operating governmental departments, \$24,897,429 (of which \$8,724,992 was for local education); for interest on debt, \$24,455; for capital outlay, \$15,474,233. Revenues were \$43,253,890. Of these, property taxes furnished \$3,817,459; sales taxes, \$21,795,741 (including tax on gasoline); departmental earnings, \$2,631,438; sale of licenses, \$3,740,345; income taxes, \$3,655,268; Federal or other grants-in-aid, \$6,086,652. Funded debt outstanding on June 30, 1937, totaled \$23,492,021 (chiefly certificates of indebtedness to counties on account of highways; these bore no interest and were to be met by payments out of money received from the taxation of gasoline). There were no sinking-fund assets against this debt. On an assessed valuation of \$1,060,314,247 the State levied in the year ad-valorem taxes of \$3,180,943.

Education. Inhabitants of school age (from 6 to 18 years, inclusive), as stated for the academic year 1937-38, numbered 810,268. The enrollments of pupils in public schools totaled 788,965. This comprised 656,710 in the elementary group, 125,337 in high schools, and 6918 otherwise classified. The year's expenditure for public-school education totaled \$26,927,404. There were 22,276 teachers; their salaries averaged, for the year, \$529.43 for males and \$603.38 for females in the elementary positions; and \$1191.50 for males and \$978.73 for females in the high schools.

Results noted in 1938 from Georgia's educational enactments of 1937, were thus summarized by the *Journal* of the National Education Association: Increased State revenue for education, free textbooks for pupils of public schools, through the 11th grade, the start of a program of auditory and visual instruction, and the expansion of the State's higher education.

Charities and Corrections. The State's Department of Public Welfare, created by a statute of 1937, administered old-age assistance, aid to needy children, and aid to the blind; it also performed services for crippled children and dealt in general with children's welfare; as successor to the Board of Control of Eleemosynary Institutions it controlled all such institutions maintained by the State. The inmates of these institutions, as stated in December, numbered 9275. Nearly nine-tenths of this total were in the State Hospital for the Insane at Milledgeville, which contained 8232. Of the remainder, the Georgia Training School for Mental Defectives had 336; Georgia Training School for Boys, 148; Georgia Training School for Girls, 154; Georgia School for the Deaf, 269; Academy for the Blind, 125; and Confederate Soldiers' Home, 11. The Department of Public Welfare had an executive head in its director (Lamar Murchison) and a deliberative body, the Board of Public Welfare, composed of six members.

The Department's expenditures for the calendar year 1938 were stated as including \$3,412,071 of State and of Federal funds for old-age assistance; \$1,047,526 for aid to dependent children; and \$144,259 for aid to the needy blind. General poor relief, expended through the counties, totaled \$542,989. A program of employment insurance (temporary dispensations to persons after their loss of gainful employment) was separately administered by the State's Department of Labor. The penal system, directed by a Board of Penal Administration, underwent changes in 1938 (see *Legislation*, below).

Legislation. The special legislative session that had met in November of 1937 continued until February 13. In addition to the acts that it had passed in 1937, it made many laws, chiefly in the fields of taxation, the penal system, and governmental organization and functions. One of its most conspicuous measures was a renewed and at last successful effort to do away with the State's 22-year-old prohibition of alcoholic beverages. This measure was designed less as a change in the regulation of popular behavior than as a move toward getting public revenue from an untaxed source, for it was passed in the expectation that it would render the already existing traffic in liquor taxable by legalizing it. The new bill was enacted in the face of the rejection of its recent predecessor, by popular vote, in June, 1937. In trying again the Legislators followed a new plan toward the same end. This plan, embodied in the County-Option Liquor Act, avoided calling another State-wide referendum on the issue and, instead, allowed any county to vote on establishing liquor traffic in its territory, whenever 35 per cent of the voters of the county should petition for such a vote; as soon as any county had thus voted for liquor, a system of State taxes, including licenses, on the manufacture and sale of lawful liquor was to go into effect, armed with heavy penalties.

Other measures bearing on taxation created a Commissioner of Revenue, holding by appointment, to collect the taxes, in place of the existing Revenue Commission, which was abolished, and set up a Board of Tax Appeals, consisting of three members; set the cost of licenses for motor vehicles upon a sliding scale that rose to \$2000 for the heaviest trucks; and allowed deduction of the Federal income tax in the computation of the State's income tax. Motor vehicles used as itinerant shops were subjected to a special impost.

There was passed a Prison Reform Act, designed to terminate the evils with which the operation of chain gangs had been reproached. This act put all felons and misdemeanants held by the State under the authority of a Board of Penal Administration, which was authorized to manage prisons and operate prison industries for the production of goods for the use of the State institutions. The use of convicts for outdoor work in gangs was not abolished, but the designation "chain gang" was changed to "work camp," by another measure. A Parole and Pardon Commission was created, to replace the prior Prison Commission; the new body was to pardon and parole without need of the Governor's approval, save in capital cases.

Among other acts, one authorizing the Legislature to convene itself in extraordinary session at the instance of the members, in case of emergency, provided for action in such cases as Governor Talmadge's period of personal rule in 1936. The law on corporations was expanded and clarified. Many of the remaining appointees of Governor Talmadge were legislated out of office. Revenue from rents

to accrue to the State on the Western and Atlantic R.R. in the years 1941-44 was anticipated by an act allowing these to be discounted for an estimated \$2,276,100, to be expended by the eleemosynary institutions and the counties. Departments of the State government were required to print information about Georgia on the backs of their envelopes. A measure duly signed but impugned as not regularly passed required judges and not juries to fix sentences in criminal convictions.

Political and Other Events. Dougherty County, the first of the counties to vote on local option as to alcoholic beverages under the new act (see above), chose (March 7) to allow alcoholic traffic. Seven other counties followed suit in March, among them Fulton (including Atlanta), on March 30. Counties voted on the subject from time to time, there being no system for uniform dates of the elections. Partisans of prohibition brought the local-option act to a test in the State Supreme Court, which found it (June 22) valid. The State Supreme Court also (May 11) upheld the validity of the new legislative act (questioned as not properly passed) transferring from jury to judge the authority to fix a criminal sentence.

The penal system founded on the new legislative reforms went into effect in the course of the spring. The incoming Board of Penal Administration ordered the removal of leg-shackles from those of the convicts, in working gangs, who wore them. The further use of the lash and the "sweat box" (both previously in abeyance) to punish convicts' faults of behavior was forbidden. It was arranged to segregate intractable convicts in the new Tatnall Prison and to assign only the better-behaved ones to work on roads and prison farms.

The taxes enacted early in the year did not come in soon enough to meet at the outset all of the State's increased expenditure. The proceeds of the discounting of future rents of the State-owned Western and Atlantic R.R. stopped the gap in some directions, but for a time after March 15 the State did not meet its obligations to pay the salaries of public-school teachers. Governor Rivers had made an exception of the teachers when, in the summer of 1935, other State expenditure was reduced to 74 per cent of appropriations. In spite of opposition from State Treasurer Hamilton, he continued the effort to pay teachers the full promised sum. Revenue began to come from the taxes on liquor as counties in some number gave up prohibition, and by the end of April a reported total from this source of \$522,000 made it possible to pay teachers \$650,000 for the last half of March. As the State had taken up the burden of paying the minimum salary for teachers and of supplying the schools with textbooks, the levy of the school taxes in December was much reduced. An enumeration of illiterates in the State was ordered to be taken in connection with the year's census of persons of school age.

Atlanta created a Housing Authority to borrow Federal money and build housing for rent at low cost. Savannah was chosen as the site of a \$1,000,000 manufactory of products of gypsum, projected by the National Gypsum Co. The new Pine Mountain State Park, near Chipleay and Warm Springs, consisting of donated land improved by the CCC, was dedicated on May 23. Atlanta's remodeled Municipal Auditorium, of which the completion had been delayed for several months by the collapse of a part of the roof, was opened in March. The construction of a sewage-disposal plant to serve the southeastern part of the city was completed by the WPA.

Elections. U.S. Senator Walter F. George (Dem.) was re-elected, prevailing over Charles A. Jiles (Ind.) by about 20 to 1, in a light ballot of about one-seventh of the registered voters. Ten U.S. Representatives, all Democrats and all but one incumbents, were elected. Gov. E. D. Rivers won a second term. As usual, the Democratic nominating primaries had decided the outcome, which the election merely ratified. The primary campaign, held in August and early September, attracted nation-wide attention, because President Roosevelt had entered it as a campaigner against George. He singled George out as the first of the Democrats whom he would ask the voters in certain States to defeat in order to effect his so-called purge of the party, the elimination of Democrats who had opposed him in some of his plans for legislation, particularly as to the bill for altering the Supreme Court. On August 11, addressing a gathering at Barnesville, he assailed George as a "dyed-in-the-wool conservative" and solicited votes for Lawrence Camp, Federal District Attorney at Atlanta, an opposing candidate. George started a campaign on the frankly anti-Roosevelt keynote, "The Democratic party is not and cannot be a one-man party." At the primary (September 14), George received about 144,000 votes; Talmadge, about 104,000. As the State nominated Senators not by the total popular vote but by a majority of voting districts, known as units, George gained the nomination by about 246 unit votes, to some 150 for Talmadge, a predominance much more marked than that in the count by total popular vote. The sentiment for him was remarkably widespread. Even in Meriwether County, in which was Warm Springs, where the President frequently sojourned, George received the highest vote. Camp, the President's favored candidate, was reported to have prevailed in only seven counties and to have won seven units' votes. His popular vote totaled about 79,000. The total of the popular votes for Talmadge and for Camp, combined, exceeded George's total, but the fact that Talmadge had been known as a strenuous opponent of the Roosevelt Administration when he was Governor deprived this combined total of much of the significance that it might have had as an indication of the voters' following the President.

Officers. Georgia's chief officers serving in 1938 were: Governor, E. D. Rivers (Dem.); Secretary of State, John B. Wilson; Attorney-General, M. J. Yeomans; Treasurer, George B. Hamilton; Comptroller-General, William B. Harrison; Superintendent of Schools, M. D. Collins.

Judiciary. Court of Appeals: N. R. Broyles, John B. Guerry, Jule Felton, Hugh I. McIntyre, Alex W. Stephens, I. H. Sutton. Supreme Court: S. C. Atkinson, M. W. Beck, W. F. Jenkins, John B. Hutcheson, R. C. Bell, Charles S. Reid.

GEORGIA, UNIVERSITY OF. A State institution of higher education for men and women in Athens, Ga., chartered in 1785. The enrollment in the 1938 summer session was 2431 and for the autumn term, 3379. The faculty numbered 185. The productive funds amounted to \$425,000. The library contained 106,000 volumes. During the year buildings to the cost of \$400,000 have been erected. President, H. W. Caldwell, LL.D.

GEORGIAN SOVIET SOCIALIST REPUBLIC. One of the 11 constituent republics of the U.S.S.R., according to the constitution adopted Dec. 5, 1936. It includes the Abkhazian Autonomous Soviet Socialist Republic (capital, Sukhum), the Ajarian Autonomous Soviet Socialist Republic (capital, Batum), and the South Ossetian Au-

onomous Province (capital, Stalinir). Area, 26,865 square miles; population (Jan. 1, 1933), 3,110,600. Tiflis, the capital, had (Jan. 1, 1936, estimate) 426,300 inhabitants; Batum, 56,980; Stalinir (Tskhinvali), 7080.

In 1938 there were 968,734 acres of spring sowing, by collectives, of chief grain crops. See UNION OF SOVIET SOCIALIST REPUBLICS.

GEORGIA SCHOOL OF TECHNOLOGY. An institution for the scientific and technical education of men in Atlanta, Ga., founded in 1888. The enrollment for the autumn of 1938 was 2500 while that in the summer session was 597. The faculty numbered 170. The endowment amounted to \$540,000, and the income from appropriations and fees was \$547,000. There were 40,000 volumes in the library. During the year a Civil Engineering Building (\$125,000), an Engineering Drawing Building (\$140,000), and an Auditorium-Gymnasium (\$225,000) were completed, and two dormitories (\$200,000) were under construction. President, Marion Luther Brittain, LL.D.

GERMAN-AMERICAN BUND. See FASCISM.

GERMAN LITERATURE. The important political changes of the past year necessarily affected the making of books and the status of authors. Two important centers for the dissemination of literature hostile to the government of Hitler disappeared when Vienna and Carlsbad were annexed by the German Reich. For a full year preceding the change neither had, however, been very active. New York became again, for the first time in generations, the scene of a German literary movement. Inside Germany little was added to the already existing cultural regulations, though possibly the discussion of religious doctrine was less free from interference by the state. In Austria long-established journals—for generations inseparable from Viennese life—were either suppressed or revamped into propaganda organs.

The Novel. A note of unreality, of isolation from the normal concerns of fiction, characterizes most current German novels. Nothing distinctively new either in technique or brilliance can be reported. Three representative titles may be named separately: Ina Seidel's *Lennacker*, historical in background but concerned primarily with religious quests and values; Hans Brandenburg's *Vater Oellendahl*, introspective in the typical German manner but moving and in the best sense of the term uplifting; and Gertrud von le Fort's *Die magdeburgische Hochzeit*, which deals with Tilly and the Thirty Years' War but attempts a quite modern literary technique. Fiction by émigré writers includes: Robert Neumann's *Eine Frau hat geschrien*, which has to do with an Hungarian robber chieftain; Bernhard Diebold's *Das Reich ohne Mitte*, a realistic, sociological novel of post-war Germany; Alfred Neumann's *Die Goldquelle*, a love story with a political background; Erich Maria Remarque's *Drei Kameraden*, certainly no improvement on the author's previous work; Stefan Zweig's *Ungeduld des Herzens*, a product of his earlier years; Emil Ludwig's *Quartett*, a study of modern *deracines* against a somewhat erotic background; Georg Fink's *Mutter und Sohn*, in which love poses a problem in Franco-German relations; and Stephan Lackner's *Jan Heimatlos*, the story of a non-Aryan in contemporary Germany. A selection from the work which appeared inside Germany would include: Bernhard Kellermann's *Das blaue Band*, one of the most popular novels of the year; Hans Fallada's *Der eiserne Gustav*; Adel-

bert Zinn's *Die schmale Stiege*, which carries on the tradition of fictional *Volkskunst*; Peter Doerfler's *Auferstehung*, which adds another Suabian peasant woman to the array of the gifted Catholic novelist's earth-bound heroines; Gertrud Baeumer's *Der Berg des Königs*, which goes back to Byzantine history for its material; Franz Braumann's *Das schwere Jahr der Maria Spaunbergerin*, a study in renunciation and perhaps one of the finest novels of the year, though one doubts its popular appeal; Ruth Schaumann's *Der schwarze Valtin und die weisse Osanna*, beautifully written as is usual with this author; Emil Merker's *Der Weg der Anna Illing*, with a Sudeten German background; Bernt von Heiseler's *Die gute Welt*, belonging to the *Blut und Boden* group; Horst Lange's *Schwarze Weide*; Werner Bergengruen's *Der Starost*; Josef Ponten's *Die Heiligen der letzten Tage*, by an author with better books to his credit; and Ottfried Graf Finckenstein's *Die Mutter*. There is a lengthy list of historical novels, from which the following titles may be selected: Juliana von Stockhausen's *Die gueldene Kette*, the story of a woman's sorrows and their sublimation, set against a picture of the Thirty Years' War; Alfred Zacharias's *Kornett im Siebenbürgen*, dealing with life in a troubled 17th century; E. von Handel-Mazzetti's *Graf Reichard*, told with only a trace of the author's old-time power; and Hans Friedrich Blunck's *Walter von Plettenburg*, in many respects a good novel. Stories written about real historical figures include: Leo Weismantel's *Franz und Klara*, the characters being the founders of the Franciscan movement; and Eugen Ortner's *Ein Mann kuriert Europa*, the hero of which is Sebastian Kneip. A few other titles by authors in both groups may be appended: *In Wologdas weisen Waeldern*, by Hans Harder; *Die tiefen Wasser*, by Trude Melhart; *Dunant, der Roman des roten Kreuzes*, by Martin Gumpert; *Der Irrtum*, by Franz Koermendi; *Kepler*, by Olaf Saile; and *Johann Lauerenz*, by Gustav Beutler. *Hoch ueber den Tal* is the latest work of the veteran Swiss novelist, Ernst Zahn.

The Novelle. Published work in this form includes: *Zwei Erzählungen*, by Ernst Wiechert; *Rettung am Rhein*, by Elisabeth Langgasser; *Karniswall*, by Albrecht Schaeffer; and *Die Lichtboten*, by Margarete Windhorst. *Flämische Weihnacht* is a collection of stories from the Flemish, translated by Carl Hanns Erkelenz.

Poetry. One of the most widely read poets of contemporary Germany is Georg Trakl, the third edition of whose collected poems was issued during the year. Friedrich Schnack published his *Gesammelte Gedichte. Deutsche Volkslieder*, edited by Ludwig Erk and Wilhelm Irmer, includes the music for the songs. Newer volumes of verse include Adolf Giesen's *Der rote Hauch*, a collection inspired by a deep awareness of nature; Friedrich Georg Juenger's *Der Taurus*; Max Kommerell's *Mein Anteil*; Walter Kiechler's *Dionysos*; Manfred Hausmann's *Jahre des Lebens*; and Christian Wulkin's *Spaetklaenge*.

Biography. A considerable number of worthwhile biographies appeared during the year. Among those with a theme affecting present-day concerns are: Carl von Bardolf's *Im Dienste des alten Oesterreich*, which contains among other things an eyewitness's account of the murder at Sarajevo; Wilhelm Herzog's *Barthou*, which sets that restless figure against the background of general European politics; and Bernhard Menne's *Krupp*, the fullest and frankest account to date of that magnate. Lud-

wig Winder's *Der Thronfolger: Franz Ferdinand* throws some new light upon a cloudy period in Austrian history; and Emil Ludwig's *Roosevelt* is a study of the American President of today. Other titles include: Wilhelm Grenzmann's *Georg Christoph Lichtenberg*, the life of a prominent 18th-century German humanist; Fritz Nemitz's *Caspar David Friedrich*, a new study of the Romantic painter; Franz Josef Wothe's *Adolph Kolping*, a study of a great social reformer; Heinz Stroh's *Eduard Benesch*; Hugo Eckener's *Graf Zeppelin*; Franz Bengston's *Karl XII*, which has an interesting Scandinavian background; Erich Eyck's *Gladstone*; Ludwig Pfandl's *Philip II von Spanien*, which reflects the great interest currently taken in Spanish history and affairs; and Josef Kuckhoff's *Johannes von Ruysbroeck*, the eminent Flemish mystic. Three biographies of especial cultural import are: *Philipp Otto Runge*, by H. G. Gerlach, a study of the greatest German Romantic painter; Oskar Loerke's *Anton Bruckner*, the most eminent musician of modern Austria; and Oskar Jellinek's *Die Geistes- und Liebestragödie der Enkel Goethes*, a study by a prominent student of German classical poetry. A new series of brief biographies under the caption of "*Menschen und Menschenwerk*" includes booklets on Carl Peters, Wilhelm Herschel, and others.

History. Many of the normal projects in historical research have been continued. Among works intended to interest a wider public are the following: Hermann Rauschnig's *Die Revolution des Nihilismus*, a critique of Hitlerism by a man who was Nazi leader of Danzig; Veit Valentin's *Weltgeschichte*, a survey by the now exiled historian of 1848; Eduard Winter's *Tausend Jahre Geisteskampf im Sudetenraum*, the most satisfactory German survey of events forming the background of the Munich peace; Hermann Schneider's *Germanische Altertumskunde*; and Nikolas Benckiser's *Das dritte Rom*, an attempt to narrate the story of the eternal city from Papal days to the dawn of the new empire.

Politics and Economics. Current discussion of governmental or economic questions in the German language is very extensive, but naturally falls into two classes according as it is written by men residing inside the country or by men who have emigrated. The following list of publications issued with the permission of the government of the Third Reich is neither exhaustive nor even representative of all shades of German thought. It is offered because the books listed seem likely to help a foreign reader interested in considering current German points of view: Bruno Brehm's *Glückliches Oesterreich*, a Nazi interpretation of the *Anschluss*; Sepp Keller's *Zwischen Nacht und Tag*, being a commentary on the fortunes of the swastika under Dolfuss and Schuschnigg; Heinrich Heise's *Der Herrschaftsstand der deutschen Revolution*, which portrays a region "beyond Spengler and Juenger; Alfred Berndt's *Meilensteine des Dritten Reiches*; Walter Schneefuss's *Gefahrenzonen des britischen Weltreiches*; Gerhard Hermann's *Italians Weg zum Imperium*; Helene Grillet's *Eine Franzoesin erlebt Grossdeutschland*; and Walther Pahl's *Das politische Antlitz der Erde*. Paul Ernst's *Politische Studien und Kritiken* is a collection of essays by a conservative thinker, now deceased. Special cultural concerns of the German government are reflected in the following: Gaston Ritter's *Das Judentum und die Schatten des Antichrist*; F. A. Six's *Freimaurerei und Judenemanzipation*; and Paul Siebertz's *Freimaurer im Kampf um die*

Macht. Selections from the addresses of the Spanish Nationalist leader, José Maria Pemán, with a commentary by Irene Behn, are provided in *Flammendes Spanien*.

Emigré literature reflects, of course, a set of entirely different assumptions. It includes the following: Robert Ingrimm's *Der Griff nach Oesterreich*, an interpretation hostile to the Nazis; Annette Kolb's *Festspieltage in Salzburg und Abschied von Oesterreich*, an affecting and beautifully written book; Hans von Wyl's *Ein Schweizer erlebt Deutschland*, in which a Swiss Fascist expresses his disapproval; Thomas Mann's *Vom zukunfftigen Sieg der Demokratie*; Hans Bauer's *Warum Krieg?*, which suggests a way round Armageddon; Karl Otten's *Torquemada's Schatten*, being a chronicle of experience in Majorca; Arthur Koestler's *Ein spanisches Testament*; Stefan Wendt's *Insel im Vaterland*; Maximilian Beck's *Diktatur oder Demokratie?*; and Franz Zuercher's *Kreuzzug gegen das Christentum*, which studies relations between the Nazis and religion. Of more serious import are the following: Adolf Sturmthal's *Die grosse Krise*; Oskar Wolfsberg's *Zur Zeit- und Geistesgeschichte des Judentums*, which closes on a strangely optimistic note; and Siegfried Marck's *Der Neuhumanismus als politische Philosophie. Du und die Masse*, by Kurt Baschwitz, is a striking essay on political mass psychology.

Philosophy. Philosophical treatises may be divided into those which serve the more serious, studious interests of thought, and those which attempt to exercise an immediate influence upon the conduct of life. In the first group belong the following: *Christliche Philosophie*, by Alois Dempf, an attempt to show that the tradition of medieval philosophy was never broken off; Wilhelm Hansen's *Die Entwicklung des kindlichen Weltbildes*; Rudolf Neuwinger's *Die Philosophie Ernst Bergmanns*, a discussion of the foremost advocate of a national Church which is to absorb the remnants of Christianity; Josef Pieper's *Vom Sinn der Tapferkeit*; Otto Janssen's *Dasein und Wirklichkeit*; Heinrich Fels's *Martin Deutinger*; Thomas Mann's *Schopenhauer*, an essay; E. Pfennigsdorf's *Der kritische Gottesbeweis*; and vol. iii of Joseph Bernhart's *Thomas von Aquino: Summe der Theologie*. The second group would include: *Von der reinen Glueckseligkeit des Menschen*, by Franz Werfel; *Leben spricht zu Leben*, by Gertrud Ehrle; *Die drei verlorenen Soehne*, by Matthias Laros; *Der rechte Augenblick*, by Michael Pfieger, of interest to students of pedagogy; *Alles Getrennte findet sich wieder*, by Hans Loescher; and *Die Macht der Frau*, by Oda Schneider.

Religion. Great interest in religious problems and realities continues. *Der Herr: Betrachtungen ueber die Person und das Leben Jesu*, by Romano Guardini, is doubtless the most important work on the life and doctrine of Jesus to have been written by a Catholic scholar in our generation. *Konfessionskunde*, by Konrad Algermissen, is a new edition of a standard treatise on the Christian confessions. Other publications include: Paul Althouse's *Verantwortung und Schuld der Kirche*; Horst Stephan's *Die Geschichte der evangelischen Theologie seit dem deutschen Idealismus*; Erich Przywara's *Deus semper major*, an introduction to the practice of mystical asceticism by a prominent Catholic philosopher; *Kirche und Welt in oekumenischer Sicht*, a report on the Oxford conferences; Paul Schuetz's *Warum ich noch ein Christ bin*; Daniel Feuling's *Katholische Glaubenslehre*, a presentation of the Catholic system; Josef Kreit-

maier's *Peter Lippert: Der Mann und sein Werk*; Ludwig Winterswyl's *Laienliturgie*; Elizabeth von Schmidt-Pauli's *Elementen und Naturalien in der Kirche*; and Arnold Rademacher's *Die innere Einheit des Glaubens*. Michael Schmaus has issued the first volume of a *Katholische Dogmatik*.

Literature. A selection of newer books includes: Albert Schaefer's *Die Gottesanschauung Rainer Maria Rilkes*, another contribution to the study of a modern poet; James Schwarzenbach's *François Mauriac*; Konrad Haemmerling's *Der Mann der Shakespeare hiess*, written in novel form; Oswald Floeck's *Heinrich Federer*, a study of the Swiss novelist; Herbert Cysarz's *Die grossen Themen der sudetendeutschen Geschichte*; Wilhelm Schneider's *Ehrfurcht vor dem deutschen Wort*; and Richard Woessler's *Die staendische Schichtung des Schriftstellertums in der englischen Renaissance*. There is a new edition of Josef Nadler's *Literaturgeschichte des deutschen Volkes*. Otto Mann has edited a volume of selections from the major essays of Hamann. *Die Rose und der Ziegelstein* is an anthology of anecdotes, edited by "Homunculus."

Art. *Deutsche Volkskunst*, by Hans Karlinger, is the latest addition to the *Prophylaen Kunstgeschichte*. Other publications include: *Um die Seele der heiligen Ikonen*, by Georg Wunderle, an excellent essay on the sacred themes of Byzantine art; Heinrich Luetzeler's *Fuehrer zur Kunst*; *Das Werk Michael Pachters*, by Eberhard Hempel; *Christliche Kunst in der Gegenwart*, by Conrad Groeber and others; and *Von Kunst und Kenner-schaft*, by Max J. Friedlaender.

Travel. *Leben und Zeit*, by Karl Benno von Mechow is a beautiful evocation of the Austrian landscape. *Wien*, by Justus Schmidt, is a new picture book concerning a city of great charm. Other publications include: *Was wird aus diesem Afrika?*, by G. A. Gedat; Frieda Fischer-Koeln's *Japanische Tagebuch*; and Paul Wulfrum's *Reiseland Suedbayern*.

Translations. The successes of the year included books by Richard Hughes, Elizabeth Madox Roberts, Harold Nicholson, Kenneth Roberts, and Liddell Hart.

GERMANY. A former Federal republic of Europe, transformed into a centralized, authoritarian state by the National Socialist revolution commencing in 1933. Capital, Berlin.

Area and Population. The annexation of Austria (q.v.) and the Sudeten territories of Czecho-Slovakia (q.v.) by the Reich during 1938 increased Germany's total area to about 225,039 square miles and the total population to an estimated 78,700,000 in October, 1938. The area previous to these annexations and the population at the censuses of 1925 and 1933 are shown in the accompanying table.

Living births in 1937 numbered 1,275,212 (18.8 per 1000); deaths, 793,192 (11.7 per 1000); marriages, 618,971 (9.1 per 1000). The 1933 census showed 756,760 foreigners in Germany, including 148,092 Poles, 180,663 Austrians, 186,189 Czecho-Slovaks, 5867 French, and 5763 British. There were 15,190 emigrants in 1936, of whom 10,190 went to the United States. Estimated populations of the chief cities on Jan. 1, 1937, were: Berlin, 4,251,000; Hamburg, 1,097,000; Cologne (Köln), 762,000; Munich (München), 756,000; Leipzig, 698,000; Essen, 662,000; Dresden, 637,000; Breslau, 625,000; Frankfurt (on Main), 551,000; Dortmund, 540,000; Düsseldorf, 515,000; Hannover, 452,000; Duisburg, 440,000; Stuttgart, 408,000;

GERMANY: AREA AND POPULATION BY STATES

States	Area sq. miles	Population, June 16, 1925	Population, June 16, 1933

Nuremberg (Nürnberg), 408,000; Wuppertal, 408,000; Bremen, 337,000; Chemnitz, 336,000; Königsberg, 335,000; Gelsenkirchen, 327,000; Magdeburg, 320,000; Bochum, 316,000; Mannheim, 278,000; Stettin, 276,000; Altona, 244,000; Kiel, 241,000; Halle, 211,000; Kassel, 203,000. In 1933, 67.3 per cent of the total population was concentrated in towns and cities of 2000 and over.

Education and Religion. Primary education is compulsory and there is little illiteracy. The estimated school enrollment in 1936-37 was: Elementary, 7,930,000; intermediate (1937-38), 273,000; "gymnasien" and "realschulen," 673,000; universities and advanced schools, 71,850 (universities 48,558, advanced technical schools 10,928, others 12,364). According to the 1933 census, Protestants comprised 62.7 per cent of the total population (40,865,258); Roman Catholics, 32.5 per cent (21,171,991); other Christians, 0.1 per cent (34,927); Jews, 0.7 per cent (499,682); adherents of other sects, 4 per cent (2,646,603).

Agriculture. The Reich has about 45,257,000 acres of arable land, 19,716,000 acres of meadow and pasture, 1,915,000 acres of trees, shrubs, and orchards, and 30,860,000 acres of forests. Including Austria, yields of the chief cereals in 1938 were (in metric tons): Wheat, 5,843,900; barley, 4,482,300; rye, 9,053,700; oats, 6,709,100; corn (Germany only, 1937), 121,400. The 1937 harvest of spelt was 4,042,000 bu.; lupins, 59,000 metric tons; potatoes, 2,022,300,000 bu.; sugar beets, 10,091,000 metric tons; beet sugar (1937-38), 2,184,000 metric tons; fodder beets, 50,349,000 metric tons; hay, alfalfa, and clover, 37,272,000 metric tons; hops, 22,657,000 lb.; tobacco, 77,161,000 lb.; wine, 66,627,000 gal. The livestock census of Dec. 3, 1937, showed 23,707,000 swine, 20,469,000 cattle, 4,684,000 sheep, 3,430,000 horses (excluding army horses), and 2,618,000 goats. The value of farm production in 1937 was 11,894,000,000 marks (plant products, 4,678,000,000; animal products, 7,216,000,000). The agricultural indebtedness was 10,180,000,000 marks on Dec. 31, 1937.

Mining and Manufacturing. The gross value of industrial production was estimated at between 85 and 90 million marks in 1938 (77 millions in 1937). The value of mineral and industrial production in 1937 was divided in part as follows (in 1000 reichsmarks): Coal, 1,966,898; lignite, 454,315; coke, 598,308; coal briquets, 111,172; lignite bri-

quets, 428,194; potash, 173,500; pig iron, 869,178; crude steel, 1,560,528; rolling mill products, 2,120,647. Production, by quantity, in 1937 was (in metric tons except as specified): Coal, 184,512,000 (186,180,000 in 1938); lignite, 184,681,000 (194,964,000 in 1938); coke, 40,896,000; coal briquets, 6,888,000; lignite briquets, 42,021,000; iron ore, 8,522,000; lead (metal content of ore), 72,500; copper (metal content of ore), 32,700; potash (K_2O), 1,678,000; pig iron, 15,957,000 (18,516,000, including Austria, in 1938); crude steel, 19,849,000 (23,208,000, including Austria, in 1938); rolling-mill products 14,116,000; rayon (including linters), 359,000,000 lb.; cotton, net imports, 649,000,000 lb.; vessels launched, 436,000 gross tons; passenger cars, 244,289; trucks and busses, 57,312; motorcycles, 145,916. The average number of unemployed was 429,461 in 1938, 912,312 in 1937, and 1,592,655 in 1936.

Foreign Trade. Imports for consumption in 1938 were valued at 6,046,900,000 marks (5,468,377,000 in 1937) and exports of German products at 5,630,400,000 marks (5,910,975,000 in 1937). The 1938 figures include the trade of Austria beginning with April and that of the Sudetenland beginning with October. The trade balance, which was favorable by 550,207,000 marks in 1936 and by 422,598,000 marks in 1937, thus became unfavorable by 416,500,000 marks in 1938. Nearly half of the 1938 import excess was accounted for by the unfavorable trade balance with the United States. German imports from the United States were 404,600,000 marks in 1938 (281,899,000 in 1937) and exports to the United States were 149,300,000 marks (208,833,000 in 1937).

The value in U.S. paper dollars of the chief 1937 imports was: Oilseeds, \$104,809,000; cotton and linters, \$98,403,000; mineral oils, \$91,838,000; iron ore, \$89,202,000; raw or washed wool, \$88,014,000; fruits and nuts, \$87,632,000. The value of the principal exports was: Iron and steel, \$410,388,000; machinery and parts, other than electric, \$307,651,000; coal, \$171,866,000; chemicals and explosives, \$137,914,000; land and air vehicles, \$107,694,000; electric machinery, \$104,901,000. Of the 1937 imports, the United Kingdom supplied 5.6 per cent by value (6.3 in 1936); Argentina, 5.4 (2.8); United States, 5.2 (5.5); Netherlands, 3.9 (4.0). Of the exports, the Netherlands took 7.9 per cent in 1937 (8.3 in 1936); United Kingdom, 7.3 (8.5); France, 5.3 (5.3); United States, 3.5 (3.6).

Finance. No budget figures have been published since the 1934-35 fiscal year. Revenue from all Reich taxes for the fiscal year ended Mar. 31, 1938, was reported at 13,958,000,000 reichsmarks (11,473,000,000 in 1936-37). Some indication of budget trends since 1935 is given by the accompanying figures issued by Assistant Minister of Economics Brinkmann in November, 1938.

GERMAN NATIONAL INCOME AND TAXATION

Years	National income (billions of marks)	Taxes and social insurance contributions	
		(billions of marks)	In per cent of national income
1913	45.69	5.14	11.3
1925	59.98	13.31	22.2
1932	45.18	13.81	30.6
1937	70.97	23.79	33.5

If the expenditure of all other public bodies "which fulfill social tasks and satisfy collective requirements" are added to the amount of taxes and other public levies, public expenditure in the fiscal year 1937-38 reached 35,000,000,000 to 40,000,000,000 marks or about one-half of the coun-

try's national income, according to Herr Brinkmann's estimate.

The public debt on June 30, 1938, was officially reported at 22,445,000,000 reichsmarks, as against 17,517,000,000 reichsmarks on Dec. 31, 1937. These figures omitted large estimates for budgetary liabilities contracted for unemployment relief and rearmament. The total of these liabilities was conjectural. The average exchange rate of the reichsmark was \$0.4020 in 1937 and \$0.4016 in 1938.

Transportation. In 1937 there were 33,878 miles of state-owned railway lines, and 2319 miles of private lines. In the same year, state railways carried 1,808,000,000 passengers and 499,047,000 metric tons of freight. The gross receipts were 4,420,000,000 marks. Civil aviation statistics for 1937 were: Miles flown, 11,702,000; passengers, 323,101; freight and baggage, 4976 metric tons; mail, 3745 metric tons. The Lufthansa system operated air routes to South America, Asia, and all parts of Europe. On June 30, 1938, the German merchant marine consisted of 2238 vessels of 100 tons or over with an aggregate capacity of 4,243,835 gross tons. During 1937 the net tonnage of vessels entering German ports was 45,212,000. There were 4760 miles of inland waterways, of which 946 miles were canals, in 1935.

Government. While the Weimar (republican) Constitution of Aug. 11, 1919, was not formally abrogated under the Nazi regime, it was nullified by the Enabling Act of Mar. 24, 1933, by which the Reichstag authorized the Cabinet to legislate by decree even if such legislation was not in accord with the Weimar Constitution. Under the Enabling Act, Adolf Hitler established a personal dictatorship, substituting the so-called "leadership principle" for the democratic and liberal governmental system of the former republic. All activities of the country were placed under the control and guidance of Herr Hitler, acting in the dual capacity of Chancellor and head of the National Socialist (Nazi) Party. Upon the death of President von Hindenburg on Aug. 2, 1934, Chancellor Hitler assumed the functions of both Chancellor and President, under the title of Leader (Fuehrer) and Chancellor (Reichskanzler). On Oct. 16, 1934, it was officially announced that Hitler would occupy both offices for life. As Leader and Chancellor, Hitler was commander-in-chief of the army, appointed all officials of both the government and the Nazi party, and exercised in conjunction with the cabinet unlimited powers of legislation. The Reichstag retained advisory powers only. The rights of the former Federal States were abolished by the decree of Feb. 1, 1934, and the Reich Cabinet assumed full powers over State and local activities. All political parties were dissolved, with the exception of the National Socialist Party, and the formation of new political organizations was prohibited.

Herr Hitler's Cabinet, originally appointed Jan. 30, 1933, was composed as follows at the beginning of 1938: Interior, Dr. Wilhelm Frick; Foreign Affairs, Count Konstantin von Neurath; Defense, Gen. Werner von Blomberg; Finance, Count Ludwig Schwerin von Krosigk; Food and Agriculture, Dr. Walther Darré; Labor, Franz Seldte; Posts, Dr. Wilhelm Ohnesorge (appointed, Feb. 2, 1937); Transport, Dr. Julius Heinrich Dörpmüller (Feb. 2, 1937); Aviation and Commissioner for the Four-Year Plan, Field-Marshal Hermann Goering; Justice, Dr. Franz Guertner; Science, Education, and Public Instruction, Dr. Bernhard Rust (Apr. 30, 1934); Church Affairs, Hanns Kerrl (July 19, 1935); National Enlightenment and Propaganda,

Dr. Joseph Goebbels; Ministers without Portfolio, Rudolf Hess (Deputy Leader of the National Socialist party), Dr. Hanns Frank (Dec. 19, 1934), Dr. Heinrich Lammers (Nov. 26, 1937), Dr. Otto Meissner (Dec. 2, 1937). For changes during 1938, see *History*.

HISTORY

Summary. The year 1938 was one of almost miraculous accomplishment from the German point of view. Without firing a shot, Chancellor Hitler incorporated Austria and the Sudeten territories of Czecho-Slovakia in the Third Reich, forming the Great Germany of which Bismarck had dreamed. In all, 43,262 square miles of territory, with a population of some 10,360,000, were added, making a state larger than the German Empire before the World War. Hitler established his unquestioned predominance throughout Central and Eastern Europe. The partition of Czecho-Slovakia removed the major obstacle to German penetration toward the grain fields of Hungary and Soviet Ukraine and the Rumanian oil fields. The way lay open for creation of a German-controlled economic empire in Central Europe and for the resumption of the pre-war drive toward Baghdad and the Persian Gulf. Two decades after the humiliation of the Reich at Versailles, it was generally admitted that Hitler had won the World War.

No less phenomenal was the way in which Germany, by utilizing to the utmost her manpower and natural resources, attained a rank second to the United States in industrial output and virtually eliminated unemployment. Between 1932, the low point of the economic depression in Germany, and 1938 industrial output, including handicraft production, increased 240 per cent and farm production 10 per cent. Employment rose from about 12,000,000 in 1932 to 20,820,000 at the end of 1938; national income from 45,200,000,000 marks in 1932 to about 75,000,000,000 in 1938. During the same period the weekly earnings of workers increased 20 per cent in spite of fixed wage scales, but higher prices and an inferior quality of goods and foods prevented the workers from realizing the full benefit of the greater wage distribution. The savings of the nation were 15,610,000,000 marks in 1932 and 23,750,000,000 marks in 1938. The dividends of 1400 industrial enterprises averaged 6.5 per cent of their capital in 1937-38 as against a minus 4.8 per cent in 1932.

This striking economic and political progress was attained at the cost of relentless regimentation and increasing socialization of all aspects of the national life, which contributed to growing internal discontent. It was based upon an increasingly shaky financial structure. And it was achieved by methods that aroused world-wide criticism and alarm, reflected in a growing foreign trade deficit and the increasing danger of another European war.

Radical Nazis Triumph. Within Germany the year was notable for the final victory of the radical wing of the National Socialist party over conservative elements opposed to Hitler's adventurous and militant foreign and domestic policies. This conflict had been under way ever since Hitler gained power in 1933 (see preceding *YEAR BOOKS*). It led to the resignation on Nov. 26, 1937, of Dr. Hjalmar Schacht as Minister of Economics. A financial wizard whose expert management of the Reich's economic affairs had made possible much of Hitler's success, Schacht warned his chief that Germany was headed toward inflation and financial collapse. Hitler replaced him on Jan. 15, 1938, by

Dr. Walther Funk, under whom the trend toward a planned and centrally directed economy like that of the Soviet Union was accentuated.

Dr. Schacht remained as head of the Reichsbank, where he continued his efforts to moderate the Nazi financial and economic policies. In the spring of 1938 he induced the government to abandon its potentially inflationary practice of financing part of its needs through short-term bills that could be repeatedly extended and were unrecorded in the Reich debt returns. But the acquisition of Austria and the Sudeten-German regions of Czecho-Slovakia and the cost of the September mobilization placed a heavy additional burden upon the Reich treasury. The safeguards imposed by Dr. Schacht were largely swept aside and fears of inflation were revived. The public debt increased by 6,700,000,000 marks during the year while the money in circulation rose by 19 per cent. Dr. Schacht's vigorous protests against this "reckless" financial policy led to his dismissal as head of the Reichsbank on Jan. 20, 1939.

Cabinet Reorganization. A similar conflict over foreign and domestic policy led Hitler on Feb. 4, 1938, to purge the army high command and the diplomatic service of officials who were lukewarm or hostile to his program. There had long been opposition among the older army officers, representing Prussian aristocratic traditions, to Nazi attempts to transform the army into a National Socialist adjunct. Some of them opposed Hitler's religious and economic policies, his intervention in Spain, the Rome-Berlin axis, and even the anti-Communist pact on the ground that they tended to weaken the Reich's fighting powers and to involve it in a conflict for which it was not prepared. Hitler's decision to annex Austria at the risk of a European conflict aroused further opposition when it became known in inner Nazi circles early in the year.

A group of officers, led by Gen. Werner von Fritsch, commander-in-chief of the army, regarded War Minister von Blomberg as too amenable to Hitler's influence. They seized upon von Blomberg's marriage with the young daughter of a humble carpenter, which violated Junker traditions of "caste and class," as an opportunity to demand his removal. Hitler requested the resignation not only of von Blomberg but of von Fritsch and of 13 other army and air force generals. He assumed "personal and direct command over all the armed forces" with the title of Defense Minister. He named Gen. Wilhelm Keitel, an officer without pronounced political views, to supervise "the unitary preparations for national defense in all fields." The army chief command was given to Gen. Walther von Brauchitsch. Twenty-two generals and eight colonels more sympathetic to Nazi policies were advanced to new commands.

At the same time Hitler named Joachim von Ribbentrop, Ambassador to London and a confirmed Nazi, as Foreign Minister in place of Baron Constantin von Neurath. The German Ambassadors at Vienna, Rome, and Tokyo were also replaced. General Goering, who coveted the post of War Minister, was placated with the title of Field Marshal. Baron von Neurath remained in the cabinet as head of a special council on foreign policy which included Goering, Hess, Goebbels, Admiral Raeder, and Generals Keitel and von Brauchitsch.

Hitler's Reichstag Speech. This extension of Nazi control over the army and the foreign office enabled Hitler to proceed immediately with his plans for the conquest of Austria and to lay down

an uncompromisingly radical domestic and foreign policy in his Reichstag speech of February 20. He emphasized his determination to carry through the Four-Year Plan of economic self-sufficiency at whatever cost, announced that "the claim for German colonies will be voiced from year to year with increasing vigor," violently denounced the "lying" British press, and rejected all proposals that German claims be moderated in the interests of European peace. German diplomacy, he said, was based on the Rome-Berlin axis and the anti-Communist pact. He expressed his earnest wish for "more and more extended" co-operation with Italy and Japan. Hailing Japan as the bulwark against communism in the Far East, he disclaimed territorial ambitions in that region or any desire to regain the former German colonial possessions held under mandate by Japan.

Anschluss Consummated. Hitler also gave advance warning of his intentions with respect to Austria and Czecho-Slovakia by demanding "self-determination" for 10,000,000 Germans outside of the Reich. The import of his words was soon realized when German troops entered Austria on March 12 and the long-debated Anschluss was consummated the following day (see AUSTRIA under *History* for full details). Possession of Vienna gave the Reich a base for economic penetration and political domination throughout the Balkans and the Danubian area. But it was flanked by the heavily defended mountain bastions of Czecho-Slovakia, which also barred the pathway to the east, marked out by Hitler in *Mein Kampf* as a field for future German expansion.

Partition of Czecho-Slovakia. The task of incorporating Austria politically, economically, and spiritually in the Third Reich had scarcely begun before Hitler launched his campaign for the partition of Czecho-Slovakia. While Nazi agents and propaganda stirred the Sudeten Germans to intransigent opposition to the Czecho-Slovak Republic, German diplomacy was active in isolating the Czechs so that they would be forced to cede the Sudeten regions under the threat of armed invasion. Acting upon Ribbentrop's advice, Hitler proceeded upon the assumption that Great Britain would not fight to maintain the status quo in Central Europe and that London could be depended upon to wean France away from her Czech and Soviet alliances in order to avoid being dragged into war.

This assumption proved correct, although the Nazi plans received a rude but temporary setback in May. Czecho-Slovakia then met German threats and troop concentrations along the frontier with prompt mobilization and France and Britain indicated their firm intention to go to Czecho-Slovakia's aid if attacked. Angered by this rebuff, Hitler immediately ordered increases in German armaments and armed forces and conscripted some 500,000 men to push the fortifications along the French border to completion. In August, he was ready to repeat on a much more terrifying scale his maneuver of presenting Czecho-Slovakia and her allies with the alternatives of capitulation or war. This time he succeeded, with the aid of the British Prime Minister and of a weak French government. See CZECHO-SLOVAKIA under *History* for full details.

The bloodless conquest of the Sudetenland under the Munich accord of September 29 added to the Reich's economic difficulties. But the government and the Nazi party proceeded with characteristic energy and thoroughness to incorporate this

territory into the National Socialist Reich. On October 31 the Sudeten German party led by Konrad Henlein was inducted as a unit into the Nazi party and Henlein was appointed district leader. Opponents of the Hitler regime were sent to concentration camps. A referendum to ratify the union with Germany and to assent to the appointment of 30 deputies to the German Reichstag was held in the Sudetenland on December 4. According to the official returns, 98.9 per cent of the voters approved the "liberation" of their region.

Internal Situation. Hitler's remarkable achievements in the foreign field during the year thrilled the German people with pride and convinced them of his genius as a statesman. Yet his willingness to risk a war over the Sudetenland, the anti-Jewish excesses of November (see JEWS), and various other developments caused domestic discontent to become more vocal and widespread than at any time since 1933. The German people as a whole showed no enthusiasm for war during the crisis over Czecho-Slovakia. Neither did many of the older army officers. Gen. Ludwig Beck, first chief of the new army General Staff, was reported to have warned Hitler that neither the western fortifications nor the army were ready for a major war. On his own application he was dismissed from active army service on October 31. On November 29 a further increase in the Reich's peacetime army to approximately 1,000,000 men was announced. This made the Reich's peacetime forces second only to Soviet Russia's standing army of 1,300,000 men. Moreover, there was a rapid expansion of both the navy and the air force.

The cost of German armaments during the years 1936-38 was estimated by foreign observers at between 12 and 16 billion dollars; in 1938 they absorbed about 28 per cent of the national income. The huge expenditures on arms seriously reduced the foodstuffs and raw materials needed to meet the consumption needs of the nation. At the same time, the amount of work to be done in armament factories, in industry in general, on the western fortifications and on innumerable public works projects throughout the Reich led to an acute shortage of labor. By a decree of June 22 all German citizens were made liable to conscription for work on any tasks assigned to them. In subsequent months workers were drafted increasingly for work on fortifications, armaments, public works, and other "especially important state projects." Commencing in October the government began to recall German emigrants to cope with the growing labor shortage. The 10-hour day was enforced throughout the armament and allied industries and on December 30 new labor decrees authorized the extension of the working day to as high as 14 hours on "important state-political tasks." The wages paid were half or less than half those paid in the United States. At the same time steps were taken to forbid the exodus of farm workers into industry, a movement which threatened to curtail agricultural production.

Industry was likewise regimented. Employers complained more and more that they were merely administrative officials of the Nazi state. Pre-emption of the money market for government bond issues prevented private corporations from floating bonds for expanding or modernizing their plants. Government red tape, the shortage of raw materials, and the growing inability of the railways to handle the load placed upon them handicapped German manufactures in competing abroad and in meeting domestic consumption needs. Yet the state

steadily extended its control, or direct ownership, of additional branches of production. On December 20 Economics Minister Funk assumed "central direction" over all phases of labor and industrial production, with orders to extend the "totalitarian national economy."

The Conflict with the Churches. Another fertile source of unrest in Germany was the continuance of Nazi efforts to co-ordinate the Protestant and Catholic churches with National Socialist ideology and within the framework of the totalitarian Third Reich (see preceding YEAR Books). The Rev. Martin Niemöller, a leading figure in the anti-Nazi Protestant Confessional Synod who had been arrested July 1, 1937, was tried in secret in Berlin in February on charges of inciting the populace to civil disobedience and other seditious acts. He was freed by the court on March 2 but was immediately rearrested by the secret police and sent to a concentration camp, where he remained throughout the year.

Dr. Niemöller's treatment aroused indignant protests from Christians both within and without Germany, but they went unheeded. Instead, Nazi pressure on dissenting pastors and laymen became greater. The state contributions to pastors and their dependents were withheld from those deemed unworthy "of the state's solicitude," and in cases the parishioners were forbidden to contribute privately to their pastors' support. Protest meetings against the government's church policy were broken up by the secret police. Anti-Christian instruction of German youth received official encouragement. The confiscation of church properties was threatened and in minor instances carried out. According to the Federal Council of the Churches of Christ in America, more than 9000 Catholic and Protestant leaders were imprisoned. About 500,000 German Christians were estimated to be victims of religious persecution in other forms. Yet in December, 1938, it was estimated that 40 per cent of the German Protestants remained attached to the anti-Nazi Confessional Synod, that 10 per cent adhered to the official or Nazi-dominated church, and that about half remained neutral in the church-state quarrel.

The Anti-Catholic Drive. The Nazi war on the Roman Catholic Church assumed an even more violent form. Attacks on the church in Austria after Anschluss are described in the article on AUSTRIA under *History*. In Germany proper the conflict was hardly less violent. On May 3 the Nazi Governor of Württemberg demanded the resignation of Bishop Johann Baptist Sproll, head of the church in that province, for failing to vote in the plebiscite on Anschluss and the Reichstag election. Bishop Sproll was obliged to flee from Rottenburg when the secret police informed him they could "no longer be responsible for his safety." When he returned he was the object of a hostile demonstration without interference on the part of the authorities. On August 19 all of the German cardinals, archbishops, and bishops met at Fulda to consider the situation. They signed a pastoral letter declaring that Nazi attacks "have not become more temperate or more bearable, but rather more hostile and more violent." The letter cited new restraints upon Catholic life; official slurs upon the Pope and the clergy; efforts to turn youth against the church, and to remove all religion from public life; accusations that the church had entered into personal and political relations with Bolshevik Russia; economic penalties inflicted upon functionaries, business men, and workers

who were faithful Catholics; and growing pressure upon Catholic students in colleges and universities.

The letter declared that the state aimed at the "complete destruction of the Catholic faith in Germany," "the uprooting of Christianity in general and the introduction of a faith that no longer has the least relation to belief in God and the Christian belief in a future life." The position of the clergy in the face of these attacks was stated as follows:

But it should be understood once and forever, and with exactitude, that we German Catholic Bishops will not purchase good-will or even suzerainty and freedom from molestation by means of a diminution of our religious doctrine, the abandonment of rights of the church, or loss of personal fortitude or character.

On October 21 Pope Pius strongly denounced Nazi tactics and compared Hitler with Julian the Apostate. Cardinal von Faulhaber on November 6 firmly upheld the individual's rights against the Nazi state in an address in Munich Cathedral. On November 12 a Nazi mob stoned the Cardinal's palace and the following day an open-air Catholic festival in Munich was interrupted by organized Nazi bands and then dispersed by the police. The *Reich Gazette* announced December 19 the confiscation of properties of a number of Catholic organizations dissolved by the police.

With the radical Nazi faction firmly ensconced in power as a result of Hitler's great foreign successes, Catholics throughout the Reich lived in fear as 1938 ended that they would soon be victims of the same tactics employed against the Jews. A campaign for the confiscation of church properties was already under way in the radical section of the Nazi press. On December 31 *Germania*, former official organ of the Catholic Centrist party and long the most influential Catholic newspaper in Germany, ceased publication.

Foreign Relations. The Munich pact brought to dazzling fruition Hitler's plan to make Germany not only the dominant European power but one that would be impervious to another blockade such as that applied by the Allies during the World War. The newly won military control of Central and Southeastern Europe gave Germany first claim upon the foodstuffs, oil, and other raw materials of this region. And the Nazis were not slow to take advantage of their opportunity. Plans were laid for extending the Four-Year Plan for German economic self-sufficiency to include all of the Danubian and Balkan area.

During October Dr. Funk visited Belgrade, Sofia, and Ankara. He offered to supply German technicians, machines, and materials for the construction of public works designed to aid the efficient exploitation of the raw materials and agricultural resources of those countries. These public works were to be paid for through shipment of increased supplies of foodstuffs and raw materials to Germany. There was a ready response to his proposals. On October 7 the Reich advanced to Turkey a credit of 150,000,000 marks for the purchase of German "industrial and military equipment and materials for public works and other purposes." A new trade agreement signed with Yugoslavia on October 25 enabled Germany to liquidate her trade debt to Belgrade by armament deliveries and paved the way for greater exchange of Yugoslav products for German manufactures. Bulgaria obtained a credit for armaments on the same basis. The agreements reached with Czechoslovakia (q.v.) in November for the construction of canals and an all-German highway to Vienna

THE ANNEXATION OF AUSTRIA

Chancellor Adolf Hitler (center foreground) announcing the formal incorporation of Austria in Great Germany

served to advance the trade-expansion plan. Negotiations for similar agreements were opened with Hungary, Greece, and Rumania. In most of these countries the activities of local Nazi parties, financed or guided from Berlin, served to reinforce direct German politico-economic and military pressure.

While great progress was made in establishing German economic hegemony, the Reich's aggressive policies aroused fears in the Danubian and Balkan countries that they were being transformed into colonial dependencies. Consequently, they displayed some reluctance to commit themselves finally to collaboration with the Reich. The governments of Hungary and Rumania strove to forestall the establishment of native Nazi regimes by adopting a fascism all their own. Hungary nevertheless was forced more and more into the Nazi orbit. But in Rumania, whose oil was highly coveted by Germany, King Carol proved a more difficult problem. Carol conferred with Hitler at Berchtesgaden for three hours on November 24. But immediately after his return home he struck ferociously at the Nazi-dominated Rumanian Iron Guard, thus breaking openly with Hitler (see *RUMANIA under History*).

Relations with Poland. Poland sought to bar the eastward expansion of Germany after Munich by seeking to create a bloc of neutral states in Eastern Europe. Her efforts to establish a common Polish-Hungarian frontier through cession of all Ruthenia to Hungary were foiled by Germany, however. Toward the year end reports from the Carpatho-Ukraine (Ruthenia) indicated that the Germans were actively laying the groundwork there for a future Ukrainian independence movement (see *CZECHO-SLOVAKIA under History*). The Reich brought pressure upon Poland to accept the Vienna territorial award by threatening armed action if Poland interfered in Ruthenia and by suddenly expelling to Poland some thousands of Polish Jews in Germany (see *JEWS*). Nevertheless, Poland on October 18 accepted a 60,000,000-mark credit from the Reich for the purchase of German machinery and other industrial equipment, to be paid for with Polish foodstuffs and lumber. Danzig (q.v.) was another source of Polish-German friction during 1938.

Memel Controversy. Germany's increased influence in Eastern Europe after Munich was also reflected in the steps taken by the Lithuanian Government late in the year to grant autonomy to the Germans in Memel (q.v.). The Reich indicated that for the time being it would not seek incorporation of Memel in Great Germany. But when Britain and France on December 12 asked Hitler to respect the statute guaranteeing Lithuania's sovereignty over Memel, they were bluntly told that their signatures to the Memel Statute gave them no right to intervene in a purely German-Lithuanian controversy. See *LITHUANIA under History*.

Rome-Berlin Axis. Hitler's understanding with Mussolini proved sufficiently based upon mutual interests to withstand both the shock of Anschluss and British efforts to weaken the Rome-Berlin axis through the Anglo-Italian accord. Hitler seized Austria without consulting Mussolini. The latter was in no position to check the German invasion by the threat of armed intervention, as he had done in 1934. Weakened by the Ethiopian war and preoccupied in Spain, Il Duce sullenly acquiesced, being mollified by Hitler's assurances that Germany would rest content with the Brenner frontier and would not lay claim to

the 200,000 Austrian Germans in the Italian Tirol.

During May 3-9 the German Chancellor visited Rome to repay the visit to Germany made by Mussolini in 1937. He gave Mussolini his solemn pledge "to consider inviolable for all time the frontiers of the Alps erected between us by nature." The Italian Premier apparently received in addition a German promise of continued support in Spain. At any rate, the remainder of the year witnessed a tightening of German-Italian diplomatic bonds. Mussolini's aid proved invaluable to Hitler during the crisis over Czecho-Slovakia. By keeping France and Britain worried about their communications in the western Mediterranean, Italy prevented the formation of a coalition against Germany and thus enabled the Reich to establish its unquestioned control over Central Europe. In return Mussolini asked German support for his demands upon France (q.v.).

Italo-German diplomatic collaboration was accompanied by economic and cultural accords. In June an agreement covering the treatment to be accorded Italian capital in Austria was signed. A pact adjusting customs tariff relations between Italy and what was formerly Austria was signed May 28. Another agreement safeguarded Trieste's position with regard to Austria's trade. An accord governing scientific, cultural, and artistic relations between the two countries was signed November 23. It provided for greatly increased cultural interchange and for "repressive treatment of politically tendentious literature of political expatriates directed against the institutions and regimes of these two countries." Numerous Italian workers were sent to Germany to meet the German labor shortage, thus reducing unemployment in Italy.

Closer Ties with Tokyo. Hitler also tightened Germany's bonds with Japan, the other partner in the tripartite anti-Communist bloc. He abandoned his claim to the former German colonies held by Japan under League mandate and lent powerful diplomatic support to Japan in China (q.v.) and economic assistance in Manchoukuo (q.v.). Important quantities of German manufactures were bartered for Manchurian foodstuffs and other products under an agreement of September 13. A German-Japanese cultural pact was approved by the Japanese Privy Council on November 22. It provided for mutual recognition of their respective racial principles, for co-operation in all sports and cultural fields, and for closer collaboration against communism. The Germans, according to reliable reports, also sought to conclude a more specific military alliance with Japan.

Attitude toward France. Hitler's program of neutralizing Britain in order to deal with France alone received a severe setback through the conclusion of a comprehensive Anglo-French alliance in April. But this aided Hitler's drive against Czecho-Slovakia as it better enabled Britain to persuade France not to fulfill her treaty obligations to Prague. The collapse of the Popular Front government bloc in France and the establishment of a French Government antagonistic to the Soviet Union and conciliatory toward the Reich was another highly favorable development from the German point of view.

After Munich Hitler proposed the conclusion of a non-aggression declaration with France similar to that signed with Prime Minister Chamberlain. After some negotiation a declaration of amity which recognized their frontiers as definitive was signed by Foreign Ministers Ribbentrop and Bonnet in Paris on December 6 (see *FRANCE under*

History). The Germans hoped that it would weaken the Anglo-French and Franco-Soviet alliances. But deep suspicion of German policy remained in France. The question of the return of former German colonies held by France and of German support of Italy in Spain and the Mediterranean remained to divide the two nations.

Anglo-German Relations. Although Prime Minister Chamberlain's "appeasement" policies contributed greatly to Hitler's sensational gains in Central Europe, the year witnessed a gradual hardening of British sentiment against Germany. This was attributed to the growing belief that Hitler would not rest content with his gains of 1938 or with the projected return of the former German colonies but that he aimed to crush Britain and despoil her of her other colonies and world markets.

In his Reichstag speech of February 20 Hitler addressed his demand for colonies specifically to Britain. He also pressed the British Government to curb anti-German press attacks. Chamberlain indicated a willingness to return at least some of the former German colonies provided Hitler would agree to a peaceful settlement of outstanding European issues. But no progress toward an Anglo-German agreement appeared to have been made during the year. Moreover, Chamberlain's "appeasement" policies failed to bring the expected improvement in their general relations. The Germans were resentful of the tightening of the Anglo-French alliance, the extent of the British armament program, the anti-German agitation in the British press and by public figures. The British were greatly alarmed by German air power, Hitler's reckless diplomacy and repeated war threats, the inroads made by German barter trade into British foreign markets, the Reich's support of Mussolini in Spain and the Mediterranean, and of Japan in South China. Nazi attacks upon Jews, Protestants, Catholics, and other dissenters and violent criticism of British public figures and institutions also aroused British hostility.

While acquiescing in German expansion to the east at the expense of the smaller European powers, Prime Minister Chamberlain was less conciliatory where direct British interests were involved. Germany was forced on July 1 to pay British holders of Austrian bonds, while claims of American and other foreign creditors were ignored. The British got action by threatening to impound the proceeds of German exports to the United Kingdom, which greatly exceeded German purchases of British goods.

At the conclusion of the Munich Conference, Hitler and Chamberlain signed a joint communiqué stating that they recognized "the question of Anglo-German relations as of the first importance for the two countries and for Europe"; that they regarded the Munich Accord and the Anglo-German naval agreement "as symbolic of the desire of our two peoples never to go to war with one another again"; and that they would continue their "efforts to remove probable sources of difference and thus contribute to assure the peace of Europe" by methods of consultation.

Soon afterwards negotiations were resumed for an Anglo-German air pact. The Germans held out for the limitation of the British air fleet at about 35 per cent of theirs, while the British demanded equality. Consequently the negotiations languished. This impasse coincided with a shift of Nazi attacks from France, Russia, and Czecho-Slovakia to Britain and the United States, which blocked

German expansion overseas. In a speech at Weimar on November 6 Hitler bitterly denounced Winston Churchill, Anthony Eden, and leaders of the Liberal and Labor parties in Britain as "war mongers." Two days later at Munich he publicly told Britain and France that Germany had no demand to make on them beyond the colonial question, but that "if others decline to grant our rights we shall secure them in a different way." The British Government replied that it was "not contemplating the transfer of any territories under British administration."

In December the London Government introduced a bill for a £10,000,000 fund to fight German dumping in competition with British exports to Eastern Europe and elsewhere. Dr. Schacht visited London in the middle of that month in an effort to avert a trade war and to seek an agreement on the refugee issue, but met with no success. Prime Minister Chamberlain, speaking before the House of Commons on December 19, asked for "a sign from those who speak for the German people" that they were ready to aid European peace. He was not reassured when the Reich Government announced that it would increase its submarine tonnage by about 45,000 tons to a figure equal to that of the British submarine fleet. A British naval delegation that went to Berlin in an effort to change this decision returned empty-handed to London on December 31. It was reported that Germany had also decided to build two more heavy cruisers in addition to three under construction, and had raised the question of increasing the maximum caliber of naval guns from 16 to 18 inches. Germany justified these increases by Soviet naval construction in the Baltic, but since they posed a direct threat to Franco-British communications and naval predominance in the Atlantic, they contributed to a deepening of British suspicion concerning Hitler's future military aims.

Rift with United States. Germany's relations with the United States had been going from bad to worse ever since Hitler assumed direction of the Reich Government. During 1938 they reached a stage just short of the severance of diplomatic relations (see UNITED STATES under *Administration*). There were violent recriminations between public officials and the press of both countries, growing competition in armaments, and constant friction over the treatment of American Jews and their properties in Germany, German trade methods which adversely affected American markets in Latin America and elsewhere, rival propaganda offensives in Latin America, the treatment accorded American holders of German and Austrian bonds, and the activities of German-employed spies and Nazi organizations in the United States in support of German foreign and domestic policy (see FASCISM).

The anti-Semitic outbreaks in Germany in November provoked a public condemnation from President Roosevelt on November 15 and the recall of the American Ambassador from Berlin. The Reich replied by summoning Ambassador Dieckhoff home on November 18 to report on "public sentiment in the United States and the singular attitude toward domestic affairs in Germany manifested in various declarations by President Roosevelt and other important United States personalities." A speech by Secretary of the Interior Harold Ickes attacking Hitlerism and Americans who accepted decorations from "a brutal dictator" led the German Chargé d'Affaires at Washington on December 21 to request the government to disavow

the speech. Acting Secretary of State Sumner Welles bluntly rejected the request, declaring that it was improper at a time when the German press was filled with attacks against President Roosevelt and members of his Cabinet. Welles declared that Ickes' utterances were a natural expression of public indignation aroused by "the recent policies in Germany."

Relations with Small Democracies. Similar tension marked the relations between the Reich and the small democracies of Western and Northern Europe. By economic pressure, support of native Nazi movements, and threats of military action, the Nazi regime sought to still criticism of its policies and methods in Switzerland, the Netherlands, and the Scandinavian states. In an exchange of notes with Switzerland on June 24 the Reich promised to respect its neutrality in return for Swiss repudiation of the sanctions and allied obligations of the League Covenant. Nevertheless, the Swiss Government felt obliged to take drastic measures against Nazi propaganda and intrigue. The other small democracies, while taking steps to insure their complete neutrality in the expected war, offered sturdy resistance to any change in their democratic institutions suggested from Berlin. Yet they lived in fear of German might and deeply distrusted Hitler's intentions.

See AUSTRIA, BELGIUM, BOLIVIA, BRAZIL, BULGARIA, CHILE, CHINA, COLOMBIA, CZECHO-SLOVAKIA, DENMARK, ECUADOR, FRANCE, GREAT BRITAIN, GREECE, HUNGARY, ITALY, JAPAN, LITHUANIA, MEXICO, NETHERLANDS, POLAND, PORTUGAL, RUMANIA, SOUTH AFRICA, SPAIN, SWEDEN, SWITZERLAND, TURKEY, UNION OF SOVIET SOCIALIST REPUBLICS, and YUGOSLAVIA under *History*; CHEMISTRY, INDUSTRIAL; FASCISM; GARBAGE AND REFUSE DISPOSAL; JEWS.

GIBRALTAR. A British crown colony and fortified naval base. Area, $1\frac{3}{4}$ square miles; total civilian population (Jan. 1, 1938, estimate), 19,541, of whom 16,792 were fixed residents. During 1937 there were 381 births (22.69 per 1000) and 292 deaths (crude death rate was 14.93 per 1000). In 1937 there were 13 government-aided elementary schools with a total of 2884 pupils enrolled, 4 secondary schools, and a few private schools.

Trade. The chief trade is the supply of coal, fuel oil, and provisions to shipping, and the transit of cargo to Spain and Morocco. There is no agricultural production. Fishing is carried on in local boats for home consumption. A few minor industries, such as boat building, ship repairing, and the manufacture of tobacco, are carried on. The deep Admiralty harbor, of 440 acres in extent, contained three graving docks. Owing to the fact that Gibraltar is practically a free port, trade statistics are unavailable. During 1937 a total of 5149 ships aggregating 13,739,230 tons entered. In 1938 there were 14 miles of roads.

Government. For 1937 revenue totaled £207,984; expenditure, £196,179. The government of the colony is administered under Letters Patent of Sept. 12, 1922, by a governor who is aided by an executive council of 4 official and 3 unofficial members. Legislative power is vested in the governor who is also the general officer commanding the garrison. Governor, Gen. Sir W. Edmund Ironside (appointed, October, 1938).

History. During 1938 the Colonial Secretary in London approved proposals submitted by the Housing Commission for the expenditure of £100,000 on a housing scheme to be known as Harington Buildings. A new reservoir, the ninth built into the Rock,

with a capacity of 1,750,000 gal., was ready for use in May. A tenth reservoir, twice the size of the ninth, has been started.

As a result of a state of overcrowding due to the number of Spaniards seeking refuge in Gibraltar, the Aliens and Strangers Ordinance was to be amended so as to avoid the danger of an epidemic which might menace the civil community, and, if it reached the garrison, impair the efficiency of the fortress. In June Governor Harington laid the foundation stone of the King George V Hospital for Diseases of the Lung. See SPAIN under *History*.

GILBERT, S(EYMOUR) PARKER. An American lawyer and banker, died in New York, Feb. 23, 1938. Born in Bloomfield, N. J., Oct. 13, 1892, he graduated from Rutgers College in 1912 and received a law degree at Harvard in 1915. After admittance to the bar he joined the firm of Cravath and Henderson, with which he remained until 1918 when Russell C. Leffingwell, a member of the firm, invited him to assist him as a member of the War Loan staff in the office of the Secretary of the Treasury of the United States as counsel in war loan matters.

In June, 1920, he was appointed Assistant Secretary of the Treasury to have charge of fiscal affairs, and on July 1, 1921, made Under Secretary of the Treasury in charge of fiscal affairs to succeed Mr. Leffingwell who had resigned. His major task was assisting Andrew Mellon, then Secretary of the Treasury, in the refunding of short-dated war debts of the Federal Government, which work had been begun by Mr. Leffingwell during the Wilson Administration. During this period he was assigned to the supervision of various bureaus and offices including the Public Debt, Loans and Currency, Accounts and Audits, Comptroller of the Currency, the Budget, Mint, etc. He resigned this post on Nov. 17, 1923, and returned to New York to rejoin his law firm.

On Oct. 30, 1924, he resigned to succeed Owen D. Young as permanent agent general for reparation payments in Germany under the Dawes plan. It was his undertaking to lead Germany to economic and financial stability and to transfer reparations from Germany to the World War Allies and to the United States. During his tenure as agent general he transferred on paper 7,948,988,748 gold marks as reparations, or about \$2,000,000,000, and supervised the distribution of this sum in varying amounts and varying types of goods and services to the Allied nations.

In 1929 the Young plan for the payment of reparations was instituted and the Dawes plan abolished, and on May 17, 1930, Mr. Gilbert ended his association with reparations, his work being taken over by the Bank for International Settlements. On Jan. 2, 1931, he was made a partner in the firm of J. P. Morgan & Company, with which he was associated at the time of his death.

In addition to honorary degrees, he was made a grand officer of the French Legion of Honor (1930), of the Order of Leopold of Belgium (1930), and of the Order of Saints Maurizio and Lazzaro, Italy (1930). He published *Reports as Agent General for Reparation Payments*, covering the administration of the Dawes Plan.

GILBERT AND ELLICE ISLANDS. A British colony in the mid-Pacific, consisting of the Gilbert group (16 coral atolls), the Ellice group (9 coral atolls), the Phoenix group, and the distant Ocean, Fanning, Christmas, and Washington islands. Total area, 216 square miles; population

(1937 estimate), 36,052. Copra and phosphate of lime are the chief products. In 1937 imports were valued at £119,201; exports, £449,940. For the fiscal year ended June 30, 1937, revenue totaled £77,630; expenditure, £79,835. The colony is administered by a resident commissioner (with headquarters on Ocean Island), under the British High Commissioner for the Western Pacific (with headquarters in Fiji).

History. The Phoenix Islands were included in the Gilbert and Ellice Islands colony by a British Order in Council of Mar. 18, 1937. According to the Anglo-U.S.A. Pact of Aug. 10, 1938, the islands of Enderbury and Canton (Mary) of the Phoenix group are for the common use of Great Britain and the U.S.A. for civil aviation and communications. See CANTON ISLAND; ENDERBURY ISLAND.

GIRL SCOUTS. A nonsectarian movement for girls from 7 to 18, started in Savannah, Ga., in 1912 by Mrs. Juliette Low and adapted from the scouting program begun in England in 1907 by Lord Baden-Powell. It is a leisure-time program which supplements the work of the church, the home, and the school, and encourages girls to learn and practice the cultural and domestic arts, healthful living, and good citizenship. The active, paid-up memberships as of Dec. 31, 1938, totaled 516,420, inclusive of leaders.

Girl Scouting in 1938 began its 27th year by putting into effect a revised program planned for girls of three age levels: Brownie Scouts, from 7 to 10 years old; Girl Scouts, from 10 to 14 years old; and Senior Girl Scouts, from 14 to 18 years old. The revised program provides wider choices of activities and greater freedom for the development of the individual girl and of the group. Girl Scouting covers 10 general fields of interest: The out-of-doors, homemaking, international friendship, arts and crafts, community life, sports and games, nature, health and safety, literature and dramatics, music and dancing. For Senior Girl Scouts there is an additional field, vocational exploration.

In August a group of five American Girl Scouts and their leader attended the annual gathering of Girl Guides and Girl Scouts at Our Chalet, the international Girl Scout meeting place near Adelboden, Switzerland. Nine nations were represented. These meetings are made possible by the Juliette Low Memorial Fund, maintained by the Girl Scouts of the United States.

The official organ for girls is the *American Girl Magazine*, and for leaders, the *Girl Scout Leader*, each a monthly publication. The national officers in 1938 were: Honorary president, Mrs. Franklin D. Roosevelt; chairman of the board of directors, Mrs. William J. Babington Macaulay (q.v.); president, Mrs. Frederick H. Brooke; national commissioner, Mrs. Frederick Edey; secretary, Mrs. Ralph G. Wright; treasurer, Miss Eleanor Frances Edson. Mrs. Paul Rittenhouse is national director. Headquarters are at 14 West 49th St., New York City.

GLUCK, ALMA (MRS. EFREM ZIMBALIST). An American singer, died in New York, Oct. 27, 1938. Born Reba Fiersohn in Bucharest, Rumania, May 11, 1884, she was brought to New York City in 1890 and educated there in the public schools and at Normal College and at Union College, Schenectady, N. Y. She entered the business world and was married to Bernard Gluck before she studied singing. But becoming aware of her beautiful soprano voice, she decided to improve it and studied under Signor Buzzi-

Peccia during 1906-09. Being heard by Gatti-Casazza, she was engaged by the Metropolitan Opera Company and made her debut as Sophie in Massenet's *Werther* at the New Theater, New York, then an adjunct of the Metropolitan. During that season she sang 11 different roles. In the next year, Mme. Gluck appeared at the Metropolitan, where she won instant recognition. During her association with the Metropolitan, she sang the roles of Mimi in *La Bohème*, Nedda in *Pagliacci*, Leonora in *Il Trovatore*, and Marguerite in *Faust*. In 1912 she retired from the operatic stage.

She then devoted her attention to the concert stage where she scored a notable success and established a reputation in lieder singing. She studied with Mme. Sembrich in Berlin during 1912-13, and in 1914 was married to Efrem Zimbalist, the violinist, having been divorced in 1912. Thereafter, she appeared less and less on the concert stage, although occasionally she gave joint recitals with her husband. In 1925 she definitely retired.

Mme. Gluck was well-known for her song recordings, chief among them being for her beautiful rendition of "Carry Me Back to Old Virginny." She was a founder of the American Woman's Association and of the American Guild of Musical Artists, and gave her support to the Friends of Music, the Musician's Emergency Fund, and the Yorkville Music School Settlement.

GLYCEROL FROM OIL. See CHEMISTRY, INDUSTRIAL.

GOA. See PORTUGUESE INDIA.

GODOWSKY, gō-dōv'ské, LEOPOLD. An American pianist, teacher, and composer, died in New York, Nov. 31, 1938. Born in Wilno, Russian Poland, Feb. 13, 1870, his musical ability manifested itself at an early age, and after studying with local teachers, he made his first public appearance at the age of nine. His success led him to tour Russia and Poland, and in 1881 he entered the Hochschule in Berlin where he remained until 1884.

In 1884-86 Godowsky made his first American tour. He left for London and Paris in 1886 where he studied under Saint-Saëns until 1890. He then made a second tour of America during 1890-94. For a year (1894-95) he was director of the Piano Department of the Broad Street Conservatory of Music in Philadelphia, and then became director of the Piano Department in the Chicago Conservatory of Music, holding this position until 1900. In 1900 he was invited to play at a concert in Berlin, then the heart of the musical world. His Berlin debut was made on Dec. 6, 1900, and so great was his success that he gave five concerts instead of one, and established his place as one of the foremost of contemporary pianists. He remained in Berlin working and teaching until 1909, when he was appointed by the Emperor Francis Joseph director of the Imperial Royal Meisterschule for Piano at the Imperial Royal Academy of Music in Vienna with the title of imperial royal professor. He held this position until 1914 when, after a concert tour in America, he settled in the United States, becoming a citizen of that country in 1921. Thereafter, Godowsky devoted himself to teaching, composing, and the concert stage. He retired in 1930 after a paralytic stroke left his right hand almost useless, and thereafter composed many pieces for the left hand alone, including a prelude and fugue, suite, six waltz poems, elegy, meditation, impromptu, etc.

Besides being known as a concert pianist and teacher, he was also a composer of note, and his numerous paraphrases of works by Chopin, Weber,

Henselt, and J. Strauss make extraordinary demands upon the player's technical execution. His original compositions consist of a sonata in E minor, 24 pieces published under the title *Renaissance*, 24 others entitled *Waltermasken*; 12 compositions for the violin; Triakontameron (30 pieces) for piano; Phonoramas (Java cycle of 12 compositions); Concert Studies in C and E-flat; Sarabande in C-sharp minor; Menuet in A-flat; Courante in E-minor; Scherzino in C-sharp minor, and 46 miniatures for four hands. From 1912 to 1921 he was editor-in-chief of the *Progressive Series of Piano Music*, and in 1934 acted as chairman of a concert in honor of Albert Einstein. Also, he was acting chairman of the Musicians Committee to Aid Spanish Democracy.

GOGA, OCTAVIAN. A Rumanian writer and politician, died at Cluj, Rumania, May 7, 1938. Born in Transylvania, Apr. 1, 1881, he was educated at the universities of Budapest and Berlin. In 1902 he founded the literary review *Luceafărul*, which exerted a strong influence in fostering Rumanian culture under a Hungarian regime. His poetry, which consisted mainly of poems on Transylvanian life and translations of Hungarian verse, won for him the National Prize for Poetry. Subsequently he directed the review *Tara Noastră* and was a former president of the Rumanian Authors' Union, and a member of the Rumanian Academy of Science.

Although honored in 1905 for his patriotic verse, it almost brought him to jail, but he escaped to Hungary where he remained until the outbreak of the War in 1914 when he returned to Rumania and joined the army. After the War he was an adviser to the Rumanian delegation to the Paris Peace Conference. A member of Averescu's People's Party, in 1921 he founded his own party, the National Agrarians, which in 1935 was merged with Alexander Cuza's League for National Christian Defense.

Goga served as Minister of Cults in 1922 and of the Interior during 1926-27 and while holding the latter office carried through one of the most coercive elections in Rumanian history. On Dec. 28, 1937, Goga was appointed prime minister by King Carol, to the amazement of Europe, as the National Christians polled only 9.15 per cent of the votes in the elections to the Chamber of Deputies. He lost no time in putting into effect his anti-Semitic and Fascist principles and by the end of the year a series of anti-Jewish decrees, intending to exclude Jews from political and economic life, were put into effect. These soon affected the economic and financial life of the country, and on Feb. 10, 1938, Goga was compelled to resign, the high court declaring unconstitutional a decree barring Jews from voting in the promised elections. He then retired to his home in Transylvania. See *RUMANIA* under *History*.

GOLD. Gold production in the world during 1938, according to the American Bureau of Metal Statistics, totaled 31,837,000 fine oz., with the U.S.S.R. excepted, compared to 29,888,000 in 1937. South Africa continued to be the largest producer, producing over twice as much as the United States; next to the United States came Canada.

The United States and its possessions, according to the U.S. Bureau of Mines, produced in 1938 5,106,109 oz., having a value of \$178,713,815 which was 6 per cent more than in 1937. Of the total production, California contributed 25 per cent; Philippine Islands, 17; Alaska, 13; South Dakota, 12; Colorado, 7; Arizona, 6; Nevada, 6; Utah, 4, and Montana, 4. A preliminary estimate of refinery

gold production in the United States during the calendar year 1938 is given below.

States or Territories	Ounces	Value ^a
Alaska	667,000	\$ 23,345,000
Alabama	30	1,050
Arizona	310,000	10,850,000
California	1,294,400	45,304,000
Colorado	370,100	12,953,000
Georgia	833	29,155
Idaho	101,000	3,535,000
Maryland	847	29,645
Montana	197,200	6,902,000
Nevada	289,700	10,139,000
New Mexico	38,600	1,351,000
North Carolina	1,870	65,450
Oregon	77,100	2,698,500
Pennsylvania	1,402	49,070

^a Gold valued at \$35 (in 1915 at \$20.67+) per fine ounce. ^b A self-governing commonwealth under the sovereignty of the United States.

The U.S. Department of Commerce announced that the United States' exports and imports of gold for 1937 and 1938 were:

Year	Exports	Imports	Excess
1938	\$ 5,889,000	\$1,979,458,000	\$1,973,569,000
1937	46,020,000	1,631,523,000	1,585,503,000

U.S. Treasury price per ounce for home and foreign gold under Executive Order of Jan. 31, 1934, \$35. Gold in U.S. Treasury reached \$14,500,000,000 in 1938, against \$12,760,150,000 at the end of 1937.

See **BANKS AND BANKING**; **FINANCIAL REVIEW**; **UNITED STATES** under *Administration*.

GOLD COAST. A British colony in West Africa, comprising the Gold Coast colony (23,937 sq. mi.), Ashanti (24,379 sq. mi.), Northern Territories (30,486 sq. mi.), and the area of Togoland mandated to Great Britain (13,041 sq. mi.). Total area, 91,843 square miles; total population (July, 1937, estimate), including British Togoland, 3,703,517, excluding 4463 non-Africans. The principal towns are Accra (71,016 inhabitants), Cape Coast (19,134), Sekondi (20,864), Kumasi (42,203), Tamale (17,687), Koforidua (13,243), and Ho (3549).

Production and Trade. The main products were cacao, kola nuts, palm kernels, copra, rubber, maize, yams, timber, gold, manganese ore, and diamonds. For 1937-38 the cacao crop was estimated at 270,000 metric tons. Gold production (1937) totaled 590,025 fine oz. The Gold Coast is the second largest producer of diamonds and the third largest producer of manganese ore in the world. Cotton manufactures, machinery, iron and steel manufactures, foodstuffs, tobacco, oils, and medicine and drugs were the main imports. In 1937 total imports (including specie and currency of £6,921,608) were valued at £19,228,363; exports (including re-exports of £268,600) totaled £16,218,193, of which cocoa (236,206 tons) accounted for £9,989,548; gold (557,764 fine oz.), £3,910,757; manganese ore (527,036 tons), £1,025,091; diamonds (1,577,661 carats), £648,057.

Communications. During the year ended Mar. 31, 1938, the length of railway line open to traffic

totalled 500 miles; 3,436,478 passengers and 1,004,-876 tons of freight were carried. Accra is the exchange center for air mails received and dispatched by Imperial Airways and the French Aeromarine-time services. The number of ships using the harbor of Takoradi in 1937-38 totalled 752, and the amount of cargo handled (import and export) amounted to 941,324 tons.

Government. For the year ended Mar. 31, 1938, net revenue totalled £3,791,673; net expenditure, £3,636,569; public debt, £11,435,000 against which the sinking funds for its redemption totalled £1,629,321. The government of the colony is administered by a governor assisted by an executive council, and a legislative council of 15 official and 14 unofficial members. Ashanti, the Northern Territories, and Togoland (British) are administered by the governor of the Gold Coast, and their statistics of trade, etc., are included in the general total for the Gold Coast. Governor and Commander-in-Chief, Sir Arnold W. Hodson (appointed, Oct. 20, 1934).

GRAND ARMY OF THE REPUBLIC. A patriotic order, formed at Decatur, Ill., in 1866 so that veterans who had served in the Federal Army during the Civil War might "enjoy a companionship made sacred by common sufferings and sacrifices." Affiliated with it are its auxiliary, the Women's Relief Corps, and the allied bodies, Ladies of the G.A.R., Daughters of Union Veterans of the Civil War, Sons of Union Veterans of the Civil War, and the auxiliary to the Sons of Union Veterans.

The maximum strength of the organization was in 1890 when it had a membership of 408,487. On Jan. 1, 1938, there were 948 posts with a membership of 3325. The 72d National Encampment was held in Des Moines, Iowa, September, 1938, and the following officers were elected: Commander-in-Chief, Robert M. Rownd, Ripley, N. Y.; Adjutant-General, Martin V. Stone, Jamestown, N. Y.; Quartermaster-General, John E. Andrew, Quincy, Ill. National headquarters are at Library Building, Ripley, N. Y.

GRAYSON, REAR ADM. CARY T (RAVERS), U.S.N., RET. An American physician and naval officer, died in Washington, D. C., Feb. 15, 1938. Born in Culpeper County, Va., October 11, 1878, he worked his way through William and Mary College (1895-98) and received the degrees of Ph.G. and M.D., at the University of the South in 1902. He interned at the Columbia Hospital for Women in Washington during 1902-03 and attended the U.S. Naval Medical School, graduating in 1904. On July 14, 1903, he was commissioned acting assistant surgeon in the U.S. Navy.

Thereafter he became successively assistant sur-

geon, June 28, 1904; passed assistant surgeon, June 28, 1907; surgeon, August, 1916, and medical director with the rank of rear admiral, Aug. 29, 1916. He saw service as surgeon at the U.S. Naval Hospital, Washington (1903-05); on the U.S.S. *Maryland* on a trip around the world (1905-07); surgeon of the presidential yacht *Mayflower*, and attending and consulting physician, Naval Dispensary, Washington, during the Roosevelt and Taft administrations.

At the inauguration of President Wilson in 1914, Dr. Grayson was called in to attend a guest, and soon afterward became the personal physician of the president. It was not long before he became the president's friend and confidant. When President Wilson became ill in 1919 it was Admiral Grayson who refused to allow the Vice-President to assume authority, and with Mrs. Wilson and the president's secretary, Mr. Tumulty, he supervised the affairs of the presidency. In 1920 he was awarded the Navy Cross "for conspicuous and meritorious duty as physician to the President of the United States and aid to him during the war."

On Dec. 30, 1928, Admiral Grayson retired from the Navy and was appointed chairman of the Gorgas Memorial Institute of Preventive Medicine and Tropical Research. His real interest, however, was in the breeding of race horses and two of his more important horses were *My Own*, which won the Saratoga Cup in 1923, and *Sarazen*, which won 27 races and prizes worth \$225,000.

In March, 1935, President Franklin D. Roosevelt appointed Admiral Grayson chairman of the American Red Cross to succeed John Barton Payne. Under his influence the society developed extensive public safety and public sanitation campaigns and mobilized more than 5,000,000 persons in annual roll calls.

During the World War, he was a member of the public health commission of the National Food Administration and of the Council of National Defense. At the inaugurations of Franklin D. Roosevelt in 1933 and again in 1937, Dr. Grayson was chairman of the committee in charge. A fellow of the American College of Surgeons, he was also a commander of the Order of Leopold of Belgium and of the French Legion of Honor.

GREAT BRITAIN. Official designation for the political union embracing England, Scotland, and Wales. Capital, London. Sovereign in 1938, George VI, who succeeded to the throne upon the abdication of Edward VIII Dec. 10, 1936, and was proclaimed King Dec. 12, 1936. Great Britain, together with Northern Ireland, the Isle of Man, and the Channel Islands, forms the United Kingdom of Great Britain and Northern Ireland. For statistical purposes, the Isle of Man, the Channel Islands, and in some cases Northern Ireland, are included under Great Britain. See BRITISH EMPIRE; IRELAND, NORTHERN.

Area and Population. The area of Great Britain, the census population of Apr. 27, 1931, and the estimated population on June 30, 1937, are shown by political divisions in the accompanying table.

GREAT BRITAIN: AREA AND POPULATION

Divisions	Area in sq. miles	Population 1931	1937
England (including Monmouthshire) ..	50,874	37,794,003	40,886,000
Wales	7,466	2,158,374	
Scotland	30,405	4,842,980	4,979,500
Isle of Man	221	49,308	145,000
Channel Islands	75	93,205	
Total	89,041	44,937,444	46,010,000

Live births in England and Wales in 1937 numbered 610,850 (14.9 per 1000); deaths, 509,560 (12.4 per 1000); marriages, 357,886 (8.7 per 1000). Live births in Scotland in the same year numbered 87,812 (17.6 per 1000); deaths, 68,942 (13.9 per 1000); marriages, 38,345 (7.7 per 1000). Permanent British emigrants to places outside of Europe numbered 31,764 in 1937 and immigrants of British nationality into Great Britain numbered 42,628. Of the emigrants, 2423 went to the United States, 2850 to British North America, 4122 to Australia, 1981 to New Zealand, 5577 to British South Africa, and 5632 to India and Ceylon. At the 1931 census the population of England and Wales was 80 per cent urban and 20 per cent rural.

Estimated populations of the chief cities in 1936 were: Greater London, 8,575,700; County of London, 4,141,100; Glasgow (Scotland), 1,119,900 in 1937; Birmingham, 1,018,800; Liverpool, 846,400; Manchester, 744,000; Sheffield, 518,200; Leeds, 489,862; Edinburgh (Scotland), 468,500; Belfast (Northern Ireland), 438,086 in 1937; Hull, 321,500; Bradford, 291,085; Newcastle-on-Tyne, 290,400; Stoke-on-Trent, 273,100; Nottingham, 279,400; Leicester, 261,800; Portsmouth, 251,400; Croydon, 241,739; Cardiff (Wales), 221,500; Plymouth, 206,400; Salford, 206,000.

Education and Religion. For the school year 1936-37, there were in England and Wales 21,654 elementary schools with an average attendance of 4,588,298; in Scotland, 2898 primary schools, with an average attendance of 566,550. For secondary education, there were in England and Wales 8575 schools of all kinds with about 1,773,900 pupils; in Scotland, 252 secondary schools with an average of 156,818 pupils on the rolls, various Central Institutions with 9172 day and 11,475 evening students, 790 centers for Continuation Classes with 152,018 students, and 7 normal schools with 1862 students. The 11 universities in England had 40,571 students in 1937-38, the four Scottish universities 10,357 students and the University of Wales 2935 students.

The Church of England (q.v.), with an Episcopal form of government, and the Church of Scotland (Presbyterian) are the "established religions" in England and Scotland, respectively. Recent statistics of "full members" of leading denominations in England and Wales were: Anglicans, 2,294,000; Methodists, 1,244,374; Congregational, 494,199; Baptist, 401,175; Calvinistic Methodist, 272,935. The number of Roman Catholics was estimated at 2,321,117 in 1933. The Church of Scotland had 2588 congregations and 1,288,571 full members on Dec. 31, 1936; the Roman Catholic Church, about 450 churches, chapels, and stations and 614,205 adherents. Various other Protestant denominations had smaller followings in Scotland.

Agriculture. About 21 per cent of the total area of the United Kingdom is arable land. The value of agricultural production in England and Wales in 1937 was £220,640,000 (livestock and products, £148,340,000; farm crops, £39,830,000; fruit, vegetables, and miscellaneous crops, £32,470,000). Yields of the chief cereals for England, Scotland, and Wales in 1938 were (in metric tons): Wheat, 1,914,300; barley, 859,600; oats, 1,703,900. For the entire United Kingdom, the potato harvest in 1937 was 183,531,000 bu.; turnips and swedes, 10,643,000 long tons; sugar beets (excluding Northern Ireland), 2,583,000 long tons; beet sugar (1937-38), 435,000 long tons; hops (England and Wales only), 26,320,000 lb.; flax (Northern Ireland only), 9,379,000 lb.; hay, 8,931,000 long tons. Livestock

statistics for the United Kingdom in 1937 were: Cattle, 8,639,000; sheep, 25,541,000; swine, 4,453,000; horses (in Great Britain on farms), 1,005,000. The wool clip as in the grease was about 107,000,000 lb. in 1937.

Mining and Manufacturing. The industrial census of 1935 showed a gross output valued at £3,464,300,000, of which £1,801,017,000 was the cost of materials and labor and £1,576,064,000 was the net value of production. A total of 7,076,600 workers were employed in industry in that year. Mineral and metallurgical production of the United Kingdom in 1937, with 1936 figures in parentheses, was (in metric tons): Coal, 245,053,000 (232,114,000); iron ore, 4,200,000 (3,872,000); tungsten ore (metal content), 132,000 in 1936; pig iron and ferro-alloys, 8,633,000 (7,845,000); steel ingots and castings, 13,172,000 (11,974,000); copper, 5200 (9400); lead ore (metal content), 26,500 (31,000); zinc (smelter production), 66,000 in 1936; aluminum (smelter production), 19,400 (16,400). The production of alcoholic spirits was 82,870,000 proof gal. in 1937; beer, 17,853,000 bbl. (of 36 gal.); cotton deliveries to spinners (1936-37), 3,155,000 bales; vessels launched, 921,000 gross tons; motor vehicles, 508,749; rayon, 154,810,000 lb.

Fisheries. During 1937 the fisheries of England and Wales landed 851,825 tons of fish valued at £11,951,195 and those of Scotland 235,083 tons valued at £3,422,178. The figures excluded shell-fish, which for all Great Britain was valued at £534,297 in 1937. The fishing fleet of the United Kingdom numbered 13,352 vessels of 273,855 net tons in 1936 and the number of regular and occasional fishermen employed was 54,774.

Foreign Trade. Recent trends in British foreign trade are shown in the accompanying table.

BRITISH FOREIGN TRADE *
[In thousands of pounds sterling]

Calendar year	Imports ^b	Exports British products ^c	Re-exports (imported merchandise) ^c	Total exports ^c	Excess of imports
1929 ..	1,220,765	729,349	109,702	839,051	381,714
1932 ..	701,670	365,024	51,021	416,045	285,625
1935 ..	756,041	425,834	55,303	481,137	274,903
1936 ..	847,752	440,605	60,769	501,374	346,378
1937 ^d ..	1,029,065	521,594	75,167	596,761	432,304
1938 ^d ..	925,372	471,282	61,855	533,137	392,235

* Not including bullion and specie movements. ^b C. i. f. value. ^c F. o. b. value. ^d Provisional figures.

Leading merchandise imports in 1937 were (in thousands of dollars, converted at average exchange rates): Wheat, \$246,431; wool, \$245,735; butter, \$234,144; raw cotton, \$231,602; wool, \$195,448; tea, \$146,517; bacon, \$144,809; gasoline, \$126,498. The chief exports were (in \$1000): Machinery and apparatus, \$308,700; iron and steel, \$243,882; cotton piece-goods, \$221,408; coal, \$186,225; woollens and worsteds, \$101,046; chemicals, \$76,389. In 1937 the United States supplied 11.1 per cent of all British imports, Canada 8.6, India 7.0, India 6.3, and Argentina 5.8 per cent. Of the 1937 exports of British products, South Africa purchased 7.9 per cent, India 7.5, Australia 7.2, United States 6.0, Canada 5.3, and France and Germany 4.1 per cent each.

Finance. Budget operations for the fiscal years ending March 31 are shown in the accompanying table on p. 300.

The totals given above for expenditures excluded £64,867,000 met from issues under the Defense Loan Act in 1937-38 and £90,000,000 met in the same manner in 1938-39. Exclusive of certain capital

UNITED KINGDOM: BUDGET OPERATIONS

Years ending March 31	Receipts	Expenditures	Balance
1931-32	£851,482,281	£851,117,944	+ £ 364,337
1932-33	827,031,000	859,310,173	- 32,279,173
1933-34	809,379,149	778,231,289	+ 31,147,860
1934-35	804,629,050	797,067,171	+ 7,561,879
1935-36	844,775,000	841,834,000	+ 2,941,000
1936-37	896,596,194	902,193,385	- 5,597,191
1937-38	948,660,000	919,874,000	+ 28,726,000
1938-39 *	994,842,000	1,024,840,000	- 29,998,000

* Estimates.

liabilities, the total public debt on Mar. 31, 1938, amounted to £8,026,000,000 (funded, £3,365,000,000; terminable annuities, £13,000,000; unfunded, £3,766,000,000), compared with a total of £7,797,000,000 on Mar. 31, 1937. The average exchange value of the pound sterling was \$4.9440 in 1937 and \$4.8894 in 1938.

Shipping. The British merchant marine on June 30, 1938, consisted of 7203 vessels of 17,781,000 gross tons capacity. During 1937 a total of 86,078 vessels of 94,100,000 net registered tons entered the ports of the United Kingdom in the foreign trade. The tonnage entered at the leading ports was: London, 22,573,000; Liverpool and Birkenhead, 14,547,000; Southampton, 11,880,000; Plymouth, 5,552,000; Hull, 5,414,000.

Railways, etc. There were 20,081 miles of railway line in Great Britain in 1937 (52,428 miles of track). During that year the railways carried 904,000,000 passengers, excluding 648,000,000 transits of season-ticket holders. Freight carried, excluding livestock, was 297,063,000 long tons. Gross receipts totaled £171,400,000. Roads and highways of the United Kingdom aggregated 178,103 miles in 1937; number of automobiles, 2,198,994. The two British air transportation systems are Imperial Airways and British Airways. In the fiscal year 1936-37 Imperial Airways planes flew 5,231,655 miles, carried 64,771 passengers and 35,668,430 letters. British Airways statistics for 1937-38 were: Miles flown, 1,404,898; passengers, 22,646; mail, 1,525,912 lb. In April, 1938, Imperial Airways accelerated its schedules on the routes to India, Australia, and South Africa. The Secretary of State for Air announced in November that Imperial Airways and British Airways would be merged to promote overseas civil aviation and that legislation would be introduced for the establishment of a public corporation to acquire the undertakings of the two companies.

Government. The United Kingdom of Great Britain and Northern Ireland is a limited monarchy, with an unwritten constitution, under which final legislative, judicial, and administrative authority is vested in a Parliament of two houses, acting through a cabinet drawn from its members. The House of Commons consists of 615 members, elected by universal male and female suffrage on the basis of one member for every 70,000 of population. The House of Lords in 1938 had 785 members, including 24 minors not seated, who are variously selected—by heredity, appointment, by virtue of office, and by election.

The elections of November, 1935, gave the National Government 431 out of the 615 seats in the House of Commons. The standing of the government parties toward the end of 1938, modified slightly by by-elections, was as follows (names of leaders in parentheses): Conservatives (Neville Chamberlain), 375; Liberal National party (Sir John Simon), 33; National Labor party (Malcolm MacDonald), 7; Independent Nationals, 5; total, 420. The Opposition was made up as follows: La-

bor party (Clement R. Attlee) and Independent Labor (James Maxton), 168; Liberal party (Sir Archibald Sinclair), 19; Independents, 7; Communists, 1; total, 195. For the composition of the cabinet at the beginning of 1938, see 1937 YEAR BOOK, p. 303; for changes in 1938, see *History*.

HISTORY

Domestic Affairs. Events of 1938 rudely shattered Britain's complacent belief in her strength and safety. The European crisis over Czecho-Slovakia in September forced the British people to face the fact that German air power had largely nullified the security maintained for generations by the British fleet. For weeks on end they lived in daily fear that large-scale air raids would devastate London and other poorly defended English cities and initiate another costly and highly destructive struggle in which the fate of the British Isles as well as of the empire would be determined. They watched, powerless to act, while Japan seized Canton, isolated Hong Kong, and took over highly profitable markets that had been British trade preserves for several centuries. They saw Italy extending and consolidating her military and strategic positions in the Mediterranean and striving to establish unquestioned control over this vital artery of the British Empire.

The impact of these world disturbances subordinated interest in domestic politics to the growing concern regarding British foreign policy. Prime Minister Chamberlain's joint program of European appeasement and British rearmament occupied the center of the political stage throughout the year.

Rearmament. There was no dispute among British parties as to the necessity for immediate and extensive rearmament. The constant attacks made upon the Chamberlain Government on this score were directed at the slowness of the progress achieved and at the inadequacy of war preparations rather than at the huge cost of the armament bill. Defense appropriations jumped from £122,200,000 in 1935-36 to £319,600,000 in 1938-39, and were estimated at £580,000,000 for 1939-40. Even before the end of 1937 actual costs outran the armament estimates. The bulk of these expenditures, apart from increased costs of maintenance, went into warships and airplanes, munitions plants, "shadow" airplane factories, ordnance depots, and heavy purchases of war materials. To finance the program, the government not only borrowed heavily (£99,700,000 in 1937 and £90,000,000 in 1938) but also imposed heavy income and other tax increases.

Inevitably Britain's industrial structure was artificially stimulated and distorted by these great and non-productive expenditures. Apparently desirous of keeping British industry on a business basis as long as his appeasement policy held out any hope of averting war, Prime Minister Chamberlain did not throw the full weight of his government into the rearmament effort. On March 15 he answered Labor critics in the House of Commons as follows:

I do not know whether you would like us to imitate Germany in the measures she has employed in regimenting her country for the production of armaments. We may have to. But we will not do it until we are convinced that nothing else will serve our purpose.

The result of this policy was that Britain was unable to catch up with the Reich's stupendous output of arms and airplanes. In Parliamentary debates in March, Winston Churchill, Sir Archibald Sinclair, and other critics charged that the German

ARAB-JEWISH CONFLICT IN PALESTINE

These Jewish homes in a Haifa suburb were set afire by Arab terrorists in open revolt against the British authorities

air strength was at least 50 per cent greater than Britain's and that British aircraft production was inefficiently organized and lagging behind Germany's. Government spokesmen replied that 1750 first-line planes would be in commission early in 1939. But it tacitly admitted the charges of the critics by announcing a new program calling for 2370 first-line planes for home defense and a total air force of some 10,000 planes by 1940. In April an official Air Mission was sent to the United States and Canada, where orders were placed to supplement the British output of military aircraft. Drastic changes in army, navy, and air service conditions, designed to improve the officer corps, were announced late in July.

Despite criticisms, large-scale expenditures, and the fact that defense preparations had been under way since 1935, only the navy was ready for effective action when the crisis over Czecho-Slovakia led to mobilization. Neither the anti-aircraft units in the Territorial Army nor the Air Raids Precaution Department at the Home Office were fully prepared to cope with attacks on London. The Air Force, while probably superior to Germany's in first-line planes and pilots, still lacked actual and potential reserve planes. Conflict over governmental jurisdiction and distribution of costs had hamstrung the A.R.P. for many months, while military and civilian experts had been unable to agree upon the best methods for the defense of London.

The immediate consequence of the September crisis was intensified criticism of the government's alleged inefficiency and negligence, followed by further acceleration of the armament program. Complete reorganization of the Territorial Army was announced October 10, the new set-up being patterned after the highly mechanized professional army. Full equipment for the army remained to be provided. Yet the government declined to establish a Ministry of Supply and to compel industry to give priority to government armament orders. On November 10, however, the government announced that £200,000,000 would be spent on its Air Force in 1939-40, a 75 per cent increase over 1938-39, and similar increases were provided for in other defense services. A call for 7000 recruits to enlarge the air arm of the fleet was issued on December 29. The new Admiralty program called for a navy whose fighting power would be fairly equally divided between the air, the sea, and the under-sea forces. See also MILITARY PROGRESS; NAVAL PROGRESS.

Other Defense Measures. The pressure to adopt some form of national conscription to permit Britain to compete on equal terms with the totalitarian states grew during the year. On October 14 the War Office started recruiting factory employees between the ages of 38 and 50 to man anti-aircraft guns in defense of their respective industrial plants. The government on October 27 adopted a plan for the evacuation of one-third of the urban population in war time and their compulsory billeting in rural areas as the most effective way of protecting civilians against air raids. On December 1 a great voluntary "national register" was opened to permit every man and woman to state what kind of work they could do in war time. Preparations were made to transfer the capital from London to Exeter, an unexposed city of southwestern England, in case of war. The government on December 21 allocated £20,000,000 for the strengthening of private homes and other buildings against air raids. Basements were to be roofed with steel girders and sheets to prevent houses from

collapsing upon persons gathered in the cellars. In addition plans were adopted for a co-ordinated recruiting campaign to enlarge the military services, for expanded facilities for the training of volunteers, and for the preparation of machinery to compile a universal, compulsory register of all British subjects in the event of war.

Defense preparations extended to many other fields. The government made large foreign purchases of wheat, whale oil, sugar, and various other foodstuffs and materials, the supply of which might be cut off in war time. Government subsidies were advanced to the beet sugar, cattle raising, dairying, and other industries of vital necessity if British food imports were curtailed. Radio broadcasts in Arabic and other languages were inaugurated to counteract anti-British propaganda emanating from Italian and German broadcasting stations. Active measures were taken to strengthen colonial defenses, to assist and co-ordinate the extensive rearmament programs under way in the Dominions, and to safeguard empire communications through political and economic agreements with strategically situated countries, particularly Ireland, Saudi Arabia, Turkey, France, Portugal, and the Netherlands.

Appeasement Policy Attacked. Criticisms of the government's slow progress toward rearmament were mild compared with the storm of violent denunciation aroused among Laborites, Liberals, and even many Conservatives by the Prime Minister's efforts to "appease" Hitler and Mussolini. Chamberlain aimed to postpone a show-down with the dictators as long as possible to permit further British military preparations and in the hope that time and the sacrifice of non-British interests would satiate Germany, Italy, and Japan and dissolve their powerful alliance without endangering the British Empire. His critics contended that concessions would not satisfy the dictators but merely whet their appetites for further territorial conquest, that Britain would be forced to fight them eventually and would be in a much more disadvantageous position as a result of their strategic, economic, and political gains made at the expense of Britain's prospective allies.

Chamberlain's determination to pursue appeasement even at the cost of abandoning the policy of collective security against aggressor nations and repudiating the League of Nations Covenant led to the resignation of Anthony Eden as Foreign Secretary on February 20. The two men parted ways on the immediate issue of negotiations with Italy. Eden held that such negotiations should be postponed until Mussolini had given guarantees of his good faith, such as the withdrawal of Italian troops from Spain. "I do not believe we can make progress in European appeasement," he said, "if we allow the impression to gain currency abroad that we yield to constant pressure." Upheld by the House of Commons, 330 to 168, Chamberlain appointed Lord Halifax as Foreign Secretary in Eden's place and assumed direct control of the subsequent negotiations with Italy and Germany. At the same time Viscount Hailsham became Lord President of the Council and Lord Maugham became Lord Chancellor.

Eden during the remainder of the year played a shrewd role that made him the outstanding candidate to succeed Chamberlain as Prime Minister should the latter's appeasement policies fail. While refusing to break with his own party, Eden repeatedly affirmed his stand against further concessions to the dictators and in favor of conducting Brit-

ain's foreign relations on a basis of respect for contractual obligations and accepted principles. Before the House of Commons on November 10 he demanded a reformed "national" government to undertake a unified national effort to regain Britain's authority and former position in the world. More vigor in rearmament and social policies designed to "build a better Britain as well as a stronger Britain" were other telling points in his program. In December he went to the United States to address the National Association of Manufacturers in New York City (December 9). While there he discussed international affairs with President Roosevelt and other leading figures in American public life. His insistence that the British people were not decadent but were capable of the same effort that had made them great in past crises struck a responsive chord among the British voters.

On May 16 Viscount Swinton was succeeded as head of the Air Ministry by Sir Kingsley Wood. The change was designed to check criticism of the slow progress in aircraft production. Malcolm MacDonald was transferred from the Dominions to the Colonial Office to handle the thorny Palestine situation and Lord Stanley, son of the Earl of Derby, became Dominions Secretary. Lt. Col. John Colville was appointed Secretary of State for Scotland and Walter Elliot became Minister of Health. A further split in the cabinet on the appeasement issue came on October 1 when Alfred Duff-Cooper resigned as First Lord of the Admiralty in opposition to the concessions made to Hitler at Munich. He was succeeded on October 27 by Earl Stanhope, a Conservative party wheelhorse. Earl De La Warr, formerly Lord Privy Seal, succeeded Lord Stanhope as Minister of Education. On October 31 Sir John Anderson, a capable civil servant, was named Lord Privy Seal with the duty of organizing British civilian defenses. At the same time Viscount Runciman returned to the cabinet as Lord President of the Council to replace Viscount Hailsham and Malcolm MacDonald was appointed Dominions Secretary in succession to the late Lord Stanley. MacDonald retained the Colonial portfolio also. On December 20 it was revealed that a number of cabinet under-secretaries were in revolt against the handling of the rearmament program. Meanwhile, the lack of definite results from Chamberlain's appeasement policy, notwithstanding the sacrifice of Austria, Czechoslovakia, and Spain, lent strength to the revolt against the Prime Minister's leadership.

Censorship Issue. Another source of the government's unpopularity was the tendency it displayed toward increasing censorship of the press and other means of communication. Even members of Parliament were indirectly threatened with application of the Official Secrets Act, penalizing the disclosure of unauthorized military information, after Duncan Sandys, a Conservative member, had cited statistics showing a shortage of anti-aircraft artillery in support of an attack upon the War Ministry. When War Minister Hore-Belisha asked him to reveal the source of these statistics, he pleaded parliamentary privilege in refusing to disclose it. Hore-Belisha's attempt to make Sandys comply aroused much criticism in Parliament. On December 5 the House of Commons unanimously approved a report of a select committee censuring Hore-Belisha and the Attorney General for their handling of the Sandys case.

The Official Secrets Act and other legislation was used by the government to restrict the freedom

of the press in discussing rearmament and foreign policy, particularly during the September crisis over Czechoslovakia. The National Union of Journalists on November 5 launched a campaign for amendment of the Secrets Act to make it applicable only to espionage. Members of the Union charged that the government had warned several anti-government newspapers to moderate their criticisms on pain of prosecution or of losing business from "certain big advertisers." Another storm of criticism developed when the government on November 23 admitted that it had asked and obtained the aid of Joseph P. Kennedy, the American Ambassador, in suppressing parts of an American-produced newsreel shown in England during the September crisis. The deleted sections consisted of interviews with two leading British journalists—Wickham Steed and A. J. Cummings—who sharply criticized Chamberlain's part in the partition of Czechoslovakia. In the ensuing debate in Parliament on December 8, it was charged that the government had employed indirect pressure upon newspaper owners to prevent the "pin-pricking" of Mussolini and Hitler during Chamberlain's negotiations for "appeasement." News reports over the British Broadcasting Corporation stations were also co-ordinated with the alleged requirements of the Prime Minister's appeasement program.

Political Trends. A series of polls taken by the British Institute of Public Opinion during the year showed a sharp decline in Prime Minister Chamberlain's popularity after the Munich accord of September 29. Before Austria was taken by Germany in March, 60 per cent of the voters were recorded as favoring the Chamberlain Government. After Munich, the government's majority shrank to 57 per cent in October and to 55 per cent in the middle of December. This anti-government swing was attributed to public revulsion against the Munich agreement, distrust of Hitler's promises and public statements, and disgust at the anti-Jewish purge of November in Germany.

The numerous by-elections held during the year were less definite as an indication of popular sentiment. Of seven by-elections held soon after Munich and fought largely on the issue of foreign policy, the government's supporters suffered two smashing defeats in Conservative constituencies, retained two seats with much smaller majorities, held two seats by almost the same margin as before, and lost one contest for a Labor-held seat by a greater margin than before. The Duchess of Atholl, the Prime Minister's most bitter critic within the Conservative party, was defeated for re-election by a narrow margin in the Scottish Highlands on December 21 after she had resigned her seat in Parliament in protest against the appeasement policy and stood for re-election as an Independent. On November 1 the Conservatives gained 20 additional seats in the municipal elections, which were fought largely on local issues. The tide of popular sentiment against further concessions to Rome and Berlin was not yet strong enough to force the Prime Minister to abandon his appeasement policy.

Moreover, the opposition elements remained divided and without effective leadership, in view of Anthony Eden's refusal to lead a secession movement within the Conservative ranks. The Communist party and left-wing elements in the Labor and Liberal parties renewed efforts of previous years to weld all opposition groups and dissident Conservatives into a "popular front." But the conservative leaders of the Labor party and of

the affiliated Trades Union Congress firmly opposed this program, asserting that the proposed "popular front" would not "afford a better rallying cry, or be more effective electorally against the 'National' Government than the Labor party itself." They also pointed out that "the Communists . . . are committed rather to maneuver than to principle. They would be capable of stabbing us in the back at any time, or of involving us in joint responsibility for their political indiscretions." In preparations for the general election, expected in 1939, the Labor party carried on a vigorous campaign on behalf of its program of socialization at home and firm collective resistance to the Fascist dictatorships abroad.

Economic Conditions. Despite the huge expenditures on armaments and a supplementary public works program costing nearly £300,000,000, Britain experienced a considerable industrial and financial recession during 1938. The economic decline in the United States, fall in commodity prices, continuance of acute international tension, and increases in the already heavy burdens of taxpayers all contributed to a decline in normal business activities to the lowest level since 1935. The 1938-39 budget increased the standard rate of the income tax to 5s. 6d. in each pound of income or 27.5 per cent. Taxes on tea, motor fuel and other commodities were boosted. The number of totally and partially unemployed workers averaged about 1,800,000 during 1938. Exports declined nearly 20 per cent from the 1937 level. The overseas income from banking, shipping, and other services declined. Security values suffered badly during the Austrian crisis in March and the Czecho-Slovak crisis of September. Budget deficits due to mounting armament costs, the danger of war, and the adverse international credit balance induced a flight of British and foreign capital abroad. The exchange value of the pound sterling declined from \$5 at the beginning of 1938 to less than \$4.70 at the year end, despite heavy expenditures from the Exchange Equalization Fund. On February 1 the Chancellor of the Exchequer relaxed restrictions on foreign lending in view of the abundant funds seeking investment. But by December the situation had so changed that the former restrictions were re-imposed with even greater rigor to stop the gold outflow and relieve pressure on the pound.

Legislation. Despite the subordination of domestic problems, some important legislation of purely national interest was passed. The controversial Coal Bill provided for the nationalization of coal royalties, compulsory amalgamations of mines, and the continuance of controlled production and selling. The Sea Food Industry Bill authorized marketing schemes for producers and distributors of fish. Another law protected buyers of furniture and clothing on the installment plan. A new Administration of Justice Act was passed. A revised Young Persons' Act provided for further restriction of working hours and improvement of working conditions. The age limit for voluntary entrants to the State contributory pensions system was changed from 45 to 40 and the contributions were increased. New provision was made for greater safety at sea and important changes introduced in Scottish administration.

Other Events. The first petroleum found in quantity in Britain was shipped from a test well at Dalkeith, Scotland, in August. Drilling was under way in a number of other districts. The £10,000,000 British Empire Exhibition in Glasgow was opened by the King and Queen on May 3 and

was closed on October 29. More than 12,500,000 persons visited the Exhibition. The first publicly confirmed meeting between the Duke and Duchess of Windsor and other members of the royal family, since Edward's abdication in 1936, took place at Paris November 11 when the Duke and Duchess of Gloucester visited the Windsors. On November 24 Prime Minister Chamberlain and the Foreign Secretary, Viscount Halifax, made a brief call on the Duke and Duchess while in Paris for conferences with French officials. On November 8 King George announced in his speech from the throne that he and the Queen had accepted President Roosevelt's invitation to visit the United States after their state visit to Canada during the summer of 1939. A plan for a sort of Federal union of the Church of England with the various other Protestant sects in England was formulated at a joint conference of Anglican and Free Church representatives early in the year.

Empire Relations. The British Government's reluctance to adopt a firm policy against Germany and Italy was due in no small part to a desire to enter upon no conflict in which it could not be assured of the united support of the Dominions. Meanwhile, the London Government moved vigorously to eliminate controversies and establish machinery for closer empire co-operation in the event of war. Outstanding among these moves was the agreement reached with Ireland (q.v.) on April 25. This appeared to have eliminated the possibility that the Irish Government might adopt an unneutral or hostile policy to secure its national objectives in the event of a European conflict. Only the partition issue remained a source of controversy.

With Canada divided as to the position it should adopt toward a British war, the British Government took steps to reinforce the economic and sentimental ties uniting the Dominion to the mother country. Britain aided Canada in the establishment of military aircraft and munitions plants and ordered part of the output. Arrangements were made for the King and Queen to visit the Dominion in the summer of 1939 (see CANADA under *History*). The Duke of Kent was named Governor-General of Australia (q.v.). Australia, South Africa, and New Zealand were aided in reorganizing and expanding their military defenses. A royal commission (Bledisloe Commission) was sent to the Rhodesias and Nyasaland to study their amalgamation into a Greater Rhodesia, and to co-ordinate their defenses. Another royal commission, headed by Lord Moyne, went to Jamaica and the other British West Indies to investigate the social and economic conditions that gave rise to serious disturbances in 1938 and previous years (see JAMAICA under *History*). In Palestine (q.v.) the British were obliged to engage in extensive military operations to stamp out an Arab revolt. That strategically important adjunct of the empire was still in turmoil at the year end, with no satisfactory solution of the Arab-Jewish controversy in sight. Also see the various other Dominions and colonies under *History*.

Foreign Relations. The foreign policy of the Chamberlain Government in 1938, judging from the Prime Minister's speeches and actions, aimed to give Germany and Italy freedom for expansion in Central and Eastern Europe while making the British Empire and its lines of communication so strong as to discourage attack. To deflect German and Italian energies toward the east and to prevent France from dragging Britain into a war over

non-British interests, it was necessary to break up the French system of alliances in Eastern Europe and to increase France's dependence upon Britain. Every effort was made to delay a European conflict in the hope that time would weaken the Rome-Berlin-Tokyo alliance and strengthen the position of Great Britain and France. At the same time Chamberlain sought to wean Mussolini away from Hitler by concessions made largely at the expense of Loyalist Spain, France, and the League of Nations. The Prime Minister also strove to establish the closest possible relations with the United States in the hope of securing her material if not military aid in case his appeasement policy failed. He was even prepared to grant Hitler's colonial claims in return for a definitive settlement of all issues likely to cause war in Western Europe. He envisaged agreements between Britain and Italy and between France and Italy, to be followed by Anglo-German and Franco-German settlements. The capstone of his projected European peace structure was to be a working agreement between Britain, Germany, France, and Italy, who were to replace the League of Nations as arbiters of Europe's destiny.

Major developments in connection with the carrying out of this program during the year were the resignation of Foreign Secretary Eden in February; British acquiescence in Germany's annexation of Austria in March; the signing of a comprehensive Anglo-Italian treaty in Rome on April 16; the consolidation of the Anglo-French defensive alliance at London on April 28; British efforts to secure the recognition of Italian sovereignty over Ethiopia at the League Council session in May; the persistent attempts to induce Mussolini to withdraw his troops from Spain through Anglo-French steps to cut off munitions shipments and other foreign aid to the Spanish Loyalists; the state visit of King George and Queen Elizabeth to Paris on July 19 to consolidate the Anglo-French alliance; abandonment of collective security at the League Assembly meeting in September; the partitioning of Czecho-Slovakia by the four-power Munich conference on September 29-30; official recognition of Italy's sovereignty over Ethiopia on November 16; and the conclusion of the Anglo-American trade agreement on November 17.

Steps were taken to restore the Anglo-Portuguese alliance to full vigor. Britain aided France in promoting a settlement of her Near Eastern difficulties and in establishing what appeared to be a Franco-Turkish defensive accord. On May 27 the London Government advanced a £6,000,000 loan to Turkey for the purchase of munitions in Great Britain. At the same time the British Export Credits Guarantee Department guaranteed another £10,000,000 of purchases by Turkey of mining, industrial, and other equipment in Britain, to be paid for through the sale of Turkish commodities in the British Empire and certain foreign countries. The Earl of Athlone and Princess Alice were sent on an official mission to strengthen British friendship with King Ibn Saud of Saudi Arabia. There was evidence of closer collaboration between British and Dutch in defense of their mutual interests in Malaya. The great British naval base was opened at Singapore early in the year but the tense European situation prevented any large concentration of British war vessels in Asiatic waters. A setback to British defense preparations was the expropriation of British-Dutch oil properties in Mexico by the Mexican Government and the subsequent severance of Anglo-Mexican diplomatic

relations, thus threatening to interrupt an important source of fuel supply for the British navy in the event of a European war.

Anglo-Italian Negotiations. The principal issues outstanding between Britain and Italy were dealt with in the accord signed in Rome by the British Ambassador and Count Ciano, Italian Foreign Minister, on April 16. It consisted of a protocol, 8 annexes, 3 sets of letters, and a "good neighbor" agreement concluded by Britain, Italy, and Egypt regarding frontier problems in East Africa. The accord was to go into effect at a date to be fixed later by the two governments; the British indicated that they would not agree to a date until after settlement of the Spanish question by the withdrawal of Italian troops from the peninsula. The main provisions of the accord follow:

Italy agreed to accept the British formula for proportional evacuation of foreign volunteers from Spain and to withdraw forthwith all Italian troops and material remaining in Spain at the end of the civil war, in which Franco's victory was taken for granted. She assured Britain that Italy had no territorial or political aims, and sought no privileged economic position with regard to Spain, the Balearic Islands, Spanish possessions overseas, or the Spanish zone in Morocco, and had no intention of keeping armed forces in those territories.

With regard to the Mediterranean, Britain and Italy reaffirmed their gentlemen's agreement of January, 1937 (see 1936 YEAR BOOK, p. 313). Italy further agreed not to use her existing positions in Spain and Italian East Africa to menace Britain's Mediterranean lifeline. In return for Italy's promise to withdraw from Spain, Britain agreed to support recognition of Italy's conquest of Ethiopia at the May session of the League Council. Italy in turn renewed previous assurances that she had no intention of "overlooking or repudiating" her obligations to Britain with regard to Lake Tana in Ethiopia, headwaters of the Blue Nile. Italy further agreed to reduce to peace strength her forces in Libya, which menaced Egypt. Both governments agreed to respect the independence of Saudi Arabia and Yemen and to oppose any third power which might seek to acquire sovereignty or a privileged position in these Arab states.

Both governments agreed to abide by the 1888 convention guaranteeing free use of the Suez Canal to all powers in both peace and war. They agreed to exchange information regarding redistribution of their military, naval, and air forces, and to notify each other in advance of any decision to provide naval or air bases in the Mediterranean and the Red Sea. Italy also agreed to adhere to the London Naval Treaty of 1936. They stated that any attempt by one of them to injure the interests of the other by propaganda would be inconsistent with the good relations envisaged in the accord.

Progress toward putting this agreement into effect proved unexpectedly slow. Viscount Halifax was unable to secure unanimous consent of the League Council to withdrawal of the non-recognition stand previously taken against Italy in Ethiopia. Instead the Council authorized the individual League members to "decide as they choose" on the question of recognition. The British-sponsored negotiations for a Franco-Italian settlement collapsed over the Spanish issue, and on July 26 Chamberlain again told the House of Commons that the Anglo-Italian accord would not go into effect until a settlement of the Spanish question had been reached. He professed himself satisfied, however, when at Munich Hitler and Mussolini both assured him they had no territorial ambitions in Spain and Mussolini early in October withdrew 10,000 of between 40,000 to 80,000 Italian soldiers estimated to be assisting the Spanish Insurgents. The Italian Government subsequently assured Britain that no further Italian troops or air forces would be sent to Spain, and that the remaining Italian forces there would be withdrawn as soon as the London Non-Intervention Committee recognized Franco's belligerent status. On the basis of these developments, Chamberlain submitted the Anglo-Italian accord to Parliament, where it was

ratified by an overwhelming vote on November 2. On November 16 Britain formally recognized the Italian conquest of Ethiopia and on the same day the Anglo-Italian accord went into effect.

It was announced on November 28 that Chamberlain and Halifax would go to Rome in January in furtherance of their reconciliation program. On December 1 Italy formally accepted the limitations on battleship size and gun power laid down in the 1936 London naval treaty. But the Prime Minister's hopes for further agreement were disillusioned by the launching of the Italian campaign for territorial and other concessions from France. On December 14 he declared that Tunisia was covered by the Anglo-Italian agreement to maintain the status quo in the Mediterranean. Charges of additional Italian intervention in Spain raised further doubt as to the success of Chamberlain's appeasement policy with respect to Mussolini.

Relations with Germany. Negotiations for a general settlement with Germany made equally slow progress. When Prime Minister Chamberlain returned from Munich on September 30 he apparently believed that an agreement was assured. Proudly displaying the Anglo-German amity declaration signed by himself and Hitler, he announced that "for the second time in our history, a British Prime Minister has returned from Germany bringing peace with honor." Most of his countrymen apparently felt the same way. He received a hero's welcome and the House of Commons approved his policy in the Czecho-Slovak crisis by a vote of 366 to 144 on October 6. But disillusionment soon spread as a result of various developments in Germany which plainly indicated that Hitler was not satisfied with the triumph he had achieved at Munich through Chamberlain's co-operation.

On December 13 Chamberlain in a speech before the Foreign Press Association in London deplored "the recent attitude of the German press, which in one case has not scrupled to pour its vituperation against our most respected statesman (Earl Baldwin) . . . and in few cases has shown much desire to understand our point of view." Because of this protest, noted in advance copies of the speech, the German Ambassador, his entire staff, and the German newspaper correspondents in London boycotted the dinner. Defending his foreign policy before Parliament on December 19 the Prime Minister declared: "I am still waiting for a sign from those who speak for the German people that they . . . are prepared to make their contribution to the peace which would help them as much as it would help us." He warned that it would be a tragic blunder to mistake Britain's love of peace for weakness. See CZECHO-SLOVAKIA and GERMANY under *History* for more complete details.

The anti-Jewish purge of November in the Reich had a particularly adverse effect upon Anglo-German relations. Leading members of the powerful pro-German faction in Britain, such as Lord Mount Temple and Lord Londonderry, denounced the German Government. British public and private agencies extended generous assistance to Jewish and other refugees from Germany and the government took steps to find havens for them in the British colonies (see JEWS). An angry German reaction followed Chamberlain's statement of November 17 that "the possibility of the settlement of refugees from Germany has been taken up with a number of colonial Governors, including the Governor of Tanganyika." Tanganyika being one of the former German colonies, this was taken to

indicate that the Prime Minister did not intend to return them to Germany. This was confirmed by Malcolm MacDonald, Secretary for Colonies, before the House of Commons on December 7. He insisted, and the entire House appeared to agree with him, that Nazi "racial theories" made them unfit to govern subject peoples. The House voted 171 to 124 that "no change in the status of colonies, protectorates or mandated territories could at any time be considered which did not take full account of the interests and wishes of the inhabitants."

Collaboration with United States. In contrast with the tension prevailing in Anglo-German and Anglo-Italian relations, British relations with the United States showed an increasing degree of cordiality and co-operation. The two governments took "parallel action" to defend their mutual economic and other interests in China and the Far East against constant Japanese encroachments (see CHINA under *History* for details). They also collaborated increasingly in naval moves indicating their growing solidarity against Japan. Three United States cruisers attended the ceremonies in connection with the opening of the Singapore naval base in February. The controversy between the two countries over the ownership of two Pacific islands on the direct route from New Zealand to Hawaii was compromised by the following joint communiqué issued simultaneously in London and Washington on August 10:

The governments of the United States and of the United Kingdom have agreed to set up a regime for the use in common of the islands of Canton (q.v.) and Enderbury (q.v.) in the Phoenix group and for the employment of these islands for purposes connected with international aviation and communication, with equal facilities for each party. The details of the regime will be determined in notes to be exchanged between the two governments.

This agreement made possible the immediate development of air facilities and observation posts that might be used not only for commercial air transport but also as air bases in the event of naval hostilities in the Pacific. Discussions between American and British naval officers regarding the co-operation of the two navies in a possible war with Japan were reported to have taken place in London during the year.

The outstanding event in Anglo-American relations, however, was the signing at Washington on November 17 of reciprocal trade treaties between the United States and Canada and between the United States and the United Kingdom, Newfoundland, and the British colonial empire. For the terms of the Canadian-American treaty, see CANADA under *History*. The treaties went into effect Jan. 1, 1939, for a period of three years and were to continue in force thereafter until either government gave notice of termination. Great Britain's major concessions affected American agricultural products, especially with the removal of duties on wheat, lard, canned grapefruit, and certain fruit juices, and reduction of duties on rice, apples, pears, and certain canned fruits. Canadian wheat, which formerly entered England duty-free only when shipped from Canada, might now be shipped through New York and Boston. The quota for American ham was expanded, and the duty-free entry of ham and other pork products, corn and cotton was bound for the future. Additional concessions were granted on American fishery, lumber, and factory products.

In return for these concessions, the United States granted reductions in, or bound at the existing level, duties on British textiles, metals and various specialties, most of them complementary to Amer-

ican manufactures. Important reductions were made in the duties on high-grade cotton, wool, flax and hemp manufactures, as well as certain earthenware, pottery, glassware, and leather products. The duty on whiskey was bound at the existing level and that on books was reduced 50 per cent. On the same day the treaties were signed, the United States and British Governments exchanged notes assuring one another of access to the raw materials in their respective territories and possessions, and agreeing to give advance notice of the imposition of additional tariff duties.

These agreements reversed the trend toward national economic self-sufficiency, which had been accelerated by the Smoot-Hawley Tariff of 1930 in the United States and the Ottawa Trade Agreements of 1932 establishing a preferential British Empire tariff system. They permitted some United States products to enter Great Britain at the same rate as that paid by competing products from the British Dominions. To compensate the Dominions for the loss of their previous advantage in the British market, Britain agreed to the abolition of the preference that British goods had enjoyed over United States goods in the Dominion markets. This left the Dominions free to make their own trade agreements with the United States without the handicap offered by the Imperial preference system. The British gave way on this issue after long negotiation partly because of the political advantages accruing from the trade agreements. They served as a check to the economic nationalism of the dictatorships and tightened the diplomatic solidarity of the democratic countries.

GREECE. A Balkan kingdom. Capital, Athens. Greece has an area of 50,270 square miles (mainland, 41,652; islands, 6818), and a population estimated at 7,000,000 in 1937. The 1928 census showed 6,204,684 (urban, 2,058,510). Living births in 1936 numbered 193,343 (28 per 1000); deaths, 104,804 (15.2 per 1000); marriages, 38,700 (5.6 per 1000). There were 16,379 emigrants in 1935. Estimated populations of the chief cities in 1937 (preliminary) were: Athens, 494,059; Piraeus, 284,057; Salonika, 264,523; Patras, 73,308; Kavalla, 54,977; Volos, 50,679; Candia (Érakleion), 43,037; Xanthi, 37,289; Corfu (Kerkyra), 34,772.

Religion and Education. According to the 1928 census 1,953,875 persons of 10 years and over were illiterate. The school attendance in 1935-36 was: Elementary, 924,816; secondary, 71,717; university, 10,257. The 1929 census returns showed 5,961,529 members of the Greek Orthodox Church, 126,017 Moslems, 72,791 Jews, 35,182 Roman Catholics, and 9003 Protestants. See *History*.

Production. Approximately 54 per cent of the working population are supported by agriculture and fishing; 16 per cent by industry, and 8 per cent by commerce. There were 6,000,000 acres of cultivable land in 1937, 2,877,000 acres of meadow and pasture, and 5,945,000 acres of forests. The value of agricultural production in 1936 was 21,470,066,000 drachmas. Yields of the chief cereals in 1938 were (in metric tons): Wheat, 978,000; barley, 253,900; rye, 62,200; oats, 158,000; corn, 199,300.

Other leading crops in 1937 were: Potatoes, 5,938,000 bu.; currants and raisins, 431,647,000 lb.; figs, 48,501,000 lb.; wine (must), 79,358,000 gal.; olive oil (1937-38), 41,293,000 gal.; tobacco, 141,441,000 lb.; cotton (ginned), 36,806,000 lb. The 1936 live-stock returns showed 1,049,000 cattle, 607,000 swine, 8,440,000 sheep, 5,514,000 goats, 948,000 horses, mules, and asses.

The value of mineral production in 1936 was about 49,603,000 drachmas. Mineral production in 1936 was (in metric tons): Chromite, 47,347; emery, 15,000; galena and zinc blend, 20,565; iron ore, 280,271; iron pyrites, 208,050; lead (smelted), 4383; lignite, 105,621; magnesite, calcined, 29,784; magnesite, crude, 116,106; nickel ore, 50,195; bauxite, 129,898. The value of factory production (excluding wines, olive oil, and flour) in 1937 was 13,773,000,000 drachmas (preliminary). The value of the chief manufactured products in 1937 was (in 1000 drachmas): Cotton yarn, 1,083,600; wool fabrics, 1,050,000; cotton fabrics, 443,300; upper leather, 661,000; sole leather, 522,000; soap, 564,800; knitted goods, 395,000; liquors and brandy, 516,000; paper and board, 348,100; cigarettes, 210,000.

Foreign Trade. In 1937 imports for consumption were valued at 15,204,363,000 drachmas (11,962,620,000 in 1936) and general exports totaled 9,555,293,000 drachmas (7,378,877,000 in 1936). The principal 1937 imports in order of value were wheat, iron and steel, chemicals and allied products, machinery, and coal. The leading exports were (in U.S. paper dollars): Leaf tobacco, \$39,697,000; currants, \$8,868,000; raisins, \$4,003,000. Germany supplied 27.2 per cent of the 1937 imports; the United Kingdom, 11 per cent; United States, 4.3 per cent. Of the exports, Germany took 31 per cent; United States 16.5 per cent; United Kingdom 9.7 per cent, and Italy 6.3 per cent.

Finance. Budget estimates for the fiscal year ending Mar. 31, 1939, placed receipts at 14,519,000,000 drachmas (including loans of 1,950,000,000) and expenditures at 15,106,000,000 drachmas. Revenue estimates for 1937-38 placed receipts at 16,486,000,000 drachmas (including loans of 3,421,000,000) and expenditures at 16,883,000,000 drachmas. The public debt on Dec. 31, 1937, was 80,990,000,000 drachmas, including the railway debt. Of this total, about 63,000,000,000 drachmas represent the external debt, with foreign currency converted at current rates. During 1938 only 40 per cent of the interest on the debt was being paid. The average exchange rate of the drachma was \$0.0091 in 1937 and \$0.0090 in 1938.

Transportation. The length of railway lines in operation on Mar. 31, 1937, was 1799 miles, including 898 miles of state railway. During the year ending Mar. 31, 1937, all railways carried 29,501,500 passengers and 2,096,262 metric tons of freight. Gross revenues were 735,298,000 drachmas. Highways extended 7736 miles in 1937; number of automobiles, 14,000 on Jan. 1, 1938. Statistics for Greek civil airlines for 1937-38 are: Miles flown, 215,042; passengers, 6327; baggage, 140,789 lb.; freight, 451,308 lb.; mail, 17,835 lb. Athens is an important aviation center, having connections with French, British, Italian, German, Polish, and other airlines. During 1937, 2985 vessels of 5,150,336 net registered tons entered Greek ports in the foreign trade. The Greek merchant marine in 1938 consisted of 638 vessels (of 100 tons or over) with a gross tonnage of 1,889,269.

Government. The Monarchist Constitution of 1911 re-entered into force with the overthrow of

the republic on Oct. 10, 1935, and the return of George II to the Greek throne on Nov. 25, 1935. It provided for a bicameral legislature, with the Lower Chamber elected by male suffrage and the Upper Chamber represented by a Council of State of not more than 25 members, of whom 10 were to be ex-officio judicial members and 15 appointed by the Crown. On Aug. 4, 1936, Premier John Metaxas established a dictatorship of marked Fascist tendencies. Royal decrees were issued dissolving Parliament, suspending constitutional guarantees, abolishing all political parties, and instituting supervision and censorship of the press. The Premier announced that parliamentary government had gone forever and that Greece would be transformed into a corporative state on the Italian model. For developments in 1938, see *History*.

HISTORY

Domestic Affairs. In line with the precedents established in 1936 and 1937 (see 1937 YEAR BOOK, p. 308), Premier Metaxas further solidified his dictatorship during 1938 by crushing all efforts to organize opposition to his regime and by extending his program of political, economic, and social reorganization. A serious challenge to the dictatorship was frustrated in January through stratagem and the arrest and deportation of leaders of the disbanded political parties.

According to news seeping through the censorship, manifestos attacking Metaxas and demanding restoration of representative government were secretly circulated early in January by George Kaphandaris, leader of the Progressive party and former Premier and Minister of Finance, and Alexander Mylonas, leader of the Agrarian Democratic party. The pamphlets were seized by government agents and suppressed. A third circular denouncing Metaxas was then issued under the signatures of Kaphandaris, Mylonas, and Themistocles Sophoulis, leader of the Liberal (Venizelist) party and ex-Premier. To offset the effect of this pamphlet, Premier Metaxas was reported to have published a fraudulent counter-manifesto, purporting to be signed by Kaphandaris and denouncing the Kaphandaris-Mylonas-Sophoulis statement as a tissue of falsehoods. When Kaphandaris demanded that the government repudiate this document as a forgery, he was arrested for the "dissemination of seditious literature" and deported to an Aegean island. The same fate was meted out to three other ex-Premiers—Sophoulis, A. Michalakopoulos, leader of the Conservative Democratic party, and John Theotokis, leader of the pro-monarchist National Populist party. More than a hundred supporters of the arrested leaders, including some army officers, were arrested at the same time. They were charged with plotting to assassinate Premier Metaxas. It was then officially announced that a purely dictatorial regime had replaced the regime established by Metaxas on Aug. 4, 1936.

Additional arrests were reported from time to time. On May 4, 76 alleged Communists were jailed, including some former members of Parliament. On July 5 the police arrested 17 persons in Salonika on a charge of providing funds for a Communist organization. On July 29 a revolt broke out in Canea, Crete, led by a nephew of Venizelos, a former mayor of Canea, and a former army officer. They seized control of the city with the aid of some 400 armed followers, but Metaxas rushed warships, troops, and airplanes to the island and quickly crushed the uprising. Most of the leaders were reported to have escaped to the hills. On the

day after the rising it was announced that Metaxas would be dictator for life. A few days later (August 4) the second anniversary of the dictatorship was celebrated with officially sponsored parades and ceremonies in various parts of the country. There were, however, evidences of widespread discontent and other indications that the dictatorship was increasingly dependent upon the support of King George and the army. On November 3 amnesty was extended to 400 political deportees in celebration of the birth of a daughter to Prince Paul.

Meanwhile, Metaxas developed his ultra-nationalist policy in other fields. In an apparent effort to exclude foreign influences, the government on May 19 ordered the cessation of all Christian Science services, lectures, and other activities. Early in September a series of decrees were issued giving the state religion unprecedented privileges and discriminating against other religious faiths. Persons attempting to win converts to any except the Greek Orthodox Church were made subject to imprisonment and fine. School children were required, with certain exceptions, to attend the state church on Sundays. Publication or circulation of literature at variance with the dogmas of the state church was prohibited. A number of instances were reported in which foreign Roman Catholic priests, Protestant ministers, and Jews were refused permission to visit the country, even as tourists. The first radio broadcasting station was opened March 25 and was devoted to the dissemination of government propaganda. Recreation, sports, social customs, and other aspects of the national life were all deeply affected by the establishment of government control and guidance. A two-year plan for further modernization of the army, navy, and air force was announced in June. The improvement of the navy was to be carried out with British financial aid.

On December 9 the Premier announced that he would assume direct charge of education and public worship in order to co-ordinate the educational system with the totalitarian state and to "bring order into the church." Greek National Youth, an organization modeled on the Hitler Youth movement, was organized to strengthen the regime among the young people. Shortly before Christmas 22 additional persons with Royalist connections were arrested and several clandestine presses seized in what the police described as an important coup against enemies of the dictatorship.

One of the most violent earthquakes in recent years shook Athens and the plain of Attica in July. Eighteen persons were killed, more than 100 injured, and several thousands left homeless.

Foreign Relations. The major developments of the year were the conclusion of a virtual political and military alliance with Turkey on February 28, and the signing of a pact on July 31 between Greece, Turkey, Rumania, and Yugoslavia (the Balkan Entente) on the one hand and Bulgaria on the other, abolishing the restrictions imposed upon Bulgaria's rearmament by the Treaty of Neuilly. On the latter date Greece, Turkey, and Bulgaria agreed to abolish the demilitarized zones along their mutual frontiers established by the second Treaty of Lausanne in 1923 (see BULGARIA under *History*).

The Greco-Turkish treaty, which was initiated by Premier Metaxas and Kemal Ataturk at Ankara, Turkey, was a further development of the 1930 treaty of neutrality and arbitration and of the 1933 treaty of co-operation. It provided that in case of unprovoked aggression upon either of the signatories, the other would exert its influence in behalf

of peace and would prohibit passage of the aggressor's troops and material through its territory. If war developed, the two governments were to consult with a view to safeguarding their vital interests. Greece followed a policy of neutrality in the European crises developing during 1938 over Germany's expansion in Austria and Czechoslovakia.

See BALKAN ENTENTE; REPARATIONS AND WAR DEBTS.

GREENLAND. A Danish Arctic colony, second in size among the islands of the world. Area, 736,518 square miles, of which only 31,284 square miles are ice free. The estimated population on Jan. 1, 1936, was 17,000 (about 16,600 Eskimos and 400 Danes). The chief settlements are Julianehaab (about 3500 inhabitants), Godthaab (1300), Godhavn, and Angmagsalik. Trade is a monopoly of the Danish Government and is mainly in cryolite, furs, skins, and oil. Exports to Denmark in 1936 were valued at 5,201,000 Danish crowns and imports from Denmark at 2,182,000 crowns. The colony is administered by a director in Copenhagen, Denmark, with the aid of local assemblies in Godthaab and Godhavn, the capitals of the districts of South and North Greenland, respectively. East Greenland is the remaining administrative district.

On Dec. 20, 1937, it was reported that the port of Faeringehavn, on the southwestern coast of Greenland, was opened for navigation, and would stay open until Oct. 31, 1941. It marked an important event in Greenland's history. In February, 1938, the annual fur auction of the Greenlands Trading Company was held at Copenhagen, Denmark. A total of 750,000 crowns was realized on the entire sale, which was 80,000 crowns more than in 1937. See POLAR RESEARCH.

GRENADA, grê-nă'da. A British island colony in the Windward Islands group of the West Indies. Area, including South Grenadines, 133 square miles; population (Jan. 1, 1937, estimate), 87,105, compared with 66,302 (1921 census). Capital, St. George's (4629 inhabitants in 1921). The principal products are cacao, nutmegs, mace, limes, sugar, bananas, cotton, and coconuts. In 1937 imports were valued at \$367,707; exports, \$362,075. For 1936 revenue totaled £150,235; expenditure, £143,396; net public debt, £377,523. The colony is administered under the Governor of the Windward Islands (resident at St. George's, Grenada), and has its own legislative council of 16 members (8 official, 3 nominated, and 5 elected). In the absence of the governor the colonial secretary becomes the administrator. See WINDWARD ISLANDS.

History. During the latter part of October, 1938, 5 lives were lost and 300 head of cattle were killed in a disastrous rainstorm in which homes were swept away and the town of St. George's was isolated when bridges and telephone lines were destroyed. The damage was estimated at £20,000. See JAMAICA under History.

GRINNELL, grî-nêl', GEORGE BIRD. An American editor, author, and ethnologist, died in New York, Apr. 11, 1938. Born in Brooklyn, N. Y., Sept. 20, 1849, he attended Yale University (A.B., 1870; Ph.D., 1880) and upon graduation he joined Prof. O. C. Marsh of the Peabody Museum on an expedition to the Far West to collect vertebrate fossils. On this visit he continued a friendship with the Pawnee Indians that had begun in 1872. This led to his visiting their section of the country almost every summer.

After engaging in business in New York from 1871 to 1874, he became assistant in osteology at the Peabody Museum, a work with which he was

associated until 1880, during which time, and until 1894, he made many trips to the plains and to the Rocky Mountains in search of fossils for the Museum. As a naturalist he accompanied Gen. George Custer on an expedition to the Black Hills and was with Col. William Ludlow, engineer of the Department of Dakota, on his reconnaissance to Yellowstone Park, 1875. Grinnell's zoological reports prepared then are still considered the authority on the mammals and birds of that region. Although invited to join Custer on his campaign in 1876, Grinnell was unable to do so and thus probably escaped the fate of that expedition.

While still associated with the Peabody Museum he became an editor of *Forest and Stream* in 1876, and in 1880 came to New York as publisher and editor of that magazine, relinquishing his control in 1911. From 1887 he was president of the Bosworth Machine Co.

In 1885 Dr. Grinnell, on a hunting trip to Montana, discovered Grinnell Glacier, and gave to the world an account of the beauties of that region in an article in *The Century Magazine* for September, 1891. After many years of effort on his part, Congress established the Glacier National Park in 1910. Also in 1885 he was appointed a commissioner to deal with the sale of the land of the Blackfoot and Fort Belknap Indians. In 1889 he was a member of the Harriman Expedition to Alaska, and his papers on the salmon industry and the Alaskan natives formed an important part of the record of the expedition.

Always interested in conservation, Dr. Grinnell was one of the founders (1887) of the Boone and Crockett Club, an organization of sportsmen and conservationists, and served as its president from 1918 to 1927. It was the membership of this organization that founded the New York Zoological Society in 1895, fought tirelessly to stop the exploitation of Yellowstone Park, and worked for the passage of legislation to cope with the menace of the destruction of wild life in that section. With Theodore Roosevelt, Grinnell edited, for the club, *American Big Game Hunting* (1893); *Hunting in Many Lands* (1895); *Trail and Campfire* (1897), and *Harper's Camping and Scouting* (1911). After Roosevelt became president of the United States, Grinnell edited *American Big Game and Its Haunts* (1904); *Hunting at High Altitudes* (1913); *Hunting and Conservation* (1925), and *Hunting Trails on Three Continents* (1933).

Other conservationist organizations to which he belonged were the American Ornithologists Union; the National Parks Association; American Game Association, which he helped to found in 1911, and the National Association of Audubon Societies. In 1925 he received the gold medal of honor of the Roosevelt Memorial Association for his services in behalf of conservation of natural resources.

An authority on the history and habits of the plains Indians, particularly the Pawnee, Blackfeet, and Cheyenne, he wrote *Pawnee Hero Stories and Folk Tales* (1889); *Blackfoot Lodge Tales* (1892); *The Story of the Indian* (1895); *The Indians of Today* (1900); *The Indians of Today to 1910* (1911); *Blackfeet Indian Stories* (1913); *The Fighting Cheyennes* (1915); *The Cheyenne Indians* (2 vols., 1923); *By Cheyenne Campfires* (1926). Also, he wrote a series of books for boys (1899-1913) as well as *Punishment of the Stingy* (1901); *American Duck Shooting* (1901); *American Game Bird Shooting* (1910); *Trails of the Pathfinders* (1911); *Beyond the Old Frontier*

(1913); *The Wolf Hunters* (1914); *When Buffalo Ran* (1920); *Beni's Old Fort and Its Builders* (1923), and *Two Great Scouts* (1929).

GRINNELL COLLEGE. A coeducational, nonsectarian institution of higher learning in Grinnell, Ia., founded in 1846. The enrollment for the year 1938 was 760. There were 70 faculty members. The productive funds amounted to \$2,000,000 and the income for the year was \$366,837. The library contains 110,000 volumes. President, John Scholte Nollen, Ph.D.

GROWTH. See ANTHROPOLOGY.

GUADELOUPE, gā'de-lōōp'. A French West Indian colony comprising the main islands of Guadeloupe (Basse-Terre) and Grande-Terre, and the dependent islands of Les Saintes, Désirade, St. Barthélemy, St. Martin, and Marie Galante. Total area, 688 square miles; population (1936 estimate), 305,000. Basse-Terre, the capital (on the island of Guadeloupe), had 9268 inhabitants in 1932; Pointe-à-Pitre, 30,465. The production of chief crops, in metric tons, was: Cane sugar, 46,000 (1934-35); cacao, 200 (1932-33); coffee, 400 (exports, 1934). Other products are rum, bananas, vanilla, logwood, and manioc. In 1937 the estimated value of merchandise imports (in old U.S. gold dollars) was \$5,300,000 (1936, \$4,400,000); exports, \$7,200,000 (1936, \$6,100,000). There were 596 miles of roads in 1937. The budget for 1934 was balanced at 62,345,195 francs. On Dec. 31, 1934, the public debt totaled 5,000,283 francs (franc averaged \$0.0657 for 1934). The colony is under a governor who is assisted by an elected council, and is represented in the French parliament by one senator and two deputies.

GUAM. An insular possession of the United States; the largest and most populous island of the Marianas group, in the mid-Pacific. It lies about 5100 miles from San Francisco, 3400 from Honolulu, and 1500 from Manila. Area, 225 square miles; population (July 1, 1938), 22,314, which included 20,880 native-born, 755 foreign-born, and 679 members of the naval establishment. Capital, Agaña (pop., about 12,000).

The native population is mainly of the Chamorro stock. The languages in use are English, Spanish, and Chamorro. School education is free and is compulsory for ages from seven to 12 years, inclusive. The number of enrolled pupils in the public schools averaged 4066 for the year 1937-38. Most of the pupils were in native schools, taught by native teachers. An American school, for children of non-natives, was maintained. Copra, coconut oil, alligator pears, and kapok were exported. Products grown for the domestic market were cacao, coffee, rice, sugar, corn, sweet potatoes, and fruits. Exports (1937) amounted to \$215,204 and were mainly of copra. Imports totaled \$774,244.

Guam is a United States naval station; its Governor, who is also the commandant of the Station, is a naval officer and an appointee of the President. Com. Benjamin V. McCandlish became Governor in 1936. An elective native Congress consisting of a House of Council (16 members) and a House of Assembly (27 members) has an advisory voice in the government. A station of the transpacific route of the Pan American Airways is maintained in Guam, and a cable station on the island relays messages between San Francisco and the Philippines, China, and Japan.

GUATEMALA, gwā'tā-mā'lā. A republic in Central America. Capital, Guatemala City.

Area and Population. The area was officially reported at 42,364 square miles in 1938 as compared

with 48,290 square miles in 1937, the reduction being apparently due to boundary adjustments with Honduras and El Salvador. The estimated population on Dec. 31, 1937, was 2,466,227 (2,004,900 at the 1921 census). About 30 per cent of the inhabitants live in cities and towns. Sixty per cent of the population are Indians and the bulk of the remainder are mestizos. The small ruling class is largely of European origin. A census of February, 1938, taken in Guatemala City showed 166,456 residents. Estimated populations of the other cities in 1936 were: Quezaltenango, 23,449; Antigua, 11,315; Cobán, 7167; Zacapa, 6119.

Education and Religion. About 80 per cent of the adult population are illiterate. The school enrollment in 1937-38 was: Rural schools, 54,544; primary, 79,786; secondary, 1102; normal, 1292; special, 2264; university, 755. A School of Economic Sciences was established in the capital in 1937. The Guatemalans are predominantly Roman Catholic, but other creeds enjoy complete liberty of conscience.

Production. Coffee and bananas normally account for about 90 per cent of the value of all exports. Coffee exports for the year ended Aug. 31, 1938, totaled 95,095 metric tons (101,510 in 1936-37), of which 54.7 per cent went to the United States (46.6 per cent in 1936-37). Exports of bananas in 1937 totaled 8,604,000 bunches (7,541,000 in 1936). Corn, sugar, wheat, rice, and potatoes are grown for domestic consumption. The forests yield hardwood and chicle. Livestock statistics for 1937 were: Cattle, 548,000; sheep, 246,000; goats, 19,000; swine, 346,000; horses, mules, and asses, 122,000. Gold production in 1937 was 4190 oz. Coffee-cleaning plants, flour and sugar mills, and shoe, soap, and pottery factories are the main industrial establishments.

Foreign Trade. Total imports in 1938 were valued at \$16,761,388 (\$16,742,907 in 1937) and exports at \$16,336,282 (\$16,108,609 in 1937). The United States supplied 44.7 per cent of the 1938 imports (45.3 in 1937); Germany, 35.1 (32.4). Of the 1938 exports, the United States purchased 69.5 per cent (64.2 per cent in 1937); Germany, 14.1 (17.4). Cotton fabrics, foodstuffs, iron and steel manufactures, machinery and tools, and railway and tramway equipment and materials were the leading 1937 imports. The chief exports were: Clean coffee, \$10,503,000; bananas, \$4,302,000; chicle, \$306,000.

Finance. Budget receipts during the 1936-37 fiscal year totaled 11,605,415 quetzales and expenditures 9,853,314 quetzales, leaving a surplus of 1,752,314 quetzales which was "used for the payment of budgetary obligations of different years." Extrabudgetary receipts for the same year were 11,147,000 quetzales and expenditures 12,311,000. The budgetary receipts and expenditures were estimated to balance at 9,789,000 quetzales in 1937-38 and at 10,333,000 in 1938-39. The public debt on Dec. 31, 1937, amounted to £1,520,432 and 11,029,700 quetzales. The quetzal (par value, \$1.693 U.S. currency) exchanged at \$1 in 1937.

Transportation. In 1937 Guatemala had about 600 miles of railway line. In March, 1938, there were 3472 miles of highways and roads open to traffic and 917 miles under construction. Air traffic statistics for 1937 were: International, 3165 passengers and 217,310 lb. of mail and freight; internal, 4324 passengers and 2,518,334 lb. of freight. In the same year 998 vessels of 2,377,588 net registered tons entered the ports of the republic.

Government. The Constitution of Jan. 1, 1928,

provided for a President, elected for 6 years and ineligible for re-election for 12 years afterwards; a single-chambered National Assembly (with 79 members in 1938); and a Council of State of 7 members (3 elected by the National Assembly and 4 appointed by the President) which supervises public contracts and concessions. A constitutional convention which met on May 15, 1935, annulled the constitutional bar to the President's re-election, and a "plebiscite" held on July 10, 1935, approved the extension of President Jorge Ubico's term to Mar. 15, 1943. He assumed office Feb. 14, 1931.

History. Despite several unconfirmed reports of revolutionary outbreaks early in 1938, President Ubico's dictatorship encountered no serious political opposition during the year. Congress nevertheless took the precaution to provide in advance for a presidential successor in case the office became vacant. On March 21 it elected Escolastico de Leon, Gen. Demetrio Moldonado, and Gen. Juan B. Alonzo as first, second, and third presidential designates for a period ending Mar. 15, 1939.

The President strengthened his military forces by the purchase of six military airplanes in the United States during the year. He also continued the distribution of government lands among small farmers. In his annual message to the National Assembly on Mar. 1, 1938, Ubico announced that 875 plots with a total area of 12,246 acres had been distributed and that it was planned to divide other lands with an area of 170,500 acres. Work was begun on the dredging of the Chiquimulilla River on the Pacific coast to provide water transportation for a rich farming, cattle raising, and commercial region. Guatemala also renewed its demand that Great Britain construct a road from the Atlantic coast to Guatemala City in fulfillment of a clause in the Guatemala-British Honduras boundary treaty of 1859. The British Government declined to discuss the matter.

A contract signed Oct. 22, 1938, between the Guatemalan Government and the Bank of London and South America provided for the cancellation of the balance of \$2,417,000 due on the \$3,000,000 loan of 1931 by the payment of \$2,000,000 in U.S. currency. The report of a mixed commission that surveyed the Guatemala-El Salvador frontier under an agreement signed in 1935 was accepted as the basis of a definitive boundary treaty signed Apr. 9, 1938, and ratified by the congresses of both countries on April 27. Soon afterward President Ubico took steps to enforce an old law prohibiting foreigners to own land within 10 miles of the frontiers, seacoasts, and certain rivers and lakes.

It was reported in December that the government had arranged to liquidate its debt of 230,034 quetzales to the National City Bank of New York by the delivery of mortgage credits held by the government. The face value of these credits was 447,664 quetzales as of June 30, 1937, but the market value was estimated at about \$150,000 in December, 1938.

GUIANA. See BRITISH GUIANA; FRENCH GUIANA AND ININI; SURINAM.

GUILLAUME, gē'yōm', CHARLES EDOUARD. A French physicist, died in France, June 13, 1938. Born in Fleurier, Switzerland, Feb. 15, 1861, he was educated at Neuchâtel and at Zurich (Ph.D.). Becoming an assistant in the Bureau of International Weights and Measures in 1883, he was appointed Associate Director in 1902 and Director in 1915. In 1935 he retired as honorary director and was awarded the French Legion of Honor.

In 1896 Guillaume discovered invar, an alloy

of nickel, 36 per cent, and steel, with 0.2 per cent of carbon. It was employed in the manufacture of instruments of precision and of standard measures because it was practically free from expansion or contraction by heat or cold. His researches were published in 1898 under the title *Nickel and Its Alloys*. For his work in this and kindred fields he was awarded the Nobel Prize for Physics in 1920, and in 1930 received the gold medal of the British Horological Institute.

Duddell Medallist in 1929, he was a past president of the Society of French Physicists and the author of *Thermometry of Precision* (1889); *Units and Standards* (1893); *X-Rays* (1896); *Metrical Convention* (1902); *Applications of Nickel-Steels* (1904); *Progress of the Metric System* (1907, 1913, 1921, 1927, 1934); *Initiation to Mechanics* (1909), and *Works of the International Bureau of Weights and Measures* (1927). Also he contributed to the publications of the Bureau: *Thermometry Studies* (1886); *Meteorological Research on Nickel Steel* (1927); *New Thermometric Studies* (1929).

HADRAMAUT. See under ARABIA.

HAGUE, FRANK. See NEW JERSEY; FASCISM.

HAITI, hā'tī. A West Indian republic, occupying the western third of the island of Haiti or Hispaniola. Capital, Port-au-Prince.

Area and Population. Haiti has an area of 10,204 square miles and a population estimated on Jan. 1, 1937, at about 2,650,000 (1,631,000 at the 1918 census). With the exception of some 3000 white foreigners, and a few thousand mulattoes comprising part of the ruling class, the inhabitants are all Negroes. Estimated populations of the chief cities in 1936 were: Port-au-Prince, 105,000; Cap-Haitien, 15,000; Aux Cayes, 15,000; Gonaïves, 10,000; Saint Marc, 10,000; Jacmel, 10,000. French is the language of government and the upper class; the peasants, comprising more than 80 per cent of the population, speak a dialect known as Creole French. Most of the inhabitants profess the Roman Catholic religion. About 85 per cent of the population are illiterate. The educational system included about 1060 primary and farm schools with 87,000 pupils, 21 secondary schools with 6000 pupils, two normal schools, and colleges of agriculture, medicine, law, and applied science.

Production. Haiti is an agricultural country whose prosperity is largely dependent upon export crops, especially coffee. Exports of the chief crops during the fiscal year ended Sept. 30, 1938, were: Coffee, 25,062,634 kilograms (kilogram equals 2.2 lb.), valued at 17,327,215 gourdes (gourde equals 20 cents U.S. currency); cacao, 1,566,383 kilos, valued at 693,608 gourdes; cotton, 4,681,814 kilos, valued at 5,261,949 gourdes; bananas, 1,363,176 stems, valued at 2,001,128 gourdes; sisal, 7,222,891 kilos, valued at 3,236,252 gourdes; raw sugar, 33,480,311 kilos, valued at 3,728,416 gourdes. Other exports were logwood (8,888,685 kilos, valued at 372,833 gourdes in 1937-38), grapefruit, oranges, goatskins, lignum vite, rum, honey, and corn. Livestock in 1936 was estimated at 110,000 cattle, 360,000 swine, 12,000 sheep, 320,000 goats, and 1,113,000 horses, mules, and asses. Minor deposits of gold, silver, copper, iron, antimony, coal, etc. exist but they remain entirely undeveloped. Manufacturing is confined to sugar refining, rum distilling, and the preparation of tobacco products, vegetable lard, and canned fruit.

Foreign Trade. For the year ended Sept. 30, 1938, imports were valued at 37,974,000 gourdes

(46,076,000 in 1936-37) and exports at 34,732,000 gourdes (44,854,000 in 1936-37). The combined value of imports and exports in 1937-38 was the lowest in 21 years. See *Production* for the chief exports. Leading import articles in 1937-38 were, in order of value: Cotton tissues, 10,468,988 gourdes; wheat flour, 2,772,525 gourdes; machinery and apparatus, 2,719,405 gourdes; iron and steel and their articles, 2,322,726 gourdes; fish and fish products, 1,128,283 gourdes; automobiles and busses, 893,681 gourdes. The principal sources of the 1937-38 imports were: United States, 20,627,627 gourdes; United Kingdom, 5,879,615 gourdes; Germany, 2,441,699 gourdes; Japan, 2,021,739 gourdes; Belgium, 1,090,291 gourdes. The distribution of exports was: United States, 14,860,616 gourdes; United Kingdom, 4,720,422 gourdes; Belgium, 4,329,746 gourdes; France, 4,010,796 gourdes; Denmark, 1,858,112 gourdes.

Finance. Government revenues during 1937-38 totaled 28,109,488 gourdes (34,448,671 in 1936-37) and expenditures were 28,940,782 gourdes (35,033,437 in 1936-37). As a result of the 1937-38 deficit of 831,294 gourdes, the unobligated Treasury surplus was reduced from 1,383,000 gourdes on Sept. 30, 1937, to 708,000 gourdes a year later. The gross public debt was 43,950,000 gourdes on Sept. 30, 1938 (44,317,000 on Sept. 30, 1937).

Communications. In 1938 there were about 158 miles of railway line, 1337 miles of highways (3180 automobiles), a connection with the Pan American Airways circuit at Port-au-Prince, and radio-telephone service between Port-au-Prince and the outside world. Port-au-Prince has a modern telephone system and there are some 1500 miles of government-owned telegraph wires. During 1937-38, 655 steam and motor ships of 1,518,449 tons (net) entered the ports.

Government. The Constitution of June 17, 1935, vested wide executive powers in a President elected for five years through primary assemblies in each commune from three candidates designated by Parliament. Parliament consists of a Lower Chamber of 37 deputies elected for 4 years, and a Senate of 21 members, of whom 10 are appointed by the President and the remainder by the Chamber of Deputies, all for 6 years. The Constitution provides that the President, Senators, and Deputies must own real property. Taxpayers alone are permitted to vote on local questions. President in 1938, Stenio Vincent, who was elected by the National Assembly on Nov. 18, 1930, and whose term of office was extended for five years from May 15, 1936, by a special clause in the 1935 Constitution. All members of Parliament elected in September, 1936, and of the cabinet were personal followers of President Vincent. There was no organized opposition to the President's rule.

History. From the economic viewpoint the year 1938 was one of the worst experienced in Haiti for the preceding two decades. The adverse effects of the higher shipping rates imposed in 1937 and the collapse of coffee prices (see 1937 YEAR BOOK, p. 313) were intensified. The sharp decline in export values during the 1937-38 fiscal year was reflected in lowered governmental revenues that placed a severe strain upon the budget.

The Vincent Government took various steps to meet this situation. On Jan. 13, 1938, it signed an accord with the U.S. Government providing for reduction of amortization payments on the dollar bonds of the 1922 loan (which constituted Haiti's public debt) during the period from Jan. 1 to Sept.

30, 1938. By another accord signed July 1, this agreement was extended to Sept. 30, 1939. Interest payments on the debt were continued, but lower amortization payments reduced the cost of servicing the debt from 7,457,000 gourdes in 1936-37 to 3,047,000 gourdes in 1937-38.

To relieve the economic depression and check the accompanying development of discontent with President Vincent's dictatorship, the government on July 6 signed a contract with the J. G. White Engineering Corporation of New York under which the latter concern undertook to carry out a \$5,000,000 public works program. The Haitian Government issued notes to that amount to the engineering company. On July 23 the Export-Import Bank at Washington made the deal feasible by agreeing to discount the notes. The program, which was expected to take three or four years to complete, provided for the construction with native labor of roads, bridges, irrigation works, and municipal water systems. All foreign materials and equipment required on these works were to be purchased in the United States and transported on American ships. Work on these projects started soon after the contract became effective on July 14 and by the end of August 800 men were already on the J. G. White payrolls.

The Franco-Haitian trade convention signed June 24, 1938, was another development designed to check the economic decline in Haiti, chiefly through the provision assuring Haiti of a market for 12,000,000 kilos of coffee annually in France. In return, Haitian duties on many French products were lowered.

These measures, together with the satisfaction obtained by Haiti from the Dominican Republic in the agreement signed at Washington Jan. 31, 1938, served to calm somewhat the anti-Vincent agitation that had gained headway during 1937 (see 1937 YEAR BOOK). Haiti received from the Dominican Republic not only a formal expression of regret for the slaughter of numerous Haitians in the Dominican Republic during 1937 but also a pledge to pay \$750,000 as compensation for the injuries and damages inflicted (see DOMINICAN REPUBLIC under *History* for full details of the settlement). A first payment of \$250,000 was received by the Haitian Government on Feb. 28, 1938, following formal ratification of the accord.

An abortive attempt to overthrow the Vincent regime was reported to have occurred in Port-au-Prince October 29-30. According to this report, five Senators were deprived of their posts for complicity in the attempted coup and a number of newspapers were closed. A short time before President Vincent announced that he had requested the United States Government to send a military mission to reorganize the military school and act as technical advisers to the general staff of the Garde d'Haiti.

Important reforms in the educational system were introduced during the year. The period of training in the elementary normal school course was extended from three to four years. A section of rural economics and sociology was established in the Division of Rural Education and advanced courses for rural pupils completing the primary grades were established. By the decree-laws of Jan. 13, 1938, an advisory Technical Council on Education was created and participation in sports was made obligatory for primary and secondary school pupils. A National Museum, housing historical documents and portraits and relics of Toussaint L'Ouverture and other national heroes, was opened at Port-au-Prince, Jan. 23, 1938.

HALE, GEORGE ELLERY. An American astronomer, died in Pasadena, Calif., Feb. 21, 1938. Born in Chicago, Ill., June 29, 1868, he was educated at the Massachusetts Institute of Technology (B.S., 1890), Harvard College Observatory (1889-90), and the University of Berlin (1893-94).

His interest in astronomy manifested itself early and while still at college he invented (1890) the spectroheliograph, an instrument for photographing the sun with its prominences. With this he successfully photographed the solar prominences and made the discovery of the luminous clouds of calcium vapor which he named "flocculi." This first spectroheliogram was made on Apr. 14, 1890, at the Kenwood Observatory, founded with his father's help in 1890 and of which he was the director until 1896. For his invention of the spectroheliograph he was awarded the Janssen medal of the Paris Academy of Sciences in 1894.

Dr. Hale lectured at Northwestern University in 1891, and then joined the staff of the University of Chicago as associate professor of astrophysics (1892-97), professor (1897-1905), and organizer and director of the Yerkes Observatory (1895-1905). During this period he made many improvements on the spectroheliograph. With the establishment of the Carnegie Institution of Washington in 1902, he was invited to assist in the organization of a proposed observatory. This was located at Mount Wilson, near Pasadena, Calif., and was founded and equipped under Dr. Hale's direction. He served as its director from 1904 to 1923 when he was named honorary director in charge of policy and development and continued his experiments in his private observatory. He was active in the transformation of Throop Polytechnic Institute of Pasadena into the California Institute of Technology, and was chairman of the Institute's observatory council in charge of the construction of the new Palomar Observatory, which is to contain the largest reflector in the world. Also, he was especially interested in the Huntington Library and Art Gallery, of which he was a trustee.

Dr. Hale contributed to many departments of solar research and was known particularly for his discovery of the magnetic field of sunspots with powerful instruments of his own design in 1908, which was termed "the most vital thing accomplished in solar astronomy in 300 years" and "the most important development in astronomy since Galileo devised his telescope." For this he was awarded the Copley medal of the Royal Society, London, in 1932. For his work in inventing the spectroscope, the spectroheliograph, and other basic astronomical instruments, he received the Franklin medal of the Franklin Institute, and for his researches of the sun, the Crosson medal of the Institute (1926-27). Among his other achievements were the invention or development of several new instruments; the discovery of hydrogen vortices centering in sunspots, and the general magnetic field of the sun.

He was one of the founders of the *Astrophysical Journal* about 1895, and in 1902 was elected to the National Academy of Sciences, and was primarily responsible for the establishment of the Academy's *Proceedings*. In 1916 he originated the National Research Council, and for three years served as its chairman and devoted all his time and effort to it. He retired in 1919 as honorary chairman.

The Dean of American astronomers, Dr. Hale held membership in the leading scientific societies throughout the world and was president of the In-

ternational Council of Scientific Unions during 1931-34. He was a commander of the Order of Leopold II, and of the Order of the Crown of Italy, and was the recipient of the Rumford medal (1902); the Draper medal (1903); the gold medal of the Royal Astronomical Society (1904); the Bruce medal, Astronomical Society of the Pacific (1916); the Janssen medal of the Astronomical Society of France (1917); the Galileo medal, Florence (1920); Actonian prize, Royal Institute (1921); Arthur Nobel medal for civic service in Pasadena (1927); the Holland Society medal (1931), and the Ives medal of the Optical Society of America. In April, 1936, a symposium was held at Harvard Observatory in his honor.

Besides the annual reports of the Mount Wilson Observatory and contributions to scientific journals, Dr. Hale wrote *The Study of Stellar Evolution* (1908); *Ten Years' Work of a Mountain Observatory* (1915); *The New Heavens* (1922); *The Depths of the Universe* (1925); *Beyond the Milky Way* (1926), and *Signals from the Stars* (1931).

HAMBURG. See GERMANY.

HAMILTON COLLEGE. A nonsectarian institution for the higher education of men in Clinton, N. Y., founded in 1812. A total of 446 students was registered for the 1938 autumn session. There were 45 members of the faculty for the year 1938-39. The productive funds of the college were approximately \$4,708,000 and the income for the year 1937-38 was \$349,790. The library contained 179,282 volumes. Construction of a new gymnasium and swimming pool will be begun in the spring of 1939. President, W. H. Cowley, Ph.D., inducted Oct. 29, 1938.

HAMLIN, CHARLES SUMNER. An American lawyer and financial expert, died in Washington, Apr. 24, 1938. Born in Boston, Aug. 30, 1861, he was educated at Harvard University (A.B., 1883; LL.B., *cum laude*, 1886). After admittance to the bar he practiced law in Boston from 1886 to 1893.

Participating in Democratic national politics, he was appointed assistant secretary of the U.S. Treasury in 1893, and as such was particularly interested in changing the accounting system of the department; in the consular service, and in the question of seal fisheries, being appointed, on his resignation from the Treasury, in 1897, a commissioner to negotiate a satisfactory settlement of the fur-seal fisheries controversy among the United States, Great Britain, Japan, and Russia. Subsequently a treaty was signed by the United States, Russia, and Japan, and later in the year the differences between the United States and Great Britain were settled.

Returning to the practice of law, Mr. Hamlin still found opportunity for civic duty. He was a member of the board of the Paris Exposition Commissioners from Massachusetts (1898); a member of the executive committee of the Indianapolis Monetary Convention (1899); a member of the U.S. Assay Commission to examine the Philadelphia Mint (1903); a delegate to the National Democratic Convention, St. Louis (1904); a member of the Japanese Famine Relief Commission (1906), for which he was decorated by the Japanese Government in 1908; a delegate of the American Bar Association to the National Peace Conference, N. Y. (1907); a member of the U.S. Commission on the Limitation of Armaments (1909); a delegate to the fisheries conference called by the New England governors (1908), and a member of the Committee of 100 in the Boston municipal election

(1909). In 1910 he received the unanimous nomination of his Massachusetts district to Congress, but declined it. During 1907-12 he acted as arbitrator in many industrial disputes.

A supporter of Woodrow Wilson for the presidency, he was president of the Woodrow Wilson College Men's League and of the Woodrow Wilson League of Massachusetts in 1912. Upon the election of Wilson, Hamlin returned to the Treasury Department as assistant secretary, and in 1914 he was appointed the first governor of the newly organized Federal Reserve Board, the purpose of which was to supervise the finances of the nation as a whole much in the same manner as the Interstate Commerce Commission supervises the railroads. He was reappointed to this post for the terms 1916-26 and 1926-36 and on Feb. 4, 1936, was named special counsel to the Board of Governors of the Federal Reserve System. From 1917 to 1919 he served as chairman of the Capital Issues Committee.

Mr. Hamlin lectured on the U.S. government at Harvard (1902-03) and from 1906 to 1914 was a member of the committee on government there. The author of many pamphlets on financial matters, he also compiled *Index Digest of Interstate Commerce Laws* (1907); *Index Digest of the Federal Reserve Act* (1915), and *Index Digest of the Federal Reserve Bulletin* (1921).

HAMPTON INSTITUTE. An institution founded in 1868 at Hampton, Va., for the education of Negroes. The enrollment for the autumn term of 1938 was 625 men, 444 women; total 1069, while that for the summer school was 76 men, 445 women; total 521. The faculty numbered 125. The endowment for the fiscal year ending June 30, 1938, was \$10,332,688, from which the income was \$419,485. Gifts to the endowment and investment funds amounted to \$62,517. There were 60,392 volumes in the library. President, Arthur Howe.

HANDBALL. See SPORTS.

HAPSBURGS. See AUSTRIA and HUNGARY under *History*.

HARBORS. See PORTS and HARBORS.

HARLAN CO., KY. See LABOR ARBITRATION.

HARVARD UNIVERSITY. A nonsectarian institution of higher education for men in Cambridge, Mass., founded in 1636. The number of students enrolled for the year 1938-39 was 8583. Of the 3684 registered in the college 795 were seniors, 864 juniors, 930 sophomores, 1030 freshmen, and 65 out of course. Those in the graduate schools were distributed as follows: Arts and sciences, 1055; business administration, 1001; and education, 202. The professional schools reported the following registrations: Public administration, 16; engineering, 162; divinity, 73; law, 1419; medicine, 516; dentistry, 162; public health, 72, and design, 103. For the summer session of 1938 the registration was 2186. The officers of instruction and administration for 1938-39 numbered 1956, of whom 303 were professors, 80 associate professors, 164 assistant professors, and 22 clinical professors. Endowment funds of the University in June, 1938, exclusive of land and buildings used for educational purposes, had a book value of \$137,157,835. Total expenses of the year for instruction, research, and administration were \$10,666,858. Gifts for the year ending June, 1938, totaled \$4,776,386. The library contained 3,941,359 volumes and pamphlets. President, James Bryant Conant, Ph.D., LL.D., D.C.L.

HATAY, REPUBLIC OF. Official name for the former Sanjak of Alexandretta in SYRIA (q.v.).

HAVERFORD COLLEGE. An institution

of higher education, under the control of the Society of Friends, in Haverford, Pa., founded in 1833. Enrollment for 1938-39 totaled 326, including 12 graduate students. There were 44 members on the faculty. The total endowment as of Aug. 31, 1938, was \$4,437,498. A number of small bequests and gifts, including \$7700 additional from the Alumni for the Centenary Fund, totaled \$28,778. The library reported 140,000 volumes. President, William Wistar Comfort, Ph.D., LL.D., Litt.D.

HAWAII. A group of islands in the Pacific Ocean, 2809 miles southwest of San Francisco, forming a Territory of the United States. Capital, Honolulu.

Area and Population. Occupying an area of 6407 square miles, Hawaii, according to the Governor's report, had (June 30, 1938) 411,485 inhabitants. This number exceeded by about 11 per cent Hawaii's population of 368,336 as determined by the census of 1930. The city of Honolulu had (1938) 153,073 inhabitants; the city of Hilo, 16,015. The strikingly diverse composition of the population, as classed by origin, was notable because of the presence of Orientals, mainly Japanese, to the proportion of more than two-fifths of the total. The Caucasian proportion of the population had gained by more than 4 per cent after the census of 1930; the Hawaiian and part-Hawaiian, by 1.28 per cent; the Japanese had declined slightly, in proportion to the total population, their number increasing less fast than other groups; the Filipino element had decreased both in number and proportionately.

HAWAII: POPULATION JUNE 30, 1938

Race	Total	Citizens	Aliens
Japanese	153,539	116,584	36,955
Hawaiian and part-Hawaiian	62,135	62,135
Caucasian	106,999	103,988	3,011
Spanish	1,248	1,069	179
Portuguese	30,406	28,898	1,508
Puerto Rican	7,639	7,639
Other Caucasian	67,706	66,382	1,324
Filipino	52,810	16,201	36,609
Chinese	28,380	24,097	4,283
Korean	6,707	4,355	2,352
All other	915	825	90
Total (italic items omitted)	411,485	328,185	83,300

Education. The enrollments of pupils in the public schools of the Territory rose to 88,885 for the academic year 1937-38, exceeding by 2499 the total of the year before. The increase, however, occurred in the high-school grades, while in the elementary group the number of pupils ran somewhat lower. A falling birthrate had brought about the lower enrollments in the lower grades, while the increase in the higher grades was attributable to the widening spread of opportunity for secondary education as the school facilities increased in many parts of the islands. The University of Hawaii, like the public high schools, reported higher enrollments for 1937-38 than for 1936-37; in the case of regular undergraduate students, the total rose to 1637, from 1397.

Production. Industry in the islands suffered somewhat during 1938 from adversity in the sugar business, which, together with the production of pineapples, provided the Territory with the bulk of its commercial exports. The sugarcane crop of 1938, harmed by weather, yielded about 30,000 tons of sugar less than Hawaii's allowed quota of sales to the mainland. The year's shipments of sugar to the States totaled 882,942 short tons, as against 960,335 for 1937. As the prices obtainable averaged less than the year before, the receipts from the sales of Hawaiian sugar were currently estimated at

\$50,000,000 for 1938, as compared with \$70,000,000 for 1937.

The production of pineapples was reported to have passed a satisfactory year, in which shipments of fruit and juice amounted to 15,500,000 cases and in value approximated \$50,000,000.

Overseas Trade. Hawaii shipped to the United States, in 1938, exports to the total value of \$96,556,679, as against \$130,138,166 for 1937. The imports into Hawaii, of goods from the United States, dropped to \$101,223,813 for 1938, from \$104,302,531 for 1937. Of the exports, sugar supplied \$50,743,327 (1938); canned pineapples, \$24,631,405; and pineapple juice, \$13,216,988. The imports included a considerable proportion of foodstuffs and food preparations, as well as manufactures in great variety.

Finance. The Territory's general fund received \$12,772,141 in the fiscal year ended with June 30, 1938. Out of the general fund the Territory expended in that year \$11,656,721 for governmental costs. The chief part of this expenditure, \$6,346,707, was for education. The outstanding bonded debt on June 30, 1938, amounted to \$36,167,000. The assessed value (June 30, 1937) of real and personal property was \$394,159,873. Corporations authorized to operate in the Territory, 947 in number, were reported to have a total capitalization of \$358,087,758; in consonance with the strongly agricultural nature of the Territory's industries, 84 corporations classed as agricultural provided somewhat over half of the total capitalization of all the corporations.

Communications. The mileage of roads in the Territory was not high but was increasing; 3095 miles of highways were reported as existing in 1937; in the fiscal year 1938, 44 miles of additional highway were built by the Territory's department of public works. In addition to the regular service of shipping lines connecting Honolulu with the United States, the Philippines, Australia, and Japan, weekly flights from Honolulu to the Orient were maintained through 1938 by the Pan American Airways.

Government. The Governor of Hawaii in 1938 was Joseph B. Poindexter. The President of the United States appoints the Governor and the Secretary of the Territory for terms of four years. The voters of Hawaii elect a bicameral legislature; its Senate consists of 15 members, whose terms run four years, and its House of Representatives has 30 members, who serve for two years. The Territory elects a delegate to the U.S. Congress. Samuel W. King (Rep.) was re-elected Delegate on Nov. 8, 1938. The Territory had (1936) 75,059 registered voters.

History. The Joint Congressional Committee on Hawaii, having visited the Territory in 1937 to investigate the bearings of the proposed granting of Statehood, reported its findings on Feb. 15, 1938. The report held it inadvisable to proceed with a proposed plebiscite in Hawaii for determining the extent of the desire among the inhabitants for the granting of Statehood. Further study of the question was recommended. "The present disturbed state of international affairs" afforded the most conspicuous assigned reason against early action to make Hawaii a State; the report put stress, however, on Hawaii's right to "the same treatment accorded to any other part of the nation," with regard to its products and industries.

The report gave a setback to the organized movement for Statehood, and it disappointed hopes that had been entertained for a generation; but as

Governor Poindexter pointed out, the Commission's clearly formulated declaration as to Hawaii's status gave the Hawaiian people good authority to quote when seeking Federal legislation. The report's coldness to the idea of early Statehood lent new interest to the special racial and strategic conditions affecting Hawaii.

Prominent among these conditions was the presence of persons of Japanese race in numbers exceeding one-third of the population. This group was gradually becoming more prevailingly Hawaiian-born and bred in American customs. Yet the Japanese were not among the five racial groups that furnished the great majority of the members of the Hawaiian National Guard, and the number of men of Japanese race serving in the National Guard diminished during the year ended with June 30, 1938.

The importance of Hawaii as an outlying defense of the United States was emphasized by uncertainties connected with the war carried on by Japan in China. Congress authorized, in its regular session of 1938, a special study of the facilities at the U.S. naval bases, and the resulting board of inquiry gave much attention to the Hawaiian base at Pearl Harbor, where, according to another source, the drydock dimensions would not accommodate the great airplane-carriers nor the heaviest battleships, in case of the latter's coming in damaged and drawing much water. The publication of the board's report awaited the convening of Congress in 1939. See George H. Blakeslee, "Hawaii, Racial Problem and Naval Base," *Foreign Affairs* (October, 1938).

HAWKS, FRANK MONROE. An American aviator, died in an airplane crash at East Aurora, N. Y., Aug. 23, 1938. Born in Marshalltown, Ia., Mar. 28, 1897, he was educated at the Long Beach, Calif., high school, and subsequently studied at the University of California and the U.S. School of Military Aeronautics. He began to fly in 1916 and in April, 1917, entered the U.S. Air Service, serving as an instructor until March, 1919, when he was discharged with the rank of captain. In June, 1932, he received the commission of lieutenant-commander in the U.S. Naval Reserve Air Force.

Like the majority of American aviation pioneers, Hawks took to barnstorming to awaken interest, and then in 1921 he signed a contract with the Mexican government to put on an air circus. He remained in Mexico until 1927 when he returned to the United States and became interested in high-speed transport flying. In that year he flew in the National Air Tour, and early in 1929 in a Lockheed monoplane owned by the Texas Corporation, he made his first transcontinental flight. With a mechanic, Oscar E. Grubb, he flew non-stop over 2500 miles from Los Angeles to New York in 18 hours, 21 min. From this time until 1932 he made numerous speed records which, although broken in later years, were influential in speeding up American air transportation.

On August 6, 1930, he broke the westerly transcontinental record by flying from New York to Los Angeles in 14 hours, 50 min. Although he made five stops for gasoline, his flight, averaging 200 m.p.h., was hailed as showing the possibility of rapid commercial and passenger service across the American continent. During the autumn he made a number of notable flights and speed records. On November 6 he flew from New York to Havana, 1400 miles, stopping for fuel at Jacksonville and Miami, Florida. His actual flying time was 8 hours, 38 min. Three days later he made the return trip

to New York in actual flying time of 8 hours, 3 min. In this year he was awarded the Harmon Trophy as well as a decoration of the French Aero Club.

In 1931 he made a unique series of record-breaking flights over America and Europe. On April 22 he breakfasted in London and flew to Rome for luncheon, making the trip of 950 miles in 5 hours and 24 min. He returned to London in time for tea, making the round trip of 1900 miles in 9 hours and 44 min. On May 27 he left Paris at 8:20 a.m. and reached London in 1 hour and 15 min. After breakfast he flew to Berlin, about 600 miles, in 3 hours and 15 min., where he lunched and arrived at Paris, 568 miles, in time for dinner. He then made a series of equally notable trips around France and other European cities, and shipping his airplane by steamer, returned to America by way of Canada. On his return to New York he flew the 350 miles in 1 hour and 45 min., thus making a new record.

On July 23, 1931, he breakfasted in New York, flew to Havana for luncheon, and returned in time for dinner in New York, making a new record on the trip down of 8 hours, 8 min., and 30 sec., and for the return, 7 hours and 31 min. On August 12 he broke the record from New York to Chicago, making it in 4 hours and 6 min., and returning to New York, surpassed his westerly record by 20 minutes. On August 26 he broke nine city-to-city records.

On Apr. 7, 1932, Captain Hawks was injured in a crash at Worcester, Mass., and on June 2, 1933, he made a non-stop record transcontinental flight from Los Angeles to New York in a little less than 13½ hours. His last attempt at making a speed record was on Apr. 13, 1937, when he took off from Hartford, Conn., and landed in Miami in 4 hours and 55 min. After luncheon he took off for Newark and 4 hours and 21 min. later he swooped in to land at Newark, N. J. But the main wing spar broke while landing and, as the damage done was too costly to replace, Hawks decided to give up speed flying.

For a time he headed the aviation division of the Texas Company, and in September, 1937, was appointed vice-president in charge of sales for the Gwinn Aircar Company of Buffalo. He was exhibiting one of the Company's planes when he had his fatal accident.

A daring flyer, Hawks was interested also in gliding, and in 1930 he sailed a gliding craft in tow of an airplane from San Diego to New York, making many stops. The distance of 2860 miles was covered in a flying time of 36 hours, 47 min.

HAY. As estimated by the U.S. Department of Agriculture the 1938 hay crop of the United States amounted to 90,743,000 tons, 10 per cent more than harvested in 1937 and 14 per cent more than the average for the 10 years 1927-36. This production included 10,444,000 tons of wild hay, 27,754,000 tons of clover and timothy hay, 4,210,000 tons of grains cut for hay, 1,745,000 tons of cowpea hay, 872,000 tons of peanut hay, 5,076,000 tons of soybean hay, 2,758,000 tons of lespedeza hay, 1,057,000 tons of sweet clover hay, and 28,858,000 tons of alfalfa hay. (See ALFALFA.) The 1938 harvested acreage was 68,083,000 acres, an increase of 3 per cent over the acreage harvested in 1937 and practically the same as the 10-year average. The 1938 hay crop was the largest in 10 years and, coupled with a large carry-over from the 1937 crop, gave a hay supply per animal unit the second largest in 30 years. The average yield of 1.43 tons of tame hay per acre and of .89 of a ton of wild hay was of greater sig-

nificance than the larger acreage harvested in the production of the large yield of 1938.

The States leading in tame hay production and their yields were as follows: Wisconsin 6,479,000 tons, New York 5,436,000 tons, Iowa 4,997,000 tons, Minnesota 4,893,000 tons, and California 4,352,000 tons. The yields of the leading wild-hay producing States were as follows: Nebraska 1,788,000 tons, Minnesota 1,571,000 tons, North Dakota 1,269,000 tons, and South Dakota 1,011,000 tons. The States ranking highest in the production of the different kinds of tame hay reported the following yields: New York 4,266,000 tons of clover and timothy hay, California 970,000 tons of grain hay, Texas 579,000 tons of cowpea hay, Georgia 232,000 tons of peanut hay, Illinois 1,011,000 tons of soybean hay, Tennessee 1,006,000 tons of lespedeza hay, and Minnesota 304,000 tons of sweet clover hay. In the fiscal year ended June 30, 1938, the United States exported 99,000 long tons of hay of various kinds and imported 23,000 short tons. Estimates on hay production in foreign countries as a rule are not available.

HAYDEN-CARTWRIGHT ACT. See AUTOMOBILES.

HAYES, PATRICK JOSEPH, CARDINAL. An American Roman Catholic prelate, died near Monticello, N. Y., Sept. 4, 1938. Born in New York City, Nov. 20, 1867, he was educated at Manhattan College (A.B., 1888; A.M., 1894), and upon graduation entered St. Joseph's Seminary, Troy, N. Y., being ordained priest in 1892. Thereupon he matriculated at the Catholic University of Washington for two years (S.T.D., 1894), laying the basis for his future authority on matters theological and canonical. Assigned to parochial work he was stationed at St. Gabriel's Church, New York, in 1894 as assistant to the pastor, Mgr. John Farley.

Upon Dr. Farley's appointment as auxiliary bishop of New York in 1897, Father Hayes was appointed his secretary, and in 1903, chancellor of the diocese of New York. Also in that year he was named president of Cathedral College, the new diocesan preparatory seminary, in which position he served until 1914. In addition to these duties, he contributed several articles to the *Catholic Encyclopedia* and prepared an accurate and clear explanation of the new marriage law of the church, *Ne Temere*, for the *North American Review*. Rome conferred upon him the degree of Doctor of Divinity in 1904, and in 1907 he was made a Domestic Prelate with the title of Monsignor.

When Bishop Farley was raised to the Archbishopric, Mgr. Hayes continued as his secretary, and on Oct. 28, 1914, was consecrated in St. Patrick's Cathedral as auxiliary Bishop of New York and titular bishop of Tagaste. A year later he was named irremovable rector of St. Stephen's Church. Upon the entrance of the United States into the World War, the Bishop devoted considerable time and effort to the spiritual welfare of the American forces and on Nov. 24, 1917, Pope Benedict XV appointed him Bishop Ordinary of the U.S. Army and Navy, carrying ecclesiastical jurisdiction over Catholics in the service wherever the American flag was raised. As such he traveled throughout the United States visiting training camps, and organized and selected those priests who were to act as chaplains. Also, he was one of five bishops who organized the Catholic War Council and was a director of the Knights of Columbus drive for war funds and of the United War Work drive.

About to sail for Europe on a visit to American

forces abroad, his visit was canceled by the death of Cardinal Farley, and on Mar. 10, 1919, he was appointed Archbishop of New York, the first native-born American to hold that office. In 1924 he, with Archbishop Mundelein of Chicago, an old schoolmate, was called to Rome, and on Mar. 24, 1924, they were made Princes of the Church.

The Cardinal-Archbishop of New York was best known for his work in the field of charity and so intense were his labors that the well-earned title "Cardinal of Charities" became his. The unification of all the charities in the diocese under one head had been considered by Cardinal Farley, but the outbreak of War intervened, and this work was left until 1919 when the new Archbishop took up the subject. On May 1, 1920, the Catholic Charities of the Archdiocese of New York was inaugurated with the Cardinal as its president. In the annual report of the New York State Board of Charities for 1920 this was referred to as "the most significant and important event of the year in the field of charitable work."

Although devoted to the cause of charity, the Cardinal did not neglect any measures necessary to the well-being of his flock. He organized the Cardinal's Literature Committee, which prepared seasonal reports on contemporary books in all fields, and the Catholic Theater Movement, which did the same for the theater. He was outspoken in his condemnation of birth control, and on Dec. 8, 1935, delivered a vigorous sermon denouncing its advocates as "prophets of decadence," and voicing his "measured, deliberate, and emphatic condemnation of the effrontery" of those "who would fly in the face of God and bring ruin and disaster to the land." In 1937 he was one of the leaders of the Catholic Church in New York who urged the defeat of the Federal Youth Control (Child Labor) amendment to the Constitution.

Cardinal Hayes was honored by France with the Legion of Honor (1919); by Italy with the Grand Official Order of St. Maurizio and St. Lazzaro (1929); he received the Grand Cross of Devotion of the Knights of Malta (1927) and in 1928 was made the Cardinal Protector of the American Branch of that Order. He was appointed to the Congregation "Pro Ecclesia Orientali" in 1931, and in 1935 became the first American to serve as a Papal Legate when he served in that capacity at the National Eucharistic Congress held at Cleveland, Ohio.

HERRESHOFF, hēr'ēs-hōf, NATHANAEAL GREENE. An American ship designer and builder, died at Bristol, R. I., June 2, 1938, where he was born on Mar. 18, 1848. Educated in the public schools of Bristol and at the Massachusetts Institute of Technology (1866-68), this was supplemented by practical study and experience in the best engineering shops and yards abroad. In 1869 he became a draftsman with the Corliss Engine Works at Providence, R. I., where he assisted in the construction of the large engine which furnished motive power for all machinery at the Philadelphia Exposition of 1876.

His reputation was first made with the speedy sailing craft *Riviera* (1874), built at Nice, and by a jointed boat or catamaran, which he patented in 1875. In the following year he designed *Lightning*, a 60-foot torpedo boat capable of 20 m.p.h. for the U.S. Naval School. He joined his brother in 1879

as designer for the Herreshoff Mfg. Co., of which he became superintendent in 1881 and president in 1915. In 1924 he retired and the Company was purchased by a syndicate.

His invention in 1874 of a tubular or coil boiler which increased speed without adding weight made the firm famous for high-speed steam yachts, the first of these being the *Stiletto* (1885), which was purchased by the Government and brought the firm the order for the torpedo boat *Cushing*. Although but 86 feet long and in use for 20 years, the *Stiletto* was able in 1903 to make 18 knots an hour.

It was with sailing yachts, however, that the Herreshoffs were best known. The *Shadow*, the first Herreshoff-designed sloop appeared in 1881 and in 1891 an epoch-making yacht appeared—the *Gloriana*, built for E. D. Morgan. The memorable features of her model included a long overhang at each end and a straightline bow in place of the hollow vertical wedge. The advantages of overhangs at each end were added initial stability and lengthened fore and aft lines of hull, thereby refining the angle presented to the water, and thus avoiding the heaping up of water under the lee bow in windward work. With the advent of the *Gloriana* the illusion that a racer must necessarily have a sharp, vertical-wedge bow with hollow lines vanished. She started in eight races in her first year and won them all. With the appearance of the *Wasp* and *Dilemma*, his success was established.

In 1893 Herreshoff designed and built his first America's Cup defender, the *Vigilant*. This was followed by the *Defender* (1895), the *Columbia* (1899, 1901) and the *Reliance* (1903), which was the fastest boat built up to that time. The last America's Cup defender designed by him was the *Resolute* (1920), which perhaps was the greatest of them all, for it defeated the *Shamrock II* and 10 years later sailed in the trials that preceded the 1930 cup race.

Other boats designed by him were the yachts *One Hundred* (1883), *Now Then* (1887), *Say When* (1888), and *Vamoose* (1891); the *Pelican* (1890); the *Navahoe* (1893); *Colonia* (1893); *Henrietta* (1886); *Ballymena* (1888); *Javelin* (1891), and the torpedo-boats, *Dupont*, *Porter*, and *Morris*, in 1897-98.

One of the outstanding yacht designers of all time, Mr. Herreshoff designed and superintended the building of thousands of boats between 1877 and 1924, ranging from sailing dinghies to the largest ocean-going schooners, from fast-driven steam yachts and torpedo boats to power-driven houseboats. His yachts won 13 Goelet Cup races; 22 out of 62 Astor Cup matches; 14 of 24 King's Cup races; triumphed twice in the Camp May Challenge Cup events, and four times in the fight for the Brenton Reef Cup.

He was a member of the Institute of Naval Architects of England and of the American Institute of Naval Architects and Marine Engineers.

HERRICK, ROBERT (WELCH). An American novelist, died at Charlotte Amalie, Virgin Islands, Dec. 23, 1938. Born in Cambridge, Mass., Apr. 28, 1868, he was educated at Harvard University (A.B., 1890), and upon graduation was appointed instructor in rhetoric at the Massachusetts Institute of Technology. Three years later he joined the faculty of the University of Chicago, serving successively as instructor in rhetoric, assistant professor of English (1895-1901), associate professor (1901-05), and professor (1905-23).

Mr. Herrick's novels included broad pictures of

American life and were concerned with the social issues of the day and with the clash of commercialism and idealism. With *Together* (1908), Mr. Herrick first achieved prominence as a novelist both at home and abroad. His other works included *The Man Who Wins* (1895), *Literary Love Letters and Other Stories* (1896), *The Gospel of Freedom* (1898), *Love's Dilemmas* (1898), *The Web of Life* (1900), *The Real World* (1901), *Their Child* (1903), *The Common Lot* (1904), one of his outstanding works, *The Memoirs of An American Citizen* (1905), *The Master of the Inn* (1908), *A Life for a Life* (1910), *The Healer* (1911), *One Woman's Life* (1913), *His Great Adventure* (1913), *Clark's Field* (1914), *The World Decision* (1915), *The Conscript Mother* (1915), *Homely Lilla* (1923), *Waste* (1924), *Wanderings* (1925), *Chimes* (1926), *Little Black Dog* (1931), *The End of Desire* (1931), and *Sometime* (1933). In 1899 he published, with L. T. Damon, *Composition and Rhetoric*.

During the World War, Mr. Herrick served as a war correspondent for the *New York Tribune*. After his retirement from the University of Chicago, in 1923, he devoted himself to writing, and in 1935 he was appointed Secretary-General of the Virgin Islands. He was a member of the National Institute of Arts and Letters.

HERTY, CHARLES HOLMES. An American chemist, died in Savannah, Ga., July 27, 1938. Born in Milledgeville, Ga., Dec. 4, 1867, he was a student at Georgia Military and Agricultural College (1880-84) and in 1886 received the degree of Bachelor of Philosophy at the University of Georgia. He took his doctorate at Johns Hopkins University in 1890, where he studied chemistry, mineralogy, and geology, and wrote for his thesis "The Double Halides of Lead and the Alkali Metals." In 1899 and 1900 he studied at the universities of Berlin and Zurich.

Dr. Herty's first post was as an assistant chemist in the Georgia State Experiment Station (1890-91). He joined the faculty of the University of Georgia in 1891 and was successively instructor and adjunct professor of chemistry (1894-1902). Joining the Department of Agriculture, he became a collaborator (1901-02) and an expert (1902-04) with the Bureau of Forestry. In the summer of 1901 he investigated the turpentine industry, the results of which he published in "Practical Results of the Cup and Gutter System of Turpentineing." In 1932 he received the Medal of the American Institute of Chemists for his "researches that revolutionized the turpentine industry," and which put it on a sound basis.

Leaving the Government service, he became associated with the Chattanooga Pottery Co. during 1904-05 and in 1905 was appointed professor of chemistry at the University of North Carolina, which position he held until 1916. During 1908-11 he was dean of the School of Applied Science there. He then became editor of the *Journal of Industrial and Engineering Chemistry*, and his belligerent editorials awakened the chemists and chemical industries to the necessity of action for a national offense as well as a defense. In 1919 Dr. Herty was sent abroad by President Wilson to negotiate with the reparations authorities for the purchase of impounded stocks of German dyes, and he successfully obtained the importation and purchase of dyes directly from the leaders of the German dye trust. He became president of the Synthetic Organic Chemical Manufacturers Association in 1921 but left that organization in 1926 to become, for two

years, an adviser to The Chemical Foundation, Inc. Until 1932 he was an industrial consultant in New York City, when he entered the Department of Forestry and Geological Development of Georgia as director of the division of pulp and paper research, and in 1933 he became director of the Pulp and Paper Laboratory of Industrial Committee of Savannah, which post he held at his death.

A leading figure in the world of chemistry, his researches were done principally in organic chemistry and included the determination of the constitution of inorganic compounds by physico methods; also, he invented a new method of turpentine orcharding and a rapid method for the determination of oil in cottonseed products. For the past 10 years or so he had made intensive investigations to determine the possibilities of producing newsprint and other grades of white paper from young southern pines, and in 1937, the first newsprint paper mill was erected in eastern Texas at a cost of \$5,000,000, to produce 150 tons of newspaper daily from southern loblolly pine by the Herty process.

For his work in this direction, Dr. Herty received the Lucas Trophy in 1934, an award given annually to the resident of Savannah, Ga., who performed the most worthwhile service for the city; and also the Herty medal given by the Students and Staff of the Chemistry Department of The Georgia State College for Women for "excellent service rendered the field of chemistry within the Southeast." A fellow of the American Association for the Advancement of Science, he was a member of many scientific societies and served as president of the American Chemical Society (1915-16), the highest honor American chemistry could give. During his incumbency, the National Exposition of Chemical Industries was organized and realizing the potentialities in this Exposition to assist the permanent establishment of a self-contained chemical industry, he became intensely interested in its success. He held the chairmanship of the Advisory Committee from its inception until 1925, when he retired, retaining membership on the Committee, however.

Besides articles in the scientific press, Dr. Herty wrote *Tables for Cottonseed Oil Products* and *Relations of Light Chipping to the Commercial Yield of Naval Stores* (1911).

HISPANIC SOCIETY OF AMERICA, THE (Spanish Museum and Library). Founded in 1904. An educational institution, containing objects of artistic, historic, and literary interest, its purposes are to advance the knowledge of the Spanish and Portuguese languages, literature, and history and to encourage the study of the countries wherein Spanish and Portuguese are or have been spoken languages. In furtherance of these aims, paintings and other art objects together with manuscripts, maps, and a library of about 40,000 books were placed in charge of the Society. These varied collections have been gradually increased so that, for example, the library now forms one of the most notable Hispanic libraries in America. A number of temporary exhibitions have been held of the works of noted Hispanic artists. The Society has issued more than 600 imprints relating to Spanish art, history, and literature. In this group are the Huntington reprints of early books, monographs, catalogues on the collections, a Handbook of the museum and library collections (1938), and several works published in co-operation with other institutions. Membership in the Society is honorary and

is limited chiefly to Hispanists of distinction. President, Archer M. Huntington. Headquarters: Broadway, between 155th and 156th Streets, New York City.

HISPANIOLA. Official name of the island commonly known as Haiti. See HAITI; DOMINICAN REPUBLIC.

HISTORICAL ASSOCIATION, AMERICAN. A society for the promotion of historical studies and writings formed in 1884 by a group of scholars and chartered by Congress in 1889. Its membership in 1938 numbered 3424.

The Association's fifty-third annual meeting was held in Chicago, Ill., Dec. 28-30, 1938. Meeting concurrently were the Agricultural History Society, American Association of University Professors, American Catholic Historical Association, American Military History Foundation, American Oriental Society (Middle West Branch), American Society of Church History, Bibliographical Society of America, Conference of State and Local Historical Societies, History of Science Society, Mediaeval Academy of America, Mississippi Valley Historical Association, National Council for the Social Studies, Society of American Archivists, and the Southern Historical Association. The Herbert Baxter Adams Prize was awarded to McCandless Wilson, Dartmouth College; the George Louis Beer Prize to René Albrecht-Carrié, and the John H. Dunning Prize to Robert A. East. The Jusserand Medal was abolished. The official organ of the association is the *American Historical Review*, a quarterly.

The officers elected for 1938 were: President, Laurence M. Larson (died Mar. 9, 1938) and succeeded by the first vice-president, Frederic L. Paxson, University of California; second vice-president, William Scott Ferguson, Harvard University; secretary, Dexter Perkins, University of Rochester; treasurer, Solon J. Buck, The National Archives, Washington, D. C.; executive secretary, Conyers Read, Philadelphia, Pa.; editor, Lowell J. Ragatz, George Washington University; assistant secretary-treasurer, Patty W. Washington. Headquarters are at 740 Fifteenth Street, N.W., Washington, D. C.

HISTORY. See FRENCH LITERATURE; GERMAN LITERATURE; LITERATURE, ENGLISH AND AMERICAN; PHILOLOGY, MODERN, ETC.; also, sections on *History* under each country.

HLINKA, ANDREAS. A Slovak churchman and politician, died at Buzomberck, Czecho-Slovakia, Aug. 16, 1938. Born at Černova, Austria-Hungary, Sept. 27, 1864, he was educated in the local schools and seminary and ordained to the Roman Catholic priesthood in 1889. Stationed at Trich Slacich he converted that little village into a model community, and in 1895 was transferred to Rosenberg. His work for the maintenance of the Slovak culture and nationalism led to his imprisonment in 1907-10, during which period of incarceration he translated the Old Testament from Latin into Slovak. During the World War he served on the Red Cross and other local welfare committees.

With the establishment of the Czecho-Slovak Republic in 1918, Father Hlinka became editor of *Ludove Noviny* and a leader of the strongly Catholic Slovak People's party, serving as their chairman in the first national assembly at Prague. In the following year he attended the Paris Peace Conference where he lobbied for Slovak autonomy. During his 20-year association with the People's party he constantly agitated and led the fight for Slovak administrative autonomy and practical

independence in all domestic affairs. In a public address in 1932 he claimed that there was no such nation as Czecho-Slovakia and that the Slovaks had their own traditions. Although an opponent of Lord Rothermere's campaign in 1927 to have the peace treaties revised, fearing no doubt that the control of Slovakia might pass to Hungary, he had in late years joined in a more or less united front with the militant Sudeten German minority and the Hungarian minority in their demands for liberation from the rule of the Czechs. He was imprisoned for 10 days in 1926 for libeling President Masaryk.

Hlinka was an apostolic protonotary with the title of monsignor, president of *Ludova Banka*, director of the daily newspaper *Slovak* and of the weekly edition, *Slovak Tyzsdennik*, and of many co-operative enterprises in his parish.

HOBART COLLEGE. An institution for the higher education of men in Geneva, N. Y., founded in 1822. William Smith College, a co-ordinate institution for separate instruction of women, was established in 1908. Undergraduate work at both colleges leads to A.B. or B.S. degrees, with advanced work leading toward Master's degree in some departments. The student enrolment at Hobart for autumn of 1938 was 381, and for William Smith was 164. The combined faculty totaled 54 members. Library contained 104,150 volumes. Endowment was \$1,357,800; value of grounds and buildings \$1,017,000; income for the year approximately \$275,000; gifts received in 1937-38 college year \$43,641. President, William Alfred Eddy, A.B., A.M., Ph.D., LL.D., L.H.D.

HOCKEY. See SPORTS.

HOLLINS COLLEGE. A liberal arts college for women, founded 1842, located 6 miles north of Roanoke, Va. It is nonstate, nonsectarian, with an endowment of \$424,807. The 1938 enrollment was 317. The faculty numbered 38, excluding all administrative officers. There were 11 academic buildings, exclusive of faculty residence halls and residences on a campus which included more than 400 acres. The library contained 28,840 volumes. The physical equipment was valued at \$1,468,523 in 1938. President, Bessie C. Randolph, Ph.D.

HOLY CROSS COLLEGE. A Roman Catholic college for men, under the Society of Jesus, in Worcester, Mass., founded in 1843. The enrollment for the autumn of 1938 totaled 1237. The faculty numbered 90. The library contained 122,000 volumes. President, The Rev. Francis J. Dolan, S.J.

HONDURAS, hōn-dōō'rās. A Central American republic. Capital, Tegucigalpa.

Area and Population. The area is about 46,250 square miles and the population at the census of June 30, 1935, was 962,000 (854,154 in 1930). The people are mainly of mixed Spanish and Indian blood, except for the considerable Negro element in the north coast banana region and some 35,000 aborigines. The 1935 populations of the chief cities, including suburbs, were: Tegucigalpa, 42,903; San Pedro Sula, 32,721; Comayagua, 15,095; Tela, 14,460; Progreso, 13,748; La Ceiba, 13,795; Choluteca, 13,024; Juticalpa, 11,593; Puerto Cortes, 11,306; Comayagua, 10,332; Trujillo, 10,275.

Education and Religion. About 67 per cent of the population over seven years of age were illiterate in 1935. In 1937 there were 757 public elementary schools, with 40,836 pupils registered and 1232 teachers. There were also 16 secondary schools, 6 normal schools, and the National University at Tegucigalpa (312 students in 1935-36).

A large majority of the inhabitants are Roman Catholics, but freedom of worship is guaranteed all creeds.

Production. Agriculture and stock raising are the chief occupations. Shipments of the principal export crops in 1937 were: Bananas, 12,710,000 bunches; coconuts, 10,804,000 nuts; coffee, 5,427,000 lb.; leaf tobacco, 1,030,000 lb. Corn, kaffir corn, beans, and sugar cane are grown for local consumption. The forests yield mahogany and other hardwoods. There is one large silver mine and several small gold workings. Manufacturing is of minor importance, supplying only a small part of the local needs.

Foreign Trade. By an act of Congress in 1938 the fiscal year was made to end on June 30 instead of July 31. Consequently the following trade figures for 1937-38 represent an 11-month period. Imports for this period amounted to \$9,468,000 and exports to \$7,356,000. The United States supplied 62 per cent of the 1937-38 imports (58.1 per cent for the same 11 months in 1936-37); Germany, 11.1 (9.5); Japan, 9.2 (14.5). Of the general 1937-38 exports, the United States took 86.4 per cent (88.8 in 1936-37); Germany, 2.8 (1.3). The value of the chief exports for the fiscal year ended July 31, 1937, was: Bananas, \$5,739,000; coconuts, \$127,000; coffee, \$127,000; gold and silver, \$2,155,000; mineral tailings, \$359,000.

Finance. For the change in the fiscal year, see *Foreign Trade*. The budget for 1937-38 estimated receipts at 11,811,627 lempiras and expenditures at 18,811,627 lempiras; for 1938-39 the estimates balanced at 14,451,000 lempiras. The external public debt on July 31, 1937, totaled \$3,061,938 and the internal debt about \$10,500,000. The entire internal debt outstanding as of July 31, 1936, was to be converted and liquidated by Aug. 1, 1938, under a law passed by Congress in 1937 (see 1937 YEAR BOOK, p. 319). The lempira (nominal value, \$0.8466 U.S. currency) had an average exchange value of about \$0.49 in 1937 and 1938.

Transportation. There were about 965 miles of railway line in operation in 1938. Highways extended about 511 miles in 1937; number of automobiles Jan. 1, 1938, 1225. Air services in operation in 1938 covered 2420 route miles and linked the principal towns with one another and with the Pan American Airways international network.

Government. The Constitution of Apr. 15, 1936, extended the terms of office of the President, Vice-President, and members of Congress from four to six years. It stipulated that the incumbent President and Vice-President should continue in office until Jan. 1, 1943, and that the Constitutional Assembly of 59 members (all Nationalists) should automatically become the regular National Congress with the members holding office until Dec. 4, 1942. The first election under the new Constitution was set for the last Sunday of October, 1942. President in 1938, Gen. Tiburcio Carias Andino (Nationalist), who assumed office Feb. 1, 1933.

History. Little news of developments under the Carias Andino dictatorship seeped through the censorship during 1938. Reports of minor revolutionary outbreaks in Honduras, given out by Nicaraguan sources, were denied by Honduran officials. The government strengthened its armed forces by the purchase of additional military airplanes from a United States manufacturer. The government's far-reaching efforts to extricate itself from a serious financial crisis (see 1937 YEAR BOOK, p. 319) were continued in 1938. A law of February 15 imposed a tax varying from 1 to 10 per cent on in-

heritances and gifts of real or personal property. The tax on such a legacy to a foreigner not domiciled in Honduras was fixed at 20 per cent.

The interest of the country was focused during the year upon the negotiations for a settlement of the boundary dispute that broke out with Nicaragua in 1937 (see 1937 YEAR BOOK). The Mediation Commission established in 1937 reconvened at San José, Costa Rica, on Feb. 23, 1938, to seek a final solution of the controversy. It was unable to break the deadlock between the Honduran representatives, who insisted on fulfillment of the King of Spain's 1906 arbitration award on the frontier issue, and the Nicaraguans, who declared the King's award unacceptable. The negotiations were hindered by Honduran charges that Nicaragua was violating the provisions of the agreement of Dec. 10, 1937, regulating the conduct of the two governments during the boundary negotiations.

On April 9 the commission adjourned. It failed to reconvene during the remainder of the year due to the persistence of the deadlock. The failure of the Costa Rican public to accept the Costa Rican-Panama boundary treaty (see COSTA RICA under *History*) militated against the success of the Honduran-Nicaraguan negotiations. It was announced on October 23 that the Mediation Commission would reconvene early in 1939 after the Pan American Conference (q.v.) at Lima, Peru, had been given an opportunity to influence the disputants.

HONDURAS, BRITISH. See BRITISH HONDURAS.

HONG KONG. A British crown colony consisting of the island of Hong Kong (32 sq. mi.), Old Kowloon (3 sq. mi.), and the New Territories (356 sq. mi.) leased from China (June 8, 1898) for 99 years. Total area, 391 square miles; total population (mid-year 1937 estimate), 1,006,982 of whom 98 per cent were Chinese. This is considered to be 30 per cent below the actual population because of the large number of refugees who have entered the colony as a result of the Sino-Japanese conflict. The following figures of vital statistics are also affected by this refugee problem. In 1937 there were 32,303 births and 34,635 deaths. The 1177 schools (1015 vernacular and 162 English) had a total enrollment for 1937 of 86,993. Hong Kong University had (in 1936) 350 full-time students.

Production and Trade. The main industries were the manufacture of sugar, cement, flashlights, rubber shoes, lard, and ships. Deep-sea fishing is an important occupation. In 1937 imports (exclusive of treasure, HK\$386,448,955) were valued at HK\$617,100,000; exports (exclusive of treasure, HK\$395,226,524), HK\$467,300,000 (Hong Kong dollar averaged \$0.3069 for 1937). China sent 33.6 per cent of the imports and took 42.7 per cent of the exports. The principal commodities of trade were foodstuffs, metals, piece goods, oils and fats, Chinese medicines, and fertilizers. Hong Kong is a free port and the chief port for South China. Its harbor is fortified and is the headquarters for the China Squadron of the British Navy. A total of 73,257 vessels aggregating 37,830,760 tons, entered and cleared the colony during 1937.

Communications. There is an electric tramway of over 9 miles, a cable tramway joining the Peak district with the lower levels of Victoria, and a government railway on the mainland joining Kowloon with Canton. Highways extended 371 miles (173 miles on the island of Hong Kong, 106 on Kowloon, and 92 miles in the New Territories).

The commercial wireless telegraph services, previously controlled by the Hong Kong telegraph administration, were taken over by Cable and Wireless Limited. The Air France service which formerly ended at Hanoi was extended to Hong Kong during 1938. There are now five large air companies (Pan American Airways, Imperial Airways, Air France, China National Airways, and Eurasia Airways) using Kai Tak airport in Hong Kong as a terminus for their services. The air mail between Bangkok and Hong Kong, hitherto on a once-a-week basis, was duplicated during 1938.

Government. For 1937 revenue amounted to HK\$33,196,368; expenditure, HK\$32,111,222; total public debt (Dec. 31, 1937), HK\$17,158,000. The colony is governed under Letters Patent of Feb. 14, 1917, and Royal Instructions of the same and following dates, by a governor who is assisted by an executive council of 6 official and 3 unofficial members. There is a legislative council, presided over by the governor, of 9 official and 8 unofficial members. Governor, Sir G. A. S. Northcote (appointed Jan. 19, 1937).

History. The legislative council, early in 1938, approved the expenditure of HK\$337,769 on the second section of the Shing Mun Valley water scheme. In addition, it approved the sum of HK\$815,577 on other 1937-38 loan works. Wing-Commander A. H. S. Steele-Perkins was appointed by the Colonial Office in London to be Air Raid Precautions officer in Hong Kong. Local rubber factories were converted, at the suggestion of the government, to manufacture gas masks which were placed on sale in stores at a small cost. An ordinance for the protection of women and girls, covering Mui-Tsai policy, was passed with a number of minor amendments by the legislative council (*Crown Colonist*, London; July, 1938).

The shipbuilding industry was extremely active during 1938. At the end of June the ships under construction totaled 40,000 tons, including two ships of 10,000 tons each. An accumulation of over 80,000 tons of cargo awaiting transit was caused by the blockade of the China coast by the Japanese. Hong Kong money, as a result of the Sino-Japanese conflict, was much in demand by the Chinese and the Hong Kong government as well as the four note-issuing banks had to increase their issues during the year. New security rim coins were released for circulation by the treasury in an effort to foil counterfeiters.

The governor announced in July that he had decided to appoint a full-time labor officer to the secretariat for Chinese affairs. His duties would include investigations into rates of wages, cost of living, and local industrial conditions. An acute housing shortage developed in the colony because of the large influx of refugees from the Sino-Japanese hostilities and a plan for the accommodation of the refugees in camps was considered by the government. A small-pox epidemic, which lasted all winter, caused the loss of 1720 lives out of 2243 cases reported. The government instituted the vaccination of over a million inhabitants in an effort to stamp out the epidemic. Then, when the small-pox epidemic had ceased, cholera swept the colony and by mid-July very few of the 189 cases reported had recovered. Quarantine restrictions, for the first time in the history of Hong Kong, were imposed against the city of Canton in order to control the small-pox epidemic which was thought to have been caused by the influx of refugees from South China.

Hong Kong's trade received a severe blow in

mid-August as a result of the cutting off of traffic with the interior, via Canton, but moderate trade continued with coastal ports, and trade with Macao, Kwangchow, and Haiphong increased. The British admiralty, in view of the decision to expand the Hong Kong naval program, contemplated the repurchase of the former naval arsenal site which was sold to the Hong Kong government last year (1937) for HK\$2,000,000. British protests against the Japanese violations of the frontier on Nov. 26, 1938, resulted in the evacuation of the entire Hong Kong border by the Japanese in order to avoid incidents. See CHINA under History.

HOPS. Data on the 1938 hop production in different countries other than the United States were quite incomplete at the close of the calendar year. The International Institute of Agriculture reported for France a crop of 4,495,000 lb. produced on 4200 acres as compared with 5,182,000 lb. and 4300 acres in 1937. A preliminary estimate placed the acreage in Belgium at 1800 acres, compared with 2100 acres the year before. The 1938 production of England and Wales was placed at 26,784,000 lb. grown on 18,500 acres, an increase of 464,000 lb. in production and of 400 acres in acreage over 1937.

The 1938 crop of the United States was reported by the Department of Agriculture at 35,261,000 lb. of which, owing to market conditions and marketing agreement quotas under the Agricultural Adjustment Administration, 3,140,000 lb. remained unharvested. The acreage of 31,500 acres was 8 per cent smaller than in 1937 and the yield per acre, 1,119.4 lb., was about 13 per cent less than in the preceding year. This report included only the Pacific Coast States as production elsewhere is not of commercial importance. Oregon produced 16,434,000 lb., Washington 9,675,000 lb., and California 9,152,000 lb. of which 1,200,000, 1,300,000, and 640,000 lb. respectively were unharvested. In 1937 these States produced 43,913,000 lb. of which 4,365,000 lb. remained unharvested due to market conditions and labor shortage. The three principal varieties grown on the West Coast are Late Clusters, the Fuggles, and Early Clusters, of which Late Clusters occupies about 75 per cent of the hop acreage of the region.

During the fiscal year ended June 30, 1938, the United States exported 5,603,000 lb. of hops compared with 2,723,000 lb. the preceding fiscal year and imported 9,291,000 lb. of hops and 3200 lb. of hop extract and lupulin. The hop industry and some of its problems are described in Washington Experiment Station Bulletin No. 363, Pullman, August, 1938, entitled "Migratory Farm Labor and the Hop Industry on the Pacific Coast."

HORMONES. See BIOLOGICAL CHEMISTRY.

HORSE RACING. See SPORTS under Turf.

HORTICULTURE. In general, 1938 was a favorable year for American horticulture. Production of commercial crops was, in most cases, lower than in 1937 but sufficient to meet needs and not so large as to depress prices except in a few instances, such as grapefruit and oranges. Severe spring freezes occurring in the south and north-central states and in the northeast area caused serious local losses and the unprecedented hurricane occurring in New England on September 21 destroyed the crops unharvested at the time. Roughly, half of the New England apple crop was blown from the trees and either lost or forced into the cider and cull markets. More serious still was the loss of trees by uprooting from the soil softened by excessive rains just prior to the hurricane. In

addition to the fruit crop, great damage was done to vegetable and ornamental plants. Withal, however, considering the nation as a whole, these local losses had but little effect on total production and total values.

Ornamental horticulture continued to gain rapidly in national significance. The extent of business in this field is shown in nearly \$1,500,000 worth of imported tulip bulbs and over \$500,000 worth of hyacinth bulbs. The interest in ornamentals is reflected in the many new books on the general subject published in 1938 (see *Bibliography* below).

The World Situation. As indicated in the mimeograph, "World Fresh Fruit Statistics," published by the Department of Agriculture in August, the United States leads in the production of many fruits, including the apple, peach, grapes for table use, oranges, and grapefruit. In the world at large, more grapes are produced than any other fruit, apples taking second place. The trend in world-total production for the 14 principal fruits, excluding grapes for wine and raisins, is upward, with the most rapid expansion in citrus fruits. Total orange and mandarin production for 27 countries reporting had increased from an average of 133 million boxes in the five years 1922-26 to 207 million in the five years ended 1937. The greatest citrus gains have been in Palestine, Brazil, and the Union of South Africa. For the United States, increasing production in foreign lands is highly significant since it means increasing competition for American fruit in foreign markets.

The Canadian apple crop in 1938 was smaller than in 1937 and there was a considerable reduction in all fruit crops in Central Europe. The European filbert crop was estimated at 96,000 short tons as compared with 128,400 tons in 1937. Bumper crops of raisins in Australia and Turkey resulted in a 29 per cent increase in production in countries outside the United States. Reduced citrus crops in Mediterranean countries, due partly to the war situation in Spain, favored United States trade in Europe. The winter tomato crop in West Mexico was drastically reduced from 30 to 8 thousand acres, due largely to the unfavorable market situation in the preceding season.

Domestic Production. Fruit crops were generally smaller and vegetable crops generally larger in 1938, according to data released by the U.S. Department of Agriculture on December 19. Among fruits to show material declines were the apple from 210,783,000 bu. in 1937 to 131,882,000 bu. in 1938; peaches from 59,724,000 bu. in 1937 to 51,945,000 in 1938; grapes, 2,777,000 tons in 1937 to 2,503,000 in 1938; cranberries, 877,000 bbl. in 1937 to 457,000 in 1938; pecans, 76,893,000 lb. in 1937 and 46,566,000 in 1938. On the other hand, orange estimates for the 1938-39 season were 78,281,000 boxes as compared with 74,476,000 in the preceding crop year; grapefruit 40,696,000 boxes in 1938-39 against 31,093,000 in the 1937-38 season. Among vegetables to show substantial yield increases were asparagus, lima beans, snap beans, beets, cabbage, cantaloupes, carrots, cauliflower, celery, cucumbers, eggplants, onions, and market tomatoes. Crops to show moderate declines were sweet corn, fresh peas, spinach, and watermelons. In most cases, increased vegetable production was based on a corresponding acreage increase rather than larger acre yields. The production of peas and snap beans for canning set new records, partly to meet the need for material for freezing preservation, a rapidly developing new industry.

Foreign Trade. Comparing figures in the

Monthly Summary of Foreign Commerce for October, 1937, and October, 1938, there is noted a sharp rise in the value of imported horticultural materials in 1938 from \$45,787,445 in 1937 to \$62,153,351 in 1938. Exports also show a substantial gain from \$77,795,567 in 1937 to \$90,274,270 in 1938. Considering disturbed international conditions, restrictive trade barriers, etc., this was a promising situation. As always, bananas constituted the major import item, \$24,622,697 worth being received from Jan. 1 to Oct. 31, 1938. Other important items were tomatoes, fresh and canned, olives, Brazil nuts, cashews, and tulip bulbs. The orange was the most valuable export item, totaling \$13,964,822. Apples followed closely with a value of \$9,734,980. Other items of large value included prunes, canned peaches, canned pears, fresh pears, pecans, and canned asparagus.

Research. Among interesting developments in the field of horticultural research was the use of certain chemicals popularly designated as growth-promoting substances, for promoting root growth in cuttings. So favorable were the results that several proprietary materials were developed for the gardener's use. None of the materials appears capable of inducing rooting in species that fail to root at all by the older methods but produced astonishing results in stimulating and increasing root formation in many difficult species. Practically speaking, the use of growth-promoting substances should result in more abundant and lower-priced plants of many species. Of more technical nature but perhaps of even greater significance to horticulture was the growing interest in the use of drugs, notably colchicine, in disturbing the normal cell division process in plants and thereby inducing the development of new forms. This new technic, although purely in the preliminary stage, unfolds opportunities for the plant breeders that have been entirely impossible heretofore. Following the accepted lines of plant breeding, much progress was made by agricultural experiment stations in the development of new fruits and vegetables. The New Hampshire Station produced a new eggplant that won a place on the 1938 All-American list of valuable new vegetables. The New York Experiment Station at Geneva continued its productive breeding program by naming seven new apples, four new grapes, a pear, a cherry, and a strawberry. Other institutions made notable contributions in the form of new and improved fruits, flowers, and vegetables. The extent and high grade of horticultural research was indicated in the 250 odd papers published in the *Proceedings* of the American Society for Horticultural Science, issued in May and reported at the winter meetings held in Indianapolis in late December, 1937.

Miscellany. Prof. J. C. Blair, horticulturist of the University of Illinois, was appointed dean of the College of Agriculture and director of the Experiment Station of the university to succeed Dean Mumford, deceased.

Dr. John H. Beaumont, horticulturist of the Hawaii Station, was promoted to the directorship following the resignation of Dr. O. C. Magistad.

Dr. H. Harold Hume, assistant director of the Florida Experiment Station and well known as author of "Azaleas and Camellias" and other books, was appointed Dean of Agriculture in Florida University.

Necrology. Henry M. Dunlap, commercial horticulturist of Champaign, Illinois, died Jan. 8, 1938. The Senator Dunlap strawberry was named in his honor.

Mrs. Louise B. Wilder, noted garden author, died Apr. 20, 1938. In 1937 she was awarded a gold medal for horticultural achievement by the Garden Club of America.

Leonard Barron died Apr. 9, 1938, at the age of 69 years. He was editor of the *Flower Grower* magazine at the time of his death.

Glen P. Van Eseltine, associate horticulturist of the New York Agricultural Experiment Station and widely known for his botanical and genetic studies with squashes and other economic plants, died suddenly at Geneva, N. Y., on Nov. 14, 1938.

A. L. Wilson, Professor of horticulture at the Utah State College, died October 30. In the research field, Dr. Wilson was well known for his constructive studies on the improvement and storage of the onion.

Bibliography. Although the following is by no means a complete list of horticultural books appearing in 1938, it is indicative of the scope of the subject matter covered. Ornamental gardening was evidently of dominant interest. In addition, many hundreds of helpful and instructive articles appeared in monthly and weekly periodicals and in the daily press: Bailey, L. H., *The Garden of Pinks*, New York, 1938; Bissland, J. H., *Common Sense in the Rock Garden*, New York, 1938; Bowers, C. G., *Hardy Azaleas*, New York, 1938; Dutton, R., *The English Garden*, New York, 1938; Ellis, C., and Swaney, M. W., *Soilless Growth of Plants*, New York, 1938; Fairchild, D., *The World Was My Garden*, New York, 1938; Felt, E. P., *Our Shade Trees*, New York, 1938; Fisher, A. S., *Flower Shows and How to Stage Them*, New York, 1938; Foley, D. J., *Annuals for Your Garden*, New York, 1938; Kamm, M. E. W., *Old Time Herbs for Northern Gardens*, Boston, 1938; McFarland, J. H. et al., *Garden Bulbs in Color*, New York, 1938; Nicolas, J. H., *The Rose Manual (Revised)*, Garden City, N. Y., 1938; Perry, A., *Water, Bog, and Moisture Loving Plants*, Enfield, 1938; Roberts, J. L., *Modern Dahlias*, Garden City, N. Y., 1938; Rockwell, F. F., and Grayson, E. C., *Gardening Indoors*, New York, 1938; Van de Boe, L., *Planning and Planting Your Own Place*, New York, 1938; Wright, R. L., *The Gardener's Day Book*, Philadelphia, Pa., 1938; Wyman, D., *Hedges, Screens and Windbreaks*, New York, 1938.

HOUSE, EDWARD MANDELL. An American diplomat, died in New York, Mar. 28, 1938. He was born in Houston, Tex., July 26, 1858, and educated at the Hopkins Grammar School in New Haven, Conn., and at Cornell University (1878-79), from which he was recalled by the death of his father after he had been there but one year. He devoted himself thereafter to the management of undeveloped property left him by his father.

Interested in politics, he became active in Democratic circles in his State and from 1892 to 1904, especially, and thereafter always, in the role of adviser to those seeking or in political office. His successful management of the campaigns of four governors and one senator gained him a State-wide reputation for sagacity and wisdom. He never sought political office for himself, and at the outset had decided that he could best further the interests of the measures that he favored by the complete avoidance of personal publicity.

After 1904 he retired from State politics and turned his attention to studying economic, political, and social conditions at home and abroad. Desirous in 1911 of entering national politics, he searched for a candidate to whom he could give allegiance,

and meeting Woodrow Wilson, then Governor of New Jersey, found that they had an almost identical agreement in the theory of government, and Colonel House—he had received his colonelcy as a member of the staff of Governor Culberson of Texas—then began quietly to obtain other supporters for the nomination of Wilson in the Democratic convention of 1912. Hence, though, following his accustomed policy, he himself had no official connection with the Convention, he not only had the solid Texas delegation pledged to Wilson but had also secured the support of key men from other States. By the exercise of great diplomacy, he succeeded in disabusing the mind of Bryan from prejudices formed earlier against Wilson. After the election of Wilson, House was invited to become a member of the Cabinet, but, feeling that he could serve better without an official position, refused.

In 1914, Colonel House was sent abroad by the President as an unofficial ambassador in an effort to find a basis for a peaceful settlement of the war they felt was brewing in Europe. Unsuccessful, he returned home and war became a reality. In the first years of the War, he made frequent trips to the belligerent nations, constantly seeking a peaceful solution to the conflict or at least to obtain modifications of its ruthlessness. The presidential campaign of 1916 found him warmly advancing the re-election of Wilson. Upon the entry of the United States into the War, House acted almost in the capacity of confidential secretary to the President. He received visiting dignitaries, digested reports, conducted various missions, and advised on policies. In 1917 he began the preparation of material bearing upon the ultimate peace treaty, and served as chairman of the American delegation to the Inter-Allied Conference. In October, 1918, he again sailed for Europe as a member of the American Commission to Negotiate Peace, and remained after the Armistice as the President's aide and colleague during the long weary sessions in Paris leading to the final Peace Treaty and the League of Nations document.

Some real or fancied injury, the nature of which remained a mystery to Colonel House, caused a break in the attitude of the President toward him while he was yet abroad. After his return to the United States in the autumn of 1919, he was not again invited to the White House. The later physical illness of the President, lasting until his death, left no opportunity for a reconciliation. Colonel House then retired to private life. However, he emerged from retirement to support Alfred E. Smith for the presidency in 1928 and for a time was adviser to Franklin D. Roosevelt upon his election to that office in 1932.

Mr. House was co-author, with Charles Seymour, of *What Really Happened at Paris* (1921) and was credited with the authorship of a novel, *Philip Dru, Administrator* (1912). The publication of *The Intimate Papers of Colonel House* (4 vols., 1927-28), collected and edited by Dr. Charles Seymour from the Colonel's voluminous papers and diaries, caused considerable controversy over the role played by House during the years he was the trusted adviser and friend of the President.

HOWARD UNIVERSITY. A nonsectarian coeducational institution in Washington, D. C., open to students without regard to race, but principally for the education of Negroes. The registration for the first semester of 1938-39 was 1969.

The faculty numbered 258; 148 of this number were full-time members and 110 part-time, with a full-time equivalent of 166 persons. The total endowment amounted to \$948,271. The total appropriation of the United States Government for 1938-39 was \$723,000 for current expenses and \$121,200 for construction. The Founders Library, a new library building, was completed and put in operation at a cost of \$1,105,711. A new Men's Dormitory was under construction and will be completed in the fall of 1939, at a cost of \$525,000, the funds being supplied by the PWA. The library contained 111,801 volumes. President, Mordecai W. Johnson, S.T.M., D.D., LL.D.

HOWLAND ISLAND. See BAKER, HOWLAND, and JARVIS ISLANDS.

HUGHES, HOWARD. See AERONAUTICS.

HUMANISM. A religious movement emphasizing faith in the supreme value and self-improvability of human personality, individually and socially, instead of belief in the supernatural. In the United States it has arisen largely from and in the left wing of Unitarianism, although it is spreading among other liberal religious groups. Some 60 or more Unitarian churches are led by ministers who have openly announced their belief in Humanism. There are at least 16,000 avowed Humanists in the United States.

In May, 1933, 34 eminent leaders of American thought, including six university professors of philosophy, signed and issued a Humanist Manifesto of 15 theses, setting forth the main points of religious Humanism. The complete text, together with the names of the signers, is available in the book *Humanizing Religion*, by Charles Francis Potter. Among the periodicals of the movement are the *Humanist News*, published weekly in New York, and the *Humanist Bulletin*, published quarterly in Chicago. At the call of Charles Francis Potter, founder and leader of the First Humanist Society of New York (established 1929), the first national Humanist Assembly was held Oct. 10-11, 1934, at the New York headquarters, 113 West Fifty-seventh Street, now removed to 1775 Broadway, N. Y. C. Chicago headquarters are at the office of The Humanist Press Association, 301 N. Mayfield Ave.

HUNGARY. A kingdom of central Europe. Capital, Budapest. Regent in 1938, Nicholas Horthy de Nagybánya (elected Mar. 1, 1920).

Area and Population. The area at the beginning of 1938 was 35,875 square miles and the population was estimated at 9,034,815 in 1937 (8,688,319 at 1930 census). By the arbitral award of Nov. 2, 1938, Hungary obtained an additional 4566 square miles with an estimated population of 1,027,450 from Czecho-Slovakia (q.v.). Living births in 1937 numbered 177,821 (20.2 per 1000); deaths, 126,795 (14.2 per 1000); marriages, 79,350 (8.9 per 1000). Estimated populations of the chief cities in 1937 were: Budapest, 1,059,131; Szeged, 140,182; Debrecen, 126,588; Pesterzsébet, 84,653; Kecskemét, 82,997; Kíspest, 75,671; Újpest, 74,647; Pécs, 71,848; Miskolc, 66,947; Hódmezővásárhely, 59,171; Nyíregyháza, 57,093; Békéscsaba, 51,886; Győr, 51,032; Rákospalota, 47,010; Szolnok, 43,337; Székesfehérvár, 41,990.

Education and Religion. About 9.6 per cent of the population, 6 years of age and over, was illiterate at the 1930 census. The school enrollment in 1936-37 was: Elementary, 1,292,955; secondary, 183,039; vocational, 9679; university, 13,821. According to the 1930 census, Roman Catholics comprised 64.9 per cent of the population, Helvetian

Evangelicals 20.0 per cent, Augsburg Evangelicals 6.1 per cent, and Jews 5.1 per cent.

Production. In 1930, 51.8 per cent of the working population was engaged in agriculture, 23 per cent in industry and mining, 9.3 per cent in trade, transportations, and communications. There were 13,877,000 acres of cultivable land in 1936 (60.3 per cent of the total). Yields of the chief cereals in 1938 were (in metric tons): Wheat, 2,609,100; barley, 667,200; rye, 781,000; oats, 278,500; corn, 2,580,800. Other leading crops in 1937 were: Potatoes, 94,040,000 bu.; sugar beets, 1,103,000 metric tons; beet sugar (1937-38), 144,000 metric tons; fodder beets, 3,207,000 metric tons; wine (must), 119,158,000 gal.; tobacco, 45,008,000 lb. Livestock in 1937 included 1,756,000 cattle, 2,624,000 swine, 1,484,000 sheep, 36,000 goats, and 798,000 horses.

The value of mine and foundry products in 1936 was 155,429,000 pengős, divided as follows: Lignite, 89,271,000; coal, 14,995,000; briquets, 8,631,000; coke, 924,000; purified lignite, 1,875,000; pig iron, 31,350,000; iron ore, 3,630,000; bauxite, 3,962,000; copper ore, 199,000. The production of coal in 1937 was 917,000 metric tons. The value of manufactured products in 1936 was 2,582,485,000 pengős. The principal articles produced were food products, textiles, clothing, leather, chemicals; iron, steel, and other metals; stone, clay, and glass products; wood and bone products, machinery, electric power, paper, printed matter, and alcohol. The national income was estimated at 3,495,000,000 pengős in 1937 (3,631,000,000 in 1936).

Foreign Trade. Merchandise imports in 1938 were valued at 418,440,000 pengős (483,600,000 in 1937) and exports totaled 522,600,000 pengős (588,000,000 in 1937). The principal 1937 imports in order of value were: Chemicals and related products, hewn and sawn wood, hides and skins, cotton and linters, machinery, and mineral oils. The values in current U.S. dollars of the principal 1937 exports were: Wheat, \$18,340,000; machinery, \$12,923,000; swine, \$7,163,000; poultry, \$7,557,000. Of the 1937 imports Germany supplied 26.2 per cent; Austria, 18 per cent; Rumania, 9.6 per cent; and Italy, 6.9 per cent. Germany took 24.1 per cent of the exports, Austria 16.9 per cent, Italy 12.3 per cent, and the United Kingdom 7.1 per cent.

Finance. Actual budget receipts for the fiscal year ending June 30, 1937, showed receipts of 1,312,000,000 pengős and expenditures of 1,305,000,000 pengős. The budget estimates for 1938-39 (with 1937-38 estimates in parentheses) were: Revenues, 1,335,000,000 pengős (1,119,000,000); expenditures, 1,335,000,000 pengős (1,267,000,000). The public debt on Dec. 31, 1937, amounted to 1,768,562,000 pengős (funded, 893,432,000; floating, 714,196,000; state guaranteed, 160,314,000). The average exchange value of the pengő was \$0.1978 in 1937 and \$0.1973 in 1938.

Transportation. The Hungarian railways, with 5727 miles of line in 1936, carried 92,846,000 passengers and 22,417,000 metric tons of freight. The gross receipts totaled 236,070,000 pengős. Highways extended 38,891 miles in 1937; number of automobiles, 21,237 on Jan. 1, 1938. Civil airline statistics for 1936 were: Miles flown, 578,984; passengers carried, 18,635; goods and mail, 6171 metric tons. There were 1019 miles of inland waterways, which in 1936 carried 1,688,000 passengers and 2,391,630 metric tons of freight.

Government. Hungary in 1938 was a constitutional monarchy with the throne vacant, power being exercised by the Regent pending the selection of a monarch. There is a parliament of two houses

—the Lower Chamber of 262 members (including 17 new deputies representing districts ceded by Czecho-Slovakia), elected by restricted male suffrage for five years, and the Upper Chamber of 243 elected or appointed representatives of various social, economic, and political groups, the term being 10 years. Premier at the beginning of 1938, Dr. Koloman Darányi, heading a National Union cabinet formed Oct. 12, 1936. For changes in 1938, see *History*.

HISTORY

Hungary's long campaign for restoration of the territories lost during the World War achieved its first important success in 1938. The partition of Czecho-Slovakia under German pressure enabled the Budapest Government to annex an estimated 4566 square miles of territory in Slovakia and Ruthenia (see CZECHO-SLOVAKIA under *History* for full details). This triumph spurred the Hungarians to intensify their revisionist drive against the remnants of Slovakia and Ruthenia as well as against Rumania and Yugoslavia—the other Little Entente states that profited at Hungary's expense in 1918 (see map on p. 288 for Hungary's prewar territories). They hoped to repeat their role in the partition of Czecho-Slovakia and to seize additional territories from their neighbors in the further reshuffling of Central European boundaries anticipated from the shattering of the World War peace treaties by Germany's expanding armed might. But at the same time the expansion of Germany raised a new threat to Hungary's political and economic independence. The Reich's acquisition of Austria and domination of Czecho-Slovakia brought it into direct contact with Hungary for the first time in modern history. It greatly increased Hungary's economic dependence upon Germany, already the chief Hungarian export market and source of imports. It gave a powerful stimulus to the agitation of the German minority in Hungary for greater political, cultural, and civil rights. And it strengthened the Hungarian Nazi movement, which had made much headway during preceding years (see 1937 YEAR BOOK, p. 324).

Internal Politics. Premier Darányi's National Union government represented the interests of the landed aristocracy, the upper middle class, the well-to-do peasants, and some of the Catholic and Protestant clergy. While all of these groups hoped for German aid in regaining Hungary's lost territories, they were alarmed at the danger that German support of the Nazi movement in Hungary would result in the elimination of the aristocracy, expropriation of the large estates, and termination of the privileges enjoyed by the ruling groups. Consequently the government followed a pro-German policy abroad and an anti-Nazi policy at home.

In February Maj. Ferenc Szalasi, head of the dissolved Hungarian National Socialist movement, and 72 associates were arrested for attempting to reorganize their party. In an effort to weaken the appeal of the Nazi program, Premier Darányi on March 5 announced a five-year plan of economic and social reorganization. This called for modernization of the army, a public works program to provide employment, extension of land reforms, financial assistance to poor farmers, the curbing of Jewish cultural activities, and the partial exclusion of Jews from business and finance.

After the Reich's seizure of Austria on March 12-13, however, the Hungarian Nazis became more bold in their agitation and attacks upon the Darányi Government and even the Regent. On

March 9 the cabinet was reorganized to meet the Nazi menace and overcome opposition to its five-year plan. Among the additions to the cabinet was Béla Imrédy, president of the Hungarian National Bank, who became Minister of Commerce. On April 3 Admiral Horthy warned the country by a radio broadcast that the government knew "how to . . . eliminate disturbing elements." Premier Darányi, however, proved too conciliatory and cautious in his treatment of the Nazis to suit his conservative supporters and on May 13 he was forced to permit the formation of a stronger government under Béla Imrédy.

Dr. Imrédy immediately announced that he would continue Hungary's co-operation with Germany and Italy whose "two ideas" he described as "triumphantly marching through the world." This policy was emphasized by subsequent visits paid by the Regent, the Premier, and the Foreign Minister to Rome and Berlin. At the same time he proceeded with severity against both the Nazis and Leftists in Hungary, while carrying into effect a Nazi-Fascist program affecting both economic and political life. Jews were expelled from banks and business enterprises and their control of private capital was curbed (see *Jews*). A number of government monopolies were established. The trade unions were abolished, labor organizations were taken over by the state, and public servants were forbidden to belong to either the Nazi or Social Democratic political organizations.

This program was extended following the return of Regent Horthy and the Premier from a state visit to Berlin early in September. Major Szalasi was sentenced to three years in prison and new measures were taken against his adherents. Additional anti-Jewish measures were applied. A national militia of former service men was created as a precaution against a possible Nazi coup. Most important of all, the government announced a serious program of land reform. The state was to lease one-third of every entailed estate of more than 320 acres and one-fourth of every estate of more than 535 acres that was not entailed. Land left by childless couples was to be confiscated. All lands thus acquired—estimated at 2,000,000 acres—were to be leased in small plots to landless peasants. In addition, the Premier adopted a housing program and initiated extensive reforms in social insurance, wages, taxation, public health, and recreation.

These measures, combined with Hungary's failure to obtain all of Ruthenia in the partition of Czecho-Slovakia, led to a split among the government supporters in Parliament in November. On November 15 Premier Imrédy submitted his cabinet's resignation, but the Regent authorized him to form a new one. In the reshuffling of the cabinet four extreme Rightists were eliminated, indicating that the government planned to continue its program of internal reform and the curbing of the Nazis. On November 22, 68 government members withdrew their support from the Imrédy Cabinet and it was defeated in the Lower Chamber the following day, 115 to 94. Social Democrats and other opponents of authoritarianism joined with reactionary landowners in ousting the Premier. The Regent, however, declined to accept the Premier's second resignation and Dr. Imrédy continued in office during the remainder of the year.

Meanwhile, the Nazi agitation appeared to have gained momentum. There were riotous Nazi street demonstrations in Budapest on December 1. Yielding to pressure from Germany, the Premier on

December 28 announced that the German minority would be granted the right to have its own schools and cultural and religious organizations. A German political party was launched. Meanwhile, more severe anti-Jewish laws, enacted earlier in December, established greater discrimination against Jews on a racial basis, closely resembling provisions of Germany's Nuremberg laws.

Foreign Relations. While drifting further into the German orbit as a result of the year's developments, Hungary attempted to retain friendly relations with Italy and with the other great powers in an effort to avoid the fate of Czecho-Slovakia. Her former close attachment to Italy had been weakened in 1937 (see 1937 YEAR BOOK, p. 325) and at the meeting of the Rome Protocol Powers in Budapest in January, 1938, Hungary joined with Austria in rejecting the Italian proposal that they withdraw from the League of Nations and join the Rome-Berlin-Tokyo anti-Communist pact.

The danger of a German-Czech crisis led the Little Entente states in their conference at Bled, Yugoslavia, on August 21-23 to recognize Hungary's right to rearm, prohibited by the Treaty of Trianon. They offered to conclude a non-aggression pact with her. Premier Imrédy declined to sign the non-aggression pact until the "rights" of minority Hungarian groups in Czecho-Slovakia, Rumania, and Yugoslavia were recognized, thus postponing the issue until after the Sudeten crisis had strengthened Hungary's position.

After Munich, reconciliation between Hungary and Yugoslavia was pushed by Mussolini, who was anxious to prevent further German expansion in southern Europe. A Hungarian-Yugoslav alliance or non-aggression pact was urged by Foreign Minister Ciano of Italy in a visit to Budapest on December 19-22. Italy had also joined with Poland in supporting Hungary's claim to all of Ruthenia, while Germany's opposition had aroused resentment in Hungary. Rumania, believing she would be the next object of Hungary's attack, likewise objected to the Hungarian claim to Ruthenia, and the year end saw Hungarian-Rumanian relations in a state of tension. Apparently with the rich Rumanian territory of Transylvania in mind, Premier Imrédy at the end of December declared his firm adherence to the Rome-Berlin axis.

Also see AUSTRIA, CZECHO-SLOVAKIA, GERMANY, ITALY, POLAND, RUMANIA, and YUGOSLAVIA under *History*; LITTLE ENTENTE; REPARATIONS AND WAR DEBTS.

HUNTER COLLEGE OF THE CITY OF NEW YORK. A college of liberal arts and sciences in New York City, established in 1870 for the higher education of women. Maintained by public funds, it is one of the four municipal colleges governed by the Board of Higher Education, the other three being The Queens College for men and Brooklyn College and City College for men and women. The enrollment for the fall semester of 1938 included 7000 students in the Day Session and 4652 students in the Evening and Extension Sessions. The enrollment in the Summer Session of 1938 was 3505. The teaching staff for Day, Evening, and Extension Sessions for the fall semester of 1938 numbered 623. The library contained approximately 99,256 volumes. President: Eugene A. Colligan, A.M., Ph.D., LL.D.

HUON ISLANDS. See NEW CALEDONIA.

OGY; TELEPHONY; CONNECTICUT, MASSACHUSETTS, NEW HAMPSHIRE, NEW YORK, RHODE ISLAND, VERMONT.

HYDROPONICS. See SOILS.

ICELAND. An independent island state between Great Britain and Greenland. Area, 39,709 square miles; population (Dec. 31, 1936), 116,948 compared with 108,861 (1930 census). Chief towns: Reykjavik (capital), 35,300 inhabitants in 1936; Akureyri, 4519; Hafnarfjordur, 3676; Vestmannaeyjar, 3541. In 1936 there were 2522 births, 1256 deaths, and 612 marriages.

Production and Trade. The principal agricultural crops are hay, potatoes (1936, 166,000 cwt.), and turnips. The yield of cod fisheries in 1937 totaled 27,958 metric tons. Livestock in the country (1936): 653,000 sheep, 46,000 horses, 37,000 cattle, and 2000 goats. Chief imports are textiles, metals, machinery, timber, coal, and cereals. Chief exports are wool (1936, 800 metric tons), fish, frozen mutton, and sheepskins. Imports in 1938 totaled 49,102,000 crowns and exports 57,752,000 crowns (preliminary) as compared with imports of 53,309,000 and exports of 58,988,000 crowns (final) in 1937. The crown (krónur) exchanged for about \$0.22 in 1937 and \$0.21 in 1938.

Communications. In 1937 the mercantile marine of Iceland (above 12 gross tons) consisted of 394 ships aggregating 39,906 gross tons. There were, in 1937, 2174 miles of roads. During September, 1936, the town councilors of Reykjavik approved the lease of a plot of land outside Reykjavik to Pan American Airways for use as an observation and wireless station. A local airline between Reykjavik and Akureyri was started early in 1938.

Government. National debt (Dec. 31, 1937), 45,957,000 krónur. Budget estimates for 1938 were revenue, 17,464,280 krónur; expenditure, 16,322,141 krónur. Iceland and Denmark are free sovereign states, united by one King, and by the agreement embodied in the Act of Union of Nov. 30, 1918. According to the Charter of May 18, 1920 (with an amendment made in 1934), the King exercises executive power, through a responsible ministry. Legislative power rests conjointly with the King and the parliament (called Althing) consisting of not more than 49 members (one-third of whom are elected to the upper chamber by the whole Althing; the other two-thirds form the lower chamber). Ruler, King Christian X of Iceland and Denmark; Premier, Hermann Jónasson (appointed July 29, 1934; Progressive).

IDAHO. Area and Population. Area, 83,888 square miles; included (1930) water, 534 square miles. Population: Apr. 1, 1930 (census), 445,032; July 1, 1937 (Federal estimate), 493,000; 1920 (census), 431,866. Boise, the capital, had (1930) 21,544 inhabitants.

Agriculture. Acreage, production, and value of the chief crops of Idaho, for 1938 and 1937, appear in the table on p. 326.

Mineral Production. Gold, silver, copper, lead, and zinc, commonly contributing some nine-tenths of Idaho's yearly mineral production, by value, yielded among them about 24 per cent less in aggregate value for 1938 than for 1937. Their yearly total approximated \$28,742,000 for 1938, as against \$37,840,174 for 1937. Lower prices both cut the value of the product of 1938 and discouraged production, in the cases of all but gold, for which the Government held to its price of \$35 an oz. The production of gold rose by nearly one-fourth, to some 101,000 oz. for 1938, from 81,861 for 1937; by value, to \$3,535,000, from \$2,865,135. Of silver, the

Crop	Year	Acreage	Prod. Bu.	Value
Wheat	1938	1,149,000	29,848,000	\$11,939,000

* Tons. ♢ 100-lb. bags.

State's most important mineral, the year's yield (recoverable metal in ore mined) diminished to about 18,601,127 oz. (1938), from 19,587,766 (1937); by value, affected by a lower price, it fell to \$12,024,971, from \$15,151,137. The small production of copper, mainly as a secondary metal in ore mined for silver, fell in value below \$500,000 for 1938. Lead and zinc, obtained both from the same ore to a great extent, were somewhat similarly affected. The production of lead declined to some 181,000,000 lb. (1938), from 207,422,000 (1937); by value, to \$8,507,000, from \$12,237,898. That of zinc, to some 87,000,000 lb. (1938), from 108,398,000 (1937); and to \$4,263,000, from \$7,045,870. The Coeur d'Alene district, in Shoshone County, remained, except for gold, the one great mining area; its percentages of the State's production were: Silver, 92; copper, 87; lead, 89; and zinc, 71.

Finance. Idaho's State expenditures in the year ended Dec. 31, 1937, as reported by the U. S. Bureau of the Census, were: For maintaining and operating governmental departments, \$16,575,144 (of which \$6,075,751 was for highways, \$3,998,930 was for charities, and \$1,658,869 was for local education); for interest on debt, \$106,737; for capital outlay, \$1,528,590. Revenues were \$18,805,171. Of these, property taxes furnished \$1,265,621; income taxes, \$1,928,665; sales taxes, \$4,362,982 (including tax on gasoline, \$4,025,988); departmental earnings, \$742,302; sale of licenses, \$1,669,387; unemployment compensation, \$1,668,863; Federal or other grants-in-aid, \$5,078,640. Funded debt outstanding on Dec. 31, 1937, totaled \$2,286,500. Net of sinking-fund assets, the debt was \$2,204,178. On an assessed valuation of \$381,047,373 the State levied in the year ad-valorem taxes of \$1,965,158.

The State's monopoly of alcoholic beverages, which kept its accounts separately from the State's, expended in the year \$3,472,078; received \$3,910,000; and contributed to the State \$807,065.

Education. Idaho's inhabitants of school age (from 8 to 18 years), as stated for the academic year 1937-38, numbered 104,542; this was less than the total of pupils' enrollments, which included many pupils younger or older than the so-called school-age group; and the number within the ages actually admissible to public schools was put at 142,030. The enrollments in public schools totaled 121,411; this comprised 88,513 in elementary study and 32,898 in high schools. The year's expenditure for public-school education amounted to \$11,293,986. There were 4529 teachers. Their salaries, by groups, averaged for the year, \$1270 for men and \$1231 for women in high schools and, in elementary positions, \$977 and \$937 for men and women, respectively. A movement under way in 1938 sought

legislation in 1939 to provide a system of retirement on pension for the State's public-school teachers.

Charities and Corrections. Functions of central administration as to the State's care and custody of persons, under the system in effect in Idaho during 1938, were divided among several authorities. The Department of Public Assistance dealt with grants of support to the needy. The Department of Public Welfare had among its duties the supervision of five State institutions: The State Hospital, South, at Blackfoot; State Hospital, North, at Orofino; State School and Colony, Nampa; Idaho Soldiers' Home, Boise; and the State's hospitals for the tuberculous. Penal institutions were administered by a separate commission.

Political and Other Events. In Ada County (containing Boise), a grand jury spent a great part of the year in secret investigations of official misconduct among former and actual servants of the State government. Its inquiries led to the indictment of more than a dozen persons on criminal charges.

Herd of elk in the vicinity of the Chamberlain Basin were reported early in the year to be dying in numbers from an unknown cause. In an effort to preserve the elk, a specialist for the U. S. Biological Survey, accompanied by other technical experts, went to this wild area of upland in February by airplane and ranged through it on snowshoes, in order to diagnose the elks' malady and, if possible, to treat it with medicines.

An amendment to the law governing primary elections in the State, adopted in 1937, came into operation in 1938; under the new system, the same ballot was to be handed to every voter in primaries, whatever his party, and each voter was at liberty, whatever his previous partisan choice, to vote in secret for the candidates in the list of whichever party he might choose, without making in his own identity any declaration of party. The system tended to throw open the selection of the candidates of either major party to voters normally belonging to the opposite party. This innovation played a part in the course of the year's political campaign, as noted below.

Elections. U. S. Representative D. Worth Clark (Dem.) was elected U. S. Senator (November 8), defeating Wallace A. Callahan (Rep.). One Republican and one Democrat were sent to the Federal House of Representatives. C. A. Bottolfsen (Rep.) was elected Governor, defeating C. Ben Ross (Dem.), former Governor for three terms. The Senatorial election, though won by a Democrat, amounted to a defeat for the Democratic Federal Administration. Clark proclaimed himself, in his campaign, "a conservative, not a New-Deal, Democrat." On this understanding in the primary election (August 8), he was chosen as the Democratic Senatorial candidate, in preference to James P. Pope, the incumbent Senator, who sought another term. Pope, in contrast to Clark, was an avowed and thoroughgoing New Dealer, who was said never to have voted against a measure demanded by the President. In advance of the primary Postmaster-General Farley, acting as spokesman for the Administration, delivered (July 14) an address at Boise, approving Pope's candidacy and declaring that it was "highly important" that the State elect "a Democratic Senator who will support the President in any program he undertakes."

The new single-ballot primary in Idaho made it possible and lawful for Republicans on August 9 to vote as Democrats and thus to increase the nom-

inating vote for Pope's rival, Clark. Many of them appeared to have done so, to judge by the total vote in the primary, as reported soon afterward: the Democratic vote attained about 84,000, as against about 54,000 for that in the primary of 1936, while the Republican vote fell to some 29,000, from the 41,000 of 1936. This made it natural to impute Clark's superiority of about 3500 votes over Pope to an influx of Republican minute-men. President Roosevelt, taking this view, attacked (August 23) as bad political morality the behavior of Idaho Republicans in preventing the renomination of the Administration's candidate. Actually, the prospect of their doing so had been foreseen as a consequence of the new single ballot and had been discussed in the press as early as March.

Officers. The chief officers of Idaho, serving in 1938, were: Governor, Barzilla W. Clark (Dem.); Lieutenant-Governor, Charles C. Gossett; Secretary of State, Ira H. Masters; Attorney-General, J. W. Taylor; Auditor, Harry C. Parsons; Treasurer, Myrtle P. Enking; Superintendent of Public Instruction, John W. Condie.

Judiciary. Supreme Court: Chief Justice, Edwin M. Holden; Justices, William M. Morgan, Raymond L. Givens, James F. Ailshie, Alfred Budge.

IDAHO, UNIVERSITY OF. A coeducational State institution of higher learning at Moscow, Ida., founded in 1889, with a southern branch at Pocatello. The total regular collegiate enrollment at Moscow in the autumn of 1938 was 2791, and at Pocatello 870. The enrollment for the 1938 summer session was 932. The faculty numbered approximately 200. The endowment principal amounted to \$2,590,032, June 30, 1938, and the income for the year 1937-38 was \$1,331,833, not including income from auxiliary enterprises or receipts from N.Y.A., P.W.A. or bond sales. Added to the University plant during the year were two new residence halls for men. This construction program, costing approximately \$178,000, was financed by loans and private bond issues. The library contained approximately 100,000 volumes. President, Harrison C. Dale.

IDENTIFICATION. See MEDICAL JURISPRUDENCE.

ILLINOIS. Area and Population. Area, 56,665 square miles, exclusive of State's part of Lake Michigan; included other water, 622 square miles. Population: Apr. 1, 1930 (census), 7,630,654; July 1, 1937 (Federal estimate), 7,878,000; 1920 (census), 6,485,280. Chicago had (1930) 3,376,438 inhabitants. Peoria, 104,969; Springfield, the capital, 71,864.

Agriculture. Acreage, production, and value of the chief crops of Illinois, for 1938 and 1937, appear in the accompanying table.

Crop	Year	Acreage	Prod. Bu.	Value
Corn	1938	8,430,000	379,350,000	\$185,882,000
	1937	9,367,000	449,616,000	211,320,000
Hay (tame)	1938	2,753,000	4,083,000 *	25,723,000
	1937	2,360,000	3,129,000 *	30,038,000
Wheat	1938	2,300,000	42,550,000	25,530,000
	1937	2,617,000	45,668,000	47,038,000
Oats	1938	3,509,000	110,534,000	22,107,000
	1937	3,655,000	166,302,000	46,565,000
Soybeans ..	1938	1,356,000	31,866,000	22,306,000
	1937	1,352,000	27,040,000	21,632,000
Potatoes ..	1938	39,000	3,822,000	2,675,000
	1937	40,000	3,120,000	2,621,000
Barley	1938	155,000	4,650,000	2,046,000
	1937	125,000	3,438,000	2,269,000

* Tons.

Mineral Production. Of the value of native minerals produced in Illinois (\$121,438,969 for 1936), coal contributed \$81,444,000 (1936), or somewhat over two-thirds. The quantity of bituminous coal mined yearly attained about 51,240,000 net tons for 1937, as against 50,926,599 for 1936. The production of coke, in byproduct ovens, increased to 2,993,906 net tons (1937), from 2,082,516 (value \$13,098,787) for 1936. Using iron ore from the Lake Superior region, blast furnaces in the State produced 3,426,480 gross tons of pig iron (1937), much exceeding their total of 2,991,740 tons (value \$54,583,804) for 1936.

There occurred in 1937 some revival of the production of petroleum. The yearly output advanced to 7,426,000 bbl. (1937), from 4,475,000 bbl. (value \$5,390,000) for 1936. Much of the gain resulted from active drilling in the Clay City and Noble pools, both discovered during the year.

Finance. State expenditures of Illinois in the year ended June 30, 1937, as reported by the U.S. Bureau of the Census, were: For maintaining and operating governmental departments, \$121,830,605 (of which \$5,262,300 was for highways, \$60,105,776 was for charities, and \$14,463,840 was for local education); for interest on debt, \$8,654,360; for capital outlay, \$45,334,538. Revenues were \$194,293,374. Of these, prior years' property taxes furnished \$1,770,423; sales taxes, \$110,839,004 (including tax on gasoline, \$19,301,974); departmental earnings, \$3,287,596; sale of licenses, \$31,705,671; inheritance taxes, \$5,095,866; Federal or other grants-in-aid, \$37,109,761. Funded debt outstanding on June 30, 1937, totaled \$205,003,920. Net of sinking-fund assets, the debt was \$200,539,045. The State levied in the year no general property tax for State purposes.

The Illinois and Michigan Canal, a public-service enterprise of the State, had, for the year, operating expenses of \$20,215 and earnings of \$15,568, not included in the figures above. The Canal was indebted for \$12,000 in called bonds that no longer drew interest.

Education. Inhabitants of school age (between 6 and 21 years) were stated to number 1,959,704 in the academic year 1936-37, the latest year for which full data had been published. The enrollments in public schools totaled 1,345,712; this comprised 994,002 in the elementary group and 351,710 in high schools. The year's current expenditure for public-school education attained \$113,134,340. Teachers numbered 47,819; their salaries for the year averaged \$1403.72.

Illinois, by an appropriation of \$1,000,000 initiated in 1938 the granting of equalization funds for high schools.

Legislation. A special session of the Legislature convened, at the call of Governor Horner, on May 20 and adjourned on July 1. It appropriated \$4,500,000 as further contribution by the State to the cost of poor-aid paid by the State's subdivisions; the sum was to be distributed in installments of \$500,000; the first, at once, and the rest monthly. This appropriation dealt with the chief purpose of the session—the treatment of an emergency caused by the exhaustion of Chicago's means for the succor of the indigent. The sum provided, however, was declared in Chicago not to suffice for the need. To obviate the difficulty of granting more money without exceeding the terms of the call to the Legislature, the Governor summoned a second special session, to run concurrently with the first. It appropriated for poor-aid an additional \$5,300,000, of which \$2,800,000 was to come from

the State treasury and \$2,500,000 was to be deducted from Chicago's share of the receipts from the taxation of gasoline. Both sessions adjourned at the same time.

Apart from the appropriations, the first special session passed a law that enabled Chicago to expand its airport in order to harbor airplanes of greater size, the 40-passenger units expected to go into service about the end of the year. An effort to change the method of ratifying a call for a State constitutional convention, by counting in favor of such a convention ballots merely marked in the circle of a party in favor thereof, at the appropriate election, was defeated. See **CHILD LABOR**.

Political and Other Events. A new institution of the State government, the Legislative Council, created by act of the Legislature in 1937, on the model of the Legislative Council of Kansas, came into being. T. V. Smith, professor at the University of Chicago, and State Senator, who originated the measure creating the council, was made its chairman, and a director of research was named. The council was to furnish legislative information to subsequent sessions and aid in the organization of their legislative programs. The question of the legality of the seizure of employers' property by strikers (the "sitdown" strike) was in the State Courts for determination. The Appellate Court held (May 10) that sentences imposed in 1937 on persons convicted of such an act, in the *Fansteel* strike, were valid despite the stand taken by the NLRB on similar deeds of strikers; that the Wagner Act could not supersede the State's power to maintain order; and that the employer's refusal to bargain with strikers could not stand as warrant for their seizure of his property.

The condition of Chicago's finances remained unsettled. The insufficiency of cash in the city's treasury combined with a continuing demand for poor-aid on a great scale, to keep the municipality in difficulties until the special sessions of the Legislature came to the rescue with additional State grants. While actual indigence remained high, critics of the city's administration charged that the method of dispensing aid to the needy was faulty and tended to keep the cost higher than was warrantable. The city closed all its poor-relief stations on May 18, having then used up all the means at its disposal. Thereby some 34,000 direct recipients from these stations ("families" as currently designated), or about 91,000 individuals, ceased to receive a cash distribution, though they continued to receive food distributed on behalf of the Federal Government and, in the case of the young, daily milk. Chicago had appropriated for the needs of its poor the sum of \$5,404,000, the proceeds, for the year, of a special tax on property, but had used it all, plus nearly \$2,000,000 a month from the State. It reckoned the need as \$3,400,000 a month. The Legislature raised the State's allowance to counties for poor-relief sufficiently to enable Chicago to resume payments on a somewhat less expensive scale.

Chicago increased corporate employees' pay by nearly \$5,000,000 through restorations of old pay rates that had been temporarily cut. Two items of additional revenue, included in the year's budget in order to supply the greater part of the additional expenditure, were held by the County Court incapable of collection in 1938, and the year's budget was therefore held (July 29) invalid; the ruling, unless changed, involved the city's return to expenditure at the lower scale of the budget of 1937. The effort to reorganize the city's lines of surface

traction, long under Federal receivership, was complicated by the expiration (July 15) of the ordinances of 1907 as to their operation. Efforts were made to draw a new plan under which the lines could be reorganized. Chicago projected the construction of a subway for transporting passengers, to cost about \$30,000,000, which was to be obtained from the PWA, part as grant, part as loan. An additional tube for the city's water system, to increase the supply to the Loop district, was dug at a cost of \$1,200,000, in expectation of greater consumption, largely by reason of air-conditioning. A Tumor Institute, endowed by Chicagoans, to provide research, treatment, and professional education in the field of tumors, was opened on March 21.

Illinois suffered its share of the economic decline that reached its depth early in 1938 and lingered, despite some improvement, until the close of the year. Disturbances in the field of labor were relatively few.

Elections. Scott W. Lucas (Dem.) was elected U.S. Senator (November 8), beating R. Lyons (Rep.) by a plurality of over 100,000 votes. Of the 27 members elected to the House of Representatives, inclusive of 2 elected at large, 17 were Democrats and 10 Republicans. The Republican contingent was increased by 4, and the Democrats lost 4 seats. No election of a Governor was held. A proposal to change the State constitution's provisions as to banking, submitted to the voters, failed to gain enough affirmative ballots for adoption.

Lucas, at that time a member of the House of Representatives, gained the Democratic Senatorial nomination in the primary election on April 12. He there defeated Michael L. Igoe, who had campaigned as a champion of the Federal Administration, whereas Lucas was known as having opposed the Administration's demand for legislation to change the Supreme Court.

Officers. The chief officers of Illinois, serving in 1938, were: Governor, Henry Horner (Dem.); Lieutenant-Governor, John Stelle; Secretary of State, Edward J. Hughes; Auditor, Edward J. Barrett; Treasurer, John C. Martin; Attorney-General, Otto Kerner and (successor, November 23) John E. Cassidy; Superintendent of Public Instruction, John A. Wieland.

Judiciary. Supreme Court: Chief Justice, Elwyn R. Shaw; Associate Justices, Norman L. Jones, Paul Farthing, Warren H. Orr, Clyde E. Stone, Francis S. Wilson, Walter T. Gunn.

ILLINOIS, UNIVERSITY OF. A coeducational State institution of higher learning in Urbana-Champaign, Ill., founded in 1867, with professional schools of medicine, dentistry, and pharmacy located in Chicago. The enrollment in the autumn of 1938 was 14,142, of whom 10,586 were men and 3556 were women. The summer session enrollment was 3836, of whom 2172 were men and 1664 were women. The number of persons on the teaching staff above the rank of assistant was 1007. The operating income for the year 1937-38 was \$7,910,256, of which \$5,044,046 was from the State. In addition, the State appropriated \$350,000 for equipping the new Medical and Dental College Building, of which \$324,862 was expended in 1937-38. The productive funds from Federal endowment totaled \$649,013, and from private gifts, \$683,881. The library contained 1,130,584 volumes and 321,666 pamphlets. President, Arthur Cutts Willard, B.S., LL.D.

IMMIGRATION. In the fiscal year ended June 30, 1938, 67,895 alien immigrants entered the

U.S. and 25,210 aliens left for permanent domicile abroad, leaving a net immigration of 42,-685. This continued the trend which had set in once more in 1936 after a number of years of net emigration. In addition to the inward movement of new immigrants, 184,802 non-immigrants were admitted, for the most part temporary visitors. During the same period, 197,404 non-emigrant aliens—visitors, transients, resident aliens leaving for visits abroad—departed. Table I shows the admission and departures for the fiscal years 1937 and 1938.

TABLE I—IMMIGRANT ALIENS ADMITTED AND EMIGRANT ALIENS DEPARTED, FISCAL YEARS 1937 AND 1938, BY COUNTRIES OF LAST OR INTENDED FUTURE PERMANENT RESIDENCE

Countries	Immigrants		Emigrants

Pacific Islands	29	20	5	21

NOTE 1.—The number of immigrants shown above as admitted include not only quota immigrants but nonquota immigrants, being wives of citizens, husbands who married citizen wives prior to July 1, 1932, children of citizens, etc. It will also be noted that this table is based on the country of last residence of the immigrant.

NOTE 2.—Immigrants admitted from the "barred zone" of Asia are mainly persons of the white race.

Table II shows the number of admissions under the Quota Law of 1924. It should be noted that figures in this table do not agree accurately with the figures for arrivals given in Table I, in view of

the fact that the quota under which any immigrant is admitted is that of the country of his birth and not that of the country of his last residence.

TABLE II—ANNUAL QUOTAS ALLOTTED UNDER 1924 ACT, AND QUOTA IMMIGRANTS ADMITTED, FISCAL YEARS 1937 AND 1938, BY COUNTRIES OR REGION OF BIRTH AND SEX

Nationality or country of birth	Annual quota	Quota immigrants admitted in—

Other quota regions	1,850	302	338
Male		13,673	20,913
Female		14,089	21,581

^a The German quota of 25,957 and the Austrian quota of 1413 were combined on Apr. 28, 1938, by presidential proclamation.

^b Quota for colonies, dependencies, or protectorates, in Other Europe, Asia, Africa, Pacific Islands, and America, included with allotment for European countries to which they belong.

Deportations. During the fiscal year 1938, 9275 aliens were deported from the United States under warrants of deportation, while 9278 aliens who had been adjudged deportable were allowed to depart at their own expense. For the fiscal year 1937, the total number deported was 8829. In 1938 the deported aliens were sent out of the country for the reasons listed in Table III.

TABLE III.—ALIENS DEPORTED FROM THE U.S. DURING THE YEAR ENDED JUNE 30, 1938

Criminals	1,662
Violators of narcotic laws	81
Anarchists and kindred classes	8
Immoral classes	318
Mental or physical defectives	401
Previously disbarred or deported	1,085
Remained longer than authorized	748
Entered without valid visa	3,545
Unable to read (over 16 years)	676
Under Chinese Exclusion Act	30
Likely to become public charges	24
Miscellaneous	697

The great proportion of the deportations took place to Canada (1941) and Mexico (5113). It is interesting to note the large numbers, however, to so-called totalitarian countries, i.e. Germany

(120), Italy (391), Japan (56). Most of these deportations were not for political offenses.

Unnaturalized Aliens. It is generally assumed that the number of unnaturalized aliens in the United States constitutes a very large group. The figures prove the reverse: that the group is small and that it is constantly decreasing in size. According to the Commissioner of Immigration, the following figures represented the state of affairs as of July 1, 1938:

1930 census figure of aliens in the United States not reported naturalized	6,234,613
Decrease since Apr. 1, 1930:	
Naturalized	1,140,315
Derivatives	246,100
Immigrant children of citizens	17,843
Excess of nonemigrant departures over nonimmigrant arrivals	161,853
Less excess of immigrants over emigrants	14,599
Deaths	147,254

Total decrease	2,395,685
Estimated alien population, as of July 1, 1938 ..	3,838,928

Asylum for Political Refugees. The unsettled political state of affairs in many countries of the world continued to call the attention of the American people to the problem of creating asylum for those who were fleeing from political and racial terror. The renewal of pogroms in Central Europe in the late fall made the question of the desirability of settlement of Jews in this country a prominent one and many organizations were calling upon the United States to lower its immigration bars and create havens for those who were the victims of the mass terrors raging in Germany, Czechoslovakia, and other countries. In addition, the particular situation of political refugees who had sought asylum in this country was being called to the attention of Federal authorities and the courts in an effort to soften the rigors of the country's deportation laws. It was being pointed out by social and welfare agencies that the present Commissioner of Immigration, James A. Houghteling, was moving too vigorously to comply with the letter rather than the spirit of the prevailing statutes.

Apparently, it had previously been the custom of the Commissioner of Immigration, when good character was proved and illegal entry was the only offense of foreign born caught in the net of immigration authorities, that voluntary departure and re-entry from Canada or Cuba would be allowed. Commissioner Houghteling during 1938, however, was beginning to insist upon deportations or voluntary departure to non-adjacent countries, putting the foreign-born in this category to considerable expense and hardship as well as penalizing their helpless dependents.

In an effort to test the validity of the deportation laws, particularly as they affected the status of persons who were affiliated with the Communist party, a case was being brought before the U.S. Supreme Court to clarify the intent of the law. This was the case of Joseph Strecker, whose membership in the Communist party was held to be no grounds for deportation by the Fifth Circuit Court of Appeals in Louisiana on Apr. 6, 1938. Strecker came to the United States legally in 1912 and went to live in Hot Springs, Ark., in 1918, where he was arrested in April, 1934, and held for deportation charged with membership in the Communist party. Controversy over this issue has raged in

the United States since 1921, when Judge Anderson, in the Federal District Court in Massachusetts, in the Colyer case, ruled that membership in the Communist party was not a deportable offense. While Judge Anderson's opinion was later reversed in the Court of Appeals, no opinion on this question was ever written by the Supreme Court. With a view to clarifying the whole matter, the Department of Labor appealed the Strecker decision to the Supreme Court. The Strecker case was being watched closely since the decision in this case would decide what action the Labor Department could take in the case of Harry Bridges, West Coast Regional Director of the C.I.O., who was being threatened with deportation to Australia on the grounds that he was a member of the Communist party.

It was also being maintained, particularly by the American Committee for the Protection of the Foreign Born, that the Department of Labor was denying asylum to refugees who had succeeded in escaping with their lives to this country. The Committee pointed out that there were three cases of refugees still pending in 1938 who were denied asylum. Hans Mueller, 20-year-old anti-Nazi refugee who fled from Germany after six months service in the army, was ordered deported. Walter Richter, a former legal resident of the United States, who left to join the International Brigade in Spain, was denied readmission and faced return to Nazi Germany. Peter Brunoldi, 53-year-old Italian who fled persecution in his homeland in 1926, was ordered to leave the United States or be deported to Fascist Italy. In addition, there were some 30 other persons still being held for deportation whose cases had not yet been decided by the Commissioner of Immigration.

As a result of vigorous representations made by the American Committee for the Protection of the Foreign Born, success was had during the period 1936-38 in the cases of some 10 persons whose deportation orders were stayed and for whom arrangements were made either to continue on in the country or to be moved to adjacent countries from which re-entry would be easy. Typical examples are the following:

Carl Ohm entered legally in 1929 and arrested in 1932 and ordered deported to Germany charged with membership in the Communist Party. After the Federal District Court had sustained the order of deportation, the Circuit Court of Appeals ordered that the case be reheard. In February, 1938, the Labor Department canceled all deportation proceedings against Ohm.

Stella Petrosky entered in 1914, mother of eight American-born children, arrested in Wilkes-Barre, Pa., in 1935 and held for deportation to Poland, charged with membership in the Communist Party, ordered deported. The Labor Department was forced to cancel the warrant of arrest and withdraw deportation proceedings as a result of nationwide protest.

Anna Mari entered in 1929, in 1930 became ill following the birth of her child, ailment later diagnosed as tuberculosis, arrested in 1936 and held for deportation on the ground that she had become a public charge within five years. Evidence presented at her trial proved that Mrs. Mari had contracted tuberculosis following her entry with the result that the deportation proceedings were dropped.

IMPORTS. See articles on various countries; and especially articles AGRICULTURE, CORN, IRON AND STEEL, ETC.

INACCESSIBLE ISLAND. See ST. HELENA.

INCINERATION. See GARBAGE AND REFUSE DISPOSAL.

INDIA. A dependency of the British Empire, consisting of British India, or the territories subject to British law, and the Indian States, ruled by native princes but under the indirect control of

the British Parliament. Capital, New Delhi. Summer seat of the government (April to October), Simla.

Area and Population. On Apr. 1, 1937, Burma (q.v.) and Aden were separated from India and created Crown Colonies. The area and population of the British (Governor's) Provinces and of the Indian States and Agencies at the 1931 census are shown in the accompanying table.

BRITISH PROVINCES AND INDIAN STATES:
AREA AND POPULATION

<i>British Provinces</i>	<i>Area in sq. miles</i>	<i>Population, 1931</i>
Ajmer-Merwara	2,711	560,292
Andamans and Nicobars	3,143	29,463
Assam	67,334	9,247,857
Baluchistan	134,638	868,617
Bengal	82,955	51,087,338
Bihar and Orissa	111,702	42,329,583
Bombay (Presidency)	151,673	26,398,997
Aden	80	51,478
Burma	233,492	14,667,146
Central Provinces and Berar	131,095	17,990,937
Coorg	1,593	163,327
Delhi	573	636,246
Madras	143,870	47,193,602
Northwest Frontier Province	36,356	4,684,364
Punjab	105,020	24,018,639
United Provinces	112,191	49,614,833
Total Provinces	1,318,346	289,491,241
<i>Indian States and Agencies</i>		
Baroda State	8,164	2,443,007
Central India Agency	51,597	6,632,790
Cochin State	1,480	1,205,016
Gwalior State	26,367	3,523,070
Hyderabad State	82,698	14,436,148
Jammu and Kashmir States	84,516	3,646,243
Mysore State	29,326	6,557,302
Punjab States	31,241	4,472,218
Rajputana Agency	129,059	11,225,712
Sikkim	2,818	109,808
Travancore	7,625	5,095,973
Western India Agency	35,442	3,999,250
Total States	490,333	63,346,537
Total Provinces	1,318,346	289,491,241
Total India	1,808,679	352,837,778
India without Burma	1,575,187	338,170,632

NOTE.—Figures for the Provinces include those of the States attached to them except in the case of Madras, where they exclude Cochin and Travancore.

The latest published estimate, that for February, 1937, sets the population of India, inclusive of Burma, not then yet severed, at 374,820,000; an allowance of 15,000,000 for Burma, deducted, would indicate the population of India as at present bounded, to have approximated 359,820,000, in 1937. The population has increased greatly in this century. Not greatly affected by migration, the number of the inhabitants has risen mainly by reason of a yearly excess of births over deaths, commonly approximating 12 to the thousand inhabitants. Registered births in the British Provinces in 1936 numbered 9,981,143 (35.4 per 1000); deaths, 6,375,731 (22.6 per 1000). Populations of the chief cities at the 1931 census were: Calcutta, with suburbs and Howrah, 1,485,582; Bombay, 1,161,383; Madras, 647,230; Hyderabad, 466,894; Delhi, including Shahdara, New Delhi, and Cantonment, 447,442; Lahore, 429,747; Ahmedabad, 313,789; Bangalore, 306,470; Lucknow, 274,659; Amritsar, 264,840; Karachi, 263,565; Poona, 250,187; Cawnpore, 243,755; Agra, 229,764; Nagpur, 215,165; Benares, 205,315.

Education and Religion. Persons able to read and write numbered 28,138,856, as counted in 1931; those unable to read and write, 268,162,814, not

to reckon children five years old or less, nor some 3,000,000 other persons whom this enumeration did not count. The number of pupils reported in attendance by 254,211 educational institutions in the academic year 1935-36 was 13,816,149; of these, 1,847,738 were females. About one-half of the institutions for elementary education were aided or maintained by the State. The system of elementary education is characterized as one based, so far as possible, on indigenous institutions and traditions. Higher education, developed on imported models, is somewhat widespread. Universities numbered 18 in 1935-36; 16 of them were in British India and the remaining two in Indian States.

As to religious faith, in 1931 the majority of the population were Hindus; these numbered 239,195,140. Moslems, 77,677,545 in number, were the next greatest group. Buddhists totaled 12,786,806; 8,280,347 inhabitants were followers of tribal cults; 6,296,763 were Christians; 4,335,771, Sikhs; 1,252,105, Jains; 109,752, Zoroastrians; and 24,141, Jews.

Production. The main occupation is agriculture; the census of 1931 showed about 71 per cent of the population engaged in agriculture or stock-raising. The planted area in the crop year 1934-35 totaled 208,816,000 acres in the British provinces (exclusive of Burma) and an additional 68,455,000 acres in the Indian States; fallow land, 48,500,000 in the provinces and 14,496 in the States. The crop of wheat was estimated at 10,953,000 metric tons for 1938, as against 9,908,500 for 1937. The production of barley attained 2,345,000 metric tons for 1937 (2,362,000 for 1936); the production of corn (maize) approximates 2,200,000 tons a year; of rice, the most abundant of the food crops, there were produced, in 1937, 40,495,400 tons, according to data that left certain of the Indian States uncovered. The crop of cotton in 1937 totaled 1,027,500 tons; in 1936, 1,146,100; jute, produced mainly in India, yielded there a crop of 1,563,600 tons in 1937 (1,743,800 in 1936). From sugar cane grown in India were produced, in the year 1937-38, 3,220,000 tons of sugar (in 1936-37, 3,960,000). The crop of tobacco was 543,600 tons for 1937 (661,400 for 1936); the production of tea amounted to 179,200 tons for 1936. There were 120,640,000 cattle in the British provinces, exclusive of Burma, in 1934-35, and in the Indian States, 42,017,000; the respective totals for buffaloes were 33,161,000 and 12,126,000; sheep, 23,974,000 and 18,847,000; goats, 36,831,000 and 15,655,000; horses, mules, and asses, 3,212,000 and 1,328,000; camels, 530,000 and 498,000.

The production of the minerals of chief importance was thus reported, for 1936 (exclusive of Burma): Coal, 22,611,000 long tons; gold, 331,946 troy oz.; manganese ore, 813,000 long tons; petroleum, 83,156,000 gal. The manufacture of products of cotton, one of the ancient occupations of the land, has been to a great extent modernized in recent years; India's cotton mills on Aug. 31, 1937, numbered 370; their equipment aggregated 9,730,798 spindles and 197,810 looms. The Indian mills produced, in the year ended with Mar. 31, 1938, about 1,159,513,000 lb. of cotton yarn (in the preceding year, 1,050,601,000); the output of cotton cloth (year 1937-38) totaled 4,084,276,000 yd., as against 3,571,987,000 yd. for the year previous. Most of the production of these articles came from the Bombay presidency, where (Aug. 31, 1937), 210 cotton mills operated 6,100,211 spindles and 141,471 looms; mills of this area produced (year 1937-38) 592,126,000 lb. of cotton yarn and 2,722,777,000 yd. of cotton cloth. The great commercial production of textiles of jute is carried on in establishments

situated mainly along the Hooghly River, near Calcutta; this industry is equipped with an estimated total of 66,500 looms, which supplied most of the world's demand for jute sacking and burlap (see *Foreign Trade*). Of the 107 jute mills, 85 were members (Jan. 1, 1938) of an association; these members had 57,313 working looms and 1,131,291 spindles; their employees averaged (1937) 252,887 in number; they produced (1937) 1,170,236 long tons of all kinds of manufactured jute. Among other industrial establishments, as listed in 1933, were 1552 rice mills, employing 72,953 workers; 980 tea factories, employing 57,053; 213 sugar factories, employing 49,545; 93 railway and tramway workshops, employing 51,307; 105 jute presses, employing 31,455; 271 engineering works, employing 26,690; 5 iron and steel mills, employing 23,726; 364 printers and bookbinders, employing 23,795.

Foreign Trade. Preliminary figures upon the foreign trade of the calendar year 1938 put exports at the total of 1,685,606,000 rupees, about four-fifths of the total, for 1937, of 2,104,328,000 rupees; imports were estimated to have declined, for 1938, to the value of 1,534,480,000 rupees, from 1,647,430,000 rupees for 1937. For the calendar year 1937, showing imports as 1,647,600,000 rupees and exports of British-Indian products as 2,021,000,000 rupees, foreign trade on both sides of the account exceeded the totals of 1936, for which year the imports totaled 1,245,800,000 rupees and the exports 1,804,900,000. By commodities, in terms of U.S. currency dollars, the principal imports of specified kinds of goods in 1937 (calendar year) were: Machinery (except automobiles), \$68,384,000; automobiles, \$17,959,000; raw cotton, \$37,644,000; cotton piece goods, \$44,489,000; mineral oils (largely kerosene), \$55,294,000; rice, \$31,774,000. The principal exports of that year were: Raw cotton, \$147,685,000; cotton piece goods, \$22,062,000; tea, \$89,016,000; burlaps and bags of jute, \$108,649,000; raw jute, \$60,598,000; hides, skins, and leather, \$50,786,000. While India both imported and exported in considerable quantity raw cotton and cotton piece goods, it was notable that the imports of the latter had tended for some years to diminish in yearly aggregate value, while the exports had increased. India got 31.5 per cent of its imports of 1937 from the United Kingdom; 22.0, from British colonies; 14.0, from Japan; 9.2, from Germany; and 6.4, from the United States. Of the year's exports, 32.6 per cent went to the United Kingdom; 15.8, to British colonies; 12.7, to Japan; 10.6, to the United States; and 5.0, to Germany.

Finance. The budget of the Central Government, for the fiscal year ending with Mar. 31, 1939, estimated ordinary revenues at 1,215,300,000 rupees and ordinary expenditures at 1,222,800,000 rupees. The revised estimates for the fiscal year ended with Mar. 31, 1938, showed totals of 1,214,800,000 rupees revenue and 1,225,700,000 expenditure. These figures did not cover the whole of the revenues and costs of government, for provincial governments and autonomous States of India maintained budgets of their own. The public debt of the Central Government (inclusive of that incurred on behalf of provincial governments), stood on Mar. 31, 1937, at 12,086,700,000 rupees, of which 7,303,000,000 rupees represented the debt internally held. The monetary unit of India, the rupee, is fixed in value, with relation to the pound sterling; its statutory value is 1s. 6d. Monetary notes in circulation on Mar. 31, 1938, totaled 1,783,000,000 rupees. The monetary stock included gold to the stated value of 444,000,000 rupees

and silver to that of 640,000,000 rupees. The average value of the rupee in terms of the U.S. dollar was reckoned for the calendar year 1937 as \$0.3733; for 1938, \$0.3659.

Transportation. Lines of railroad operated in India in the year ended with Mar. 31, 1937, totaled 41,068 miles, as against 43,118 miles for the fiscal year 1936, with which year's end figures for railroads in Burma ceased to form part of the Indian totals. About three-fourths of the mileage of line in India belonged to the Imperial State system and most of the remainder consisted of Indian State lines. Railway passengers in the fiscal year 1937 numbered 489,646,000, freight carried totaled 82,406,000 long tons, and railroads' gross receipts amounted to 1,043,895,000 rupees. The ships of the Indian merchant marine (of 100 tons or over) numbered 214 on June 30, 1938; their aggregate gross tonnage was 247,819. The aggregate length of highways of all sorts was 277,471 in 1937; automobiles numbered 83,012. The chief Indian cities are linked with British, Dutch, and French air lines to the Far East and, via Hong Kong, with the American transpacific air line.

Government. The Constitution of India, known as the Government of India Act, 1935, went into effect on Apr. 1, 1937. It provided for the establishment by gradual stages of an All-India Federation consisting of the British (governors') provinces, the chief commissioners' provinces, and those Indian States desiring to participate. A large measure of political autonomy was extended to the 11 British provinces at the time the new Constitution was inaugurated (see 1937 YEAR BOOK, p. 333). Elected legislative assemblies were established in each province with ministries responsible to the assemblies. The governors of the British provinces, who are appointed by the Crown, retained power to veto acts of the provincial ministries and assemblies in emergency cases.

Federation was delayed pending its acceptance by rulers of the native States possessing not less than half the population of all the States. The Federal Legislature was to consist of the Governor-General, representing the Crown; a Council of State consisting of members elected by communities in British India and appointed by the rulers of the native States; and a House of Assembly elected in the main by the provincial assemblies. Pending establishment of the Federal Legislature, the Central Legislature continued to function, largely as an advisory body. It consisted of a Council of State of 34 elected and 26 nominated members and a Legislative Assembly of 105 elected and 40 nominated members. In the Legislative Assembly elections of 1934, the All-India Congress party and supporting groups won 57 seats. The Moslem League held the balance of power between the government members and the Congress party.

Under the new Constitution executive power was to be exercised on behalf of the King-Emperor by the Governor-General, assisted by a Council of Ministers responsible to the Federal Legislature. During the transitional period prior to establishment of the Federal Legislature, the Governor-General was assisted by an Executive Council of seven officials appointed by the Crown and responsible to the Governor-General. The Governor-General was under the direction and control of the Secretary of State for India in the British Cabinet. Once the Federal Legislature was established, the authority of the Secretary of State for India was to be restricted to matters involving the exercise of

the Governor-General's discretionary powers. Control over foreign relations, ecclesiastical affairs, and defense was vested exclusively in the Governor-General under the new Constitution and in addition he was empowered to supersede the Federal Legislature in civil administration and finance in time of emergency.

As from Apr. 1, 1937, relations between the British Crown and the Indian States were conducted through the office of Crown Representative, held by the Governor-General. The holder of the two offices of Crown Representative and Governor-General is designated the Viceroy. Viceroy in 1938, the Marquess of Linlithgow (assumed office, Apr. 18, 1936). For developments in 1938, see *History*.

HISTORY

Political Developments. Further progress was made during 1938 toward a working agreement between the powerful All-India National Congress and the British authorities on the basis of the 1935 Constitution. The Congress (Nationalist) party maintained its demand for ultimate complete independence and its opposition to the new Constitution as an obstacle to this aim. It had entered the 1937 elections to the provincial assemblies in order to force the repeal of the new Constitution and the framing of a new one by a constituent assembly elected by adult suffrage. Having won majorities in six provinces and pluralities in three others, it agreed to accept the responsibilities of government after the British governors had promised not to use their special powers "capriciously" or to intervene in "day to day" governmental routine. See 1937 YEAR BOOK, pp. 333-334.

In February, 1938, a new crisis developed over the refusal of the governors of Bihar and the United Provinces to permit the wholesale release of some 40 political prisoners. The Congress party ministries in the two provinces resigned on February 15, asserting that the release of the prisoners was a matter of "day to day" routine and that the governors had no authority to intervene. Supported by the Viceroy, the governors took the position that the wholesale release of the prisoners jeopardized law and order throughout India and encouraged terrorism in Bengal.

On February 15 the Congress executive body, meeting at Haripura, accepted Mohandas Karamchand Gandhi's recommendation against extension of the political crisis by the proposed resignation of Congress ministries in the other provinces. It requested the Bihar and United Provinces ministries to continue in office until their resignations were accepted by the governors. At the same time it invited the Viceroy to reconsider his position under the threat of an extension of the crisis. On February 22, Lord Linlithgow proposed a compromise under which the governors of Bihar and the Central Provinces would accept the advice of the provincial ministries regarding the release of the political prisoners only after individual examination of each case. This formula was accepted by the Congress leaders and the ministries of the two provinces returned to office on February 25.

The settlement was widely received as a triumph for the principles of the new Constitution. In conservative and moderate circles within the Congress party sentiment developed for co-operation with the British authorities in their offer of provisional self-government as a means to promote democratic institutions. The difficulties encountered by the

Congress ministries in the provinces in carrying out their sweeping pledges of economic and social reform also had a sobering effect. Moreover, all Indians were deeply impressed by Japan's aggression upon China, which led them to place far greater value than before upon Britain's offer of dominion status within the British Commonwealth of Nations.

All these developments caused a growing breach within the Congress party between the conservatives and moderates on the one hand and the radical leaders of the party with their adherents on the other. The Socialists, Communists, and other left-wing groups led by Pandit Jawaharlal Nehru and Subhas Bose strove vigorously to transform the Congress party into a socialistic movement by combining the old attack upon British exploitation with a campaign against Indian moneylenders, landlords, and industrialists, many of whom had supported the Congress party's nationalist drive. They stirred up the peasants and industrial laborers to make demands that the Congress ministries were unable to meet. Financial limitations handicapped the ministries in executing their social reform programs and their financial problems were intensified by rent strikes and the disruption of industry from recurrent labor disturbances. The Congress governments in many provinces were forced to oppose the extremist agitation within their own ranks. Meanwhile representative government was being practised in all of the 11 British provinces with better success than had been anticipated.

Progress toward the carrying into effect of the remaining constitutional reforms was blocked by the Congress party's refusal to participate in the projected Federal Legislature and by the growing reluctance of the Indian princes to co-operate with the radical Congress leaders. The Congress party contended that Federation would strengthen the rule of the native princes and check the growth of democracy and social welfare in the British provinces. The princes, on the other hand, sought guarantees that their prerogatives, often of a feudal character, would not be diminished under the federation scheme. Meanwhile, friction between the Congress movement and the Indian rulers developed within some of the native States. A Congress party mob, defying a ban on public meetings during a festival in Viduraswatham, State of Mysore, was fired on by the police April 26 and 32 were killed. The Nizam of Hyderabad in September banned the Congress party organization in that State as a subversive organization.

Congress leaders leveled bitter criticisms at the princes for pledging unreserved support of Britain during the September crisis in Europe over Czechoslovakia. The Maharaja of Bikaner, whom Congress leaders accused of treachery to India in this connection, replied that India's support of Britain would strengthen her claim to an independent status within the British Commonwealth. He declared that the collapse of the British Empire would place India under a different yoke in which the slightest difference of political opinion might lead to the scaffold. Another obstacle to federation was the fear of the Moslems that the entrance of the Indian States, which are mostly Hindu, into the Federal Legislature would give the Hindus an excessive influence in the Federal Government.

The demand of some Congress leaders that representative government should be established in the Indian States as a condition precedent to Federation was answered by the Viceroy in a speech in Calcutta December 19. He declared that the Brit-

ish Government would not obstruct proposals for constitutional reform in the States, but that it would not force the Princes to initiate such reforms. The rulers of the States would remain responsible for determining the forms of government required to meet conditions in their respective domains. The government's primary consideration in the approach to Federation, he said, was the unity of India. He asserted that Provincial Autonomy had proved its workability and essential soundness. Toward the end of the year several of the native Princes, including those of Kolhapur and Bhore, announced their intention of establishing elective legislatures and governments responsible to them. But Gandhi in his journal *Harijan* pointed out that most of the Princes were antagonistic to the Congress party movement. He urged them to "read the handwriting on the wall" and accept the assistance of Congress leaders in establishing representative government.

Other Events. It was announced in February that King George had abandoned his plan to visit India the following winter to hold the Coronation Durbar. The decision was attributed to European political conditions and to the opposition of the Congress party to the King's visit. As a concession to Indian nationalism, the British Government decided to allow India to use its annual £500,000 contribution to Empire defense for the construction of an Indian fleet of six small warships. It also agreed to increase its annual grant of £1,500,000 toward Indian defense by £500,000 and to advance up to £5,000,000 for the re-equipment and mechanization of British and Indian military units in India and for the provision of new airplanes to the Royal Air Force in India. The transfer of four British battalions from India and their replacement by Indian troops was also approved. In October the British Government sent a committee of experts headed by Lord Chatfield to India to study the defense problem with the India Defense Committee and to make further recommendations. These steps were in partial response to Congress party criticism of the high cost of maintaining British troops in India.

Despite the costly military operations carried out in 1937 against the adherents of the Fakir of Ipi in Waziristan (see 1937 YEAR BOOK), guerrilla warfare continued in this mountainous region throughout 1938. The British made heavy use of bombing planes against the fanatical tribesmen. A report of Gen. R. A. Cassel, the commander-in-chief in India, submitted to the British Parliament in February, estimated casualties among the tribesmen in the preceding nine months at nearly 700 killed and more than 350 seriously wounded. In July a series of additional clashes in which a number of British officers were killed was reported. Sporadic rioting between Hindus and Moslems occurred in Allahabad, Bombay, and other cities, but on a relatively small scale.

The new hydro-electric plant at Malakand on the Swat River in the Northwest Frontier Province was opened by the Viceroy in April. The project was designed to furnish cheap power and to extend irrigation in the Peshawar plains district. The President of the Congress party and the Ministers of Industry from all the Congress-administered provinces met at Delhi in November to plan the development of "mother industries" throughout India as part of the party's reconstruction program.

See **AFGHANISTAN** and **BURMA** under *History*.

INDIA, PORTUGUESE. See **PORTUGUESE INDIA**.

INDIANA. Area and Population. Area, 36,354 square miles, exclusive of State's part of Lake Michigan, but including (1930) other water, 309 square miles. Population: Apr. 1, 1930 (census), 3,238,503; July 1, 1937 (Federal estimate), 3,474,000; 1920 (census), 2,930,390. Indianapolis, the capital, had (1930) 364,161; Fort Wayne, 114,946; Evansville, 102,249; South Bend, 104,193; Gary, 100,426.

Agriculture. Acreage, production, and value of the chief crops of Indiana, for 1938 and 1937, appear in the accompanying table.

Crop	Year	Average	Prod. Bu.	Value
Corn	1938	4,229,000	173,389,000	\$81,493,000
	1937	4,752,000	213,840,000	96,228,000
Wheat	1938	1,890,000	30,240,000	18,144,000
	1937	2,171,000	34,718,000	35,065,000
Hay (tame)	1938	1,995,000	2,815,000*	16,046,000
	1937	1,669,000	2,355,000*	18,942,000
Oats	1938	1,310,000	34,060,000	7,153,000
	1937	1,455,000	45,105,000	12,629,000
Potatoes	1938	52,000	4,940,000	2,717,000
	1937	54,000	5,400,000	3,834,000
Soybeans	1938	431,000	8,404,000	6,303,000
	1937	341,000	5,797,000	4,696,000

* Tons.

Mineral Production. The mining of coal in Indiana diminished slightly to the yearly total of 17,270,000 net tons (1937), from 17,822,536 (value \$26,932,000) for 1936. The by-product coking ovens maintained their yearly production of coke at 5,444,657 net tons for 1937, virtually at the level of the 5,449,755 tons (value \$40,627,036) produced in 1936. The yearly output of pig iron again rose, the blast furnaces' shipments mounting to 3,694,360 gross tons (1937), from 3,256,677 (1936); in value, to \$77,990,597 (1937), from \$59,067,654 (1936). The yearly production of open-hearth steel, 5,947,368 gross tons for 1937, approximated the 5,963,501 tons attained in 1936. The production of architectural limestone was well maintained, the quarries' sales rising to the value of \$3,536,868 for 1937, from \$3,151,103 for 1936.

Finance. Indiana's State expenditures in the year ended June 30, 1937, as reported by the U.S. Bureau of the Census, were: For maintaining and operating governmental departments, \$63,458,681 (of which \$13,447,929 was for local education); for interest on funded debt, \$166,125; for capital outlay, \$13,280,126. Revenues were \$101,331,853. Of these, property taxes furnished \$5,779,318; sales taxes, \$47,513,090 (including tax on gasoline, \$22,140,459); departmental earnings, \$7,263,244; sale of licenses, \$12,495,427; unemployment compensation, \$13,063,635; Federal or other grants-in-aid, \$9,001,862. Funded debt outstanding on June 30, 1937, totaled \$4,644,500. Net of sinking-fund assets, the debt was \$4,458,239. On an assessed valuation of \$5,066,063,791 the State levied in the year ad valorem taxes of \$5,932,006.

Education. Enrollments of pupils in the public schools in the academic year 1937-38 totaled 689,657; this comprised 488,922 in the elementary group, 185,129 in high schools, and 15,606 otherwise classified. The year's expenditure for public-school education totaled \$63,748,509. Teachers numbered 22,956 and their salaries for the year averaged \$1224.11.

The U.S. Supreme Court, in a decision dealing with teachers' tenure of positions in the public schools of Indiana, upheld in 1938 teachers' contractual rights under that law. The system of safety education was developed in the rural high schools.

Consolidations among rural schools made further headway.

Charities and Corrections. The number of persons receiving public support scored some noteworthy increases during the year. The townships, providing poor-aid for their needy, thus carried in January 69,971 cases (said to cover about $3\frac{1}{4}$ persons each, on the average); in March 80,004 cases; and in November 54,811. On June 1 old-age assistance was allowed to the elderly poor at 65 years instead of the former 70 years; the number of the recipients rose from 41,491 in January to 51,960 in November. Children supported by public money numbered 26,344 in January and 31,471 in November. The payment of benefits, under the system of unemployment insurance, to persons losing their employment, was begun in 1938, and created another group of recipients.

The Department of Public Welfare was the State's chief administrative authority both for the dispensation of grants of support and for the institutional care and custody of persons. This Department, headed by a board of five members and an administrator (Thurman A. Gottschalk), supervised the county departments of public welfare, which administered the old-age assistance, and aid to dependent children. Through the county boards as its agents it granted support for the blind. It also supervised five State hospitals for the mentally unsound and institutions for the feeble-minded and the epileptics, which among them all contained (November 30) 11,445 inmates; hospitals for physical ailments, soldiers' homes, a school for the deaf, and a school for the blind, the inmates of which group numbered 2376; and a State Prison, a Reformatory, a State penal farm, a women's prison, a school for delinquent boys, and another for delinquent girls, having for the group a population of 6518.

Legislation. Summoned by Governor Townsend, the Legislature convened in special session on July 19 and adjourned July 30. The stated object of the session was to promote economic recovery from the slump of 1937-38 and in particular to start a program of construction of public buildings. Enactments of the session appropriated \$5,329,750 from the balance of the State Treasury for expenditure matching Federal grants toward paying for constructing buildings for State institutions; authorized the creation of a State hospital for the tuberculous, in southern Indiana; appropriated \$2,000,000 for the counties' use in public welfare; and removed from the State's system of unemployment-compensation the requirement that an applicant must have earned \$10 later than March 31 in order to qualify him for payments. The last-mentioned act was expected to admit 35,000 or more persons to receipt of payments.

Political and Other Events. The State Supreme Court rendered (January 11) a decision depriving non-residents' hasty marriages, performed in the State, of their supposed legality. Upholding a lower court's injunction that prohibited a county clerk's issuing marriage licenses to persons from outside the State, the decision held that this practice violated a law of 1852 requiring that a license be obtained in the county in which the bride resided. Indiana had served the purpose of a Gretna Green for residents of Illinois and other adjoining States. In consequence of the decision, not only did the business in quick marriages decline, but courts in Illinois began to grant annulments to parties seeking them on the ground

of their marriage in Indiana while residents of Illinois.

Indiana became involved in a conflict of interests, with Michigan and also with Ohio, in February, over interstate traffic in beer. The other two, on the ground that Indiana required a license fee of \$1500 for the importation of beer from another State, retaliated against Indiana beer; Michigan by excluding it and Ohio by subjecting it to a \$1500 fee for importation, without privilege for the importer to sell to other distributors. Indiana, in turn, shut out all imports of alcoholic drinks from Michigan.

Elections. Frederick Van Nuys (Dem.) was re-elected U.S. Senator on November 8, by a small plurality of about 7000 over Raymond E. Willis (Rep.). Republicans were elected to 7 seats in the U.S. House of Representatives, making a net gain of 6 seats; Democrats won the other five. The lower chamber of the State Legislature fell into Republican control; the upper continued prevalently Democratic. There was no election for Governor.

The campaign of Van Nuys to retain his seat in the Senate held Nationwide interest, which centered above all on his capture of the Democratic renomination. He had been one of the group of anti-Administration Democrats that balked the passage of legislation sought by the President in 1937, and particularly of the bill to change the Supreme Court. It was reported in the press that Governor Townsend, after a conference with the President, announced from the steps of the White House that Van Nuys would not be returned to the Senate. Van Nuys started a campaign as an independent candidate and sent out (February 16) 100,000 letters which brought him thousands of signed pledges of support. Samuel D. Jackson of Fort Wayne, launched with the approval of the Democratic organization in the State as the Democratic candidate for the nomination, threw himself into contrast with Van Nuys by laudation of the President. Senators Wheeler of Montana, Burke of Nebraska, and others, by report about 20 anti-Administration Democrats in all, expressed willingness to help Van Nuys's campaign. Van Nuys attacked the State Democratic organization (March 24), promising to prove in later statements that one of its leaders had reported to the Government earnings of \$140,000 for 1937, and adding, "I'm going to tell Governor Townsend what's going on in Indiana, let the chips fall where they may." About the same time (March 22) he gave what purported to be damaging particulars about officials of a city in Indiana, which he said he "could name." On June 14 he promised to tell "in September" about some public servants' profits through political manipulations. The State Democratic ban on Van Nuys was revoked; Governor Townsend telegraphed him (July 4) an invitation to become a candidate for renomination by the Democratic State convention on the 12th. The convention unanimously renominated Van Nuys.

Officers. The chief officers of Indiana, serving in 1938, were: Governor, M. Clifford Townsend (Dem.); Lieutenant-Governor, Henry F. Schricker; Secretary of State, August G. Mueller; Auditor, Lawrence F. Sullivan; Treasurer, Peter F. Hein; Attorney-General, Omer Stokes Jackson; Superintendent of Public Instruction, Floyd I. McMurray.

Judiciary. Supreme Court: Chief Justice, George L. Tremain; Judges, Michael L. Fansler, Curtis W. Roll, James P. Hughes, Curtis G. Shake.

INDIANA UNIVERSITY. A coeducational State institution of higher learning in Bloomington, Ind., founded in 1820. For the first semester of the academic year 1938-39 the registration aggregated 6156 students (4036 men and 2120 women). The registration for the summer session totaled 2094 (1052 men and 1042 women). The faculty had 436 members, an increase of 19 over 1937-38. The endowment funds amounted to \$2,432,179, and the total income for the year, from State and private sources, was \$5,461,061. This year marked the beginning of construction on a \$3,500,000 building program, which will add to the physical plant the following buildings: Auditorium, Business Administration Building, Physical Science Building, two dormitories for men, two dormitories for women, and the Extension Center Building at East Chicago for the Calumet District. The main library contained 312,526 volumes. President, Herman B Wells, B.S., A.M., inducted Dec. 1, 1938.

INDIANS. The policy on Indian affairs as outlined by the Commissioner of Indian Affairs in his annual report for the fiscal year ending June 30, 1938, was to use productively the moneys appropriated by Congress for Indians, so as to enable them on good, adequate lands of their own, to earn decent livelihoods and lead self-respecting, organized lives in harmony with their own aims and ideals, as an integral part of American life. By the close of the fiscal year 1938, the area of the lands held in trust for the Indians by the Government had been increased to approximately 51,540,307 acres—about 67 per cent tribally owned, and 33 per cent in allotments held in trust for the benefit of individuals.

Under authority of the Indian Reorganization Act, Congress appropriated \$500,000 for the acquisition of land during the fiscal year 1938, and there was acquired for the Indians 64,354 acres. There was restored to tribal ownership and reservation status 38,279 acres. From 1935 through 1938, 30 purchase projects have been conducted by the Commissioner of Indian Affairs in co-operation with the Government agencies now merged in the Farm Security Administration. Consolidation of Indian lands is an important corollary of land acquisition. Negotiations are underway in South Dakota, Florida, and other States to exchange scattered Indian tracks for State and county lands, so that the holdings of the Indians may be blocked into usable units.

Of the lands remaining to the Indians, some 46,000,000 acres are in forest and range. As guide and supervisor in the field of forest and range management, the Indian Office has responsibility over a territory larger than the entire State of North Dakota. The income from timber sales and the money value of timber used on the reservations, the income from grazing leases and permits, and the money value of free grass consumed by Indian livestock, constitute together one of the Indians' major sources of revenue. Approximately 426,000,000 ft. b.m. of timber were cut during the fiscal year 1938, bringing to the Indians a gross income of about \$1,175,000. During the year, new contracts were completed covering the sale and future cutting of 270,290,000 ft. b.m. of timber on seven units located in four reservations.

With most of the Indian reservations in the arid or semi-arid region, irrigation is vital to Indian life. The construction and water-development program was maintained in 1938 at nearly the same level as previous years. Of the major projects undertaken, that on the Colorado River Reservation

in Arizona is the largest. This contemplates the construction of an irrigation system to supply water from the Colorado River to 110,000 acres. Irrigation works will include a large diversion dam across the river, together with appurtenances and a complete canal system. Work on other large projects consisted of the completion of the storage dam on the Owyhee River, Western Shoshone Reservation, Nev.; the completion of a storage reservoir and the commencement of a large pumping plant on the Flathead project, Mont.; continuation of work on the Fort Peck, Mont., pumping plant; and preliminary work on the construction of a large storage dam on the Crow Reservation, Mont. Miscellaneous, but extensive construction activities continued on the Navajo and Pueblo Reservations in Arizona and New Mexico.

Final judgments in favor of the Klamath Tribe of Oregon and the Shoshone Tribe of the Wind River Reservation, Wyo., in the amount of \$5,313,347.32 and \$4,408,444.23 respectively, were rendered by the Court of Claims. In affirming the decisions of the Court of Claims in these two cases, the Supreme Court rendered decisions of great importance to the Indians. These two cases settled the question as to the scope of the title of an Indian tribe to the reservation set apart for it by treaty. In the Shoshone case, the Supreme Court held that the tribe's right of occupancy was as sacred and as securely safeguarded as in fee-simple absolute title, notwithstanding the fact that the United States retained the fee. Following this theory, it was held that the tribe's right of occupancy in perpetuity included ownership of the land, mineral deposits, and standing timber on the reservation, and an award was made accordingly.

The actual adjustment of Indians to white civilization varies greatly in different areas. Nowhere is it complete. Thousands of Indians, for example, do not speak English. Among the Navajo, for instance, it is estimated that more than 90 per cent neither speak nor understand English. Until faced with the ravages of soil erosion, due largely to overgrazing, the Navajos were self-supporting and self-sufficient. They perpetuated their ancient culture with a minimum of adjustment to neighboring whites. Today, education is a powerful force in helping these people bring back their land to its former productivity. In areas such as Minnesota, Washington, and California, where assimilation of Indians is proceeding rapidly, Indian children are taken care of in public schools. In recognition of the exemption of Indian lands from taxation, the Federal Government pays the school districts for such services. During 1938 approximately \$1,045,000 was spent for Indian education in district schools and \$378,000 was paid to the States.

During the past eight years, the number of Indians on current census rolls at Federal agencies has increased at the rate of approximately 1.2 per cent per year. This compares with an average annual increase for the population at large, as estimated by the Bureau of Census, of only 0.7 per cent over the past seven years. The total Indian population under the jurisdiction of the Office of Indian Affairs, as of Jan. 1, 1938, was 342,497. As of Jan. 1, 1937, the number was 337,366, denoting an increase of 5131. In addition to this Indian population, the Indian Office had under its jurisdiction the education and medical relief of about 30,000 natives of Alaska—a total responsibility, therefore, for the welfare of more than a third of a million Indians and Eskimo citizens.

INSULL, SAMUEL. An American public utility executive, died in Paris, France, July 16, 1938. Born in London, Nov. 11, 1859, he received a primary school education, and at the age of 14 became an office boy. He studied bookkeeping and stenography at night, and subsequently became secretary to Col. E. H. Johnson, London representative of Thomas A. Edison, who was engaged in forming the Edison Telephone Co. of London. Coming to the attention of Edison, Insull was invited to join him as his private secretary in 1881, and in this capacity he had full charge of Edison's business affairs for many years, and represented him in the organization and management of the Electric Tube Co., the first manufacturers of underground electricity conductors; the Edison Machine Works, and Edison Lamp Co.

Insull built and operated the Edison Machine Works in Schenectady, N. Y., and served as general manager, and in 1889 when the various Edison manufacturing concerns and the Edison Electric Light Co. were consolidated into the Edison General Electric Co., he was made 2d vice-president in charge of the manufacturing and selling departments. When this organization merged with the Thomson-Houston Co. in 1892 to form the General Electric Co., he became 2d vice-president of that company.

He did not hold that office long, however, but in the same year resigned to join the Chicago Edison Co., as its president. When the Commonwealth Electric Co. was founded in 1898 he became its president too, and when the two companies were consolidated in 1907 as the Commonwealth Edison Co., he was elected president. On Feb. 24, 1930, he became chairman of the board. Insull was a director in 85 companies, chairman of 65, and president of 11, which last included the Peoples' Gas, Light, & Coke Co., a monument to his efforts, and the Midland Utilities Co., formed in 1912, a holding company of subsidiaries serving 200 communities in Ohio and Indiana. Also, he effected the consolidation of Chicago's five electric railways into the Chicago Rapid Transit Co., and acquired the Chicago South Shore & South Bend Electric R.R.

At the peak of his career, in the middle 1920's, he headed a \$4,000,000,000 utilities empire, and was known as the ruler of the greatest industrial empire in the world. The Commonwealth Edison Co., the largest single producers of electricity in the world, produced practically all the electric light and power consumed in Chicago. Insull's success, although aided by the technical knowledge gained during his association with Mr. Edison, was due mostly to his personal ability as a financier and an

organizer. Overexpansion in 1931, when the bottom had dropped out of the securities market, caused the collapse of this empire, and Insull's inability to borrow the huge sums of money necessary to meet his notes caused three of his largest companies—the Middle West Utilities, the Insull Utilities Investments, Inc., and the Corporation Securities Co.—to go into the hands of a receiver in April, 1932. In June Insull resigned his offices in all these holdings.

In October, 1932, the Cook County Grand Jury found indictments against Samuel Insull and his brother, Martin, who had left the country and were made the objects of extradition proceedings. Martin went to Canada and Samuel to Greece, where the U.S. Government made several efforts to have him extradited, but each time the Greek Court of Appeals decided in his favor. However, the Greek Government, under pressure from Washington, announced that he would have to leave by Jan. 1, 1934. Illness intervened and he was granted a stay until March 15. On the eve of that day he fled in disguise on the Greek tramp steamer *Maiotis*. Subsequently he landed at Istanbul, and was arrested, taken off the ship, and jailed on Apr. 1, 1934. He and his brother were both brought back to the United States, and, with Samuel's son and 15 other defendants, went on trial on Oct. 1, 1934, in the U.S. District Court on charges of using the mails to defraud investors of some \$143,000,000. They were acquitted on October 24. The older Insull still faced the State charge of embezzlement and the other Federal charge of bankruptcy law violation. He was acquitted of the former on Mar. 11, 1935, and of the latter on June 14.

In August, 1935, he was granted a yearly pension of about \$20,000 by the Commonwealth Edison, the Public Service Co. of Illinois, and the Peoples' Gas, Light & Coke Co. He made one last effort to re-enter the business world in 1936 when he organized the Affiliated Broadcasting Co. Control was wrested from him, however, in September of that year, and he retired.

A citizen of the United States by naturalization in 1896, Insull was chairman of the Illinois State Council of Defense from May 3, 1917, to 1919. He served as president of the Chicago Music Foundation and of the Chicago Civic Opera Co., and was instrumental in securing the \$20,000,000 Civic Opera House. He delivered the Cyrus Fogg Brackett engineering lecture at Princeton University in 1921, and in 1926 the National Electric Light Association bestowed upon him the Charles A. Coffin Medal. Mr. Insull received honorary degrees from several colleges and universities, was a member of both the American and British Institutes of Electrical Engineers, and in 1930 was made a Chevalier of the French Legion of Honor. In 1931 he donated a wing to the National Temperance Hospital, London.

INSURANCE. Numerous important changes, enacted or proposed, in the insurance laws of various states, together with an investigation by a Congressional committee into the investment policies of life offices particularly, called for a large share of attention from underwriters during 1938.

Of especial interest were the changes recommended for the governing code of New York, the adoption of which would markedly affect the conduct of the insurance business, not alone in the Empire State, but elsewhere throughout the country.

The effort of bar associations in different sections of the land to restrict the adjustment of

claims against both fire and casualty companies, to the legal fraternity, which began in 1937, continued through last year, with varying results, the courts in some jurisdictions sustaining the plea of the attorneys, while in others they refused support.

The most outstanding litigation of general application, though, was that growing out of the counter-signature law of several states; that is, the requirement that where licensed representatives are requested by their companies to countersign policies covering upon business written within their respective jurisdictions, they must receive not less than 50 per cent of the commission upon the business, though the risks may be controlled by non-resident agents or brokers. Local agents are determinedly opposed to permitting salaried representatives of companies countersigning contracts, maintaining that through such practice the agents are deprived of legitimate revenue.

Challenge of the constitutionality of the counter-signature law was made in Georgia, Florida, Montana, and Virginia, managing underwriters holding the issue to be vital for them, and indicating their purpose to carry it to the Supreme Court of the United States, if need be, to secure final determination.

In an effort to reach a common understanding, representatives of the National Association of Insurance Agents and of the Association of Casualty and Surety Executives have been conferring upon a proposed model resident agency law which, if agreed upon, would be offered for adoption in all states of the Union, eliminating thereby trouble which has been growingly irritating for months past. See **AUTOMOBILES; UNEMPLOYMENT.**

Fire Insurance. Though the volume of business written by the fire companies in the past 12 months will exceed that had in 1937, the net premiums thereon will aggregate less by approximately 5 per cent, it is estimated; the reduction in income being accounted for by the reduction in rates upon many classifications of risks that have been applied in the majority of states, and, again, by the broadening liability assumed without additional charge being imposed.

A further cause for the reduced income was the sharp curtailment in the volume of automobile business written, the number of new cars sold by the automobile manufacturers in 1938 being considerably below the record of the preceding year. While premiums in both the straight fire and the automobile lines fell off sharply for the reasons above noted, gains were achieved in inland marine writings, a division of the business the great majority of companies have been seeking to develop in recent years, and with notable success.

After experiencing a favorable loss record for the preceding five years, the trend changed last July, since which time the country's fire loss increased each succeeding month, bringing the total for 1938 more than \$10,000,000 beyond the 1937 figures, thus giving point to the contention of managing underwriters that the era of low losses was at an end, and from now on it may be expected to steadily advance.

Apart from the losses suffered under their straight fire policies, companies paid out millions of dollars in consequence of the hurricane that swept the New England and a section of the New York and New Jersey coasts last September 21, approximately 23,000 loss claims having been filed. While liability for flood damage is expressly excluded from fire policies, contracts, under the extended coverage form, do cover for

destruction wrought by windstorms, and this provision called for an aggregate payment by all companies of at least \$12,000,000. What the marine writing companies paid to settle claims due to the same disaster, is unknown, figures not being reported to a central body by the marine offices, as is true of the fire companies. That the marine underwriting loss was well up in the millions, however, there is no question. A lively demand for hull and cargo coverage was made upon marine writing companies during the days that threatened a general European war, all offices being importuned by vessel owners and cargo shippers to grant desired indemnity, regardless of the war rates that were imposed. Fortunately the anticipated struggle did not materialize, and once assurance of accord having been reached between the concerned governments, the marine offices reduced their rates to normal figures. The added premiums had during the period of uncertainty, however, came in handy to help meet the exceptional claims resulting from the hurricane a few weeks later.

How to properly regulate the writing of automobile finance business has been a perplexing problem for years, despite the numerous attempts made to find a proper solution. Within the past two months, a small committee of fire company officials appointed by the Insurance Commissioner of Illinois worked out a reform program, which was not only endorsed by that official, but proved acceptable to the fraternity generally, thereby disposing of a question that had long been provocative of ill feeling between a number of companies, and also between companies generally and local agents.

Appreciating the desire of manufacturers and merchants to secure indemnity against loss resulting from striking employees, whether within or without the plants, the fire companies amended their policies, to indemnify for malicious mischief damage, requiring, properly, a slightly higher premium for the broadened protection.

Casualty Insurance. In the field of casualty insurance the outstanding event of the year was the issuance by member companies of the National Bureau of Casualty and Surety Underwriters, of a revised method for writing automobile bodily injury and property damage insurance; issuance of the plan following an intensive study of the general subject by underwriters and actuaries for months. Termed the "Safe Driver Reward Plan," a 15 per cent refund is guaranteed under its terms to all insured motorists whose record for the preceding year proves accident free; that is, they were not involved in an accident for which the company on the risk was required to pay or reserve for payment, in excess of \$10. Though disallowed in several states, the plan met the approval of the great majority of the others and, in the main, of the local agents. New York was among the few states that declined to endorse the program, and to meet the views of its insurance department another method was worked out, which became operative in the state December 1, when all carriers licensed in New York must conform to its terms. The plan in question differs from that used elsewhere in that, while the latter provides for a rate refund at the close of the policy year, the New York method predicates rates upon the assumption that at least 80 per cent of the motorists are careful drivers, and should not be penalized to make good the losses caused by the remaining 20 per cent; hence it contemplates imposing graduated penalties upon the loss producers.

Both plans, as well as those formulated by several

individual companies not bound by Bureau obligations throughout the country generally, though forced to observe the New York state method, evidence the desire of underwriters to differentiate between careful drivers and those of the accident-producing type, and to hold out financial inducements for safe driving.

In the miscellaneous casualty, surety, and fidelity lines the volume of business written through the year was approximately that had in 1937, and with substantially the same loss ratios for each. Surety forms were broadened and the same applies to fidelity coverages, the rating authorities tuning their rates in keeping with the more favorable loss experience shown. With the lessening of public work construction by the Federal Government came a resultant decrease in the demand for completion bonds, a condition, however, offset in degree by the growing call for road construction and kindred forms of indemnity, and by a substantial increase in fidelity bond writings. Of broad concern to insurance companies of all classes was and is the question of examinations by state departments, a process highly expensive to the offices investigated, and, often, needlessly so.

No company worthy of confidence objects to proper supervision, and the law of New York, and maybe of other states, requires all companies licensed within their jurisdictions to submit to an examination every three years, the departments having authority to make interim investigations should they deem such procedure desirable. What managing officials oppose is needless examinations and particularly by representatives of states poorly equipped to undertake the work. To properly examine a company of substantial size calls for expert talent, and consumes anywhere from three to twelve months. The customary charge for such service is \$25 per day, for each examiner, plus an expense allowance of \$8 per day, plus again the cost of transportation from the home department to that of the domicile of the company examined. The cost of such examinations—which must be passed along in the final analysis to policyholders, either through the medium of increased rates, or, of participating companies, by way of reduced dividends—is severe, and the opposition of companies generally to the practice is wholly justified.

The question was prominently upon the agenda of the convention of the National Association of Insurance Commissioners at Des Moines last December, and promises to be a lively subject for discussion for some time to come.

Life Insurance. New York's passage of a law reducing policy loan interest to 5 per cent on contracts issued after Jan. 1, 1939, was probably the most important life insurance event of the year, particularly when taken in connection with the modifications in income under optional modes of settlement which most of the companies affected by the New York statute made in their policies when putting in the new policy loan interest rate. There is a close connection between the policy loan rate and the income under options, for it is obvious that if the income on policy loans is cut one-sixth, the ability of companies to pay interest on their funds is definitely affected.

Where there are several hundred life companies, the 19 having their home offices in New York, plus the 38 companies of other states and Canada, which are licensed in New York, account for more than 75 per cent of the total life insurance in force in the United States and Canada. Consequently, any law of New York, such as that limiting to 5 per

cent the interest on policy loans, concerns a very large share of the life business on the North American continent. The law is not retroactive but only applies to policies issued after the first day of 1939.

Changes in optional settlements under life contracts have a two-fold aim: first, to take account of the downward trend in interest rates, and to this end the guarantees as to what the companies would pay on policy proceeds left them at interest, were cut from the former 3 per cent basis to $2\frac{1}{2}$ per cent, though the companies could still pay any excess interest that might be earned. The second purpose was to modify the annuity option in policies in order to take account of the increased longevity among recipients of annuities. On the type of option where the proceeds are paid out at a fixed rate for a definite number of years, some companies retained the 3 per cent basis, since one of the main reasons for changing to $2\frac{1}{2}$ per cent was a disinclination to guarantee a higher figure for an indefinite future period.

A development being watched with considerable interest is the savings bank life insurance movement. The New York legislature at its latest session enacted a law permitting mutual savings banks to write life insurance, the aim being to provide low-cost protection to persons of small income, the limit to which indemnity could be issued to any individual being \$3000. Massachusetts has had a similar plan in operation for over 30 years. When the New York measure was under consideration the life companies opposed it, on the ground it granted savings banks privileges denied regular life institutions.

Attempts to unionize agents in the industrial or weekly premium phase of the business, which began in 1936, continued through the past year, chiefly in the New York City area. In an election held by agents under the auspices of the State Labor Relations Board, agents of the Metropolitan Life in the city and five contiguous counties won their claims for collective bargaining. Appeal from the ruling of the Labor Relations Board was taken by the Company, and the case is now before the court for adjudication.

Early in the year the Treasury Department decided that agents, compensated upon a commission basis solely, are not employees of the companies, but, instead, are independent contractors, and hence not amenable to the social security laws. This decision meant a saving to life companies and their policyholders, not only as to the social security and unemployment contributions that otherwise would have to be paid, but of the heavy expense to which companies would be subjected in maintaining the additional records of accounting.

Most companies transacting annuity business revised their rates upward on such contracts, in keeping with the downward trend of interest earnings. Surveys of the 1937 experience revealed to companies their annuity business on the whole was a losing venture at the then prevailing rates, the aggregate loss on the class by companies licensed in New York being in excess of \$14,000,000 in 1937 alone.

Another source of heavy loss to life companies was that type of disability policies under which a holder receives a monthly income in the event of his total and, presumably, permanent disability. Most companies have ceased writing this business because of the unfortunate experience therewith. Losses from 1927 to 1937 inclusive, aggregated for the companies \$443,035,850, the contribution of 1937 to the total being over \$31,000,000.

The life business was brought under the scope of the Federal Temporary Economic Committee's survey, commissioned to investigate monopolistic practices in the national economic picture. Inclusion of the life companies was mainly with a desire to learn to what extent, if any, the companies' assets of approximately \$26,000,000,000 were used to foster monopolistic tendencies among corporations in the securities of which the companies invested. Since life company investments are predominantly in bonds and mortgages, rather than in stocks, life underwriters failed to see wherein they could exercise any considerable control over corporations, even were they disposed to do so. Nevertheless, they gave the fullest co-operation to the Federal investigation, the life insurance division of which was handled by members of the Securities and Exchange Commission staff.

Although sales of life insurance were considerably lower in 1938 than in 1937, there was a decided lessening of the downward trend toward the close of the year, due in some measure to the desire of the public to buy policies having the existing favorable settlement option features.

See ENGINES, INTERNAL COMBUSTION.

INTERNATIONAL BANKING AND FINANCE. Developments in international finance during 1938 were dominated by the acute political crisis which developed in Europe during September as a result of Germany's demands for Czecho-Slovak territory. Not only did the war scare in that month cause enormous shifts of funds from Europe, particularly London, to the United States, bringing imports of \$520,000,000 of gold into the United States in September alone, but the changed political situation in Europe following the Munich agreement caused many European capitalists to continue to transfer funds to the United States even though the immediate war scare had passed. Furthermore, the prospect of increasing taxation in Europe to finance ever larger armament programs and the heavier imports of commodities made necessary by war preparations also encouraged the transfer of funds abroad, and had a marked depressing effect upon the quotations of the pound sterling and other European currencies.

Great Britain reported net imports of gold amounting to \$420,000,000 during 1937. For 1938, the direction of the gold flow was reversed, and Great Britain lost a considerable amount of the yellow metal on balance because of enormous shipments to the United States beginning with August. Also, South Africa reduced her shipments to London, and a good deal of gold was hoarded directly within that country, as a result of liberalization of regulations governing such hoarding by the authorities in South Africa. The British Equalization Account, which officially disclosed its gold holdings on Mar. 31, 1938, at \$1,489,000,000, had only \$759,000,000 left at the end of September. Shortly after the end of the year, the Bank of England turned over £200,000,000 of gold, at the old parity, to the Equalization Account to replenish the latter's gold holdings, which had been cut down further in the final quarter of 1938. This increased the gold holdings of the Account by some \$1,700,000,000. The Bank of England had to expand its fiduciary note issue, which is backed by Government securities instead of gold, by a corresponding amount, as its gold holdings were cut to £127,000,000, at the old parity, by this transfer.

Apart from the outflow of capital, the chief

financial problem facing Great Britain at the end of the year was the amount of prospective armament expenditures and the method that was to be adopted in financing them. British armament expenditures have been running at the rate of about \$1,500,000,000 a year, and any sharp increase in these outlays would naturally result either in a budget deficit or heavier taxation. Either of these two developments would encourage the flight of capital from the country, while the increased imports necessary to carry on armaments would depress the pound by making the trade balance even more unfavorable. However, during December the pound sterling rallied because of the large short interest that had been built up earlier and because of the passing of the season of heavy imports. The British authorities were reported not averse to seeing the pound sag to a lower level because of the moderately downward trend in business conditions in that country.

France suffered another major financial crisis, which led to a third devaluation of the franc within two years, in May. The fall of the second Blum Government in April resulted in the establishment of a more moderate regime headed by Daladier, who received broad powers to govern by decree. Instead of providing a range of fluctuation of the franc, as had been done before, the Daladier Government established a fixed lower limit for the franc at 179 francs to the pound sterling on May 5, and a heavy return flow of capital followed. Also, the Government sought to stimulate productive activity within the country through liberalizing the social legislation enacted since 1936, particularly the 40-hour work week. During the European war crisis, the franc was supported with relation to the pound at its minimum level, but the need for enlarged national defense appropriations thereafter and the conviction that France's economic weakness spelled serious danger for the country's political future brought about the adoption of a more aggressive economic rehabilitation program. Paul Reynaud, who had advocated the devaluation of the franc long before this was done in October, 1936, was made Minister of Finance in October, and he secured the adoption of a program involving more drastic modification of the 40-hour week, reduction of Government expenditures, and increases in taxes, that was designed to effect a fundamental solution of the country's difficulties. Organized labor sought to check this program through a general strike called for November 30, but this move proved a failure as a result of energetic preventive measures taken by the Government, and thereafter the financial outlook in France improved considerably. A heavy return flow of capital developed, and the French Stabilization Fund was reported to have gained considerable amounts of gold during the closing months of the year. Through revaluation of the gold holdings of the Bank of France, the latter's gold stock was marked up by almost 32,000,000,000 francs in November to 87,264,000,000 francs.

The authoritarian countries, particularly Germany and Italy, did not affect world financial conditions directly because of their thoroughly controlled economies. They continued to make aggressive efforts to expand their economic relations with nations in southeastern Europe and Latin America through barter arrangements, but these have given rise to considerable dissatisfaction in many instances. The ability of countries that sell raw materials to Germany to obtain only a very limited selection of manufactured goods in exchange has

resulted in the building up of blocked balances within Germany that are of very limited usefulness to their owners.

The war in China proved a heavy drain upon Japan's financial resources. That country shipped to the United States almost \$200,000,000 of gold, thus further weakening her reserve position. The gold reserves of the Bank of Japan had fallen to the lowest level in a number of years by the end

sought to make long-term credits more freely available to Latin American countries wishing to purchase capital goods in the United States, but Mexico's expropriation of American oil properties had a discouraging effect upon new direct investments in these countries by American concerns.

The movement of foreign exchange rates during 1938 was as follows:

FOREIGN EXCHANGE RATES, 1938

[Average of noon buying rates for cable transfers in New York. In cents per unit of foreign currency]

	United Kingdom (pound)	France (franc)	Germany (reichsmark)	Norway (krona)	Sweden (krona)	Denmark (krona)	Belgium (belga)

* Export peso quoted at 4 0000 throughout year.

of 1938. This additional loss of gold occurred despite the application of rigid foreign exchange restrictions and efforts to limit the import of all goods not regarded as necessities of war.

Soviet Russia shipped in excess of \$100,000,000 of gold to London during the year. This is regarded as part of that country's policy of keeping a portion of its reserves in the form of foreign exchange, because of the desire to be able to purchase materials and supplies abroad readily, in the event of a war or other crisis, even though gold exports should not be possible.

Financial conditions in Latin America were little changed during 1938. Lower commodity prices brought about a decline in exports in most cases, but imports also were lower. The improvement in business conditions in the United States during the last half of the year was a helpful development, and in a few cases negotiations were undertaken to reach a settlement on dollar bonds in default. Cuba resumed service on her defaulted public works debt on a reduced basis, and at the end of the year Colombia was negotiating actively for a settlement of her debt. The American Export-Import Bank

Central Banking Policies. Central banks in all countries sought to keep interest rates low and credit freely available for financing domestic business and government deficits, despite the highly disturbed state of the foreign exchange markets during the latter part of the year. With the trend of business conditions in most countries downward, the desire to prevent inflationary developments manifested in several countries during 1937 was no longer in evidence, and instead consideration was given to ways and means of encouraging and stabilizing industrial activity. In Great Britain the fiduciary issue of the Bank of England, consisting of notes backed only by Government bonds, was increased by £30,000,000 in December to permit an expansion of currency circulation without gold backing. This occurred before a large additional fiduciary issue was made necessary by the transfer of £200,000,000 of gold to the Equalization Account in the following month. In Sweden, where the banking authorities are committed to a program of stabilization of business activity, capital expenditures of Government-owned enterprises were expanded to offset reduced activity elsewhere.

While interest rates remained at a relatively very low level in all leading countries, the only significant change during the year was in France. The discount rate of the Bank of France, which was 3 per cent at the beginning of the year, was lowered to 2½ per cent during November. Belgium, whose discount rate was raised to 4 per cent in May, 1938, reduced it back to 2½ per cent later in the year.

Fluctuations in the gold reserves of central banks and governments during 1938 were as follows:

GOLD RESERVES OF CENTRAL BANKS AND GOVERNMENTS
[In millions of dollars]

End of month	Total ^a (52 countries)	United States	United Kingdom Bank of England	Exchange Account	France	Bel- gium	Nether- lands	Switzer- land	Japan

^a Table is incomplete since certain central banks and governments, and certain stabilization funds such as those of France, Netherlands, and Switzerland, hold gold that is not reported. U.S. Stabilization Fund gold included in table to extent of \$1,800,000,000. ^b Preliminary.

INTERNATIONAL CHAMBER OF COMMERCE. An international federation of business organizations and business men, established in 1920 as a successor to the more loosely organized International Congress of Chambers of Commerce, which had met at intervals of two years for a considerable period before the World War. It has a membership of industrial, trade, financial, and insurance associations, chambers of commerce, shipping and transportation organizations, as well as an associate membership of individual business companies and business men, in 48 countries.

Through 1938 the organization has held nine general congresses—London, Rome, Brussels, Stockholm, Amsterdam, Washington, Vienna, Paris, and Berlin—the Berlin Congress in June, 1937, being attended by more than 1600 delegates. The congresses declared the policies relating to the numerous problems of trade barriers, and the urgent need of sound commercial policies and adequate facilities for carrying on international business in the postwar period. The present program deals primarily with the complicated array of restrictions on trade that grew up during the worldwide economic depression of the past few years, and the advocacy of international monetary stabilization, on which the Chamber and the Carnegie Endowment in 1936 and 1937 collaborated in a comprehensive series of studies by experts. The general theme announced for the 10th general congress at Copenhagen, 1939, is "The Need for Economic Order."

The International Chamber has committees on the organization of production, international trade expansion, monetary policy and credit, fiscal questions, banking studies, futures trading on commodity exchanges, commercial documentary credits, merchandise distribution and marketing, advertising, rail transport, highway transport, transport use, sea transport, inland navigation, air transport, international telegraph and telephone communications, international postal service, air mail, pro-

tection of industrial property, customs technique, trade terms, bankruptcy, automobile insurance, legal status of foreign establishments, legalization of documents, and international commercial arbitration.

The officers in 1938 were: Thomas J. Watson of New York, industrialist, President; Pierre Vasseur, Secretary General. Headquarters were at 38 Cours Albert. Premier, Paris, France. Eliot Wadsworth of Boston was Chairman of the American National Committee; Silas H. Strawn of Chicago

was American Vice-President. The office of the American Section was at 1615 H Street, Washington, D. C. Chauncey D. Snow, Manager.

INTERNATIONAL GEOLOGICAL CONGRESS. See GEOLOGY.

INTERNATIONALISM. There are now 1103 International Relations Clubs fostered by the Carnegie Endowment for International Peace located in all parts of the world. This means that in 838 colleges and universities and in 265 high schools groups of students are meeting for a unique purpose. Convinced that the terrible problem of war and peace cannot be solved by sensational strikes and emotional protests, the members of the International Relations Clubs have set themselves the much more difficult task of quiet, objective study of the conditions which bring about war and of their possible remedy. There are 950 Clubs in the United States, in addition to seven in the Philippines and one each in Hawaii, the Canal Zone, Alaska, and Puerto Rico, making a total of 961. Of these, 265 are in high schools, the remainder in colleges and universities.

The College Clubs in the United States and Canada meet in 12 regional conferences once a year. The conferences are called primarily to bring the Clubs in contact with a representative of the Endowment, so that the work may be co-ordinated. About this nucleus is arranged a significant program for the discussion of international affairs. Student participation and administration are stressed and the round table discussions are a living evidence of the ability of the International Relations Clubs members and of the progress they are making in developing the international mind. In addition, distinguished guests designated as Carnegie speakers, are sent by the Endowment to add their expert counsel and advice to the discussions of the students.

The International Committee of the World Alliance for International Friendship through the Churches, at its meeting in Larvik, Norway, on August 23-29, elected Dr. William P. Merrill as

its president. Dr. Merrill is president of the Church Peace Union, and also served as president of the American Council of the World Alliance from the time of its organization in August, 1914, until 1936.

The Good Will Congress and twenty-third Annual Meeting of the World Alliance for International Friendship was held in San Francisco, November 7-11, in co-operation with the Church Peace Union and the San Francisco Peace Council. The opening session of the Congress was a United Ministers Meeting, at which representatives of three faiths spoke. This co-operation among the various religious groups featured the whole Congress, and was a practical example of the type of co-operation needed on a world scale. Youth was given a special place on the program and a large meeting of young people was held as one of the regular Congress meetings. The meeting was arranged by a committee of young people. Bishop Oldham was unanimously re-elected President of the American Council.

The World Federation of Education Associations issued during the year a new publication entirely at variance with its previous publications, though the title, "World Education," remains the same. The new magazine is devoted to summaries of articles and official publications from a variety of foreign countries, not necessarily limited to the 26 countries represented in the Federation. This magazine of condensed information, drawn from all of the educational periodicals of the world, is issued in six bi-monthly numbers and goes with the good will memberships in the Federation. The Federation is making arrangements for its next biennial conference in Rio de Janeiro, Aug. 6 to 11, 1939. All of the Federation's activities are based on the idea that the best way to promote international understanding and good will is through the personal acquaintance of teachers of various countries and their knowledge of the aims and procedures of education in other countries.

The University of Chicago was presented in 1923 with a trust fund for "the promotion of a better understanding on the part of American citizens of the other peoples of the world, thus establishing a basis for improved international relations and a more enlightened world-order." This fund, known as the Norman Wait Harris Memorial Foundation, is administered by a Faculty Committee with Quincy Wright, Professor of International Law, Chairman. This Foundation makes it possible for the University to offer exceptional opportunities for the study of international relations, including an annual institute on some international problem. The fourteenth institute, which extended from August 1 to 20, 1938, dealt with the subject "The Crisis of Democracy." The public lectures were given by William E. Rappard, Doctor of Law, professor at the University of Geneva; director of the Graduate Institute of International Studies at Geneva; member of the Permanent Mandates Commission of the League of Nations; author of *International Relations as Viewed from Geneva* (1925), *Uniting Europe* (1930), *The Geneva Experiment* (1931), *The Government of Switzerland* (1936), and numerous articles in Swiss, French, German, English, and American.

INTERNATIONAL LABOR ORGANIZATION. A permanent diplomatic and administrative association, having in its membership 60 nations of the world, including the United States, which became a member by Presidential proclamation Aug. 20, 1934, under authorization of a resolution of Congress June 19, 1934. The objectives of

the Organization are the improvement of labor conditions within the member countries. The machinery of the Organization consists of an annual *Conference* of representatives of the member nations, and an *International Labor Office* controlled by a *Governing Body*, the latter consisting of 32 persons, 16 of whom represent the governments, 8 the employers, and 8 the workers, meeting quarterly.

The annual Conferences are composed of 4 representatives of each of the member countries: 2 representing the government, 1 the employers, and 1 the workers. These conferences discuss an agenda prepared by the Governing Body and draw up *draft conventions* and *recommendations* affecting industrial conditions which are presented to the competent authorities in each member nation for ratification or adoption. The Constitution of the Organization imposes an obligation to present the draft treaties for consideration by the appropriate and competent authority in each country. When a convention has been ratified by two or more members it becomes an international treaty between the members so ratifying. All standards adopted are minimum. Up to the present time, the Conference has adopted 63 draft conventions. While 5 of these conventions have not yet come into force, the remaining 58 have received 819 ratifications.

The International Labor Office, which is situated at Geneva, Switzerland, acts as a secretariat for the annual conference, preparing material for the use of the conference and following up the work of the conference. It also acts as a bureau for the collection and dissemination of information bearing on the problems of labor and industry. It edits and publishes several periodicals and numerous reports and studies dealing with problems of industry of international interest. Director of Washington office, L. Magnusson, 734 Jackson Place, Washington, D. C.

INTERNATIONAL LAW. See also ARBITRATION; INTERNATIONAL; LAW; LEAGUE OF NATIONS; WORLD COURT.

GENERAL

"What is the Trouble with International Law?" asks P. S. Wild in *Am. Pol. Sc. Rev.*, XXXII, 478; and Chairman Pittman, of the U.S. Senate Foreign Relations Committee, suggests that its indefiniteness be remedied by substituting bilateral treaties between the leading nations. "The Soviet Union has developed a new form of international law . . . and is not merely using (the) bourgeois" form of it, claims J. N. Hazard in *Am. J. of Int. Law*, XXXII, 250-1. So "the National Socialist theory of international law" is basically distinguishable from theories held by the historical or sociological schools. (*Ib.* 704; V. L. Gott.)

International Conferences, Congresses, etc. Of the many held during 1938 may be mentioned:

February 1. Telecommunications Conference opened at Cairo, delegates from 62 countries (*Ib.* 562).

April 28-30. 32d annual meeting, American Society of International Law, Washington (*Ib.* 348).

May 23. Aerial legal experts met in Paris and agreed upon three draft conventions and a protocol.

June 2-8, 24th session, International Labor Office at Geneva (*Ib.* 801).

June 14-24. Whaling Conference in London, protocol and final act signed by delegates from nine countries.

July (first week). Representatives of 15 northern European seaport cities met at Antwerp to discuss plans for a union modeled upon the medieval Hanseatic League; unification of sea transport law was one of the objectives (see *Christian Science Monitor*, July 26).

July 17-25. International Conference of Red Cross in London.

September 19. Opening of 4th International Conference on Private Air Law at Brussels.

December 9. Opening of 8th Pan-American Conference (q.v.) at Lima, on anniversary of Ayacucho.

PUBLIC

Aliens. History of the doctrine of "Denial of Justice" to aliens is traced in *Am. J. Int. Law*, XXXII, 63 (H. W. Spiegel); the fraudulent (Robinson) passport case (*ib.* 320); protection against Spanish insurgents (*ib.* 324). Nonresident workers may now become Soviet nationals upon approval by the Supreme Parliament. A comprehensive "Law of Aliens, Extradition, and Naturalization" (*ib.* 163 Off. Docs.) was promulgated by President Enriquez of Ecuador on February 16. "The Legal Status of Aliens in Pacific Countries" (ed. by Norman MacKenzie, 1937, rev. *ib.* 651) is an unusually timely report of the Institute of Pacific Relations in view of the present abnormal conditions in those countries. Brazil's (reserved) adhesion to the Montevideo declaration in regard to Nationality was announced on January 10.

Sea and Air Law. "The Admiralty Law of Salvage" is treated in *Cornell L. Quar.*, XXXIII, 229 (G. H. Robinson) and, for comparison, we have "Salvage in Aviation," *Air L. Rev.*, VIII, 200. Under the head of "Air Law," *Current Legal Thought Index* (1937-38) lists nearly three columns of titles of recent articles. A "Selected Bibliography" of the subject appears in *Jnl. of Air Law*, VIII, 675. Check lists of pending legislation in aeronautics and radiography are found in *Air L. Rev.*, VIII, 340, IX, 196, 370. Air law in various countries is discussed in *Jnl. of Air Law*, IX, 201 (Canada, B. V. Richardson), *ib.* 129 (Germany, C. G. Grossman); *ib.* 283 (Venezuela, J. L. Brown). The U.S. Civil Aeronautics Authority (Act of 1938), consisting of five members, assumed control of civil aviation on August 22. One of its first acts was the installation of a private flying unit devoted to the interests of airplane operators outside the scheduled companies. The proposed Uniform State Code is considered in *Air L. Rev.*, VIII, 283, 334, 589; Los Angeles Bar Assn. *Bull.*, XIII, 78. See AERONAUTICS; UNITED STATES under *Administration*.

Air law in treaties is discussed in *Air L. Rev.*, VIII, 343 (Pan-American and Paris Conventions); *ib.* IX, 281 (Warsaw and Rome Convention). "Treaty Regulation of Radio and Short Wave Broadcasting" is discussed in *Am. J. Int. L.*, XXXII, 719 (H. S. Leroy). Ratifications were exchanged in London, June 19, of the Budapest Air Transit Convention between Great Britain and Hungary. On July 28 an agreement was effected by exchange of notes between the United States and Canada, regarding air navigation and reciprocal certificates of airworthiness and pilotage.

Sovereignty. "The Immunities of Foreign States Engaged in Private Transactions" are treated in *Jnl. of Comp. Leg. & Int. L.*, XX, 1 (S. H. Brookfield); "The Jurisdiction of British Courts over Foreign Sovereigns," in *Jurid. Rev. L.*, 179 (A. B. Keith). A sovereign government may intervene in the courts of another, but it must offer proof of its claims—mere suggestion is insufficient (*Compania Española etc. v. The Nave-mar*, 303 U. S. 68). Nor is the foreign sovereignty, like the local one, exempt from the operation of prescriptive laws (statutes of limitation) (*Guaranty Trust Co. v. U. S.*, 304 U. S. 126, reviewed in *Cal. L. Rev.*, XXVI, 713; *Yale L. J.*, XLVII, 132).

Territory. "International Transfers of Territory in Europe," State Dept. Pubs., No. 1003 (So-

phia Saucerman), relates mostly to the changes resulting from the World War and is now largely ancient history, for many of these "transfers" were themselves changed, or prepared for change, by or in 1938. On March 12 German forces invaded Austria (q.v.) effecting a bloodless conquest of some 32,369 sq. mi. of territory and about 6¾ millions of population. Resulting fiscal obligations, which Germany seeks to evade, are discussed in *Am. J. Int. Law*, XXXII, 421,766 (J. W. Garner). Also see CZECHO-SLOVAKIA.

Boundaries. "Boundaries, Possessions and Conflicts in South America" (Cambridge, 1938), by Gordon Ireland, is criticised (*Am. J. Int. L.*, XXXII, 388) for its pessimism and wholesale imputation of improper motives to others. *Dominican Republic-Haiti*: On March 26, exchanged ratifications of a treaty covering boundary and other questions; two days later the former paid the initial indemnity of \$250,000 for slaughter of Haitians. *Guatemala-Salvador*: On April 27, the congresses of both countries ratified the boundary treaty. *Bolivia-Paraguay*: Following the arbitral treaty of July 21 an award by Presidents of six American republics, including the United States, announced at Buenos Aires on October 10, ended this century-old controversy involving years of fierce warfare. See CHACO DISPUTE. *Ecuador-Peru* (1937 YEAR BOOK, 345): After two years of fruitless negotiation in Washington, Peru closed its office there and an *impasse* appeared to have been reached. But immediately following the Chaco award, President Borrero of Ecuador addressed the heads of five other American States asking their intervention because of Peru's alleged unwillingness to arbitrate. *Iran-Iraq*: The treaty (1937 YEAR BOOK, 345), ratified by the latter's Chamber of Deputies (81 to 10) on March 6, while "protesting students fought police outside," gave the former one-half the Shatt al Arab district and common rights in the Basra seaport. *Britain-United States*: A provisional arrangement was effected on August 10 for joint use, for aviation and communication purposes, of the two coral isles of Canton and Enderbury (qq.v.), which the latter had occupied notwithstanding the former's adverse claim.

Waters. In the World Court case involving diversion of waters from the Meuse (*ib.* 345) the Court rejected both the Netherlands claim and the Belgian counter-claim (*Am. J. Int. L.*, XXXII, 1). "Diversion of Waters Affecting the United States and Canada" is discussed by James Simsarian (*ib.* 488).

Extraterritoriality, of armed forces, is the subject of an article in *Revista di Diritto Internazionale*, XVI, 186 (R. Borin). "Equity Decree Determining Interests in Extraterritorial Land" is discussed in *Yale L. J.*, XLVII, 1400. *Contemporary Manchuria* (II, 8) contains an article on "The Abolition of Extraterritoriality and the Transfer of Administrative Rights in the South Manchurian Railway Zone." Members of a foreign commercial delegation are not entitled to the immunity of diplomatic agents but are subject to the ordinary operation of the laws. *De Fallois v. Piatakoff* (*cour de Cassation*) *Nouvelle Rev. de Droit International Privé*, IV (2), 324.

Treaties. In General. Up to April 1, 67 treaties and conventions had been signed at international conferences of the American States during the present century. A valuable table showing their status appears in *Am. J. Int. L.*, XXXII, 103. Additional volumes of treaty collections continue to appear, e.g. "Treaties and Other International Acts

of the United States," vol. v; "International Legislation," vol. vi, edited by Hunter Miller, who became editor of treaties in place of Historical Adviser to the State Department according to its announcement of August 1. "Treaty-Making Procedure in the British Dominions" is discussed in *Am. J. Int. L.*, XXXII, 467, 473, 486 (Australia); *Canadian Bar Rev.* XVI, 159 (Canada); "Denunciation of Treaty Violators," *Am. J. Int. L.*, XXXII, 526.

Commercial Pacts. On January 2, abrogation of the trade pact of 1932 between Canada and Southern Rhodesia became effective. France and Italy signed a commercial accord on April 14. The 17th treaty under the American Reciprocal Trade Act (1937 YEAR BOOK, 344) was signed by the United States and Czecho-Slovakia on March 8. Modifications due to the latter's loss of territory are expected. The 18th treaty with Ecuador was proclaimed September 23. But the most important of all these, if not of all negotiated between the nations concerned, was that which the United States on the one hand, and Britain, her colonial empire, and Canada on the other, signed in the White House on November 17. In order to effect it, the last-named signatories were obliged to modify their policy of imperial preference. Meanwhile, on June 13, the U.S. Senate ratified the 1937 commercial treaty with Siam (see *Am. J. Int. L.*, XXXII, 796), and on November 15 a commercial treaty between the United States and Greece was signed at Athens. Anglo-American treaties, affecting rights of Indians to carry commodities across the Canadian border, were reviewed in *U.S. v. Garrow*, 71 *Treas. Dec.* 421 (*ib.* 372).

Non-Aggression Pacts. Finland deposited adhesion to the Argentine Anti-War Treaty on February 17; Colombia's ratification (deposited July 12 with reservation) was the 17th to the Inter-American Arbitration Treaty of 1929; Guatemala adhered to the Inter-American Conciliation Convention on May 26. A brief, three-paragraph pact, signed at Paris by the French and German Foreign Ministers on December 6, declared recognition of the territorial *status quo* and the intention of the two nations "to remain in contact on all questions" of mutual interest and "to consult together (relative to) international difficulties."

War. See CHINA; JAPAN; SPAIN. Following are some of the more important current articles on this subject: "The Power to Punish Neutral Volunteers in Enemy Armies," *Am. J. Int. L.*, XXXII, 535 (E. M. Borchard); "Can Civil Wars Be Controlled by International Law?" (*ib.* 542, C. G. Fenwick); "Localization of the Spanish War," *Am. Pol. Sc. Rev.*, XXXII, 237 (F. O. Wilcox).

PRIVATE

Several important works appeared on this branch of the subject in 1938: *Private International Law* (2d ed.), by G. C. Cheshire (*rev. Am. J. of Int. L.*, XXXII, 635); *Private International Law* (in Greek), by Streit and Vallindas (*rev. ib.* 883); "La notion d'équivalence en droit international privé," (Witenberg, *Jnl. du Droit International*, LXIV, 736).

Conflict of Laws. The American Law Institute's "restatement" of this subject was published, with Colorado annotations, in *Rocky Mountain L. Rev.*, X, 210; with Ohio annotations, *U. of Cincinnati L. Rev.*, XII, 410; "Which Law Should Govern?" *Va. L. Rev.*, XXIV, 863 (E. S. Stimson). "*Renvoi*," a doctrine by which a question is referred to that of the forum where laws conflict,

is exhaustively treated in *Harv. L. Rev.*, LI, 1165. (Griswold). Compare *Univ. of Pa. Law Rev.*, LXXXVII, 34.

Contracts. "Intention of the Parties," *Ill. L. Rev.*, XXXII, 899 (W. W. Cook); "The Proper Law of the Contract," *St. John's L. Rev.*, XII, 242; "Choice of Law by Parties," *Jurid. Rev.*, XLIX, 110 (M. Wolff).

Divorce. *Revue de Droit International et de Legislation Comparée*, XIX, 5 (H. C. Gutteridge); *Canadian Bar Rev.*, XVI, 57; *Notre Dame Lawyer*, XIII, 295 (J. E. Boyle); *The Foreign Laws of Marriage and Divorce*, H. Cohn (1937), *rev. Am. J. of Int. L.*, XXXII, 648.

Domicile. Cordier, "De la notion de domicile en Droit Comparé," *Jnl. de du Droit International*, LXIV, 969; "Domicil and Naturalization," *Canadian Bar Rev.*, XVI, 159, 312.

Property. "Choice of Law for Land Transactions," *Columbia L. Rev.*, XXXVIII, 1049; "Law Governing Title to Intangibles," *N.Y.U. L. Quar. Rev.*, XV, 536 (E. S. Stimson). "The Mexican Situation and the Protection of American Property Abroad," *A.B.A. Jnl.*, XXIV, 813 (F. R. Coudert); "Expropriation of Petroleum Companies in Mexico," *Am. J. of Int. L.*, XXXII, 519; *Tulane L. Rev.*, XII, 534 (H. P. Crawford). It was announced in November that a settlement of the controversy over lands of Americans which the Mexican Government confiscated had been reached, on the basis of \$10,000,000, to be paid in annual installments.

Claims. The Special U.S.-Mexican Claims Commission completed its three years of work on July 19, having allowed, at least in part, 1358 out of 2833 claims. See *Am. J. Int. L.*, XXXII, 457 (L. W. McKernan); "Work of General Claims Commission," *Federal Bar Assn. Jnl.*, III, 83 (B. L. Hunt); "Diplomatic Claims vs. the Soviets," *N.Y. Univ. L. Quar. Rev.*, XV, 507 (A. N. Sack).

Religion. The proposed concordat between Yugoslavia and the Vatican (1937 YEAR BOOK, 345) was abandoned in January, 1938, owing to opposition by the former's Orthodox clergy. The Austrian concordat of 1933 has been virtually repudiated by Germany.

Succession. "The Private International Law of Succession in England, America, and Germany," by Walter Breslau, "is the only work of its kind in English" (*rev. Am. J. of Int. L.*, XXXII, 634); *Donatio Mortis Causa* (gifts effective at death), *Canadian Bar Rev.*, XVI, 143. The Erie Co. (N.Y.) Surrogate's decision in Matter of Penrose, 164 Misc. 388, applying the *jus domicilii* of a pre-deceased legatee, rather than that of the original testatrix, is criticised in *Yale L. J.*, XLVII, 1216.

Torts. "Enforcement of Foreign Actions for Wrongful Death," *Columbia L. Rev.*, XXXVIII, 946.

INTERPARLIAMENTARY UNION. The Thirty-fifth Annual Meeting of the United States of America Group of the Interparliamentary Union was held in Washington, Jan. 17, 1938.

In spite of the uncertain and anxious times, the Union was able to gather together at The Hague, 350 representatives of 25 Parliaments on Aug. 22-27, 1938, to take part in what was a manifestation of peace and friendship. Such success would have been impossible had it not been for the generous hospitality which was offered to the Conference by the Inter-Parliamentary Group of the Netherlands, materially supported by the Queen's Government and by the town councils of the large cities of the Netherlands. The 25 Groups represented at the

Conference were: United States of America, Belgium, Bulgaria, Czecho-Slovakia, Denmark, Dutch East Indies, Egypt, Estonia, Finland, France, Great Britain, Hungary, Ireland, Italy, Japan, Luxembourg, Netherlands, Norway, Poland, Rumania, Spain, Sweden, Switzerland, Turkey, and Yugoslavia. Only a few overseas Groups were not represented, such as Canada, Costa Rica, Iran, and the Philippines. M. Carton de Wiart, speaking on behalf of the Interparliamentary Council, proposed as President of the Conference M. Bongaerts, President of the Inter-Parliamentary Group of the Netherlands.

The General Debate on the Report of the Secretary General took up the two meetings on Monday, August 22. It was remarkable for the large number of suggestions which were made from the platform. The first speaker, M. Makowski (Poland), stressed the danger of ideological conflicts in the international field as well as within the Union itself. M. Saveano (Rumania) then recalled the contribution which his country had made to the policy of peace, of which the Salonika Agreement is one of the most fortunate results. M. Kenez (Hungary) made a definite suggestion to place the problem of minorities on the agenda of the Conference. In the afternoon, M. Necib Ali Kucuka (Turkey) recalled the general lines of the peaceful policy to which the Turkish people remain closely attached. M. Clerigo (Spain) declared his faith and that of his colleagues in the principles for which Republican Spain was fighting. M. Stodola (Czecho-Slovakia) explained the problem with which his country has to deal in the matter of minorities, the peaceful settlement of which should be desired by all, the more so as in 1942 the Inter-Parliamentary Union was invited to hold its conference in Prague. M. Mamdouh (Egypt) then dealt in masterly fashion with the labyrinth of the Palestine question and pointed out the consequences of Jewish Immigration. Mr. Fahy (Ireland) spoke of the situation in Eire after the Anglo-Irish Agreement and expressed the desire that soon the whole of Ireland should be united under one banner. M. Albarda (Netherlands), after having recalled the principles which are the foundations of the Union, formally proposed that the Conference should pronounce upon the resolutions which were adopted in Nice by the Council in regard to the right of nations to self-determination and of the protection of national minorities. M. Makino (Japan) emphasized the love of peace which animated the Japanese people and invited the Union to hold its XXXVth Conference in Tokio in 1940.

A debate in participation in the development of Colonial resources was, to a certain degree, the continuation of the very full discussion which had taken place the previous year in Paris on access to raw materials.

One of the economic questions which gave rise to lively discussion after the World War was the "most-favored-nation" clause. Whereas the United States of America and several overseas countries have adopted it as the very basis of their commercial policy since approximately 1920, most of the countries of the Old Continent are being compelled to provide, if not for exceptions, at least for attenuations, with a view to facilitating the conclusion of regional economic agreements.

International Unification of Legislation on Copyright was a somewhat technical question. However, the prospect of the Inter-Governmental Diplomatic Conference, which is to be held next year in Brussels, with a view to unifying the systems used in

the protection of copyright, lent the problem current interest. Initiative for, and Framing of, Laws gave rise to a debate which remained throughout on a high level. The speeches made were worthy of the Union and of the fundamental principles which are the basis of the parliamentary system. The competent committees, it will be recalled, had drawn up in Nice a "Basis of Discussion" and not a draft resolution. This unusual procedure had been prompted by a desire to present to the Conference an accurate text which would contain a definite and carefully thought-out opinion.

As previously mentioned, M. Albarda (Netherlands) asked the Conference to adopt the resolutions passed in Nice on the protection of national minorities and on the right of nations to self-determination. In accordance with the Statutes, this proposal was referred to the Council, which decided to submit to the Conference the resolution on the right of nations to self-determination. It was understood, however, that no debate could take place on it for lack of time. Thus at the end of Saturday afternoon, just before the closing of the Conference, the assembly adopted this resolution by a large majority, the Italian delegation abstaining from voting.

INTOXICATION. See MEDICAL JURISPRUDENCE.

IOWA. Area and Population. Area, 56,147 square miles; included (1930) water, 561 square miles. Population: Apr. 1, 1930 (census), 2,470,939; July 1, 1937 (Federal estimate), 2,552,000; 1920 (census), 2,404,021. Des Moines, the capital, had (1930), 142,559 inhabitants.

Agriculture. Acreage, production, and value of the chief crops of Iowa, for 1938 and 1937, appear in the accompanying table.

Crop	Year	Acreage	Prod. Bu.	Value
Corn	1938	10,306,000	468,923,000	\$220,394,000
	1937	11,082,000	498,690,000	224,410,000
Oats	1938	5,913,000	198,086,000	33,675,000
	1937	5,913,000	271,998,000	68,000,000
Hay (tame)	1938	3,083,000	4,997,000 *	28,483,000
	1937	2,723,000	4,021,000 *	32,168,000
Wheat ...	1938	584,000	9,586,000	5,560,000
	1937	817,000	14,649,000	14,942,000
Barley	1938	447,000	12,963,000	4,537,000
	1937	389,000	12,448,000	6,224,000
Potatoes ..	1938	58,000	5,684,000	3,695,000
	1937	60,000	4,920,000	3,641,000
Soy beans .	1938	294,000	5,733,000	4,300,000
	1937	229,000	4,236,000	3,474,000
Rye	1938	101,000	1,566,000	517,000
	1937	207,000	4,036,000	2,744,000

* Tons.

Mineral Production. Coal exceeded a third of the State's latest-reported yearly output (1936) of native minerals. The coal produced, about 3,690,000 net tons for 1937, approximated the total of 3,960,700 (value \$9,940,000) for 1936. Cement, the next product in value, was shipped to the quantities of 4,598,453 bbl. in 1937 and 4,407,624 in 1936; by value, \$7,046,021 (1937) and \$6,908,225 (1936). Clay products attained, in value, \$2,731,810 for 1936, the latest year for which this total was published. Ranking third among the States of the Union in the output of gypsum, Iowa produced 387,255 short tons in 1937, as against 344,221 tons (value \$3,261,288 as processed) in 1936.

Education. Inhabitants of school age were reckoned, for the academic year 1937-38, at 681,169. Enrollments of pupils in all public schools totaled 519,150. This comprised 380,817 in the elementary group, 136,564 in high schools, and 1769 in ungraded classes. The year's expenditure for public-school education totaled \$44,737,416. Teachers

numbered 25,225; their salaries for the year averaged \$826.

Allotments of State and Federal money were made in Iowa for the construction of additional buildings at the State educational institutions. The Department of Public Instruction carried on a program of improving instruction in speech and in matters of safety.

Charities and Corrections. The 15 State institutions maintaining persons in their care or custody were governed, through individual superintendents, by the Board of Control of State Institutions. They were: The Men's Reformatory (1060 inmates) at Anamosa; State Penitentiary (1461), Fort Madison; Training School for Boys (574), Eldora; Training School for Girls (192), Mitchellville; Women's Reformatory (75), Rockwell City; State Hospitals for mental cases, at Cherokee (1708), Clarinda (1671), Independence (1738), Mount Pleasant (1505); Hospital for Epileptics and School for the Feeble-minded (1434), at Woodward; Institution for Feeble-minded Children (1809), Glenwood; State Sanatorium (391), Oakdale; State Juvenile Home (307), Toledo; Iowa Soldiers' Home (441), Marshalltown; Iowa Soldiers' Orphans' Home (555), Davenport.

Functions of the State in the support of needy classes were performed by the Department of Social Welfare.

Iowa's Board of Social Welfare, established under a statute of 1937, was the State's chief administrative authority as to most of the distributions of public money for the support of needy individuals; it governed old-age assistance, aid to the needy blind, and support, as well as other services, for children lacking adequate family support. Grants under the system of unemployment compensation were administered by a separate board.

Political and Other Events. A strike that started on May 9 in the works of the Maytag Washing Machine Co., at Newton, brought Governor Nels Kraschel into conflict with the N.L.R.B. in July. The occasion of the strike was a reduction in the wages of the employees, who numbered about 1400. Kraschel, acting under a State law, named an arbitration board of three men, who went to Newton (July 11) and sought to settle the difficulty. Men organized by the C.I.O. had previously seized the manufacturing premises and refused to give them up unless the company should agree to arbitrate; an injunction had been issued, forbidding the strikers to trespass on the property. The N.L.R.B. instituted hearings in the case and carried them on without reference to Kraschel's efforts. The Governor ordered troops to the scene (July 19) and kept them there in spite of the company's protest. The troops kept the works closed awaiting the result of arbitration. This action was protested before the N.L.R.B., which sought to have the troops removed. The Governor invoked martial law to order the hearings of the Board in Iowa closed (July 30). On August 3 the strikers' organization voted to accept the cut in wages and return to work under certain stipulations. The rule of martial law ended about 10 days later. The issue as to rival powers, between the Governor and the Federal Board, was not at the time carried to a test in the courts.

The farmers of the State again raised an ample crop of corn, somewhat less than one-fifth of the total for the Nation. The adverse effect of current prices for corn, about 10 cents a bushel below those of the autumn before, was offset by the Federal offer to lend to farmers above the market

price on corn grown in cases that met with the requirements of the Federal agricultural regulations. An effort was made by Governor Philip F. LaFollette of Wisconsin in the spring to establish his newly organized National Progressive party in Iowa, but no widespread results of this effort were reported.

Elections. U.S. Senator Guy M. Gillette (Dem.) was re-elected (November 8) by a narrow margin, defeating L. J. Dickinson (Rep.); the vote (unofficial count) was 412,791 to 410,674. Gillette's election occurred in the face of a Republican sweep. Republicans were elected to seven of the State's nine seats in the House of Representatives; Democrats retained two seats and lost three to Republicans. George A. Wilson (Rep.) was elected Governor, defeating Governor Nels G. Kraschel. Republicans won a heavy majority in what had been an evenly divided lower house of the Legislature; they also elected a substantial majority in the State Senate.

Gillette's re-election was noteworthy not only as occurring in spite of the general Republican victory in the State but also and more particularly because he survived designation by the New Deal for political extinction at the State primary. The suggestion to drop Gillette came in the form of a statement (May 24) from Harry L. Hopkins, head of the WPA, advising Iowan Democrats to nominate, for Senator, Representative Otha D. Wearin, who had presented himself as a rival candidate. Gillette hastened from Washington (May 27) and promptly started in Iowa a campaign, till then apparently unnecessary, for renomination. He proclaimed (June 5) his refusal "to support, as a blindfolded legislator, every piece of legislation presented to the Congress by the bureaus and departments . . . for furthering their bureaucratic interest." He cited his support of a number of New Deal measures, along with a list of others that he had opposed. Governor Kraschel took Gillette's part, denouncing (May 25) Hopkins as having "violated his declared policy of keeping the WPA out of politics." The primary (June 6) resulted in a substantial plurality for Gillette.

Officers. The chief officers of the State, serving in 1938, were: Governor, N. G. Kraschel; Lieutenant-Governor, John K. Valentine; Secretary of State, Robert E. O'Brian; Auditor, C. W. Storms; Treasurer, Leo J. Wegman; Secretary of Agriculture, Thomas L. Curran; Attorney-General, John H. Mitchell.

Judiciary. Supreme Court: Justices, E. G. Albert, John W. Anderson, Maurice F. Donegan, W. H. Hamilton, John W. Kintzinger, Richard F. Mitchell, James M. Parsons, Leon W. Powers, Paul W. Richards.

IOWA, THE STATE UNIVERSITY OF. A coeducational State institution of higher learning in Iowa City, founded in 1847. The enrollment for 1937-38 was 10,249. For the autumn of 1938 the enrollment was 8167, including 1808 correspondence students not also registered in residence. The 1938 summer session registration totaled 4350, including 1561 correspondence students not also registered in residence. There were approximately 464 members on the faculty. The income for 1937-38 was \$5,129,256. The libraries contained 591,584 volumes. President, Eugene Allen Gilmore, A.B., LL.D.

IOWA STATE COLLEGE OF AGRICULTURE AND MECHANIC ARTS. A State institution for the higher education of men and women in Ames, Iowa, founded in 1868. The enrollment for the fall quarter of 1938 was 6029.

The registration for the first half of the 1938 summer session was 1506, and for the second half, 623. The faculty numbered 519 members. The endowment funds amounted to \$824,270 and the income for the year was \$4,280,200. The library contained approximately 268,000 volumes. President, Charles Edwin Friley, LL.D.

IRAN (PERSIA). A kingdom of southwest-ern Asia. Capital, Tehran (Teheran); sovereign in 1938, Shah Riza Khan Pahlevi, who was crowned Apr. 25, 1926.

Area and Population. With an area of about 628,000 square miles, Iran had a population estimated on Jan. 1, 1936, at 15,000,000. No census has been taken in modern times and the estimate is largely conjectural. Besides the dominant Iranians, there are large minority groups of Turks, Arabs, Kurds, Leks, Baluchis, and Gipsies. About 3,000,000 inhabitants are nomads. Estimated populations of the chief cities are: Tehran and district, 360,000; Tabriz, 219,000; Meshed, 139,000; Shiraz, 119,000; Isfahan, 100,000; Hamadan, 99,000; Resht, 89,000; Kermanshah, 70,000; Kazvin, 60,000; Kerman, 59,000; and Sultanabad, 55,000. The people are mainly Moslems of the Shiite sect.

Education. The number of Iranian schools increased from 612 with 55,000 pupils in 1921 to 4939 with 273,680 pupils in 1937. The bulk of the population, however, remains illiterate. A few foreign schools also were maintained by American and British Protestant groups, French Roman Catholics, Jews, and the Soviet Government. The Iranian Government forbade Iranian children to attend the foreign primary grades. About 900 Iranian youths were studying abroad in 1937, most of them on government scholarships.

Production. Agriculture and livestock raising support the bulk of the population although the oil fields are a leading source of government revenue. Production of the chief crops in 1934-35 was estimated as follows (in metric tons): Wheat, 1,930,700; barley, 761,100; rice, 526,600; tobacco, 22,800; dates, 126,452; raisins, 61,478. The 1936-37 cotton crop was 37,200 metric tons. Gum tragacanth and many fruits are produced. Livestock statistics for 1935 were: Sheep, 16,018,615; cows, 1,039,324; oxen, 1,257,433; goats, 6,821,457; horses, 189,030; mares, 165,498; donkeys, 1,134,548. Wool production in 1936 was estimated at 22,200 metric tons. The output of petroleum by the Iranian properties of the Anglo-Iranian Oil Company rose from 8,330,000 metric tons in 1936 to 10,449,000 in 1937 (see *History*).

Rug making by hand, formerly the chief manufacturing industry, has declined in recent years. Tabriz, Hamadan, Sultanabad, and Kerman are the principal rug-making centers. New industries are being developed, largely under government ownership or subsidization. Cotton textiles, beet sugar, cement, jute products, woollen yarn and cloth, matches and tobacco products are made in the larger cities. Petroleum refining is an important industry; in 1937 the Abadan refinery of the Anglo-Iranian Oil Company treated nearly 9,500,000 tons. Since 1935 the Soviet Union export agency has constructed for the Iranian Government a large food combine near Tehran, a flour mill, macaroni factory, numerous grain elevators, and several rice-cleaning and wool-washing establishments. There are fairly extensive deposits of iron, coal, copper, lead, manganese, nickel, borax, cobalt, iron oxide, and rock salt but they remain largely unexploited.

Foreign Trade. State-owned corporations handle the major share of both imports and exports.

For the economic year ended June 21, 1937, general imports were valued at 47,300,000 old U.S. gold dollars (\$36,500,000 in 1935-36) and general exports at \$95,000,000 (\$79,100,000 in 1935-36). Merchandise imports in the calendar year 1937 totaled 1,258,800,000 rials (1,508,760,000 in 1938) and exports 2,582,040,000 rials (2,460,000,000 in 1938). Petroleum accounted for nearly three-fourths of the value of all exports; next in value were carpets and rugs, and fruits. Cotton piece goods, machinery and tools, sugar, vehicles, and tea are the principal imports. Trade is mainly with the Soviet Union, the United Kingdom, United States, British India, Germany, and Japan.

Finance. Budget estimates for the fiscal years ending March 21, excluding royalties from the Anglo-Iranian Oil Company, are shown in the accompanying table. Closed accounts of the government were not published.

IRANIAN BUDGETS

Year	Ordinary budget		Supplementary expenditures
	Receipts (1,000 rials)	Expenditures (1,000 rials)	
1934-35	621,413	621,308	130,000
1935-36	751,123	750,828	178,835
1936-37	1,000,017	1,000,008	396,400
1937-38	1,250,010	1,248,032	320,000
1938-39	1,528,893	1,527,018	330,000

Royalties and taxes paid by the Anglo-Iranian Oil Co. totaled £2,580,206 in 1936 and increased by nearly £1,000,000 in 1937. The funded foreign debt on May 8, 1937, was £1,009,342. The unfunded foreign debt on Dec. 31, 1935, was about £2,000,000 and the internal floating debt was 6,661,428 rials. The government assumed control of foreign exchange transactions Mar. 1, 1936, fixing the buying rate at 80 rials to the pound sterling and the selling rate at 80.50 rials.

Transportation. The Trans-Iranian Railway from Bandar Shapur on the Persian Gulf to Bandar Shah on the Caspian Sea was completed on Aug. 26, 1938, the northern and southern sections meeting at Safid Cheshmeh, about 20 miles south of Tehran. The line has a length of 866 miles and cost about £30,000,000. This addition brought the total railway mileage to 981 miles. Construction of a 70-mile branch of the Trans-Iranian Railway from Semnan to Garmsar (Quishlaq) was begun Mar. 15, 1938, to transport iron ore from Semnan to a blast furnace under construction near Tehran. It was announced that the government was planning three important additional branch lines, connecting Tehran with Tabriz, Meshed, and Yezd. A contract for the improvement of the port works at Bandar Shahpur was let to a German firm late in 1937.

The mileage of Iranian roads and highways in 1937 was 12,278 and the number of automobiles 9585. On May 17, 1938, the Shah opened the Kandawan tunnel on the motor road from Tehran to the Caspian port of Now-Shahr. The 6177-foot tunnel was cut through the Elbruz Mountains at an altitude of 8858 feet in three years and cost about \$1,515,000. The number of vessels cleared from Iranian ports in 1935-36 was 6572.

Government. Executive power is exercised by the Shah, acting through a cabinet appointed by and responsible to him. There is a parliament (Medjliss) of 136 members, elected for two years, which gives legislative sanction to measures proposed by the Shah and his cabinet. Premier in 1938, Mahmoud Djam, appointed Dec. 4, 1935.

History. The Shah pushed ahead with his program of westernization in 1938. In addition to the

completion of the Trans-Iranian Railway and important highway projects (see *Transportation*), the government made further progress in the development of new industries. An order for a complete iron-smelting plant to cost 30,000,000 reichsmarks was placed in Germany. The plant, to be erected near Tehran, was to consist of two blast furnaces, each having a daily production capacity of 130 metric tons of pig iron, a coking plant, and open hearth steel plant, a rolling mill, power plants, and a foundry. The leading role played by German companies in the Iranian industrialization and public-works program and arrangements made by the Deutsche Lufthansa to open an air service from Baghdad to Kabul via Tehran were reported to have aroused Soviet anxiety. A contract for university buildings in Tehran and docks in the Shatt al Arab was granted in October to a subsidiary of the Co-operative Federation of Stockholm. The projects, costing about \$1,500,000, were to be paid for in Iranian produce which the Co-operative Federation was to market in Sweden and adjacent countries.

Lord Cadman, chairman of the Anglo-Iranian Oil Co., reported to the stockholders on June 20, 1938, that the new Gach Qaraghuli (Gach Saran) oil field had been brought into large production and promised to exceed in richness the two fields previously developed. Petroleum was also discovered in White Oil Springs (Naft-i-Safid) structure and its potentialities were being tested in 1938. It was estimated that these new discoveries would approximately double the oil reserves available to British defense forces and industries.

The 1937 boundary treaty with Iraq was ratified in 1938 by the Iraqi Parliament. See *IRAQ* under *History*. The Iranian Government again broke off diplomatic relations with France on Dec. 30, 1938, because newspaper references to the annual Paris cat show were considered as slurs against the Shah. The pronunciation of the words "shah" and "cat" is the same in French. The French Government immediately took steps to assure the Shah that no reference to him was intended (see 1937 *YEAR BOOK*, p. 349 for a similar incident in 1937).

IRAQ (IRAK). An Arab kingdom occupying the basin of the Tigris and Euphrates Rivers in Mesopotamia. Capital, Baghdad. Ruler in 1938, King Ghazi I, who succeeded to the throne Sept. 8, 1933.

Area and Population. With an area of 116,600 square miles, Iraq had a population estimated on Jan. 1, 1937, at 3,600,000 (3,561,000 at the census of October, 1934). Estimates for 1932 showed 2,642,366 Moslems (1,029,833 Sunnis and 1,612,533 Shias), 110,885 Christians, and 72,783 Jews. The chief cities, with their estimated populations, are: Baghdad, 300,000; Mosul, 90,000; Basra, the chief seaport, 50,000. The latest available educational statistics show 11 kindergartens, with 888 pupils, 616 State primary schools, with 73,832 pupils; 79 private primary schools, with 20,728 pupils; 34 intermediate schools, with 6613 pupils; 8 secondary schools, with 1141 students; various special schools and colleges of medicine, law, and military and teachers' training.

Production. Agriculture, stock raising, and petroleum mining are the chief occupations and dates, wool, and petroleum are the principal exports. Dates exported in the fiscal year 1935-36 totaled 160,572 tons, valued at 930,086 dinars (1 dinar equals 1 pound sterling). Petroleum production rose from 1,031,000 metric tons in 1934, when the pipeline from the Kirkuk oil fields to the Medi-

terranean at Haifa, Palestine, and Tripoli, Syria, was opened, to 4,258,000 metric tons in 1937 and about 4,372,000 tons in 1938. The 1936 wool clip was about 7200 metric tons. Yields of other crops in 1937 were (in metric tons): Wheat, 580,000; barley, 570,000; rice, 150,000; tobacco (1936), 5500; cotton-seed, 10,600; cotton, 4500.

Foreign Trade. Merchandise imports in the calendar year 1937 were valued at 9,565,970 dinars (7,177,110 in 1936) and merchandise exports, excluding petroleum, at 5,568,734 dinars (3,483,649 in 1936). Crude oil exported via the Kirkuk-Haifa-Tripoli pipelines in 1937 totaled about 4,100,000 metric tons (3,961,579 in 1936). The 1937 imports from the United Kingdom were valued at 2,825,787 dinars and exports to the United Kingdom at 1,547,508 dinars. The budget for 1938-39 estimated ordinary receipts at 5,665,490 dinars and expenditures at 5,469,813 dinars.

Finance. Budget operations for the fiscal year ended Mar. 31, 1938, showed a deficit of 310,379 dinars. Receipts totaled 6,854,461 dinars (excluding petroleum royalties but including loan receipts of 730,731 dinars) and expenditures were 7,164,843 dinars (including capital works of 2,123,389 dinars). The deficit in the state treasury on Mar. 31, 1938, was 167,050 dinars. There was no public debt other than the £1,000,000 public-works loan floated in London on July 28, 1937.

Transportation. On Mar. 31, 1937, Iraq had 752 miles of railway lines, excluding 176 miles of sidings. The government line from Baiji, Iraq, to Tel Kotchek, Syria, which was nearly completed during 1938, gave the Iraqi railway network direct connections with Europe via Syria and Turkey. Highways extended 3411 miles in 1937 and the number of automobiles was 4771. The British, French, and Netherland airlines between Europe and the Far East all pass through Iraq. On Mar. 25, 1938, the new airport at Basra, considered the best between London and Singapore, was officially opened by King Ghazi. At that time 18 airliners were calling at Basra weekly in the regular services of the three major air systems. Work proceeded during the year on two steel bridges across the Tigris River at Baghdad.

Government. Iraq was established as a semi-independent kingdom by the treaty of Oct. 10, 1922, with Great Britain, which at the same time assumed a mandate for Iraq on behalf of the League of Nations. On June 30, 1930, a treaty of alliance was concluded with Great Britain, under the terms of which the mandate was abolished and Iraq obtained full independence. On Oct. 3, 1932, it was admitted to membership in the League of Nations. The Constitution of Mar. 21, 1924, provided for a limited monarchy, with the King exercising executive powers through a cabinet responsible to Parliament. Parliament consists of a Lower House of 108 elected deputies and a Senate of 20 members, nominated by the King.

History. The non-party government established by Senator Jamil Midfai on Aug. 17, 1937, following the assassination of the dictator, Gen. Al Fariq Bakr Sidky Pasha (see 1937 *YEAR BOOK*, p. 350), ruled without arousing serious opposition on internal issues during 1938. Work was pushed on the existing public-works program and a new capital works plan involving the expenditure of £8,000,000 during the ensuing five years was drawn up by the Minister of Finance. Legislation was passed establishing government regulation of both foreign and local banks for the first time. A further increase in petroleum output was insured with the

start of production in the Khanaqin region. Further exploration work was continued by the British Oil Development Co. on the west bank of the Tigris.

The Basrah Petroleum Company, representing British, French, and American interests, obtained an oil concession on December 1. On December 25 a new Cabinet was formed by Gen. Nuri es-Said. One of its first acts was to authorize the return of various persons exiled by the preceding ministries.

The Iraqi boundary treaty with Iran, signed in Tehran in 1937, was ratified by the Iraqi Chamber of Deputies, 81 to 10, on Mar. 6, 1938, despite strikes and violent protest demonstrations in Baghdad by student nationalists. Seventeen Deputies abstained from voting. The treaty made Basra a joint harbor for Iran and Iraq and fixed the frontier in the center of the channel of the Shatt al Arab, the river formed by the junction of the Tigris and Euphrates.

Despite the disturbing influence upon the Iraqi Moslems of the Arab-Jewish civil war in Palestine (q.v.), relations between the Iraq and British Governments remained cordial. Prime Minister Chamberlain in his speech of Mar. 24, 1938, before the House of Commons, reaffirmed the British pledge to defend Iraq in the event of aggression by a third power. While continuing its diplomatic and moral support of the Arab cause in Palestine, the Iraq Government showed increasing concern lest the Palestine conflict spread to neighboring countries. On July 23 it advanced a new proposal for settlement of the Palestine controversy on behalf of itself and the Governments of Saudi Arabia and Yemen. Iraq officials in both Baghdad and London continued negotiations on the Palestine issue with British representatives during the remainder of the year (see PALESTINE under *History*). Meanwhile, Moslem religious leaders in Baghdad had on August 9 proclaimed a Jihad, or holy war, on behalf of the Palestine Arabs. The call was reported to have led thousands of Iraqi youths to enlist for armed service in Palestine.

An unconditional most-favored-nation treaty of friendship, commerce, and navigation between Iraq and the United States was signed at Baghdad, Dec. 3, 1938.

IRELAND (EIRE). A self-governing unit of the British Commonwealth of Nations comprising 26 counties of southern Ireland. Capital, Dublin. Under the Anglo-Irish treaty of Dec. 6, 1921, the country was officially designated the Irish Free State. By virtue of the new Irish Constitution of 1937, the name was officially changed to "Ireland" in the English language and to "Eire" in the Irish language, effective Dec. 29, 1937. As used in the official sense in this article, Ireland excludes the six counties comprising Northern Ireland (q.v.).

Area and Population. The area is 26,601 square miles and the population was estimated at 2,937,000 on June 30, 1938, as compared with 2,965,854 at the 1936 census. The decline in population was attributed mainly to emigration to the United Kingdom. Living births in 1937 numbered 56,564 (19.2 per 1000); deaths, 45,115 (15.3 per 1000); marriages, 14,896 (5.1 per 1000). Overseas emigration declined from 20,802 in 1929 to 1228 in 1937. In 1936, 1523 returned to Ireland from overseas. Populations of the chief cities in 1936 were: Dublin (Baile Atha Cliath) with suburbs, 467,691; Cork, 80,713; Limerick, 41,395; Waterford, 27,962.

Religion and Education. School attendance is compulsory and there is practically no illiteracy. School attendance in 1936-37 was: Elementary,

481,599; secondary (1937-38), 36,092; university, 5185. The institutions of higher education are Trinity College at Dublin and the University of Ireland, with constituent colleges at Dublin, Cork, and Galway. According to the 1926 religious census, there were 2,751,269 Roman Catholics, 164,215 Episcopalians, 32,425 Presbyterians, 10,663 Methodists, and 13,416 others.

Production. Agriculture, stock raising, manufacturing, and fishing are the principal occupations. There were 3,679,000 acres of crops in 1937, 7,950,000 acres of grass and grazing, and 252,000 acres of forests. The value of agricultural production in 1936-37 was £47,318,000. Yields of the chief crops in 1937 were: Wheat, 6,879,000 bu.; rye, 54,000 bu.; barley, 5,403,000 bu.; oats, 39,494,000 bu.; potatoes, 99,440,000 bu.; turnips, 2,736,000 long tons; sugar beets, 583,000 long tons; beet sugar (1937-38), 90,000 long tons; mangels, 1,661,000 long tons; hay, 4,777,000 long tons; flax, 1,859,000 lb. In 1937 there were 3,955,000 cattle, 2,999,000 sheep, 934,000 swine, 429,000 horses, 160,000 mules and asses. The sea fisheries yielded 19,724,208 lb. of fish, valued at £124,372,000 in 1937; value of shellfish, £24,469,000. The net value of industrial products in 1936 was £33,790,776. Production of electric power in the year ending Mar. 31, 1937, was 218,758,000 kilowatt-hours; malt liquor, 1,724,000 bbl.; distilled spirits, 1,267,000 proof gal.

Foreign Trade. General merchandise imports in 1937 were valued at \$218,161,000 (\$198,402,000 in 1936) and exports of Irish products were valued at \$109,961,000 (\$109,207,000 in 1936). The leading 1937 imports in order of value were wheat, coal, iron and steel, corn, tea, lumber and timber, and paper and cardboard. The principal 1937 exports were: Cattle, £37,077,000; porter, beer, and ale, £15,603,000; bacon and ham, \$8,424,000; butter, \$7,858,000; horses, \$7,113,000. In 1937 the United Kingdom supplied 48.7 per cent of the general imports (51.9 in 1936); the United States, 6.6 per cent; Germany, 3.2 per cent. Of the exports, the United Kingdom took 81.2 per cent in 1937 (81.4 in 1936); Northern Ireland, 9.4 per cent; Germany, 3.7 per cent.

Finance. For the fiscal year ending Mar. 31, 1938, actual revenues were £31,623,519 and expenditures £33,346,411, leaving £1,722,892 to be raised by borrowing. Budget estimates for 1938-39 balanced at £37,525,000; the receipts included the sum of £5,550,000 "to be found by borrowing or otherwise." The funded and unfunded public debt was placed at £37,184,996 on Mar. 31, 1938. The Irish pound is convertible into the pound sterling. The average exchange value was \$4.9440 in 1937 and \$4.8894 in 1938.

Transportation. The Irish railway system, including extensions into Northern Ireland, had 2880 miles of line and siding in 1937. During that year it carried 21,168,466 passengers and 3,532,840 tons of freight. Motor highways extended 5199 miles on Dec. 31, 1937. Airlines linked Dublin with the Isle of Man, Bristol, Liverpool, and London. A newly developed airport at Foynes on the River Shannon was to become the eastern base of a transatlantic air-service scheduled for 1939. Navigable rivers and canals extended 560 miles. During 1937, 12,481 vessels of 9,547,000 net registered tons entered Ireland's ports in the foreign trade.

Government. The Constitution proclaimed Dec. 29, 1937, changed the name of the Irish Free State to Ireland (Eire in Gaelic) and declared Ireland a sovereign, independent, democratic state. It provided for a Parliament (Oireachtas) composed of

a President elected for seven years by direct suffrage, a House of Representatives (Dail Eireann) of 138 members elected by adult suffrage, and a Senate (Seanad Eireann) of 60 members of whom 11 are appointed by the Prime Minister, 6 elected by the universities, and the remainder elected from five panels of candidates chosen to represent the following vocational groups: (1) National language and culture, literature, art, education, etc., (2) agriculture and allied interests and fisheries, (3) labor, organized and unorganized, (4) industry and commerce, and (5) public administration and social services.

Executive power is vested in the government (cabinet) responsible to the Dail Eireann and headed by a Prime Minister appointed by the President on nomination of the Dail Eireann. The President also appoints the other members of the cabinet on nomination of the Prime Minister and with the previous approval of the Dail. He summons and dissolves the Dail Eireann on the advice of the Prime Minister, signs and promulgates laws, appoints judges, and exercises supreme command of the defense forces in accordance with law. The President is empowered to refer certain bills to the Supreme Court to determine their constitutionality or, on petition of a proportion of the members of Parliament, submit the bills to popular referendum.

The Constitution guarantees free primary education, free speech and assembly, the right to form associations and unions, and freedom of conscience and religion subject to public order and morality. It recognizes the special position of the Roman Catholic Church, but guarantees other religions against discriminatory disability, forbids divorce, and authorizes the state to censor the press and other organs of public opinion. For text of Constitution, see *International Conciliation*, October, 1938. For constitutional developments in 1938, see *History*.

HISTORY

The Anglo-Irish Accord. The negotiations for a settlement of long-standing Anglo-Irish issues, which were inaugurated in 1937 by a series of discussions between Prime Minister Eamon de Valera and the British Secretary of State for Dominions, Malcolm MacDonald (see 1937 YEAR BOOK, p. 353), were brought to a successful conclusion in 1938 on all except one issue—that of partition. Accompanied by several cabinet ministers, de Valera arrived in London on Jan. 15, 1938, for the opening of formal negotiations. He returned to Dublin on January 19 after four days of discussion, leaving the negotiations to be carried on by technical experts, but visited the British capital with his colleagues for further discussions late in February and again in March and April.

These interchanges paved the way for the signing on April 25 of three agreements that put an entirely new face upon Anglo-Irish relations. The first of these provided for the transfer to the Government of Ireland of British Admiralty property and rights at Berehaven, Ireland, and the harbor defenses at Berehaven, Cobh, and Lough Swilly. The agreement replaced provisions of the treaty of 1921 under which the Irish Free State Government gave the British Navy harbor and other facilities for the naval defense of Ireland.

Under the second agreement the Irish Government agreed to pay Britain £10,000,000 in final settlement of British claims for land annuities with a capitalized value of more than £100,000,000, upon which the de Valera Government had suspended

payment in 1932. The duties on Irish products imposed by Great Britain in retaliation for the withholding of the land annuities and the counter-duties subsequently imposed by the Irish Government on imports from Britain were abolished.

The third treaty was a comprehensive trade agreement under which Britain agreed to admit Irish goods free of customs duties other than revenue duties, with the exception of agricultural products, on which quantitative limits were fixed. The Government of Ireland in its turn bound on its free list United Kingdom goods then entering free of duty, agreed to remove or reduce customs duties on a list of other products, and undertook to secure a review by the Prices Commission of Irish protective tariffs with a view to their reduction to permit British producers and manufacturers opportunity for reasonable competition in the Irish market. Ireland agreed to preserve the existing preferences allowed British goods and to maintain the preference in any adjustment of tariff rates. It undertook to abolish license control of coal imports, to permit the continued entrance of British coal free of duty, and to impose a duty of not less than three shillings a ton on foreign coal. A provision designed to promote the orderly marketing of Irish agricultural and fishery products in the United Kingdom was included in the accord.

These agreements were ratified by the Dail Eireann on April 29 with but one dissenting vote. The British House of Commons endorsed them on May 5 and a bill carrying out their provisions received the King's assent on May 17. At midnight on May 18 the British and Irish retaliatory duties imposed in 1932 were removed, bringing to an end the long trade war resulting from the land annuities controversy. The £10,000,000 due to Britain under the annuities settlement was raised by the Irish Government on June 25 by means of a 20-year 3½ per cent loan issued at par. It was paid in final settlement of all financial claims between the two governments, except for the annual payment of £250,000 annually by Ireland as compensation for damage to British property under the 1925 agreement. In accordance with arrangements made on May 29, the fortifications at Spike Island guarding Cobh (Queenstown) harbor were turned over to Irish troops by the British garrison on July 11 in a ceremony marked by cordiality on both sides. The Union Jack was hauled down for the first time since the British occupied the island in 1790. Within the next few months the British garrisons were withdrawn from Berehaven and Lough Swilly.

In the debate on the agreements in the British House of Commons on May 5, Prime Minister Chamberlain said that he had made large concessions "in order to gain Ireland's friendship." The British withdrawal from Ireland's key harbor defenses was carried out after Prime Minister de Valera had given his pledge that no foreign power would be permitted to use Irish soil as a base of attack upon Great Britain and that Ireland would assume the full burden of her self defense. The British were also eager to insure Ireland's friendship in order that they might obtain food supplies from Ireland if cut off from overseas sources of supply by a European war.

In accordance with de Valera's military engagements, Ireland during the European military crisis of September over Czecho-Slovakia strengthened the harbor defenses at Cork with huge guns brought from England and installed with the aid of British engineers and artillerymen. Anti-aircraft guns were

placed to protect the transatlantic air base at Foynes and the principal electric plants throughout the country. At the same time a drive for new army recruits was started.

The Partition Issue. With the entry into force of the Anglo-Irish agreements, the partition issue remained the only serious source of dissension between the two governments. Since assuming power in 1931, Prime Minister de Valera had made the eventual subordination of Northern Ireland to the Dublin Government an essential condition of Anglo-Irish reconciliation. He brought forward the issue during his negotiations in London with Prime Minister Chamberlain and other British officials, but the latter took the position that no settlement of the partition question was possible except with the consent of both Ireland and Northern Ireland.

On January 24, de Valera publicly proposed a settlement along the lines suggested by David Lloyd George in 1921, leaving to the Belfast Parliament "its present area of jurisdiction and present powers as a local parliament, giving to all Ireland a parliament (at Dublin) constituted on the basis of proportional representation, the reserved powers as at present retained by the British Imperial Parliament." But this and all other proposals for Irish unity at the expense of Ulster's independence and unity with Britain were rejected by the Unionist majority in Northern Ireland, where the Craigavon Government's stand was reinforced by new parliamentary elections. See IRELAND, NORTHERN, under *History*.

Britain's intervention in the Czecho-Slovak crisis in September afforded de Valera an opportunity to demand of the British Government that a plebiscite be held in the various counties of Northern Ireland to determine whether they wished to remain separated from the South. The Prime Minister's adherents in both Northern and Southern Ireland contended that such a plebiscite would bring four out of the six counties of Northern Ireland under Dublin's control.

Agitation over this issue developed in intensity toward the close of the year. On November 23, de Valera declared before a Fianna Fail (government party) convention at Dublin that Britain was interfering in the affairs of Ireland by keeping the North and South apart and that if Britain "kept out" natural laws would promote Irish unity. The Prime Minister disclaimed any desire to settle the issue by force, but toward the end of November a series of terroristic attacks took place upon British customs huts along the Northern Ireland border. Many of them were blown up at night. Evidence connecting these outrages with the long quiescent Irish Republican Army was produced when two members of that organization were killed by a blast of explosives secreted in a Donegal County cottage.

Internal Politics. Meanwhile, the settlements reached with Britain on other issues had served to consolidate Prime Minister de Valera's political power in Ireland. In the July, 1937, elections to the Dail Eireann, the Prime Minister's Fianna Fail party captured 68 seats, former President William T. Cosgrave's United Ireland party 48, the Labor party 13, and other groups 8 seats out of the 138 in the Dail. The Labor party thus held the balance of power between the government and the opposition. Taking advantage of his newly won popularity, de Valera called a new general election for June 17 following a minor defeat in the Dail. The final returns gave him an unexpectedly large majority of 77 seats as against 45 for the United Ire-

land party, 9 for Labor, and 7 for Independent candidates. The new Dail Eireann convened on June 30 and re-elected de Valera Prime Minister by a vote of 75 to 45, with Labor members abstaining.

Elections to the vocational Senate under the new Constitution were held on March 29. Although the Prime Minister had invited the respective vocational groups to submit candidates, most of these nominees were badly defeated by candidates of the regular political parties. The result was that of the 49 Senators elected, 26 were affiliated with the Fianna Fail party and 23 with the United Ireland (opposition) party. Prime Minister de Valera completed the formation of the upper chamber on August 22 by nominating 11 additional Senators from among his adherents, thus giving him a substantial majority in the Senate as well as in the Dail.

Preparations for the election of the first President of Ireland under the new Constitution were ended when all parties agreed to the nomination of Dr. Douglas Hyde, a 78-year-old Protestant, who for many years had led the movement for revival of the Gaelic tongue as Ireland's national language. Dr. Hyde was declared elected on May 4 at a brief ceremony. On June 1 he made his constitutional declaration of office before members of the Dail Eireann, the Senate, and the judiciary, a ceremony marked by the extension of amnesty to the only remaining political prisoners in Ireland—six Irish Republicans. Following de Valera's election as Prime Minister by the Dail on June 30, the Dail was adjourned for one hour while the Prime Minister went to the presidential residence in Phoenix Park to have his election constitutionally confirmed by Dr. Hyde.

IRELAND, NORTHERN. A constituent part of the United Kingdom, comprising six counties and two parliamentary boroughs in northern Ireland. Capital, Belfast.

Area and Population. The area is 5237 square miles and the population at the census of Feb. 28, 1937, was 1,279,753 (1,285,000 estimated in June, 1938). Living births in 1937 numbered 25,416 (19.8 per 1000); deaths, 19,284 (15.1 per 1000); marriages, 8501 (6.6 per 1000). The 1937 census population of Belfast was 438,112; of Londonderry, 47,804. The 1926 religious census showed 420,428 Roman Catholics, 393,374 Presbyterians, 338,724 Protestant Episcopalians, 49,554 Methodists, and 54,481 professing other faiths. Public elementary schools numbered 1727 with 194,347 pupils on Dec. 31, 1937; preparatory, intermediate, and secondary schools, 73, with 13,683 pupils in 1937-38; centers of technical instruction, 125, with 22,368 students in 1936-37. Queen's University at Belfast had 1592 students in 1937-38.

Production. Agriculture and manufacturing are the chief occupations. Production of the chief crops in 1937 was (in tons): Oats, 242,758; potatoes, 867,979; turnips, 482,307; flax, 4187; hay, 833,396. Livestock in 1937 included 730,109 cattle, 570,058 swine, 828,851 sheep, 35,522 goats, 80,951 horses, 7444 asses, and 10,182,267 poultry. Herring fishing is an important summer industry. Mines and quarries employ about 2000 persons. Belfast is a leading manufacturing center. In 1938 there were about 875,000 linen spindles and approximately 70,000 persons were employed in the industry. The Belfast shipyards can build more than 200,000 tons of shipping a year; they employ about 15,000 persons. Ropes, twine, tobacco products, biscuits, hosiery, underwear, soap, distillery products, pre-

serves, embroidery, canned goods, textile machinery, and furniture are other leading manufactures. Trade statistics are included under those of Great Britain (q.v.).

Finance. Budget estimates for the fiscal year ended Mar. 31, 1939, placed revenues at £15,922,000 and expenditures at £14,662,000, leaving a provisional surplus of £1,260,000, of which £1,000,000 was to be allocated to the British Government as a contribution toward the cost of Imperial services. Actual revenue for 1937-38 was £16,082,000 (£14,222,000 in 1936-37) and expenditure was £15,933,000 (£14,167,000 in 1936-37).

Transportation. In 1937 there were 754 miles of railway line, 12,996 miles of roads, 180 miles of canals besides various navigable rivers and lakes, and air and shipping lines linking Belfast and Londonderry with the principal cities of Great Britain. Belfast, Londonderry, Newry, Larne, and Coleraine are the principal seaports.

Government. Although an integral part of the United Kingdom and represented by 13 members in the British House of Commons, Northern Ireland exercises local autonomy by means of a Parliament and a responsible cabinet. Parliament consists of a Senate of 24 elected and 2 ex officio members and a House of Commons of 52 elected members. Governor in 1938, the Duke of Abercorn, reappointed for a third six-year term in July, 1934. Prime Minister, Viscount Craigavon of Stormont, who had held office continuously since the Northern Ireland Parliament met for the first time in June, 1921.

History. The determination of the Protestant Unionist majority in Northern Ireland to resist demands for the union of Ulster with southern Ireland under the jurisdiction of the Parliament at Dublin was strengthened by developments in 1938. The demands for termination of the partition of Ireland came from both the Catholic Nationalist minority in Northern Ireland and from the de Valera Government in the south (see 1937 YEAR BOOK, p. 354).

When Prime Minister de Valera raised the partition question in his negotiations with the British Government early in 1938 (see IRELAND under History), Prime Minister Craigavon on January 13 dissolved the Northern Ireland Parliament and called a general election for February 9 "to allow the people to pronounce upon the (partition) issue for themselves." By making de Valera's "impudent challenge" the major issue, Craigavon and his party overwhelmed both the dissident Protestant parties (Independent Unionists and Labor), who fought the election on social and economic issues such as unemployment, old-age pensions, and financial relations with Great Britain, and the Nationalists. Sporadic disorders marked the campaign. The final returns gave the Unionists 39 seats in Parliament as against 13 held by all opposition groups. The standing of the parties in the new Parliament, with the previous standing in parentheses, was: Unionists, 39 (37); Nationalists, 8 (9); Independent Unionists, 2 (2); Labor, 1 (2); other parties, 2 (2).

Lord Craigavon declared that the election settled "definitely and finally" that Northern Ireland would not exchange its unity with Great Britain for unity with the rest of Ireland. Prime Minister de Valera replied that "union will be the first item on the agenda in every conference between Eire (Ireland) and Great Britain until that item has been wiped off by the restoration of Ireland's national unity."

During the course of the Anglo-Irish negotia-

tions, Lord Craigavon conferred with Prime Minister Chamberlain in London in the middle of March and secured economic and financial concessions for Northern Ireland, which he announced on April 26. These concessions included a larger share of the British rearmament program to relieve Northern Ireland unemployment, consideration for Ulster's manufactures in tariff readjustments between Britain and Ireland, permission to buy British coal at the same price offered Ireland, non-discrimination between British and Northern Ireland farmers in agricultural subsidies, and an equitable division of the costs of social services in Northern Ireland between the Ulster and British governments. On the other hand the removal of British duties on exports from Southern Ireland adversely affected Ulster cattle raisers and exporters.

The agitation against partition was intensified after the Anglo-Irish settlement of other outstanding issues. The anniversary of the Battle of the Boyne brought the usual Catholic-Protestant clashes in Ulster. There were repeated terroristic bombings of Ulster customs huts and other buildings. On July 25 a woman was sentenced to a year's imprisonment in Belfast for possessing "Irish Republican Army documents" showing the strength and disposition of Belfast police units and arms storage places. The European crisis of September over Czecho-Slovakia, which led the Northern Ireland Government hurriedly to order 500,000 gas masks in Britain, was followed by Nationalist demands for self-determination for the Catholic minority in Ulster. This demand, repeated on October 13 in the Northern Ireland Parliament by a Nationalist member, was bluntly rejected by Lord Craigavon.

In an interview published in a London newspaper October 23, the Ulster Prime Minister asserted that any attempt to carry into effect de Valera's proposal for an all-Ireland Parliament under which Ulster would enjoy autonomy in local affairs would lead to civil war. He declared that Ulster placed no faith whatever in de Valera's promises and guarantees and that under no circumstances would it consider union with the rest of Ireland. The British Government gave assurances during the year that it would stand upon its previous position that any settlement of the partition issue must be reached only through the voluntary consent of the parties involved.

IRISH FREE STATE. See IRELAND (EIRE).

IRON AND STEEL. The world production of steel ingots and castings in 1938, according to the annual review of the publication *Steel*, was 107,523,000 gross tons, against 133,616,000 in 1937, a decrease of 19.5 per cent. For pig iron and ferroalloys, the estimated output for 1938 was 80,802,000 gross tons, compared with 102,046,000 in 1937, a decrease of 20.8 per cent. Production of both steel and pig iron was lower than in 1936, but higher than in any intervening year between 1936 and 1929. The decline in American production in relation to that of any other country is the largest of all. For steel it amounts to 43.5 per cent in comparison with the 1937 output; for pig iron 47.5 per cent. As a result, the share of the United States in world steel production which was 38.6 per cent in 1937, dropped in 1938 to 27.1; as regards pig iron, the United States produced 24.2 per cent of the world's total, against 35.4 in 1937. In the output of pig iron by countries, United States is still first, followed by Germany, Russia, Great Britain, France, Belgium, and Japan. The world production of pig iron, ingots, and castings, in

thousands of gross tons as reported in the annual review of *Iron Age*, is shown in the accompanying table.

WORLD IRON AND STEEL PRODUCTION
[Thousands of gross tons]

	Pig-iron *		Ingots & castings	
	1938	1937	1938	1937
United States	19,341	37,127	27,996	50,569
Germany ^b	18,200	16,026	22,600	20,161
U.S.S.R. (Russia) ..	14,845	14,231	18,405	17,497
United Kingdom ...	6,700	8,497	10,420	12,964
France ^c	5,650	7,792	5,780	7,779
Belgium	2,330	3,782	2,210	3,808
Japan ^d	3,100	2,900	5,860	5,719
Luxemburg	1,415	2,473	1,400	2,471
Czecho-Slovakia	1,200	1,649	1,750	2,281
World total ^f	79,344	101,188	105,596	133,298

* Highest yearly production. ^b Includes Saar district and Austria. ^c Includes Alsace-Lorraine. ^d Includes Korea and Manchuria. ^e Includes charcoal iron and ferroalloys. ^f Includes all countries.

Iron and steel exports, exclusive of scrap, in 1938 declined sharply from the 1937 figures according to *Iron Age*. Exports of pig iron and steel (ingots, semi-finished and finished) in 1938 are estimated at 2,175,000 gross tons, a drop of 38 per cent from 1937, which amounted to 3,475,257. Exports of scrap to Japan last year were about 1,258,000 tons, and in 1937, 1,904,768. The second largest buyer of American scrap was the United Kingdom of approximately 469,712 tons compared to 845,216 in 1937. Pig iron imports fell to 35,000 tons from 95,908 in 1937.

The total number of Bessemer, open hearth, electric furnace, and crucible units in the United States, operated by 74 different companies is 1186, and the total annual capacity as reported by the American Iron and Steel Institute on July 1, 1938, was 73,047,892 tons of steel ingots and steel for castings. The production of steel ingots in January, 1938, was only 29.15 per cent of capacity, but rose in March to 33.85, then declined in June to 28.46, and from this rose to 62.05 for November, followed in December to a decline of about 50.

Reflecting the relative stability of demand for steel from industries producing consumers' goods, light steel products (sheets, strip, wire, tin plate, etc.) accounted in 1938 for approximately 45 per cent of the total output, as against 43 in 1937. Output of steel products used chiefly in construction, such as structural shapes, plates, concrete reinforcing bars, nails, etc. for a nine-month period amounted to 21 per cent of the 1938 total, as compared to 19 for 1937. Purchases of steel by railroads in 1938 as indicated by the output of rails and fastenings, car wheels, and axles was relatively lower, being 4.5 per cent for 1938, and 6 per cent for 1937. Although the tonnage of steel consumed by both the farming and canning industries in the first nine months of 1938 was under 1937, both industries consumed a larger share of total output in 1938. Production of barbed wire, fencing, bale ties, and fence posts in the first nine months of 1938 accounted for a larger share of total production, and represented 2 per cent of total output as against 1 per cent in the same period of 1937. See BUSINESS REVIEW.

While the above paragraphs give statistics on the production of iron and steel in 1938, attention is called to the fact that during this year iron and steel products have been employed in an ever-increasing number of articles not only for household purposes, but also in the manufacturing of machinery and the building of engineering structures. Gray iron castings as now commonly made have

improved properties over those that a few years ago were made with difficulty by only a few foundries. Stainless steels have been further employed for both ornamental and utilitarian purposes, while new low-alloy steels are found to be particularly desirable for railway passenger and freight cars, also for trucks where strength and lightness are wanted.

The increased variety of uses for iron and steel may be traced to the modern foundries and mills capable of producing better products, that have been built by many corporations. In 1938, there were completed 11 open-hearth furnaces with annual capacity of 931,300 tons, 2 blast furnaces with annual capacity of 690,000 tons, 255 by-product ovens with an estimated annual coking capacity of 1,538,300 tons, and 50 rolling mills. Perhaps the outstanding plant put in operation was the Irvin Works, near Pittsburgh, of the Carnegie-Illinois Steel Co. This plant consists of three divisions, viz., an 80-inch continuous hot mill for sheet and strip, a cold reduced sheet and strip mill, and a cold reduced tin plate mill. It covers 653 acres; the group of mill buildings is 4275 ft. long by 1229 ft. wide.

IRON ORE. The output of iron ore in the United States in 1938 is estimated by the Bureau of Mines, Department of the Interior, at 28,286,000 gross tons, a decrease of 61 per cent from the quantity mined in 1937. The ore shipped from mines in 1938 is estimated at 26,271,000 gross tons valued at \$73,196,000, a decrease of 64 per cent in quantity and 65 per cent in total value compared with 1937. The above figures do not include ore that contained 5 per cent or more of manganese.

Exports of iron ore, as reported by the Bureau of Foreign and Domestic Commerce, for 1938, were 591,524 tons valued at \$1,954,287, compared with 1,264,102 tons valued at \$4,039,248 for 1937. The imports of iron ore for 1938, were 2,122,516 tons valued at \$5,288,366, compared with 2,442,069 tons valued at \$5,841,637 for 1937. Most of the 1938 exports went to Canada, while about three-fourths of the imports came from Chile.

IRRIGATION. See SOILS.

IRWIN, MAY (née ADA CAMPBELL). An American comedienne, best known in farce comedy, died in New York, Oct. 22, 1938. Born in Whitby, Ont., Canada, June 27, 1862, she attended Whitby High School, and made her stage debut at the Adelphi Theatre, Buffalo, N. Y., in February, 1876, with her sister Flora. They appeared later in Rochester, and in 1877 joined Tony Pastor's Company in New York.

May Irwin remained with Pastor until 1883 and appeared at the Metropolitan Theater and at Pastor's Fourteenth Street Theater, and was seen in *The Pie Rats of Penn Yarn* (1881) and as Lady Angela in *Patience* (1883). Discovered there by Augustin Daly in 1883, she joined his Company and appeared with many famous stars and portrayed roles in *The Recruiting Officer*, *A Night Off*, *Nancy & Co.*, *A Woman's Won't*, *The Magistrate*, and *After Business Hours*. While with Daly she made her London debut at Toole's Theatre, Aug. 1, 1884, in *Dollars and Sense*.

During 1887-88 she appeared in vaudeville and then joined Charles Frohman's management, appearing in *A Straight Tip* (1892-93) with John T. Powers, *His Wedding Day* (1893), and *The Poet and the Puppets* (1893). Under her own management from 1894 to 1908, she starred in *The Widow Jones* (1895); *Courted in Court* (1896); *The Swell Miss Fitzwell* (1897); *Kate Kip, Buyer* (1898); *Sister Mary* (1899); *Madge*

Smith, Attorney (1900); Mrs. Black Is Back (1904); Mrs. Wilson (1906); Mrs. Peckham's Carouse (1907), and *The Mollusc* (1908).

Subsequently, Miss Irwin appeared in *Mrs. Jim* in Detroit (1910), which was brought to New York in the same year, but retitled *Getting a Polish*. She toured in *She Knows Better Now* (1911), and in 1913 opened in *A Widow by Proxy*. Returning to vaudeville, she toured in *She Just Wouldn't* (1914), and in 1915 appeared in *No. 33 Washington Square*, which she took on tour in 1916-17. In 1915 she was invited by President Wilson to give a performance of this play in Washington and after an interview with the President he jokingly suggested that she be given the portfolio of "Secretary of Laughter" in his unofficial cabinet.

In 1919-20 she toured in *On the Hiring Line*, and in 1922 appeared in New York in *The '49ers*. Thereafter she retired from the stage, but in 1925 appeared in vaudeville at the Palace Theater, New York.

Whether she sang popular songs in Negro dialect in pantomime, or played a straight character part, she was able to arouse her audience to laughter, and her manner of "putting over" a song brought success to such numbers as "Mr. Johnson, Turn Me Loose," "I Ain't Gonna Work No More," "When You Ain't Got No Money You Needn't Come Around," the "Frog Song," "The Bully" from *Widow Jones*, and "After the Ball." In 1896 the kiss scene from the *Widow Jones* was filmed by Thomas A. Edison—the first celluloid close-up of a kiss.

ISOTOPES. See CHEMISTRY.

ITALIAN EAST AFRICA. An Italian colony in East Africa established by the decree of June 1, 1936, which merged the colonies of Eritrea and Italian Somaliland with the newly conquered territory of Ethiopia into a single administrative unit (see 1936 YEAR BOOK under ERITREA, ETHIOPIA, and SOMALILAND, ITALIAN). Capital, Addis Ababa.

Area and Population. Italian estimates of the area of Italian East Africa by provinces (governments) and the population on Jan. 1, 1937, are shown in the accompanying table.

ITALIAN EAST AFRICA: AREA AND POPULATION

Province (Capital)	Sq. miles	Population
Eritrea * (Asmara)	85,300	1,000,000
Somaliland * (Mogadiscio)	271,000	1,300,000
Harar (Harar)	78,000	1,400,000
Shoa * (Addis Ababa)	224,960	3,900,000
Total	659,260	7,600,000

* Eritrea and Somaliland are not co-terminous with the former colonies; they include parts of Ethiopia (see map in 1936 YEAR BOOK, p. 240, for the former provincial boundaries).

By a decree of Sept. 1, 1938, the Italian Government merged the provinces (governments) of Amhara, and of Galla and Sidamo with the administrative district of Addis Ababa to form the new Government of Shoa. For the areas and populations of the merged provinces, see 1937 YEAR BOOK.

Estimated populations of the chief cities in 1937 were: Addis Ababa, 150,000; Harar, 50,000; Dire Dawa, 30,000; Asmara, 23,000; Massaua, 15,000; Mogadiscio, 21,000; Gondar, 6000; Dessye, 5000. The number of Italians in Italian East Africa in 1938 was reported at 335,000, of whom about 2500 were farmers and the remainder road workers, troops, and officials. The native population includes some 2,000,000 Amharas, the former rulers of Ethiopia, who are Coptic Christians of Hamitic origin;

more than 3,000,000 Gallas, who are part Christian, part Mohammedan, and part pagan; and the Danakil, Somalis, and numerous other tribes, mostly Mohammedan or pagan.

Education and Religion. Italian, Amharic, Arabic, and Tigrenish are official languages. Education is entrusted to the Italian Fascist party, which has established schools in the principal occupied cities. Some mission schools are permitted to operate. There are for Italians classical high schools at Addis Ababa and Harar and technical schools at Addis Ababa and Dire Dawa as well as various primary schools. There is an institute for young native Christians and another for Moslems. Construction of a Moslem college at Harar was authorized.

The Italian authorities in 1938 were reported to be lending active encouragement to the activities of both Roman Catholics and Moslems while placing obstacles in the way of Protestant missionaries and seeking in every way to break the former extensive power of the Coptic clergy over the native Christian population. The age-old tie between the Ethiopian and Egyptian Coptic churches was broken on Dec. 1, 1937, when the Viceroy declared the Ethiopian church autocephalous and appointed the Abuna (patriarch) for all of Italian East Africa.

Production. Stock raising and primitive agriculture remain the chief occupations. Coffee (both cultivated and wild), cotton (grown on foreign-owned plantations), sugar, bananas, dates, grapes, cereals, tobacco, fruits, and vegetables are grown on a small scale. In 1937-38 exports of coffee via French Somaliland and into the Anglo-Egyptian Sudan, representing the bulk of the exports, totaled 14,000 metric tons. The wheat crop is placed at less than 2,000,000 bu. About three-fourths of the coffee, flax, cotton, and banana production of Eritrea and Somaliland are grown on foreign-owned plantations operated with native labor. There were believed to be about 16,000,000 cattle in Ethiopia in 1937 besides numerous sheep, goats, horses, mules, and donkeys. Gold and platinum were the only minerals produced in commercial quantities in 1937; gold output was valued at about \$540,000 and platinum totaled about 418 lb.

Foreign Trade. Trade figures for Italian East Africa as a whole were unavailable. In 1937 imports through Eritrea and Italian Somaliland were equivalent to 50,900,000 old U.S. gold dollars; exports, \$8,400,000. The bulk of Ethiopia's former trade through the port of Djibouti in French Somaliland (q.v.) was diverted to Eritrea and Italian Somaliland with the completion of trunk highways linking the ports of these provinces with Addis Ababa and other Ethiopian cities. There was additional trade by caravan routes with the Anglo-Egyptian Sudan and other neighboring territories. All foreign trade in 1938 was under strict governmental control, which served to hamper operations. Coffee, hides and skins, wax, civit, and native butter are normally the chief exports and cotton piece goods, building supplies, petroleum products, sugar, glass, and salt the main imports.

Finance. The budget for the fiscal year ended June 30, 1939, balanced revenues and expenditures at 1,591,128,542 lire (1,125,916,799 lire in 1937-38). Ordinary revenues for 1938-39 were estimated at 402,000,000 lire, the contribution from the Italian treasury was fixed at 1,000,000,000 lire annually for six years, and special revenues were placed at 179,128,000 lire. The ordinary and extraordinary military expenditures amounted to 632,967,000 lire (664,015,000 lire in 1937-38).

An Italian decree of Jan. 25, 1938, confirmed an extraordinary expenditure of 12,000,000,000 lire for public works and equipment in Italian East Africa in addition to the 1,000,000,000 lire annual contribution to the ordinary budget. Of the 12,000,000,000 lire, the sum of 2,000,000,000 was charged to the 1936-37 budget. The official currency is the Italian lira, but the natives in 1938 were reported to be reluctant to accept it and the old Maria Theresa silver thalers, the prevailing currency for about 130 years, were still in wide use. An Italian decree of May 16, 1938, authorized the Bank of Italy to issue a special series of notes of 1000, 500, 100, and 50 lire to serve as legal tender only in Italian East Africa.

Transportation, etc. Previous to the Italian conquest, the roads in Ethiopia were mere caravan tracks. By June 30, 1938, the Italians had completed 2125 miles of motor highways of which 642 miles were macadam and 1805 miles asphalt. The principal highways were: Massaua-Asmara-Addis Ababa, Nefasit-Decamere, Assab-Dessye, Asmara-Sabderat, Asmara-Gondar, Addis Ababa-Jimma, Addis Ababa-Lekemti, Dessye-Magdala. Another road from Asmara to Tessenei near Cassala on the Sudanese frontier (217 miles) was completed early in 1938. Air lines linked Addis Ababa with Mogadiscio, Jimma, Gondar, Asmara, Cairo, and Rome, and Assab with Djibouti and Dire Dawa. The narrow-gauge French-controlled railway from Djibouti to Addis Ababa (486 miles) had lost much of its traffic by 1938 to competing motor highways. Improvements and extensions were under way in 1938 on all of the chief ports—Massaua and Assab on the Red Sea and Mogadiscio, Merca, and Chis-maio on the Indian Ocean.

Government. Italy invaded Ethiopia early in October, 1935, and captured the capital, Addis Ababa, on May 4, 1936. On May 9, 1936, it was formally annexed by Italy and on June 1, 1936, an Italian decree united Ethiopia with Eritrea and Italian Somaliland in the single colony of Italian East Africa under direct Italian rule. All the former officials of Ethiopia were automatically replaced by Italians. In a few Mohammedan districts the feudal chiefs were permitted to continue their rule under Italian direction. The five governments (later four) into which Italian East Africa was divided were subdivided into commissariats and these in turn were divided into smaller units called residencies and vice residencies. The provincial governors were responsible to the Viceroy at Addis Ababa in all matters except local affairs. The Viceroy was assisted at Addis Ababa by a Vice Governor General and a Chief of Staff and by a consultative Council of Government composed of high government officials. A Board of Consultants consisting of representatives of white colonists and native chieftains also was established. Governor-General and Viceroy in 1938, the Duke of Aosta (appointed Nov. 20, 1937).

History. Although the backbone of Ethiopian armed resistance to the Italian invaders was broken with the defeat and execution of Ras Desta Deltu, son-in-law of the deposed Emperor Haile Selassie, in 1937 (see 1937 YEAR BOOK, p. 356), guerrilla warfare was continued by warrior bands known as *shifitas*, operating mainly in the Amhara districts of central Ethiopia and particularly from the Cencer Mountains. Early in 1938 there were authenticated reports of fighting between Italian or Italian-led native troops and rebel bands within 40 miles of Addis Ababa, near Lake Tana and in the extreme northwestern section of Ethiopia. The rebels were

also harried by tribes friendly to the Italian administration, who received an annual subsidy and the right to bear arms in recognition of this aid. Italian control was gradually extended by the construction of roads, the erection of small forts protecting communication centers, effective use of the air force, and the creation of native military and police organizations to support the Italian troops. On March 12 the Italian authorities ordered the release of 900 native political offenders in Italian East Africa; the amnesty applied to only part of the Ethiopians arrested since October, 1935. On May 30 the Viceroy, declaring that the country was completely pacified, renewed his former offer of pardon for rebels who surrendered.

The refusal of the natives to work on Italian-directed projects proved an even greater obstacle to Italian exploitation of the new conquest. The Ethiopians declined to accept Italian paper money in payment for their goods and refused to work or produce when deprived of markets for their produce. A group of 105 heads of families left Brindisi on January 17 to settle on farms in the government of Harar, thus formally inaugurating the Italian colonization drive. But rebel raids, the scarcity of native labor, the exceptionally high cost of living, and the necessity of importing both food and equipment kept the influx of colonists to an unexpectedly small number. Economic activities of both natives and Italian settlers were hindered by governmental restrictions of various kinds and by the refusal of the Italian Government to import products from Italian East Africa unless a stated proportion of the colony's exports were disposed of in foreign markets. Friction between the Italian troops and the newly arrived Italian colonists was also reported.

Meanwhile, Italy attained greater success in leveling the legal barriers raised by the League of Nations to the recognition of Ethiopia's status as a part of the Italian empire. At the beginning of 1938, 10 governments had formally recognized Italy's sovereignty over Ethiopia and during the year this list was greatly extended, notably by the addition of Great Britain and France. In return for British recognition of the Ethiopian conquest, in the Anglo-Italian pact of Apr. 16, 1938, Italy agreed to respect British interests in the Lake Tana region, not to raise troops in Ethiopia for service outside that territory provided France would do likewise in her colonies, and to permit English and other foreign missionaries to continue their religious work in Ethiopia. See FRANCE, GREAT BRITAIN, and ITALY under *History*.

In accordance with a pledge made in connection with the Anglo-Italian accord, the British Foreign Minister attempted at the 101st meeting of the League Council beginning May 9 to put through a resolution repudiating the previous agreement of League members not to recognize the Italian conquest of Ethiopia. This move was opposed by ex-Emperor Haile Selassie in person and his representative, Ato Tazaz, as well as by the delegates of New Zealand, Bolivia, China, and the Soviet Union. In view of this opposition, a compromise was reached whereby the Latvian President of the Council, Vilhelms Munters, announced that "the great majority of members feel, despite regrets, that it is for individual members to decide as they choose." This left League members free to disregard their solemn obligation and by the end of 1938 most of them had done so. See ITALY under *History*; LEAGUE OF NATIONS.

ITALIAN LITERATURE. Within the past two years Italy lost two of its major writers, Luigi Pirandello and Gabriele D'Annunzio (q.v.), both international figures. D'Annunzio's heyday fitted more around the turn of the century, while Pirandello's star sparkled in the past decade. Gabriele D'Annunzio, it may be recalled, dominated the field of European literature in poetry, the theater, and novel. An artist of varied and stormy activities, D'Annunzio may be called a synthetic product. All his creations at one time or another fell under cross currents of European masters. Whatever may be said of D'Annunzio's literary fickleness, of his lack of profound convictions, he was a strong enough personality to emerge as an international figure. A personalist of first order, he could never be accused of lacking inspirational fire. Any creation of his will inevitably have pages of intense beauty and impassioned feelings. An incorrigible egotist, he was, none the less, great enough to draw Italian literature from its regional lethargy and project it on the European panorama.

Fiction. *Il mulino del Po* (*The Mill on the Po*; Fratelli Treves, Milan), a novel on large canvas and broad strokes, was contributed by Riccardo Bacchelli. The author himself has labeled it an historical novel (*romanzo storico*), covering the period of 1812-40. The introductory chapter is projected on Russian soil, of Napoleon's disastrous campaign. It deals with the emperor's Italian corps of 30,000 men, the crossing of the Vop, and the ultimate survival of but 2000 of these Italians. It was in this melancholy and frigid scene that the protagonist of the novel, Lazzaro Scacerni, saved his life by wading the icy waters of the Vop, and after innumerable vicissitudes made his way back to Italy, to his native Ferrara. Nor were his tribulations over once back on the Po. The struggle for existence was accentuated by turbulent and violent episodes. He was, as a matter of personal decorum, a moral and upright man, and, if he erred, under dire and inevitable circumstances, sympathy is with him. The novel may never survive as one of historical utility; rather it draws its chief merits from its literary constituents. Riccardo Bacchelli tells a powerful story and in Lazzaro Scacerni, he has delineated a powerful characterization. Riccardo Bacchelli cannot be accused, as have often been his Italian *confrères*, of not knowing how to tell a story. This novel, composed of 580 pages never loses *tempo*, and can be said to have powerful architectonic structure. If any adverse criticism is to be advanced it would be in the nature of objection to the over intensity at the expense of repose and serenity. It is certainly regrettable that the book was not more widely acclaimed and read.

Noemi Carelli made use of an exclusive Russian motif in her novel, *Borea* (Fratelli Treves, Milan). The subtitle, *Gente italiana a Pietroburgo*, is misleading because one may expect an historical novel of the role of Italians in the Russian empire. As a matter of fact, however, the novel deals only with the family of an Italian singing teacher at Saint Petersburg, in that uneasy period of Russian Czarism upward of 1890. The novel actually is one with a thesis: It dwells on the futility of tyranny, radicalism, or the revolutionary spirit. The author, if her novel is to be defined, shows distaste for wanton despotism and disapproval of the communistic trend arising from the late Czarist rule. The novel's artistic and esthetic values, on the other hand, may be termed negligible. One quality, however, not devoid of poetic and artistic moments, stands out: The sympathetic treatment of the young

revolutionary students (Lenin numbered among them). As for other materials that make up the formula of a good novel, it can be said without reserve that they fall short of their goal. The novel does not possess elements of universal appeal. Nor are its characters in high relief. The hero, Valerio Landi, for all his intelligence and idealistic aspirations, never emerges from being other than a sympathetic student. As has been stated, the necessary ingredients for a strong novel are discountable; consequently, *Borea* as a novel is destined for quick oblivion.

Ain Zara Magno, another woman writer, also chose a foreign background for her novel, *Pasioni* (Fratelli Treves, Milan). South America this time is the locale of a politico-sociological novel in which are brought to play opposing forces of communism and nationalism. This pair of women writers must be credited with the courage of tackling our present-day, almost unsolvable problem of governments—a problem which more and more poignantly is drawing a sharp line of contention between liberalism as against nationalism. Laudable and serious as may be these preoccupations, neither woman possesses the genius necessary to create great political conceptions in a sociological novel. In *L'uomo è forte* (Bompiani), the Calabrese author, Corrado Alvaro, put out a novel much discussed and reviewed in Italy and elsewhere. A serious writer, Alvaro, never loses sight of a sense of morality which should motivate the actions of man. He is intensely preoccupied in defining and orienting human sentiment with its attendant psychological aspects. The keen critic, Attilio Momigliano, has recently called Alvaro's prose transcendental and his treatment of reality approaches something akin to "an ecstatic vision, musical and feverish. His veracity is great, his psychology brief and profound." Corrado Alvaro's production may not be one of quantity, but it is a pleasure to note that his prose continues the good tradition established by his poetry (*Poesie grigiorde*, 1917). Virgilio Brocchi, who must be classified among writers in the popular vein, completed his cycle (*Figliuol d'uomo*) in *Il Tramonto delle stelle* (Mondadori, Milan) which constitutes the fourth volume in the series. One travels far in the present volume, from Italy to Spain, from New York to Buenos Aires. Virgilio Brocchi knows what public he has and capitalizes. He always spins a good story. Attesting to the popularity of this writer, it can be stated that the four volumes that compose this cycle have sold from 45 to 100 thousand each. In point of fact, *Tramonto delle stelle* was the most widely read novel of the past season. At this moment could be recorded various works, first among them, the literary prize novel (Premio Biella), by Gian Paolo Callegari, a newcomer in the contemporary field. Despite the fact that this is a prize novel, *La Terra e il Sangue* (Liciano Capelli) must be labeled as of the pseudo-literary variety, meant principally to delight the public with an extravagant assortment of "love affairs, victories and defeats, heroism and sacrifice." Michele Saponaro wrote a romanticized life and biography in *Vita amorosa ed eroica di Ugo Foscolo* (Mondadori, Milan). It may readily be styled a novel, the historical and research motives are carefully integrated in the story. Widely read again were the *Novelle per un anno* of Luigi Pirandello, republished in a de luxe edition by A. Mondadori (Collezione Omnibus). This volume, comprising 1354 pages, was edited, in the main, by the distinguished Sicilian, shortly before his death.

While the discussion has turned to the short story, Lorenzo Ruggi's collection could be taken up, *La madonna del gatto nero* (Sonzogna, Milan). Told by a man who enjoys the reputation of having become a good author, "by instinct rather than by dint of elaborate method," the stories have exquisite taste, a wealth of Bolognese local color, and are couched in superb style.

Poetry. The output for the past season may be called enormous. There has always been a tradition and a public for poetry in Italy, and even if this public is small, it is, none the less, eclectic. First in order could be taken up Angelo Josia's book of verses, *In cammino* ("La Prora," Milan), which is divided in two parts, *Poesie d'oggi* (1934-37) and *Poesie d'allora* (1924-30). His poetry is characterized by a dominant note of optimism and faith in life. For poetry in more solemn mood one can turn to Salvatore Quasimodo's *Poesie* (Edizioni Primi Piani, Milan). This poetry is reminiscent of Jacopone and Rimbaud in the exposition of the "drama of human solitude," which finds solace in the "world of imagery," in humanity, and in nature. The Goethe Prize went to Villaroel for his volume *Stelle sugli abissi* (Mondadori, Milan). These poems, too, re-echo Baudelaire and D'Annunzio, and evoke an atmosphere of "morbid beauty, burning melancholy, and deluded dreams." Mario Réfalo falls under the spell of two of today's senior poets, Ugo Betti and Giuseppe Ungaretti. *Nostalgia mi porta* (Poeti d'oggi, Asti), if inspired by the afore-mentioned poets, reveal Réfalo's individuality and inspiration, qualities which will indubitably manifest themselves more concisely in subsequent compositions. Another young poet making himself felt is Vincenzo Filippone. His volume, *Vigilie* (Chiaruzzi), bears the same sort of approach to the art of poetry and problems of life as Réfalo's, except that Filippone abandons himself almost fanatically in his poetic message. His verse is difficult to follow, needing a slow and incisive interpretation. Giuseppe Gerini forms the third member of this trio of poets. Older than his colleagues, his poetry bears the imprint of mellow and benevolent undertones. His could be called the poetry of the hearth, of the family, and of the soil. Following no particular school of thought, his contributions are intimate and sensitive, detached from influence, theories, and formulae. It has been stated in Italy that this trio of poets seems destined to formulate a new order of contribution, inasmuch as their older *confrères* have already crystallized their ideas and perhaps their aspirations.

Theater. The season in the theater is not comparable in quantity and quality to that of prose and poetry. The so-called crisis of the theater continued, and by now, it may be called perennial. The loss of Luigi Pirandello, chief figure in the Italian Theater, has only accentuated and slackened the pace in theatrical production. Unless another genius arises on the horizon to replace the indefatigable Sicilian, the Italian Theater, alas! will continue in apathy. The world over feels that varying fortunes and vicissitudes are crippling this genre—a fact which may console the Italian Theater but not help it. Ettore Bignone completed the translation of the trilogy of Sophocles in *Le tragedie di Sofocle*, vol. ii; *Edipo Re e Antigone* (Sansoni, Florence); *Edipo a Colono* was translated by the same author in 1936. A specialized Hellenist, the author has accompanied the volumes with critical essays, exhaustive and informative. Among the few plays produced in Italy last season, one stood

out: Valentino Bonpiani's *Delirio del personaggio*, played at the Teatro delle Arti in Rome. The play pits two personalities against each other. A mother and daughter, similar in maternal instincts and feelings, fall diametrically opposite in psychological perspectives. One may call the play a study in dialectic estrangement, calling to mind the Pirandellian paradox of personality. Silvio D'Amico continued his lucid and discriminating study of the theater in *Invito al teatro* (Morcelliana, Brescia). It is a "well-informed work, learned, which, examining the past, studying the present, will usher in the future." Discarding the "ephemeral values" of a play, the author tries to orient it from the aspect of its durability, its national and cultural import. Another theatrical critic, Renato Simone, assembled reminiscences of yesterday in his book, *Teatro di ieri* (Fratelli Treves, Milan). These recollections may well be called essays on the great actors of yesteryear, Duse, Alessandro Moissi, Angelo Musco, Petrolini, among many others. Incidentally, there is much critical evaluation on the theater in this volume, comprising three decades of activities. The book, in excellent format, is especially featured with numerous photographs.*

ITALIAN SOMALILAND. A former Italian colony in East Africa, incorporated with Ethiopia and Eritrea into a single colony known as Italian East Africa, by the decree law of June 1, 1936. See ITALIAN EAST AFRICA.

ITALY. A kingdom of southern Europe, upon which a Fascist dictatorship is superimposed. Capital, Rome. Sovereign in 1938, King Victor Emmanuel III, who ascended the throne July 29, 1900.

Area and Population. Excluding Libya (q.v.), which became part of Italian national territory in 1938, Italy has an area of 119,714 square miles and a population estimated at 44,056,000 on Dec. 31, 1938 (42,444,588 at the 1936 census, which did not include 528,542 workers and soldiers in Africa). The 1936 census showed 31,735,027 urban and 11,258,575 rural residents. Of the population 10 years old or over, 47.7 per cent was agricultural. Living births in 1938 numbered 1,031,193 (23.6 per 1000); deaths, 606,799; natural increase, 424,394. Emigrants in 1936 numbered 41,710; in 1935 39,470 emigrants returned to Italy. Foreigners in Italy at the 1936 census numbered 108,597 as compared with an estimated 9,600,000 Italians living in other countries.

Estimated populations of the chief cities in February, 1938, were: Rome (Roma), 1,250,704; Milan (Milano), 1,181,170; Naples (Napoli), 907,528; Turin (Torino), 675,246; Genoa (Genova), 646,544; Palermo, 425,400; Florence (Firenze), 344,173; Bologna, 307,775; Venice (Venezia), 280,277; Trieste, 255,079; Catania, 247,925; Bari, 207,219; Messina, 200,373.

Education and Religion. According to the 1931 census 79 per cent of persons six years of age and over were able to read. The school enrollment in 1935-36 was: Elementary, 5,117,579; secondary, 577,122; higher education, 63,344. The 1931 census showed 41,014,096 Roman Catholics (99.6 per cent of the population), 83,618 Protestants, 47,825 Jews.

Production. About 46.3 per cent of the working population is engaged in agriculture and fishing, 30.4 per cent in mining, quarrying and industry, 8.3 per cent in commerce, and 4.6 per cent in transportation. Yields of the chief cereals in 1938 were (in metric tons): Wheat, 8,091,800; barley, 247,800; rye, 138,800; oats, 629,100; corn, 3,000,000.

* Acknowledgment is hereby made to the "Meridiano di Roma" for notes and bibliographical information.

The production of other leading crops in 1937 was: Rice, 36,264,000 bu.; potatoes, 105,517,000 bu.; sugar beets, 3,314,000 metric tons; beet sugar (1937-38), 358,000 metric tons; olive oil (1937-38), 78,720,000 gal.; wine, 898,238,000 gal.; citrus fruits, 675,000 metric tons; tobacco, 90,389,000 lb.; tomatoes, 2,341,506,000 lb.; coconuts, 70,444,000 lb. The 1937 livestock statistics showed 7,286,000 cattle, 9,095,000 sheep, 2,814,000 swine, 1,804,000 goats, 796,000 horses, and 1,225,000 mules and asses.

Mineral production in 1937 was valued at 775,-184,000 lire (542,886,000 in 1936); quarry output, 394,380,000 lire (358,030,000 in 1936). Mineral and metallurgical production in 1937 was (in metric tons): Iron ore, 997,805; lead ore, 58,598; zinc ore, 181,968; iron pyrites, 914,524; lignite, 1,059,231; sulphur (crude), 343,526; asphaltic and bituminous rock, 365,978; marble, 484,151; marine salt, 950,777; bauxite, 386,495; metallic mercury, 2208; aluminum, 22,947; lead, 46,308; pig iron, 801,181 (1938: 864,000); ferro-alloys, 73,124; steel ingots and castings, 2,098,729 (2,328,000 in 1938); metallurgical coke, 1,703,199; cement, 4,359,112. The capitalization of Italian manufacturing industries on Dec. 31, 1937, was 47,695,000,000 lire. The output of raw silk in 1937 was 6,306,000 lb.; rayon and other artificial fibers, 274,226,000 lb.; cotton yarn, 412,880,000 lb.; cotton cloth, 952,966,000 yd. The hydro-electric plant capacity in January, 1938, was 3,929,000 kilowatts; the output in 1937 was 14,-391,000,000 kilowatt-hour. Woolen textiles, chemicals, sulphuric acid, superphosphate, copper sulphate, cheese, and macaroni are other important manufactures.

Foreign Trade. Total imports in 1938 were valued at 11,123,882,000 lire (13,992,130,000 in 1937) and exports at 10,379,075,000 lire (10,443,-583,000 in 1937). These figures included imports from Italian colonies of 205,699,000 lire (399,945,-000 in 1937) and exports to the colonies of 2,419,-528,000 lire (2,590,497,000 in 1937). In current U.S. dollars, the 1937 imports for consumption were valued at \$727,941,000 (\$440,357,000 in 1936) and exports at \$538,638,000 (\$404,472,000 in 1936). Leading 1937 imports were: Coal, coke and briquettes, \$90,922,000; wheat, \$73,281,000; raw cotton, \$55,241,000; iron and steel, \$44,365,-000; wool, \$31,502,000; oil-seeds, \$29,289,000. The principal exports were: Cotton fabrics, \$43,522,-000; automobiles, \$32,455,000; rayon and other artificial fibers, \$21,869,000; wool fabrics, \$19,-472,000; chemicals, medicines, and paints, \$16,060,-000; lemons, \$16,563,000; fabrics of rayon and other artificial fibers, \$15,913,000. Of the 1937 imports, Germany supplied 18.6 per cent (26.8 per cent in 1936); United States, 10.9 (14.8); Argentina, 7.6 (3.0); United Kingdom, 3.9 (0.9); Italian Africa, 2.4 (2.4). The 1937 exports were distributed mainly as follows, by value: Italian Africa, 24 per cent (35.3 in 1936); Germany, 14.4 (19.6); United States, 7.5 (9.9); United Kingdom, 6.1 (2.8); Switzerland, 4.9 (6.2); France, 4.2 (3.5). United States statistics for 1938 showed exports to Italy of \$58,266,327 (\$76,829,855 in 1937) and imports from Italy of \$41,201,698 (\$48,-169,610).

Finance. Actual budget returns for the fiscal year ended June 30, 1937, and the estimates for 1937-38, 1938-39, and 1939-40 are shown in the accompanying table.

No statement of the public debt has been published since that of Aug. 31, 1935, showed a total debt of 107,185,000,000 lire (funded, 93,827,000,-

ITALIAN BUDGET OPERATIONS

[In millions of lire]

	1936-37	1937-38 ^a	1938-39 ^a	1939-40 ^a
Revenue	24,702	20,597	25,072	24,561
Ordinary expenditure	23,413	23,770	25,035	29,316
Surplus (+) or deficit (-)	+1,289	-3,173	+37	-4,755
Extraordinary expenditure	17,519	9,000 ^b
Net deficit ...	16,230	12,173

^a Estimates. ^b Estimate made by Minister of Finance on May 18, 1938.

000; floating, 13,358,000,000). The Minister of Finance stated on Apr. 30, 1937, that the internal debt, exclusive of the floating debt, was 101,241,-000,000 lire. The average exchange value of the lira was \$0.0526 in both 1937 and 1938.

Transportation. At the beginning of 1938, Italy had 14,230 miles of railway line (state, 10,-540; private, 3690); 2460 miles of state line and 1087 miles of private line were electrified. For the year ended June 30, 1937, the government lines carried 90,727,000 passengers and 45,297,000 metric tons of freight, the gross receipts totaling 3,707,-000,000 lire. The mileage of roads and highways in 1937 was 151,392; number of automobiles on Jan. 1, 1938, 439,994. Statistics of civil aviation for 1937 were: Miles flown, 6,481,000; passengers, 113,743; mail, 913,000 lb.; newspapers, 323,000 lb.; baggage, 3,700,000 lb.; merchandise, 1,084,000 lb. A new air service between Genoa and Tunis in French North Africa, with stops at Alghero and Cagliari on the island of Sardinia, was inaugurated Mar. 28, 1938. The Italian merchant marine on June 30, 1938, comprised 1293 vessels of 3,290,484 gross tons. During 1937, 12,281 vessels of 21,159,-000 net register tons entered Italian ports in the foreign trade. Italian ships landed 9,109,000 metric tons of cargo; foreign vessels, 8,034,000 metric tons.

Government. The Fascist regime has been superimposed upon the constitutional monarchy established by the Constitution of Mar. 4, 1848. Under the law of Dec. 9, 1928, the Fascist Grand Council, consisting of (1) life, (2) ex-officio, and (3) extraordinary members appointed by the head of the government, acts as "the supreme organ coordinating and uniting all the activities of the regime." There is an appointive Senate of some 374 members and a Chamber of Deputies of 400 members nominated by the Fascist Grand Council and elected by restricted suffrage. The Cabinet, as constituted at the commencement of 1937, was as follows: Premier, Chief of the Government, and Minister of Interior, of War, of the Navy, of the Air, and of Italian Africa, Benito Mussolini; Foreign Affairs, Count Galeazzo Ciano di Cortellazzo; Corporations, Feruccio Lantini; National Education, Giuseppe Bottai; Agriculture and Forests, Edmondo Rossini; Finance, Count Paolo Thaon di Revel; Justice, Arrigo Solmi; Communications, Antonio Stefano Benni; Popular Enlightenment, Dino Alfieri; Public Works, Giuseppe Cobolli-Gigli; Trade and International Payments, Felice Guarneri; Minister-Secretary of the Fascist Party, Achille Starace.

HISTORY

Internal Affairs. Internal developments within Italy during 1938 were intimately connected with Mussolini's policy of national aggrandizement abroad at the expense of France, Britain, and smaller nations in his path. To secure German backing

for this policy, Il Duce became first an equal and then a subordinate partner in the Rome-Berlin axis, which subjected Italian politics and economics to the powerful influence of dynamic German National Socialism. This influence was reflected during 1938 in the speeding up of the revolutionary activities of Italian fascism, and the rise to dominant positions within the Fascist Party of vociferous anti-Semitic, anti-clerical, anti-capitalist, and anti-bourgeois groups. While Mussolini's personal power remained supreme, he gave increasingly free rein to the extremists among his followers.

Racist Measures. This extremist attitude found concrete expression in a series of measures adopted during the year to curb the economic, political, and cultural activities of Jews in Italy—they numbered 57,425 in August, 1938, according to a special census—and to exclude them progressively from the national life (see Jews under *Italy* for details). These measures were climaxed by the so-called racial laws of October 7 prohibiting marriages between (1) "Italians" and persons of Semitic or other "non-Aryan" races, (2) Italian men in State or public service and foreign women, and (3) Italians and foreigners in general, except with the consent of the Ministry of Internal Affairs. On November 10 the Cabinet promulgated organic laws adding to those classified as Jews persons having a Jewish mother and an unknown father, and excluding all Jews from the civil and military administrations of the State, the Party, and their affiliated organizations.

There was much speculation in Italy and abroad as to the reasons for Mussolini's approval of these measures. It was suggested that he wished to strengthen his self-appointed position as "protector" of the Moslem peoples, aroused by the Arab-Jewish struggle in Palestine; that he wished to compete with the Reich for the favor of the large anti-Jewish elements in Hungary, Rumania, Yugoslavia, and other Danubian countries and thus bring those countries into the Fascist orbit; and that he had been angered by anti-Fascist conspiracies among Italian and foreign Jews. On October 16 the government announced that there had been widespread arrests of Jews in northern Italy for alleged anti-Fascist plottings. The explanation for the anti-Semitic laws most widely accepted outside official circles in Italy, however, was that Mussolini had been forced to adopt them in order to placate Hitler and retain his support.

There was widespread opposition to the racial laws among the masses of the Italian people and even within the Fascist Grand Council. To overcome this attitude, the Fascist press on November 26 launched a campaign to stimulate "racial consciousness" among the Italian people. "Racism" was eulogized as "an expression of strength and of spiritual maturity which heralds greater power to come," while any show of compassion toward the Jews was declared not only disloyal but an evidence of "bourgeois mentality."

Conflict with the Vatican. The anti-Semitic measures and particularly the decrees restricting marriage on a racial and national basis inaugurated a new conflict between the Italian State and the Roman Catholic Church (q.v.). On November 14 *Osservatore Romano*, Vatican City newspaper, announced that Pope Pius XI had appealed to both Mussolini and King Victor Emmanuel not to permit the violation of the concordat of Feb. 11, 1929, that he declared was implicit in the racial and marriage laws. The King on November 15 assured the Pope that efforts would be made to meet his objections.

But no positive action to modify the laws was forthcoming. On December 24 Pius XI told the Sacred College of Cardinals that these laws were a breach of the concordat and accused the Fascist Government of harrying and repressing Catholic Action groups throughout Italy. He declared there had been clashes the previous day in Venice, Turin, and Bergamo and that Cardinal Schuster, Archbishop of Milan, had provoked active Fascist hostility by preaching against the racial laws. Thus the Church-State struggle seemed to be developing in intensity as the year ended.

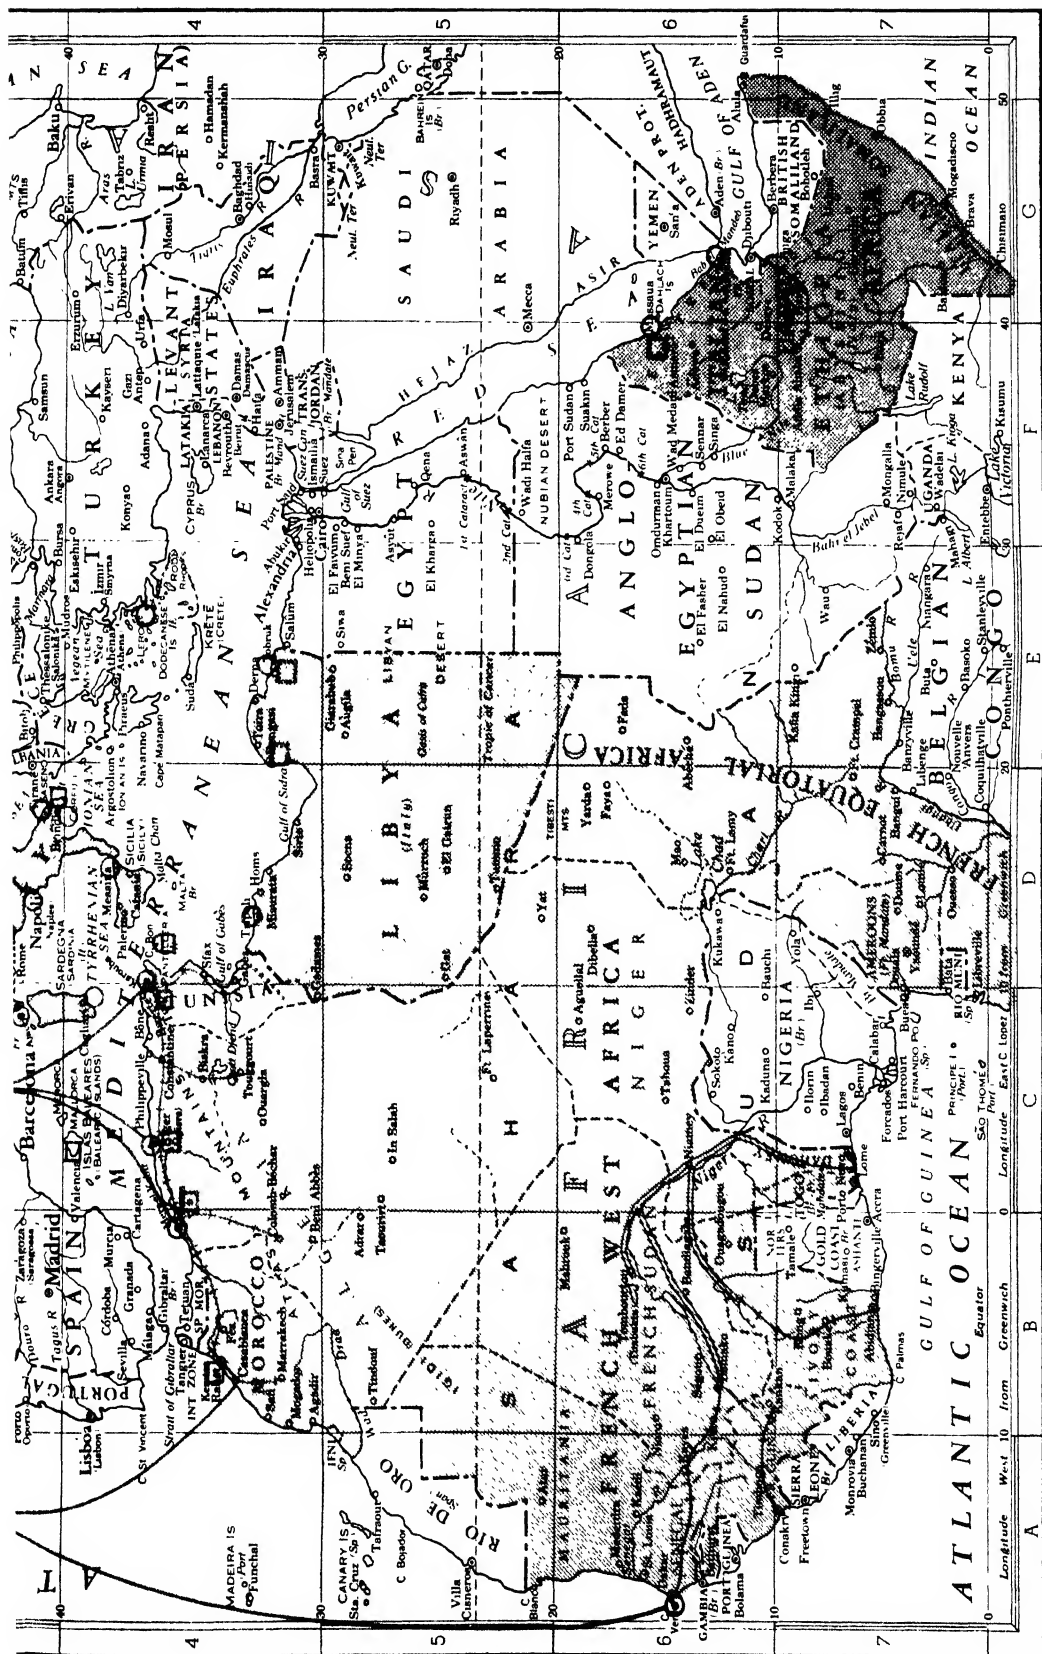

Chamber of Deputies Abolished. One of the last vestiges of the former democratic regime was eradicated on December 14 when the Chamber of Deputies voted itself out of existence, 90 years after the establishment of parliamentary government. In accordance with the draft law promulgated October 7, the Chamber was to be replaced on Mar. 23, 1939, by a Chamber of Fasci and Corporations, to be composed of approximately 800 appointive members of the National Council of the Fascist Party and of the National Council of Corporations. The new Chamber and the Senate were authorized to vote by a show of hands or by acclamation, instead of the former secret ballot, on measures presented to them by the head of the government or on measures the discussion of which had been previously authorized by him. Both houses were expected to "collaborate" with the government instead of limiting its power.

Both Mussolini and King Victor Emmanuel in April were vested with a newly created rank in the military hierarchy, that of "Marshal of the Empire." Il Duce continued during the year to prepare his son-in-law and Foreign Minister, Count Galeazzo Ciano as his successor in the role of dictator. The increasingly bold and hazardous foreign policy of the Premier was attributed by observers to the influence of Count Ciano and his ambitious wife, both of whom were understood to favor aggressive expansion of Italy's foreign interests on the military basis afforded by the Rome-Berlin axis.

Other Extremist Tendencies. There were various other developments indicating the growing momentum attained by revolutionary and ultranationalist tendencies. The campaign for economic self-sufficiency (see 1937 YEAR BOOK, p. 360) was intensified. The new town of Carbonia, constructed within a year to house 12,000 persons for the exploitation of previously undeveloped coal deposits in southern Sardinia, was dedicated by Premier Mussolini on December 18. An elaborate minerals fair held in Rome in November called attention to the progress made in developing domestic sources of mineral supply.

The colony of Libya (q.v.) on the opposite shore of the Mediterranean was decreed an integral part of Italy on October 26 and steps were taken to bind this desolate region closer to the Italian homeland by more intensive colonization. At the end of October, 18 vessels carried 1800 agricultural families to Libya to settle in farming communities previously laid out by the Italian administration in the colony. These 18,000 persons represented the vanguard of 80,000 settlers scheduled to be transferred to their new homes by the end of 1942. While sending colonists to Italian territories overseas, the government on November 17 created a commission to repatriate Italians wishing to return to Italy or her colonies from foreign countries. On December 12 the sum of 10,000,000 lire was appropriated for this purpose.

Meanwhile Italian propagandist activities abroad were increased through the provision of improved short-wave radio broadcasting facilities. On December 3 all Italian journalists were forbidden to serve as correspondents of foreign newspapers or news agencies, effective December 31; about 200 were affected. It was officially announced December 17 that a Fascist Index of books to be banned from sale in Italy on political or other grounds was being compiled. The Italian Rotary clubs were disbanded by order of the government effective December 31, because of alleged Masonic and anti-Fascist influences in the organization. Promotion was prohibited for unmarried officials and the proportion of women in public or private employment was restricted to 10 per cent of the total by decrees issued in September.

Armament Program. With its entire national economy geared to a program designed to make the country as nearly self-sufficient as possible in wartime, Italy was carrying forward a vast armament scheme, maintaining a large and costly military force in Spain, undertaking the colonization of Libya on an unprecedented scale, and attempting to consolidate her military conquest of Ethiopia. The peace-time army in Italy had been raised to a strength of over 600,000 men, the air force nearly doubled in four years, and the navy had undertaken a construction program that would make Italy almost equal to France at sea by 1941. This gigantic program had to be supported by a nation whose national income was about 120,000,000,000 lire annually, whose budgetary income did not exceed 25,000,000,000 lire, whose trade balance had been consistently adverse for many years, and whose supply of the essential raw materials was the smallest of all the great powers.

Under this financial burden, the Fascist Government had been operating on an increasingly heavy deficit since 1931 (see *Finance*). This deficit had been met by loans and borrowing from the Bank of Italy. The series of forced loans and extraordinary tax levies imposed since 1936 was climaxed by a special tax levy approved by the Cabinet Nov. 7, 1938. It provided for collection of 7½ per cent on the taxable capital of private industrial and commercial concerns, with graduated deductions to favor the smaller ones. The tax was made payable in 18 bimonthly installments beginning Mar. 10, 1939, and was expected to yield 1,200,000,000 lire. Despite this levy, the state budget announced Dec. 14, 1938, for the fiscal year 1939-40 provided for a deficit of 4,755,000,000 lire as a result of shrinking revenues and increased expenditures on armaments, declared to be "an unavoidable necessity in view of the situation." Yet the government's wide powers over industry and finance prevented the increasingly serious budgetary deficit from causing disruption of economic activities. Due to this factor and the government's huge borrowing and spending program, industrial activity remained at a relatively high level throughout 1938.

Foreign Relations. The major developments of the year in Italian foreign relations were Austro-German *Anschluss*, making Hitler's dynamic Great Germany a formidable next-door-neighbor; the progressive replacement of Italian influence and trade throughout the Danubian and Balkan regions by Germany; the collapse of the Rome bloc of powers (Italy, Austria, and Hungary) with the extinction of Austria and the transfer of Hungary from the Italian to the German orbit; the consolidation of the Rome-Berlin axis, with Mussolini

playing an increasingly subordinate role; the growing success achieved by the Italo-German intervention in support of General Franco's Insurgent cause in Spain; the conclusion of the Anglo-Italian agreement designed to settle virtually all outstanding points of difference between them; the Italian demands for greater territorial and other concessions from France and the resultant growing tension between the two countries; Anglo-French recognition of Italy's conquest of Ethiopia; growing coolness in relations between the United States and Italy.

Danubian and Balkan Events. Italy's subordination of its ties with Austria and Hungary to the Rome-Berlin axis and to rapprochement with Rumania and Yugoslavia (see 1937 YEAR BOOK, p. 363) had adverse repercussions for Italy early in 1938. At the conference of the Rome bloc held in Budapest January 10-12, Austria and Hungary rejected Mussolini's request that they join the Rome-Berlin-Tokyo anti-Communist pact and withdraw from the League of Nations. They did agree to recognize the Franco Government in Spain.

With the development of the Austro-German crisis in February and March, the Austrian Chancellor appealed to Il Duce for support against Hitler. Italy was unable for both military and diplomatic reasons to oppose Hitler's ambitions, and Mussolini turned a deaf ear to Dr. Schuschnigg's appeals (see AUSTRIA under *History*).

The appearance of German troops at the Brenner pass caused marked forebodings among the Italian people. But Mussolini accepted with reservations Hitler's pledge that the Brenner frontier would remain inviolable and announced that Italy would remain faithful to the Rome-Berlin axis. Italy's acceptance of *Anschluss*, he assured the Italian people, was dictated not by fear but by "our conscience, our sense of honor, our loyal friendship for Germany." At the same time he ordered the strengthening of fortifications along the German-Italian frontier and declared that Italy was prepared to defend it. The strength of the Rome-Berlin axis appeared to have been solidified by Hitler's visit of May 3-5 to Italy and by the invaluable aid Mussolini gave Hitler during the crisis of September over Czecho-Slovakia (q.v.). In return Mussolini demanded and received assurances of German support for his colonial demands upon France, made late in the year (see FRANCE under *History*).

But there was doubt as to whether Hitler would go to the extent of giving armed aid to Italy against the western powers. The unpopularity of the German alliance among the Italian people was enhanced by Nazi attacks upon Catholics in Austria and Germany and by the strength the axis gave to radical elements within the Fascist Government itself. Mussolini showed himself unwilling to accept complete exclusion from the Danube basin and the Balkans by his support of Polish-Hungarian efforts to establish a common frontier to block Germany's eastward and southward expansion. Yet without German aid, Italy was unable to press her demands upon France and Britain, the basic objective of which was eventual Italian domination of the Mediterranean. Mussolini also needed a further diplomatic or military triumph to offset the disillusionment felt in Italy at the paucity of the economic results flowing from Italy's expenditure of men and money in Ethiopia (see ITALIAN EAST AFRICA under *History*).

Relations with Britain and France. In an effort to wean Italy away from Germany, Prime Minister Chamberlain of Great Britain in April

agreed to pay Mussolini's price, which was recognition of Italian sovereignty over Ethiopia and acquiescence in the victory of General Franco brought about by open Italian and German intervention in Spain (see GREAT BRITAIN under *History*). The British also induced the French Government to cut off all aid to the Spanish Loyalists. The impending Franco victory promised to give Italy important diplomatic and strategic advantages in her drive to weaken the Anglo-French hold on the Mediterranean and North Africa. With the aid of a friendly Spain, granting Italian submarines and naval vessels the use of its ports, Italy hoped to be able to prevent the British and French from closing the Straits of Gibraltar in case of war and to threaten the French communications with North Africa and British shipping in the eastern Atlantic. Up to the end of 1938 the Italian intervention in Spain was estimated to have cost several billion lire, while casualties among Italian troops numbered 2657 dead and 8858 wounded up to Oct. 10, 1938, according to an official communiqué.

General Franco's action in declaring his neutrality during the European crisis of September over Czecho-Slovakia was reported to have aroused anger in Rome and doubt as to the reliability of Franco's future friendship. Shortly afterwards Mussolini for the first time accepted the British plea for withdrawal of Italian troops from Spain. On October 20 about 10,000 of some 40,000 Italian troops in Spain returned to Naples to receive a great popular welcome (see SPAIN under *History*). This action enabled Prime Minister Chamberlain to put into effect in November the Anglo-Italian treaty signed in April. The resultant improvement in Anglo-Italian relations was checked toward the end of the year by the Italian demands upon Britain's ally, France. There also remained some unsettled Anglo-Italian issues, such as the Italian demand for possession of the *Coenaculum* in Jerusalem and Italian opposition to the growing British and French economic and political ties with Turkey (q.v.). The Turks remained deeply suspicious of Mussolini's Mediterranean aims and hostile toward Italian expansion.

Relations with United States. The United States remained the principal great power that held to its refusal to recognize the Italian conquest of Ethiopia. It was reported in January that negotiations on an Italian-American trade treaty had been interrupted by Secretary Hull's refusal to accept Mussolini's demand that the pact be made in the name of Victor Emmanuel as King of Italy and Emperor of Ethiopia. On May 13 Mr. Hull announced that the United States would adhere to its non-recognition stand and this was done in subsequent exchanges with Rome authorities. Another point of friction arose over the Italian anti-Semitic laws. The United States demanded and received assurances that American Jews in Italy would be accorded the same rights as other American citizens (see JEWS under *Italy*). The United States Ambassador to Rome, William Phillips, was called home in November to confer with President Roosevelt on Italo-American relations, but unlike the Ambassador to Germany, he was permitted to return to his post. There was increasing friction between Italian and American interests in Latin America, where Italian propaganda worked to undermine the commercial and diplomatic position of the United States.

Other Developments. Italy continued to enjoy the collaboration of the Stoyadinovitch Government in Yugoslavia (q.v.); a new commercial and pay-

ments agreement was signed by the two governments Jan. 7, 1938. Italy worked to reconcile Yugoslavia, Rumania, Hungary, and Poland in the hope of creating a counter-weight to German economic and military power in that region. By an exchange of notes with Switzerland on June 24 Italy promised to respect Swiss neutrality in return for Switzerland's repudiation of all League obligations. On July 5 a trade treaty was signed by Italy on one hand and Japan and Manchoukuo on the other. Italy had recognized Manchoukuo as an independent state in 1937.

See ALBANIA, CHINA, CZECHO-SLOVAKIA, EGYPT, FRANCE, GERMANY, GREAT BRITAIN, HUNGARY, JAPAN, POLAND, RUMANIA, SPAIN, SWITZERLAND, TURKEY, and YUGOSLAVIA under *History*; FASCISM; JEWS; LEAGUE OF NATIONS; MILITARY PROGRESS; NAVAL PROGRESS; REPARATIONS AND WAR DEBTS; ROMAN CATHOLIC CHURCH.

IVORY COAST. See FRENCH WEST AFRICA.

JAMAICA, ja-mā'ka. A British colony in the West Indies. Area, 4540¼ square miles; population (Jan. 1, 1938, estimate), 1,152,528 compared with 858,118 (1921 census). The dependencies are Cayman Islands (see below), Turks and Caicos Islands (see below), Morant Cays, and Pedro Cays. The principal towns are Kingston (capital), 62,707 inhabitants in 1921; Spanish Town, 8694; Port Antonio, 6272; Montego Bay, 6580; Savanna-la-Mar, 3442; Port Maria, 2481. In 1937 there were 35,352 births, 17,481 deaths, and 5305 marriages.

Production and Trade. The principal products are sugar (120,000 tons in 1938), bananas, coffee, rum, coconuts, pimento, grapefruit, logwood extracts, ginger, cocoa, oranges, tobacco, and logwood. For the 1938-39 season, Jamaica's sugar quota was fixed at 82,400 long tons. Livestock in the colony (1936-37): 102,101 cattle, 10,405 sheep, 30,726 horses, mules, and asses. In 1937 imports totaled £6,138,379 (cotton piece goods 6 per cent, flour 6.6 per cent, fish 4.8 per cent, boots and shoes 3.9 per cent, and fuel oil 4.4 per cent, were the chief items); exports (including re-exports) totaled £4,994,281 (bananas 55.3 per cent, sugar 18 per cent, and rum 5 per cent, were the main items). Great Britain supplied 33.7 per cent of the imports and took 55.8 per cent of the exports. During 1937, 1513 vessels aggregating 4,652,412 net tons cleared the ports. There were 6893 miles of roads in 1937. During the same year, a total of 65,269 tourists visited Jamaica.

Government. For the fiscal year ended Mar. 31, 1938, total revenue amounted to £2,476,136; expenditure from income, £2,271,174; public debt, £4,604,477. Budget (1938-39): Revenue, £2,449,517; expenditure, £2,535,507. The government is administered by a governor, assisted by a privy council of 8 members, and a legislative council of 30 members (consisting of the governor as president, and 5 ex-officio, 10 nominated, and 14 elected members). Captain-General and Governor-in-Chief, Sir Arthur F. Richards (appointed, June 14, 1938), who succeeded Sir Edward B. Denham (died June 2, 1938).

History. The governor, on Jan. 31, 1938, opened the Inter-Colonial Conference in Jamaica, to discuss uniform customs procedure in the British West Indies. Early in January, a sugar-cane cutters' strike broke out in the parish of St. Thomas and 40 strikers were injured. Later the dispute was settled. From April 29 to May 3, disorders took place on sugar estates in the parish of Westmoreland where strikers battled with armed police. Six persons were killed, 50 were wounded, and 90 were

arrested. The strike was broken and some of the men returned to work. A strike of stevedores and street cleaners began at Kingston on May 21, and two days later it was augmented by a sympathetic strike of industrial and agricultural workers in many parts of the island. Governor Denham was granted emergency powers by the legislative council and the cruiser *Ajax* was summoned from Bermuda. The strike was settled by mediation on May 27, but violence continued.

During July a royal commission was appointed "to investigate social and economic conditions in Barbados, British Guiana, British Honduras, Jamaica, Leeward Islands, Trinidad and Tobago, and Windward Islands, and matters connected therewith, and to make recommendations." The commission consisted of 10 members including Lord Moyne as chairman and Sir Edward Stubbs as vice-chairman. In London the chairman announced that the commissioners would work together in Jamaica, Barbados, Trinidad and Tobago, and British Guiana, but would divide into two parties in order to visit British Honduras, Leeward Islands, and Windward Islands. The commission arrived in Jamaica at the end of October.

At the end of July, the worst accident in the history of the Jamaica railways occurred when a train, which was proceeding to Montego Bay with a large number of vacationists, was derailed and more than 30 people were killed and 70 were wounded. Jamaica's celebration, on August 1, of the 100th anniversary of "Emancipation Day," was carried out in perfect order throughout the island. Agricultural laborers were excluded from the Workmen's Compensation Act which went into force in Jamaica at the beginning of August. Sir Arthur Richards, the new governor, arrived at Kingston on August 19. He promised to try to bring about a peaceful settlement of disputes between capital and labor, and to proceed with the land-settlement scheme initiated last May to relieve unemployment.

After 18 years on the island, engaged in various health projects, the Rockefeller Foundation announced its retirement in September. Headquarters were transferred to Havana, Cuba. On December 13, the Jamaican legislature voted universal suffrage, but the proposal must be approved in London before it can be made effective. Regular shipments of the new fruit named *ugli*, a cross between the tangerine and the grapefruit, were made from Jamaica to London during 1938.

Cayman Islands. A dependency of Jamaica, consisting of the islands of Grand Cayman, Little Cayman, and Cayman Brac. Area, 104 square miles; population (1937), 6800. Georgetown (capital) had 1321 inhabitants in 1934. The chief products are coconuts, green turtle, thatch rope, and turtle shell. In 1937 imports totaled £27,321; exports £10,478; revenue, £17,410; expenditure, £16,649. The government is administered by a commissioner under the direction of the Governor of Jamaica.

Turks and Caicos (ki'kōs) Islands. A dependency of Jamaica. Area, 166 square miles; population (1937), 5300. The principal products are salt (1,400,840 bu. exported in 1937), conchs, turtle shell, sponges, and sisal. In 1937 imports were valued at £25,654; exports £30,061 (including re-exports); revenue, £21,148; expenditure, £10,955. There is a cable station at Grand Turk. The government is administered by a commissioner (with headquarters on Grand Turk) aided by a legislative board of seven members (appointed by the Crown),

subject to the supervision of the Governor of Jamaica.

JAPAN. A Far Eastern empire, comprising (1) Japan proper, or the five main islands of Honshu, Kyushu, Shikoku, Hokkaido, and Ryukyu, with some 600 smaller islands; (2) Formosa (Taiwan); (3) Korea (Chosen); (4) Karafuto (southern Sakhalin); and (5) Pescadores (Bokoto) Islands. In addition Japan controlled the leased territory of Kwantung and the South Manchuria Railway Zone in Manchuria and mandated territories (Marianne, Caroline, and Marshall Islands) in the North Pacific. During 1931-33 it established a protectorate over three Chinese provinces (Liaoning, Kirin, and Heilungkiang) in Manchuria and Jehol Province in Inner Mongolia, forming them into the new state of Manchoukuo. Capital of Japan, Tokyo; Emperor in 1938, Hirohito, who ascended the throne Dec. 25, 1926. See separate articles on FORMOSA, KOREA, KARAFUTO, JAPANESE PACIFIC ISLANDS, KWANTUNG, and MANCHOUKUO.

Area and Population. The area and population of the empire at the censuses of 1930 and 1935 are shown in the accompanying table.

JAPANESE EMPIRE: AREA AND POPULATION

Island	Area, sq. miles	Population, 1930 census	Population, 1935 census
Japan proper	147,593	64,450,005	69,254,148
Korea	85,228	21,058,305	22,899,038
Formosa ^a	13,889	4,592,537	5,212,426
Karafuto	13,934	295,196	331,943
Japanese Empire .	260,644	90,396,043	97,697,555
Kwantung ^b	1,438	1,328,011	1,656,726
Mandated Pacific Is.	830	69,626	102,537

^a Including Pescadores (Bokoto) Islands; area, 49 square miles. ^b Including South Manchuria Railway Zone.

The population of Japan proper was estimated at 72,222,700 on Oct. 1, 1938. The urban population increased from 24 per cent of the total in 1930 to 32.7 per cent in 1935, due partly to the expansion of metropolitan areas. Births in Japan proper in 1936 numbered 2,101,969 (29.9 per 1000); deaths, 1,230,278 (17.5 per 1000); marriages, 549,116 (7.8 per 1000). On Oct. 1, 1936, there were 997,115 Japanese residing abroad (206,802 men and 154,440 women in the Americas). The number of foreigners in Japan on Dec. 31, 1936, was 40,865 (2086 U.S. citizens). The estimated populations of the chief cities on Oct. 1, 1937, were: Tokyo, 6,274,000; Osaka, 3,213,000; Nagoya, 1,186,900; Kyoto, 1,133,900; Kobe, 964,000; Yokohama, 759,700; Hiroshima, 326,600; Fukuoka, 308,200; Kure, 248,400; Yawata, 229,600; Sendai, 229,400; Nagasaki, 214,600; Hakodate, 211,700; Shizuoka, 211,600; Sapporo, 205,900; Yokosuka, 203,800.

Education and Religion. Approximately 10 per cent of persons over 7 years of age are illiterate, but illiteracy is confined largely to people over 50 years of age. The school enrollment in 1935 was: Elementary, 11,103,920; secondary, 694,536; technical, 1,614,443; normal, 33,061; university, 71,162. There is no state religion and religious freedom prevails. Shintoism, with 13 different sects, and Buddhism, with 12 sects, are the principal religions. The Roman Catholic, Greek Catholic, and Protestant churches have a relatively small following.

Production. Manufacturing normally accounts for about 32.7 per cent of the national income, commerce for 25.4 per cent, and agriculture for about 17.7 per cent. Agriculture, however, supports nearly half the population of Japan proper, although only 14,914,000 acres (16 per cent of the total

area) were suitable for cultivation in 1936. Cultivable land included 7,885,000 acres of rice fields and 7,029,000 acres of upland farms. There were 59,271,000 acres of forests, bamboo groves, etc. The Ministry of Agriculture estimated farm income at 3,754,000,000 yen for 1938 and 3,654,000,000 yen for 1937. Production of the chief crops in 1937 was: Rice (rough), 603,012,000 bu.; wheat, 50,410,000 bu.; barley, 35,217,000 bu.; naked barley, 30,512,000 bu.; oats, 9,927,000 bu.; soybeans, 13,482,000 bu. (1936); azuli beans, 3,542,000 bu. (1936); potatoes, 61,552,000 bu. (1936); sweet potatoes, 137,733,000 bu. (1936); tea, 118,650,000 lb.; sugar cane, 1,123,000 metric tons (1936); tobacco, 142,375,000 lb.; cocoons, 712,941,000 lb. Raw silk production was 93,261,000 lb. (1936). The livestock census of 1936 showed 1,771,000 cattle, 1,432,000 horses, 1,110,000 swine, 292,000 goats, and 61,000 sheep.

The mineral and metallurgical production of Japan proper for 1936 was (in metric tons): Coal, 41,803,000; iron pyrites, 1,850,914; sulphur, 198,237; copper, 77,975; lead, 8883; zinc, 39,066; tin, 1871; pig iron (including Korea and Manchuria), 2,008,000; steel ingots (including Korea and Manchuria, 4,539,000. The 1936 output of crude petroleum was 2,458,000 bbl.; gold, 714,855 troy oz.; silver, 9,765,000 troy oz. The value of the output of leading manufactured products of Japan proper in 1936 was (in 1000 yen): Cotton fabrics, 865,002; cotton yarn, 840,274; machinery, 785,252; wool fabrics, 339,857; rayon, including silk mixtures, 207,027; silk fabrics, 301,009. The total value of industrial production in 1937 was estimated at 16,486,000,000 yen (12,257,588,000 in 1936). Of the value of the 1936 output, textiles accounted for 29.8 per cent; metals and metal products, 18 per cent; chemicals, fertilizers, etc., 17.2; machinery and vehicles, 14; foodstuffs, 10.2; clay products, 2.7; lumber and wood products, 2.3; printing and binding, 1.9 per cent. In 1937 Japan regained world leadership in the production of cotton piece goods.

Foreign Trade. General merchandise imports into Japan proper in 1937 totaled 3,783,177,000 yen (2,763,681,000 in 1936) and general exports 3,175,418,000 yen (2,692,976,000). Converted to U.S. currency at average exchange rates, imports were \$1,088,344,000 in 1937 (\$802,076,000 in 1936); exports of Japanese products, \$914,457,000 (\$781,555,000). The leading 1937 imports, in order of value, were ores and metals, ginned cotton, wool; oils, fats and waxes; and machinery. The value of leading 1937 exports was (in U.S. currency): Cotton piece goods, \$165,031,000; raw silk, \$112,242,000; rayon piece goods, \$44,597,000; heavy iron and steel, \$26,097,000. The United States supplied 33.6 per cent of the 1937 imports of Japan proper; India, 11.9; China, 10.4; Germany, 4.7; Australia, 4.4. Of the exports the United States took 20.6 per cent; China, 12.3; India, 9.4; United Kingdom, 5.3.

Imports of the Japanese Empire in 1938 totaled 2,836,000,000 yen and exports 2,897,000,000 yen, or decreases of 28.5 and 13 per cent, respectively, from 1937. About 50 per cent of the total 1938 trade was with the continent of Asia (43 per cent in 1937). United States trade figures for 1938 showed imports from Japan of \$126,820,137 (\$204,201,032 in 1937) and exports to Japan of \$239,575,201 (\$288,558,170 in 1937).

Finance. Operations of the general accounts budgets for fiscal years ending March 31 are shown in the accompanying table.

JAPANESE BUDGET OPERATIONS

[In thousands of yen]

	1936-37 (actual)	1937-38 (estimates)	1938-39 (estimates)
Revenues:			
Ordinary	1,561,650	1,833,085	2,203,762
Extraordinary *	147,985	233,798	302,698
Total revenue	1,709,635	2,066,883	2,506,460
Expenditures:			
Ordinary	1,320,141	1,528,697	1,767,447
Extraordinary	962,035	1,452,994	1,747,075
Total expenditures	2,282,176	2,981,691	3,514,522
Excess of expenditures	572,541	914,808	1,008,062
Proceeds from loans ..	609,622	827,395	1,008,062

* Excludes proceeds of loans and transfer of balance brought forward from preceding years. ^b Includes 317,165,276 yen to be transferred to the Extraordinary Military Expenditures, Special Account.

The above figures are exclusive of the special budget for extraordinary military expenditures having no fixed fiscal term. For this budget the Diets of July-August, 1937, September, 1937, and March, 1938, approved special taxes and other revenues totaling 502,533,000 yen (including 317,165,276 yen transferred from the General Accounts budget for 1938-39) and expenditures of 7,379,879,000 yen. National loans of 6,877,346,000 yen were authorized to meet the excess of expenditures authorized over tax receipts and transfers.

The Vice-Governor of the Bank of Japan estimated that all government payments during the calendar year 1938 exceeded receipts by 4,750,000,000 yen, as against an excess of 1,770,000,000 yen in 1937. The bonded indebtedness of the Japanese Government on Dec. 31, 1938, totaled 16,222,700,000 yen, an increase of 4,329,000,000 yen over Dec. 31, 1937, and rice notes outstanding Dec. 31, 1938, amounted to 428,600,000 yen. The average exchange value of the yen was \$0.2879 for 1937 and \$0.2845 for 1938.

Transportation. On Mar. 31, 1937, there were 10,826 miles of government and 4338 miles of private railway line. For the year ended Mar. 31, 1936, all railways carried 1,531,314,000 passengers and 109,169,000 tons of freight, the gross receipts totaling 635,183,000 yen. There were about 665,394 miles of roads and highways in 1937; the number of automobiles on Jan. 1, 1938, was 175,761. Regular air services connect the principal cities of Japan proper with Formosa, Korea, Manchuria, China proper, and the Japanese mandated islands in the Pacific. Regular services between Tokyo and Peiping and between Fukuoka and Nanking via Shanghai were opened Oct. 5, 1938. In 1936 Japanese air routes totaled 1887 miles. Operating statistics were: Number of flights, 10,452; passengers, 20,996; freight, 184,686 lb.; mail, 785,968 lb. Effective Dec. 1, 1938, the government merged the principal aviation companies of Japan to facilitate the rapid development of civil air services. In 1938 the Japanese merchant marine consisted of 2187 vessels (of 100 tons or over) with a gross tonnage of 5,006,712 (2564 ships of 4,475,110 tons in 1937). During 1937, 21,736 vessels of 72,886,000 net registered tons entered the ports of Japan proper in the foreign trade (excluding trade with Formosa and Korea).

Government. Executive power is vested in the emperor, who acts with the advice and aid of a ministry appointed by and responsible to him, but every law requires the approval of the Imperial Diet of two chambers. The Upper Chamber (House of Peers) consisted in 1938 of 412 members, of

whom 192 were chosen for life on the basis of rank, wealth, and other qualifications and the remainder were elected from and by special groups for seven years. The House of Representatives consisted of 466 members elected for four years. There is a Privy Council, consulted by the emperor on important national problems. Premier at the beginning of 1938, Prince Fumimaro Konoye, heading a non-party government formed June 3, 1937. For changes in 1938, see *History*.

HISTORY

Domestic Affairs. The entire energies of the Japanese people were directed throughout 1938 to the prosecution of the war upon China (see CHINA under *History* for a full description) and to preparations for the expected conflict with the Soviet Union. The national emergency imposed an increasing strain upon the national economy, reversing the striking economic progress that Japan had enjoyed in the years preceding the outbreak of the Chino-Japanese struggle in July, 1937. Under cover of the emergency, the reactionary and ultra-nationalist elements completed the rout of liberalism and representative government, begun in 1931. By the end of 1938 a military-fascist government was exercising virtually unlimited control over Japan's economic and political life. The nation's economic structure had undergone a far-reaching change resulting from mobilization of all economic resources for military purposes.

National Mobilization Law. The final victory of the military-fascist elements was achieved by means of repeated changes in the cabinet that eliminated persons opposed to absolute military control of the government and the economic system. In the Diet session of February-March, 1938, the military-fascist forces obtained the passage, against the opposition of liberal politicians and industrialists adversely affected by the rise of war industries, of the National Mobilization Bill. This far-reaching statute, drafted by the army-dominated Cabinet Planning Board, gave the government unlimited control of Japanese social and economic life, including industry, finance, trade, transportation, labor, the press, and organizations of all kinds. It provided for conscription of workers, prohibited strikes and lockouts, and authorized the government to fix wages, hours, and working conditions. Challenging the legislative powers of the Diet, it provided that matters not specifically mentioned in the bill could be regulated by Imperial Ordinance.

Opponents of the measure were subjected to intimidation and terroristic attacks. The Tokyo headquarters of the two largest political parties—Minseito and Seiyukai—were forcibly occupied by a gang of 400 hired ruffians during the course of the debate in the Diet. Before approving the bill, the party leaders demanded guarantees from the Home Minister against a repetition of these tactics. They also exacted a pledge from Premier Konoye that the bill would not be applied during the Sino-Japanese conflict but only in case of war with another power. The government also agreed to appoint a majority of Diet members to the National Mobilization Council, to be consulted regarding Imperial Ordinances issued under the measure. On March 26 laws nationalizing the electric power industry were passed, with certain amendments protecting private power interests.

Cabinet Reorganized. Most of the safeguards erected against application of the National Mobilization Act were swept away as a result of the

political crisis precipitated by the Chinese victory at Taierhchwang on April 6-7. The army demanded immediate application of the Mobilization Act. Prince Konoye resisted, but was finally forced to repudiate his pledge and to sanction the putting into effect of the main provisions of the act (May 5). On May 26 the cabinet was reorganized to facilitate prosecution of the war and enforcement of the Mobilization Act. Gen. Kazushige Ugaki became Minister of Foreign and Overseas Affairs, replacing both Koki Hirota and Sanyu Otani. Gen. Sadao Araki became Minister of Education and Seihin Ikeda Minister of Finance and of Commerce and Industry. On June 3 Gen. Seishiro Itagaki, recalled from active service in North China, replaced Gen. Gen Sugiyama as War Minister. This "Quick Victory Cabinet," as it was dubbed by the Japanese press, placed military and naval men in control of all the key positions except that of Finance.

The presence of Prince Konoye and other civilians in the government balked the army extremists of complete domination of the governmental machinery. The continuance of the struggle for power between the moderate and extremist factions was marked by the resignation of General Ugaki on September 29. His withdrawal was attributed in some quarters to his opposition to military control of the China Affairs Bureau, established to direct economic and cultural relations between Japan and the conquered portions of China. It was also charged that Ugaki had not been aggressive enough in his negotiations with Britain, France, Russia, and the United States to suit the army extremists. He was said to have opposed both the plan for an attack upon Canton and the provocative treatment of foreign interests in China. The Foreign Minister's resignation was followed by that of Naotake Sato and Hachiro Arita, the two former Foreign Ministers who had been made advisers to the Foreign Office in an effort to strengthen Ugaki's hand against the extremists. Premier Konoye himself took over the Foreign portfolio pending the appointment of Hachiro Arita on October 28.

With Ugaki out of the way, the China Affairs Bureau was reconstituted in line with the wishes of the military extremists and the successful offensive against Canton was launched on October 12. The extremists now shifted their attack to the Finance Ministry under Seihin Ikeda, which vigorously opposed the army's demands for application of the remaining provisions of the National Mobilization Law, particularly those permitting state control of corporation funds and restriction of the size of dividends. Ikeda held that these measures would adversely affect the capital market and curtail industrial activity. He was supported in this stand by Premier Konoye. But pressure of the extremists proved irresistible and on December 28 the National Mobilization Council approved six imperial ordinances empowering the government to control dividends, profits, wages and hours and to requisition factories, land, and commodities. This decision was followed by the resignation of Premier Konoye and Finance Minister Ikeda on Jan. 4, 1939, and the formation of a new government under Baron Hiranuma representing a formal victory for the military-fascist groups.

Economic Developments. The provisions of the National Mobilization Law were supplemented by other control measures designed to place Japanese political and economic forces at the command of the military machine. Among these were the Temporary Capital Adjustment Law, regu-

lating the flow of capital; the Temporary Measures Regarding Exports and Imports, restricting or prohibiting the export or import of any commodity; the restriction of currency exports; mobilization of all gold coin and bullion hoarded by banks and individuals; release of 300,000,000 yen from the Bank of Japan's gold reserve for shipment abroad to create a revolving foreign exchange credit, to be used for the purchase of raw materials for the manufacture of export articles, etc. By the end of 1938, practically every phase of business, financial and industrial activity was subjected to rigid limitations.

As a result of these measures, commodity prices advanced to the point where Japanese exports became less competitive in world markets. Foreign trade declined. Living costs increased sharply. The income from tourists and from Japanese shipping was drastically curtailed. Many small- and medium-sized industrialists not engaged in the production of war material were obliged to close down their plants or change the nature of the enterprises. On the other hand, the productive power of the nation was enlarged, particularly in armament and allied heavy industries. The output of peace-time industries declined by about 30 per cent from 1937. Unemployment virtually disappeared as a result of conscription and the demand for industrial labor. There was an increase in purchasing power and savings, which strengthened the government loan market. But despite efforts to develop local sources of supply, the government was hard pressed to find the foreign exchange necessary to pay for imports of vital raw materials and was obliged to deplete its gold reserve to a dangerously low level. In December the government ordered the gold mines in Korea to increase their production. The budget for 1939-40, presented in December, provided for the highest ordinary expenditures in the nation's history in addition to the extraordinary military bill of some five billion yen. Higher taxes were envisaged to limit the steadily mounting national debt (see *Finance*).

Not content with grandiose plans for the economic exploitation of Manchuria and China proper, the government pushed preparations for economic penetration of the Pacific islands and Indo-China. Early in 1938 the officially sponsored Taiwan Development Company announced a five-year expansion program, calling for investment of 120,000,000 yen in agricultural and industrial development in Formosa and 140,000,000 yen in similar enterprises in the South Seas. In conjunction with French investors, it established on Jan. 20, 1938, the French Indo-China Industrial Company, which commenced developments of iron, gold, zinc, manganese, and other metals in French Indo-China. The first shipment of 7500 tons of iron ore was sent to Japan on March 15. Meanwhile, the government continued to develop its program for mass colonization of Japanese youths in Northern Manchuria. About 95,000 young men were scheduled to settle there in 1939 and they were to be supplied with "picture brides" once they had established homes. To facilitate transportation to and from the mainland, the Ministry of Communications in December authorized a preliminary survey of a proposed 80-mile tunnel between Japan and Korea under the Straits of Tsushima.

State of National Morale. According to most observers, the intensely patriotic spirit of the Japanese people remained unimpaired by the hardships and sacrifices imposed by the war upon China. Yet signs of war weariness were noted. The fall of

Hankow and Canton in October, 1938, was received without the unbounded hope and enthusiasm that followed the capture of Nanking in December, 1937. The public was told by War Minister Itagaki that the conflict in China was only half over and that Japan might find herself facing a second enemy at any time. The New Year messages issued by government officials at the end of 1938 all emphasized the necessity for further sacrifices. In July the city of Tokyo cancelled the Olympic games scheduled to be held there in 1940.

Typhoons and floods inflicted further sufferings upon the Japanese people. The worst typhoon in 21 years swept Japan on September 3, killing about 200 persons and destroying 3500 houses. Crops were badly damaged. On October 21 another typhoon killed some 226 persons, injured more than 590, and left 35,000 homeless.

Foreign Relations. The resistance offered by the United States, Great Britain, and France to the Japanese efforts to exclude them from China and the resulting friction is described in detail in *CHINA under History*. The rise of German and Italian military power in Europe, with its threat to Britain and France, gave Japan a virtually free hand to oust British and French interests from China and eastern Asia. The Japanese leaders worked with dispatch, once they had overcome the opposition within Tokyo governmental circles, in order to consolidate their position in the western Pacific before the new British battle fleet, planned for completion by 1942, would be ready to operate from the Singapore naval base.

After Munich the Japanese felt free to defy Britain by launching the attack upon Canton and to prepare for the occupation of Hainan Island, dominating the sea approaches to French Indo-China. But the firm resistance offered by the United States to the Japanese "squeeze play" in China and Washington's financial aid of December to China (q.v.) revived Japan's fear of a possible Anglo-American combination against her and induced her to moderate her aggressiveness for the time being. While standing firmly by their "new order" in eastern Asia, the Japanese sought to avoid unnecessary irritation of American sentiment. A gentleman's agreement was reached in March under which Japanese fishing vessels did not renew their previous invasion of the Alaskan salmon fisheries at Bristol Bay.

Naval Building Race. However, the action of the Japanese Government in refusing on February 12 to supply information on its naval building plans, requested by Britain, France, and the United States as signatories of the London Naval Treaty of 1936, caused both Britain and the United States to enter the unlimited naval armament race already understood to have been begun by Japan. In November the yearbook of the German naval command reaffirmed previous rumors that Japan was building two new battleships of 40,000 to 45,000 tons displacement, each carrying nine 16-inch guns. British and American ships of similar tonnage and armament were hurriedly planned. The German yearbook also indicated that Japan was building fuel bases for her air force and submarines in the mandated islands in the Pacific, taken from Germany in the World War. The Japanese, who had repeatedly denied violating the demilitarization provisions of the mandate, were again to be questioned on this point at the annual session of the League mandates commission in Geneva in October-November. However, the Japanese Government on November 3 formally broke off all rela-

tions with the technical organizations of the League as a result of the League Council's action of September 30 authorizing individual application by League states of punitive measures against Japan.

Relations with Soviet Union. Japanese relations with the Soviet Union became more and more strained during 1938. The Japanese were deeply angered by Soviet aid to China and by the fact that Japan's aggression upon China had given the Chinese Communists a new foothold in the Nationalist Government and among the Chinese masses. In March Japan refused to permit the final payments due Russia on the Chinese Eastern Railway. The bad blood between the two countries, expressed in countless minor clashes between patrols along the Soviet-Manchoukuo border, came to a head in the fighting at Changkufeng near Possiet Bay in July and August (see MANCHOUKUO under *History*).

The successful Russian defense of Changkufeng and Moscow's refusal to back out under the threat of large-scale hostilities put a damper on Japanese belligerency toward the U.S.S.R. While Tokyo officials decided that the time was not ripe for a final showdown with the Soviet Union, they warned their people to prepare for the coming conflict. Friction with Russia continued over other points—the Chinese Eastern Railway payment, the Sakhalin oil concession, the suspension of parcel post service, and the perennial quarrel over Japanese fishing rights in Soviet waters, guaranteed by the Portsmouth Treaty of 1905. In December the Soviet Government refused Japan's request for a new fisheries treaty to permit fishing in Soviet waters in 1939 except on stiffer terms than theretofore prevailing. This stand aroused new threats of war in Tokyo and was still being debated at the year end.

Attitude Toward Rome-Berlin Axis. During the European crisis of September over Czechoslovakia, the Tokyo Foreign Office announced that in the event of war, Japan would adopt a policy of "watchful waiting," while maintaining "benevolent neutrality" in favor of Germany and Italy. After Munich another difference of opinion developed among Japanese military and diplomatic leaders over the advisability of transforming the Rome-Berlin-Tokyo anti-Communist pact into a military alliance. This issue was still unsettled when the year closed. Meanwhile, a German-Japanese cultural pact, providing for mutual recognition of their respective racial principles, was concluded on November 22. In February Chancellor Hitler had announced that he would formally recognize Manchoukuo, thus following the lead set by Italy in 1937.

See CHINA, FRANCE, GERMANY, GREAT BRITAIN, MANCHOUKUO, PHILIPPINES, and SIAM under *History*; COMMUNISM; FASCISM; LEAGUE OF NATIONS; NARCOTICS; MILITARY PROGRESS; NAVAL PROGRESS.

JAPANESE PACIFIC ISLANDS (NANYO). By the Treaty of Versailles Japan was given the mandatory right over the former German South Sea Islands north of the equator. They include (1) MARIANA (or LADRONE) group of 14 islands, the main ones being Saipan, Tinian, Rota; (2) CAROLINE group of 549 islands, the main ones being Yap, Palau, Angaur, Spring, Summer, Wednesday, Ponape, Kusaie; (3) MARSHALL group of 60 islands, the most important being Jaluit. Total area, 830 square miles; total population (1936 estimate), 108,000.

Production. Cane sugar (1935-36, 49,100 metric tons), maize (1936, 200 metric tons), phosphates (1936, 70,000 metric tons), tapioca, bananas, coffee, yams, taro, alcohol, and copra (1936 exports, 12,200 metric tons) are the main products. In 1937 the estimated value of merchandise imports (in old U.S. gold dollars) was \$3,200,000 (1936, \$2,500,000); exports, \$4,300,000 (1936, \$3,500,000).

Communications. An air service between Tokyo and Saipan was scheduled to be inaugurated during 1937, covering a distance of 2562 miles in about 36 hours.

Government. The budget for 1937-38 was estimated to balance at ¥8,700,000 (yen averaged \$0.2879 for 1937). A governor, with headquarters at Koror in the Caroline group, administers the islands under the Japanese Minister of Overseas Affairs. Governor, Kisao Hayashi.

JEWS. Germany. The assassination in November of Third Secretary of the German Embassy Ernst vom Rath in Paris by the young Jewish refugee, Herschel Grynszpan, unleashed an official terror against the Jews in Germany, which, it quickly became apparent, had as its purpose the complete bankruptcy and eventual extirpation of some 700,000 Jews and so-called racial Jews residing in this land. On November 10, aided and abetted by the press, organized mobs made up of members of the Elite Guard and the Brown Shirts proceeded through the streets of Germany's urban communities burning synagogues, wrecking and pillaging shops and offices, and arresting on a wholesale scale thousands of heads of families for incarceration in concentration camps. This pogrom went on for 14 hours and terminated as quickly as it had begun when Propaganda Minister Goebbels called a halt, although he condoned the mob action as inspired by "healthy instincts."

The devices which Germany immediately unleashed for the purposes of exacting retaliation, clearly indicated that the plans had long been in preparation and simply awaited the appearance of a provocative act such as the Rath assassination. Field Marshal Hermann Goering, Four-Year-Plan Director, issued a decree prohibiting Jews, after January 1, from conducting retail-trade, mail-order, commission, or handicraft enterprises. He also levied a fine of one billion marks upon German Jews as a "penalty for the dastardly murder in Paris." In other words, under these decrees, Jews were to be excluded from all forms of capital and productive enterprise after the end of the year, making possible, therefore, survival only on the basis of the consumption of the capital remaining in the hands of the group. It was estimated that this total capital was not much in excess of 10 billions of marks. The impoverishment of the whole Jewish community was likely therefore to have the inevitable end of building up a new proletariat.

It was generally agreed by trained observers on the scene that this ruthlessness on the part of the German officialdom had neither the support nor the sympathy of the great mass of the population. Indeed, many of them, at the risk of their personal safety, gave asylum to Jews who were being sought by the police, helped in the feeding of families

whose menfolk had been carried off to jail, and privately expressed their shame and disgust at the wanton destruction and pillaging. Mrs. Anne O'Hare McCormick very justly pointed out that the real victims of this tragedy were not the Jews but the German people itself. She said in the *New York Times* of Nov. 12, 1938: "It means that the millions who detest this brutality have lost the power to protest and that other millions have no desire to protest because they have been worked on by years of anti-Semitic propaganda. And this shows what the Nazi mentality plus the Nazi police power has done to an intelligent people."

The work of retaliation was pursued on many fronts. Germany began a mass deportation of Polish Jews across the Polish frontier and within a single day from 4000 to 18,000 persons, according to various estimates, including women, children, and sick people, were being deported to Poland with only 10 marks in their pockets and the clothes they wore.

In the middle of December it was revealed that Germany was evolving a plan for the purposes of getting rid of the greater part of its Jewish community, not merely at the expense of German-Jewish capital, but also by the forced participation in expanded export trade on the part of Jews throughout the world. Dr. Hjalmar Schacht, President of the Reichsbank, placed before Mr. George Rublee, Permanent Director of the Governmental Committee for Refugees, which had been set up at the Evian Conference (described in detail below), the German plan. Under this, all capital possessions left by Jews in Germany after the government collected its share in "flight taxes," "money atonement," and "aryanization profits," and after the liquidators got through liquidating Jewish businesses, were to be pooled. This pool, which could not be transferred, was to be used as the basis for an international loan, to be raised obviously by world Jewry, for the purposes of financing the emigration of German Jews. The service charges on this loan were to be paid out of "additional German exports," that is to say, the servicing of the loan would be based entirely upon the willingness of Jewish refugees and their friends among world Jewry to buy German goods over and above normal German exports. Here, in other words, was a device for legalizing the expropriation of Jewish property in Germany and at the same time forcing world Jewry to pay for the redemption of Jewish hostages and their movement out of the country through the forced purchase of German goods.

It appeared, toward the end of the year, that international experts were not particularly cordial to the plan, although Mr. Rublee accepted the invitation to come to Berlin to discuss the various ramifications of the proposal with Mr. Schacht and Field Marshal Goering.

Italy. Undoubtedly inspired by the activities of the Nazis in Germany and, as many informed observers believed, caught in the toils of the net which Hitler had spun about him with great skill, Mussolini in Italy, beginning with the midyear, began to inaugurate a widespread anti-Semitic program. No effort was made by anti-Jewish propaganda to prepare the Italian people—always friendly to the Jews—for the storm which descended so suddenly. Nor did the Italian Government make any effort to provide any ameliorating measures. Seeking to cover itself in the eyes of the world on the basis of a racist doctrine which was obviously copied from Germany, Italy, beginning with August, promulgated a series of anti-Jewish decrees

which had the effects of eliminating the Jews from the cultural and public life of Italy and shutting off virtually every conceivable opportunity for business and professional enterprise.

The Jewish problem in Italy obviously was not a significant one from the population point of view, and while the Jews were common in business, professional, and educational activities, they by no means played the predominating role that was true of their position in Vienna, for example. The fact of the matter was that the number of Jews residing in Italy was very small. The 1931 census gave the total of the Italian Jewish population as well under 50,000. Even allowing for the few thousand German and Austrian Jewish refugees who had migrated to Italy and for those Jews who had been converted to Christianity, the total of persons in Italy regarded as "non-Aryans" could not amount to as much as 2 per 1000 of the population. In the second place, the Italian Jewish population had virtually been entirely assimilated in view of the fact that most Italian Jews had been Italian nationals for many generations.

The anti-Jewish decrees, in less than four months, as has been said, virtually eliminated the Jews from every form of cultural and productive activity. The decrees included the following: No Jewish students were to be permitted to study in the high schools or universities; special classes were open for Jewish children in the elementary school; all Jews who had entered Italy since the World War, whether they had become naturalized or not, were to quit the country before Mar. 1, 1941; Italian Jews were not to be permitted to own urban real estate which produced an income in excess of more than \$1000 a year; Jewish capitalists were not permitted to own factories employing more than 300 workers; all Jews in public offices, in the army, in the universities and schools, and working as journalists, writers, and artists, were to be dismissed from their posts; Jews were banned from appearances on stages and in concert halls, nor might the work of a Jewish writer, Italian or foreign, be published; banks, insurance companies, and other financial institutions were called upon to dismiss their Jewish employees and to drop their Jewish directors; the Jewish owner of a shop or business might not bequeath his shop or business to his children.

It was generally agreed that this Italian anti-Semitic policy had no basis of support in the lower classes and emerged entirely from the Fascist Party bureaucracy. It is important to note that the Vatican, speaking for the Catholic community, courageously raised its voice against the new racial dogmas which it termed "excessive nationalism." And then when Mussolini, in a further decree, prohibited marriage between Aryan and non-Aryan Christians, it officially intervened. In letters addressed to the King and to Mussolini, the Vatican indicated that such a prohibition was a violation of the Concordat between the Church and the Italian State, under which the State agreed to confirm marriages solemnized by the Church. The Vatican also was going out of its way to defy the new decrees by offering aid to baptized Jews. How successful the Church was likely to be in the struggle against the new paganism—a paganism which had virtually become the official, religious, and moral view of Germany and now apparently was being adopted in Italy as well—remained to be seen. In any case it was very important to observe that the Catholic Church increasingly was being pushed

into a position of open hostility toward Fascism and Nazism.

Pressure also was being brought to bear on Italy by the American State Department, which called upon the Italian Government to clarify its attitude as regards the status of American Jews in Italy. As a result of such inquiries, in October the Italian Foreign Office assured the American Government that its decrees related to foreign Jews in general and not only to Jews of American citizenship and that American Jews would not be treated less favorably than other foreign Jews. It was apparent, however, that such an ambiguous promise was not completely satisfactory and that the State Department was prepared to pursue the matter further until questions of American Jewish property and personal rights had been entirely clarified. On December 19 Acting Secretary of State Sumner Welles announced that the Italian Government had given assurances that the rights of all American citizens would be fully observed in the application of the Italian anti-Semitic measures.

Russia. In September it was announced that the Society for Jewish Farm Settlement in Russia, organized and financed by American Jews to assist Jews in the Soviet Union, was proceeding to liquidate its affairs and planning to withdraw entirely from the Soviet Union immediately. The reason offered was that the Society had completed its work in Russia and that there was no longer any Jewish problem in this country. In the 17 years in which the so-called Agro-Joint, the Russian subsidiary of the Society, had operated it had spent 25 million dollars in the U.S.S.R. contributed by American Jews. With the liquidation of Agro-Joint, the last American relief work terminated, in view of the fact that Ort, the American Society for helping to train Jewish artisans, had wound up its affairs in July. There was one point, however, on which questions emerged in the United States. It had been generally assumed by contributors of the work of the Society that the money expended in the U.S.S.R. was in the form of an investment or loan rather than an outright grant. It was significant to note, however, that the Agro-Joint, in heralding the termination of its work, made no reference to the arrangements effected with the U.S.S.R. for the purposes of repaying this loan. American Jews were raising the question whether it was not desirable to insist upon a final settlement in view of the fact that funds were needed so badly for the purposes of resettling Jewish refugees from Central Europe.

Czecho-Slovakia and Hungary. That, as a result of the Munich settlement, Czecho-Slovakia was increasingly falling under the sway of Germany, was revealed by the fact that an official anti-Semitic policy was being drawn up. In December the Czech press described the first step taken in this direction as falling "within the framework of solving the whole Jewish problem." This was in connection with the issuance of a decree ousting Jews in teaching posts in German-language universities and high schools in the country. There was every indication that similar limitations on Jewish professional people were going to be imposed as regards the German institutions within Czecho-Slovakia. The Czech press was admitting that prohibitions against the activities of Jewish doctors in hospitals, sanitariums, insurance societies, and other social institutions were going to be imposed before long.

A somewhat similar anti-Jewish movement was evidencing itself in the case of Hungary, which

also was falling under the sway of the Nazi system. A new law already prepared by the Government Party was presented to Parliament, based on the same racial concepts to be found in the German anti-Semitic code. Under the Hungarian bill, every "full-blooded" or "half-blooded" Jew was to be regarded as a Jew. "Quarter Jews" were not to be so regarded nor "half Jews" if the Jewish parent was baptized and if the parents' marriage was contracted before Jan. 1, 1938. The law also made exceptions in the case of veterans of the World War who received gold or silver medals or had been 50 per cent disabled.

Under the bill, the Ministry of the Interior was given authorization to deprive Jews of citizenship if they were naturalized after June, 1914. Jews were virtually disfranchised by the inclusion of a provision that they could not vote with the other part of the population but only one month later in special polling booths. Further, Jews were to be prohibited from forming more than 6 per cent of any elected body throughout the country and were entirely excluded from the Senate. They were not to form more than 6 per cent of the members of any profession. In the field of newspaper publishing, the disabilities were particularly onerous. Jews were to be entirely excluded from owning, editing, or playing a leading part in any newspaper. This provision was to be put into force at the end of 1938. In commercial undertakings Jews were restricted to 12 per cent with an additional allowance of 3 per cent for those with military decorations. In this field, however, the time limit was fixed at 1943.

Austria. For the position of the Jews consult the article on that country.

Poland. The position of the Jews in Poland, now that Germany was spreading its influence increasingly over Central Europe, was becoming more threatening. The Polish Nationalists, the outstanding political group in the country, were beginning to demand the introduction of the ghetto for Polish Jews, and as Mr. Zukerman pointed out in *The Nation* of Apr. 2, 1938, the Polish Government had begun to comply with this demand. The first step in the introduction of the ghetto was in connection with the segregation of Jewish students in the universities. While the Government itself did not sanction the movement, it made no effort to discourage it. Rectors of the Polish universities, therefore, were compelling Jewish students to sit on special benches and their refusal was met with brutal beatings at the hands of the Nationalist students, or expulsion from the schools by the university administrators.

The ghetto was also being introduced unofficially in many other quarters. Apparently there already existed hundreds of ghetto markets in Poland, where Jewish traders and stallkeepers were being separated from the Poles and where Jewish porters were being compelled to wear special badges. Nationalistic Polish lawyers were demanding special benches in the courts for Jewish attorneys and nationalistic doctors were demanding similar segregation for their Jewish colleagues. Mr. Zukerman recorded, however, the fact that all sections of the Polish people were neither approving tacitly nor acquiescing silently. Polish labor and the Democratic Polish intelligentsia raised protests, while a number of leading Polish professors and scientists openly revolted against the order of university rectors for segregation.

Polish workers gave their Jewish fellow-workers assistance when, in March, the Polish

Jews staged a general strike against the introduction of the ghetto. Everywhere Polish workers joined their Jewish comrades. Also, the Polish Socialist Party was working harmoniously with the Jewish Labor Party against anti-Semitism. Mr. Zukerman was of the opinion that a good deal of the anti-Semitism had official support. Said he:

Poland, it is true, has a grievous Jewish problem but it is not the cause of the present outburst. Of the Polish population, 76 per cent consists of peasants, most of them on the point of starvation; yet Polish peasantry as a whole is not anti-Jewish. In most of the villages when the Nationalist agitators come to organize pogroms they meet with the resistance of the peasants. The peasants insist on trading with Jews even in the ghetto markets. The Polish workers, the worst paid in Europe, are not anti-semitic. Even the Polish intelligentsia and academic youth have no real grievance which could provoke such barbarism.

Mr. Zukerman went on to say that the terror launched by the Nationalists was for the purposes of embarrassing the Government, undermining the morale of the people, and creating a mood of anarchy which would make possible the establishment of a dictatorship comparable to the Italian and German Fascist and Nazi rules. Said he: "It may sound strange abroad, but in Poland it is a generally accepted truth that the present anti-Jewish drive . . . is directed more against Polish democracy than against the Jews."

Palestine. The aggravation of the refugee problem and the outbreak of the official German pogrom in November, as well as the continued Arab terrorism that was taking place in Palestine during the year, necessitated a reconsideration on the part of the British Cabinet of its plan promulgated in 1937 for the partition of the Holy Land. Under the 1937 proposal, Palestine was to have been divided up into Jewish, Arab, and British mandated States. Because of the resistance to the proposal from all quarters, a new Partition Commission, headed by Sir John Woodhead, was set up. The Woodhead Commission had been charged with the drawing up of plans for partition; and it had reported its inability to recommend boundaries for the proposed areas which would afford a reasonable prospect of the eventual establishment of self-supporting Arab and Jewish States. The British Government announced that it would seek a new solution for the Palestine problem "consistent with its obligations to the Jews and Arabs."

Thus Palestine once more became a center of interest not only of Jewish and Arab plans and hopes, but of British imperial policy as well. As far as the Jews were concerned, the problem had become particularly acute in view of the fact that the establishment of the homeland also coincided with the revival of anti-Semitism throughout Central Europe. The necessity for quickly finding asylum for hundreds of thousands of persons who were not necessarily associated with the Zionist movement, focused attention on the need for arriving at an accommodation as regards the Arab-Jewish dispute.

The Arab world regarded the plans of Jews in Palestine with considerable misgivings. Their whole case obviously rested upon the thought that an uncontrolled Jewish immigration would swamp the Arabs and convert them into a national minority. The problem obviously was a difficult one, particularly from the British point of view, whose ability to maintain peace in this strategic area obviously was linked with the stability of the empire in near and middle Asia. As Mr. Harold Callender, writing from London on November 12 in the *New York Times*, reported: "To enforce fair play amid

such racial bitterness, to permit Jewish immigration, according to the wording of the Balfour declaration in favor of a Jewish national home in Palestine, while safeguarding the Arab interests . . . is a difficult, perhaps impossible task for Britain."

Refugee Problem. The organized movement against Jews in Germany immediately after the accession to power of Hitler in 1933 forced international interest and preoccupation with the question of refugee settlement. In October, 1933, a Commission was set up by the League of Nations, headed by the American, James G. MacDonald, who was appointed High Commissioner of Refugees coming from Germany. With funds made available only from private contributions, this Commission set about the task of finding places of asylum for fleeing German refugees, and in partial measure met with successes. Some 40,000 Jewish refugees were moved into Palestine, and the Netherlands and Czecho-Slovakia absorbed small numbers.

The new wave of terrorism in 1938, following the absorption of Austria into Great Germany and the acquisition of the Sudetenland under the Munich settlement, as well as the inauguration of official and semi-official anti-Semitic campaigns in Hungary, Poland, and Czecho-Slovakia, necessitated a re-examination of the whole problem. At the behest of the U.S. Government, on March 24, a general conference on refugees was summoned with invitations sent to 9 European powers and 20 American Republics. Only Italy rejected the invitation to attend. The conference met at Evian, France, in July, with the United States represented by a delegation headed by Myron C. Taylor. While the conferees were prepared to engage in a frank discussion and listened with sympathetic attention to Mr. Taylor's demand for immediate action, no formal commitments were entered upon. The representatives of all participating countries reported their inability to let down immigration bars because of pressures at home against the admission of new groups, many of which would inevitably be inducted into the already large unemployed populations. The French insisted that they had already admitted more refugees than they were in a position to absorb. The British could only propose that the powers should try to persuade Hitler to stop his persecutions. The final upshot of the deliberations was that only Mexico, Peru, the Dominican Republic, and the United States offered to raise slightly their quota limits on refugees from Germany and other countries.

The overseas countries, it was interesting to note, were unanimous in rejecting any suggestion of large-scale settlement on their territories. The Foreign Policy Association, in its report of Nov. 1, 1938, called "International Aid to German Refugees," pointed out that the attitude of Australia was particularly illuminating and symptomatic of the position adopted by sparsely settled overseas regions. Lieut.-Col. T. W. White, the Australian spokesman, declared that "As we have no real racial problem we are not desirous of importing one by encouraging any scheme of large-scale foreign migration."

With an eye to furthering whatever settlement was possible under the circumstances—the unwillingness on the part of countries to absorb mass movements on the one hand and the virtual refusal of Germany to permit refugees to leave that country with any funds being the leading difficulties—the conference established a so-called Inter-Governmental Committee, stationed at London, under the executive direction of the American, George

Rublee. The refugees to be assisted by this Committee were defined as "persons who have not already left their country of origin (Germany, including Austria), but who must emigrate on account of their political opinions, religious beliefs, or racial origins, and persons, as defined above, who have already left their country of origin and who have not yet established themselves permanently elsewhere." As Director, Mr. Rublee was authorized to "undertake negotiations to improve the present conditions of exodus and to replace them with conditions of orderly emigration," and to "approach the governments of refugees with a view to developing opportunities for permanent settlement." The Foreign Policy Association summed up the results of the meeting as follows:

Thus the Evian meeting can be termed successful only in the sense that it succeeded in clarifying the existing situation, setting up permanent machinery to attempt to deal with the problem, and—possibly—leading some countries to adopt a somewhat more sympathetic interpretation of existing administrative regulations blocking immigration. The only concrete contribution has been the undertaking by the United States to admit 27,370 Germans annually—a considerable increase over the figure for the past few years.

In this connection it should be noted that in the fiscal year ending June 30, 1938, the United States admitted 11,917 refugees from Germany, Jewish and non-Jewish.

Following the events of November, increasing pressure was being brought to bear on the United States and Great Britain notably, for the purposes of making possible mass settlements. The American Government listened sympathetically, but at the end of the year indicated that it would go no further than the permission it had accorded visitors on temporary visas to prolong their stay in this country and the filling up of the German quota to the legal maximum under the laws. The pressure brought to bear on the British Government seemed to promise to meet with greater success. In December the British Government indicated its receptivity to the appeal not to bar Jewish emigration into Palestine altogether, and it also showed a willingness to consider plans for the settlement of mass groups in the African Colonies and in British Guiana. Thus the present arbitrary limit of 12,000 immigrants annually to Palestine was likely to be disregarded in favor of a reversion to the principle of the "absorptive capacity" set forth in the mandate. It was being estimated that the final annual figure for Palestine would be somewhere between 12,000 and 25,000. It was to be recorded also that Britain was notably hospitable in opening its doors to the entrance of the children of Jewish families into England, where temporarily they were being housed in shelter stations until they were gradually absorbed into English foster homes. By the end of the year considerably more than 1500 such waifs had been welcomed into England. The Netherlands and Switzerland were making similar contributions to the refugee problem on a smaller scale. It was significant to note also that the U.S.S.R., despite the availability of large areas for mass settlement, made no effort to welcome German refugees.

Despite all the hopeful talk of the movement of large groups into regions like Tanganyika and British Guiana, it was becoming increasingly apparent that the tremendous costs involved for successful settlement militated against the possibility of any quick solution of the refugee problem. Informed observers, toward the end of the year, were declaring that the only hope for Central European Jewry was continued movement into Palestine, on

the one hand, and the relatively fast absorption of small groups of young people in already settled regions of the world like the United States, Canada, Great Britain, and the like. In this way it was hoped that the rigors of the German persecutions might be somewhat alleviated. Some support was given to this conjecture when on December 30, the Inter-Governmental Refugee Committee turned to plans for moving 150,000 young Jews out of Germany on the assumption—not yet officially confirmed in Germany—that Chancellor Hitler would agree to relax the campaign against elderly German Jews if their sons and daughters emigrated as quickly as possible. This apparently was a counter-proposal of the Schacht scheme described above, which called for the removal of all Jews from Great Germany. Apparently the German Government also was prepared to consider the possibility of moving young Jews as long as financial aid from foreign governments and world Jewry would be assured.

JOHNS HOPKINS UNIVERSITY. A nonsectarian institution of higher education in Baltimore, Md., founded in 1876, some divisions being for men only, others for men and women. The enrollment for the autumn of 1938 was 5107, distributed as follows: School of higher studies of the faculty of philosophy, 252; school of higher studies in education, 25; school of engineering, 31 (graduate), 324 (undergraduate); college of arts and sciences, 474; school of business economics, 108; school of medicine, 296; school of hygiene and public health, 154; afternoon and evening courses, 3443. The enrollment in the 1938 summer session was 987. The faculty numbered 674. The endowment amounted to \$30,182,644 and the income from all sources for 1937-38 was \$2,852,534. The main library contained 550,860 bound volumes. President, Isaiah Bowman, Ph.D., LL.D.

JOHNSON, JAMES WELDON. An American author, died in an automobile accident near Wiscasset, Me., June 26, 1938. Born in Jacksonville, Fla., June 17, 1871, he was graduated from Atlanta University (A.B., 1894; A.M., 1904) and subsequently did post-graduate work at Columbia University for three years. In 1917 he received the degree of Litt.D. from Talladega College, Alabama.

Entering the educational field, he became principal of the Stanton Central Grammar School in Jacksonville (1894-97), which he made into a high school and which, under his direction, became the largest Negro school in the State of Florida. He was admitted to the Florida bar in 1897, the first Negro to be admitted, and practiced there until 1901.

In that year he removed to New York in order that he might collaborate with his brother, J. Rosamond Johnson, in writing for the light-opera stage. Their best-known work was *The Csar of Zam*. One of their first works, "Lift Every Voice," became the national anthem of the Negro. They composed "Since You Went Away" for May Irwin (q.v.), and subsequently James Weldon Johnson entered into partnership with Bob Cole. This partnership lasted until 1906 and was responsible for many of the most popular songs of the day. They wrote "The Maiden with the Dreamy Eyes" for Anna Held; "The Maid of Timbuctoo" for Lillian Russell; "My Castle on the Nile" for Bert Williams; "Oh! Didn't He Ramble" for George Primrose; "Congo Love Song" for Marie Cahill, and many others.

In 1906 Johnson left Broadway to become U.S. consul to Puerto Cabello, Venezuela, the first Ne-

gro to hold such a post. During 1909-12 he held the same position at Corinto, Nicaragua, serving during the overthrow of Zelaya and through the abortive revolution against Diaz. He resigned from the consular service in 1912 and became the editor of *The New Age*.

In 1916 he accepted the secretaryship of the American Association for the Advancement of Colored People and served in that capacity until 1930. One of the foremost defenders of his people against white domination, as secretary of the Association he did much to change the condescending attitude toward his race and to raise the political status of the Negro. During the middle 1920's, when the Ku Klux Klan was at the height of its power, he made every effort to put through the House and the Senate the Dyer Anti-Lynching Bill and although unsuccessful, he did make lynching a national issue for the first time.

Dr. Johnson resigned as secretary in 1930 to become professor of creative literature at Fisk University, a post he held at his death. From 1934 he served as visiting professor of creative literature at New York University. He was the recipient of the Spingarn Medal in 1925, awarded to an "author, diplomat, and public servant"; received, for distinguished creative achievement, the Harmon Foundation Award in Literature in 1926 and the Gold Award in 1927, and in 1929, a year's fellowship from the Julius Rosenwald Fund.

The unofficial spokesman for the American Negro in prose and verse, he contributed to many magazines and to the 14th edition of the *Encyclopædia Britannica*. His published works included *The Autobiography of an Ex-Colored Man*, which was published anonymously in 1912 and republished in 1927; *Fifty Years and Other Poems* (1917); *Self-Determining Haiti* (1920); *The Book of American Negro Poetry* (1921); *The Book of American Negro Spirituals* (1925); *Second Book of Spirituals* (1926); *God's Trombones* (1927); *Black Manhattan* (1930); *St. Peter Relates an Incident of the Resurrection Day* (1930); *Along This Way*, autobiography (1933), and *Negro Americans, What Now?* (1934). He translated into English the libretto for the grand opera *Goyescas*, produced at the Metropolitan Opera House, New York, in 1915.

JOHNSTON ISLAND. An island in the central Pacific (16° 13' N. and 169° 50' W.), southwest of Hawaii, belonging to the U.S.A.

JOHORE. See UNFEDERATED MALAY STATES.

JONES, ADM. HILARY POLLARD, U.S.N., RET. An American naval officer, died in Washington, Jan. 1, 1938. Born in Hanover Co., Va., Nov. 14, 1863, he graduated from the U.S. Naval Academy in 1884, and on July 1, 1886, was assigned to the *Nipsic*, which escaped destruction in the Samoan hurricane of Mar. 16, 1889. He was mentioned in the official report as "a young officer of great promise and bids fair to be of value to the service and his country."

During the Spanish-American War (1898) he saw service on the *Dorothea*, and for a number of years thereafter was stationed in South American waters. During 1904-06 he was in command of the *Scorpion* at the Washington Navy Yard. Subsequently, he served as executive officer on the *Idaho* (1909); at the Naval Station, Cavite, P. I. (1909-10); at the Washington Navy Yard (1910-11); as commander of the *Birmingham* (1911), *Tennessee* (1911), and the *Rhode Island* (1911-12); as commander of the Navy Yard and superintendent of

the Naval Gun Factory, Washington (1913-14), and as commander of the *Florida* (1914-16).

Jones attended the Naval War College in 1916-17, and at the entrance of the United States into the World War was in command of Squadron One, Patrol Force of the Atlantic Fleet. On July 17, 1917, he was appointed commander of Division One, Cruiser Force raider guard of the Atlantic Fleet. He commanded the Newport News division cruiser and transport force from April, 1918, to January, 1919, and as such had control of the transports sailing from Hampton Roads and more than 250,000 troops were embarked from the district under his supervision. Attached to the division were 16 transports, for the sailings of which Jones was responsible. On Aug. 20, 1918, all floating equipment belonging to the army, the navy, and the Shipping Board in that district was pooled for operation under his administration. From January to July, 1919, he was director of naval overseas transportation. For his excellent work in these fields he was awarded the Distinguished Service Medal of both the army and of the navy.

In July, 1919, he was promoted to vice-admiral and given command of the 2d Battleship Squadron of the Atlantic Fleet and in 1921 was promoted to admiral and named Commander-in-Chief of the Atlantic Fleet. Upon its reorganization in December, 1922, his title was changed to Commander-in-Chief of the U.S. Fleet. In August, 1923, he was appointed to the General Board, and on Nov. 14, 1927, was retired from active service, having attained the statutory retirement age. He was commissioned admiral on the retired list on Oct. 15, 1930.

On a special mission to Brazil in 1922, Admiral Jones was envoy extraordinary and minister plenipotentiary, and as one of the country's leading naval authorities during the postwar efforts to check the international naval building race, he was senior technical adviser to the American delegation to the Preparatory Commission for Limitation of Armaments at Geneva in 1926-27, and delegate to the Conference for Limitation of Naval Armaments at Geneva in 1927.

KANSAS. Area and Population. Area, 82,158 square miles; included (1930) water, 384 square miles. Population: Apr. 1, 1930 (census), 1,880,999; July 1, 1937 (Federal estimate), 1,864,000; 1920 (census), 1,769,257. Kansas City had (1930) 121,857 inhabitants; Wichita, 111,110; Topeka, the capital, 64,120.

Agriculture. Acreage, production, and value of the chief crops of Kansas, for 1938 and 1937, appear in the table on p. 373.

Mineral Production. Of the total value, \$121,723,341, of native minerals produced in Kansas in 1936, petroleum furnished over one-half and natural gas and gasoline extracted therefrom, nearly half of the remainder. The yield of petroleum rose, for 1937, to 70,761,000 bbl., from 58,317,000 bbl.

Crop	Year	Acreage	Prod. Bu.	Value
Wheat	1938	14,497,000	152,184,000	\$ 80,658,000
	1937	13,172,000	158,052,000	159,633,000
Corn	1938	2,260,000	45,200,000	21,244,000
	1937	2,456,000	29,472,000	16,504,000
Hay (tame) ..	1938	760,000	1,171,000	5,738,000
	1937	947,000	1,032,000	9,185,000
Oats	1938	1,518,000	35,673,000	7,491,000
	1937	1,474,000	35,376,000	13,089,000
Grain sorghums	1938	1,343,000	14,773,000	5,614,000
	1937	1,370,000	12,330,000	5,672,000
Barley	1938	393,000	6,681,000	2,004,000
	1937	298,000	3,427,000	1,919,000
Potatoes	1938	29,000	3,219,000	1,416,000
	1937	28,000	2,156,000	1,229,000

* Tons.

(value \$65,900,000) for 1936. The output of 1937 was reported as the heaviest in quantity, if not in value, that the State had attained. The number of discoveries of petroleum exceeded that for any previous year. The character of these was similar to that of earlier discoveries, the occurrences being in numerous pools, none of them of great apparent extent. The production of natural gas, somewhat over 69 billion cu. ft. (value \$23,126,000) for 1936, was not yet given for 1937, but reports on the latter year noted numerous completions of new gas wells in many parts of the State, including 10 discoveries in new fields. The mining of lead and zinc was active. The yearly yield of zinc, in concentrates, increased to 80,300 short tons (1937), from 79,017 (1936); by value, to \$10,439,000, from \$7,901,700. That of lead rose to 16,008 short tons (1937), from 11,409 (1937); by value, to \$1,888,944, from \$1,049,628.

Finance. Kansas' State expenditures in the year ended June 30, 1937, as reported by the U. S. Bureau of the Census, were: For maintaining and operating governmental departments, \$24,686,640 (of which \$10,454,252 was for highways and \$669,361 was for local education); for interest on debt, \$982,215; for capital outlay, \$16,506,120. Revenues were \$42,744,137. Of these, property taxes furnished \$5,436,012; income taxes, \$2,215,478; sales taxes, \$10,556,677 (chiefly tax on gasoline, \$9,674,514); departmental earnings, \$3,591,911; sale of licenses, \$6,198,883; Federal or other grants-in-aid, \$13,282,236. Funded debt outstanding on June 30, 1937, totaled \$21,685,000. Net of sinking-fund assets, the debt was \$21,466,768. On an assessed valuation of \$2,716,560,079 the State levied in the year ad-valorem taxes of \$5,406,678.

Education. For the year ended with June 30, 1937, the latest covered by published data that follow, inhabitants of school age were reckoned at 520,740. All of ages between 5 and 21 years were included. The year's enrollments of pupils in the public schools numbered 395,481; attendance averaged 343,891. There was an additional enrollment of 10,593 in kindergartens and 3727 in public junior colleges. Apart from the tax-supported public schools, parochial and private schools reported 18,396 enrolled pupils. The year's expenditures for public-school education totaled \$28,441,990. The public-school system comprised 8662 tax-levying school-districts, of which the most part—7253—maintained one teacher each, while a few at the opposite extreme were big urban school systems. The teachers, principals, and superintendents numbered 19,336.

A plan to provide for the retirement of elderly public-school teachers was prepared on behalf of the teaching body, for the consideration of the forthcoming session of the Kansan Legislature.

Charities and Corrections. The four groups

of State institutions under the authority of the Board of Administration were: The charitable institutions, caring for the mentally ill, feeble-minded, epileptic, and certain orphans; correctional institutions, penal, reformatory, and those for juvenile delinquents; "patriotic" institutions, including a home for soldiers; and educational institutions for special groups. In the first group were the three State hospitals for mental cases, at Topeka (1903 inmates), Osawatomie (1670), and Larned (1146); a State Hospital for Epileptics at Parsons (877); State Training School, Winfield (1236); State Sanatorium for Tuberculosis, Norton (324); and State Orphans' Home, Atchison (173). The correctional institutions were the State Penitentiary, Lansing (1809); State Industrial Reformatory, Hutchinson (634); Women's Industrial Farm, Lansing (72); Boys' Industrial School, Topeka (184); and Girls' Industrial School, Beloit (127). The third group included the State Soldiers' Home at Fort Dodge and the Mother Bickerdyke Home at Ellsworth. The State schools under the Board of Administration were the School for the Blind (100 pupils) at Kansas City; School for the Deaf (122) at Olathe; Western University (colored, 145) at Kansas City; and Kansas Vocational School (colored, 124) at Topeka.

Political and Other Events. A tax on retail sales, which went into application in Kansas in the middle of 1937, was found at the end of its first year to have yielded \$9,965,238, virtually the \$10,000,000 of the estimate that the Legislative Council had made to guide the Legislature in imposing the tax. Out of the receipts from this tax, payments were made to counties, which in turn distributed portions to taxing units within their territory, school-district units included. Renewed prospects that the petroleum company purchasing from the thousands of stripper wells in the southeastern part of the State would withdraw from the field moved the State government to seek in May for grounds on which it might prevent the company's ceasing purchases. About 13,000 of these wells, some of them active for 30 years, were said to yield from 1 to 5 barrels each daily.

The construction at Milford of a \$21,000,000 dam and reservoir and of eight other reservoirs in the basin of the Missouri River was authorized in the Flood Control Act passed by Congress, but without specific appropriation. A Federal agency, the Prison Industries Reorganization Administration, in a report on the State's prison system, charged that the State Penitentiary at Lansing was insecure as a place of confinement and recommended that dangerous convicts be segregated from other prisoners and kept elsewhere. See MINIMUM WAGE.

Elections. An extensive shift to the Republican party swayed the general election of November 8. Payne H. Ratner (Rep.) was elected Governor, defeating Gov. Walter A. Huxman (Dem.). Clyde M. Reed (Rep.) won from George McGill (Dem.) the latter's seat in the U. S. Senate. McGill, one of the authors of the Agricultural Act of 1938, had in his campaign declared that a vote defeating him would amount to a slap at that act, whereas Reed had criticized the New Deal's spending program and its plan to reorganize the courts, and had characterized McGill as a rubber stamp. Six Republicans and one Democrat were elected to the House of Representatives.

Officers. The chief officers of Kansas, serving in 1938, were: Governor, Walter A. Huxman (Dem.); Lieutenant-Governor, W. M. Lindsay; Secretary of State, Frank J. Ryan; Auditor,

George Robb; Treasurer, J. J. Rhodes; Attorney-General, Clarence V. Beck; Superintendent of Public Instruction, W. T. Markham.

Judiciary. Supreme Court: Chief Justice, John S. Dawson; Justices, W. W. Harvey, William E. Hutchison, William A. Smith, Walter G. Thiele, Hugo Weddell, Harry K. Allen.

KANSAS, UNIVERSITY OF. A State institution of higher education in Lawrence, Kans., founded in 1864. The enrollment in the autumn of 1938 numbered 4595, of whom 3106 were men and 1489 women. The 1938 summer session had an enrollment of 1231. The full-time teaching staff numbered 256. The endowment fund amounted to \$256,000 and the budget for the year was \$2,000,000, exclusive of buildings. There were 300,300 volumes in the library. The gift of a two-story addition to the School of Medicine research laboratory (\$40,000) was received during the year. Chancellor, Ernest Hiram Lindley, Ph.D.

KANSAS WESLEYAN UNIVERSITY. A coeducational institution under the auspices of the Methodist Episcopal Church in Salina, Kans., founded in 1885. The enrollment for the autumn of 1938 was 337 and in the summer school of 1938, 86. The faculty numbers 30. The University is now engaged in a campaign to raise \$300,000 in additional endowment, of which a substantial amount has already been pledged. The University operates on a debt-free basis, and a pay-as-you-go plan. The library has 25,000 volumes. A new athletic stadium is being constructed. President, E. K. Morrow.

KARAFUTO, ká-rá-fōō'tō. The Japanese part of the island of Sakhalin, south of 50° north latitude. Area, about 13,935 square miles; population (1936 estimate), 340,000. Chief towns: Toyohara, the capital, 34,274 inhabitants; Otamari, 30,913; Esuturi, 23,432; Sikka, 22,617.

Production, etc. In 1936 sea-fisheries production was valued at 19,812,145 yen. The production of chief crops in 1936 was: Wheat, barley, oats, etc., 803,492 bu.; peas and beans, etc., 114,882 bu.; buckwheat, 48,438 bu.; potatoes, 35,334 metric tons; grasses, 18,823 metric tons; vegetables and others, 61,734 metric tons. In 1936, 2,075,157 metric tons of coal were produced. The production of wood pulp in 1937 was estimated at 382,000 metric tons (dry weight). Livestock (1936): 12,468 horses, 8459 swine, 6712 cattle, and 11,165 foxes. In 1934 imports (from Japan proper) were valued at Y37,100,000; exports (to Japan proper), Y96,600,000. The budget for 1937-38 balanced at Y36,375,724 (yen averaged \$0.2879 for 1937). Governor, Takeshi Imamura.

KAUTSKY, kout'skí, KARL JOHAN. An Austrian Socialist, economist, and editor, died at Amsterdam, The Netherlands, Oct. 17, 1938. Born at Prague, Austria-Hungary, Oct. 16, 1854, he was educated at the University of Vienna. He joined the Social Democrat Party of Austria in 1875, and five years later settled in Zurich where he became associated with *Sozialdemokrat*, the organ of the German Socialist Party which he joined. He visited England in 1881, where he met Marx and Engels, and thereafter he corresponded with the latter until his death in 1894. He published this correspondence

in 1935 under the title *In the Time of Early Marxism*.

A convert to Marxism, in 1882 he removed to Vienna and in the following year to Stuttgart. There (1883) he founded the scientific review of the German Socialist Party, *Die Neue Zeit*, which he edited in London (1885-90) while he studied with Engels, and where he also wrote his work on *Thomas More and His Utopia* (1888; 2d ed., 1907). In Stuttgart and later in Berlin, to which he removed in 1897, he was in conflict with Eduard Bernstein over his theories challenging the adequacy of Marx on various points of policy and economic thought. As a result he published *The Agrarian Question* (1899) and *Ethics and Materialistic History* (1906), the latter considered the most important contribution to Marxian thought since Marx's death. These he followed with his work on Russia, *The Social Revolution* (vol. i, 1902; ii, 1903; 3d ed., 1911). His pacifistic stand in 1914 led to his forming in 1917, with Hugo Haase, the Independent Socialist Party. The first revolutionary government of Germany appointed him Secretary of State in the Foreign Office (1918) to study documents pertaining to pre-war history, from which he wrote *The Origin of the War* (1919), the English title being *The Guilt of William II*. He moved to Vienna in 1920, but in 1934 he became a naturalized citizen of Czechoslovakia. After the German-Austrian *Anschluss* in March, 1938, he fled to The Netherlands.

Kautsky was the foremost theorist of Socialism and after the death of Engels he was the leading interpreter of Marxist doctrine. He opposed equally Bolshevism and Fascism, declaring the former to be contrary to Marx. In 1918 he published *Dictatorship of the Proletariat* (1918; Eng. trans., 1920) in which he attacked Leninist doctrines. Among his important works may be mentioned *The Economic Doctrines of Karl Marx* (1887; 14th ed., 1912); *The Erfurt Programme* (1892; 11th ed., 1912) one of the most important contributions to Socialist thought; a popular edition of Karl Marx's *Capital* (1913); *Democracy or Dictatorship* (1919); *Terrorism and Communism* (1919); *From Democracy to State Slavery* (1920), a controversy with Trotsky; *The Proletarian Revolution and Its Programme* (1927); *The Materialistic Interpretation of History* (1927), the most notable of his later works; *War and Democracy* (1930); *A Marxist's Progress*, autobiography (1930); *Bolshevism at a Deadlock* (1931); *Communism and Social Democracy* (1932); *New Programs* (1932), and *Socialists and War* (1937).

KAZAKH SOVIET SOCIALIST REPUBLIC. One of the 11 constituent republics of the U.S.S.R., according to the constitution adopted Dec. 5, 1936. It includes the provinces of Aktyubinsk, Alma-Ata, East Kazakhstan, Karaganda, Kustanai, North Kazakhstan, South Kazakhstan, and West Kazakhstan. Area, 1,047,797 square miles; population (Jan. 1, 1933), 6,796,600. Capital, Alma-Ata (Verny). In 1938 there were 10,088,715 acres of spring sowing, by collectives, of chief grain crops. See UNION OF SOVIET SOCIALIST REPUBLICS.

KEDAH. See UNFEDERATED MALAY STATES.

KEELING ISLANDS. See STRAITS SETTLEMENTS.

KEEWATIN. See NORTHWEST TERRITORIES (CANADA).

KELANTIN. See UNFEDERATED MALAY STATES.

KENTUCKY. Area and Population. Area, 40,598 square miles; included (1930) water, 417

square miles. Population: Apr. 1, 1930 (census), 2,614,589; July 1, 1937 (Federal estimate), 2,920,000; 1920 (census), 2,416,630. Louisville had (1930) 307,745 inhabitants; Frankfort, the capital, 11,626.

Agriculture. Acreage, production, and value of the chief crops of Kentucky, for 1938 and 1937, appear in the accompanying table.

Crop	Year	Acreage	Prod. Bu.	Value
Corn	1938	2,761,000	74,547,000	\$39,510,000
	1937	2,906,000	75,556,000	43,822,000
Tobacco	1938	395,600	339,550,000 ^a	58,514,000
	1937	412,500	365,785,000 ^b	64,400,000
Hay (tame)	1938	1,319,000	1,720,000 ^b	13,416,000
	1937	1,290,000	1,463,000 ^b	14,923,000
Wheat	1938	552,000	8,280,000	5,216,000
	1937	552,000	10,212,000	10,825,000
Potatoes	1938	45,000	4,635,000	3,244,000
	1937	47,000	4,371,000	3,322,000
Sweet potatoes	1938	24,000	2,280,000	1,710,000
	1937	24,000	2,160,000	1,771,000

^a Pounds. ^b Tons.

Mineral Production. Of the \$116,697,776 forming the yearly total, by value, of the production of native minerals in Kentucky in 1936, coal furnished more than two-thirds. The yield of the coal mines was maintained at 47,053,000 net tons for 1937, as against 47,521,950 (value \$77,678,000) for 1936. The production of natural gas totaled 43,903 million cu. ft. (value \$19,200,000) for 1936; its rate was not affected by any striking new operations in the gas fields in 1937. The output of petroleum fell slightly, to 5,484,000 bbl. (1937), from 5,633,000 (value \$7,240,000) for 1936. Shipments of fluorspar increased again, to 87,296 short tons (1937), from 80,241 (1936); by value, to \$1,710,122, from \$1,409,433.

Finance. Kentucky's State expenditures in the year ended June 30, 1937, as reported by the U.S. Bureau of the Census, were: For maintaining and operating governmental departments, \$33,786,368 (of which \$9,653,249 was for local education); for interest on debt, \$1,384,452; for capital outlay, \$12,422,466. Revenues were \$61,606,262. Of these, property taxes furnished \$5,416,161; sales taxes, \$20,491,239 (including tax on gasoline, \$11,334,794); departmental earnings, \$4,320,368; sale of licenses, \$12,353,182; unemployment compensation, \$4,673,685; Federal or other grants-in-aid, \$8,143,978. Funded debt outstanding on June 30, 1937, totaled \$15,247,627. Net of sinking-fund assets, its amount was \$14,929,210. On an assessed valuation of \$2,449,220,234 the State levied in the year ad valorem taxes of \$5,311,105.

Education. Kentucky's inhabitants of school age (7 to 16 years), in 1938, numbered 792,079. In the academic year 1937-38 the enrollments of pupils in the public schools totaled 618,318; this comprised 491,337 in elementary study and 126,981 in high schools. Annual expenditure for public-school education attained \$28,684,502. The yearly salaries of the 18,836 teachers averaged \$834.

A retirement system for public-school teachers, on account of age, was enacted but did not go into operation in 1938, as the Legislature had failed to appropriate the necessary money. A study of the subject of support for the public schools, according to the *Journal of the National Education Association*, was conducted with a view to helping the Legislature to deal with the subject in 1940.

Legislation. The General Assembly convened in regular session early in January. It enacted a measure carrying the appropriations from the general fund at the rate of about \$24,500,000 for each of the two ensuing fiscal years. No new taxes

were sought by the Governor. An act bearing on alleged oppressive practices against unionized miners in Harlan County prohibited the direct payment of officers of the peace by private companies. Louisville was deprived of its special system for the registration of voters, and provision was made for a revision of the voting lists in the city with a view to ridding them of names wrongfully carried; the city's method of registration was made the same as that of the rest of the State. A system of State regulation of the traffic in alcoholic drink was created; control was vested in administrators appointed by the Governor; sale by the drink was allowed in cities of the first, second, and third classes; sales of liquor by wholesale, to purchasers outside the State, was allowed only in case the purchasers held licenses from their own States. Cities of the second class, such as Covington and Newport, were authorized to have civil-service commissions. See CHILD LABOR; MINIMUM WAGE.

A special session summoned by the Governor for the purpose met May 23 and enacted a welfare bill, providing means to improve the personnel operating the State's mental hospitals.

Political and Other Events. The chronic violence in the coal-mining area of Harlan County led to a Federal prosecution of coal operators and of guards and deputy sheriffs in their employ, at London, Ky., before District Judge H. C. Ford. The defendants were 16 mining companies, 18 officials of companies, and 21 officers of the peace. They were charged with conspiracy to violate the Wagner Labor Act. The prosecution was conducted by the U.S. Attorney-General, through an assistant. The trial, which lasted for 11 weeks, was filled with testimony alleging acts of violence against the members of the defendant group and (for the defense) against miners. It ended (August 1) in a mistrial brought about by the jury's inability to agree on a verdict. Companies involved in the trial, however, consented to enter into labor agreements with their miners. During the trial, on the other hand, there was no complete truce to the feud between the pro-company and the pro-union groups. Frank White, one of the chief defendants, was shot to death (July 6) while sitting on a porch at a tourist camp a few miles from London. A witness who had testified for the defense declared (July 21) that \$50 had been paid him to accuse a union organizer of another killing.

The Registration and Purgation Act (see *Legislation*, above), in great part designed to prevent falsities in the list of registered voters in Louisville, was fought in the courts; the State Court of Appeals, however, held (June 7) that the act was constitutional, except in its provision for the pay of those charged with the duty of purging the list of names wrongly carried. The State's practice of hanging, at the seat of the county of jurisdiction, and usually in public, defendants sentenced to death for rape was terminated, in accordance with a legislative act including this with other capital crime, for which death was exacted by the electric chair. Under the authority of the new act to improve the personnel of the State's mental hospitals a few of the higher functionaries, including the superintendent of the Central State Hospital, were dismissed. Reportedly in a disagreement over hospital-post appointments, the Governor ousted Commissioner of Corrections Wallis in November.

Elections. U.S. Senator Alben W. Barkley (Dem.) was re-elected (November 8) by 346,735 votes (official count) to 212,266 for John P. Haswell (Rep.), his opponent. All the incumbent

members of the Federal House of Representatives, 8 Democrats and 1 Republican, were re-elected. Nine persons were reported to have been shot to death in various places in the State on election day; five of the killings occurred in Harlan County. Senator Barkley's election was effected with ease by the predominant Democratic vote, but his nomination (August 6) at the primaries was won by a closer margin of about 50,000 votes over a strong opponent, Governor Chandler, who campaigned in defiance of the Administration's wish to have Barkley, the President's choice in 1937 for majority leader in the Senate, obtain another term. The President stopped at Covington on his speaking tour in July and spoke at the Latonia racetrack (July 8); denying interference in the primary campaign, he endorsed Barkley by implication, characterizing him as "a great American of whom the whole Nation is proud." Chandler charged Barkley with being a "yes-man" and assailed the Federal spending agencies as using for Barkley's benefit funds intended to benefit the needy population. Chandler, shortly before the close of the primary campaign, was prostrated by a temporary illness, ascribed by his physician to poison in water that the Governor drank at Louisville. Chandler retained office as Governor, his term having another year to run.

Officers. The chief officers of Kentucky, serving in 1938, were: Governor, A. B. Chandler (Dem.); Lieutenant-Governor, Keen Johnson; Secretary of State, Charles D. Arnett; Treasurer, John E. Buckingham; Attorney-General, Hubert Meredith; Auditor, E. E. Shannon; Commissioner of Agriculture, Labor, and Statistics, Garth Ferguson; Superintendent of Public Instruction, Harry W. Peters.

Judiciary. Court of Appeals: Chief Justice, Alex L. Ratliff; Associate Justices (Eastern Division), Gus Thomas, Wesley Vick Perry, James W. Stites; (Western Division), William H. Rees, William Rogers Clay, Virgil H. Baird.

KENTUCKY, UNIVERSITY OF. A coeducational State institution of higher learning in Lexington, Ky., founded in 1866. The enrollment in the autumn of 1938 was 3642. There were 2449 students registered in the 1938 summer session. The faculty numbered 302. The productive funds amounted to \$184,075, and the income for the year was \$1,298,949. The library contained 213,000 volumes. New buildings completed or nearing completion were the Student Union Building, Law Building, Biological Sciences, Engineering Buildings, and additions to the Agricultural Experiment Station, the Women's Residence Halls, and the Armory. President, Frank LeRond McVey, Ph.D., LL.D., L.H.D.

KENYA, kē-nyá' or kēn'ya. A British colony and protectorate in East Africa. Area, 224,960 square miles, of which the land area amounted to 219,730 square miles. Total population (1938 estimate), 3,334,191, including 19,211 Europeans, 42,368 Indians, 3658 Goans, 13,660 Arabs, and 1605 others. Nairobi, the capital, had 61,000 inhabitants; Mombasa, 50,000. In 1937 the 1573 schools (exclusive of private Koran schools at the coast) had a total of 114,590 pupils enrolled.

Production and Trade. The main products were coffee, wheat, maize, tea, sugar, hides and skins, cotton (17,800 bales in 1937), coconuts, wattle bark and extract, sodium carbonate, timber, and gold. Kenya and Uganda are one administrative unit for customs purposes, the principal imports being cotton piece goods and manufactures, textiles, automobiles, gasoline, industrial machinery, and

wearing apparel. Coffee, gold, tea, maize, sugar, and sisal were the chief exports. In 1937 imports (Kenya and Uganda) were valued at £10,832,573; exports (Kenya only), £3,954,055.

Communications. The harbors and railways of Kenya and Uganda are owned by the state. A total of 1625 miles of meter gauge railway line was in operation in 1937, and 771,471 passengers and 1,008,128 tons of freight were carried. The government operates a marine service on lakes Victoria, Kioga, and Albert, and on the river Nile. In 1937 highways extended 9746 miles. In the same year the vessels entered and cleared the ports totaled 4,715,586 net registered tons. Kenya is served by the air service between Great Britain and South Africa operated by Imperial Airways and three stops are made in each direction every week at Nairobi and Kisumu. There is also an air mail feeder service linking the principal towns.

Finance. For the year ended Dec. 31, 1937, gross revenue totaled £3,667,393; gross expenditure, £3,565,976 (net figures are obtained by deducting reimbursements from neighboring territories in respect of joint services from Kenya and Uganda railways and harbors in respect of loan interest and from other sources on account of services which are not a charge against the local revenues of the colony. Therefore, the annual accounts for 1937 show an actual net revenue of £2,492,643, and net local expenditure of £2,391,226; total public debt, £17,580,600 of which £13,251,808 represented the capital debt of Kenya and Uganda railways and harbors.

Government. The supreme executive power for the whole country is vested in a governor, aided by an executive council of 12 members. There is also a legislative council of 41 members (the governor as president, 11 ex officio, 9 nominated, 11 European elected, 5 Indian elected, 1 Arab elected, 2 nominated unofficial members to represent the African community, and 1 nominated unofficial member to represent Arab interests). The governor can veto any measure passed by the legislative council. Governor and Commander-in-Chief, Air Chief Marshal Sir Robert Brooke-Popham (assumed office, March, 1937).

KENYON COLLEGE. A college of arts and sciences for men in Gambier, O., established in 1824 by the Protestant Episcopal Church. The enrollment for the autumn term of 1938 was 309. By action of the Board of Trustees the enrollment is permanently limited to 300. The faculty numbered 35 members. The endowment funds amounted to \$1,733,294, and the income for the year was \$243,232. The library contained about 108,500 volumes. President, Gordon Keith Chalmers, M.A. (Oxon.), Ph.D., LL.D.

KINETICS. See CHEMISTRY.

KINGMAN REEF. An atoll in the Pacific Ocean, owned by the United States. Situated 1067 miles southwest of Honolulu, Hawaii, and 1797 miles northeast of Pago Pago, American Samoa, it offers the only suitable seaplane base between those two points. Including its submerged shoals, the reef is about 8 miles long and 5 miles wide, but at high tide an area of only about 150 feet by 120 feet remains above water. The lagoon is 5 miles wide and protected against prevailing winds by barrier reefs. The atoll was occupied in 1936 by an airport crew of six Pan American Airways employees in preparation for the establishment of an air service between Honolulu and Auckland, New Zealand. Several survey flights were made along the route in 1937.

KIRGHIZ SOVIET SOCIALIST REPUBLIC. One of the 11 constituent republics of the U.S.S.R., according to the constitution adopted Dec. 5, 1936. Area, 75,926 square miles; population (Jan. 1, 1933), 1,302,100. Frunze, the capital, had 71,680 inhabitants in 1933. Chief crops are hay, hemp, oats, corn, barley, cotton, wheat, and dzhu-gara. In 1938 there were 1,187,830 acres of spring sowing, by collectives, of chief grain crops. Stock-raising is the chief occupation. See **SOVIET CENTRAL ASIA**; **UNION OF SOVIET SOCIALIST REPUBLICS**.

KIWANIS INTERNATIONAL. An organization of clubs made up of not more than two of the leaders in each business and profession, united for the rendering of civic and social service to the community. The first club was organized in Detroit, Mich., in 1915; by 1917 the organization had spread into Canada. At the close of 1938 the international organization consisted of over 1985 clubs with a membership of over 100,000. The objectives for the year 1938-39 were: 1. Service to underprivileged children; 2. Vocational guidance; 3. Boys' and girls' work; 4. Closer relations between the farmer and the business and professional man; 5. Intelligent, aggressive, and serviceable citizenship.

Citizenship activities are: 1. Sponsorship of community councils; 2. Support of churches in their spiritual aims; 3. Initiation and support of constructive policies of conservation; 4. Education concerning harmful effects of narcotics, especially marihuana; 5. Co-operation in law observance and enforcement; 6. Increased assistance in public safety movements; 7. Presentation of non-partisan information on public problems; 8. Education and training in the duties and responsibilities of citizenship to insure the perpetuation of the established institutions of freedom and popular government; 9. Maintenance of the international good will existing between Canada and the United States.

The 1939 convention will be held in Boston, Mass., June 18 to 22. The officers for 1938-39 are: President, H. G. Hatfield, Oklahoma City, Okla.; Immediate Past President, F. Trafford Taylor, St. Boniface, Manitoba; Vice-Presidents, Bennett O. Knudson, Albert Lea, Minn., and J. J. Smith, Regina, Saskatchewan; Treasurer, Samuel F. Claibough, Birmingham, Ala.; Secretary, Fred. C. W. Parker, Chicago. Headquarters are at 520 North Michigan Ave., Chicago, Ill.

KLAIPEDA. See **MEMEL**.

KNIGHTS OF COLUMBUS. A society of Roman Catholic men organized under a special charter, granted by the Connecticut General Assembly in 1882, permitting it to do business as a fraternal benefit society and to promote and conduct education, charitable, religious, and social welfare work. The four principles of the order are charity, unity, fraternity, and patriotism.

The order is composed of a supreme council, the governing body and highest authority; a supreme board of directors, the executive body; 64 state councils; and 2465 subordinate councils. The total membership as of June 30, 1938, was 430,870, which represented an associate membership of 208,965 and an insurance membership of 221,905. In the 56 years of its existence the Society has paid out more than \$50,000,000 to the beneficiaries of its members. Death claims paid during the fiscal year amounted to \$3,618,024.

The annual convention was held in Cincinnati, Ohio, Aug. 19-21, 1938. The officers were Martin H. Carmody, of Grand Rapids, Mich., supreme

knight; William J. McGinley, of New Haven, Conn., supreme secretary; and D. J. Callahan of Washington, D. C., supreme treasurer. The order publishes *Columbia*, a monthly magazine. Headquarters of the supreme council are in New Haven, Conn.

KOMI AUTONOMOUS SOVIET SOCIALIST REPUBLIC. See **RUSSIAN SOVIET FEDERATED SOCIALIST REPUBLIC**.

KOREA (CHOSEN). A former empire of eastern Asia, annexed by the Japanese Empire on Aug. 22, 1910, and incorporated as an integral part of Japan by an Imperial Rescript of 1919. Capital, Keijo (Seoul).

Area and Population. The area is 85,228 square miles and the population at the census of Oct. 1, 1935, was 22,899,038. The estimated population on Jan. 1, 1936, included 21,248,864 Koreans, 583,428 Japanese, and 58,888 foreigners (673 Americans). Populations of the chief cities on Jan. 1, 1936, were: Keijo (Seoul), 404,202; Fusan (Pusan), 180,271; Heijo (Pyongyang), 172,746; Taikyu, 105,706; Jinsen (Chemulpo), 80,420.

Education and Religion. The population is about 60 per cent illiterate. Educational facilities for Koreans in 1935 included 2363 common schools with 720,757 pupils, 45 higher common schools with 20,552 pupils, and various industrial schools. For Japanese primarily, there were 491 primary schools with 84,395 pupils, 12 middle schools with 6715 pupils, 28 high schools for girls with 10,525 pupils, 4 normal schools with 2434 pupils, and various professional, technical, and commercial schools. The University of Seoul had 465 Japanese and 210 Korean students in May, 1935. Buddhism and Confucianism are the chief religions. There were 469,242 Christians at the end of 1935.

Production. Korea is almost exclusively an agricultural country. Rice is the chief crop and main article of diet. The production of rough rice was about 4,888,700 metric tons in 1937-38 (3,594,800 in 1936-37). Other leading crops, with the latest available production in metric tons, are: Wheat, 300,500 (1937); barley, 1,365,800 (1937); oats, 40,500 (1936); corn, 112,000 (1936); potatoes, 711,900 (1936); tobacco, 26,500 (1937); cotton-seed, 92,500 (1937); soybeans, 487,100 (1936); cotton, 46,100 (1937); hemp, 18,000 (1936). The production of raw silk in 1936 was 1253 metric tons. Livestock in 1936 included 1,702,979 cattle, 51,560 horses, 1,573,590 swine, 39,534 goats, and 3997 asses. The yield of the sea fisheries in 1936 was 1,668,200 metric tons valued at 77,900,000 yen.

Mineral production is increasing; the value in 1935 was 88,039,201 yen. Output of the chief minerals and metals (in metric tons) was: Coal, 2,282,000 in 1936; tungsten, 1110 in 1936; iron ore, 346,000 in 1935; pig iron and ferroalloys, 174,000 in 1936; steel ingots and castings, 97,000 in 1935; copper ore (metal content), 3600 in 1936; lead ore (metal content), 5900; magnesite, 6900 (exports) in 1936; graphite, 45,118 in 1935. Gold output in 1938 was estimated at 30 metric tons valued at 110,000,000 yen. In 1935 Korea had 5635 industrial establishments with 168,771 employees and an output valued at 634,300,000 yen. Manufactures were expanding rapidly under Japanese auspices. Leading manufacturing lines are cotton spinning; cotton, silk, and rayon weaving; and the making of fertilizers, cement, paper, matches, pottery, flour, electric bulbs, rice wine, and enameled ironwares.

Foreign Trade. General imports in 1937 were valued at 248,686,000 U.S. currency dollars, converted at the average exchange rate, and exports

totalled \$197,217,000. Japan supplied 85.3 per cent of the 1937 imports and took 83.5 per cent of the exports. The bulk of the remaining trade was with China and Manchuria. The value of the leading exports in 1937 was: Rice, \$66,878,000; fertilizers, \$10,905,000; heavy iron, \$10,600,000; copper, gold, and silver bearing, \$7,255,000.

Finance. The budget estimates (ordinary and extraordinary) for the fiscal year ended Mar. 31, 1938, balanced at 417,187,110 yen. For 1936-37 actual revenues were 384,493,357 and expenditures 324,472,357 yen. The public debt outstanding on Mar. 31, 1937, totalled 549,731,185 yen (509,038,362 on Mar. 31, 1936). The yen exchanged at an average of \$0.2879 in 1937 and \$0.2845 in 1938.

Transportation. Government railways open to traffic on Dec. 31, 1936, totalled 2220 miles; private lines (March, 1936), 678 miles. For the fiscal year 1935-36 the government lines carried 29,344,188 passengers and 9,459,019 metric tons of freight; operating expenses were 65,979,857 yen; earnings, 90,470,458 yen. An additional 187 miles of state line were under construction. There were about 13,770 miles of roads and highways in 1937; number of automobiles, 8470. Air lines connect the chief cities with Japan and Manchuria. A number of the Korean rivers are navigable. The shipping tonnage entered at the ports in 1936 aggregated 15,716,239.

Government. Korea is governed as an integral part of Japan through a governor-general with extensive powers. Governor-General in 1938, Gen. J. Minami, who assumed office Aug. 4, 1936.

KRASNOYARSK TERRITORY. See RUSSIAN SOVIET FEDERATED SOCIALIST REPUBLIC.

KRESS FOUNDATION. See ART MUSEUMS.

KU KLUX KLAN, KNIGHTS OF THE. An American benevolent, eleemosynary, and fraternal institution, incorporated under the laws of the State of Georgia in 1915. "The membership is made up of white, Gentile persons, native-born American citizens, 16 years of age. They must be of sound mind, good character, commendable reputation, and respectable vocation; must believe in the tenets of the Christian religion; and must owe no allegiance to any foreign government, nation, institution, sect, ruler, prince, potentate, people, or person, their allegiance, loyalty, and devotion to the government of the United States of America in all things being unquestionable." At the biennial legislative meeting held in August, 1934, Dr. Hiram Wesley Evans was re-elected president, or Imperial Wizard, this being his fourth consecutive term; and Sam H. Venable, treasurer. National headquarters are in Atlanta, Georgia.

KUWAIT. See ARABIA.

KWANGCHOWAN (KWANGCHOW). See FRENCH INDO-CHINA.

KWANTUNG, kwän'dōōng'. The territory at the southern extremity of the Liaotung Peninsula, Manchuria, leased from China by Japan. Area, including adjacent islands, about 1337 square miles; population, excluding the armed forces, 1,148,034 (Dec. 31, 1936), of whom 975,935 were Manchus, and 170,535 were Japanese, with 1564 other nationalities. Chief towns (with July 31, 1935, populations): Dairen, the capital, 481,379; Port Arthur (Ryojun), 143,760; Chinchou, 125,545; Pulantien.

Production, etc. The production of chief crops in 1936, in metric tons, was: Groundnuts, 79,000; soybeans, 17,700; maize, 132,100; potatoes, 4300; rice, 2700; wheat, 1300. The sea-fisheries catch in 1936 was valued at approximately Y6,000,000. The

salt output for 1936 amounted to 413,084 metric tons. In 1936 imports were valued at Y521,065,535; exports, Y432,057,374. Japan supplied Y410,098,907 of the imports and received Y158,644,012 of the exports. The budget for 1937-38 was estimated to balance at Y26,063,681 (yen averaged \$0.2879 for 1937). Governor, Gen. Kenkichi Uyeda. See JAPAN and MANCHOUKHO.

LABOR. Industrial Relations in Great Britain. As a result of the great increase in strikes during 1937 and the feeling on the part of many industrialists that the American industrial code was too favorably disposed toward labor, President Roosevelt in 1937 was responsible for the establishment of a Commission to make an intensive study of the industrial relations in Great Britain and Sweden. The report, which was delivered in midyear 1938 and which received the unanimous endorsement of all the Commissioners, indicated that in England workers and employers had succeeded in achieving a stable pattern of industrial relations as the result of the recognition of the right of collective bargaining, the establishment of agencies for the harmonious discussion of differences between employers and employees, and the intervention of the state through the creation of mediation machinery on a voluntary basis. The Commissioners, however, pointed out that this stability in England had been achieved only after the result of a long period of great strife. It was not until the passage of the Trade Union Act of 1871, followed by a wave of intensive organizational activity on the part of the trade unions, that the principle of collective bargaining began to be universally recognized. Whereas in the early stages of union and employer organization in the industries of Great Britain violent industrial conflict had taken place, after 1910 collective bargaining was permanently established and strikes since that time had become increasingly infrequent.

Following the experiences of the World War and the establishment of a Royal Commission in 1916, the Whitley Committee, whose reports were adopted in Parliament in 1918 and 1919, there was evolved a governmental policy which has been adhered to up to the present. The essential basis of the Whitley Committee's plans was the "considered conviction that an essential condition of securing a permanent improvement in the relations between employers and employed is that there should be adequate organization on the part of both employers and workpeople." The ensuing program based upon such a general policy led to the development of a plan founded upon these two essential principles: First, labor standards were to be set, wherever feasible, by the free negotiations of voluntary organizations of workers and employers. Second, where such machinery did not function satisfactorily it was to be reinforced by the state determination of labor standards. The procedure of compulsory arbitration which had been adopted during the war, was completely abandoned.

Ever since 1919 the British Government committed itself to the promotion of the machinery of voluntary collective bargaining. The Whitley Reports recommended that in each industry national organizations of workers and employers should form a joint industrial council for the consideration not only of labor standards but of all the economic problems of the industry. Local shop councils were to implement the broad decisions registered by the national councils. As a result of an intensive campaign carried on by the Ministry of Labor, during

the period 1918-21, approximately 60 industry-wide joint industrial councils were set up. To assist this machinery, the British Government developed a complete program. First, its conciliation service was expanded and improved on a completely voluntary basis to permit the peaceful conclusion of the negotiations of labor standards. Next, in the event that conciliation was unsuccessful, the state made available an agency for voluntary arbitration. Next, an industrial court was established which was permanently available to groups desiring impartial arbitration. It was not assumed, however, that all open conflicts could be avoided by such a program. When industrial disputes, therefore, broke out, which were of particular concern to the public interest, the Government appointed a court of inquiry which did not, according to the Commission's report, "operate to stop or postpone a dispute; the purpose is to expose the facts and to bring public opinion to bear on the merits."

In view of the fact that collective machinery had been fully developed in all industries, two further devices were perfected by the government to reinforce the voluntary machinery. The first of these was the device of trade boards originally created to operate only in a few of the most sweated industries, but subsequently extended to the industries having no effective organization and having excessively low wages. Under this procedure some 47 trade boards were established. As a result, representatives of the workers, employers, and the public were appointed to boards and empowered to fix minimum wages and establish normal working hours beyond which overtime was to be paid. In the second place, in those industries where collective bargaining machinery was established but was not applicable to all of the trade, the British employed a device which they named a "fair wages clause." Under this, national as well as local Government authorities required in their contracts that the contractor should "pay rates of wages and observe hours of labor not less favorable than those commonly recognized by employers and trade societies in the trade in the district where the work is carried on."

By the end of 1921, therefore, the framework of collective bargaining now existing in Great Britain was substantially established. As has been said, basically the English pattern was that of free negotiations of voluntary organized groups. Originally organized for the purposes of fighting the trade unions, the employer associations gradually modified their position until today the purpose of their existence is to make collective agreements with the union organizations and to carry them out. According to the Commission's report, there were, in 1938, "266 general federations or associations of employers, designed to cover the whole of an industry or service, and to deal exclusively with labor matters." On the workers' side there were in existence in Great Britain and Ireland 1041 trade unions, with a stated membership of 5,308,000 workers, representing roughly one-third of the persons estimated as eligible for union membership. According to the Commission: "The employers' associations and unions have long since become an integral part of the collective bargaining system in which they respect one another and mutually attribute real value to the agreements and to the relations that have been built up between them." Negotiations for the conclusion of collective agreements in England are also carried on on an industry-wide basis. Such agreements include not only standards of wages, hours, and working con-

ditions, but also, looking to the future, "almost invariably either in the collective agreements or in agreed upon rules of joint standing bodies, composed equally of representatives of union and employer organizations, there are provisions specifying the steps to be taken before strikes or lockouts may occur." The agreements also contained procedure for handling local grievances and for handling disputes on their interpretation.

The Commission had many illuminating things to say about the general strike of 1926 and the Trade Disputes Act of 1927 which followed it. It pointed out that the collective-bargaining machinery, while it was interrupted by the strike of 1926, was neither broken nor essentially modified. The 1927 Act, while it was intended to prevent a repetition of the general strike of 1926 in ordinary industrial disputes, did not effect the immunity of trade unions. The only strike thus forbidden by the Trade Disputes Act was one which was both a sympathetic strike beyond the confines of the industry in dispute, and which was also designed to coerce the government. The act also added a clarifying definition to the obligation to carry on picketing peacefully. The Commission found that in Britain industrial disputes were usually conducted on a peaceful basis. In the case of strikes involving at the outset enough workers to make continued operation of a plant impractical, employers almost invariably shut down their plants and did not attempt to operate until the controversy had been settled by negotiations. This was true, according to the Commission, because (1) "it is difficult to obtain replacements"; (2) "there is a general feeling among workers and employers that the job belongs to the man"; and (3) a desire "on both sides to effect a resumption of work under circumstances as free from bitterness as possible."

While the Trade Disputes Act of 1927 called for the registration of trade unions, it was not true that this requirement in effect meant government regulation of these bodies. Trade unions could not be incorporated. The major obligation of a registered union under the law was to file with the Registrar an annual account of its general funds and a copy of its rules. But according to the Commission, this did not mean government control "for the Registrar functions only administratively, to see that the rules do in fact contain such provisions. Beyond this he has no power to require any particular form of organization, or to supervise the conduct of a trade union."

The Commission found that while strikes were not unknown in Great Britain, nevertheless, the ordinary procedures in industrial relations were peaceful. Also, there was a real determination on the part of the employers' organizations and the trade unions to employ to the full the system of voluntary national agreements and to make these function as effectively as possible. The Commission concluded that such agreements, resting as they did upon good faith rather than legal enforceability, would not be significant unless they were signed by responsible organizations of workers and employers. "Finally, and most important, the acceptance and general practice of collective bargaining on an industry basis places upon the employers' and workers' organizations . . . a peculiarly heavy responsibility calculated by its very nature to call forth patience, understanding, and a desire to make and keep agreements and to achieve industrial peace."

Industrial Relations in Sweden. In Sweden the basic labor conditions were substantially the

same. The Commission found that these were fixed by a series of collective agreements signed by the representatives of workers and employers, each of which set the standard for an industry. To sign and apply these agreements, as in Britain, strong organizations of workers and employers have been developed.

The Commission found that approximately 90 per cent of the manual workers in the manufacturing industries and about 65 per cent of all manual workers were members of 42 national trade unions joined together in the Swedish Confederation of Trade Unions. A substantial majority of these 850,000 members were in industrial unions. Similarly, some 5000 employers of nearly 400,000 workers were members of 37 national associations of employers which were joined together in the Swedish Employers' Federation.

It was not until 1906, after a long period of bitter industrial conflict, that an agreement was reached between the Employers' Federation and the Confederation of Trade Unions whereby the employers undertook to respect the workers' right to organize while the workers recognized the employers' right to manage the undertaking and to engage and dismiss workers without regard as to whether or not they were union members. This agreement served to establish the right of collective bargaining for manual workers and after 1909 was incorporated in all of the national collective agreements. Under it, discrimination issues were adjusted. Neither the closed shop nor the checkoff were issues, due in part to the extensive organization of the workers. The Commission reported that "although strikes and lockouts still occur in Sweden, they occur within the framework of a voluntary system of collective bargaining in which the settlement of differences by methods of persuasion rather than by force has become the order of the day." It is also to be noted, as in the case of Great Britain, that the entire process of collective bargaining was voluntary and that both workers and employers preferred this method to any kind of compulsion on the part of the Government.

As in the case of Great Britain, the Commission noted that the general prevalence of collective agreements on an industry-wide scale depended upon the extent and character of the organization of both workers and employers.

The Commission found a close parallel between the procedures under collective agreements in England and Sweden, and summarized these as follows: First, basic changes in wages and hours were commonly negotiated by the national unions with the associations of employers. Second, the failure of negotiations led the parties to seek the help of an impartial agency, established by the government. Third, local disputes were first negotiated between the particular worker or his union representative and the employer. And if not settled in this way, were referred to a joint body composed of representatives of the national union and the employers' association. Fourth, under the agreements there could be no strikes or lockouts until the procedure for negotiating basic changes or for settling local disputes and grievances had been completed. In England, enforcement of the collective agreements rested upon moral force rather than legal compulsion. In Sweden, the collective agreements were legally enforceable in the Labor Court.

In Sweden, on the other hand, certain standards which in England remain within the scope of collective agreements have been established by legis-

lation. Basic hours of work were fixed by the law of 1919 for most industrial workers at 8 hours per day or 48 hours per week. The 8-hour day could be extended to 9 within the 48-hour week, and beyond this 200 hours of overtime per year were allowed, not more than 48 of which were to be in any 4 weeks. Vacations with pay were also established by law.

Labor Conditions in the South. The National Emergency Council, in its significant report issued during the year, called "Report on Economic Conditions of the South," gave particular attention to the conditions of labor in this region. It pointed out that non-agricultural labor, which was to a large extent in the South unskilled, was increasingly becoming subjected to the competition of large numbers of farm workers who were finding continuance in agriculture difficult or impossible. The relatively low purchasing power and standard of living of southern workers and their migration to other sections made the southern labor problem an integral part of the national problem. The Council's report found that from the point of view of non-agricultural wage earners, the South was particularly significant as a reservoir of labor. One-fourth of the natural increase of the population of rural districts moved to southern cities or to other sections of the country. The tenant farmers in the South were notably mobile and formed the most unstable part of the population, more than one-third of them moving every year. The inability of southern industry to absorb the growth of rural population, in addition to the increase of population in the towns, naturally led to a mass migration out of the region. Nevertheless, in both rural and urban areas, even before the 1929 depression, there was to be found a large amount of unemployment. Perhaps even more significant, according to the Council's report, were the large numbers so inadequately employed that their work was virtually a form of disguised unemployment. The rural unemployment problem and the pressure of unemployed rural workers on industrial labor was intensified by the increased use of tractors and gang plows in agriculture. Nevertheless, in spite of widespread unemployment and inadequate employment, the amount of child labor was greater in the South—on the farms and in the cities—than any other section. Also, in many of the Southern States the proportion of women with gainful occupations was exceptionally large. And finally, low wages prevailed in many sections of the region. The average tenant family on southern cotton plantations received only \$73 per person per year. Sharecroppers' earnings ranged from \$38 to \$87 per person. In 1937 common laborers in large industries in the South were paid 16¢ an hour less than the amount paid for similar labor in other parts of the country. The average annual wage in southern industry was \$865 as compared with \$1219 in other states.

The Council indicated as its belief that low wages helped industry little in the South. Low wages curtailed the purchasing power of workers and therefore also had the effect of retarding southern industry by giving inefficient employers a competitive advantage. The Council's report pointed out that emigration of southern workers, far from affording a solution, tended to reduce the national wage level by intensifying competition for jobs in other sections. The population problems of the South were thus aggravated rather than solved by the movement of southerners to other sections unless at the same time the levels of income and

purchasing power were raised and a basis was laid for higher standards of living.

These subjects are discussed in greater detail in the articles STRIKES; LABOR, AMERICAN FEDERATION OF; LABOR ARBITRATION. Readers are referred to the following for other topics concerned with the role that labor played in American annals during 1938: UNITED STATES; CHILD LABOR; CHILD WELFARE; CO-OPERATION; OLD-AGE PENSIONS; MINIMUM WAGE; WORKMEN'S COMPENSATION; UNEMPLOYMENT; RELIEF.

LABOR, AMERICAN FEDERATION OF. See LABOR UNIONS.

LABOR ARBITRATION. **National Labor Relations Board.** As the year progressed it became increasingly apparent that the criticism of the NLRB not only was not relaxing, but that every effort would be made to force amendments at vital points when the new Congress assembled in 1939. In the section on the *American Federation of Labor* below, attention is called to the opposition to the National Labor Relations Act on the part of the American Federation of Labor, which was charging that the NLRB was definitely partial to the C.I.O., and in fact served as a recruiting agency for that body. Similarly, representatives of business were unrelenting in their opposition to certain aspects of the Act and certain activities of the NLRB, and this in the face of the continued approval of the NLRB's work by the U.S. Supreme Court.

The opposition of business was focused on the following aspects of the National Labor Relations Act and its administration: (1) It was an instrument devised only in the interests of labor and therefore was entirely one-sided. In this connection it was pointed out that employers were given no means by which to prevent abuses at the hands of labor leaders and labor organizations. Investigations were conducted by the NLRB only on the complaint of the workers, and the employer had no right to appeal to the Board for an initial investigation. (2) It was being charged that as a result of increasing jurisdictional disputes between the C.I.O. and the A. F. of L., working conditions in plants were constantly being disrupted so as to make normal operations difficult. (3) It was also being contended that labor leaders frequently sought to compel workers to join labor organizations and by acts of intimidation made for a certain amount of restlessness among employees. (4) It was also being maintained that the Act did not protect employers against violations of contract on the part of unions. (5) And finally, the position of many spokesmen for business was summed up in the contention that the NLRB had a decided pro-labor bias and that frequently in its trials and investigations it operated on the assumption that the employer as a rule was guilty of violating employees' rights.

Senator Burke of Nebraska, one of the most articulate spokesmen for business in this connection, pointed out that while he could see no objection to the grant of the right of free collective bargaining, there was, nevertheless, a need for protection of the workers from attempted intimidation. He went on to say:

Every employee should have the right to decide of his own free will and without any coercion whatever, whether he wants to join a union, and if so, what particular union, and whether he wants to continue his job. . . . Let the Act be amended to give that complete protection. Let it denounce unfair practices on the part of employees as well as employers. There is no reason why labor organizations should not be as strictly amenable to the law as any other group of citizens.

This criticism of the National Labor Relations Act was buttressed from another quarter in the contention of Mr. Walter Lippmann, that the law was unfair to labor as a whole because of the majority rule being imposed by the NLRB. Said Mr. Lippmann:

A minority of workers have no rights that the Wagner Act as now interpreted will protect. Their constitutional freedom of association is treated as a compulsion to follow the union of the majority. So the Board is no longer concerned with the protection of the general civil rights of labor. It is now a board to foster the organization of unions which shall have exclusive power to speak for the workers in a plant or in an industry. In practice the Board is a Federal agency for assisting the union organizers of the CIO or of the A. F. of L.

These and similar charges were denied and rebutted by members of the NLRB, notably in the addresses of Mr. J. Warren Madden, Chairman of the Board, and Mr. Edwin S. Smith, a Board member, during the year. They pointed out that the National Labor Relations Act was attempting to do for workers what employers had done for themselves for decades; that is, organize themselves to protect their interests. The employer had always enjoyed a favored position in his dealings with labor, and without such protection as afforded by the Act, the worker was likely to be at the mercy of the employer. They also denied that evidences of coercion on the part of labor leaders were frequent. Mr. Madden, particularly, in a radio speech on May 18, called attention to the fact that as a result of the presence of the Act on the statute books many thousands of employers had dispensed with industrial disputes and voluntarily had recognized the right of their employees to choose their representatives without interference. He also referred to the fact that in thousands of cases, employers and employees, through the efforts of the Board's agents, had adjusted their difficulties on the basis of compliance with the law. He also called attention to the fact that labor was as law-abiding as capital in the observance of the terms of labor agreements. Said he on this point,

In the industries where collective bargaining has been the accepted practice for years there is no difficulty about responsibility and the faithful performance of contracts on both sides. There is no possible reason why the same should not become true of those unions and those employers who have recently for the first time made contracts. In fact they are rapidly adjusting themselves to their new status.

And Mr. Madden went on to say—it was reported with White House approval—that the NLRB expected to continue to "try to do a careful and workmanlike job in the interpretation and administration of our law. We shall not modify our policy of vigorous enforcement."

Mr. Edwin S. Smith, on Nov. 30, 1938, pointed out that the opponents of the Act were beginning to focus their demands for amendment on two points. The first proposal called for the alteration of the procedural provisions of the Act, either by taking more power of decision from the Board and vesting it in the courts, or by so separating the Board's functions as to have one group of individuals responsible for conducting investigations and issuing complaints and another group responsible solely for making decisions on the facts which the first group had developed. And the second proposal for amendment called for the imposition of new obligations upon labor unions in return for the new obligations which the Act imposed upon employers. In general, such proposals sought to curtail the right to strike and to limit the manner in which the unions might pursue the work of organization.

Mr. Smith rejected the first series of proposals on the score that the Supreme Court gave full approval to the procedure followed by the Board and maintained that the legal and constitutional rights of employers were being fully protected. Again, on this proposal, Mr. Smith referred to the inevitable delay that would eventuate from a bifurcation of the Board's functions and pointed to the long delays that accompanied the operations of the state commissions regulating public utility rates. Said Mr. Smith further on this point:

There is also the problem, which must be delicately approached, of whether courts are as apt to be temperamentally inclined to give labor's problems . . . the sympathetic understanding which will be accorded by a specialized administrative tribunal. I doubt that the courts, generally speaking, could do so. Numbers of courts devote a large part of their energies to thinking in terms of property rights. . . . Judges whose predominant concern . . . is with such matters will necessarily, it seems to me, carry over into the field of labor relations something of liberal-mindedness and over-precision in assessing the significance of facts which are brought before them.

As regards the second set of proposals, namely for the imposition upon labor of new obligations, Mr. Smith said:

Generally speaking, these proposed amendments would exert various sorts of curbs upon union activity. I think such amendments are unwise. I think that the cure for undesirable union activity is to give labor organizations more responsibility, not less. To seek to curtail their present efforts at self-responsibility by forcing upon them onerous legal restrictions would tend to make them look and act more and more like wards of the state.

And in referring to the achievements of the Board, Mr. Smith pointed out that from the fall of 1935 to the end of November, 1938, the NLRB had handled more than 17,000 cases, of which more than 13,000 had been closed, 5370 of these being closed by agreement of the parties without formal action by the Board. Another 40 per cent of the cases were dismissed by the regional directors or by the Board on appeal from the regional directors' rulings. Also, more than 12,000 workers were reinstated after discriminatory discharge and more than 200,000 workers were reinstated after strikes or lock-outs. Scores of illegally maintained company unions were put out of existence. Also, the Board held over 1500 elections in which over 5000 votes were cast. On this point Mr. Smith said:

These elections are an important part of the Board's work. They have enabled employees to determine democratically who should represent them in collective bargaining. They have enabled the winning organization to achieve recognition from the employer without recourse to strike. As a matter of fact 1386 strikes have been settled as a result of the Board's intervention and 628 threatened strikes have been averted.

That the debate was making its influence felt— in certain measure at any rate—upon the American public was indicated by the results of a nationwide poll taken by the American Institute of Public Opinion under the direction of Dr. George Gallup. It is interesting to note that approximately half of the voters polled said they had not formed an opinion one way or another about the Wagner Act. But of the other half who were prepared to hazard an opinion, 43 per cent favored revision, 19 per cent favored repeal, and 38 per cent were willing to leave the Act unchanged. In other words, taking the poll as representative of the American population at large, it may be assumed that about 30 per cent of the American population favored repeal or revision, 20 per cent approved of the Act as it stood, and the other remaining 50 per cent was not in a position as yet to make a decision. In the four East Central States of Ohio, Indiana, Illinois, and Michigan, the vote for revision reached 48 per cent

of those with opinions, while 33 per cent wanted outright repeal and only 19 per cent favored leaving the Act unchanged.

The NLRB and the Supreme Court. Up to May, 1938, and in a period of 13 months, the Supreme Court handed down 11 opinions in which in every case it upheld either the Wagner Act or the authority and decisions of the Labor Board. In the five important decisions handed down in 1937, to which reference is made at length in the YEAR BOOK of 1937, the constitutionality of the National Labor Relations Act was declared and the Court held that Congress had power to regulate labor relations in production industries as well as in regard to those matters that clearly were affected by the interstate commerce clause. Not only was the Wagner Act sustained as a valid exercise of the commerce power by the Court, but it was also held not to violate the due process clause of the Constitution in that it did not interfere with the normal exercise of the right of an employer to select employees or to discharge them. Further—and this was significant from the point of view of authenticating the administrative practices of the NLRB—the Court held that the laws' procedural provisions afforded adequate safeguards for the employer against arbitrary action.

Following these five decisions, in another group of five cases, decided in the fall term of the court running from October, 1937, to March, 1938, the Court illuminated certain other aspects of the Act and the NLRB's conduct under it. In two opinions in related cases, the Supreme Court found that the NLRB could not be enjoined from holding hearings on complaints filed by workers against employers. In two other opinions, the Court held that the NLRB in particular situations, when it found domination or interference on the part of an employer in the organization of his employees, was empowered by the statute to order the employer to withdraw all recognition from and disestablish company unions. In the fifth opinion, the Court found that the law was applicable to an employer engaged in processing, even though the employer procured all his raw materials from within the state in which his plants were located and sent out of the state less than half of his product.

The outstanding decisions in which these opinions were laid down were the following: In connection with the NLRB's right to hold hearings on the charge of unfair labor practices: *Meyers vs. Bethlehem Ship Building Corporation* and *Newport News Ship Building and Drydock Co. vs. Schauffler*, decisions rendered on Jan. 31, 1938. In connection with the NLRB's right to order the disestablishment of company unions: *National Labor Relations Board vs. Pennsylvania Greyhound Lines, Inc.* and *National Labor Relations Board vs. Pacific Greyhound Lines, Inc.*, decisions rendered on Feb. 28, 1938.

In connection with the jurisdiction over a processing company, whose interstate business represented only a minor fraction of its production, *Santa Cruz Fruit Packing Co. vs. National Labor Relations Board*, decision rendered on Mar. 28, 1938.

Another outstanding decision was that rendered in the *National Labor Relations Board vs. MacKay Radio and Telegraph Co.*, on May 16, 1938, when the Supreme Court upheld the procedure followed by the National Labor Relations Board in ordering the reinstatement of five strikers. This case had significance for two reasons. First, on the merits of the controversy involved in the case, the

Court ruled that workers who went out on a strike, not provoked by any unfair labor practice of their employers, nevertheless remained employees; and that the employer, if he discriminated because of union activities in reinstating the strikers after failure of the strike, was therefore violating the Wagner Act. Second, on the procedural side of the case, the Court held that the employer was not denied a full and accurate hearing before the Board which had refused the employer's request for notice of its proposed decision so that objections could be taken before any order was issued.

On December 5 another decision, that of the Consolidated Edison Co. of New York vs. the National Labor Relations Board, the Court for the first time refused to validate one of the procedural rules of the NLRB. The NLRB had ordered the Consolidated Edison Co. and its subsidiaries to abrogate contracts with the International Brotherhood of Electrical Workers, an affiliate of the A. F. of L., on the basis of representations made by a rival union, the United Electrical and Radio Workers, affiliated with the C.I.O. On the grounds that the contracts were illegal because the company had influenced its employees to join the I.B.E.W., the NLRB, after investigation, had ordered the company to abrogate the contracts. The majority of the Supreme Court held that it had not been proved that the company's contracts with the I.B.E.W. had been made for the purpose of effecting and perpetuating unfair labor practices which discriminated against the C.I.O. union. The majority opinion contended that the law gave the Board no express authority to validate contracts with independent labor organizations and that the scope of its power was restricted to taking such affirmative action as would effectuate the policies of the law. Said the decision: "We think that this authority does not go so far as to confer a punitive jurisdiction enabling the Board to inflict upon the employer any penalty that it may choose because it is engaged in unfair labor practices. The power to command affirmative action is remedial not punitive." In other respects the Court upheld the decision of the Board. Those parts of the order requiring reinstatement of workers allegedly discharged because of union discrimination and banning recognition of the union as the exclusive bargaining agent of the workers, were sustained. The union was held to be the bargaining agency only for its members. Equally important was the support given by the Court to the Board's contention that it had the right of jurisdiction over public utilities serving interstate industries. In this respect the Board reaffirmed its previous opinion that industries operating within a state are subject to Federal regulation if industrial disputes or other emergencies in their operations would affect interstate commerce. It is interesting to note that four of the eight members of the Court were in complete agreement on the decision, delivered by Chief Justice Hughes; also, that President Roosevelt's two appointees to the bench, Justices Reed and Black, held that the action of the Board should have been sustained in every particular.

Elections Conducted under the NLRB.

Figures made public by the NLRB presented an interesting analysis of the outcome of elections conducted under its supervision. From October, 1935, when it first began to function, through December, 1937, the NLRB conducted 966 elections to determine the majority choice of representatives for purposes of collective bargaining. In 14.5 per cent of the elections, all types of labor organizations ap-

pearing on the ballot were defeated. In 74.8 per cent, employees chose established trade unions of national or international affiliation. Unions having no outside affiliation and confined to a particular company or plant, as well as unions restricted to a certain locality, won 10.7 per cent of the elections. The 74.8 per cent of the total elections that were won by established trade unions were divided as follows: Unions affiliated with the A. F. of L. won 26.3 per cent; unions affiliated with the C.I.O. won 47.1 per cent; workers in 1.4 per cent of the elections chose to be represented by such standard independent or non-affiliated unions as the Sailors' Union of the Pacific. In terms of the total number of valid votes cast in elections held by the Board during the period in question, 81.1 per cent of the votes were for some trade or independent union, 13.6 per cent were for plant or local independent unions, and 5.3 per cent were for no organization.

The Harlan Dispute. In 1937, as a result of the investigations conducted by the Senate's Civil Liberties Committee, headed by Senator La Follette of Wisconsin, and the NLRB, the United States was given the full tale of violence, bloodshed, and intimidation which had characterized the history of industrial relations in Harlan County, Kentucky, an important bituminous coal center. As a result of the filing of charges with the NLRB against some 40 Harlan County coal companies and operators by a union representing coal miners, the NLRB took jurisdiction and proceeded to test its powers procedurally and in the courts. In the case of one large company, the Board made an order for reinstatement of some 60 miners discharged for union activities, and ordered compensation for loss of pay. The U.S. Circuit Court of Appeals upheld the Board's order in all particulars and entered its decree against the company. As a result of non-compliance and for other purposes the U.S. Attorney in the area brought suit against 55 Harlan County coal companies, mine operators, and former deputy sheriffs for conspiring to deny Harlan citizens their civil rights. Jurisdiction was taken under a Federal law passed in 1870 to combat the Ku Klux Klan. On August 1, after 12 weeks given over to the taking of testimony and the hearing of witnesses, the jury reported its inability to arrive at a verdict and Federal Judge H. Church dismissed the jury.

But the story apparently was to have a happy ending, for on August 27 an agreement was signed between the United Mine Workers of America and the Harlan County Coal Operators' Association, which seemed to presage peace. In view of the fact that the agreement recognized the U.M.W.A. as a collective bargaining agency for the miners in the community and also imposed the standard check-off, the NLRB consented to dismiss finally all charges of violation of the Wagner Act against the coal companies of the county.

Railroad Wage Dispute. Following negotiations that began on May 12 and that finally terminated on Oct. 29, 1938, a threatened industrial dispute affecting virtually all the railway companies in the United States was averted. On May 12 the carriers served notice on their employees of their intention to reduce wage scales 15 per cent on July 1, 1938. Efforts at settlement proving unavailing, mediation was invoked and followed, however, without succeeding in adjusting the dispute. As required by the Railway Labor Act, the National Mediation Board requested the parties to submit the controversy to arbitration. The carriers signified their willingness to arbitrate, but the employ-

ees declined. On Aug. 31, 1938, the National Mediation Board formally notified the parties of the termination of its services. This automatically stayed the original notices for an additional 30 days. The carriers then notified their respective employees that the notices would be put into effect on Oct. 1, 1938. Strike votes were taken and on September 26 the employees announced their intention to call a nationwide strike unless the wage-reduction proposals of the carriers were withdrawn. On the following day, the National Mediation Board notified the President that in its judgment the unadjusted dispute of the parties threatened substantially to interrupt interstate commerce to a degree such as to deprive the country of essential transportation service. As empowered by the Railway Labor Act, President Roosevelt thereupon created an Emergency Board to investigate and report respecting the dispute. It was this Board which recommended on October 29 that the railway companies rescind their wage-reduction orders. On November 4 the railroads complied and withdrew their orders for the wage reduction.

Recognizing that the request of the railroads grew out of their financial needs and conceding that it was necessary to give some consideration to the railway problem as a whole as a result of which ways and means would have to be devised for coming to the aid of individual railroads in difficulties, the Board nevertheless concluded that the level of wages of railroad labor was not high when compared with wage levels in other industries. The Board went on to say:

Nor do wage trends show that railway wages have advanced proportionately greater than wages in other industries. Instead they seem to show a slight lag. . . . Furthermore, no justification arises for a wage reduction from the current wage situation in other industries. . . . These considerations lead us to the conclusion that the carriers' proposal can derive no sustenance from the contention that railway wages as a whole are too high.

Establishment of the Maritime Labor Board. In June, 1938, as an amendment to the Merchant Marine Act of 1936, Congress provided for the establishment of a Federal Maritime Labor Board to aid in the settlement of disputes between maritime workers and their employers. The Board was to be composed of three members. The primary function of the Board was to encourage all maritime employers and their employees to bargain collectively and endeavor to settle disputes amicably. The Board was called upon to encourage employers and employees to make every reasonable effort "to make and maintain written agreements concerning rates of pay, hours of employment, rules, and working conditions, which agreements shall provide, by means of adjustment boards or port committees, for the final adjustment of disputes growing out of grievances or the application or interpretation of the terms of such agreements," and to "settle all disputes, whether arising out of the interpretation or application of such agreements or otherwise, in order to avoid any interruptions to transportation of passengers or property in water-borne commerce." The amended act did not affect or limit the provisions of the National Labor Relations Act, and no unfair labor practice under that act was a dispute for the purposes of the new act. The National Labor Relations Board was to continue to determine questions relating to representation of employees of a maritime employer. The parties to a dispute might request the Maritime Labor Board to act as mediator in such agreements, also the Board might proffer its services in case any maritime labor dispute was

found to exist. If the Board found itself unable, through mediation, to bring the parties to a dispute to an agreement, it was required to use its best efforts to secure the assent of both parties to arbitration of the matter in dispute.

LABOR BANKS. See CO-OPERATION.

LABOR CONDITIONS IN THE SOUTH. See LABOR.

LABOR LEGISLATION. The most significant achievement in labor legislation during 1938 was the adoption by Congress of the National Fair Labor Standards Act—fixing maximum hours and minimum wages and prohibiting child labor in interstate industries.

Of first rate importance also were the new Federal law setting up a national system of unemployment compensation for railway workers, the constitutional amendment adopted by Arkansas voters in November authorizing enactment of a state workmen's compensation law, the New York constitutional amendment authorizing adoption of a health insurance law, and the new minimum wage laws in Kentucky and Louisiana. Outstanding, too, in its implications was the final ratification by the United States Senate of five maritime labor treaties, the first International Labor Organization conventions to be ratified by this country.

These and many other advances in labor legislation came in a year when, in addition to Congress, fewer than half of the state legislatures met in regular or special session.

With the new Federally administered law for railway workers, there are now 52 American unemployment compensation laws. Noteworthy among amendments to these laws was the suspension of worker contributions in Massachusetts for one year, while a recess commission studies the advisability of their permanent abolition. Only six other laws compel workers to contribute. In Georgia, the date for the beginning of benefit payments was advanced six months to Jan. 1, 1939; and in Louisiana, coverage was extended to employers of four or more workers instead of eight or more. Benefits were liberalized in Louisiana and Mississippi; and flat minima were fixed in Kentucky (\$4), Louisiana (\$4), New Jersey (\$5), and Virginia (\$3). The maximum amount a worker may earn at odd jobs without affecting his benefit rights was raised in Georgia, Massachusetts, and New York. The waiting period was reduced to two weeks in Louisiana and Massachusetts.

All of the states and Alaska, Hawaii, and Puerto Rico now have old age pension or assistance laws. These laws were amended by the legislatures in Georgia, Kentucky, Massachusetts, New Jersey, and Rhode Island. Missouri, by constitutional amendment, authorized payment of pensions beginning at age 65 instead of 70. North Dakota voters by initiative petition amended the state law to fix a minimum pension of \$40, or \$30 if more than one person in the same family is receiving a pension.

Besides Arkansas which in 1938 approved a constitutional amendment explicitly authorizing the legislature to adopt a workmen's compensation law, only Mississippi is now without this legislation. Liberalizing or strengthening amendments to existing laws were adopted in Kansas, Louisiana, Massachusetts, New Jersey, Puerto Rico, and Virginia. New York removed the state insurance fund from the labor department and placed it under an independent eight-man commission. Massachusetts provided for a special commission investigation of methods of insurance, silicosis compensation, and

allocation of rejected risks. Congress made several changes in the Federal Longshoremen's Compensation Act and the United States Employee's Compensation Act, and exempted clerical employees of members of Congress from the District's law.

Notable among laws affecting labor's right of collective bargaining is the act of Congress creating a three-man Maritime Labor Board to mediate maritime labor disputes and to promote arbitration when other means fail. Puerto Rico, moreover, enacted a labor relations act similar to the Federal law. New York adopted a constitutional amendment establishing labor's right to organize and bargain collectively through representatives of their own choosing; and Massachusetts extended the state conciliation board's jurisdiction. Several states, including Kentucky and New York, enacted laws designed to safeguard the rights of striking workers. Congress strengthened the law prohibiting the interstate transportation of strike-breakers. Rhode Island outlawed the use of tear gas by private individuals or corporations during strikes and lockouts. Virginia provided for a study of causes and remedies of labor disputes. Oregon, on the other hand, by referendum on November 8, adopted a law designed to limit severely the rights of labor to picket, to boycott and to accumulate funds, with provision for enforcement through court injunctions and criminal penalties.

In the National Fair Labor Standards Act, Congress fixed a national minimum wage for employees in interstate industries, beginning at 25 cents an hour the first year and rising to 30 cents the second year and to 40 cents six years later. Industry committees may be created to recommend different hourly rates but not more than 40 nor less than 30 cents an hour. The new state minimum wage laws of Kentucky and Louisiana made a total of 25 states, the District of Columbia, and Puerto Rico having such laws. Massachusetts made it illegal to attempt evasion of the minimum wage law through leases or otherwise. New York by referendum voted a constitutional amendment requiring prevailing wages on public works.

The Federal wage-hour law which went into effect October 24, requires extra pay for weekly hours in excess of 44 the first year, 42 the second, and 40 thereafter in interstate industries. Important among new state hour laws is the South Carolina act putting into effect a 1936 law limiting hours of employees in textile mills to 8 a day and 40 a week, and placing the same limits on women's hours in garment factories and a 48-hour weekly maximum for women in finishing, dyeing, and bleaching plants. That State also restricted hours in many other industries. Louisiana fixed an 8-hour day and a 48-hour, 6-day week for women in most industries, prohibited night work for females under 18 and prescribed rest periods for women.

Virginia reduced women's hours in many occupations from 10 to 9 a day and fixed a 48-hour weekly limit. New York made her one-day-rest-in-seven law applicable to janitors, watchmen, and superintendents of buildings and to engineers and firemen in theaters. An 8-hour day and 5-day week was prescribed for public works in an amendment to the New York constitution adopted on November 8.

Congress extended coverage of the 8-hour day for seamen and licensed officers in deck and engine departments to vessels on the Great Lakes. Massachusetts provided for a joint investigation of hours of women and children in hospitals and nursing

homes, to be made by the labor and health departments.

Revival of Federal regulation through the Fair Labor Standards Act made 1938 a year of outstanding importance for child labor legislation. Returning to the method first attempted in the 1916 act which was declared unconstitutional in 1918, Congress has now prohibited the shipment in interstate commerce of goods produced in any establishment, where, within the preceding 30 days, any child under 16 years of age had been employed, or any person between 16 and 18 years of age had been employed in an occupation declared to be particularly hazardous or detrimental to the health or well-being of such person. Administration is through the Children's Bureau.

Among the states, South Carolina forbade night work of minors under 18 years of age between 10 p.m. and 6 a.m., New York extended the application of the street trades law. Louisiana, Massachusetts, and Virginia provided for state systems of voluntary apprenticeship.

A modern boiler safety law applying outside of New Orleans was adopted by Louisiana, where the commissioner of labor was authorized to make and enforce administrative regulations, to inspect boilers and levy inspection fees, and to accept inspections by qualified insurance company inspectors. Puerto Rico created an accident prevention council empowered to make and enforce safety rules in industry and elsewhere.

Louisiana authorized the commissioner of labor to license and regulate fee-charging employment agencies. Agencies transacting all their business in a regular office in a city or town are required to pay an annual license fee of \$50, instead of \$25 as formerly. For others, the fee is \$500. A \$5000 bond must be filed with the commissioner. Licensees must be at least 21 years of age and of good character.

Several states, including Massachusetts, New Jersey, New York, Rhode Island, South Carolina, and Virginia, enacted laws to protect workers' wage claims. Laws seeking to prevent age discriminations in public employments were enacted by New Jersey and New York.

New York authorized savings banks to write life insurance or annuity policies; required approval of the board of standards and appeals for use as corporate names of such phrases as "industrial union"; and created a commission to study English methods of industrial self-regulation and existing profit-sharing plans. Congress made applicable to the construction of naval vessels the provisions of the Walsh-Healy Act relating to wages, hours, and conditions of workers under public contracts.

To enforce the Federal wage-hour law Congress established a wage and hour division in the Labor Department. Congress also created a three-man Maritime Labor Board to mediate maritime labor disputes.

Louisiana authorized the labor commissioner to appoint three inspectors to enforce the women's hour law, created a minimum wage division in the labor department, and provided for a director of apprenticeship in the labor department and also for an apprenticeship council. Massachusetts and Virginia also created apprenticeship boards attached to their labor departments.

Louisiana established a civil service system for its state employment offices and unemployment compensation division; and Kentucky authorized her unemployment compensation commission to adopt

such a system. In Virginia the advisory legislative council was authorized to study the advisability of enacting a state civil service law.

LABOR LEGISLATION, AMERICAN ASSOCIATION FOR. Founded in 1906, this membership organization of socially minded economists, lawyers, journalists, labor leaders, and employers has worked along scientific lines, consistently attacking needless industrial evils from the general welfare viewpoint. It continued its work as the American arm of the International Association for Social Progress formed in 1925 by the fusion of the three international organizations for labor legislation, unemployment, and social insurance. At the World Congress on Social Policy in Paris, July, 1937, the American Section actively participated. Progress of the Association was recorded in its substantial quarterly, the *American Labor Legislation Review*. A cumulative index to the first 20 volumes of this *Review* was published in 1931.

The Association from the beginning has given special attention to social insurance legislation, and to laws for the prevention of industrial and mine accidents and occupational diseases, the mitigation of the evil effects of unemployment through long-range planning of public works, the regulation of fee-charging employment agencies, and the development of public employment offices, and for the provision of one day of rest in seven. It places special stress upon effective administration of the laws.

The Association's 32nd Annual Meeting was held in Detroit, December 29-30, several sessions being held jointly with the American Economic Association, the American Statistical Association, and the American Sociological Society.

The president in 1938 was Joseph P. Chamberlain; the Treasurer, Eustace Seligman; the Secretary, John B. Andrews; and they were re-elected. Headquarters are at 131 East 23rd Street, New York City. See **LABOR LEGISLATION**.

LABOR UNIONS. The rift which had developed in the ranks of organized labor in 1935 came to an open break in 1938 when the Committee for Industrial Organization decided to go its own way as an entirely independent body. The result was that in November of the year its constituent national trade unions organized the Congress of Industrial Organizations, a body which duplicated the American Federation of Labor. As a result of the internecine struggle, labor made relatively little advances during the year. Indeed, in some sectors there were definite losses. The following factors contributed to the uncertain situation: (1) Factional struggles broke out in a number of important unions, notably the United Automobile Workers of America, the National Maritime Union, and the International Fur Workers' Union, which checked organizational activities. Charging them with Communist sympathies, Homer Martin, president of the automobile union, suspended four international officers. The fight spread to a number of the outstanding locals, and, as a result, appeal was made to John L. Lewis, Chairman of the C.I.O., for the purpose of rehabilitating the union. Setting up what came to be virtually a regency, under the direction of Sidney Hillman and Philip Murray, vice chairmen of the C.I.O., Mr. Lewis endeavored to re-establish peace through the restoration of the suspended officers and the limiting of the powers of Homer Martin. This plan took effect in October. A similar factional struggle, which endangered the progress of C.I.O. organizational work on the

west coast, took place when a number of local unions, notably those affiliated with the International Ladies' Garment Workers' Union, charged that Harry Bridges, the west coast regional director of the C.I.O., was following the Communist Party line. The same difficulties emerged on the east coast in the Maritime Workers' Union and in New York among the furriers. (2) In November, David Dubinsky, president of the I.L.G.W.U., withdrew from the C.I.O. just before the meeting of its constitutional convention on the grounds that John L. Lewis had made no real efforts to establish peace with the A. F. of L.—a peace which he charged had been on the verge of realization in December, 1937, as a result of the meetings taking place between the representatives of the two bodies—and because of the I.L.G.W.U.'s refusal to countenance "dual national movements." Said Mr. Dubinsky in explaining his attitude:

We believe now, as we have always believed, that one unified labor organization in this country could and should bring the benefits of organization to all wage-earners in the land, whether in the mass-production or the skilled industries, and protect labor against its economic as well as political enemies.

Being vitally interested in the reconciliation of the two parts of the labor movement, we therefore decide to remain an independent union until peace is established in the labor movement or until it is otherwise decided by a regular or special convention of our union.

3. Though unaffiliated with either side, our policy in the future will be to support every genuine effort, whether C.I.O. or A.F.L., in their organizational activities for the improvement of the conditions of the workers, and in every effort to achieve peace in the labor movement.

(3) As a result of the inability of the two Federal organizations to come to terms, the A. F. of L. proceeded to charter dual national unions, the outstanding one of these being the International Union of Progressive Mine Workers of America, which was to work in the same field as the C.I.O.'s United Mine Workers of America. This new union held out the olive branch to employers when it promised to eliminate the check-off from contracts and not to call strikes without the consent of the rank and file membership. (4) Another important characteristic of the period was the continued attacks of the A. F. of L. on the work of the National Labor Relations Board. Further mention of the attitude of the A. F. of L. toward the NLRB will be made below. (5) In May, the A. F. of L. took the final step of outlawing the suspended unions which had thrown in their lot with the C.I.O. when it formally expelled 9 of the 10 bodies that had followed the leadership of John L. Lewis. The suspended unions were as follows: United Mine Workers of America; International Union of Mine, Mill, and Smelter Workers; Federation of Flat Glass Workers of America; Amalgamated Clothing Workers of America; Amalgamated Association of Iron, Steel, and Tin Workers; United Textile Workers of America; International Union United Automobile Workers of America; United Rubber Workers of America; Oil Field, Gas Well, and Refinery Workers of America.

A. F. of L. Convention. The 58th Convention of the A. F. of L. met at Houston, Texas, during October 3-13 with the question of peace in organized labor and the A. F. of L.'s attitude toward the NLRB as the outstanding topics of discussion. The executive council's report indicated a growth of membership from 2,860,933 paid-up members on Aug. 31, 1937, to 3,623,087 on Aug. 31, 1938. To this latter figure must be added the unemployed members of 1,400,000, bringing the total up to 5,000,000, the highest in the A. F. of L.'s history.

The tone of the meeting was set when the execu-

tive council's report openly charged the NLRB with being linked with the fortunes of the C.I.O. and with "fostering its interests and by the effect of its decrees recruiting membership for the C.I.O." The executive board, in its report, made three charges against the NLRB as follows:

First, in a large number of instances its agents have shown gross favoritism and bias in the handling of cases, furthering the objectives of one union against another and favoring one form of labor organization.

Second, by administrative fiat the board has set aside legally valid and binding contracts entered into in good faith by bona fide unions and employers.

Third, through the arbitrary determination of appropriate units in cases dealing with the question concerning representation, the board has sought to impose upon workers, regardless of their wishes, the type of organization it favored.

On the second day of the convention's meetings the question of peace in the ranks of organized labor was forcibly placed before the assembled delegates when President Roosevelt's message to the convention openly asked for a reconsideration of the basis of the strife. Said his message:

... I venture to express the hope that the convention will leave open every possible door of access to peace and progress in the affairs of organized labor in the United States. If leaders of organized labor can make and keep the peace between various opinions and factions within the labor group itself, it will vastly increase the prestige of labor with the country and prevent the reaction which otherwise is bound to injure the workers themselves.

This appeal met with response from an unexpected and powerful quarter within the ranks of the A. F. of L. when Daniel J. Tobin, president of the International Brotherhood of Teamsters, Chauffeurs, Stablemen, and Helpers of America, the largest international in the A. F. of L. with a paid-up membership of 309,200 on October 7, declared:

I hope and trust that you will pay some attention to that [President's message], the first message of its kind that ever came to one of our conventions, and that you will not leave this convention without telling us in the executive council in no unmistakable language, "Go and meet those people (the C.I.O.) if you are called upon, and try to bring about a settlement."

Mr. Tobin further went on to say that the division in the ranks of labor had become so serious that no further labor legislation might be expected in Washington until labor itself was cemented into one body. The door was left open to peace when the Committee on Resolutions recommended that "the convention authorize the executive council to carry on the battle and at the same time stand ready to respond to any genuine appeal for peace or any honorable and sincere opportunity to reunite the labor movement." That this attitude was not accepted in ill part by Mr. Green was indicated by the remarks made in his speech of acceptance as president of the A. F. of L. for the 15th consecutive term. Here he said:

I promise you that I shall make every contribution that lies within my power towards the promotion of peace in the labor movement; I shall do what I can to heal the wounds and close the breach and unite the force of labor. ... I will do what I can to serve in every way to establish here in America a solid invincible movement unassailable and unafraid.

There was no question that Mr. Tobin's position was strategic and at the end of the convention he indicated that he was not prepared to remain in the A. F. of L. quiescently; indeed to reporters he said that the teamsters could "build their own house" if peace did not quickly come.

Also, at its convention, the A. F. of L. openly voiced its opposition to the NLRB and to those among its decisions which it charged were friendly to the C.I.O. In the executive council's report the

NLRB was accused of misinterpreting the intent of Congress in determining what constituted an appropriate unit for the purpose of collective bargaining, and of rendering aid directly and through decisions to the C.I.O. In line with this sentiment, the convention approved the report of the executive council and instructed the council to draft amendments to the National Relations Act to meet the following demands:

1. The unit rule must be changed to conform to that which is in the Railway Labor Act so that it will be obligatory on the Board to grant a craft or class the right to select its bargaining representative by majority vote.

2. The power of the Board to invalidate contracts must be definitely curtailed.

3. Every known interested party should be served with due process and be afforded an opportunity to appear in any case. No contractual rights should be passed upon without every party to the contract being served with process and given the right to appear in the case.

4. Intervention by interested parties should be made a matter of right and not a matter of discretion.

5. Definite qualifications should be set forth in respect to examiners. Some are wholly incompetent and unfit to serve in that capacity. In fact, affidavits of prejudice should be permitted to be filed against them where an examiner is considered unfair.

6. Clarification respecting power over the issuance of subpoenas is necessary and liberalizing of the rule in that respect should be provided.

7. The secrecy of files must be lifted to the extent that all persons may have an opportunity to examine a record which contains material on which decisions are made.

8. Elections should be held within thirty days from the filing of petitions.

9. All cases should be decided within forty-five days after the close of the taking of testimony.

The convention also recommended consideration of the desirability of (1) granting jurisdiction to appellate courts to "review the facts as well as the law . . ." and (2) of separating "the administrative functions from the judicial functions of the NLRB."

Other important decisions taken by the convention included the following: (1) It approved the objections of its executive council to Section 14 of the Fair Labor Standards Act of 1938 pertaining to special rates of wages for apprentices and handicapped workers. (See MINIMUM WAGE.) (2) It approved the Walsh-Healey Act and recommended that the law "be further amended so that all contracts entered into by government agencies for marine vessels . . . should come under the wage provisions of the law." (3) It pledged support to the railroad workers' unions in their struggle against the 15 per cent wage reduction which the operators demanded. (See LABOR ARBITRATION.) (4) It refused to adopt a resolution for united action by democracies for peace and for the quarantining of aggressor nations. (5) It commended the Federation's officers for helping German and Austrian refugees and praised Mr. Green for carrying out the Federation's policy favoring boycott of German goods and his recent telegrams to the State Department and the British Trades' Union Congress on behalf of keeping immigration open to Jews who may wish to go to Palestine.

Mr. Green was re-elected president and all the other officers were similarly re-elected. The convention voted to hold its next meeting in San Francisco.

See ART EXHIBITIONS.

C.I.O. The Committee for Industrial Organization took the step that led to the establishment of a dual labor federation when it met in Pittsburgh during November 14-18 and drew up a constitution for the Congress of Industrial Organizations. Its organizing committee claimed a membership of 4,037,877, but, deducting the 250,000 members representing the I.L.G.W.U., the net membership was 3,787,877. It should be noted that

these included dues-paying as well as unemployed members. Thus these 3,788,000 persons were to be added to the 5,000,000 gross members of the A. F. of L. to make the total of almost 9,000,000 organized trade unionists in America exclusive of the membership of the railroad brotherhoods.

There assembled at Pittsburgh representatives of 35 affiliated unions, 675 local industrial unions, 9 organizing committees, 23 state industrial councils, and 115 city councils. It can be seen, therefore, that the C.I.O. planned to duplicate point for point the organizational forms and the activities of the A. F. of L.

President Roosevelt in his message to the C.I.O. convention repeated again, largely in similar terms, the plea for peace that he had voiced in his message to the A. F. of L. He said:

... it is essential that there be co-operation among the wage earning groups and because of this I venture to express the hope, as I did also to the A. F. of L. convention delegates, that every possible door to the access to peace and progress in the affairs of organized labor in the United States be left open. Continued dissension can only lead to loss of influence and prestige to all labor. On the other hand, collective bargaining will be furthered by a united labor movement making for co-operation and labor peace which will be in the interests of all Americans.

Reporters were quick to observe that while there was a good deal of free discussion on the floor of the convention, nevertheless its proceedings were dominated by a small group of executives who quickly indicated that no dissension or factionalism would be brooked. For one, the top leadership refused to permit the reopening of the peace discussions and would not tolerate a motion calling for delay in the setting-up of an independent organization. Without a dissenting vote, therefore, the delegates resolved that while the goal of unity in the labor movement was accepted, the C.I.O. would never compromise with either the fundamental principle of industrial unionism or "its obligation to fully protect the rights and interests of all its members and affiliated organizations." In the words of a well-informed observer, "the door for further negotiations was not slammed; it simply was not approached."

In similar fashion, the top leadership treated none too gently the demands of left wingers at the convention who called for tolerance toward radical political groups. In its preamble the C.I.O. declared it as its purpose "to bring about the effective organization of the working men and women of America regardless of race, creed, color, or nationality." It became at once apparent that the preamble had nothing to say about "political affiliation," meaning of course those persons who openly or tactically were following the line of the Communist party. For the purposes of giving further consideration to this question, delegates Rathborne, Curran, and Bridges requested that a little more time be afforded to study the provisions of the constitution before voting on it, the thought being to force the inclusion of the term "political affiliation." But the top leadership would brook neither delay nor criticism and the preamble as originally written was forced through.

The constitution as accepted provided for an unpaid president, two vice-presidents, a secretary, and an executive board comprising representatives of each of the 41 affiliated international unions. Headquarters were to be in Washington and conventions were to be held annually with the executive board meeting twice a year. Revenues for the C.I.O. were to be derived from a tax of 5¢ a month per member from each international union, and 50¢ per member from each directly affiliated in-

dustrial union. Questions before the C.I.O. executive board were to be decided by a simple majority vote with a roll call on demand of any member. In the case of the roll call each member was to cast as many votes as there were members in his union. This obviously meant control by a group of the large unions, notably the miners, the clothing workers, the steel workers, and the automobile workers. Also, the constitution provided that no affiliate was to be suspended or expelled without a two-thirds vote at the convention.

The constitution declared the objects of the newly named Congress of Industrial Organizations to be as follows:

1. To bring about the effective organization of the working men and women of America regardless of race, creed, color, or nationality and to unite them for common action into labor unions for their mutual aid and protection.
2. To extend the benefits of collective bargaining and to secure for the workers means to establish peaceful relations with their employers, by forming labor unions capable of dealing with modern aggregates of industry and finance.
3. To maintain determined adherence to obligations and responsibilities under collective bargaining and wage agreements.
4. To secure legislation safeguarding the economic security and social welfare of the workers of America, to protect and extend our democratic institutions and civil rights and liberties, and thus to perpetuate the cherished traditions of our democracy.

The delegates adopted a social security and health program of their own as well as a score of other resolutions. These included the establishment of a permanent civil liberties bureau in the Federal Government; liberal credit to small farmers and the maintenance of farm prices at not less than the cost of production; opposition to reduction in WPA; substantial expansion in the housing, social security, and youth programs; the expansion and raising of wage and hour standards; the elimination of poll taxes in the South; Federal legislation forbidding the use of the National Guard to break strikes; and approval of President Roosevelt's Latin-American program. It did, however, demand that social services should not be curtailed to pay for armament and that the right of labor under the National Labor Relations Act be respected. The NLRB received a clean bill of health from the convention.

The C.I.O. elected as its first constitutional president John L. Lewis, president of the United Mine Workers of America. The two vice-presidents named were Philip Murray, of the United Mine Workers and chairman of the Steel Workers' Organizing Committee, and Sidney Hillman, president of the Amalgamated Clothing Workers of America and chairman of the Textile Workers' Organizing Committee. As secretary it named James E. Carey, president of the United Electrical and Radio Workers' Union.

LABRADOR. The most easterly part of North America; a dependency of Newfoundland. Area, 118,400 square miles; population (1935), 4716. Capital, Battle Harbor. On Nov. 16, 1938, it was announced by Dr. J. A. Retty, chief geologist of the Labrador Mining and Exploration Company, that two great iron-ore deposits were discovered. One deposit, of high-grade ore, is at Sawyer Lake; the second deposit, of lower-grade ore, is at Attikamagen. See NEWFOUNDLAND.

LACROSSE. See SPORTS.

LA FARGE, CHRISTOPHER GRANT. An American architect, died at Saundertown, R. I., Oct. 11, 1938. Born in Newport, R. I., Jan. 5, 1862, the son of John La Farge, he studied at the Massachusetts Institute of Technology (1880-81) and spent the

year 1882 in the office of H. H. Richardson. In 1883 he joined his classmate, George L. Heins, at Minneapolis as an architect on a railroad station project. They moved to New York in the following year where they took charge of the architectural work of La Farge's father.

In 1886 the firm of Heins and La Farge was founded which lasted until 1910. During this period some of Mr. La Farge's best work was done. In 1890, as the result of a competition in which 30 architects participated, their design for the Cathedral of St. John the Divine in New York City was adopted. It was conceived on Byzantine lines internally but externally treated in a free Romanesque manner. After Mr. Heins' death in 1907, Mr. La Farge was retained as architect, but in 1911 the remainder of the work, the design of which was changed to Gothic, was entrusted to Mr. Ralph Adams Cram of the firm of Cram, Goodhue & Livingstone.

Other works on which Mr. La Farge acted as collaborator during his membership in this firm were: The interiors of the Church of St. Paul the Apostle, the Church of the Incarnation, and the church and parsonage of the 4th Presbyterian Church, all in New York; St. Matthew's Church, Washington; the Church of the Blessed Sacrament, Providence, R. I.; St. Paul's Church and parish house, Rochester, N. Y.; the Houghton Memorial Chapel, Wellesley, Mass.; the Roman Catholic Church and rectory, Tuxedo, N. Y.; the chapel and parish house, St. Michael's, Geneseo, N. Y.; the Roman Catholic chapel at West Point, N. Y.; the Lorillard, Matthiesen, and Bliss mausoleums in Woodlawn Cemetery, New York; the Calvin S. Brice mausoleum, Lima, O.; the alterations and extensions to Grace Church, New York; accessory buildings of the Cathedral of St. John the Divine; the Roman Catholic cathedral, Seattle, Wash.; the Packard Memorial Library, Salt Lake City; many of the New York subway stations built under the Rapid Transit Commission, particularly those below Grand Central Station on the Interborough Rapid Transit line; the buildings of the New York Zoological Park; the Morgan Library, Hartford, Conn.; the Williams Memorial, Trinity College; St. Patrick's Church, Philadelphia; the U.S. Naval Hospital, Brooklyn, N. Y.; the New York Yacht Club Station; the Chelsea-Moore Apartment House; the N. Y. Genealogical Society Building; the gymnasium, Woodstock (Conn.) Academy, and the residences of Caspar Whitney at Irvington, N. Y., and Donald Frothingham at Darien, Conn.

From 1910 to 1915 he was a member of La Farge and Morris, and after Jan. 1, 1926, of the firm of La Farge, Warren and Clark, and from April, 1931, executive member of La Farge & Son. During April-December, 1918, he was an investigator and later assistant general manager of the U.S. Housing Corporation.

Elected an Associate National Academician in 1910, Mr. La Farge also was a fellow and director of the American Institute of Architects, past president of the Architectural League of New York, and secretary of the American Academy in Rome. He acted as chairman of the Advisory Commission of the School of Architecture of Columbia University and was a member of a similar commission at the Massachusetts Institute of Technology. In 1921 Princeton University honored him with the honorary degree of Master of Fine Arts.

LAFAYETTE COLLEGE. An institution for the higher education of men in Easton, Pa.,

founded in 1826. The registration in the autumn of 1938 was 940. The faculty numbered 99. The productive funds amounted to \$3,921,000 in 1938, and the income was \$157,783. The number of volumes in the library was 97,000. President, William Mather Lewis, A.M., LL.D., Litt.D., L.H.D.

LANDS. PUBLIC. Readjustment of its activities to meet the primary responsibilities placed upon it by a universally recognized need for prudent conservation of the natural resources on the public domain, was the outstanding problem met by the General Land Office during the fiscal year ended June 30, 1938.

The total cash receipts from sales, leases, and other disposals of public lands (including receipts from copies of records, sales of Government property, etc.) were \$8,393,511, and from sales of Indian lands \$53,863.28, an aggregate of \$8,447,374, all of which was deposited in the Treasury. The total expenditures from appropriations made for the conduct of the General Land Office was \$1,821,681. The excess of receipts over expenditures was \$6,625,693. The receipts were the largest in any year since 1927, exceeding 1937 receipts by \$1,047,535. Receipts under mineral leasing acts as bonuses, royalties, and rentals under laws providing for the leasing rights on the public domain (including royalties and rentals of potash deposits and royalties on coal leases in Alaska) aggregated \$6,675,973. Receipts under the Taylor Grazing Act as fees on grazing licenses amounted to \$817,499, and for fees and rentals as under section 15 of the act, \$47,932.

On June 30, 1938, about 6,500,000 acres were embraced in unperfected entries upon which proof of compliance with the law was not due or had not been presented. In addition, there were pending applications for exchange under the Taylor Grazing Act involving approximately 2,500,000 acres of privately owned and state school land and about the same area of public land. At the beginning of the year there were outstanding 1020 oil and gas leases embracing 405,671.72 acres. On July 1, 1938, there were outstanding 11 potash leases for 27,785.49 acres; 28 potash permits for 62,548.87 acres; and 7 phosphate leases embracing 3352 acres. During the year 9 sulphur permits for 5985.01 acres were issued, bringing the total to 27 permits covering 17,508.01 acres. Twenty-two sodium permits, embracing 36,227.38 acres, were issued during the fiscal year, making in all 47 sodium permits for 65,586.36 acres.

New applications by various states, under the Taylor Grazing Act, for exchanges of lands, were received, embracing 266,067.44 acres. Selections involving 79,957.26 acres were approved, and patents were issued in 24 cases embracing 50,377.16 acres. The rejected and relinquished applications involved 123,260.19 acres.

In Alaska on June 30, 1938, there were outstanding 32 leases for fur farming covering approximately 170,260 acres. Matters relating to fur farm leases were considered in 164 instances. Three renewal leases were issued; two new leases were issued; and two leases were canceled. There were 13 grazing leases in effect, embracing approximately 899,312 acres.

The area of existing power-site reserves was decreased by 2838 acres, that of the public water reserves was increased by 1030 acres, and the lands classified as valuable for hydroelectric power purposes were increased by 83,969 acres.

Withdrawals aggregating 252,258 acres were made for use by the Farm Security Administration, successor of the Resettlement Administration, and

3187 acres purchased by the latter were transferred by Executive order from the jurisdiction of the Department of Agriculture to the jurisdiction of this Department. Withdrawals for lighthouse purposes were reduced by 1120 acres, a withdrawal of 40 acres for use by the War Department as an airplane site was revoked, and one for the use of an Indian tribe expired by limitation.

A summary of the outstanding mineral withdrawals and classifications as of June 30, 1938, is as follows:

	<i>Withdrawn acres</i>	<i>Classified acres</i>
Coal	26,971,813	33,276,103
Oil	5,168,593	71,884
Oil shale	5,989,949	4,081,208
Phosphate	1,889,601	302,219
Potash	9,411,906
Total	49,431,862	37,731,414

LANGE, CHRISTIAN LOUS. A Norwegian historian and Nobel Prize winner, died at Oslo, Dec. 11, 1938. Born in Stavanger, Norway, Sept. 17, 1869, he was educated at the University of Oslo (Ph.D., 1919) and studied history and modern languages in Paris and London. He taught and lectured in Oslo from 1890 to 1909 and from 1900 to 1909 he was secretary to the Nobel Committee of the Norwegian Parliament. Thereafter he became a member of the Nobel Prize Committee. He represented Norway at the Peace Conference at The Hague in 1907, and in 1909 he became secretary general of the Inter-Parliamentary Union, serving first at Brussels, at Oslo during the World War, and from 1920 to 1933, when he retired, at Geneva. He was a European correspondent for the Carnegie Peace Endowment from 1917 to 1930, and in 1926 lectured at the Academy of International Law, The Hague, and in Europe and America on international problems.

A member of the Royal Commission relating to The Hague Conference and the League of Nations, Lange was appointed Norwegian delegate to the League in 1920, where he was president of the 6th Committee of the Assembly in 1932, president of the Consultative Committee on the Sino-Japanese Dispute in 1933, and president of the 3d Committee of the Assembly in 1936. With Hjalmar Branting, the Premier of Sweden, he shared the Nobel Peace Prize for 1921, awarded for his consistent advocacy of disarmament and his labors in this field.

The author of many pamphlets and articles on arbitration, disarmament, etc., he wrote *L'Arbitrage International en 1913* (1914); *The European Civil War* (1915); *L'Histoire de l'Internationalisme* (1919); *International Politics* (1924); *History of International Relations, 1814-1914* (1926); *Imperialism and Peace* (1938). He edited *Annuaire de l'Union Interparlementaire*, 1911-14, and *Bulletin Interparlementaire*, 1920-33.

LATTER-DAY SAINTS, CHURCH OF JESUS CHRIST OF. A religious body, commonly known as the Mormon Church, organized in 1830 at Fayette, N. Y., by Joseph Smith. Its membership is largely in the Mountain States, owing to the early migration of the Mormons and their final settlement in Utah. For history, see THE NEW INTERNATIONAL ENCYCLOPÆDIA under MORMONS.

In 1938 the organization of this church included

126 stakes, 1040 wards, and 102 independent branches, with a membership of 616,088. Each stake organization is a pattern of the general Church organization, with a stake presidency of 3 men and a high council of 12 men. Each stake comprises several wards. A bishop and two counselors preside over the ward. A branch presidency of three men presides over a branch. There were 17 missions in America with 447 branches and a membership of 101,660; the missions in Europe had 318 branches and a membership of 31,145, and those in the Pacific Islands, 186 branches and a membership of 18,859. Of the 2083 missionaries, 1049 were at work outside of the United States. The administrative affairs of the church and the performance of all church ordinances are attended to by the priesthood, consisting of the Melchizedek Priesthood, a senior order, with 98,376 male members, and the Aaronic Priesthood, a junior order, with 96,326 male members.

The church maintains seven temples which are devoted to sacred ordinances for the living and the dead, such as baptism, endowments, and marriages. It also maintains Brigham Young University (q.v.), Ricks Junior College, Latter-day Saints Business College, 13 collegiate institutes, 2 high schools, 101 senior seminaries (schools adjoining high schools and providing special religious instructions), 100 junior seminaries (schools for the religious training of junior high school students), and 6 elementary schools. Enrollment in senior seminaries, 19,502; in junior seminaries, 3481.

The auxiliary bodies include a women's Relief Society numbering, in 1938, 75,064 members who care for the sick and the poor. The Sunday Schools in 1938 had an enrollment of 287,203 pupils and 31,698 officers and teachers. The two Mutual Improvement Associations, composed of young people, had an enrollment of 138,698. The Primary Association for those under 12 had 114,997 members.

The church holds in Salt Lake City, Utah, two general conferences each year, one during the first week in April and the other the first week in October, at which the work of the general authorities is reviewed. On Jan. 1, 1939, the General Authorities were: First Presidency: Heber J. Grant, president; J. Reuben Clark, Jr., first counselor; David O. McKay, second counselor. Quorum of the Twelve Apostles: Rudger Clawson, President, and Reed Smoot, George Albert Smith, George F. Richards, Joseph Fielding Smith, Stephen L. Richards, Richard R. Lyman, Melvin J. Ballard, John A. Widtsoe, Joseph F. Merrill, Charles A. Callis, Albert E. Bowen, and Sylvester Q. Cannon, Associate of the Council. First Council of Seventy: Rulon S. Wells, Levi Edgar Young, Antoine R. Ivins, Samuel O. Bennion, John H. Taylor, Rufus K. Hardy, and Richard L. Evans. Presiding Bishopric: LeGrand Richards, presiding bishop; Marvin O. Ashton, first counselor, and Joseph L. Wirthlin, second counselor.

LATTER-DAY SAINTS, REORGANIZED CHURCH OF JESUS CHRIST OF. After the death of Joseph Smith in 1844, several factions developed among the Latter-day Saints. In 1852, in Wisconsin, one of these scattered congregations effected a partial reorganization, which was completed in 1860 under the name of "Church of Jesus Christ of Latter-day Saints." About 1870 the word "Reorganized" was prefixed to avoid confusion.

In 1938 the church reported a membership of 120,368, which included members throughout the United States and in Canada, Great Britain, Australia, Germany, Isle of Pines, the Netherlands,

Switzerland, Norway, Sweden, Palestine, South Sea Islands, Hawaii, and New Zealand. There were 745 churches, 7000 ministers, and 730 Sunday schools with 50,000 pupils. The church maintains Graceland College at Lamoni, Iowa, and homes for the aged and the Independence Sanitarium at Independence, Mo. The official periodical, the *Saints' Herald*, is issued weekly.

Dr. Frederick M. Smith has been a member of the First Presidency since 1902 and president since 1915. Elbert A. Smith is Presiding Patriarch, after 29 years as Counsellor in the First Presidency and L. F. P. Curry, Presiding Bishop since 1932. Headquarters are at the Auditorium, Independence, Mo.

LATVIA. A Baltic republic, established Nov. 18, 1918. Capital, Riga.

Area and Population. With an area of 25,402 square miles, Latvia had a population estimated at 1,971,000 on Dec. 31, 1937 (1,950,502 at the 1935 census). Of the total population, 35 per cent lived in communities of 2000 or more. Living births in 1937 numbered 34,863 (17.7 per 1000); deaths, 28,083 (14.3 per 1000); marriages, 15,971 (8.1 per 1000). The 1935 census populations of the chief cities were: Riga, 385,063; Liepaja (Libau), 57,098; Daugavpils (Dvinsk), 45,160; Jelgava (Mitau), 34,099; Ventspils (Windau), 15,671; Rzekne, 13,139.

Education and Religion. According to the 1930 census, 13.6 per cent of the population 10 years of age and older were illiterate. The school attendance in 1936-37 was 269,354 (elementary, 221,180; secondary, 22,620; university, 7258). At the 1935 census 56.13 per cent of the inhabitants were Protestants, 24.45 per cent Roman Catholics, 14.4 per cent Greek Catholics and members of the Orthodox Church, and 4.79 per cent Jews.

Production. Agriculture, stock raising, lumbering, and manufacturing are the principal sources of the national income, which was estimated at 950,000,000 lats in 1937. There were in 1935 5,223,000 acres of cultivable land, 4,094,000 acres of meadow and pasture, and 4,317,000 acres of woods and forests. The chief cereals produced in 1938 were (in metric tons): Wheat, 208,100 (171,500 in 1937); barley, 237,400 (218,400); rye, 365,000 (418,600); oats, 475,000 (405,000). The potato harvest in 1937 was 65,476,000 bu.; linseed, 880,000 bu.; flax, 50,971,000 lb. Livestock in 1937 included 1,210,000 cattle, 739,000 swine, 1,334,000 sheep, and 392,000 horses. At the close of 1937 there were 5717 industrial establishments employing 111,917 workers and with an annual output valued at 636,800,000 lats. The chief manufacturing lines are metallurgy, textiles, foodstuffs, wood-working, metal working, and chemicals.

Foreign Trade. Total imports in 1938 were valued at 227,400,000 lats (231,200,000 in 1937) and total exports at 227,200,000 lats (260,900,000 in 1937). Coal and coke, machinery, iron and steel, fertilizers and wheat were the leading 1937 imports for consumption. The chief 1937 exports were (in U.S. paper dollars): Butter, \$8,891,000; mine timbers, \$4,809,000; pulpwood, \$4,611,000; and plywood, \$4,379,000. Of the imports for consumption in 1937, Germany supplied 27.1 per cent by value; the United Kingdom, 20.7; and the United States, 7.0. Of the exports, the United Kingdom purchased 38.4 per cent, Germany, 35.1; the Soviet Union, 2.6; and the United States, 1.1. United States trade figures for 1938 showed exports to Latvia of \$1,461,571 (\$1,743,846 in 1937); imports from Latvia, \$558,080 (\$766,585).

Finance. Budget estimates for the fiscal year

ending Mar. 31, 1939, provided for receipts of 190,878,000 lats and expenditures of 190,481,000 lats. For 1937-38 the budget estimates balanced at 180,092,000 lats. The public debt as of Mar. 31, 1937, totaled 142,074,000 lats (external, 123,202,000; domestic, 18,872,000). The domestic debt on Mar. 31, 1938, was 26,671,656 lats. When the gold standard was abandoned on Sept. 28, 1936, the lat was pegged to British currency at 25.22 lats to the pound sterling; subsequent exchange on the dollar was about \$0.1945.

Transportation. Railway lines in operation Apr. 1, 1938, aggregated 2092 miles; highways and roads in 1937, 21,185 miles; automobiles on Jan. 1, 1938, 5834 miles; inland waterways, 2775 miles. An airline between Riga and Liepaja (Libau) was opened in 1937. The net tonnage of vessels entering Latvian ports with cargo and in ballast in 1938 was 1,344,000 (1,584,000 in 1937). The Latvian merchant marine on Jan. 1, 1937, comprised 102 vessels of 181,105 tons gross.

Government. On May 15, 1934, the government headed by Premier Karlis Ulmanis established a *de facto* dictatorship pending reform of the Constitution of Feb. 15, 1922, which was suspended. Parliament was dissolved, its functions were assumed by the Ulmanis Cabinet, and activities of political parties were banned. With the expiration of the term of President Albert Kviesis on Apr. 11, 1936, Dr. Ulmanis assumed the Presidency in addition to the Premiership. A law of the same date provided that in the absence of the President, his post was to be filled by the Minister of War, Gen. J. Balodis.

History. The vast extension of government control over industry was continued by the Ulmanis-Balodis dictatorship in 1938 but at a slower pace than in the previous year (see 1937 YEAR BOOK, p. 392). A state-controlled textile enterprise was founded, for which the government purchased the "Buffalo" cotton mill. Plans were announced for the state-supervised production of artificial wool from processed milk. A cold-storage plant in Riga was bought by the Ministry of Agriculture for the storage of eggs, cheese, and fruit. Two new state-controlled stock companies were organized—one for the exploitation of peat fields and the manufacture of peat products and the other for the production of slate and artificial slate. To offset the decline in world prices for agricultural products, the government beginning July 1 paid farmers guaranteed prices on butter, hogs, clover and other seeds, cereals, and poultry products which amounted to a subsidy of from 15 to 60 per cent. Beginning September 1, control of foreign exchange transactions was further concentrated in the hands of the Bank of Latvia. Meanwhile, the constitutional reforms promised upon the establishment of the dictatorship in 1934 appeared to have been indefinitely postponed.

Several laws passed in December promised to have far-reaching effects upon the Latvian economic system. One provided for the establishment of syndicates to rationalize the various branches of trade and industry. The syndicates were to be controlled and supervised by the Chamber of Commerce and Industry and the Ministry of Finance. They were to include both government-controlled and private enterprises in each branch of production and the liquidation or absorption of a number of smaller enterprises was expected. Another law provided for an Institute of Economic Research to study and recommend methods of rationalization for each industry. Other measures fixed the maxi-

imum interest rate on loans at 7 per cent and established a new General Farmers' Bank to serve the rural communities.

Dragged into the European armaments race by its dangerous position as a prospective battleground in a German-Russian conflict, Latvia increased her national defense appropriation by 4,500,000 lats in the 1938-39 budget. In addition a national defense fund was established by the decree of Apr. 2, 1938, imposing special taxes on real property, salaries, and imports, which were expected to yield 9,000,000 lats per annum. Early in December, Foreign Minister Vilhelms Munters visited Great Britain for the purpose of purchasing arms and munitions as well as to discuss an Anglo-Latvian trade treaty. However, Latvia placed her main reliance in preserving her independence upon a policy of neutrality in any war between the great European powers. See **BALTIC ENTENTE**; **ESTONIA**, and **LITHUANIA under History**.

The republic celebrated the 20th anniversary of its independence in 1938 with a program of events and ceremonies extending from April to November 18, the date of the independence proclamation.

LAW. (See also **CRIME**, **INTERNATIONAL LAW**, **LABOR ARBITRATION**, **LABOR LEGISLATION**, **MEDICAL JURISPRUDENCE**, **TAXATION**.)

GENERAL

Comparative Law. "Teaching Comparative Law" (i.e. "functional comparison of legal rules and institutions"), *U. of Chicago L. Rev.*, V, 615 (Max Rheinstein), is "an attempt to define, on the basis of experiences, during the first two years of the author's incumbency . . . of the Max Palm Professorship (in that institution) various aspects of the term." *La Fonction de la Methode Comparative dans L'Histoire et la Philosophie du Droit*, by Arthur K. Kuhn of the New York bar, is an excerpt from *Recueil d'Etudes en l'honneur d'Edouard Lambert*, on the occasion of the latter's retirement from the University of Lyons. Other current articles on the subject are: "The Comparative Aspects of Legal Terminology," *Tulane L. Rev.*, XII, 401 (H. C. Gutteridge); "Balance between Legislative and Executive Power" (Comparative), *U. of Chic. L. Rev.*, V, 566 (Karl Loewenstein); "The Mechanics of Fact Discovery" (Comparative), *Ill. L. Rev.*, XXXII, 261 (R. W. Millar); "Comparative Air Law," *Air L. Rev.*, VIII, 259 (H. S. Leroy).

Jurisprudence. Former Dean Pound continues his review, "Fifty Years of Jurisprudence," in *Harv. L. Rev.*, LI, 444, 777; "Jurisprudence is the ordered relation of all these studies" (ethics, philosophy, psychology) according to President Hutchins, *U. of Chic. L. Rev.*, IV, 368; "The Lawyer and Psychology" are considered in *Kansas St. Bar Assn. Jnl.*, VI, 231; "A Restatement of Hohfeld" is essayed by Max Radin, *Harv. L. Rev.*, LI, 1141; "Petrazhitskii, Science of Legal Policy and Theory of Law," *Boston Univ. L. Rev.*, XVII, 793 (H. W. Babb); "Natural Law in American Jurisprudence," *Notre Dame Lawyer*, XIII, 89 (W. P. Sternberg); "The Natural Law Precedent and Thurman Arnold," *Va. L. Rev.*, XXIV, 587 (Jerome Hall); "The Soviet Concept of Law," *Fordham L. Rev.*, VII, 1 (V. Gsovski). "Louisiana's Legal System" is the subject of a "Reappraisal" by R. L. Tullis (*Tulane L. Rev.*, XII, 113, cf. *U. of Toronto L. Jnl.*, II, 298), of which an "Appraisal" by various authors is made in *ib.* 12. "The Path of Due Process" is discussed in *Ethics*, XLVIII, 269:

Property. "Development of the Conception of, in Political Philosophy," *Ethics*, XLVIII, 297 (R. McKeon);

"Changing Conceptions of," *U. of Pa. L. Rev.*, LXXXVI, 691 (F. S. Philbrick); "The Institution of," (*N. Y.*, 1936), C. R. Noyes, rev., *U. of Chic. L. Rev.*, IV, 686 (Rhein-stein).

Sociological. "Cardozo's Doctrine of Sociological Jurisprudence," *Jnl. of Social Philosophy*, IV, 5 (M. J. Aronson); "The Sociological Place of Law," *Am. Jnl. of Sociology* (September, 1938; N. S. Timasheff); "Sociological and Comparative Aspects of the Trust," *Columbia L. Rev.*, XXXVIII, 408 (A. Nussbaum).

Legal History. Increasing space in the periodicals continues to be given to contributions to this subject. Among them are:

Hebrew. "Trial by Ordeal in Ancient Hebrew Law," *Detroit L. Rev.*, VII, 78 (J. Gross).

Greek. "Platonic Justice," *Ethics*, XLVIII, 367 (H. Retsen); a study of this concept in the philosopher's system.

Roman. "Custom in Classical Roman Law," *Va. L. Rev.*, XXIV, 268 (A. Schiller); "Societas as a Consensual Contract," *Cambridge L. Jnl.*, VI, 381 (D. Daube); Genet, *De la Procedure formulaire du Droit romain à la Procedure de la cour permanente de Justice Internationale*, *Revue Internationale Française du Droit des Gens*, V, 17.

English. "The Harvard MS. of Thornton's Summa" (ca. 1290), *Harv. L. Rev.*, LI, 1038 (F. T. Plucknett); "Year Books of Richard II," vol. iii (rev. Yale L. J., XLVII, 1231 G. E. Woodbine); "The Inns of Court," *Canadian Bar Rev.*, XV, 675 (E. M. McDougal); "History of English Ecclesiastical Law," *Boston Univ. L. Rev.*, XVIII, 342 (F. C. Setaro); "Some Considerations on the Origins of Habeas Corpus," *Canadian Bar Rev.*, XVI, 92 (M. Cohen); "The Clermont Assizes of 1665" (State v. Feudal Barons), *U. of Pa. Press* 1937 (Linn); "The Doctrine of the Separation of Powers in 17th Century Controversies," *U. of Pa. L. Rev.*, LXXXVI, 842 (M. Radin); "A Breach of Promise Case in the Early 1800's," *Peabody L. Rev.*, III, 2 (C. F. Robinson); *The Life of Blackstone* by Lewis C. Warden (Charlottesville, 1938); "Lord Tenterden (Charles Abbott)," *The Law Student*, XVI, 18 (H. R. Harrison). See *England under Legislation* below.

French. "Legal Practice in 15th Century France," *W. Va. L. Rev.*, XXIV, 581 (A. B. Kerr); "Passing of the Montesquieu School," etc., *Tulane L. Rev.*, XII, 1 (M. Franklin).

Canadian. *Civil versus Common Law in Canada 1775-1791 (Administration of Justice under the Quebec Act)*, by Hilda M. Neathy (Minneapolis, 1937), rev. *Harv. L. Rev.*, LI, 1323.

Spanish. "A Thirteenth-Century MS. of the Primera Partida," *Speculum*, XIII, 278 (J. Homer Herriott).

United States. "The Influence of English and Civil Law Principles upon the American Legal System during the Critical Post-Revolutionary Period," *U. of Cincinnati L. Rev.*, XII, 289 (F. R. Aumann); "Probate Practice: Origin and Development," *Kan. St. Bar Assn. Jnl.*, VI, 226 (S. E. Bartlett); "Connecticut's Colonial Committee System," *Conn. Bar Jnl.*, XI, 359 (D. L. Jacobus); "Michigan Court Rules: Historical Review," *Detroit Bar Quar.*, V, 19 (Olive C. Iathrop); "The Lawyer's Test Oath during Reconstruction," *Miss. L. Jnl.*, X, 154 (W. A. Russ, Jr.).

Legislation. "The Common Law of," *Iowa L. Rev.*, XXIII, 41 (F. E. Horack); "The Legislative Rider and the Veto Power," *Georgetown L. Jnl.*, XXVI, 954 (Casey & Naughten); in the 75th Congress, *A.B.A. Jnl.*, XXIV, 505:

California. *Cal. L. Rev.*, XXVI, 329 (B. N. Armstrong); *So. Cal. L. Rev.*, XI, 1 (various authors).

Florida. *Fla. L. Jnl.*, XI, 283 (H. C. Tillman).

Illinois. *U. of Chic. L. Rev.*, V, 89 (various authors).

Kentucky. *St. Bar Jnl.*, I, 13, 11, 17, 19, 22 (H. B. Mackoy).

Massachusetts (a session of 232 days, longest in Commonwealth's history, closed on August 24).

Michigan. *Detroit Bar Quar.*, V, 6, VI, 21.

Nebraska. Work of the unicameral legislature is reviewed in *Minn. L. Rev.*, XXII, 60 (L. W. Lancaster); *Annals, Am. Acad. Pol. & Social Sc.*, January, '38 (J. P. Senning); *Lincoln, State Journal and Star*, Apr. 17, 1938 (L. E. Aylesworth).

New Jersey. *L. Jnl.*, LXI, 45, 75.

New York. "On the whole it did a good job," said the *N. Y. Times*, editorially, of the legislature's 161st session. The state's "Law Revision Commission" is described in *Georgetown L. Jnl.*, XXVI, 60 (J. W. Macdonald); its recommendations, *N. Y. St. Bar Assn. Bull.*, IX, 234, X, 114 (id.); "Laws Sponsored by the Judicial Council," *ib.*, IX, 166 (L. S. Saxe).

Ohio. Table of 1938 Laws, *O. L. Reporter* (1938), 101.

Pennsylvania. "The Statutory Construction Act," *U. of Pa. L. Rev.*, LXXXVI, 189.

Philippines. Following the regular session, a special one began on July 25 to consider an electoral reform bill and tax measures. (See also **FREEMASONRY**).

Wisconsin. "Permanent Statute Revision in," *Mo. Bar Jnl.*, IX, 37 (E. E. Brossard).

For the fiscal year ending April 30, the Legislative Service Bureau of the N. Y. Merchants' Assn. reviewed 449 new Federal laws, 941 new state laws, and 110 laws and 33 ordinances of the N. Y. Municipal Assembly.

FOREIGN. Austria. The Civil Code, promulgated in 1911, is undergoing revision, especially the part relating to Succession which is being changed to conform to Nazi ideology.

Colombia. "Legislative Trends in," *Tulane L. Rev.*, XII, 534 (R. C. Backus); a Code of Criminal Procedure was enacted at the special session ending May 26.

England. "Law Reform in," *U. of Toronto L. Jnl.*, II, 233 (F. A. Vallat); recent and pending Parliamentary legislation is mentioned in the London Letter of the *A.B.A. Jnl.*, XXIV, 73, 164, 296, 493.

Canada. "Survey of Legislation in," *U. of Toronto, L. Jnl.*, II, 374 (various authors); American influence on Canadian legislation is discussed by Under Secretary of State Coleman, *A.B.A. Jnl.*, XXIV, 627.

Switzerland adopted a new Penal Code (see REFERENCE).

Interstate Compacts are neither treaties nor statutes; but when the subject thereof is an interstate stream, the apportionment of its waters thereby binds all citizens of the signatory states. *Hindler v. La Plata Co.*, 304 U.S. 92. In *Cornell L. Quar.*, XXIII, 280, the question is raised whether states should be permitted to make compacts without the consent of Congress (F. C. Carman). Other articles are: "Legal Problems Relating to Interstate Compacts," *Ia. L. Rev.*, XXIII, 618; "Influence of Federal upon State Legislation," *ib.* 519 (W. B. Graves); "Legislative Co-operation, Federal and State," *ib.* 539 (J. P. Clark); "Modern Machinery for Interstate Co-operation," *ib.* 573 (H. W. Toll).

In *Swift v. Tyson*, 16 Pet. (U.S.) 1 (1842), the Supreme Court, per Story, J. (with one justice dissenting on another point), held that the Judiciary Act's requirement (XX, 34) that the Federal Courts apply state "laws," in the absence of contrary Federal provisions, did not include decisions. This doctrine was overruled 96 years later, in *Eric R. Co. v. Tompkins*, 304 U.S. 64, where Brandeis, J. traced its subsequent history and followed the decisions of Pennsylvania, where the case arose. There were two dissents and the majority opinion evoked widespread comment. Solicitor General Jackson called it "one of the most dramatic episodes in the history of the Supreme Court" (*A.B.A. Jnl.*, XXIV, 609). See also *U. of Pa. L. Rev.*, LXXXVI, 896; *A.B.A. Jnl.*, XXIV, 862 (A. G. Powell); *Va. L. Rev.*, XXIV, 895 (N. T. Winthrop).

Vetoes. "Where Congress has not adjourned and the House in which the bill originated is in recess for not more than 3 days . . . the bill does not become law if the President has delivered it, with his objections, to the appropriate office of that House, within . . . 10 days and Congress does not pass it over his objections by the required votes." *Wright v. U.S.*, 302 U.S. 583, 598. "The Legislative Rider and the Veto Power" is discussed in *Georgetown L. Jnl.*, XXVI, 945 (Casey & Naughten). By the end of 1938, President Roosevelt had vetoed nearly 300 bills—more than any other President save Cleveland.

ADMINISTRATION

"Causes of Popular Dissatisfaction with the Administration of Justice" are considered by Former Dean Pound, *U.S.L. Rev.*, LXXII, 28; "The Fee System," *Okla. St. Bar Jnl.*, IX, 52 (L. B. Moore); "The Missouri Institute for," *Mo. Bar Jnl.*, VIII, 273 (various authors).

Courts: In General. Taking a leaf from Pennsylvania's experience, the new Constitution of New York (see p. 398) prohibits the suspension or

impairment of the judicial power to investigate and indict officials. "Legislative Power over Court Officers" is discussed in *Kansas Bar Assn. Jnl.*, VI, 311; "Judicial Councils" in *Wis. St. Bar Assn. Bull.*, X, 212 (J. C. Warner); *Cal. St. Bar Jnl.*, XIII, 11 (A. Ames). Representative Hobbs of Alabama hopes to expedite and reduce the cost of appeals by his bill to provide all U.S. court rooms with "sound equipment" which would record all trial proceedings for reproduction in the appellate court. In "Burgos Justice," Ruiz Vilaplana, former Commissioner of Justice in Franco's capital, excoriates the brutality of the military regime in revolutionary Spain, from which, when he could no longer endure it, he fled.

Judicial Opinions are treated in *Boston Bar Bull.* No. 137 (C. T. Bond); (Dissenting), *Jno. Marshall L. Quar.*, III, 570 (E. A. Evans).

Judicial Selection is the subject of a 40-page report of a Committee of the A.B.A.'s Judicial Section. Methods in vogue among the states are described and commented on. The present status of reforms in this direction are discussed in *Am. Jud. Soc. Jnl.*, XXII, 121; *Ohio St. Univ. L. Jnl.*, IV, 157 (F. J. Milligan); *Commercial L. Jnl.*, XLII, 449, 267; *Okla. St. Bar Jnl.*, VIII, 185. The proposed constitutional amendment, substituting appointment for original election, was defeated in Ohio and Michigan. (See REFERENCE.) Selection of substitute judges is discussed in *Mich. L. Rev.*, XXXVI, 985 (J. Kaplan).

Rule-Making Authority of the courts has been a frequent subject of discussion during the year. The Pennsylvania Supreme Court's recent statutory authorization to formulate rules for all the courts of that state has been exercised by its approval of a draft by a committee of lawyers, to become effective Mar. 20, 1939. (See *Dickinson L. Rev.*, XLII, 204; *Am. Jud. Soc. Jnl.*, XXI, 101, 198; XXII, 158.)

Other current articles on the subject are:

ib., XXI, 39; XXII, 10, 27; *U.S. L. Rev.*, LXXI, 618 (H. Hirschman); *Commercial L. Jnl.*, XLIII, 25 (H. U. Feibleman); *A.B.A. Jnl.*, XXIV, 645 (No. Car.); F. E. Winslow; *Fla. L. Jnl.*, XI, 350; *Wis. L. Rev.* (1938), 324 (Evidence, E. V. Davey); *Mo. Bar Jnl.*, IX, 44 (England, L. M. Hyde).

United States: SUPREME COURT. Its October (1937) term was ended in June, during which it disposed of 878 cases up to the recess of May 2. Sessions were resumed on October 7, opening the October, 1938, term. Justice George Sutherland retired during the year and was succeeded by Solicitor General Stanley F. Reed. Justice Benjamin N. Cardozo (q.v.) died on July 9 and, by reason of illness during the previous term, had taken little part in the Court's work (see *A.B.A. Jnl.*, XXIV, 638, 728). (Professor Felix Frankfurter of Harvard was nominated on Jan. 5, 1939, as his successor.)

Discussion of Justice Black's appointment (1937 YEAR BOOK, 394) continued. A critical article by Marquis Childs in *Harper's Monthly* evoked a favorable one in *Nat. Lawyers' Guild Quar.*, I, 181 (H. C. Havighurst); "Is Hugo Black a Supreme Court Justice *De Jure*?" is the subject of another, *Cal. L. Rev.*, XXVI, 31 (D. O. McGovney); "When Is It Vacant?" *ib.* 32 (E. W. Camp). A proposed resolution for a committee to present to the Supreme Court the question of Justice Black's eligibility, failed of adoption by the A.B.A. House of Delegates at Cleveland (*Jnl.*, XXIV, 747). The Court as a whole is treated in *Georgetown L. Jnl.*, XXVI, 88, 369, 669, 931 (T. L. Seamon); "Busi-

ness in the 1935, 1936 Terms" (Frankfurter & Fisher). Its recent decisions are reviewed in *A.B.A. Jnl.*, XXIV, 46, 135, 222, 305, 374, 463, 559, 652; *Cleveland Bar Assn. Jnl.*, IX, 25 (A. H. Holtzoff); *Fed. Bar Assn. Jnl.*, III, 77, 149 (D. E. Hudson) (and see under *Constitutional Decisions*); "The Supreme Court and Rotation in Office," *Geo. Wash. L. Rev.*, VI, 401 (C. S. Collier); "As an Arbiter between Congress and the States," *Va. L. Rev.*, XXIV, 613 (A. Lincoln); "A Superannuated Bench?" *Los Angeles Bar Assn. Bull.*, XIII, 287 (F. G. Tyrrell). Many periodicals continued to deal with the attempt to enlarge the Court (1937 YEAR BOOK, 394). Prof. Edwin Borchard argues for "relinquishment by the Court of its assumed function as the arbiter of social policy" (*Yale L. Jnl.*, XLVII, 1051).

The Federal Judicial Conference of 1938 opened at Washington September 29 and continued for three days, with all of the 11 circuits represented (the 5th and 10th by other than Senior Judges) besides the Chief Justice, the Attorney General, and the Solicitor General. Legislation was recommended for adding 4 circuit judges and 9 district judges, changes in court rules to conform to the new procedure were discussed, and the Attorney General's proposal for a Federal Court administrative office was referred to a committee for study (see *A.B.A. Jnl.*, XXIV, 905; *Am. Jud. Soc. Jnl.*, XXII, 160, where the possibilities of the conference are set forth). A conference of Washington, D. C., appellate and district judges, mainly to follow the above recommendations as to rule changes, was held near the University of Virginia, November 4 and 5. "The Circuit Court of Appeals as a Court of Last Resort" is discussed in *Jno. Marshall L. Quar.*, III, 203 (E. A. Evans); The U.S. District Court (Mass.), *Boston Bar Bull.*, No. 132, 3 (H. D. McLellan); "Federal Justice," (Cummings & McFarland, 576 pp.) traces an evolution from the Attorney General's office, established in 1789, and the Department of Justice in 1871, to the vast legal organization of today.

State Courts (Appellate): Connecticut *Am. Jud. Soc. Jnl.*, XXI, 201 (A. T. Vanderbilt); *Massachusetts L. Quar.*, XXIII, 1 (H. S. Lummus); *Missouri L. Rev.*, II, 293; *Wisconsin L. Rev.* (1938), 43, 329 (various authors); (*Superior*): *Mass. Boston Bar. Bull.* No. 136; *Mass. L. Quar.*, XXIII, 14; (*Minor*): "Justice in Minor Courts," *Am. Jud. Soc. Jnl.*, XXII, 38 (H. T. Lummus). **Magistrates' Courts** in New York City handled, in the first half of 1938, 6599 felony (excluding traffic) cases (a decrease of 839 from the corresponding period of 1937) and 52,055 misdemeanors—an increase of 45 per cent. These courts are discussed in *Brooklyn L. Rev.*, VII, 295, 411, and the N. Y. *Times* editorially indorses the movement for their merger with the Court of Special Sessions, calling the present system "obsolete." **Miscellaneous:** The Municipal Court of Boston, *Bar Bull.* No. 134 (W. Bolster); *Mass. L. Quar.*, XXIII, 1; The Michigan Circuit Court Commissioner, *Detroit L. Rev.*, VII, 121; The Small Claims Court, *The Shingle*, I, 131 (J. Jaffe). One of these was recently installed in Washington, D. C., as a branch of the Municipal Court, from which judges are detailed to preside. Its jurisdiction is limited to claims not over \$50, the filing fee for a case is \$1, and pleadings and procedure are simplified; *Juvenile Courts* (abolition advocated), *Cal. St. Bar Jnl.*, XIII, 1 (J. Olney); *Probate Courts*, *Kansas St. Bar Assn. Jnl.*, VI, 134, 226 (S. E. Bartlett). **Justices of the Peace**, to the number of over 300,

representing more than 48 New York counties, assembled at Geneva, N. Y., in March, for a four-day school of instruction under the guidance of Dr. James M. Williams, Professor of Sociology in Hobart College. This reminds the writer of the Justices of the Peace Assembly which he held in the Philippines in 1905 for a similar purpose and which is believed to have been the first of its kind (see his *Philippine Practice*). In Britain, where the office is an ancient one, Justices of the Peace are appointed from the landed gentry and numbered some 30,000 until Lord Chancellor Hailsham began his "purge" of the absentees and superannuated. On February 11 the Attorney General reported 365 resignations to the House of Commons.

Necrology. Members of the judiciary who died in 1938 were:

Benjamin N. Cardozo (68), Supreme Court Justice from 1930 (q.v.); A. B. Anderson (81), 27 years on Federal bench (Indiana); C. H. Moorman (61), U.S. Court of Appeals (Kentucky); G. W. Anderson (76), U.S. Court of Appeals, First Circuit; J. M. Killitts (79), eight years Judge of Northern (Ohio) District Court; S. H. West (66), Justice of same court; J. L. Glenn (46), U.S. District Judge in South Carolina; E. K. Campbell (80), Court of Claims Court Judge 1913-28; W. H. Jackson, former Judge of Panama Canal Zone, *Connecticut*, J. K. Beach (83), 13 years on Supreme Court; Isaac Wolfe (78), 31 years on Superior and Common Pleas Courts at New Haven; W. C. Rungee (64), former Probate Judge at Greenwich, *Delaware*; J. O. Wolcott (61), State Chancellor since 1921; former U.S. Senator, *Georgia*, R. B. Russell (77), Supreme Court Chief Justice for 15 years, *Illinois*; G. A. Cooke (69), former Supreme Court Chief Justice; W. W. Duncan (81), 18 years on Supreme Court; J. B. David (74), over 20 years on Cook County Superior and Criminal Courts, *Indiana*; W. C. Daly (70), former Indianapolis City Court Judge, later practiced in New York, *Kentucky*; W. R. Clay (collateral relative of Henry, 73), on Court of Appeals since 1920, *Massachusetts*; Arthur P. Rugg (76), 32 years a member and Chief Justice of Supreme Judicial Court; J. P. Doran (63), Presiding Judge of Bristol 3d District Court, *Michigan*; T. E. Weadock (88), over 65 years at Bar and for a brief time on Supreme Court, *Missouri*; Wm. F. (brother of Glenn) Frank (63), Supreme Court Justice, *Nebraska*; C. A. Goss (74), two terms Chief Judge Supreme Court; L. B. Day (49), on Supreme Court since 1929, *Nevada*; G. F. Talbot (79), 12 years on Supreme Court, *New Jersey*; R. V. Lawrence (67), 12 years Circuit Judge; E. W. Hicks (69), former District Court Justice and Supreme Court Commissioner, *New York*; A. S. Tompkins (72), 29 years on Supreme Court; W. N. Cohen (82), Supreme Court Justice 1897-98; F. W. Kruse (85), former Presiding Judge 4th Division Supreme Court (Olean); H. J. Lynch (56), former Supreme Court Justice (Westchester); Jno. Bizell (70), former New Rochelle City Judge; T. C. Brown (62), 33 years on N. Y. City Municipal and Domestic Relations Courts, *North Carolina*; J. S. Manning (79), former Supreme Court Chief Justice, *Ohio*; Coleman Avery (58), former Supreme Court Justice (suicide), *Pennsylvania*; Presiding Judge W. A. McKeen (69), of North Hampton Common Pleas Court; W. S. McLean (61), Presiding Judge Luzerne County Court, *Rhode Island*; Jerome Hahn former Supreme Court Justice, *South Dakota*; C. G. Sherwood (83), former Supreme Court Justice, *Tennessee*; D. W. Wilkie (80), former Circuit Court Judge, *England*; Sir George Talbot (77), 14 years on High Court of Justice; Sir Thomas G. Horridge (80), King's Bench Justice 27 years, participated in Roger Casement trial; Cecil Chalmers (86), 25 years London Magistrate, legal author; Sir Lewis Dibdin (86), 31 years an ecclesiastical court judge, *Canada*; F. R. Latchford (84), Chief Justice Ontario Supreme Court; C. P. Fullerton (68), former Manitoba Court of Appeal Justice, *Peru*; Ulises Quiroga (72), 40 years in the Judiciary, twice President Supreme Tribunal, *Misc.* J. W. Wright (54), American Representative on International Mixed Court at Cairo.

JURIES. "Lawyers and judges must face the fact that the system of jury trials is undergoing criticism in many jurisdictions," is the opening of a 12-page report to the A.B.A. Judicial Section, suggesting various improvements in the selection of jurors and the conduct of trials. The recommendations on these points, including adoption of the Cleveland system of selection, were approved by the association. Courts with three judges for important cases, said to be the rule in continental countries, are

provided here in the Federal system and are urged for the state courts as no more expensive than juries. Other signs pointing to a decline of the jury system are: *Connecticut*: In New Haven County only 7 per cent of the cases judicially handled were tried by juries and three-fourths of these were negligence cases. *District of Columbia*: The new court rules provide that juries in civil cases are waived unless requested within 10 days after completion of the pleadings. Requests were filed in one-fourth of the cases to the date of the latest information. *Maryland*: Luther Bevans, convict, was tried for murder at Snow Hill without a jury, upon petition of his own attorneys. *Minnesota*: A Minneapolis juror in a personal injury action was recognized by a motorman (witness) as a bandit who had recently robbed him. The juror was arrested, but not until the jury, of which he had formed a part, had returned its verdict. *New York*: The special ("blue ribbon") jury is chosen from a general list consisting of those who, in the judgment of the clerks who interview them in advance, are "alert, intelligent, and unprejudiced" (e.g. on capital punishment). An attempt to repeal the statute providing for such juries was defeated in the recent legislative session and it was with one of them that the Hines trial (see p. 397) opened. One phase of that "mistrial" which has been generally overlooked is that it could not have happened had the trial been before judges only; for it was the flimsy fiction that a single unanswered question "might mislead the jury" which afforded the excuse for a "mistrial."

Although women jurors have served in Wyoming since 1870, less than half the states now provide for them. In Arizona a school for jurors (cf. 1937 YEAR BOOK, 395) was opened at Phoenix on January 18 under the auspices of women's clubs, with a Superior Court Judge and several attorneys as instructors, to promote a movement for women jurors. A New York act of 1938 excludes from first degree murder jury panels the names of conscientious objectors to capital punishment. *Grand Juries* have been abolished in England (see *Jnl. Crim. L. & Criminology*, XXIX, 3) and their powers curtailed in Pennsylvania (see *Harv. L. Rev.*, LII, 151); but a new constitutional amendment is designed to preserve them in New York, where women have been serving for several years, though their eligibility for grand jury service has recently been challenged (*St. John's L. Rev.*, XII, 172 [Reardon]; *U.S. L. Rev.*, LXXI, 75). For the Grand Jury's history and functions, see *L. Soc. Jnl.*, VIII, 192, 205. Other recent New York jury legislation is discussed in *Columbia L. Rev.*, XXXVII, 1235; *Jury Trials*, in *Cambridge L. Jnl.*, VI, 367 (R. M. Jackson); *Cal. St. Bar Jnl.*, XII, 276 (J. G. Sweet). In *U.S. v. Melitzer and Klein*, 100 Fed. 2d, 739, judges of the 7th Circuit Court of Appeals, at Chicago on December 20, reversed a conviction because the trial judge, following a practice in vogue in the Federal courts for three quarters of a century, commented on the merits of the evidence. Judge Evans maintained, however, that the wisdom of the practice had been demonstrated by experience.

ADMINISTRATIVE TRIBUNALS. These appear to advance in public favor as juries decline. "The multiplication of administrative agencies is the outstanding characteristic of our time," said Chief Justice Hughes before the American Law Institute on May 12, and that fact is naturally reflected in the law journals. *Current Legal Thought* (Index) lists nearly six columns of titles of articles relating

thereto, only a few of which is there space here to mention. The February *Yale L. Jnl.* carried a symposium on current developments in this field. Following the Foreword by Professor Frankfurter of Harvard, Dean Landis wrote on "Administrative Policies and the Courts," reviewing Supreme Court decisions and arguing for larger discretionary powers in such tribunals. Prof. R. F. Fuchs of Washington University discussed "Concepts and Policies in Anglo-American Administrative Law Theory." Other articles are found in *A.B.A. Jnl.*, XXIV, 837 (traces the history of administrative tribunals and urges making them safe and judicial "by barring politics, training administrators and securing their tenure," J. V. Masters); "Judicial Review of Administrative Agencies" (*ib.*, 897; A. S. Faught); "The Extent to Which Fact-Finding Boards Should Be Bound by Rules of Evidence" (*ib.* 1), the Ross Prize for 1938, awarded to Albert E. Stephan (*ib.* 510), claiming that "ultimately the courts will profit by borrowing some of the fact-finding methods of the administrative commissions; but the A.B.A. Committee on Administrative Law denounced "the principle of absolutism in administrative offices" as manifested in various "defects" and "tendencies" which it enumerated. The report was adopted although Commissioner Frank of the SEC protested that certain phrases therein "defamed" Chairman Douglas of that Commission. Again, on November 9, Commissioner Frank criticized the report, as not based on fact, and also a draft bill which accompanied it but which the Committee members disclaimed having seen. Hearings were continued before the Senate Judiciary Subcommittee on Senator Logan's bill for a proposed administrative court to review the rulings of all these agencies. A second hearing in *Morgan v. U.S.*, 304 U.S. 1, brought a reversal of the Secretary of Agriculture's order, as based on findings which the party adversely affected had no opportunity to examine. Interlocutory orders of the Federal Power Commission are not reviewable by the Court of Appeals; nor is any other order thereof unless a rehearing by the Commission has been sought; and its orders to produce books are "nothing more than a notice" (*Federal Power Commission v. Met. Edison Co.*, 303 U.S. 375). But the Comptroller of the Currency's order for an assessment on shares of an insolvent bank is final and conclusive (*Adams v. Nagle*, 303 U.S. 532). Besides the voluminous periodical literature on this subject, two books have appeared: *The Administrative Process*, by James M. Landis (155 pp.); *A Case Book*, by Prof. K. C. Sears of the U. of Chic. L. School (850 pp.).

Legal Education. Of the 49 continental American jurisdictions 39 now require two years of college education, or its equivalent, before taking the bar examination. The new Arkansas constitutional amendment (see REFERENDUM), empowering the Supreme Court to make rules regarding the legal profession, should normally add another, especially as that State and Georgia are the only ones requiring no preliminary standards of any kind. On July 1 the Washington, D. C., Court of Appeals adopted a rule requiring of all applicants for admission after July 1, 1943, two years of college work and a diploma from an accredited law school. Some five months later the District Court of the same jurisdiction adopted a rule with a somewhat lower standard, recommended by the local bar association. If both rules are to stand there will eventually be a class of lawyers in the District who are ineligible for admission to the Court of Appeals. "Out of 185 law schools, 99 are now on the ap-

proved list of the A.B.A. (*Jnl.*, XXIV, 879) and these contain over 60 per cent of the present student body." Five jurisdictions now require preparation in such a school; 12 more recognize no other law schools; 6 more limit this rule to schools outside the jurisdiction, while in 3 more, a proposal to adopt the rule is pending. The new Harvard Law School curriculum is discussed in the school's *L. Rev.*, LI, 965 (*Am. L. Sch. Rev.*, VIII, 1038) by Prof. S. C. Simpson. The needs and progress of legal education are discussed in *Okla. St. Bar Jnl.*, IX, 10, 116 (R. G. Storey); *Fla. L. Jnl.*, XII, 156 (R. A. Pasco); *La. L. Rev.*, XXIII, 297 (P. Bordwell); *Yale L. Jnl.*, XLVII, 214 (F. W. Hanft); *Jno. Marshall L. Quar.*, III, 584; *Mo. Bar Jnl.*, IX, 71 (J. A. McLain); *A.B.A. Jnl.*, XXIV, 105; *Commercial L. Jnl.*, XLIII, 179 (M. L. Ferson); "Prelegal Education," *Kansas City Bar Bull.*, XIV, 2 (F. J. Mereau); *Ky. L. Jnl.*, XXVI, 290 (F. Murray); "Jurisprudential Aims of Church Law Schools," *Notre Dame Lawyer*, XIII, 363 (B. F. Brown); "Are Gradings Accurate?" *Cal. St. Bar Jnl.*, XII, 241; *Foreign: The Shingle*, I, 86 (L. H. Van Dusen, England); *Wis. L. Rev.* (1938), V (M. Rheinstein, Germany); Moscow's Law Institute, *A.B.A. Jnl.*, XXIV, 130.

Legal Profession. *Bar Integration* is now attained in 20 States and the Territory of Puerto Rico and some 40,000 lawyers have been brought into integrated bars (see *Fla. L. Jnl.*, XI, 296 (H. Harley). The Nebraska Supreme Court, in an exhaustive opinion (275 N.W. 265), directed integration without a statute specifically authorizing it. The Virginia legislature enacted such a statute on March 3. Arguments for integration and for "building a better bar" appear in *Am. Jud. Soc. Jnl.*, XXI, 213 (C. B. Rix); *Detroit Bar Quar.*, VI, 11; *Ohio St. Bar Assn. Reporter*, X, 653 (J. E. Brenner); Opposing integration: *N. J. L. Jnl.*, LXI, 1 (I. Gross); *Commercial L. Jnl.*, XLIII, 4, 114 (H. U. Feibleman). On June 23 the Penna. State Bar Assn. rejected such a proposal.

Conferences, Congresses, Conventions, etc. (National and International). The *National Lawyers' Guild* (1937 YEAR BOOK, 398) held its second annual convention at the Willard Hotel, Washington, D. C., February 19-22. Following the opening session, at which Pres. John P. Devaney delivered the annual address, a "series of conferences under auspices of corresponding guild committees" met concurrently and discussed papers relating mostly to economic and sociological jurisprudence.

The *American Society of International Law* held its 32d annual meeting at the Carlton Hotel, Washington, April 28-30. A full program with an attendance of "several hundred members" was reported; but Pres. J. B. Scott was unable to be present (*Am. Jnl. Int. L.*, XXXII, 555). The meeting was preceded by a conference of international law teachers.

The *American Law Institute* held its 16th annual meeting at the Mayflower Hotel, Washington, May 12-14. A letter of commendation was received from President Roosevelt and Chief Justice Hughes addressed the Institute for the ninth time. Drafts of the law of torts and of property were approved and that of security considered (*A.B.A. Jnl.*, XXIV, 426). "The Restatement in the Courts" (3d ed.), a valuable digest showing how the work of the Institute has been used judicially, was distributed.

The *American Judicature Society* met preceding the Institute on May 11 and also on July 27 at Cleveland, Ohio, during the 61st annual meeting of the *American Bar Association* which opened in that

city on July 25 and continued in session until July 29. Frank J. Hogan was elected president, (*A.B.A. Jnl.*, XXIV, 685) and Herbert Harley, editor of the *Judicature Society's Journal*, was awarded the Association Medal for 1938 (*ib.* 714). The *National Conference of Commissioners on Uniform Laws* also met in Cleveland during the week preceding the Association's meeting; the National Conference of Bar Examiners met contemporaneously (see its organ, VII, 115).

The *Incorporated Law Society of Great Britain* has proposed, through its president W. W. Gibson, a measure for sweeping changes in the British judiciary, including withdrawal of judicial functions from the House of Lords. The *Union Internationale des Avocats* met in the *Salle de Curie Royale*, Budapest, Hungary, September 8-11. Four delegates from the American Bar Association attended (*Jnl.*, XXIV, 896).

Discipline. Oran Farmer was disbarred by the Texas Supreme Court for having, some 12 years previously, obtained his license by misrepresentation. The National Lawyers' Guild announced on April 10 the appointment of a committee, including the Solicitor General and other government officials, to defend Edward Land, of Toledo, against a charge of professional misconduct in criticising the course of an Ohio judge before whom he appeared.

Legal Aid Societies and their work are discussed in *Am. Jud. Soc. Jnl.*, XXI, 189 (R. H. Smith), 190 (C. E. Hughes, Jr.); *N. Y. Times Mag.*, March 27 (C. Janus). The New York Society (an outgrowth of the *Deutscher Rechts-Schütz Verein*, founded in 1876 to assist German immigrants) made an appeal early in the year for a contribution of \$25,000 from laymen, although they gave only about \$10,000 in the preceding year as against \$77,357 by 169 law firms and 462 individual lawyers. More experienced trial lawyers were asked to serve on the Voluntary Defenders' Committee. Legal aid in civil cases is discussed in *Georgetown L. Jnl.*, XXVI, 32; *N. Y. St. Bar. Assn. Bull.*, X, 12 (W. B. Cobb).

Necrology. Members of the bar who died in 1938 included:

California, T. C. Ridgway (59), former president State Bar Assn. *Connecticut*, John Elliott (73), 40 years at the bar. *Georgia*, H. N. Randolph (66), great-great-grandson of Thomas Jefferson, nearly 40 years at bar of Atlanta. *Illinois*, Clarence Darrow (80 q.v.), defender in 100 or more murder trials, no client ever executed; Samuel Ettelson (63), twice Chicago corporation counsel; Clyde L. Day (69), 48 years at Chicago bar; D. R. Anderson (73), dean of Will County bar. *Kentucky*, J. D. Black (88), lawyer and public official. *Maine*, Hannibal Hamlin (79), former attorney general and son of vice-president. *Maryland*, James H. Preston (78), lawyer and former Baltimore mayor. *Massachusetts*, Augustus P. Loring (81), of the Boston bar; specialized in trust activities; Francis Peabody (83), over 60 years at Boston bar. *Missouri*, E. T. Miller (67); general counsel St. L. & S. F. R. Co.; Nebraska, A. F. Mullen (65), lawyer and political leader; E. J. Cornish (76), lawyer and corporate executive. *New Hampshire*, E. K. Woodworth (63), former president State Bar Assn. *New Jersey*, G. S. Hobart (63), nephew of former vice-president; head of Newark law firm and civic leader; H. G. Gaston (80), Somerville, scion of a family of lawyers; C. A. Swift (79), 58 years at bar; Charles Jones (60), real property lawyer, Newark; C. W. Hurst (68), Englewood, over 25 years at bar; W. L. Clark (82), 61 years at bar; Clarence Sackett (78), court reporter and afterward lawyer. *New York City*, (Admiralty): C. S. Haight (67), decorated by foreign sovereigns; Earl Appleman (51); (Corporations): Victor Morawetz (79), author, Carnegie's attorney; T. L. Chadbourne (66); S. W. Howland (59), once partner of Elihu Root; R. A. Young (54); (Patents): F. J. Allen (79), former U. S. Commissioner of Patents; William Muzzy (66); J. F. Neary (61); (Reality): Joshua Kantrowitz (81), practiced half a century in Brooklyn; Herman G. Loew (81), single tax advocate; D. J. Daly (52); (General Practice): Howard Mansfield (89), 64 years at the bar; J. M. Gifford (82), 55 years at bar;

James Hillhouse (84), lawyer and civic leader; C. W. Bacon (82), lawyer and writer; G. P. Hotaling (81), executor and trustee of large estates; C. H. Fuller (79), 54 years at bar; W. A. White (77), member of N. Y. Law School's first class; T. D. Day (73), 50 years at bar; J. C. Judge (69), nearly a half century at bar, critic of juries; F. T. Warburton (72), lawyer and welfare worker; Irving Ernst (58), defended Molyneux; Mansfield Perry (56), 30 years at bar. *New York (Upstate)*, H. W. Mack (77), Port Chester, long at N. Y. City bar; P. H. Murphy (77), former Herkimer County attorney; J. A. Peck (75), 54 years at Westchester bar; F. S. Wright (80), Auburn; F. S. Sidway (68), Buffalo. *Oklahoma*, W. W. Hastings (71), once attorney general for Cherokee Nation (of which he was a full-blooded member) and Member of Congress. *Pennsylvania*, E. A. Ballard (77), over 35 years General Counsel for Philadelphia Rapid Transit Company; Harvey Huffman (70), lawyer and four-term state senator; H. A. James (72), practiced 49 years in Doylestown. *South Carolina*, Alfred Huger (61), maritime lawyer. *Vermont*, M. C. Webber (70), Rutland, former president State Bar Assn. *Virginia*, T. J. Michie (70), law publisher, formerly Supreme Court reporter. *Washington*, Harold Preston (79), Dean of Seattle Bar. *England*, Sir Cecil Howard (92), barrister; former head of Inc. L. Soc. *Canada*, A. J. Brown (77), lawyer and senator; C. W. Bell (61), leading criminal lawyer and playwright; successful defender in 16 murder trials; G. F. Pearson (61), Halifax King's Court public utility specialist; S. W. Jacobs (67), first Jewish member of House of Commons. *Spain*, M. G. Prieto (77), lawyer, diplomat, and six years premier.

Penal Law. (See also CRIME.) **Causes célèbres.** On March 12, the California lower house adopted, by a bare two-thirds majority, a resolution designed to pardon "Tom" Mooney (1937 YEAR BOOK, 297), but it was rejected forthwith by the Senate. Mooney's attorneys then, for the third time, presented his case to the U.S. Supreme Court, which, on October 10, denied *certiorari* (*Mooney v. Smith*, 305 U.S. —). *Habeas corpus* was then sought and likewise denied on December 12. The case figured in the state campaign, the Democratic gubernatorial candidate, Olson (who was elected), being understood to favor a pardon (which he granted soon after inauguration). Another move in the "Scottsboro Cases" (1937 YEAR BOOK, 396) was the pardon of Clarence Norris by Governor Graves on July 5; Wright and Weems are still serving long sentences. Of the 73 persons indicted for fraud and conspiracy in connection with the WPA in New Mexico, two pleaded guilty and the attacks on the indictment by the others were overruled and their trial set for January, 1939.

Terrorism in Puerto Rico. On January 10 eight of those accused of shooting at Judge Cooper (1937 YEAR BOOK, 394) were convicted by a jury in San Juan and sentenced to five years of imprisonment. Two others who had turned "state's evidence" were given two and one-half years each. Four others were convicted and sentenced to terms ranging from 6 to 10 years for participating in bombing a priest's house in the preceding July. While the 40th anniversary of the first arrival of United States troops was being celebrated at Ponce, on July 25, between 65 and 80 shots were fired at Governor Winship. The shots missed him, but two others were killed and 32 wounded in the clash which followed. Arrests of 13 were made and the leader, Escobar, who had been acquitted of complicity with the murder of a policeman on the preceding Palm Sunday, was this time convicted and sentenced to life imprisonment. Others were convicted later.

Hines Case. The trial of James J. Hines, Tammany district leader, for "racketeering" was ended on September 12, when the presiding Justice (Pecora) granted a motion for a "mistrial" because District Attorney Dewey had asked a defense witness, in a 14-word question, whether he remembered any testimony before the Grand Jury "about Hines and the poultry racket." The District At-

torney asked for a retrial before another judge and it was originally fixed for November 14 but had not been called up by the close of the year. Justice Pecora's ruling was widely discussed in the public press and is the subject of articles in *Cal. St. Bar Jnl.*, XIII, 32 (P. S. Sommer); *Boston Bar Bull.*, No. 140, 3 (J. M. Maguire).

Penalties. *Nulla Poena Sine Lege* is the subject of a learned article by Prof. Jerome Hall (*Yale L. Jnl.*, XLVII, 165) in which the limitations upon judicial punishment are traced from Roman times. There were 194 legal executions in the United States during 1936, according to the latest Census Bureau report, and nearly 5000 lynchings in the last 55 years—an average of almost 100 per annum. But the Anti-Lynching Bill was laid aside in the Senate "for more important measures." According to Louis Waldman, American labor candidate for Kings County Judge, Brooklyn judges directed acquittals of 51.4 per cent of those on trial in the fiscal year 1936-37. "Capital punishment is the only way to deal with terrorists who kill fine citizens, like Colonel Irizarry," declared Governor Winship; but Attorney General Garcia and a majority of the Puerto Rican legislature opposed it. The new Honduras Constitution sanctions it, however, and the "murderer of a friend" was executed there on March 8. The first white man to suffer the death penalty in Northern Rhodesia was hung on August 22 for the murder of an Afrikaner. A convicted wife beater was given 20 lashes at Baltimore on March 1 and another was sentenced to similar punishment at Hagerstown. A confessed burglar received 10 lashes at the New Castle Co. (Del.) Workhouse on November 5. A poll of the American Institute of Public Opinion showed 61 per cent as disapproving that mode of punishment (see 1936 YEAR BOOK, 359). Sir Samuel Hoare, British Home Secretary, is reported as framing a bill to abolish corporal punishment in prisons, with certain reservations.

Procedure. The New Federal Rules (1937 YEAR BOOK, 398) came into force on September 1, despite a threatened attempt in the Senate Judiciary Committee to postpone the date, and their appearance occasioned another flood of periodical literature.

Their history in *A.B.A. Jnl.*, XXIV, 97; their "underlying philosophy," *ib.*, XXIII, 976 (Dean C. E. Clark, a draftsman); other points in *Cal. St. Bar Jnl.*, XII, 192, 223; *S. F. Bar J.*, II, 7; *Ky. St. Bar Jnl.*, II, 14; *Columbia L. Rev.*, XXXVIII, 1179; *Wash. L. Rev.*, XIII, 198; *Kan. St. Bar Assn. Jnl.*, VII, 9; *Patent Off. Soc. Jnl.*, XX, 672. "Institutes" were held in various states, at which judges and lawyers expounded the rules to the bar. Judge John J. Parker, e.g. explained to the Virginia Bar Association how to handle a case under the rules (*A.B.A. Jnl.*, XXIV, 793). As a result of their promulgation, President Hogan of the A.B.A. predicts eventual unification of state court procedure (now quite diverse) and similar suggestions have been considered in Colorado (*Dicta*, XV, 5); Florida (*L. Jnl.*, XII, 195, 235); Indiana (*L. Jnl.*, XIII, 202, 299); Ohio (*St. Univ. L. Jnl.*, IV, 143 [cf. *St. Bar Assn. Report*, XI, 481, E. R. Sunderland, also a draftsman]; and South Dakota (*Bar Assn. Jnl.*, V, 13). Dean Wigmore suggests (*Am. Jud. Soc. Jnl.*, XXII, 166) a special Reporter for decisions construing these rules and the Department of Justice publishes a Bulletin containing them which is utilized by the *A.B.A. Jnl.* (See XXIV, 913 sq.)

Attorney General Cummings (who retired shortly after the year's end, and was succeeded by Ex-Gov. Frank Murphy of Michigan) proposed (*ib.* 151) extension of the Supreme Court's rule-making power to all phases of criminal procedure, instead of, as now, to procedure after verdict only. These rules are held inapplicable to the territorial

and oversea jurisdictions (*Mookin v. U.S.*, 303 U.S. 201).

Pre-Trial Procedure is provided, for the first time in the Federal courts, by the new rules. No. 16 authorizes the judge to call in the attorneys of both parties and discuss, informally, simplification of issues, amendment of pleadings, admissions to "avoid unnecessary proof," limitation of experts, reference to a master, etc. According to the *Am. Jud. Soc. Jnl.*, XXI, 160, the success of this new feature has already been demonstrated in California, Massachusetts, and Michigan. It was adopted in Dallas, Tex., upon the judges' unanimous recommendation, and continued by a pronounced vote of the bar. In Washington, D. C., it was applied in a libel case involving some 2000 exhibits and 100 depositions. Sifting such voluminous evidence before a jury is called saves enormous waste of time and money. An 18-page printed report of the A.B.A.'s Committee on the subject concludes that it "produces results which cannot be obtained in any other way."

Proof. The A.B.A. House of Delegates at Cleveland (*Jnl.*, XXIV, 726) approved 25 proposals of its Judicial Administration Committee to improve the law of evidence, although 10 of them were grouped as "recommendations for reference, further study, etc." Included was the "Uniform Expert Testimony Act," sponsored by the National Conference of Commissioners on Uniform Laws, discussed in *Am. Jud. Soc. Jnl.*, XXI, 156. "Tomorrow's Law of Evidence," *A.B.A. Jnl.*, XXIV, 507 (C. T. McCormick), stresses the rationalizing influence of the jury system's gradual displacement by administrative tribunals, compensation boards, etc., advocates a similar method of handling automobile accident cases, points out the advantages of "discovery" and "pre-trial," predicts "that the hard rules of exclusion will soften into standards of discretion to exclude," and suggests "comparative research and open-minded willingness to profit by the experience of others" as "the path of improvement." **Fingerprinting tests** (see 1937 YEAR BOOK, 398) were denied in *People v. Gati*, N. Y. Court of General Sessions, where the accused asked for such a test of a pistol, suspected of use in the affair; and by Justice Laws of the Washington District Court. On January 20 at Croydon, England, one accused of burglary secured acquittal by demonstrating (to the jury's satisfaction) that he could "fake" fingerprints. French police were reported as "baffled" by a similar claimant. According to Brazil's fingerprint expert, Ribeiro, the "whorling patterns," which vary with the individual, may be altered by certain skin diseases, e.g. leprosy. Bodkin, the Philadelphia fingerprint specialist, scoffs at the so-called "demonstrations." *Jnl. Crim. L. & Criminology*, XXVIII, 573 (W. W. Harper). The Washington press made much of the identification, from civil service fingerprints, of a woman's corpse found in a nearby Maryland creek. Director Hoover of the F.B.I. predicts "the day when all citizens will be fingerprinted" as "a matter of common sense and expediency." **Pathometer** ("Lie Detector") tests were held in *Fort v. People*, 4 N.Y.S. (2d) 913, insufficiently established scientifically as yet to rank with "handwriting, fingerprinting, and ballistics . . . recognized by experts as possessing such value that reasonable certainty can follow from tests." The trial judge was upheld in denying the accused's motion for such a test by Rev. W. G. Summers (49), pathometer's inventor, who died September 24. In Chicago, one Stanley, accused of driving while intoxicated, invoked the

"Lie Detector" with the result that his fine was raised from \$25 to \$118.50. Other uses of the instrument are described in a lengthy Associated Press dispatch from the N. J. State Hospital, Trenton, November 26. It is said that Keeler, who developed the polygraph (a form of the pathometer), requires an operator to undergo at least six months' training (see Marston, *The Lie Detector Test*, N. Y. 1938). **Miscellaneous:** In *State v. Welch*, at Webster City, Iowa, the accused was convicted of manslaughter, largely, it is reported, on a test of his blood, admitted in evidence over the protests of his counsel that it infringed the privilege against self-incrimination—which Professor McCormick calls "that curious survival" and predicts will "ultimately . . . disappear." Governor Blanton Winship of Puerto Rico reported that all 13 of those arrested for attempting to assassinate him (see p. 397) reacted to the "paraffin test," showing gunpowder granules on their hands. In a mail fraud trial, before U.S. Dist. J. Patterson in New York, the phonographic record of a telephone conversation, within the state, was admitted in evidence as not subject to the rule in *Nardone v. U.S.* (1937 YEAR BOOK, 398). **Remedies:** "Election of, A Delusion" is discussed in *Columbia L. Rev.*, XXXVIII, 292; "Accounting in Assumpsit (Extension)," *Dickinson L. Rev.* XLII, 42 (W. Garber); "The Writ of Prohibition," *Georgetown L. Jnl.*, XXVI, 831 (Hughes & Brown); "*Scire Facias* (in Penna.)," *Bar Assn. Quar.*, XXXV, 158 (S. M. Sofel). For comparative law see Genet, *De la Procédure Formulaire du Droit romain à la Procédure de la Cour permanente de Justice Internationale*, *Revue Internationale Française du Droit des Gens*, V, 17.

CONSTITUTIONAL AND PUBLIC LAW

United States. Interpretation by the Supreme Court of Federal Constitution clauses included:

Amendments I and XIV, guaranteeing freedom of speech and the press, held infringed by a Georgia municipal ordinance prohibiting the circulation of "literature of any kind" without written permission of the City Manager, *Lovell v. Griffin*, 303 U.S. 444.

Amendments I and X, held not infringed by the Bankruptcy Act of 1937, adding Ch. X, authorizing composition of debts by taxing agencies, etc., *U.S. v. Bekins*, 304 U.S. 27.

Amendment XIV, 1, not infringed by a state procedure which enables defendant, in an action brought by a non-resident, to obtain a judgment against the latter upon serving his attorney alone in a cross section, *Adam v. Saenger*, 303 U.S. 59; but a negro student is not given "equal protection of the laws" (if denied admission to his state's one law school) by providing a course for him in a school outside the state, *State ex rel Gaines v. Canada*, 305 U.S. 337. Grant of "exclusive jurisdiction" by a state to the Federal Gov't is not effective to prevent operation of the former's tax laws, unless the latter has accepted such jurisdiction, *Atkinson v. Tax Comm'n*, 303 U.S. 20. (A new edition of Elliot's Debates, in the state conventions, on the Federal Constitution, is announced by the Michie Company, Charlottesville, Va.)

Conventions and Constitutions. **UNITED STATES.** *New Hampshire.* The 12th constitutional convention (1937 YEAR BOOK, 649) of the Granite State, described as "an unwieldy mass meeting of 481 members," met at Concord in May and adjourned on the 31st, after submitting proposals for absentee voting, income, inheritance, and sales taxes, and reservation of revenues from vehicle traffic to highway purposes. Governor Murphy's proposal for state aid to private enterprise and all plans to reduce the present legislative membership below 424 were rejected by the convention (see also REFERENDUM). *New York's* eighth constitutional convention (see 1936 YEAR BOOK, 656) opened auspiciously at Albany on April 5 with 168 dele-

gates, of whom 92 were Republicans and 76 Democrats (one chosen on an opposition ticket). Partisanship figured considerably behind the scenes, notably as to legislative reapportionment. According to the *N. Y. Times* "an alliance of upstate Republicans and Tammany Democrats put through a discreditable political deal" to outlaw PROPORTIONAL REPRESENTATION (q.v.). Such a provision was actually inserted in the original draft but was detached just before adjournment on August 27, after 694 proposals had been considered. The convention's work, as finally submitted, consisted of nine so-called "amendments," though the first was "actually the new constitution," consisting of 20 articles (replacing 14 in the old instrument) and 50,000 words as against 30,000. The new one contained various provisions which aroused opposition, such as tax exemptions, free transportation of private school pupils, and civil service pensions as a "contractual relationship," but it was ratified by the voters. The other eight "amendments" were submitted separately; five were adopted (see REFERENDUM) and provision was made for holding the next convention in 1959—an "off year."

Abroad. *Australia.* Attorney General Menzies announced in the House of Representatives on November 22, the government's intention to seek more powers for the Federal Parliament, either by a Referendum or a transfer from the state legislatures. A new constitution came into force in *Czechoslovakia* (with a dictatorship trend). *Colombia* adopted a constitutional amendment for annual, instead of semi-annual, sessions. *Rumania.* Here on February 24 all voting subjects were required to appear before local authorities and answer aloud whether they should be recorded for or against the new constitution of 117 articles by which the King becomes virtually a dictator with a parliament, nominally in the "corporative" form but really impotent. A religious ceremony is required for all marriages but religious and racial equality are promised. (*El Salvador.* The National Constitutional Assembly met at the capital, San Salvador, on November 15, pursuant to demands of many municipalities and thousands of citizens, for constitutional reform. It began work by approving the preamble and first articles of a new instrument which reaffirm the form of government as republican, democratic, and representative. In Art. I, *El Salvador* undertakes also to do its part toward achieving real solidarity among the American nations and forming thereby a continental democracy. But later it was announced that the convention had extended the term of President Martinez for six years from March 1, when his present term expires.

PRIVATE LAW

Contracts. *General phases* of this branch are treated in the following current articles: "A Theory of Contract Sanctions," *Columbia L. Rev.*, XXXVIII, 775 (M. S. Mason); "Statute of Frauds and Consideration" (English Law Revision Committee Report), *Canadian Bar Rev.*, XV, 585; *Williston on Contracts* (revised ed.) reviewed, *Cornell L. Quar.*, XXIII, 269 (H. E. Whiteside); "Williston's Fundamental Conceptions," *Mo. L. Rev.*, III, 219 (A. L. Harding); "Quasi-Contracts," *N. J. L. Jnl.*, LX, 409 (R. W. Mullin).

Bankruptcy. The Chandler Act of June 22 is "the first thorough-going revision" of the American Bankruptcy Statute in 40 years. Its introducer, Representative Chandler of Tennessee, traces its history through successive congresses (*A.B.A.*

Jnl., XXIV, 880). Section 77B of the old act, dealing with corporate reorganizations, is expanded into a new chapter (X), and the Securities & Exchange Commission, which has created a new division for that purpose, acts with the courts in an advisory capacity. The purposes and provisions of this new chapter are explained by Chairman W. O. Douglas of the S.E.C. (*ib.*, 875). Other discussions of the act are found in *U. of Chicago L. Rev.*, V, 1, 272, 398; *Commercial L. Jnl.*, XLII, 411, 443; XLIII, 326, 332; *Nat. Bankruptcy Referees Jnl.*, XII, 124; *Temple U. L. Quar.*, XIII, 1; *U. of Pa. L. Rev.*, LXXXVII, 105; *St. John's L. Rev.*, XIII, 18.

Carriers. The urgent railway legislation failed of enactment by the 75th Congress, and the proposed wage cut was abandoned by the companies after fruitless attempts to reach an agreement with their employees. The distinction between "common" and "contract" carriers is explained in *Mich. L. Rev.*, XXXVI, 802 (M. L. Plant; cf. *Va. L. Rev.*, XXIV, 168, A. Svihra). Motor carrier legislation is discussed in *Wash. U. L. Quar.*, XXIII, 1 (E. A. Haid); *U. of Pa. L. Rev.*, LXXXVI, 403 (S. T. McDowell); *Kan. Cy. L. Rev.*, VI, 264 (J. F. Miller). Natural Gas Pipe Lines are treated in *D. C. Bar Assn. Jnl.*, IV, 5.

Insurance. The London underwriters of policies on the *President Hoover*, wrecked near Formosa, Dec. 10, 1937, accepted liability for a "total loss" (£1,000,000) within four days after the claim had been received. Recent and pending insurance legislation is discussed in *Ill. L. Rev.*, XXII, 391 (H. C. Havighurst); *Jno. Marshall L. Quar.*, III, 145 (H. S. Moses); *N. Y. St. Bar. Assn. Jnl.*, IX, 161; X, 110 (L. H. Pink).

Negotiable Instruments. "Development, in Early English Law," *Harv. L. Rev.*, LI, 813 (F. K. Beutel). Following the example of the British Bills and Notes Act and the American Uniform Negotiable Instruments Law, the Baltic states of Estonia, Latvia, and Lithuania have adopted a common code for such instruments.

Sales. Following are current articles under this branch: "A Federal Uniform Sales Act," *Va. L. J.*, XXIV, 793 (L. B. Blissard); "Buyer's Election under the Sales Act," *Columbia L. Rev.*, XXXVIII, 888; "Draft of an International Law of Sales," *U. of Chicago L. Rev.*, V, 543 (E. Rabel); "Through Title to Contract," etc., *N. Y. U. L. Quar. Rev.*, XV, 159 (K. N. Llewellyn).

Corporations. "The Natural History of the Private Artificial Person," *Tulane L. Rev.*, XIII, 41 (Charles S. Lobingier), undertakes to trace the corporate notion from its earliest manifestations, in primitive human groups, through the guilds of Rome, Continental Europe, and England, to the United States and the present day. Titles of articles in this field fill 4½ columns of *Current Legal Thought's* latest Index. Among them is "The Future of Corporations," *Cleveland Bar Assn. Jnl.*, IX, 93 (J. P. Taggart). Before the National Lawyers' Guild, A. A. Berle, Jr. declared Federal licensing of corporations a logical development of the future, as did also Senator O'Mahoney, author of a bill for that purpose (*Commercial L. Jnl.*, XLIII, 67). The "Census of American Listed Corporations" (a WPA project, begun in 1936) abstracts data from S.E.C. registration statements including to date about 2000 companies. On January 29 a new and modern corporation act came into force in Georgia, and the D.C. Bar Assn. is reported as moving to supersede an archaic statute there. In *Electric Bond & Share Co. v. S.E.C.*, 303 U.S. 419,

the Supreme Court upheld as divisible and separately enforceable, regardless of the act as a whole, those provisions of the Public Utility Holding Company Act of 1935, requiring such companies to register with the S.E.C. or be barred from the mails and interstate commerce. Chairman W. O. Douglas discusses the effect of the decision and the S.E.C.'s future policy in applying the act in *A.B.A. Jnl.*, XXIV, 800. The "Illinois Business Corporation Act" is treated in *Jno. Marshall L. Quar.*, IV, 106 (A. B. Wilson). Wisdom of the corporate form of business organization is questioned in *Ind. L. Jnl.*, XIII, 533 (H. H. Bredell).

Domestic Relations. Marriage. With the accession in 1938 of New Hampshire, New Jersey, and New York, eight states now require blood tests of all applicants for marriage licenses, five others require them of male applicants only. In New York, where the law became effective July 1, there was a 50 per cent decrease in applications during that month; but almost three times as many licenses were issued in August. Connecticut and Illinois reported a continuing decline. The latter's act is discussed in *Ill. L. Rev.*, XXXII, 327; *Jno. Marshall L. Quar.*, III, 471 (A. Goldblatt). "Common Law Marriages" (without ceremony) are considered in *Minn. L. Rev.*, XXIII, 177 (Billig & Lynch); *Ia. L. Rev.*, XXIII, 75 (necessity of cohabitation). District judges (who supersede Justices of the Peace in Nassau Co., N. Y.) may solemnize marriages under an Attorney General's opinion. "Effect of Extra-State Marriage Ceremonies," in *Miss. L. Jnl.*, X, 105 (C. Taintor). An amendment (February 1) of the French Civil Code gives the wife independent civil status and eliminates "obedience" from the civil ceremony. Marriage by purchase prevails yet in parts of Yugoslavia, where three young Englishmen are reported as having recently purchased brides. The German marriage laws (1937 YEAR BOOK, 401) were extended to Austria on August 1 and a rush of applications followed from those who had "remarried" under "civil dispensations," not by the Roman Church. *Observatore Romano*, Vatican organ, published a two-column protest.

Divorce. The inclusion of insanity as a ground for divorce in England (1937 YEAR BOOK, 401) may affect 32,000 people. "Impotence as a Ground (in Pennsylvania)" is considered in *Temple L. Quar.*, XII, 242; "What Constitutes Open Concubinage (in Louisiana)" *Tulane L. Rev.*, XI, 447 (G. T. Wogan). In *Walker v. Walker*, N. Y. L. Jnl., June 8, Justice Collins of the New York Supreme Court refused to enforce a divorce decree of the U.S. Court for China, rendered upon grounds which arose in another country. The Maryland act of 1937, authorizing divorce for five years' voluntary separation, was upheld in *Campbell v. Campbell*, 198 Atl. 414. A Nevada divorce to the husband was recognized in *Glasser v. Glasser*, 276 N.Y. 206; the Court of Appeals accepted the Nevada court's finding that plaintiff was a "resident." But the German *Reichsgericht*, on April 28, refused to recognize a Latvian divorce obtained during temporary domicile. Although Eire has banned divorce (1937 YEAR BOOK, 401), Northern Ireland is reported as moving to make it "speedier and cheaper." *Annulment* is discussed in *U. of Toronto L. Rev.*, II, 319 (England); *Md. L. Rev.*, II, 211 (Md.). The New York State Law Revision Committee sponsors a bill permitting annulment (now granted for extra-state marriages only) of those contracted within the State. The Quebec Superior Court, on June 8, reversed a decree of annulment granted on the ground

that the marriage had not been solemnized in accordance with canon law, which, said the Superior Court, "has nothing whatever to do with the validity of marriage." "Das Legitimitätsproblem und das kanonisch Recht" is discussed in *Zeitschrift für Öffentliches Recht*, XVIII, 1 (W. Plöhl).

Adoption. In various jurisdictions, is discussed in the following periodicals: *Calif. St. Bar. Jnl.*, XIII, 55; *Georgetown L. Jnl.*, XXVI, 119 (D. C.); *Jno. Marshall L. Quar.*, III, 491; *Miss. L. Jnl.*, X, 239; *Mo. Bar Jnl.*, IX, 47; *Dickinson L. Rev.*, XLII, 12 (Penna.).

Guardianship. An attempt by Dionne, father of the "quintuplets," to obtain their custody, displacing Dr. Dafoe as guardian, was unsuccessful. A natural tutor's authority over a child's estate is discussed in *Tulane L. Rev.*, XI, 419 (J. V. Wolff).

Property. "Changing Conceptions of Property" are considered in *A.B.A. Jnl.*, XXIV, 70 (N. W. MacChesney) and 65 (Leon Green); The American Law Institute's Restatement of Property Law, in *U. of Pa. L. Rev.*, LXXXVI, 173 (W. R. Vance); *St. John's L. Rev.*, XII, 1 (J. P. Maloney); *N. J. L. Jnl.*, LXXI, 73; "Rights of Way by Prescription (Comparative)" *Tulane L. Rev.*, XI, 226 (Otto Schoenrich); "The Rule in Shelly's Case" (personal property transfers), *Ill. L. Rev.*, XXII, 935 (E. M. Leesman); *Ind. L. Jnl.*, XLII, 466 (A. M. Dowling). Legislation, past and proposed, affecting real property in various jurisdictions is discussed in *Conn. Bar Jnl.*, XII, 9 (H. J. Marks); *Mass. L. Quar.*, XXII, 38; *N. Y. St. Bar Assn. Bull.*, IX, 254; *Columbia L. Rev.*, XXXVII, 238; *Okla. St. Bar Jnl.*, IX, 43; *Canadian Bar Rev.*, XV, 516 (Ontario). Strong recommendations for a coordinated system of land surveying and description were made at the conference of engineers in Troy, N. Y. The President's suggestion of "excess condemnation" in constructing highways and other public works, is warmly commended in a letter to the N. Y. Times (February 22, F. P. Stockbridge). On March 30, the General Land Office ruled that the Federal government, and not the oil companies, was the owner of another section of lands in the California Elk Hills Naval Reserve (see "The Conservation of Oil," *Harv. L. Rev.*, LI, 1209 (N. Ely)). Opposition to making compulsory the "Torrrens System" (1935 YEAR BOOK, 384) was voiced by several speakers before the N. Y. Title Assn.'s convention, on April 24. "The Tragic Story of Pueblo Indian Land Titles" is told in *Kan. Bar Assn. Jnl.*, VI, 158.

Copyright entries in the Library of Congress from 1897 now number about 9,000,000. "Copyright Law and Its Sanctions" are discussed in *Brooklyn L. Rev.*, VII, 523 (A. Lerner); "Comparative Copyright Legislation," *Jnl. Patent Off. Soc.*, XX, 157 (J. L. Brown); "Revision of the Copyright Law," *Harv. L. Rev.*, LI, 906; "Copyright Reform and the Duffy Bill," *Yale L. Jnl.*, XLVII, 433; "Legal Protection of Ideas," *Pittsburgh L. Rev.*, IV, 113 (J. M. Duff); *Special Productions: (Musical)*, *Dicta*, XV, 117 (D. W. Strickland); (News), *A.B.A. Jnl.*, XXIV, 17 (F. Thayer); (Performing Artists), *Dickinson L. Rev.*, XLII, 57, 88 (Bass & Hitchler); (Radio), *Air L. Rev.*, IX, 265; *Columbia L. Rev.*, XXXVIII, 578.

Patents. Following several fruitless congressional investigations, the "Temporary National Economic Committee" (inter-departmental) has undertaken a study of invention "from its cultural, social, and economic aspects" with a view to recommending reforms in procedure, the apparent conflict between patent monopoly and the anti-trust

laws (considering "the effect of cross-licensing and patent pooling"), and the proposal for compulsory licensing of patents (see *G. W. L. Rev.*, VI, 357, 364, 499, 520; *Mich. L. Rev.*, XXXVI, 811).

Trademarks. "Trademark Problems and Laws" are treated in *Brooklyn L. Rev.*, VII, 20 (F. S. Moore); Power of Congress re, *Fordham L. Rev.*, VI, 408; Regulation and Legislation, U.S. Trademark Assn. *Bull.*, XXXIII, 177, 184, 229; Results of the Prague Congress, *ib.* 201; late decisions, *ib.* 235; in Britain, *ib.* 717 (cf. *Va. L. Rev.*, XXIV, 440; in Germany, *ib.* 253. The *Oficina Interamericana de Marcas*, established at Havana under joint agreement of western hemisphere nations, undertakes to "harmonize and articulate" notions of industrial property protection and publishes a *Boletano*. The Exchequer Court at Ottawa, in July, found the "Pepsi-Cola Co. of Canada" an infringement of the "Coca-Cola Co. of Canada." The Hudson's Bay Co., chartered in 1670, appealed to the Washington District Court from the refusal to register its trademark, "H. B. World Charters," as resembling that of a Louisville firm.

Succession. The new English Inheritance Act adopts the Civil Law principle of the *legitime*, requiring provision for the testator's wife and children. Similar restrictions in the British dominions are discussed in *Mich. L. Rev.*, XXXVI, 1107. "The power of appointment is the most efficient dispositive device" and "the answer of more problems that face the draftsman of wills and trusts than any other," says Prof. W. B. Leach (*A.B.A. Jnl.*, XXIV, 807). "Evolution of Testamentary Capacity in Illinois" is traced in *Ill. L. Rev.*, for April (D. M. Schuyler); "Execution of Wills in Michigan," *St. Bar Assn. Jnl.*, XVI, 527 (G. L. Field); "The Investment Clause," *Dicta*, XV, 14; "Nuncupative Wills" (La.), *Tulane L. Rev.*, XII, 439; "Contingent Wills," *U.S. L. Rev.*, LXXI, 671; Testamentary Conveyances, *Miss. L. Jnl.*, IX, 183 (F. G. Berger); *Kansas St. Bar. Assn. Jnl.*, VI, 280 (P. L. Wilbert). The Roman doctrine of implied revocation was applied by Surrogate Slater of Westchester Co., N. Y., in construing the will of F. W. Mosher, who, after its execution, married the beneficiary, thereby, it was held, revoking the will. On February 11, the Philadelphia Orphans' Court, by a vote of 3 to 2, decided that testamentary trustees, vested with discretion, may invest estate funds in stocks—preferred or common. In *Texas v. Florida* (306 U.S. —) the U.S. Supreme Court, the referee's report, finding the late Colonel (son of Hetty) Green (1936 YEAR BOOK, 402) a resident of Massachusetts at the time of his death, was confirmed November 14. The Virginia Court of Appeals (144 S. E. 804) upheld the will of the late W. R. Hayes, Roman Catholic priest, bequeathing his entire estate to the woman he married (1936 YEAR BOOK, 402). The late Justice Cardozo (q.v.) executed his will on June 12, 1935 (see N. Y. *Times*, July 29), bequeathing the residue of his estate (after paying certain bequests to charities, etc.) to Columbia University with

branch of the law. Current articles on its general phases are:

"Pennsylvania Tort Law v. The Restatement," *Pa. Bar Assn. Quar.*, No. 33, p. 33 (L. H. Eldridge); "The Right of Privacy," *Jno. Marshall L. Quar.*, III, 265 (C. Stepper); *Los Angeles Bar Assn. Bull.*, XIII, 991 (Moore & Norris); *Canadian Bar Rev.*, XVI, 425 (Broadcasting; G. W. Paton). Damage by Chattels, *U. of Toronto L. Jnl.*, II, 280 (F. V. Harper). Defamation. Privilege in, *Cal. L. Rev.*, XXVI, 226 (J. M. Hall); *Tulane L. Rev.*, XII, 452 (J. R. Stewart); *Texas L. Rev.*, XVI, 87; "Punitive Damages in, Pa. for," *U. of Pittsburgh L. Rev.*, IV, 92 (W. B. Gold, Jr.); By radio, *Washington U. L. Quar.*, XXIII, 262 (J. Kutten); *Georgetown L. Rev.*, XXVI, 475 (E. J. Hickey); *Oreg. L. Rev.*, XVII, 307, 314; *U. of Newark L. Rev.*, III, 182 (A. Teich).

The Institute's draft above mentioned seems to ease the risk of newspapers in this field. Shortly before (April 24) the French *Cour de Cassation* reduced to 5000 francs an award of 20,000 against the late Anatole France, although in the lower court plaintiff had asked 100,000. Defamation in Scotland is treated in *Cambridge L. Jnl.*, VI, 327 (Lord Normand).

Misrepresentation—A Synthesis of the Law, *Minn. L. Rev.*, XXII, 939 (Harper & McNeely). Negligence. "Last Clear Chance," *Yale L. J.*, XLVII, 704 (F. James, Jr.); *Kan. Cy. L. Rev.*, VI, 235 (in Mo., W. H. Coulson); Comparative, *Wis. L. Rev.*, (1938), 465 (T. P. Whelan); Contributory, *Minn. L. Rev.*, XXII, 410; Of children, *Id. L. Rev.*, XXIII, 15 (H. J. Hoffman); *W. Va. L. Quar.*, XLIV, 55 (C. L. Carroll); Causal Relation Required for, *Minn. L. Rev.*, XXII, 410; "Wrongful Death and," *N. Car. L. Rev.*, XVI, 211 (R. H. Wettach); Survival of Action in, *Oreg. L. Rev.*, XVII, 218 (D. C. Silven).

LAWRENCE COLLEGE. A coeducational institution in Appleton, Wis., founded in 1847. For the autumn term of 1938, 581 students were enrolled in the college of liberal arts, 77 in the Conservatory of Music, and 56 in the Institute of Paper Chemistry, a graduate school affiliated with the college. There were 57 members on the faculty of the college, 14 on that of the Conservatory, and 47 on that of the Institute. The endowment, exclusive of buildings and equipment, amounted to \$1,519,488; the income from endowments for 1938 was \$57,480. The college library contained 133,652 volumes, and the Institute, 8097 volumes. President, Thomas N. Barrows.

LEAD. Reports from producers in the United States covering 11 months' actual production plus an estimate for December, indicate, according to the U.S. Bureau of Mines, that about 196,100 tons of primary domestic desilverized lead, 114,500 tons of soft lead, and 30,800 tons of desilverized soft lead were produced in 1938—making a total output of about 341,500 tons of refined lead from domestic ores. Corresponding figures in 1937 were 247,876 tons of desilverized lead, 139,949 soft lead, 55,317 desilverized soft lead, making a total of 443,142 tons. The output of lead smelted and refined from foreign ore and bullion was about 44,800 tons as compared with 24,175 in 1937. The total primary lead smelted or refined in the United States in 1938 was thus about 386,200 tons, a decrease of 17 per cent as compared with the 467,317 tons in 1937. Plants that treat primary materials mainly produced 23,000 tons of secondary lead in 1938 compared with 29,986 in 1937. Therefore, the total output of primary and secondary refined lead at primary refineries was 409,200 tons, as compared with 497,303 in 1937.

Antimonial lead produced at primary refineries totaled 23,500 tons, containing 8900 tons of primary domestic lead, 1300 of primary foreign lead, 2400 of primary domestic and foreign antimony, 10,200 of secondary lead, and 700 of secondary antimony.

According to the U.S. Bureau of Foreign and Domestic Commerce, total imports of lead as "pigs,

"The wish and hope . . . that the gift shall be applied to the foundation or maintenance of a chair of jurisprudence in the law school . . . associated with my name and to perpetuate the scientific study of a subject which has been one of my chief interests in life."

President Kemal Atatürk's (q.v.) will, executed September 5, provides for life incomes for certain relatives, etc., the remainder to the Society for the promulgation of Turkish Language and History.

Torts (Delicts). The American Law Institute voted, May 12, to approve its final draft of this

bars, and old" amounted to 4,379,851 lb. valued at \$104,483 during 1938 compared with 5,407,174 lb. valued at \$204,887 in 1937. Base bullion imported during the same period totaled 607,747 lb. compared with 374,258 lb. during 1937. Imports of lead in ore and matte were 13,030,198 lb. compared with 11,223,944 lb. in 1937. Exports of lead in pigs, bars, sheets, etc., during 1938 amounted to 91,732,717 lb. valued at \$3,354,616. Total exports of pig lead for 1937 were 40,181,083 lb. valued at \$1,838,662, and 1,195,199 lb. valued at \$84,619.

The new supply of lead made available for consumption in 1938 is calculated at about 347,000 tons, a decrease of 23 per cent from the 452,129 tons in 1937. Producers' and consumers' stocks are not taken into account in the calculation of apparent consumption.

World production of lead excluding the United States, according to American Bureau of Metal Statistics, for 1938 was estimated at 1,447,892 tons.

LEAGUE OF NATIONS. From Jan. 26 to Feb. 2, 1938, the Council of the League held its 100th session. The members of the Council took that opportunity of reaffirming their faith in the system of international co-operation for which the League stands.

Resolution on China. After a discussion between certain of its members on the position in the Far East, the Council noted with regret that hostilities continued in China. It found this deterioration in the situation particularly deplorable in view of the efforts and achievements of the National Government of China in her political and economic reconstruction. The Council then recalled and emphasized the terms of the Assembly resolution of Oct. 6, 1937, and expressed its confidence that the members specially concerned would consider what other steps could be taken to secure an equitable settlement of the conflict. By ignoring the question of applying sanctions in its resolution of February 2 on the Sino-Japanese situation, the Council tacitly recognized the suspension of the coercive clauses of the Covenant.

Though regarding the resolution as "inadequate," the Chinese representative, Dr. V. K. Wellington Koo, accepted it in the hope that "the proposed examination will be pursued with energy and promptness." The representatives of Peru and Poland abstained from voting on the resolution on the ground that it "had been prepared by certain members of the Council without keeping the others day by day informed of its progress."

Miscellaneous Developments. On January 27, the Council decided that League control of Hungary's finances should end on March 31. On January 28 it appointed a committee of seven experts "to inquire into the status of women in all countries and to suggest means for equalizing their standing with that of men." In accordance with a resolution of the Assembly of the League, the Council also appointed a special committee to inquire into the functions of the economic and financial organizations of the League with a view to enlarging the bases of international co-operation in the economic and financial domain.

On the occasion of this 100th meeting the Council took occasion to publish an inventory report about itself. The main purpose of this 150-page book is to present in a clear and concise manner a résumé of the Council's organization and activities since its first session in January, 1920—an account of its "composition, competence and procedure." There is, in addition, a series of annexes, giving a chronological table of the Council sessions

and lists of the various states which have been members of the Council from time to time.

In the course of February, a Committee of 28, instructed by the Assembly to study the application of the principles of the Covenant, proceeded to a general discussion on the question of the participation of all states in the League, in connection with a report submitted by Viscount Cranborne, representative of the United Kingdom.

In March the German Government communicated to the Secretary-General the text of a law of Mar. 13, 1938, providing for the return of Austria to Germany and holding of a plebiscite on that issue in Germany and Austria on April 10. The German Government added in its communication that the former Federal State of Austria, upon the promulgation of this law, had ceased to be a member of the League of Nations.

As a result of certain observations made by the Turkish Government, a special Committee, appointed by the Council, revised the regulations drawn up by the Electoral Commission for the first elections to be held in the Sanjak of Alexandretta. It forwarded the final text to the president of the Council for transmission to the French Government and promulgation in the Sanjak. In accordance with the Montreux Convention on the Regime of the Straits, the Turkish Government forwarded to the Secretary-General its first annual report on the movement of battleships and merchant vessels in the Straits.

The Secretary-General of the League sent a mission headed by M. Podesta Costa, Under-Secretary-General, to various countries of South America. The mission visited Uruguay, Argentina, Chile, Bolivia, Peru, Ecuador, Panama, Venezuela, Colombia, Cuba, the Dominican Republic, Haiti, and Mexico.

Activity during April was marked by the meeting of a number of Committees. The Committee entrusted with the task of preparing the European Conference on Rural Life, to be convened in 1939, drew up a detailed agenda for that Conference, bearing on the role of the public authorities, national, regional, and local, in improving the conditions of rural life, and that of the agricultural associations and co-operative societies. The Road Traffic Committee adopted a number of conclusions in connection with the revision of the International Conventions of 1926 and 1931 on motor traffic and various questions, including the safety of pedestrians, protection of traffic, simplification of traveling documents, and unification of accident statistics. A Special Committee for the Study of Signals at Level Crossings prepared a report on the technical and legal aspects of the problem of safety on roads and railways. This report, to which the Committee attached a preliminary draft convention, is intended to facilitate the work of a conference to be summoned for the purpose of concluding an international convention on the subject.

The Executive Committee of the International Committee on Intellectual Co-operation reviewed the work done by the Intellectual Co-operation Organization. It dealt, among other questions, with the Declaration concerning the Teaching of History, the teaching of the principles and facts of international co-operation, standard regulations for international architectural competitions, broadcasting, use of the moving picture in the cause of peace, "conversations" on scientific subjects, intellectual rights, and protection of monuments and works of art during armed conflicts.

On May 14 the Secretary-General reported to

the Council on the progress in organizing the League of Nations' participation in the New York World's Fair. He had asked the Commissioner of the Vatican Pavilion to prepare, as technical adviser, plans for the League Pavilion.

Retreat from Collective Security. The 101st session of the League Council met May 9 to May 14. Its proceedings illustrate the retreat from Geneva that has taken place during the past two years. A handful of the states represented on the Council—China, Soviet Russia, and New Zealand—tried to stem the retreat. The others, led by Britain and France, devoted their energy to the evasion of critical issues rather than to their settlement.

To stop the Japanese invasion of China, a resolution was passed reaffirming approval of aid to China by individual states. To stop intervention in Spain, Lord Halifax expressed the hope for "eventual success" of the British plan of evacuation. To protect Ethiopia, the President of the Council maintained that member states were free to decide on recognizing the Italian conquest.

Many powers, including the United States, bear responsibility for the retreat from League principles to power politics, but the major responsibility rests with certain of the great powers. The latter are swiftly reverting from a policy of protecting their interests through the maintenance of international law and order to a policy of protecting their privileges through sordid bargains at the expense of weak powers. They are taking, as the Foreign Policy Bulletin put it, "the road back—to 1914." There has been a rapid development of this great power bargaining. Great Britain and Italy made a deal at the expense of Ethiopia and Spain. Great Britain and France reached a pact at the expense of Ethiopia, Spain, and perhaps Czecho-Slovakia. Germany and Italy bolstered their axis, undoubtedly at the expense of Czecho-Slovakia and Spain. The new "realism" alters the status of small states. They are regarded not so much as players in the game of international politics, but rather as the stakes of the game. As Chamberlain stated openly on February 22: "We must not try to delude small, weak nations into thinking that they will be protected by the League against aggression."

These "realistic" methods are in keeping with the ends in view. Secret, exclusive diplomacy takes the place of open, inclusive diplomacy. Two reasons may be cited. In the first place, the open forum of the League is an inconvenient place for discussing deals in the presence of the intended victims. In the second place, public debate gives undesirable publicity at home to policies of dubious popularity. The League has not been entirely discarded by the bargaining powers for this very reason. The stamp of League approval is sought as a means of popularizing the bargain policy. It may be that the effort of Halifax and Bonnet at Geneva to secure approval for the recognition of Italy's conquest of Ethiopia was primarily an attempt to placate public opinion at home. Recognition of an accomplished fact is not important by itself, except as it opens the way for loans to make the conquest profitable and thereby encourages aggression elsewhere; but it was certainly adding insult to injury to seek League approval for such recognition in view of the obligations of the League to Ethiopia, both under the Covenant and under the principle of non-recognition, unanimously adopted by the Assembly in March, 1932.

Decision on Ethiopia. On the agenda of the session were 18 items, a number of which were of

special importance politically. One of these, "the consequences arising out of the existing situation in Ethiopia," was placed on the agenda at the request of the British Government in a note dated April 9, which said:

His Majesty's Government in the United Kingdom have had under consideration the anomalous situation arising from the fact that many states members of the League, including no less than five of the states represented on the Council, recognize that the Italian Government exercise sovereignty over Ethiopia or have taken action implying such recognition, whereas other states members of the League have not done so. His Majesty's Government in the United Kingdom are of opinion that this situation should be clarified.

Ethiopia's exiled Emperor, Haile Selassie, joined the Ethiopian delegation at the Council meeting on May 12 and appealed against recognition of Italy's conquest of Ethiopia, asking that the matter be referred to the Assembly. But the judgment of the Council was that "It is for individual members to decide as they choose." Four members of the Council—Bolivia, China, New Zealand, and Soviet Russia—opposed the majority decision.

Refugees, etc. Also, at the request of the British Government, the Council considered the question of aid to political refugees and decided, following Russia's withdrawal of her objections to the inclusion of White Russians among those to be assisted, to establish "a single autonomous office to aid refugees of all nationalities and creeds" under a high commissioner.

Switzerland's request to be relieved of the obligation of enforcing League sanctions against aggressor nations was agreed to by the Council upon receiving "assurances that restoration of absolute neutrality would not interfere with the free working of the League in Swiss territory."

By a vote of 4 against 2, with 8 abstentions, the Council on May 13 rejected a resolution proposed by the Spanish delegate, Julio Alvarez del Vayo, that the Council carry out the Assembly's pledge of Oct. 2, 1937, to "consider ending the non-intervention policy" if "complete withdrawal of non-Spanish combatants" from Spain "cannot be obtained in the near future." The large number of abstentions were due to the fact that only two hours had been given for consideration of the resolution, which did not permit delegates to consult their Governments. According to Señor del Vayo, less than 6000 foreigners were fighting on the side of the Loyalists as compared to 100,000 Italians on the side of the Insurgents.

Concerning China's appeal for aid against Japanese aggression, the Council, with the Polish delegate alone abstaining, adopted a resolution in which the Council "earnestly urges League members to do their utmost to give effect to the recommendations contained in previous Assembly and Council resolutions in this matter to take into serious, sympathetic consideration the requests they may receive from the Chinese Government in conformity with the said resolutions"; expresses "sympathy with China in her heroic struggle for the maintenance of independence on territorial integrity, threatened by Japanese invasion, and in the suffering which is thereby inflicted on her people," and "recalls that the use of toxic gases is a method of war condemned by international law which cannot fail, should resort be had thereto, to meet with the reprobation of the civilized world and requests the governments of states which may be in a position to do so to communicate to the League any information they may obtain on the subject."

Chile's notice of withdrawal from the League of

Nations was announced by her representative at the final meeting on May 14; this action followed the Council's decision to refer the Chilean request for consideration of the subject of reform of the League Covenant to the September Assembly.

Assembly Session. The 19th ordinary session of the Assembly was held September 12 to September 30. Of the 54 States Members of the League, 49 were represented, namely: Afghanistan, South Africa, Albania, Argentina, Australia, Belgium, Bolivia, United Kingdom, Bulgaria, Canada, China, Colombia, Cuba, Czecho-Slovakia, Denmark, Dominican Republic, Ecuador, Egypt, Estonia, Finland, France, Greece, Haiti, Hungary, India, Iran, Iraq, Ireland, Latvia, Liberia, Lithuania, Luxembourg, Mexico, the Netherlands, New Zealand, Norway, Panama, Peru, Poland, Portugal, Rumania, Siam, Spain, Sweden, Switzerland, Turkey, U.S.S.R., Uruguay, Yugoslavia. The delegates to the Assembly included two Prime Ministers (Ireland and Spain) and 18 Foreign Ministers (Denmark, Egypt, Estonia, Finland, France, Iran, Iraq, Latvia, Lithuania, Luxembourg, the Netherlands, Norway, Poland, Rumania, Spain, Sweden, Turkey, U.S.S.R.). The session was opened by W. J. Jordan (New Zealand) as President of the Council. Eamon de Valera, Prime Minister of Ireland, was elected president of the Assembly. In adjourning the body, he said:

The 19th session of the Assembly of the League of Nations opened under threatening skies. When taking the Chair as President of the Assembly, I referred to the crisis, then becoming more acute every day, and dared express the hope and the prayer that the 19th session might close with immediate dangers past, and a beginning made towards a conference for peace based on justice, which the situation clearly called for and the peace-loving peoples everywhere earnestly desired.

As the session proceeded, events chased one another, and the nations of Europe were, it would appear, brought to the edge of the precipice. Is it, I wonder, a true summary of the history of those recent days to say that, having gazed over the brink, Europe shrank back appalled by the ghastly prospect of what it saw in the abyss? Be that correct or not, one thing at least is certain. The public opinion of the world stood against the making of war on a question which it believed to be capable of peaceful solution. All honor to those who in that conviction strove—as we now know, thank God, successfully—for such a solution.

While these events were taking place and these efforts were being made, we in this Assembly were performing the task which lay immediately to our hands. We can, I think, congratulate ourselves that our task has been successfully accomplished. A number of important decisions have been reached. We have added another successful session to the many previous such sessions of the Assembly, and have brought our measure of effort and achievement to the sum of those acts of State co-operation and collaboration which grows with the passing years.

There is, I think, a danger in times like these that the world at large may forget or overlook the useful and beneficial activities of the organs of the League in many fields. But, at the close of a session like this, in which we here have all been engaged in actual work upon them, I do not need to dwell at any length upon the nature, or the scope, or the value of the many services which the League of Nations renders and can render in increasing measure to all peoples. There is hardly a domain of human life or action in which the League does not take an interest and cannot play an effective part.

New Council Members. In opening the 103d session of the Council, its President, Dr. García Calderón, representative of Peru, addressed, on behalf of the Council, sincere wishes to the negotiators of order in Europe. He paid a tribute to Neville Chamberlain, Prime Minister of the United Kingdom. The President then welcomed the new members of the Council—the Dominican Republic, Greece, and Yugoslavia.

League Finances. The financial position of the League of Nations during the 12 months ending in September, continued, as in the preceding year, to

be satisfactory. This is shown by the fact that the financial year 1937 concluded with a surplus of 4,558,625 gold francs. The satisfactory position was due: (1) To an improvement in the payment of contributions which, taking into account payments of arrears, amounted in 1937 to 103.03 per cent of the total expenditure budget; 94.61 per cent of this figure represents contributions in respect of the current year and 8.42 per cent contributions in respect of previous years. (2) To profits arising from the difference between the expenditure budget, which is shown in Swiss francs, and the income budget which, since the devaluation of Swiss currency, continues to be shown in gold francs. These profits amount to 2,991,071 gold francs. (3) To economies effected by the Administration, amounting to 1,567,554 gold francs.

League of Nations Societies. The 22d Congress of the International Federation of League of Nations Societies was held from July 5 to 10 at Copenhagen. As usual, the Congress was divided into a number of committees for the discussion of questions falling into different categories. The main interest was concentrated upon the juridical and political questions. Here the discussions turned mainly upon the reform of the League Covenant, the smaller nations evincing a tendency to wish to contract out of the obligations entailed by the acceptance of collective security. Very considerable divergence of view was exhibited. A Danish representative put forward a doctrine described as neo-neutrality, the essence of which appeared to be that nations should not be bound by the Covenant to take action against an aggressor, unless certain conditions were satisfied. Among such conditions would be: (1) that intervention to restrain the aggressor would be likely to be effective; (2) that it would not be likely to extend the area of the conflict; (3) that whatever sanctions were involved should be economic and not military.

Those chiefly concerned to put forward this doctrine were obviously influenced by fear of Germany and expressed the view that the geographical situation of a nation must be taken into account when the question of its obligation to take part in sanctions was under discussion.

It was finally decided to circulate to the constituent bodies of the Federation a number of questions relative to the reform of the Covenant. Should it, for example, be weakened or strengthened? Should Article XVI be replaced by an optional Protocol? Should the League of Nations be so framed as to include nations whatever be their attitude to the League? It is hoped to give further consideration to this vexed question in the light of the answers received.

A resolution on Spain was passed pressing for an immediate armistice, denouncing the closing of the Pyrenees frontier without at the same time imposing control upon the ports, and urging that, pending an armistice, the Spanish Government should be allowed to import the necessary arms for its defence.

On China, a resolution was passed requiring members of the League to give financial assistance to China, to provide stores and drugs, and to take economic sanctions against Japan by an embargo upon Japanese products and refusing to supply war materials.

Another resolution pointed out that Czecho-Slovakia appeared to be threatened by economic and military aggression, and reminded League member states that under the Briand-Kellogg Pact they were required to take measures to safeguard

the security against aggression of all members of the League.

LEATHER. Continuing a trend that developed late in 1937, operations in the domestic leather and shoe industries were below those of the same period of the previous year. Official data of the U.S. Bureau of Foreign and Domestic Commerce showed some improvement in the third quarter of 1938, while trade sources advised that the better conditions continued during the final three months of the year. Because of the increased activity in the last six months of 1938, the position of the leather and shoe industries was not as unfavorable as was expected when operations for the first half of the year were recorded.

Inventories of leather and visible supplies of raw hides displayed a declining trend throughout 1938 according to the Tanners' Council of America. By the close of the year, total visible supplies of hides and leather reached the lowest level in a number of years. The following table gives estimated 1938 totals of leather production based on actual figures for the first 11 months. Comparison is made with 1937 totals.

LEATHER PRODUCTION (000 OMITTED)

	1938	1937
Cattle hide hides	18,900	22,380
Calf and kip skins	12,800	12,027
Goat and kid do.	31,285	46,554
Sheep and lamb do.	28,750	34,232

For 1938 the U.S. Bureau of Foreign and Domestic Commerce reported that exports of leather from the United States were valued at \$12,060,649 and leather manufactures, \$8,651,401; imports of leather were valued at \$7,205,529 and leather manufactures at \$8,282,173.

LEBANON, REPUBLIC OF. See SYRIA AND LEBANON.

LEDERER, GEORGE. An American theatrical manager, died in Jackson Heights, New York City, Oct. 8, 1938. Born in Wilkes-Barre, Pa., in 1861, he first became interested in the theater as a singer in a light opera company with which he went on tour. Subsequently he wrote stories for *The Boys' and Girls' Weekly* and *Frank Leslie's Weekly*; was dramatic critic of *The Morning Journal*; and wrote skits for variety theaters.

His first venture in theatrical management was in connection with Sydney Rosenfeld's play, *Florizel*, in 1878, which he took on tour. Thereafter (1883) he produced several musical plays which did not achieve any great success and shortly after organized, in Europe, the Herrmann Transatlantique Vaudeville Co., which he brought to America and presented at the leading theaters. Mr. Lederer claimed that he was the pioneer in America of high-class variety of "vaudeville" shows.

In 1893, with A. H. Canby, he became lessee of the Casino Theater, New York, and the next 10 years was one of the most brilliant periods in the history of musical comedy in the United States. He opened with *The Princess of Nicotine*, starring Lillian Russell whose manager he had become, and followed that with *Prince Kam*, *About Town*, *The Passing Show*, which made theatrical history in as much as it brought to the American stage for the first time the revue type of entertainment, and *The Little Trooper*. In 1894 they leased the Bijou Theater and produced *Miss Dynamite*.

In the following year they resumed the management of the Casino and produced *The Merry World*; *The Sphinx*; *In Gay New York*; *An American Beauty*; *The Whirl of the Town*; *The*

Belle of New York, Mr. Lederer's greatest success and which he produced in London in 1898; and *The Telephone Girl*. In 1898 as sole lessee of the theater he produced *In Gay Paree*, *The Jolly Musketeer*, *The Singing Girl*, *The Belle of Bohemia*, and *Floradora*. In the following year he became manager of the New York Theater, where he produced *The Man in the Moon*, and in 1903 he had under way two productions, *The Blonde in Black* at the Knickerbocker and *The Jersey Girl* at the Victoria.

Financial losses caused him to give up his theaters and he became manager of a production of *The Southerners* on an extended tour. He attempted a comeback in 1910 with *Madame Sherry*, which proved very successful and ran for four years, following it with *Mama's Baby Boy*, *The Charity Girl*, etc. He was again bankrupt in 1913, but subsequently formed a partnership with H. H. Frazee, producing *Angel Face* (1920), *The Girl in the Spotlight* (1920), and *Peaches* (1923). He became general manager for Sam H. Harris in 1928 and in 1931 produced *The Joy of Living* with G. F. Womrath. In later years he became interested in motion pictures, and in 1935 was heard on the radio in a reminiscent series entitled "Glamor, Gossip, and Greasepaint."

Mr. Lederer was credited with discovering many actors and actresses who later became stars, including Marie Dressler, Edna May, David Warfield, Eva Tanguay, Edna Wallace Hopper, Ina Claire, Jefferson de Angelis, and Cissie Loftus.

LEEWARD ISLANDS, BRITISH. A British West Indian colony consisting of the five presidencies of (1) Antigua, with Barbuda and Redonda; (2) St. Christopher (or St. Kitts), with Nevis and Anguilla; (3) Dominica; (4) Montserrat; (5) British Virgin Islands, with Sombrero. Total area, 726 square miles; population (Jan. 1, 1938), 142,063. The principal towns are St. John (capital), Basseterre, Roseau, Plymouth, Charlestown, and Road Town.

Production and Trade. The chief products are sugar and molasses (Antigua and St. Christopher), cotton (Montserrat, St. Christopher, Nevis, and Virgin Islands), limes and fruits (Dominica), tomatoes and onions (Montserrat), coconuts (Nevis), tobacco and cigars (Virgin Islands), salt (Anguilla and St. Christopher). Sea island cotton produced, 1937-38, was estimated at 1,830,000 lb. The export sugar quota for 1938-39 was set at 51,250 long tons. Tomato exports from Antigua for 1938 were estimated to total 5000 crates (of 20 lb.). In 1937 imports were valued at £746,720; exports, £831,436. Shipping entered and cleared during 1936 totaled 6,575,150 tons.

Government. For 1936 revenue totaled £276,069; expenditure, £281,808; public debt (Dec. 31, 1938), £332,871. A governor administers the central government consisting of a federal executive council, and a general legislative council of 20 members (10 official and 10 unofficial). Each presidency has its own executive and legislative councils except the Virgin Islands which has an executive council only. Governor and Commander-in-Chief, Sir G. J. Lethem (appointed October, 1935).

History. Late in 1938, it was announced that, because of delay in the preparation of the necessary local legislation, the transfer of Dominica to the Windward Islands group would not become effective until Jan. 1, 1940. See JAMAICA under History.

LEEWARD ISLANDS, FRENCH. See OCEANIA, FRENCH ESTABLISHMENTS IN.

LEGISLATION. See AUTOMOBILES; CHILD WELFARE; CRIME; FIRE PROTECTION; LABOR LEGISLATION; LAW; MINIMUM WAGE; REFERENDUM; TAXATION; UNITED STATES; WORKMEN'S COMPENSATION; and the articles on the separate States.

LEHIGH UNIVERSITY. A nonsectarian institution for the higher education of men in Bethlehem, Pa., founded in 1866. The University is divided into a college of arts and science, a college of business administration, a college of engineering, and a graduate school with courses leading to the Ph.D. degree. The enrollment for the autumn of 1938 was 2000. The enrollment for the summer session of 1938 was 660. The faculty numbered 205, including 15 persons on the administrative staff. The endowment amounted to \$6,084,123 and the total income for the year was \$1,655,633. There were 236,000 volumes in the library. During the past year a new wing was added to the Chemistry building and a new dormitory named the Charles Russ Richards House, housing 138 students was constructed. President Clement Clarence Williams, B.S., B.S. in C.E., C.E., LL.D., Eng. D.

LEHMANN-HAUPT, CARL FRIEDRICH. A German archaeologist and historian, died at Innsbruck, July 24, 1938. Born in Hamburg, Mar. 11, 1861, he was educated at the universities of Heidelberg, Leipzig, Göttingen (1883), Berlin (Ph.D., 1886), and Johns Hopkins. Appointed assistant at the Egyptian Institute of the Royal Museum, Berlin, in 1887, he did research work in England in 1882, 1886, and in 1890. He lectured on ancient history at the University of Berlin in 1893, made a research trip through Armenia during 1898-99; and was associate professor at Berlin, 1901-11. He then became Professor of Greek at the University of Liverpool, and at the beginning of the World War served as Director of the Prison Camp at Zossen. From 1915 to 1918 he was professor of ancient history at the University of Constantinople when he was appointed to that chair at the University of Innsbruck. He resigned in 1932.

In his special field of Armenian and Babylonian history and archaeology he wrote: *Das alt-babylonische Mass- und Gewichtssystem* (1893); *Zwei Hauptprobleme der altorientalischen Chronologie* (1898); *Materialien zur alten Geschichte Armeniens und Mesopotamiens* (1907); *Die historische Semiramis und ihre Zeit* (1910); *Israel, seine Geschichte im Rahmen der Weltgeschichte* (1911); *Solon, the Poet, the Merchant and the Statesman* (1912); *Geschichte des Altertums Orients* (1925); *Armenien einst und jetzt* (1926), and a work on *Corpus Inscriptionum Chaldaicarum* (1928; 1935).

LENGLEN, län-län', SUZANNE. A French tennis player, died at Paris, July 4, 1938. Born at Compiègne, France, May 24, 1899, she was educated at the Institut Massena in Nice. In 1913 she started on her road to tennis stardom by winning the singles championship of Picardy. In the next year she captured the world's hard-court singles and doubles titles at Paris.

Her rise was checked by the World War, but after the Armistice she soon regained her place in international tennis, by winning the tennis championships of France and England in 1919. In 1920 she won all the gold medals at the Antwerp Olympic Games. She captured the singles, doubles, and mixed doubles titles in France and England from 1919 to 1923 and again in 1925-26. Until she retired from amateur ranks in 1926 she had won every game in which she played but one. In 1924 illness kept her from competing.

One of the finest women tennis players in the

world, Mlle. Lenglen was never matched for the mechanical perfection of her game. She had a flawless ground stroke coupled with sound strategic technique, a fiery aggressiveness, and a flashing speed unparalleled by any other woman player.

A genius of the courts, she also had the temperament usually associated with that word. In 1920 when she was trailing the American champion, Mrs. Molla Mallory, at the end of the first set of their second-round match in her only bid for the American title, she walked off the court, claiming to be too ill to play. In 1926 she refused to play at a scheduled match at Wimbledon because of illness, and this caused such a furor that the French Government apologized to Queen Mary, who had been present, for her conduct.

In 1926 Mlle. Lenglen met Helen Wills, American tennis champion, in a long-heralded match at Cannes. The Frenchwoman was the victor 6-3, 8-6, and after this match she announced her retirement from amateur tennis. Under the auspices of Charles C. Pyle she toured the United States during 1926, giving exhibitions in the major cities of the country. After her return to France in 1927 she retired from competitive tennis. In 1936 she opened the Tennis School in Paris.

Mlle. Lenglen made several motion-picture tennis shorts, and was author of *Lawn Tennis, the Game of Nations* (1925); *Tennis by Simple Exercises*, with Margaret Morris (1937), and a novel, *The Love Game* (1926).

LEWISOHN, ADOLPH. An American financier and philanthropist, died at Upper Saranac Lake, N. Y., Aug. 17, 1938. Born in Hamburg, Germany, May 27, 1849, he was educated in that city and at the age of 15 entered his father's business. He came to the United States on Aug. 1, 1867, to join his brother, Leonard, in the metals business. They then formed the firm of Lewisoohn Brothers which engaged in general importing, and later dealt in metals, particularly in copper, lead, gold, and platinum. Pioneers in the Montana copper fields, they eventually developed smelters which became the foundation of their fortune. After the death of his brother, Adolph became the head of the business and subsequently the name of the firm was changed to Adolph Lewisoohn & Sons.

Honored as the first citizen of New York, Mr. Lewisoohn was active in its philanthropic and cultural life. To Jewish charities he was more than generous, devoting his time and energy and giving financial support to many undertakings, among which may be mentioned the Federation for the Support of Jewish Philanthropic Societies, Mount Sinai Pathological Laboratory and Mt. Sinai Hospital, and the Hebrew Sheltering Guardian Society. In 1914 he presented to the College of the City of New York, a rare library of 1500 German books and an athletic stadium, named in his honor, Lewisoohn Stadium. In 1917 he conceived the idea of park concerts throughout the summers. The first one was held on June 23, 1918, at the Stadium; though to continue the concerts, Mr. Lewisoohn was obliged to underwrite them each year. To the Brooklyn Museum he gave a collection of modern art known as the Adolph Lewisoohn Gift Collection. Other of his gifts were made to Dartmouth College, Yale University, Johns Hopkins University, and Columbia University School of Mines.

In 1912, Mr. Lewisoohn was appointed a member of a Commission on Industrial Relations by President Taft. He was interested in the improvement of prison conditions and was the president of the National Committee on Prisons and Prison Labor.

Also, he was one of the leaders of the National Thrift Week movement and of the Public Safety Traffic League.

LIBERIA. A Negro republic on the west coast of Africa between Sierra Leone and the French Ivory Coast. Area, about 43,000 square miles; population, estimated at from 1,000,000 to 2,500,000. Of the total population about 60,000 residing on the coast, including some 15,000 Afro-Americans, may be considered civilized. Capital, Monrovia (population about 10,000). There were about 7000 pupils attending 121 mission and 51 government schools in 1932. A Methodist and a government college are maintained at Monrovia and a Methodist agricultural and industrial institute at Kakata. English is the official language.

Production. The exploitation of the country's rich forest, agricultural, and mineral resources has barely begun. The Firestone Company has a 1,000,000-acre rubber concession which employed nearly 6000 persons in 1937. Native coffee, cacao, cotton, piassava fiber, palm oil, palm kernels, kola nuts, rice, and oil seeds are produced in small quantities. Mineral resources remain largely unsurveyed, but iron deposits are worked by natives and further iron and copper deposits were reported discovered in 1937.

Foreign Trade. Imports in 1937 were valued at 1,958,268 Liberian dollars (pegged at \$4.80 to the pound sterling) against \$1,673,776 in 1936; exports were \$1,991,161 (\$1,312,365 in 1936). The United States maintained first place in Liberian trade in 1937, followed by Germany, United Kingdom, the Netherlands, and Japan. Imports in 1937 included textile fibers and manufactures, \$402,767; metals and their manufactures, \$316,527; machinery and vehicles, \$224,511; rice, \$192,264. The chief exports were: Crude rubber, \$1,032,309; palm kernels, \$346,004; coffee, \$148,698; piassava, \$181,994; crude gold, \$65,063.

Finance. Budget receipts increased from \$782,746 in 1936 to \$1,006,036 in 1937. Estimated ordinary expenditure for 1937 was \$567,490. The external public debt on Dec. 31, 1936, was \$1,846,000 and the internal floating debt on Aug. 31, 1937, was \$384,916. Interest payments on outstanding bonds were suspended in 1932 but resumed on July 1, 1936. On Aug. 31, 1938, the total debt was \$1,943,794 (external, \$1,632,000). The 1939 budget estimated expenditures at \$993,000 and ordinary revenues at \$900,000.

Communications. There are no railways and only about 150 miles of roads suitable for light motor traffic. The number of automobiles in the country in 1937 was only 125. The rivers and, in the interior, porters offer the chief means of transportation. Monrovia was connected with Dakar, Senegal, and Pointe-Noire, French Equatorial Africa, by a weekly air service opened in 1937.

Government. The Constitution, modeled on that of the United States, vests executive power in a president, assisted by a cabinet of 8 members, and legislative power in an assembly of 2 houses—a Senate of 10 members and a House of Representatives of 21. Suffrage is restricted to Negroes owning land. The True Whig Party, dominated by a small oligarchy of Afro-American families at Monrovia, has controlled all branches of the government since 1878. President in 1938, Edwin Barclay, who was inaugurated for a second term (for eight years) Jan. 6, 1936. An opposition party called the Unit True Whig Party was organized in 1935 under the leadership of former President Charles King.

History. A treaty of friendship, commerce, and navigation between the United States and Liberia was signed at Monrovia Aug. 8, 1838, replacing the treaty of commerce and navigation in effect since Feb. 17, 1863. The new treaty provided for entry, travel, and residence of nationals of each country in the territories of the other; most-favored-nation treatment in customs matters; regulation of Liberian trade quotas and exchange control; and regulation of shipping.

The United States Minister to Liberia, Lester A. Walton, who returned to America on leave of absence early in 1938, reported in April to a group of American societies interested in Liberia that marked progress had been made by the Barclay Government to remedy the abuses and chaotic conditions that led to the withdrawal of recognition by the United States and Great Britain in 1930 and the intervention of the League of Nations. The United States resumed diplomatic relations in 1935 and Great Britain in 1936 after the Liberian Government agreed to carry out reforms and employed seven foreign experts, including five Americans, to assist in this work. The site of a new United States legation at Monrovia was dedicated October 31—the 75th anniversary of the initiation of American-Liberian treaty relations.

LIBRARY ASSOCIATION, AMERICAN. The official organization of librarians in the United States and Canada, founded for the purpose of promoting library service and librarianship. In 1876 its membership was 103; in 1938 it was more than 15,000. The activities of the association are carried on by its officers; by more than 70 committees and boards, comprising hundreds of voluntary workers, engaged in studying such problems as the extension of library service, library administration, special libraries such as those in hospitals, work with the blind and with the foreign born; and by the members of the headquarters staff, who numbered 70 in 1938.

The Association issues various books and pamphlets for libraries and in the interest of library progress and education generally. Among the 1938 publications were: *The Geography of Reading*, by Louis R. Wilson (published jointly with the University of Chicago Press) which represents years of study regarding the distribution of cultural resources; *Official Map Publications*, by Walter Thiele, an historical sketch and bibliographical handbook of current maps and mapping services of the United States and the more important Latin American and European countries; *Resources of Southern Libraries*, by Robert B. Downs, a survey of facilities for research in the libraries of 13 southern states; *Activity Book for School Libraries*, by Lucile F. Fargo, suggestions and devices for integrating the library with school activities; four indexes: *Subject Index to Readers*, by Eloise Rue, for the primary grades; *Vocations in Fiction*, by Mary R. Lingenfelter; *Vocations in Short Stories*, by Vera E. Morgan; and *Subject Index to High School Fiction*, by Jeanne Van Nostrand; *Experimenting Together—The Librarian and the Teacher of English*, by Frieda M. Heller and Lou L. LaBrant, a case study of integration in a progressive school; *Small Public Library Buildings*, by John Adams Lowe, principles, pictures, floor plans, and critical comment on recent structures; and *A.L.A. Catalog 1932-36*, by Marion Horton (ed.), a second five-year supplement to the association's standard buying guide.

The Association issues four periodicals: *Bulletin of the American Library Association*, a monthly

which includes the annual reports, the conference proceedings, and the yearly handbook; the *Book-list*, published semi-monthly as a guide to the selection and purchase of current books; the *Subscription Books Bulletin*, a quarterly which presents critical estimates of subscription books and sets sold currently by canvassing agents, and the new quarterly, *Journal of Documentary Reproduction*, a review of the application of photography and allied techniques to library, museum, and archival service.

At the 60th annual conference, held in Kansas City, Mo., June 13-18, 1938, with more than 2000 librarians present from not only the United States and Canada but Australia, Italy, Yugoslavia, Mexico, and South Africa, the Association presented three new awards for the first time.

Miss Mary U. Rothrock, supervisor of library service of the Tennessee Valley Authority, was presented with the Joseph W. Lippincott award for "the most outstanding contribution to librarianship" in 1935-36. Carleton B. Joeckel, professor, Graduate Library School, University of Chicago, received the James Terry White medal, given for "notable published professional writing" for his *Government of the American Public Library*.

The first Caldecott medal, awarded for the most distinguished American picture book for children published during the preceding year, was presented by the Section for Library Work with Children and the School Libraries Section of the Association to Dorothy P. Lathrop, for her illustrations of *Animals of the Bible*. The section also presented the sixteenth Newbery medal, which is awarded for the most distinguished contribution to children's literature published during the preceding year, to Kate Seredy, for *The White Stag*. Frederic G. Melcher, editor, *Publishers' Weekly*, is the donor of these two medals. Randolph Caldecott, for whom the medal is named, was a pioneer in book illustration for little children.

Proposed reorganization of the Association and a professional classification of its members were discussed at the Kansas City conference. A Rockefeller Foundation grant of \$5000 for preliminary work on a new *Union List of Serials* was announced and by unanimous consent, the Association conferred honorary membership on Ross Collins, representative in Congress from Mississippi, for his many services to libraries.

Officers elected for 1938-39 were: President, Milton J. Ferguson, chief librarian, Brooklyn Public Library; President-elect and first vice-president, Ralph Munn, Carnegie Library, Pittsburgh, Pennsylvania; second vice-president, Sarah B. Askew, State Public Library Commission, Trenton, New Jersey; treasurer, Matthew S. Dudgeon, Public Library, Milwaukee, Wisconsin.

During the midwinter meeting of the Association, held in Chicago, Dec. 27 to 30, 1937, and attended by approximately 700 librarians, the Executive Board acknowledged grants of \$4850 from the Carnegie Corporation of New York toward a supplement to the *List of Books for College Libraries*, \$2500 toward the Sarah C. N. Bogle Memorial Fund (to aid librarians to study abroad), and \$9000 for library fellowships in the United States and Canada. A vote of thanks was also given to the General Education Board for extending the time of the appropriation for co-operative cataloguing for two years, or until the end of December, 1939.

Solicitation of books for Chinese libraries was carried on by the A.L.A. during the fall and winter

of 1938 at the request of Dr. T. L. Yuan, chairman of the Executive Board of the Library Association of China, in Hong Kong. The volumes were forwarded by the International Exchange Service of the Smithsonian Institution in Washington to Dr. Yuan, who had agreed in advance to distribute them to those colleges and universities whose libraries had been destroyed by the Japanese invasions. The Grand Prix and a silver medal for library participation in the 1937 Paris Exposition were awarded the A.L.A., which is also co-operating in several other projects with libraries abroad.

LIBRARY ASSOCIATION. THE. An organization of libraries and librarians throughout the British commonwealth of nations, founded in 1877 and incorporated by Royal charter in 1898. Its primary objects are: To unite all persons engaged or interested in library work by holding conferences and meetings for the discussion of bibliographical questions and matters affecting libraries; to promote the better administration of libraries; to promote whatever may tend to the improvement of the position and qualifications of librarians; and to hold examinations in librarianship, and to issue certificates of efficiency. It maintains a professional register of more than 1100 qualified persons, classified as Fellows (F.L.A.) and Associates (A.L.A.); candidates for senior positions in libraries are selected from among those who have been elected to Fellowship or Associateship. The School of Librarianship at the University of London is conducted under the joint auspices of the University and of the Association. Among the Association's publications are: *The Library Association Record*; *The Library Assistant*; *The Library Association Year Book*; *The Year's Work in Librarianship*; and *The Subject Index to Periodicals*. The President elected for 1939 was Mr. Arundell Esdaile, M.A., F.L.A., Secretary of the British Museum. The Secretary is P. S. J. Welsford, F.C.L.S. Headquarters are at Chaucer House, Malet Place, London, W.C. 1.

LIBRARY PROGRESS. Several significant events have taken place during 1938 in the progress of libraries. The Library Service Division in the U.S. Office of Education, advocated by the American Library Association for several years (see 1936 and 1937 YEAR BOOK articles on *Library Progress*), began operations on Jan. 2, 1938, with Ralph M. Dunbar as chief and Edith Gantt and Nora Beust, specialists in public and school library fields, respectively. It is expected by the A.L.A. that over a period of years many aspects of library service will be greatly advanced by the existence and work of this new governmental agency. In February the report of President Roosevelt's Advisory Committee on Education was released, including, among other recommendations, Federal grants to the states for rural library service, beginning with \$2,000,000 in 1939-40 and increasing during a six-year experimental period to \$6,000,000. In April the Harrison-Thomas-Fletcher bill, embodying these recommendations, was introduced before Congress. Because its introduction was so late in the session, it was not voted upon by the last Congress but there is promise of early consideration at the 1939 session.

Several officers of the Federal government participated in a conference on rural library development called by the A.L.A. Library Extension Board in Washington last February. A corresponding regional conference was held in Kansas City immediately before the A.L.A. conference and was

attended by some 50 rural leaders representing a wide variety of interests and viewpoints.

Increased distribution of public documents to libraries was accomplished through the passage of congressional legislation recommended by the A.L.A. Public Documents Committee. Congress also passed a bill authorizing the retirement of Dr. Herbert Putnam, librarian of Congress since 1899, with the title of librarian emeritus in honor of his distinguished service.

The appointment of a national library consultant, Edward A. Chapman, on the staff of the Works Progress Administration in Washington, has facilitated WPA activities in and for libraries during the year. These have covered projects ranging from rural library service, bibliographical work, and bookbinding to the repair and construction of library buildings.

Latest complete circulation figures and statistics on the use of public libraries in the United States appeared in the 1935 YEAR BOOK, under LIBRARY PROGRESS. During the past year a decrease in the borrowing of books for home use was noticed even though the general rise in appropriations and expenditures has continued. The decrease in book circulation, mainly in fiction, does not indicate a drop in the use of libraries, since many report an increasing demand for information in special fields and increased use of reference rooms. The most recent library statistics available were published in the *Bulletin* of the American Library Association in February and April, 1938.

In Canada briefs were presented this year on library matters to the Royal Commission on Dominion-Provincial relations by the library associations of both British Columbia and Ontario. A library survey of the Province of Nova Scotia was published in January, followed by the establishment of the Nova Scotia Library Commission in the fall.

State Aid. In June, 1938, Louisiana was added to the list of states receiving state aid, by the appropriation of \$200,000 for grants for regional libraries and for enlarged activities of the state library commission. State aid campaigns are being planned in more than a dozen states for 1939. Due to increased state appropriations in five states, Louisiana, Georgia, Tennessee, Virginia, and North Carolina, school libraries have advanced considerably. The establishment during the year of approximately 50 new county libraries shows an increasing realization of the need for rural book service. State aid and WPA projects have been among the factors contributing to this increase. Out of 3100 counties in the United States, about 325 have county-wide library service. About 1000 counties are without public libraries.

Adult Education. Interest in giving more and better informal adult education service in public libraries showed an increase during the year, especially on the part of the smaller libraries. In some of the larger city library systems, readers' advisory service is now being offered through branch libraries. Special attention has also been focused during the year on remedial reading for adults having some form of reading difficulty, and on the public library's place in the preservation and distribution of the educational motion picture. Six state library associations, New Jersey, New York, North Carolina, Ohio, Pennsylvania, and Texas now have adult education committees to promote development of adult education service through local libraries.

Among studies and surveys being sponsored by

the A.L.A. Adult Education Board is one on *The Library as a Community Intelligence Center*, by John Chancellor, which will cover the library's self-education facilities, such as films, phonograph records, forums and educational groups, as well as the use of print. Also in preparation are *Types of Library Adult Education Service*, by John Chancellor, and *A Plan of Reading in Psychology*, by Marion E. Hawes. *Helping the Reader Toward Self-Education*, by John Chancellor, Miriam D. Tompkins, and Hazel I. Medway; *Books for Self-Development*, by Sigrid A. Edge, and *The Library and the Radio*, by Faith Holmes Hyers, were published this year.

Library Training and Personnel. During the year, co-operation with library schools and other training agencies, state surveys of library personnel and training agencies, and projects in the field of education for librarianship received special emphasis on the part of the A.L.A. Board of Education for Librarianship. Efforts to secure the wider adoption of certification of librarians, to aid in recruiting superior young people to the library profession, and to obtain more sources of scholarships and fellowships were continued. The board is attempting to discourage the unwise multiplication of library training agencies, believing that conditions point to the need for an increasingly high quality of professional education through the strengthening of the best of existing agencies and the limitation of students to those persons possessing superior qualifications for service as librarians.

The third annual 10-day summer institute given by the Graduate Library School, University of Chicago, was devoted in 1938 to the subject of *Current Issues in Library Administration*. For the first time, Columbia School of Library Service and the University of Buffalo offered courses in music library work and a pre-librarianship curriculum was inaugurated at the University of Wyoming and Simmons College. A library intern was appointed for the first time in the Tennessee Valley Authority.

Preparation of classification and pay plans for municipal public libraries, that will serve as the foundation upon which all other personnel work will develop, was the first project of the newly created A.L.A. Board on Salaries, Staff, and Tenure. This board has also given considerable time to the study of civil service, tenure of position, and exchanges.

Gifts, Grants, and Buildings. Many gifts of both money and books have been made to American libraries during the year. One of the largest was a grant of \$1,000,000 to the Joint University Libraries, Nashville, by the General Education Board, for a library building or endowment on condition that a similar amount be secured by Dec. 31, 1938. Mrs. Annie and Henry Pfeiffer of New York City will present MacMurry College, Jacksonville, Ill., with a new library building, providing that an endowment of \$100,000 is raised. The Rockefeller Foundation and an anonymous donor have each given \$100,000 to the University of Oregon for an addition to the Medical School Building in Portland. A new half-million-dollar memorial library is the gift of the late Mr. and Mrs. Lenox S. Rose to Drew University, Madison, N. J. Friedsam Library of St. Bonaventure College, St. Bonaventure, N. Y., was the recipient of a \$125,000 building from the late Colonel Michael Friedsam and Bryn Mawr College Library received \$100,000 for an addition from Dr. and Mrs. George Woodward of Chestnut Hill, in memory of their daughter, Quita

Woodward. A \$100,000 addition has also been started for the James V. Brown Library, Williamsport, Pa.

A photographic laboratory was made possible for the Library of Congress by a grant from the Rockefeller Foundation and at Sullivan Memorial Library, Temple University, Philadelphia, a new microphotography department was established with a gift from the Samuel I. Vogelsson Foundation. A supplementary grant of \$1500, from the Rockefeller Foundation, to that made for the A.L.A. microphotography demonstration at the Paris Exposition made possible a gift of equipment to co-operating agencies in England and France. The Foundation has also made a grant to the International Bureau of Education in Geneva, for a study of children's books in Latin America, and has continued its aid to the committee which issues the *Handbook of Latin-American Studies*.

The General Education Board made an additional grant of \$4600 to Fisk University, Atlanta University, Hampton Institute, and Prairie View State College for continuation, in the summer sessions of 1938 and 1939, of the program of instruction for Negro teacher-librarians begun in 1936. It also appropriated \$100,000 toward a permanent endowment of the Peabody Library School.

Among the grants made by the Carnegie Corporation were: \$150,000 for endowment of the Melvil Dewey Professorship of Library Service and \$100,000 for general purposes to Columbia School of Library Service; \$50,000 for support of research projects to the University of Chicago Graduate Library School; \$9000 for grants-in-aid awarded by the A.L.A. Committee on Fellowships and Scholarships to five applicants from the United States and two from Canada for investigation and research in graduate library schools; visitors' grants to seven librarians from Australia, England, Italy, Puerto Rico, and the United States; and \$25,000 to the A.L.A. for the purchase of books over a period of five years for the American Library in Paris.

Public Works Administration grants for buildings include those to the Virginia State Library, which it is estimated will cost about \$1,000,000; Oregon State Library, to cost about \$700,000; the University of Colorado Library, to cost about \$500,000, and Eastern Washington State College of Education, to cost about \$275,000. Late in 1937 the new University of Oregon Library, which cost about \$500,000, was completed with the aid of a PWA grant.

The new Illinois State Archives Building, which when fully equipped will cost over a million dollars, was occupied this year by the Archives Division of the Illinois State Library. This is one of three such buildings in the United States, the other two being the new National Archives Building in Washington, D. C., completed in 1937 at a cost of more than \$12,000,000, and the Maryland Hall of Records at Annapolis.

Citizens of St. Louis, Mo., headed by Dr. Meyer Wiener, raised \$35,000 for a library and furnishings for the use of the blind. This building, presented as a branch to the St. Louis Public Library, is understood to be the only separate library in the world for use by the blind.

Publications. Some other publications in addition to those mentioned under *Library Association, American*, were: Buswell, Guy T., *How Adults Read* (University of Chicago, 1937); Harrod, L. Montague, *Librarian's Glossary* (London, Grafton, 1938); Haygood, William C., *Who Uses the Pub-*

lic Library (University of Chicago, 1938); Hill, Ruth A., and DeBondeli, Elsa, comp. *Children's Books from Foreign Languages* (Wilson, 1937); Humble, Marion, *Rural America Reads: A Study of Rural Library Service* (American Association for Adult Education, 1938); Hyers, Faith Holmes, *The Library and the Radio* (University of Chicago, 1938); Ingles, May, and McCague, Anna, *Teaching the Use of Books and Libraries* (Wilson, rev. ed., 1937); *An Invitation to Read: The Use of the Book in Child Guidance*, a list of titles recommended by the Mayor's (F. H. LaGuardia) committee for the selection of suitable books for children in the courts; Jenkinson, Hilary, *Manual of Archive Administration* (London, Percy Lund, Humphries, 1937); Johnson, Alvin, *The Public Library—A People's University* (American Association for Adult Education, 1938); Kelley, Grace O., *The Classification of Books* (Wilson, 1937); Loizeaux, Marie D., *Publicity Primer: An ABC of "Telling All" about the Public Library* (Wilson, 1937); Lyon, Margaret C., *The Selection of Books for Adult Study Groups* (Columbia University, 1938); McCrum, Blanche P., *An Estimate of Standards for a College Library* (Washington and Lee University, 2d ed. rev., 1937); McPherson, Oscar H., *Study of Libraries in Schools of the Secondary Education Board* (Secondary Education Board, Milton, Mass.); Reece, Ernest J., and others, *School of Library Economy of Columbia College, 1887-1889; Documents for a History* (Columbia University, 1937); *Reorganization of a Large Public Library: Ten Year Report of the Enoch Pratt Free Library, 1926-35* (Baltimore, Enoch Pratt Free Library, 1937); Roupell, M. G., comp., *Union Catalogue of the Periodical Publications in the University Libraries of the British Isles* (London, National Central Library, 1937); Sayers, W. C. Berwick, *Brown's Manual of Library Economy* (London, Grafton, 1937); Shaw, Marian, ed. *Library Literature, 1937* (Wilson, 1938); Siefkes, Ruth L., Holtze, Belle, and Morse, C. K., *A Course in Methods for the Small Library* (University of Nebraska, 1937); Waples, Douglas, *People and Print: Social Aspects of Reading in the Depression* (University of Chicago, 1937); Wilson, Louis R., ed. *The Role of the Library in Adult Education* (University of Chicago, 1937).

LIBYA, lib'i-a. An Italian colony (Cyrenaica and Tripolitania) in North Africa. Area, 677,044 square miles; population (1936 census), 839,524, including 66,525 Europeans and 772,999 natives. The chief towns are on the coast, they are Tripoli (the capital), 98,861 inhabitants; Bengasi (Benghazi), 48,510; Misurata, 15,000; and Homs (Khoms), 31,000. In the interior there are important caravan halting places at Ghadames, Sinauen, Mizda, Murzuq (Murzuk), and Ghat.

Production and Trade. The chief agricultural products are barley, dates, olives, oranges, lemons, almonds, and vegetables. Other important products are salt, sponges, fish, and tobacco. Livestock in the colony (1936): 650,000 sheep, 380,000 goats, 55,000 cattle, 50,000 camels, and 42,000 donkeys, mules, and horses. In 1936 imports were valued at 622,976,000 lire; exports, 107,800,000 lire (lira averaged \$0.0729 for 1936; \$0.0526 for 1937).

Communications. In 1938 there were 147 miles of railway line, and over 8342 miles of highways including the new highway along the entire coast of Libya. There are many important caravan routes through the interior. Air communications include a daily service, Tripoli-Rome; a thrice-weekly service, Bengasi-Sirte-Tripoli; and a weekly service,

Bengasi-Cyrene (Cirene)-Derna (Derne)-Tobruk. During 1936, 3170 ships entered the ports of Lybia, landing 672,546 tons of freight and 124,471 passengers; 3161 ships left the ports with 179,360 tons of freight and 148,775 passengers.

Government. The budget for 1937-38 was balanced at 439,132,613 lire (for 1938-39, 462,345,471 lire). On Jan. 1, 1934, the colony was divided, for administrative and military purposes, into the four provinces of Tripoli, Misurata, Bengasi, and Derna; and into a military territory in the interior to the south with Hun as the capital, having jurisdiction over the southern areas of all the four provinces. At the end of October of 1938, the Fascist Grand Council, meeting in Rome, decreed the inclusion of the four provinces of Libya in the national territory of Italy. Governor-General, Air Marshal Italo Balbo (appointed, November, 1933). See ITALY under *History*.

LIECHTENSTEIN, lik'ten-shtin. An independent principality between Switzerland and Austria. Area, 65 square miles; population (1936 estimate), 12,000. Vaduz (capital) had 1715 inhabitants in 1930. Corn, wine, fruit, wood, and marble are the chief products of the country. The main industries are cotton spinning and weaving, leather goods, pottery, and cattle rearing. The Swiss currency has been in use since February, 1921, and since January, 1924, Liechtenstein has been included in the Swiss Customs Union. Switzerland administers the posts and telegraphs, and has charge of the foreign interests of Liechtenstein.

In 1938 revenue was estimated at 2,187,800 francs; expenditure, 1,880,923 francs. The public debt on Dec. 31, 1936, amounted to 3,901,063 francs (Swiss franc averaged \$0.3019 for 1936). The constitution of Oct. 5, 1921, made the monarchy hereditary in the male line. It provided for a Diet of 15 members elected for four years by general and secret ballot. Regent, Francis Joseph (appointed Mar. 31, 1938); Administrator, Dr. Joseph Hoop (appointed Aug. 4, 1928).

On Mar. 31, 1938, the 84-year-old Prince Francis I (died July 25, 1938) abdicated in favor of his nephew, Prince Francis Joseph, whom he appointed regent. The growing strength of the Nazi movement as well as the Nazi agitation over the marriage of Francis I to Baroness Elsa Gutmann, who is of Jewish extraction, on July 22, 1929, were given as additional reasons for his abdication, aside from the fact that he felt too old to carry on his responsibilities. Prince Francis Joseph named several Nazis to cabinet portfolios, although he pledged the continued independence of Liechtenstein. It was feared that the Hitler Government would seek to annex it to Germany.

LIFE INSURANCE. See INSURANCE.

LIGHTHOUSES. Further demands upon the activities of the Lighthouse Service, Department of Commerce, were made in the past year, including not only the maintenance of aids to navigation, but also keeping in service modern lighthouse tenders to serve off-shore lighthouses and lightships, and to constantly check the positions of buoys and signals in channels.

The total number of aids to navigation maintained by the Lighthouse Service at the close of the fiscal year June 30, 1938, was 28,758, a net increase of 652 over the previous year. Of the additional aids established, 405 were lighted aids, 54 were sound signals, and 232 were unlighted buoys and daymarks. Radiobeacon equipment was installed at

11 additional light stations. Of the new stations, 3 were on the Atlantic coast, 6 on the Great Lakes, and 2 on the Pacific coast. The grand total of all United States radiobeacons is now 133, which is approximately 30 per cent of the marine radiobeacons of the entire world. Radiobeacon signals were synchronized with sound-in-air fog signals, for distance-finding purposes, at 7 additional stations, there now being 91 stations having such synchronized signals. The first low-power, unattended "secondary" radio aid to navigation was established at St. Ignace, Mich., June 18, 1938. This radio aid, termed a "marker radiobeacon," operates continuously, without attendance, having automatic duplicate equipment.

The broadcasting of marine information by means of radiophones has been considerably extended during the year, following the experimental broadcasts made at Sault Ste. Marie, on the Great Lakes, in 1937. There are now five additional radiophone broadcasting stations on the Great Lakes, and such broadcasts are also made from Key West, Fla., and New Orleans, La. In addition to matter concerning navigational aids maintained by the Service, these broadcasts include information furnished through the co-operation of the U.S. Weather Bureau and the Hydrographic Office of the Navy Department. A further dissemination of information has been secured through the co-operation of the U.S. Coast Guard, several of the stations of which rebroadcast the material prepared by the Lighthouse Service.

Lightships were maintained on 30 stations during the year, and at the close of this period the fleet consisted of 42 ships. In addition to the regular station ships, 9 were held as relief ships and 3 in reserve. There were 58 lighthouse tenders in commission; contracts were awarded for the construction of three additional tenders.

Appropriations for the maintenance of the Lighthouse Service totaled \$11,376,000 for the fiscal year 1938. There was allotted, June 29, 1938, by the Public Works Administration, \$2,098,750, and subsequently an additional \$1,680,000 for the construction and reconditioning of lighthouse tenders and lightships.

LIGHTNING. See ELECTRICAL TRANSMISSION AND DISTRIBUTION.

LIMA CONFERENCE. See PAN AMERICAN CONFERENCE.

LIME. Shipments of lime in 1938 in the United States, according to preliminary figures furnished the U.S. Bureau of Mines by producers, decreased approximately 17 per cent, compared with 1937. Following the general trend of most industries in 1938, the demand for lime was poor during the first 8 or 9 months of the year. Increased activity in the chemical, metallurgical, and building industries in the latter part of the year created a more active demand for lime, but the increase in sales during this period was insufficient to make the total for 1938 equal to that of 1937. Sales for 1938 amounted to 3,424,000 short tons valued at \$24,153,000.

Lime sold during the past year for construction, estimated at 887,000 tons valued at \$7,385,000, decreased about 7 per cent in quantity and 10 per cent in value. The decline in sales for building purposes was less than for other major uses. Sales for agricultural purposes amounted to 356,000 tons valued at \$2,397,000, a decrease of 12 per cent in quantity and 13 per cent in value. So-called "chemical" lime (exclusive of dead-burned dolomite)—

used in the chemical, metallurgical, and other process industries—amounted to 1,824,000 tons valued at \$11,390,000. This represents a decrease of 15 per cent in quantity and 18 per cent in value for 1937. Over one-half of all the lime sold was included in this classification. Shipments of dead-burned dolomite suffered the greatest decline in 1938 compared with 1937—42 per cent in quantity and 43 per cent in value. Based on reports received the quantity estimated is 357,000 tons and the value \$2,981,000. Hydrated lime included in the total output amounted to 1,092,000 tons valued at \$8,640,000, a decrease of 16 per cent in both quantity and value. About one-half of the hydrated lime is used by the building trades, one-third for chemicals, and the remainder for agriculture.

Imports of lime as compiled from figures of the U.S. Bureau of Foreign and Domestic Commerce for 1938 totaled 13,635,842 lb. valued at \$66,203 compared with 17,575,565 lb. valued at \$90,605 in 1937. Exports amounted to 132,216 bbl. (of 200 lb.) valued at \$121,662 in 1938, and 113,028 bbl. valued at \$126,297 in 1937.

LINGUISTICS. See **ANTHROPOLOGY.**

LIONS CLUBS, INTERNATIONAL ASSOCIATION OF. An organization of business and professional men's clubs, formed in Chicago, Ill., in 1917 for the purpose of promoting good government and good citizenship, encouraging efficiency, and promoting high ethical standards in business and the professions. By the end of 1938 the Association had grown to 3152 clubs with a total of approximately 110,000 active members. The annual convention of the Association was held at Oakland, Calif., July 19 to 22, 1938. Officers elected were: President, Walter F. Dexter of Sacramento, Calif.; vice-presidents, Alexander T. Wells of New York City, Karl M. Sorrick of Jackson, Mich., and George R. Jordan of Dallas, Tex. The founder of the Association, Melvin Jones of Chicago, has been secretary-treasurer from the beginning. He is also editor of the official magazine, *The Lion*. Association Headquarters are at 332 South Michigan Ave., Chicago. The 1939 International Convention will be held at Pittsburgh, Pa., July 18 to 21.

LIPPE. See **GERMANY.**

LIQUOR TRAFFIC. Status of Prohibition. Dec. 5, 1938, marked the end of the fifth year of the new repeal era in the United States following the 13-year experiment with national prohibition. It had been argued by advocates of repeal that the rescinding of the prohibition law would bring in its wake definite economic and social benefits. Mrs. John S. Shephard, member of the New York State Liquor Authority, writing in the *New York Times Magazine*, Dec. 4, 1938, recalled what these outstanding promises had been and sought to evaluate the size of their realization in terms of the experiences of the past five years. She noted that advocates of repeal had pointed out

(1) that public revenues would be considerably increased as a result; (2) that the prohibition evils of illicit manufacture, bootlegging, and liquor racketeering would cease; (3) that the saloon would not return; (4) that the liquor industry would never regain its old sinister hold on politics; (5) that drunken driving would be reduced; (6) that youth would be rescued from the excessive drinking of the speakeasy era; (7) that respect for the law would be restored; (8) that temperance would be encouraged.

Obviously, accurate statistical measurements to substantiate or disprove these contentions were impossible, but Mrs. Shephard, on the basis of her long and intensive experience with the enforcement of the New York State law, was able to come to certain general conclusions which are of interest.

She was able to report that public authorities were receiving from the legal liquor traffic a very large direct revenue, which in 1937 came to more than \$1,000,000,000. Did this mean that Americans were drinking more or less than the pre-prohibition era? The figures indicated that the Americans were drinking less but were paying more for the privilege. Thus, the consumption of spirits fell from 2 gallons of spirits per person in 1916 to slightly more than 1 gallon in 1936. In the second place, there was no question that the attack on the bootlegging and racketeering aspects of the industry was meeting with substantial success. In 1930, after 10 years of prohibition, 25,000 stills were seized in all parts of the country. In striking contrast, the stills seized in the fifth year after repeal were 11,407. Also, the seizures were taking place, not in the great cities as had happened during prohibition, but in the Southern mountains, the area of operations of the small illicit distiller who had flourished in the pre-prohibition days. It was interesting to note too that the Coast Guard was reporting that liquor smuggling from the high seas had virtually disappeared.

About the return of the saloon, less certainty existed. The States increasingly were coming to grips with the social aspects of this problem through the growing weight placed upon off-premise rather than on-premise consumption. Of the 44 States which authorized the sale of hard liquor by the bottle for off-premise consumption, 15 allowed no hard liquor to be sold in hotels and restaurants or any other places where beer and wine or beer alone might be sold and consumed. Most States which gave on-premise licenses for liquor insisted that food should be sold where drinks were sold and that there should be visibility into the premises. Mrs. Shephard said, on this point:

These requirements helped to keep away the old saloon atmosphere, but the bars are still painfully reminiscent of the old days. While there are many drinking places in the land which can hardly be told from the saloon, yet there are many where the restaurant aspect does predominate. I feel that our one hope of preventing the return of the saloon lies in the food-sale provision of the law and in keeping these licensed places open to public view.

In one realm repeal was encountering real success and that was in the increasing severance of the connection between the liquor manufacturers and the saloonkeeper. This was notably so as a result of the vigilance of the Federal Alcohol Administration, which was successful not only in eliminating the so-called "tied" house but was also loosening the bond between manufacturer and retail distributor by limiting the credit period extended for the purchase of liquor and also the monopoly control of single distillers over individual saloons. Also, it was the belief of Mrs. Shephard that the liquor interests had not regained the hold they had on politics before prohibition in view of the appearance of forward-looking men in the industry. The same could not be said with an equal degree of confidence concerning interference in petty politics. Said Mrs. Shephard: "Enforcement in many communities is swayed by favoritism and graft and, because of local politics, is often lacking entirely. This arouses public resentment and increases the dry vote in many parts of the country."

It was impossible to test the validity of the belief that repeal was likely to end drunken driving because of the wide differences in method of reporting drunken-driving accidents and the different tests applied by States and cities. As to drinking in relation to health, however, reliable data were available. Census Bureau figures showed that deaths

from alcoholism rose under prohibition from 1 per 100,000 in 1920 to 4.3 in 1927, while in 1934 they fell to 3 and in 1936 to 2.9.

Mrs. Shephard could not report any tangible improvement along the lines of temperance. While she pointed out that many States were seeking by education to inculcate a temperance attitude, success was not evident because, on the one hand, of the pressure of total-abstinence groups and on the other hand because education among the adults was being thwarted by lack of funds and public indifference. However, the situation held out some hope for the future in view of the fact that the liquor industry itself was beginning to recognize the need of promoting temperance. This new note was beginning to appear in advertising.

Mrs. Shephard's conclusions may be quoted at length:

The answer as to whether all the promises made by the repealists have been fulfilled varies according to region. Under repeal we have 49 different systems of control. There are States with almost no restrictions on the buying of drinks. On the other hand, there are States where no one can purchase a drink without an individual permit. One has State sale of liquor; the next a liberal licensing system. In one no liquor at all may be sold by the drink; in another drinks may be sold 20 hours in the 24.

To estimate the success or the failure of repeal under these 49 different systems is not so easy as it was to judge the success or failure of one nation-wide system, prohibition. The verdict today must be sought in the States, not in the nation, for under repeal each State now makes its own liquor laws. But viewing the situation as a whole, a just conclusion seems to be that conditions after five years of repeal are definitely better than they were after 13 years of prohibition.

In considerable measure, Mr. W. S. Alexander, Administrator of the Federal Alcohol Administration, confirmed Mrs. Shephard's impressions. Keenly alert to the fact that repeal was still on trial and that the total-abstinence sentiment still played a very significant role in many communities, he was constantly seeking to improve the industry in its own interest. He pointed out that it was imperative that the liquor industry recognize that regulation had come to stay and that it was important that it join hands with every authority in keeping the business within the law. In an address delivered before a representative group in the industry, he declared that the liquor business was under constant surveillance and this frequently was a hostile one. Said he:

Many States have local option laws; other States are enacting them. Election after election is being held to determine if this community and that shall tolerate your business, and frequently the battle goes against you. My information is that since Repeal in seven thousand local option elections five thousand political units have gone dry. . . . In Pennsylvania you have lost 1000 voting units in two years.

Mr. Alexander called attention to the fact that unfair practices continued to prevail in the industry. The producer, or wholesaler, was offering to the retailer free merchandise rebates and other inducements to stock up with a particular brand of merchandise. Too frequently retailers were advertising too lavishly, notably in the use of outdoor electrical signs, to call attention of hostile groups to the existence of their business. Also, some retailers were permitting producers to utilize the entire retail store front with signs. The extension of generous terms of credit, as has already been pointed out, was bringing many retailers under direct control of special producers.

See GEORGIA.

Liquor Production. Figures compiled by the Federal Alcohol Administration showed that the production of whiskey, brandy, and rum for the calendar year 1937 and the first six months of 1938

showed a marked decrease. Whiskey production, which averaged more than 20 million gallons monthly in 1936 and 17,500,000 gallons monthly during the first six months of 1937, showed a decrease to an average of less than 9 million gallons per month during the last half of 1937 and during the first half of 1938. This lower rate of production was reflected to some extent in the accumulation of whiskey stocks in bonded warehouses, which at the end of June 30, 1938, aggregated more than 471 million gallons.

Scientific Study of the Drink Problem. In October it was announced that a new organization composed of nearly 100 distinguished scientists and educators from various parts of the country had been formed to make a "thorough, unbiased and strictly scientific investigation of the problems related to the control of alcoholic beverages and to seek solutions through a program of unprejudiced research and education." The organization was to be known as the Research Council on Problems of Alcohol and Dr. Karl M. Bowman of New York City was to be chairman of the 15-man executive committee. Insisting that repeal was not successful and that excesses and abuses were plainly evident, the new Research Council defined its field of action in the following platform: It would conduct research and present the facts in suitable form to interest groups and encourage intelligent discussion of the facts. It would not arrive at "conclusions based on assumptions or prejudiced opinion, engage in propaganda, lobby for liquor control laws or participate in political campaigns." It declared that a well-organized body of facts was needed in regard to (a) the effects of alcohol on the individual; (b) the effects of alcohol on society; (c) the effectiveness of various measures of industrial and legal control which have been attempted or which may be proposed. Insisting that education for temperance had ceased with repeal, the Council called for a new education concerning the problems of drink which was to be strictly scientific." Dr. Harry H. Moore, formerly Director of the Committee on the Costs of Medical Care, was chosen Director of the Council's activities with headquarters in New York.

LITERATURE, ENGLISH AND AMERICAN.

Biography. Among studies of American political figures were: *The Hidden Lincoln*, the Herndon papers edited by Emanuel Hertz; Carl Van Doren's *Benjamin Franklin*; Philip C. Jessup's *Elihu Root*; William Allen White's *A Puritan in Babylon* (Coolidge). Others were: *Jefferson Davis*, by Robert McElroy; *Thomas Paine*, by Frank Smith; *Cardozo and Frontiers of Legal Thinking*, by Beryl Harold Levy; *"Eagle Forgotten"* (John Peter Altgeld), by Harry Barnard. Vol. ii of *The Letters of Henry Adams, 1892-1918*, was edited by Worthington C. Ford.

Biographies of American literary figures included: *Mark Twain*, by Edgar Lee Masters; *Sailor on Horseback* (Jack London), by Irving Stone; *Edwin Arlington Robinson*, by Hermann Hagedorn; *Young Longfellow*, by Lawrence Thompson; *This Was a Poet* (Emily Dickinson), by George Frisbie Whicker; *Louisa May Alcott*, by Katherine Anthony. Two books on Walt Whitman were published: *Walt Whitman's Pose*, by Esther Shephard, and *Whitman*, by Newton Arvin. Autobiographies were: Jesse Stuart's *Beyond Dark Hills*; Harriet Monroe's *A Poet's Life*; Irwin Edman's *Philosopher's Holiday*; Logan Pearsall Smith's *Unforgotten Years*. *The Journals of Bronson Alcott* were edited by Odell Shepard.

Among other Americans were: Paul D. Moody's *My Father* (Dwight L. Moody); Ralph Barton Perry's *In the Spirit of William James*; Lincoln Ellsworth's *Beyond Horizons*; Charles Allen Smart's *R.F.D.*; Hugh Wilson's *The Education of a Diplomat*; Richard Byrd's *Alone*.

Books about British literary figures were: Alfred H. Bill's *Astrophel* (Sir Philip Sidney); Lodwick C. Hartley's *William Cowper*; William Powell Jones' *Thomas Gray*; Edith Finch's *Wilfred Scawen Blunt*; Lawrence Whistler's *Sir John Vanbrugh*; Boris Brasol's *Oscar Wilde*; R. Glynn Grylls' *Mary Shelley*; two books on Burns: John Lindsay's *The Ranting Dog* (*Immortal Memory*, the American title) and *Burns—By Himself*, edited by Keith Henderson; two books on Jane Austen: Mona Wilson's *Jane Austen and Some Contemporaries*, and Elizabeth Jenkins' *Jane Austen*; two books on D. H. Lawrence: Knud Merrild's *A Poet and Two Painters* and Hugh Kingsmill's *D. H. Lawrence*; William R. Rutland's *Thomas Hardy*; Sir Herbert Grierson's *Sir Walter Scott, Bart.* Among memoirs were: W. Somerset Maugham's *The Summing Up*; R. H. Mottram's *Autobiography with a Difference*; Lord Alfred Douglas' *Without Apology*; Ford Madox Ford's *Mightier than the Sword*; Shane Leslie's *The Film of Memory*. Memories of youth were recalled in Lord Dunsany's *Patches of Sunlight*; Humbert Wolfe's *The Upward Anguish*; Siegfried Sassoon's *The Old Century and Seven More Years*. *The Letters of Charles Dickens* were edited by Walter Dexter.

About British political figures: Mary Taylor Blauvelt's *Oliver Cromwell*; Mary Agnes Hamilton's *Arthur Henderson*; Sir Charles Petrie's *The Chamberlain Tradition*; Winston Churchill's *Malborough*, vol. vi, the last; Clara and Hardy Steeholm's *James I of England*; L. McNeill Weir's *Lossiemouth to No. 10* (J. Ramsay MacDonald).

About other British figures were: Robert Speaight's *Thomas Becket*; F. Winthrop Woodruff's *Roger Bacon*; two books about Wesley: Richard Pyke's *John Wesley Came This Way* and Leslie F. Church's *Knight of the Burning Heart*; W. B. Maxwell's *Time Gathered*; George Thomas' *My Mind a Kingdom*, the conquest over affliction; J. W. N. Sullivan's *Isaac Newton*. David Garnett edited *The Letters of T. E. Lawrence*.

Autobiographies of interesting women were: Margaret Sanger; Mary K. Simkhovitch's *Neighborhood*; Geraldine Farrar's *Such Sweet Compulsion*; Mary Sullivan's *My Double Life*, the story of a New York policewoman; Nathalie Sedgwick Colby's *Remembering*; Helen Keller's *Journal*. Biographies were: *Lillian Wald*, by R. L. Duffus, and *Fanny Kemble* by Margaret Armstrong.

A group of journalists' memoirs included: Frazier Hunt's *One American and His Attempt at Education*; Irene Kuhn's *Assigned to Adventure*; Douglas Reed's *Insanity Fair*, mostly about Germany; Carleton Beals' *Glass Houses*, mostly about Mexico; Mark Sullivan's *The Education of an American*; Isaac Marcossou's *Turbulent Years*; Stephen Bonsal's *Heyday in a Vanished World*. Candace Stone wrote *Dana* and *"The Sun,"* and *The Letters of Lincoln Steffens* were edited by Ella Winters and Granville Hicks.

Among numerous medical memoirs were: Arthur E. Hertzler's *The Horse and Buggy Doctor*; William N. Macartney's *Fifty Years a Country Doctor*; William E. Aughinbaugh's *I Swear by Apollo*; R. McNair Wilson's *Doctor's Progress*.

Books about musicians included W. J. Turner's

Mozart; Henry Coates' *Palestrina*; Henry J. Wood's *My Life of Music*; Daniel Gregory Mason's *Music in My Time*. Three painters were Bernard Falk's *Turner the Painter*, Charles Poore's *Goya*, and Constance Rourke's *Charles Sheeler*.

Other biographies were: Carl Crow's *Master Kung* (Confucius); W. E. Woodward's *Lafayette*; Francis Watson's *Wallenstein*; Robert Berkov's *Strong Man of China* (Chiang Kai-shek); Enid Starkie's *Arthur Rimbaud*; Stanley Jackson's *Guy de Maupassant*. Two collections were John Middleton Murry's *Heaven and Earth* (American title, *Heroes of Thought*) and *Profiles from "The New Yorker."*

Criticism and the History of Literature. E. M. W. Tillyard published *Shakespeare's Lost Plays* and *The Miltonic Setting*. Other books on Shakespeare were Edgar J. Fripp's *Shakespeare, Man and Artist*, an analytical appreciation, and John Mair's *The Fourth Forger*, the Ireland forgeries.

Criticisms of English poetry were: Louis Untermeyer's *Play in Poetry*, four lectures on verbal play; Robert Hillyer's *First Principles of Verse*, a discussion of technique; Herbert Read's *Poetry and Anarchism*, a confession of faith in the poetic mind; William Tillotson's *English Pastoral Poetry*; Milton O. Percival's *William Blake's Circle of Destiny*, an interpretation of Blake's prophetic books; John Drinkwater's posthumous *English Poetry*, up to John Donne.

Three critical studies were John Crowe Ransom's *The World's Body*, Herbert Read's *Collected Essays in Literary Criticism*, and J. W. MacKail's *Studies in Humanism*. Other works were Frank Luther Mott's *A History of American Magazines 1865-1885*; *Seventeenth Century Studies Presented to Sir Herbert Grierson*; Osbert, Edith, and Sacheverell Sitwell's *Trio: Dissertations on Some Aspects of National Genius*, lectures by each on specialties; Rose Macaulay's *The Writings of E. M. Forster*.

Two collections of miscellaneous pieces by dramatic critics were *The Morning after the First Night*, by George Jean Nathan, and *Two on the Aisle*, by John Mason Brown. *The American Theater*, by John Anderson, was a history.

Drama. Thornton Wilder published the Pulitzer Prize play *Our Town*. Other single plays published were: *Susan and God*, by Rachel Crothers; *The Cradle Will Rock*, by Marc Blitzstein; *Oscar Wilde*, by Leslie and Sewell Stokes; *Bachelor Born*, by Ian Hay; *Robert's Wife*, by St. John Ervine; *The Flashing Stream*, by Charles Morgan; *On the Frontier*, a melodrama, by W. H. Auden and Christopher Isherwood. *On Borrowed Time*, by Paul Osborne, was an adaptation of the novel by Lawrence Edward Watkin; *Father Malachy's Miracle* was adapted by Brian Doherty from the novel by Bruce Marshall. *The Fifth Column and the First Forty-nine*, by Ernest Hemingway, contained a play and 49 of his short stories. *The King of Nowhere and Other Plays*, by James Bridie, included the title play, *The Anatomist*, and *The Last Trump*. *The Best Plays of 1937-38* was edited by Burns Mantle. See **DRAMA**.

Economics. Various economic panaceas were offered. Gilbert Seldes in *Your Money and Your Life* advocated middle-class common sense and liberalism, while David Cushman Coyle in *The American Way*, a prize essay, wanted orderly change and more taxes paid willingly. In *The Roads to a New America* Mr. Coyle also advocated

more government enterprise and expenditure, but Harry Scherman in *The Promises Men Live By* upheld that government in economics is always dishonest, and wanted only private transactions. Miriam Beard in *A History of the Business Man* added political, personal, and psychological factors to economics. A selection from research done by the Price Study Staff on how prices are determined was published in *Price and Price Policies*, by Walter Hamilton and others. John Daniels in *Co-operation: An American Way* traced the co-operative movement in America, while Maurice Pearlman discussed the economic life of the Jews in Palestine in *Collective Adventure*. J. H. Clapham published the third and last volume of *An Economic History of Modern Britain*.

Essays. E. V. Lucas' *Adventures and Misgivings* was in the tradition of the familiar essay. W. B. Yeats in *Essays 1931-36* and Albert Jay Nock in *Free Speech and Plain Language* discussed miscellaneous subjects. Edmund Wilson's *The Triple Thinkers* was about literature. William Ralph Inge's *Our Present Discontents* dealt with current topics. The humorous essay was represented by Robert Benchley's *After 1903, What?*; Ruth McKenney's *My Sister Eileen*, reminiscences of girlhood; Cornelia Otis Skinner's *Dithers and Jitters*; and Sally Benson's *Emily*, satiric character sketches of women.

Fine Arts. Ezra Pound's *Guide to Kulchur* discussed the arts. Two books on appreciation were R. W. Church's *An Essay on Critical Appreciation* and A. Philip McMahon's *The Art of Enjoying Art*. R. G. Collingwood's *The Principles of Art* connected art with language. Books on music were: Hugo Leichtentritt's *Music, History, and Ideas*, the relation of music to its environment; *The Oxford Companion to Music*, a handbook; Gerald Abraham's *A Hundred Years of Music*, since Beethoven; Lawrence Gilman's *Toscanini and Great Music*. On Painting: Henry Reitlinger's *From Hogarth to Keene*, story-telling pictures; Charles Marriot's *A Key to Modern Painting*, the relation of modern painting to the machine age; Walter Pach's *Querer Thing*, Painting, men and movements. Frederick Gibberd published *The Architecture of England from Norman Times to the Present Day*. Two works on the Baroque were Sacheverell Sitwell's *German Baroque Sculpture* and T. H. Fokker's *Roman Baroque Art*. John Masefield contributed the poems and Edward Seago the pictures to *Tribute to Ballet*.

History. Allan Nevins' *The Gateway to History* was an introduction to the study of history. Clare Brinton's *The Anatomy of Revolution* attempted to find common factors in the English, American, French, and Russian revolutions.

In American history appeared: *Indian Cavalcade* by Clark Wissler, and *The Apache Indians*, by Frank C. Lockwood. Colonial life was studied by Curtis P. Nettles in *The Roots of American Civilization* and by Thomas Jefferson Wertenbaker in *The Founding of American Civilization: The Middle Colonies*. Two incidents of the Revolution were treated in *Valley Forge*, by Harry Emerson Wildes, and in *March to Quebec*, the journals of Arnold's expedition edited by Kenneth Roberts. Herbert Agar's *The Pursuit of Happiness* was the story of the Democratic party from Jefferson to Franklin D. Roosevelt. A history of inventions was given by Roger Burlingame in *The March of the Iron Men*. Books on special periods included: *Ware Sherman* by Joseph LeConte, an American Civil War journal; *Adventures of America 1857-*

1900, by John A. Kouwenhoven, a pictorial record compiled from *Harper's Weekly*; *The Big Four*, by Oscar Lewis, the men who built the U.P. In *America Goes to War* Charles S. Tansill traced America's transition from neutrality to war, 1914-17. An important book was Matthew Josephson's *The Politicos: 1865-1896*, which showed the close ties between American industry and politics in the years following the Civil War.

Two state histories were: *Then Came Oil*, by C. B. Glasscock, Oklahoma; and C. P. Connolly's *The Devil Learns to Vote*, Montana. Two works added to the Rivers of America series were *Suwannee River*, by C. H. Matschat, and *Powder River*, by Struthers Burt. Frances Winwar published *Puritan City*, a history of Salem.

In British history appeared: *A People's History of England*, by A. L. Morton, a Marxist interpretation; *This Realm of England*, by Sir John Marriott, a constitutional history; *The Constitutional History of Medieval England*, by J. E. A. Jolliffe, from the English Settlement to 1485; *Wesley's England*, by J. H. Whitely, the social life of the 18th century; *The Age of Drake*, by James A. Williamson, a maritime history of the Elizabethan period; *Medieval Panorama*, by G. G. Coulton, the English scene from the conquest to the reformation; *The English Revolution*, by George Macaulay Trevelyan; *Building the British Empire*, by J. T. Adams, to the end of the first empire. History seen through individuals was given in J. L. Hammond's *Gladstone and the Irish Nation*; *Further Letters of Queen Victoria*, edited by Hector Bolitho; *The Letters of King George IV, 1812-1830*, vol. i, edited by A. Aspinwall; and *The Greville Memoirs, 1814-1860*, edited by Lytton Strachey and Roger Fulford.

In European history Charles Seignobos' *Rise of European Civilization* gave the middle-class point of view. Two medieval studies were *The Gateway to the Middle Ages*, by Eleanor Shepley Duckett, the 6th century, and *The Medieval Universities*, by Nathan Schnachner. French history included Geoffrey Bruun's *Europe and the French Imperium, 1799-1814*; Hilaire Belloc's *Monarchy*, a study of Louis XIV, and Nesta H. Webster's *Louis XVI and Marie Antoinette*, vol. ii. *The House of Guise*, by Henry Dwight Sedgwick, was confined to the 16th century. *Twenty Years Armistice*, by William Orton, covered the period 1918-1938. *From Tsardom to the Stalin Constitution*, by W. P. and Z. K. Coates, was written with sympathy for the Soviets. David Lloyd George published two volumes of *The Truth about the Peace Treaties*. Other parts of the world were represented in *The Pageant of Japanese History*, by Marion Way Dilts, and *Republican Hispanic America*, by Charles Edward Chapman.

Novels. The vogue for historical novels continued. The American revolution was the background for Esther Forbes' *The General's Lady*, Frank O. Hough's *Renown*, and Cyril Harris' *Trumpets of Dawn*. Novels about pioneering included Harold Sinclair's *American Years* (Illinois); Rose Wilder Lane's *Free Land* (Dakota); Ross McLaury Taylor's *Brazos* (the Southwest); George R. Stewart's *East of the Giants*. The Civil War continued to be a popular subject, as witness: Hervey Allen's *Action at Aquila*; Gwen Bristow's *The Handsome Road*; Laura Krey's . . . and *Tell of Time*, about reconstruction in Texas; Allen Tate's *The Fathers*, the years immediately preceding the Civil War.

British historical novels included: John Mase-

field's *Dead Ned*, an 18th-century sea story; Patrick Carleton's *Under the Hog*, vindicating Richard III; Evan John's *Crippled Splendour*, about James I of Scotland; D. L. Murray's *Commander of the Mists*, the "Forty-Five"; Clemence Dane's *The Moon Is Feminine*, Regency Brighton; Alfred T. Sheppard's *The Matins of Bruges*, the reign of Edward I; Jack Lindsay's *1649*; Patry Williams's *I Am Canute*, Anglo-Saxon times.

Other historical novels were: C. S. Forester's *Ship of the Line*, sea adventure in Napoleonic times; Vincent Sheean's *A Day of Battle*, Fontenoy; Charles Lorne's *Mexican Masquerade*, Maximilian and Carlotta; Rachel Field's *All This, and Heaven Too*, France and New England; Robert Graves' *Count Belisarius*, Justinian's general.

Novels based on literary figures included: Gwyn Jones' *Garland of Bays* (Robert Greene); E. Thornton Cook's *Speaking Dust* (the Carlyles); Helen Ashton's *William and Dorothy* (the Wordsworths); John Erskine's *The Start of the Road* (Whitman).

Novels about women were Josephine Lawrence's *Bow Down to Wood and Stone*; Pearl S. Buck's *The Proud Heart*; Margaret Ayer Barnes' *Wisdom's Gate*; Anne Parrish's *Mr. Despondency's Daughter*; Rhys Davies' *Jubilee Blues*; Myron Brinig's *May Flavin*; James Gray's *Wings of Great Desire*. Children were the subject of Marjorie Kennan Rawlings' *The Yearling*, Kathryn Hulme's *We Lived As Children*, and Leighton Barret's *Though Young*.

Poverty was the subject of Charles Curtis Munz' *Land Without Moses*, southern sharecroppers; Jim Phelan's *Ten-a-Penny People*, English poor; L. Stewart Boyd's *There's Always England*, about Scotland; Jack Jones' *Bidden to the Feast*, Wales; Joseph Vogel's *Man's Courage*, Americans on relief; Beatrice Bisno's *Tomorrow's Bread*.

The novelette form continued to be used, as in John O'Hara's *Hope of Heaven*; Edwin Lanham's *Another Ophelia*; H. G. Wells' *The Brothers*; Richard Warren Hatch's *The Fugitive*; Richard Wright's *Uncle Tom's Children*, four stories of race hatred; *The Flying Yorkshireman*, a group of five stories, by Eric Knight and others.

Outstanding first novels presented fresh material, as: Dorothy Baker's *Young Man with a Horn*, about swing music; A. I. Bezzerides' *Long Haul*, long-distance trucking; Wessel Smitter's *F.O.B. Detroit*, the Ford factory; W. L. White's *What People Said*; May Sarton's *The Single Hound*; Elizabeth Seifert's *Young Dr. Galahad*.

Among humorous books Darwin L. Teilhet's *Journey to the West* was a picaresque romance; Evelyn Waugh's *Scoop* was witty about Ethiopia; Angela Thirkell's *Pomfret Towers* was lightly comic; and T. S. Stribling's *These Bars of Flesh* was satiric.

Books by well-known authors included: Sinclair Lewis's *The Prodigal Parents*; William McFee's *Derelicts*; Elizabeth Madox Roberts' *Black Is My True Love's Hair*; Branch Cabell's *The King Was in His Counting House*; Sheila Kaye-Smith's *The Valiant Woman*; Hugh Walpole's *The Joyful Delaneys*; James T. Farrell's *No Star Is Lost*; Edith Wharton's unfinished *The Buccaneers*; Storm Jameson's *Here Comes a Candle*; H. G. Wells' *Apogee of Dolores*.

Leane Zugsmith in *The Summer Soldier* and John Hyde Preston in *The Liberals* scorned the pink liberal, while Charles Harrison in *Meet Me on the Barricades* was whimsical about revolution-

ary dreams. Recent events lent special interest to Sidney Meller's *Roots in the Sky*, Jewish immigrants 50 years ago; Brinckerhoff Jackson's *Saints in Summertime*, fascism in Central Europe; Upton Sinclair's *Little Steel*, today's labor battles. *Sleep in Peace*, by Phyllis Bentley, and *English Rue*, by Martin Hare, both gave a half century in the lives of two English families. G. B. Sterne in *The Ugly Dachshund* and Robert Nathan in *Journey of Tapiola* wrote lightly about dogs. Nathan's other book, *Winter in April*, Bessie Breuer's *The Daughter*, and Elizabeth Bowen's *Death of the Heart* were tragedies of girlhood.

Three novels about musicians were *No Victory for the Soldier*, by James Hill, *Concert Pitch*, by Elliot Paul, and *The Wrong World*, by Louis Paul. Howard Spring's *O Absalom* (American title, *My Son, My Son!*), G. E. Trevelyan's *William's Wife*, and Sarah Gertrude Millin's *What Hath a Man?* were tragedies of frustrated lives. Psychological thrillers included Graham Greene's *Brighton Rock*, Daphne du Maurier's *Rebecca*, Kay Boyle's *Monday Night*, and J. B. Priestley's *The Doomsday Men*. Clyde Brion Davis in *The Great American Novel* and Dorothy McCleary in *Paved with Good Intentions* wrote about thwarted literary ambitions.

Other novels included: *Old Haven*, by David Cornel DeJong, provincial Dutch life; *This Is Me, Kathie*, by Julia Truitt Yenni, a small Louisiana town; *Remember the End*, by Agnes Sligh Turnbull, the coal industry in Pennsylvania; *Testament*, by R. C. Hutchinson, the Russian revolution; *The Kents*, by LeGrand Cannon, a cog in American business; *The Noise of Their Wings*, by MacKinlay Kantor, a millionaire's obsession; *In Hazard*, by Richard Hughes, a hurricane at sea; *Hollow Sea*, by James Hanley, a troopship in wartime; *Nightingale Wood*, by Stella Gibbons; *Lifer*, by Jim Phelan, prison psychology; *Those Were the Days*, by Osbert Sitwell; *Late Harvest*, by George Blake, Scottish life; *National Provincial*, by Lettice Cooper, contemporary English politics.

Philosophy. *The Philosophy of Art*, by George Herbert Mead, was the expression of a pragmatist, while *The Realm of Truth*, book third of *Realms of Being*, by George Santayana, was materialistic and naturalistic. *Logic, the Theory of Inquiry*, by John Dewey, dealt with the relationship of logic and the scientific method. *Modes of Thought*, by Alfred North Whitehead, was a discussion of the thought processes of man. See PHILOSOPHY.

Poetry. Collections of poetry were: *Collected Poems*, by Robert Graves; *Collected Poems*, by Genevieve Taggard; *Collected Poems*, by E. E. Cummings; *The Complete Collected Poems of William Carlos Williams*; *The Selected Poetry of Robinson Jeffers*. Josephine Young Case's *At Midnight on the 31st of March* mixed the commonplace and the supernatural. Edwin Muir's *Journeys and Places* was metaphysical. Two poetic dramas were *The Herne's Egg*, by W. B. Yeats, and *Trial of a Judge*, a tragedy by Stephen Spender. Archibald MacLeish's *Land of the Free* was a collection of photographs of the American dispossessed illustrated by poetry. Other noteworthy publications were: *Memory and Other Poems*, by Walter de la Mare; *Memoir 1887-1937 and Other Poems*, by G. Rostrevor Hamilton; *Overtures to Death and Other Poems*, by C. Day Lewis; *The Earth Compels*, by Louis MacNeice; *Solitude*, a long poem by V. Sackville-West; *The Story of Lowry Maen*, a blank verse narrative by Padraic Colum; *Dead Reckoning*, by Kenneth Fearing; *The Fifth Dead*

of *Cantos*, by Ezra Pound; *Said before Sunset*, by Frederick Mortimer Clapp; *Natural History*, by Raymond Holden; *Bullinger Bound and Other Poems*, by Leonard Bacon. *U.S. 1*, by Muriel Rukeyser, was proletarian poetry, while *The Carnival*, by Frederick Prokosch, was romantic. *I'm a Stranger Here Myself*, by Ogden Nash, and *The Fox of Peapack*, by E. B. White, were humorous. Publications by young poets of promise were *The Five Fold Mesh*, by Ben Belitt, and *Christopher Columbus and Other Poems*, by Sidney Salt. Robert W. Nesser edited *American Naval Songs and Ballads*.

Politics. The rise of fascism attracted attention to the problems of democracy in America. John Strachey's *Hope in America* and Louis Adamic's *My America 1928-1938* were optimistic. Max Lerner's *It Is Later Than You Think* discussed the perpetual crisis of democracy. Jerome Frank's *Save America First* pleaded for greater American self-sufficiency, while Donald Davidson's *The Attack on Leviathan* pointed out the dangers of centralized government. Three books about the possibility of fascism in America were: *The Peril of Fascism*, by A. B. Magil and Henry Stevens; *The Defense of Democracy*, by F. Elwyn Jones; and *The Prospects of American Democracy*, by George S. Counts. Contemporary American political history was the subject of Louis M. Hacker's *American Problems of Today*, since the World War; Edward S. Corwin's *Court Over Constitution*, the growing power of the Supreme Court; James A. Farley's *Behind the Ballots*; *The Public Papers and Addresses of Franklin D. Roosevelt*, an indispensable source book for contemporary history, edited by Samuel I. Rosenman.

The political problems of Britain were discussed in R. W. Seton-Watson's *Britain and the Dictators*; H. J. Laski's *Parliamentary Government in England*; Robert Briffault's *The Decline and Fall of the British Empire*; *Arms and the Covenant* (American title, *While England Slept*), a collection of Winston Churchill's speeches. Compton Mackenzie's *The Windsor Tapestry* was a defense of Edward VIII.

Books about the European situation included Eugene Young's *Looking Behind the Censorships*; R. H. Bruce Lockhart's *Guns or Butter*, which found democracy at a low ebb; Geoffrey T. Garra's *Mussolini's Roman Empire*, an indictment of England's recent policy; Elizabeth Monroe's *The Mediterranean in Politics*; Robert Macbray's *The Struggle for the Danube and the Little Entente 1929-1938*. Two books on Italy were *The Plough and the Sword*, agriculture from the viewpoint of the class struggle, and *Italy's Foreign and Colonial Policy 1914-1937*, by Maxwell H. H. Macartney and Paul Cremona. Russia was treated in Violet Conolly's *Soviet Tempo*, from the point of view of an economist, and in *Terror in Russia*, two opposing views by Upton Sinclair and Eugene Lyons.

The Orient: The Chinese communists and their army were discussed in Edgar Snow's *Red Star over China*, an important first-hand account, Agnes Smedley's *China Fights Back*, and Harry Gannes' *When China Unites*. Sir Eric Teichman's *China and the Nations* was a survey, while recent history was discussed in *China Fights for Her Life* by H. R. Elkins and Theon Wright. James A. B. Scherer's *Japan Defies the World* blamed Japan, but Willard Price's *Children of the Rising Sun* defended her. G. C. Allen's *Japan: The Hungry Guest* was a survey of Japan's political economy. A. Morgan Young's *Imperial Japan 1926-1938* surveyed domestic and international policies.

Other parts of the world: Lord Hailey's *An African Survey*, European imperialism; Carleton Beals' *The Coming Struggle for Latin America*, Fascist versus democratic countries; Marquis Childs' *This Is Democracy*, collective bargaining in Scandinavia; Douglas V. Duff's *Poor Knight's Saddle*, Jew and Arab in Palestine. Two surveys were *Foreign Affairs 1919-1937*, by E. L. Hasluck, and *Survey of International Affairs 1936*, by Arnold J. Toynbee and L. V. Boulter. *Bio-Politics*, by Morley Roberts, gave analogies between the biological and social and political fields.

Religion. Several religious books were concerned directly with a re-interpretation of the Bible, such as: *A Guide to Understanding the Bible*, by H. E. Fosdick; *The Eternal Gospel*, by Rufus M. Jones; *An Introduction to the New Testament*, by Kirsopp Lake and Silva Lake; *The First Epistle of Paul to the Corinthians*, by James Moffatt; *The Validity of the Gospel Record*, by Ernest Findlay Scott; *The Life of Christ*, by Hall Caine, which squashed many fallacies; *The Historical Background of the Bible*, by J. N. Schofield; and *The Apocrypha. An American Translation*, by Edgar J. Goodspeed. Other works on religion were: *War and the Christian*, by Charles E. Raven, a completely pacifist point of view; *In the Steps of St. Francis*, a new biography by Ernest Raymond; *The History of Israel*, by H. Wheeler Robinson; *St. Paul*, by Arthur Dudley Nock; *The Christian Hope of Immortality*, by A. E. Taylor; *The First Five Centuries of the Christian Church*, by James Moffatt; *Studies in the Philosophy of Religion*, by Archibald Allan Bowman; *Symbolism and Belief*, by Edwyn Bevan.

Science. The outstanding work in general science was Lancelot Hogben's *Science for the Citizen*, a thorough survey for the intelligent layman. Books about medicine were: David Dietz's *Medical Magic*, a popularization; William M. Malisoff's *The Span of Life*, which asserted chemistry may lengthen it; Paul DeKruif's *The Fight for Life*, dramatic moments in recent research; Ellsworth Huntington's *Season of Birth*; Louis Berman's *New Creations in Human Beings*, endocrinology; William Healy's *Personality in Formation and Action*, psychiatry.

About nature: W. C. Allee's *Social Life of Animals*, with applications to human affairs; Louis J. Halle's *Birds Against Man*; Brian Curtis's *The Life Story of the Fish*; Julie Closson Henly's *Little Lives*, insects.

Books about other sciences were: Carroll Lane Fenton's *The Amazing Earth*, geology for the layman; David Fairchild's *The World Is My Garden*, botany by the discoverer of new plants; Reginald C. Waterfield's *A Hundred Years of Astronomy*; Frank Waldrop and Joseph Boskin's *Television, a Struggle for Power*.

General works were: J. B. S. Haldane's *The Marxist Philosophy and the Sciences*, by a Marxian scientist; Mark Graubard's *Man the Slave and Master*, a combination of biology and sociology; *The People's Food*, by Sir William Crawford and H. Broadley, national habits in food consumption.

Short Stories. Two collections of stories about the American south were *Southways*, by Erskine Caldwell, stories with economic implications, and *The Unvanquished*, by William Faulkner, about the Sartoris family. Three collections of proletarian stories were *The Money's All Right*, by Leslie Halward; *The Way Things Are*, by Albert Maltz; and *The Cleft Stick*, by Walter Greenwood. Other noteworthy collections were: *The Long*

Valley, by John Steinbeck; *Life along the Passaic River*, by William Carlos Williams; *Faithful Stranger*, by Sheila Kaye-Smith; *The Trouble with Tigers*, by William Saroyan; *Twenty-four Tales*, by Gerald Bullett.

Sociology. Two important books were: *Power: A New Social Analysis*, by Bertrand Russell, who considered power the fundamental social motive; and *The Culture of Cities*, by Lewis Mumford, who discussed the place and the potentialities of the city in civilization. Biological and psychological studies of man included *Apes, Men, and Morons*, by Earnest Albert Hooton, and *Man against Himself*, by Karl Menninger, an analysis of the causes of suicide.

Books about unemployment and relief included: *America on Relief*, by Marie Dresden Lane and Francis Steigmüller, public relief since 1933; *British Unemployment Policy*, since 1930, by Roland C. Davison; *The Right to Work*, by Nels Anderson, advocating public works; *We Too Are the People*, by Louise Armstrong, methods of relief, with praise for the FRA.

On labor: *American Labor*, a history, by Herbert Harris; *The Labor Movement in America*, by Marjorie R. Clark and S. Fanny Simon; three histories of the C.I.O.: *Labor on the March*, by Edward Levinson; *The Story of the C.I.O.*, by Benjamin Stolberg; and *Labor's New Millions*, by Mary Heaton Vorse; *Sit Down with John L. Lewis*, by C. L. Sulzberger, a portrait of the C.I.O. leader; *Labor Cears*, by Harold Seidman, corruption in the labor movement; *Civil Liberties and Industrial Conflict*, by Roger Baldwin and Clarence B. Randall, lectures by men of opposite points of view.

Two works on housing were: *Housing Comes of Age*, by Michael W. Straus and Talbot Waggs, the work of the FHA, and *The Challenge of Housing*, by Langdon W. Post, mostly about New York City. Miscellaneous works were: *I Like America*, by Granville Hicks, a communist point of view; *A Southerner Discovers the South*, by Jonathan Daniels; *Suckers' Progress*, by Herbert Asbury, an informal history of gambling in America; *These Foreigners*, by William Seabrook, foreign groups in America; *The Law and Mr. Smith*, by Max Radin, a layman's guide to law; *Judge Lynch: His First Hundred Years*, by Frank Shay, a history of lynching in America; *Behold Our Land*, by Russell Lord, the problem of soil erosion; *The Press*, by Henry Wickham Steed, an historical survey; *The Tyranny of Words*, by Stuart Chase, semantics; *People and Print*, by Douglas Waples, social aspects of reading in the depression; *The Jewish Contribution to Civilization*, by Cecil Roth; *Three Guineas*, by Virginia Woolf, how women can help prevent war; *Chinese Women: Yesterday and Today*, by Florence Ayscough; *Marriage: Past and Present*, by Margaret Cole.

Travel. Additions were made to the series of guide books by the WPA writers' project: *New Orleans City Guide*, edited by Lyle Saxon; *New Hampshire*; *Connecticut*; *The Ocean Highway*, from New Jersey to Florida; *Iowa*; *Delaware*; and *New York Panorama*.

Margaret Halsey's *With Malice toward Some* wisecracked about England and the English. Books on other parts of Europe were: Sacheverell Sitwell's *Rommanian Journey*; Halliday Sutherland's *Lapland Journey*, mostly Finland; Oliver St. John Gogarty's *I Follow St. Patrick*, Ireland; Louis MacNeice's *I Crossed the Minch*, the Hebrides.

Of South and Central America: Negley Farson's

Transgressor in the Tropics; John W. Vandercook's *Caribbean Cruise*; Earl Parker Hanson's *Journey to Mandao*; Warwick M. Tompkins' *Fifty South to Fifty South*, around the Horn. About Africa and Asia: W. R. Leigh's *Frontiers of Enchantment*, an artist in Africa; Katherine Fowler-Lunn's *The Gold Missus*, a geologist in Sierra Leone; Herbert Ticky's *Tibetan Adventure*; Maurice Collis's *Lords of the Sunset*, the Shan states; H. V. Morton's *Through Lands of the Bible*; Ruth Harkness' *The Lady and the Panda*, western China. About North America: Walter Wilkinson's *Pupets through America*; Vera Brittain's *Thrice a Stranger*, three visits to America; Dorothy Childs Hognor's *Westward, High, Low, and Dry*, American deserts; Kenneth Roberts' *Trending into Maine*; William Beebe's *Zaca Adventure*, a zoological expedition to the west coast; Dana Lamb and June Cleveland's *Enchanted Vagabonds*, Lower California; William Oliver Stevens' *Old Williamsburg and Her Neighbors*. Other travel books were: F. W. Ommanney's *South Latitude*, a biologist in the Antarctic; Edward Shackleton's *Arctic Journeys*; Cecil Lewis's *The Trumpet Is Mine*, about Tahiti; Anne Morrow Lindbergh's *Listen! the Wind*, a flight from Africa to Brazil; John Dos Passos' *Journeys between Wars*, various parts of the world.

LITHOGRAPHS. See PRINTS.

LITHUANIA, lith'ü-ä'nī-ä. A Baltic republic, the independence of which was proclaimed Feb. 16, 1918. Provisional capital, Kaunas (Kovno). Vilna, transferred to Poland by the Council of Ambassadors in 1923, was still claimed by Lithuanians in 1938 as their true capital.

Area and Population. Including the Memel (Klaipėda) district of 1100 square miles, Lithuania has an area of 21,474 square miles and a population estimated on Jan. 1, 1938, at 2,549,668 (152,660 in Memel). The number of foreigners was 8773. About 80 per cent of the population is agricultural. Living births in 1937 numbered 56,393 (22.2 per 1000); deaths, 33,260 (13.1 per 1000); marriages, 34,863 (7.4 per 1000). Estimated populations of the chief cities on Jan. 1, 1938, were: Kaunas (Kovno), 108,198; Memel (Klaipėda), 38,927; Siauliai, 24,970; Panevėžys, 21,626.

Education and Religion. About 15 per cent of the population was illiterate at the end of 1937. Excluding Memel, Lithuania had 2331 elementary schools with 5258 teachers and nearly 300,000 pupils on Oct. 1, 1938. At the end of 1938 there were about 90 secondary schools, with 18,000 pupils. Attendance in high schools in 1936-37 was 17,732; in universities, 4007. At the 1923 census Roman Catholics formed 80.5 per cent of the population, Protestants and Calvinists, 9.5; Jews, 7.3; Greek Orthodox, 2.5. Protestants comprise 91.7 per cent of the Memel Territory's population.

Production. About 77 per cent of the working population is engaged in agriculture and 10 per cent in commerce, industry, and transportation. The land area in 1935 was divided as follows (in thousand acres): Arable, 6,666 (60.9 per cent); meadows, 1720; permanent pasture land, 1097; forests, 427; peat bogs and marshes, 336. Yields of the chief cereals in 1938 were (in metric tons): Wheat, 246,900 (220,700 in 1937); barley, 268,800 (274,000); rye, 626,100 (606,900); oats, 424,800 (387,800). The potato harvest in 1937 was 92,224,000 bu.; linseed, 1,401,000 bu.; flax, 69,081,000 lb. Livestock statistics for the end of 1938 showed 557,840 horses, 1,192,840 cattle, 1,149,470 swine, 618,980 sheep, and 4,592,720 fowls. The sea fisheries

in 1937 yielded 1,599,250 kilograms of fish valued at 466,000 lits. The principal industries are dairying, meat packing, flour milling, lumbering, brewing and distilling, textile manufacture, tanning, sugar refining, and the production of hardware and tobacco products. In July, 1938, there were 1441 industrial enterprises employing not less than five persons, with a total personnel of 40,818 including 35,063 hired workers.

Foreign Trade. Total imports in 1938 were valued at 223,686,000 lits (212,667,000 in 1937) and exports at 233,198,000 lits (208,325,000). Leading 1937 imports were, in order of value, iron and steel, machinery, coal and coke, cotton cloth, cotton yarn, wool yarn. The value of the chief 1937 exports was (in U.S. paper dollars): Butter, \$6,973,000; bacon, \$3,994,000; swine, \$2,753,000; flax fiber, \$2,513,000; wood pulp, \$2,498,000. The United Kingdom furnished 28 per cent of the 1937 imports; Germany, 21.8; U.S.S.R., 8.4; United States, 3.5. Of the exports, the United Kingdom took 46.5 per cent; Germany, 16.6; U.S.S.R., 5.3; United States, 3.3. United States trade figures for 1938 showed exports to Lithuania of \$699,423; imports from Lithuania, \$921,761.

Finance. Actual budget returns for 1937 showed total receipts of 310,400,000 lits (ordinary, 285,500,000) and total expenditures of 318,100,000 lits (ordinary, 249,000,000). The receipts were exclusive of withdrawals of 19,600,000 lits from the Treasury Reserve Fund. Budget estimates for 1938 balanced at 346,800,000 lits; for 1939, at 368,800,000 lits, the largest in the Republic's history. The public debt on Dec. 31, 1937, totaled 118,634,000 lits (internal, 40,095,000). The lit exchanged practically at par (\$0.1693) in 1936, 1937, and 1938.

Transportation. Lithuania in 1937 had 1486 miles of railway line, 19,633 miles of roads and highways (with 2031 automobiles), and 1606 miles of waterways. A new railway from Panevėžys to Joniškėlis (25 miles) was opened Dec. 3, 1938. During 1937 the railways carried 3,356,100 passengers and 2,167,100 metric tons of freight, the gross receipts totaling 31,257,200 lits. During the same year, 1414 vessels of 844,662 net registered tons entered the port of Memel.

Government. The democratic Constitution of Aug. 1, 1922, was suspended following the coup d'état of Dec. 17, 1926, which placed full power in the hands of a small nationalist intelligentsia, organized as the Tautininkai party (Nationalist Union). The Diet was dissolved Apr. 17, 1927. On Dec. 16, 1933, the Nationalist Union adopted fascism as its ruling principle. As of Feb. 6, 1936, all political organizations except the Nationalist Union were officially dissolved. Elections to Parliament were held on June 9-10, 1936, for the first time under the Nationalist Union dictatorship, the candidates being restricted to members of that party. The 49 members of the new Parliament convened Sept. 1, 1936, and began the task of framing a new constitution, which was not completed until 1938 (see *History*). President at the beginning of 1938, Antanas Smetona, who was elected by Parliament Dec. 19, 1926, and re-elected by a board of electors Dec. 11, 1932. Premier, Juozas Tubelis, heading a cabinet formed Sept. 6, 1936.

HISTORY

Internal Politics. The Parliament of Nationalist Union party members, convened in 1936 to enact a new constitution, completed its work early in 1938 and the new fundamental law went into

effect May 12. It gave legal sanction to the corporative state already largely molded by the Nationalist Union dictatorship. Under the new Constitution elections were held for a Parliament of 128 members. The new Parliament convened in November and on November 14 re-elected Lithuania's 64-year-old President, Antanas Smetona, for another seven-year term. He was the only candidate considered.

A number of cabinet changes occurred during the year as a result of internal and external tensions, but without broadening the base of the government by giving portfolios to the dissolved opposition parties. Premier Juozas Tubelis and his entire cabinet resigned on March 24 following Lithuania's capitulation to Poland's ultimatum (see below). A new ministry was formed under the Rev. V. Mironas, chief chaplain of the army and one of the three leaders of the Nationalist Union. Effective October 1 Prime Minister Mironas assumed the Agriculture portfolio in addition to his other duties. The Mironas Cabinet was reconstructed December 5 in order to improve Polish-Lithuanian relations and offer stronger resistance to German pressure with regard to Memel. Juozas Urbysys succeeded Stasys Lozoraitis as Foreign Minister. Other changes in the cabinet made Brig.-Gen. Kazys Musteikis War Minister, Jonas Gudauskis Minister of Justice, Juozas Skaisgirius Minister of Agriculture, and Kazys Germanas Minister of Communications. The new Cabinet on December 29 approved a new Neutrality Law which placed in force measures for the strict observance of neutrality in any European conflict, similar to neutrality measures already adopted by Estonia and Latvia.

The government's pro-Polish and anti-German policy aroused the adherents of former Premier Augustinas Voldemaras, the strongly anti-Polish leader who was sentenced to 12 years at hard labor for an attempted anti-Government coup in 1934. Disorderly demonstrations against the government broke out in Kaunas early in December and on December 11 the regime imposed modified martial law on the capital and surrounding district. Persons causing political disturbances were threatened with exile or imprisonment.

The 20th anniversary of the restoration of Lithuanian independence was celebrated by military parades and other ceremonies on Sept. 8, 1938. The draft of a new land law, modeled after that in effect in Germany, was submitted to Parliament late in 1938 by the cabinet. It prohibited the subdivision of small holdings among heirs and authorized the state to take land from an owner who proved incompetent to work it.

Poland's Ultimatum. Unsuccessful in its repeated efforts to bring about a Polish-Lithuanian rapprochement on the basis of existing frontiers (see 1937 YEAR BOOK, p. 418), Poland early in 1938 resorted to more forceful measures. While Europe was absorbed in the German annexation of Austria, Poland seized the opportunity presented by the shooting of a Polish soldier on the Lithuanian side of the frontier on March 11 to present an ultimatum to Lithuania demanding the restoration of diplomatic relations before March 31. On the following day some 80,000 Polish troops began to concentrate on the Lithuanian frontier. The frontier had been closed since Oct. 10, 1920, when the Polish General Zeligowski, without authorization from his government, invaded Lithuania and seized one-third of her territory, including Vilna, the capital city. This territory was subsequently confirmed to Poland by the Conference of Ambassadors.

sadors. But Lithuania refused to accept the decision, severed diplomatic relations, closed the frontier to traffic of every kind, and refused to grant any rights to the Polish minority in Lithuania. This situation had existed for 18 years despite Polish protests and overtures and the efforts of the League of Nations to effect a reconciliation.

Threatened with invasion by a Polish force four times the size of the Lithuanian army, the government at Kaunas was forced to accept the Polish demands on March 19. It had appealed in vain to the Soviet Union for aid and Lithuania's partners in the Baltic Entente—Latvia and Estonia—urged acceptance of the ultimatum. On March 21 a Polish diplomatic representative was sent to Kaunas to arrange for the exchange of permanent envoys, which followed before the end of the month. Under the pressure exerted by the Polish forces on the frontier, a Polish-Lithuanian agreement for the resumption of postal, highway, and aerial communications was reached on March 26 and arrangements for rail connections followed.

This forced capitulation was unanimously approved by the Lithuanian Parliament but caused deep resentment among the Lithuanian people and an intensification of nationalism. The Tubelis Cabinet was forced to resign and the new ministry soon afterwards issued a decree requiring all publications to follow the Lithuanian spelling of place names. Polish newspapers issued in Lithuania suspended publication for three days in protest against this order, and then resumed the Polish spellings. Despite Polish protests, the new Lithuanian Constitution of May 12 contained the clause from the former Constitution designating Vilna as the "lawful capital of Lithuania." Negotiations for a Polish-Lithuanian commercial treaty, opened in July, soon collapsed under the continued hostility of the two countries on political issues. The Kaunas Government refused Polish requests that minority rights be granted the Polish minority in Lithuania.

The partition of Czecho-Slovakia in September and the subsequent rapid development of the agitation among the Germans of Memel for reincorporation in the Reich led the Lithuanian authorities to reverse their anti-Polish foreign policy late in October. They had been frightened by repeated rumors of a Polish-German deal whereby Poland would cede the Polish corridor to Germany in return for German support of Poland's annexation of Memel and possibly all of Lithuania. Following a conference at Kaunas on October 20 of Lithuanian Ministers from the various European capitals, it was reported that the government had decided to grant special rights to the Polish minority, promote closer commercial relations with Poland, and, by implication, recognize Poland's ownership of Vilna. This was followed on November 21 by a Polish-Lithuanian agreement to present press and radio news about one another in a "good neighbor" spirit.

On December 22 a comprehensive Polish-Lithuanian trade agreement was signed at Kaunas. It provided for increased and equalized trade, and a system of reciprocal transit by which Polish timber and other goods were to be shipped through Memel via water or rail. It also regulated commercial travelers, certificates of origin, and navigation.

Nazi Agitation in Memel. The Nazi agitation in Memel for immediate complete autonomy for the German majority of that territory and eventual reincorporation in the Reich moved toward a climax in 1938. This coincided with the growing belief that Hitler had marked out Memel as the next

German-speaking region to be annexed following the partition of Czecho-Slovakia. The danger of a Nazi diplomatic-military coup, coupled with demonstrated unwillingness of the Soviet Union, Britain, and France to intervene in defense of the small nations, produced a reversal in Lithuanian policy toward the Memel question during the year similar to that announced with respect to Poland and Vilna.

The German-dominated Memel Diet on April 12 passed a resolution demanding termination of martial law, in effect in Memel as well as in the rest of Lithuania since the Nationalist Union dictatorship was established in 1926. It called for the withdrawal of the Lithuanian "safety police" from Memel and for complete liberty to carry into effect Nazi ideology in the territory. At the same time the action of the Lithuanian Governor of Memel, Juozas Kubilius, in vetoing certain laws passed by the Diet, was attacked as contrary to Memel's autonomous rights.

The Lithuanian Government on April 13 rejected the demand for immediate abrogation of martial law but indicated that the state of war might be modified following passage of projected laws concerning the safety of the state. The growing tension in Memel flared up in a two-hour riot between Germans and Lithuanians on June 28 in which one person was killed and about 50 injured. Following the simultaneous outbreak of German and Polish press campaigns against Lithuania, the Kaunas Government on October 20 indicated its decision to moderate the bills for security of the state, which had been adopted in principle by the Lithuanian Parliament.

The Memel Germans, contending that the precautionary measures provided in the bills violated the Memel Statute, called a special protest meeting of the Memel Diet on October 26. With Nazi adherents demonstrating outside, the German leaders in the Diet demanded full executive and police powers within the territory for the Memel Directorate (government). Meanwhile, Memel Nazis, meeting at Koenigsberg, East Prussia, with Nazi representatives from Danzig and Berlin, were reported to have drawn up a list of demands for presentation to the Lithuanian Government. They included appointment of a German as head of the Memel Directorate, introduction of the German legal system in Memel including the Nuremberg anti-Jewish laws, complete freedom for Nazi political organizations in Memel, and self-government for the Memel Germans similar to that in effect in Danzig (q.v.). These demands were supported by the German press and by the German Minister at Kaunas.

As a result of these representations martial law in Memel and all Lithuania was ended on November 1, being replaced by the civilian law in force prior to the establishment of the dictatorship in 1926. The Lithuanian Government also restored to Dr. Ernst Neumann, the Nazi leader in Memel, and other Nazis the civil rights withdrawn when they were sentenced for political activity in 1935. They were thus able to stand for election to the Memel Diet in the election held December 11. The voting gave the German party 2,093,466 votes, or 87.3 per cent of the total, while Lithuanian candidates polled 266,485, or 12.7 per cent. The Germans elected 25 members of the Memel Diet and the Lithuanians four. Herr Neumann immediately announced that the Memel Germans would "try by all means to establish connection with our German

brothers across the river and expand our movement and the National Socialist idea."

The agitation for reunion with the Reich increased in intensity after the election. On December 12 the Memel Directory issued a decree depriving the Lithuanian State police of all authority in the Territory. In view of the menacing attitude of the German Government, President Smetona expressed willingness to negotiate a settlement of the Memel question. At the same time an appeal for British and French support was sent to London and Paris, but Anglo-French representations were rebuffed in Berlin (see *GERMANY under History*). At the year end, it seemed certain that the occupation of Memel by German troops was impending.

LITTLE ENTENTE. The political and military combination formed by Czecho-Slovakia, Rumania, and Yugoslavia in 1920 and 1921 in defense of their frontiers as established by the World War peace treaties. They concluded bilateral treaties providing military guarantees against aggression by Hungary. Their collaboration in defense of the territorial status quo was formalized and extended to economic and financial matters by a series of treaties signed in 1929, 1930, and 1933. These established a Permanent Council and provided for a concerted foreign policy based on the principles of the League of Nations, the Kellogg-Briand Pact, the General Act of Arbitration of 1924, and the Locarno Treaties. Each state agreed not to make outside political commitments without the previous consent of the other members—a provision annulled in 1936—and accepted a mutual system of conciliation and arbitration of their disputes. In 1925 France concluded a treaty with Czecho-Slovakia providing for mutual aid in case either was attacked. France also negotiated pacts of non-aggression and consultation with Rumania and Yugoslavia. In 1934 Rumania and Yugoslavia became members of the Balkan Entente (q.v.).

The Italo-German agreement for collaboration in European affairs concluded in 1936 was followed by strenuous efforts to detach Yugoslavia and Rumania from Czecho-Slovakia. The Little Entente alliances served to restrain Hungary somewhat during the partition of Czecho-Slovakia by Germany and Poland in September-October, 1938, but with the establishment of German domination in what was left of Czecho-Slovakia, there remained of the Little Entente for effective purposes only the agreement between Rumania and Yugoslavia to aid one another if either was attacked by Hungary. See *CZECHO-SLOVAKIA, HUNGARY, RUMANIA, and YUGOSLAVIA under History*.

LIVESTOCK. Plentiful feed supplies in 1938 aided the continuance of recovery of the livestock industry begun last year. The devastating droughts of 1934 and 1936 made necessary the reduction of livestock numbers to a minimum for continuance of the herds and flocks. Hog, sheep, and poultry numbers were increased some in 1937, but cattle and horses are slower to respond to favorable conditions. The beginning of a cycle of increased cattle production was pronounced in 1938 with the saving of unusually large percentages of heifer calves to furnish additional breeding animals. Despite the reduced acreage of grain crops in line with the conservation program, which resulted in a 2 per cent lower acreage than last year, the total supply, including a large carryover from 1937 of corn, oats, barley, and grain sorghum at the end of the crop year, was estimated at about 111,000,000 tons. This was about 3 per cent larger than the average for

the period 1928-32. The supply per animal was greater than at any time for more than 12 years. The expansion in livestock numbers helped maintain an active demand for feed grains.

An increase of 1 per cent in cattle numbers to about 66,500,000 was estimated during the year. The increase in numbers occurred largely west of the Mississippi River, the area where reductions since 1934 were most drastic.

Federally inspected slaughter of cattle and calves in 1938 was about 15,000,000 head, which was about 1,000,000 head less than 1937. Barring the recurrence of a series of drought years, the U.S. Bureau of Agricultural Economics predicted that cattle numbers will tend to expand for several years and that a new cattle-production cycle was starting. To make this possible, cattle slaughtering may continue low in 1939.

The 1938 pig crop of 71,088,000 was about 15 per cent larger than the pig crop of 1937, but still 11 per cent under the five-year average for 1929-33. Indications for farrowing in the spring of 1939 were 21 per cent larger than in the spring of 1938. With the abundant feed supplies of 1938 and the favorable relation of feed prices to pork, if the corn crop in 1939 is good, the U.S. Bureau of Agricultural Economics estimated that the number of pigs raised in 1940 may reach the level of the five years before the 1934 drought.

The increased hog production, coupled with favorable feed prices, resulted in a heavier pork production in 1938. During the marketing year, which ended Sept. 30, 1938, there were slaughtered under Federal inspection over 6,000,000,000 lb. of dressed pork, as contrasted with 5,500,000,000 lb. in the preceding year. The 1938 production was only about 75 per cent of the average of 8,000,000,000 lb. of pork produced during the five years, 1928 to 1933. With a higher average dressed weight of pigs in 1938, lard production of 1,002,000,000 lb. was about 13 per cent heavier than in 1937, although nearly 40 per cent under the average lard production of 1,630,000,000 lb. in the five years prior to 1934.

Despite declining hog prices toward the latter part of the year, an increasing corn-hog ratio resulted from the heavy corn crop and declining feed prices. In November, 1938, 100 lb. of pork would purchase 18.2 bu. of No. 3 yellow corn, the highest corn-hog ratio since June, 1926.

In the spring, stocks of pork and lard in storage of about 700,000,000 lb. were nearly one-third smaller than in the preceding year. However, storage demand for hog products continued weak through the year and on Nov. 1, 1938, pork stocks in storage of 252,000,000 lb. were even smaller than the very small stocks of 1937 and 40 per cent smaller than the five-year average, 1929-33, on that date.

The numbers of sheep on feed on Jan. 1, 1938, were estimated at 6,066,000 head, about 11 per cent greater than last year, and the largest number of lambs on feed on January 1 on record. The 1938 lamb crop of 32,221,000 head was 5 per cent larger than in 1937 and the largest lamb crop on record. This resulted in part from a small increase in the number of breeding ewes, but mainly from the largest lambing percentage of any of the 15 years of record. The early lamb crop was at least 15 per cent larger than the small early lamb crop of 1937.

These situations resulted in heavy slaughtering of lamb. In 1938 there were slaughtered under Federal inspection 18,060,136 head, as contrasted with 17,270,140 in 1937.

In the 1937-38 season, many rather heavy losses

were encountered in lamb-feeding operations. In spite of this experience abundant feed at low prices and favorable feeder-lamb prices as compared with feeder cattle encouraged considerable lamb feeding. However, the numbers fed in the corn belt and western states were less than last year. See VETERINARY MEDICINE.

Although the numbers of horses on farms have been decreasing for several years, increases were noted in the numbers of stallions and jacks licensed for public service, suggesting probabilities for some increases in horse production.

The Institute of American Meat Packers estimated the per capita meat consumption in the United States as 128 lb. in 1938, an increase of three and one-half pounds over last year.

International Conditions. The livestock industry in the United States was distinctly benefited by the trade agreements negotiated during 1938, particularly that with the United Kingdom. On account of a shortage of pork in the United Kingdom, import quotas for cured and frozen pork were increased at several periods during the year. The cured pork quota for the United States totaled nearly 48,000,000 lb., which was similar to 1937, but the frozen pork quota was over 20,000,000 as contrasted with about 15,000,000 lb. in 1937. Further, the cured-pork quota from the United States was filled for the first time since 1934.

By the terms of a new trade agreement effective Jan. 1, 1938, the duty of 10 per cent ad valorem on lard imports into Great Britain from the United States was removed and the quota on imports of ham from this country was increased to at least 56,000,000 lb., with certain provisions for further increases. Since 1934, the annual quota for ham and bacon imports from the United States has varied from 47,000,000 to 49,000,000 lb. For many years Great Britain has been the most important outlet for United States lard.

With the favorable conditions and heavy production of pork products in the United States in 1938, and declines in hog slaughter in the important hog-producing countries of western and central Europe, exports of pork, excluding lard, were about 95,000,000 lb. About 200,000,000 lb. of lard, totaling approximately 20 per cent of the production, were exported from the United States during the year.

Under the terms of a trade agreement with Czecho-Slovakia, the United States was assured an annual quota of at least 12,346,000 lb. of rendered lard and raw hog fat. Since 1931 there has been competition between Denmark, Netherlands, and the Danubian countries with the United States for the Czecho-Slovakian markets for hog fats.

To serve as a stimulant to hog production, the British Government guaranteed minimum prices for bacon-type hogs to producers, and a subsidy to bacon factories. Contracts will be made through the Pig Marketing Board between producers and the Bacon Marketing Board, bacon prices being based on feed prices. The total number of hogs in the United Kingdom on June 1 was placed at 5,343,000, but guaranteed bacon prices are limited to only 2,100,000, with provision for increases to 2,500,000 in three years. The guaranteed price does not apply to fresh pork. Under conditions existing during 1938 with low feed prices, it was more profitable to feed for fresh pork production.

Hog numbers in Germany, as indicated by the census of Sept. 3, 1938, were reduced about 2,000,000 head as compared with the corresponding date of 1937, when 25,393,000 head were reported. The French Government encouraged pork and lard pro-

duction by fixing a subsidy on Apr. 16, 1938, of 2.8 cents per pound on export lard and 2.1 cents per pound on salt pork for export.

Early in 1938, demands for live hogs in Denmark were such that provisions were made to import 100,000 head from Sweden and Norway beginning March 5. The Swedish Government maintains livestock production at levels to meet uniform marketing requirements in England and Germany. It was felt that the Danish demand would dislocate the established equilibrium of supply and demand in an undesirable manner, in its effect on domestic supplies and ability to fill the British bacon quota. Therefore, an embargo was placed on live hog exports from Sweden.

Improved feeding conditions for beef cattle in the United States, and increased beef production, caused a reduction of about 30 per cent in the imports of live and dressed beef, as compared with 1937 when imports were estimated at 336,386,000 lb.

Exports of refrigerated beef from Uruguay, totaling over 160,000,000 lb. in 1938, were more than 30 per cent greater than in 1937. Over half of the exports were to the United Kingdom, with the balance going principally to continental Europe. The United States, which is the principal market for canned beef from Uruguay, received about 75,000,000 lb. However, this constituted a reduction of about 15 per cent from 1937.

Live cattle imports into the United States from Canada decreased nearly 70 per cent as compared with 1937. Imports of slaughter cattle from Mexico were comparable to previous years, but imports of feeder cattle were increased more than 30 per cent.

Although livestock numbers on farms and held by the Government in the Soviet Union were reported heavy, a serious drought causing reduced production of feed, poor pastures, and hay crops was expected to necessitate reduction in livestock numbers.

Research. The available space will only permit reference to a few investigations of livestock problems which are suggestive of the comprehensive nature of research in this field, and attempts to solve practical problems not only at agricultural experiment stations in the United States, but in other countries as well.

Interest continued on the feeding value of pastures and roughages and improved methods of preserving hay and silages (see DAIRYING, p. 203). The Michigan Agricultural Experiment Station found that during curing, alfalfa hay lost about half of the carotene (vitamin A) present in the green alfalfa. The Texas Agricultural Experiment Station studied the vitamin A in stored mixed feeds to which fish oils had been added, and found that from 70 to 100 per cent of the vitamin disappeared in four weeks' storage at 7° to 28° C. The loss of the vitamin was delayed during the first two weeks by the addition of .1 per cent hydroquinone. It was recommended that feeds mixed with a vitamin A supplement be stored not longer than 10 days if the vitamin A potency is to be maintained.

Deficiencies of minerals were found to be responsible for an increasing number of malnutrition problems in livestock. Severe anemia occurring in breeding ewes in Western Australia was found to be due to a depletion of copper. A new vitamin known as K was discovered at Washington University, St. Louis, which prevented a type of anemia in chickens. Recovery within three days followed the administration of small quantities of vitamin K or alfalfa meal in the ration to deficient birds.

Following closely on similar reports in some parts of the United States, cobalt deficiencies in the soils in areas of Denmark were associated with the so-called "wasting disease." Sheep suffering from bush sickness and Morton Mains disease in New Zealand were cured by drenching them with small amounts of cobalt, or by making a cobaltized salt lick available.

A comparison of different breeds and crosses of pigs for bacon export from Australia to England showed that breed alone is insufficient for guaranteeing desirable type bacon pigs. Type within the breed is the important factor, and the selection of a strain capable of producing a large proportion of pigs uniform in conformation and complying with present-day market classes is essential for success. The School of Agriculture at Cambridge, England, found, that with good stock, properly fed and managed, there was no incompatibility between rapid-growth rate and good quality in pigs of different breeds.

The Low Temperature Research Station of the British Food Investigation Board found that a carbon dioxide medium delayed the development of mold and slime on meat stored at chilling temperatures. As an outgrowth of these studies and further investigations of the effect of carbon dioxide on the quality and chemical changes in the meat, the transportation of chilled beef in a carbon dioxide atmosphere from Australia and New Zealand to Great Britain was carried out on a commercial basis.

Improvements in methods of artificial insemination of livestock were being perfected, especially in Russia, Canada, Denmark, and at the California, Minnesota, Missouri, and New Jersey Agricultural Experiment Stations, and the U.S. Department of Agriculture. Progress has been such that co-operative associations have been organized among dairy cattle breeders in New Jersey and New York for artificial insemination of their herds. Selected bulls are used and a paid full-time veterinarian does the insemination. Progress has been made in the preservation of semen so that it is being shipped various distances experimentally. Ewes in Poland have been impregnated by semen shipped from England, and ewes at Moscow, Idaho, were impregnated with semen shipped from Dubois, Idaho, and Beltsville, Maryland. Similar studies were conducted with other classes of animals.

A regional co-operative poultry research laboratory was established by the U.S. Department of Agriculture at East Lansing, Mich., under the terms of the Bankhead-Jones Act. The initial problem was concerned with the development of effective control measures for fowl paralysis, a disease that has been widespread on commercial poultry farms over much of the country. The laboratory work was to be directed jointly by the U.S. Department of Agriculture and 25 State Agricultural Experiment Stations. Attempts will be made to find the causative agent and control for the disease and to breed disease-resistant strains.

The Fourth International Animal Breeding Congress is to be held Aug. 8-11, 1939, at Zurich, Switzerland, where opportunity will be afforded for a mutual interchange of ideas by scientists and breeders on the more recent advances in research and experiences in animal breeding.

Extensive plans were being formulated throughout the year for the Seventh World Poultry Congress to be held in Cleveland from July 28 to Aug. 7, 1939.

Changes in Personnel. Dr. F. B. Mumford, a

well-known leader in livestock research, and Dean of the Missouri College of Agriculture and Director of the Agricultural Experiment Station for many years, retired on Sept. 1, 1938. Prof. J. W. Wilson, Director of the South Dakota Agricultural Experiment Station, and head of the Animal Husbandry Department for 36 years, was retired and made emeritus professor of animal husbandry.

After 35 years of continuous service, Prof. George Humphrey was, by request, relieved of the chairmanship of the Animal Husbandry Department of the University of Wisconsin to be permitted to devote more time to phases of animal production in which he is especially interested. Dr. A. E. Darlow was appointed chairman of the department, and Dr. G. Bohstedt was placed in charge of livestock research work.

E. G. Ritzman, Professor of Animal Husbandry at the New Hampshire Experiment Station, was also appointed research associate in animal nutrition in the Carnegie Institute. Dr. Mary Juhn, of the University of Chicago, was appointed Research Associate Professor in poultry husbandry at the University of Maryland. Dr. F. H. Leinbach, Professor of Animal Husbandry at the Colorado State College, and J. B. Outhouse were appointed as Professor and Assistant, respectively, in Animal Husbandry at the University of Maryland, the former to succeed Prof. K. A. Clark, who resigned. Dr. C. H. Kick, Associate Animal Husbandman at the Ohio Agricultural Experiment Station, succeeded Dr. Leinbach at Colorado. Dr. W. E. Carroll, head of the Animal Husbandry Department in the Utah Agricultural College, resigned to accept a position in the Animal Husbandry Department at the University of Illinois. Prof. H. J. Gramlich, head of the Animal Husbandry Department of the University of Nebraska, was appointed Secretary of the American Shorthorn Breeders Association on November 1; and H. J. Brant, formerly of the University of Wisconsin, was elected Secretary of the Belgian Horse Breeders Association.

J. E. Nordby, Professor of Animal Husbandry at the Idaho University, was appointed Director of the U.S.D.A. Regional Sheep-Breeding Laboratory at Dubois, Idaho. Dr. J. Holmes Martin, Professor of Poultry Husbandry at the University of Kentucky, and Dr. N. F. Waters, Professor of Poultry Husbandry of Iowa State University, were appointed Director and geneticist, respectively, of the U.S.D.A. Regional Poultry Laboratory at East Lansing, Mich., the appointments being effective Jan. 1, 1939. Earl Krantz, in charge of horse work in the U.S. Bureau of Animal Industry, resigned on Oct. 15, 1938. Dr. R. M. Fraps was appointed Senior Physiologist in the U.S. Department of Agriculture, Bureau of Animal Industry, August 1.

Necrology. Dean and Director H. W. Mumford, of the University of Illinois and the State Experiment Station, died on May 31, 1938. Dean Mumford was a well-known leader in livestock research. Prof. M. W. Harper, Professor of Animal Husbandry and in charge of teaching and research with horses in Cornell University since 1909, died on May 9, 1938.

Bibliography. Recent publications representative of the literature on various phases of the livestock industry are: *The American Society of Animal Production: Record of Proceedings of the Thirtieth Annual Meeting, November 26-28, 1937* (Amer. Soc. Anim. Prod. Proc. (1937), pp. 394); *Animal Breeding Plans*, J. L. Lush (Ames, Iowa: Collegiate Press, Inc. (1938), 4 ed. rev. pp. 366); *Principles of Feeding Farm Animals*, S. Bull and

W. E. Carroll (New York: Macmillan Co. (1937), rev. ed., pp. XI + 395); *Livestock Judging Handbook*, J. E. Nordby and W. M. Beeson (Danville, Ill., Interstate, 1937); *The Physiology of Domestic Animals*, H. H. Dukes (Ithaca, N. Y.: Comstock Pub. Co. (1937), 4 ed. rev., pp. XIV + 695); *Thoroughbred Racing Stock and Its Ancestors*, Lady J. A. D. M. Wentworth (London, Allen & Unwin, 1938); *The Colorado Range Cattle Industry*, O. B. Peake (Glendale, Calif.: Arthur H. Clark Co. (1937), pp. 357); *Correlation of Body Measurements of Slaughter Steers with Rate and Efficiency of Gain and with Certain Carcass Characteristics*, W. H. Black, B. Knapp, Jr., and A. C. Cook (U.S.D.A. Jour. Agr. Res. [U.S.], 56 (1938), No. 6, pp. 465-472); *Effect of Supplementing Winter and Summer Range on Gains of Steers in the Northern Great Plains*, W. H. Black and V. I. Clark (U.S. Dept. Agr., Tech. Bul. 628 (1938), pp. 15); *Productive Sheep Husbandry*, W. C. Coffey (W. G. Kammlade, Philadelphia, Lippincott (1937), ed. 2, rev.); *Recent Changes in Sheep Breeding in the Arable Areas, I, II*, R. P. Askew (Jour. Min. Agr. [Gt. Brit.], 44 (1937), Nos. 5, pp. 450-457; 6, pp. 562-571); *Das lymphgefäßsystem des schweines. Überarbeitet von H. Grau, H. Baum* (Berlin, Parey, 1938); *The National Poultry Improvement Plan* (U.S. Dept. Agr., Misc. Pub. 300 (1938), pp. 23); *Battery Brooding*, M. H. Arndt (New York: Orange Judd, New ed. (1937), 47 Ar62, rev. ed.); *Reference Book of the Meat Packing Industry* (Chicago, Ill.: Institute of American Meat Packers (1938), pp. 64); *Poultry Husbandry*, M. A. Jull (New York: McGraw-Hill Book Co., Inc., 1938, 2 ed., pp. 548).

LOS ANGELES. See AQUEDUCTS.

LOUISIANA. Area and Population. Area, 48,506 square miles; included (1930) water, 3097 square miles. Population: Apr. 1, 1930 (census), 2,101,593; July 1, 1937 (Federal estimate), 2,132,000; 1920 (census), 1,798,509. New Orleans had (1930) 458,762 inhabitants; Baton Rouge, the capital, 30,729.

Agriculture. Acreage, production, and value of the chief crops of Louisiana, for 1938 and 1937, appear in the accompanying table.

Crops	Year	Acreage	Prod. Bu.	Value
Cotton	1938	1,224,000	676,000	\$28,730,000
	1937	1,569,000	1,104,000	46,352,000
Sugar cane ..	1938	270,000	6,237,000	15,805,000
	1937	254,000	5,258,000	15,301,000
Corn	1938	1,620,000	26,730,000	14,969,000
	1937	1,422,000	24,885,000	16,424,000
Rice	1938	494,000	20,748,000	12,449,000
	1937	517,000	20,680,000	14,269,000
Sweet potatoes	1938	99,000	6,930,000	4,504,000
	1937	90,000	6,570,000	4,533,000
Hay (tame) .	1938	299,000	333,000	3,263,000
	1937	263,000	321,000	3,210,000
Potatoes	1938	43,000	2,752,000	1,651,000
	1937	44,000	2,728,000	1,773,000

* Bales. ♢ Tons.

Mineral Production. The \$153,367,213 attained by the yearly total of production of native minerals in Louisiana in 1936 was made up to the extent of nine-tenths by the output of petroleum and natural gas; sulphur supplied much of the remainder. In 1937 the rise of the yield of petroleum continued, though less rapidly; production increased to 90,510,000 bbl. for 1937, from 80,491,000 (value \$85,600,000) for 1936. This gain, due to higher output from the Gulf Coast, was limited by a decline of production from the State's portion of

the Rodessa field. Fully a dozen more of the typical salt-dome fields of the coastal area, at depths of 8000 feet or more, were discovered. The production of natural gas was augmented by numerous new wells in known territory and by some discoveries elsewhere; it attained 339 billion cu. ft. (1937), or about 15 per cent more than the total of 290,151 million cu. ft. (value \$53,641,000) for 1936. More than half of the natural gas obtained in 1937 was put into pipe lines serving distant consumers. Production of sulphur made a moderate increase to 342,230 long tons (1937), from 333,475 tons (value \$5,980,101) for 1936. The producers of salt shipped 974,403 short tons (1937), as against 918,414 tons (1936); in value, \$2,898,826, as against \$2,436,971.

Finance. Louisiana's State expenditures in the year ended Dec. 31, 1937, as reported by the U.S. Bureau of the Census, were: For maintaining and operating governmental departments, \$47,000,120 (of which \$3,997,034 was for highways, \$5,306,346 for charities, and \$11,869,582 for local education); for interest on debt, \$6,032,223; for capital outlay, \$14,215,551. Revenues were \$78,198,585. Of these, property taxes furnished \$7,715,248; income taxes, \$4,855,042; sales taxes, \$22,979,716 (including tax on gasoline, \$11,154,134); departmental earnings, \$3,448,749; sale of licenses, \$12,099,202; unemployment compensation, \$7,560,338; Federal or other grants-in-aid, \$8,390,386. Funded debt outstanding on Dec. 31, 1937, totaled \$126,473,591. Net of sinking-fund assets, the debt was \$126,324,740. On an assessed valuation of \$1,338,882,600 the State levied in the year ad-valorem taxes of \$7,698,575.

The State conducted two public enterprises not included in the figures above. The Port of New Orleans, the greater of the two, expended, in the year, \$4,233,272; earned \$2,811,414; and received from the State \$1,003,790, in addition to \$775,000 from the New Orleans Levee Board.

Education. Louisiana's inhabitants of school age, as reckoned in 1935, numbered 619,475; of these, 382,711 were whites and 236,764 were Negroes. Enrollments in public schools, for the academic year 1937-38, totaled 462,069 (294,192 white and 167,877 colored). They comprised 375,326 elementary enrollments (219,568 white and 155,758 colored) and 86,743 in high schools (74,624 white and 12,119 colored). In addition to these, there were 10,594 enrollments (6397 white and 4197 colored) in a system of public evening schools and 60,898 (44,909 white and 15,989 colored) in other than public schools. The year's expenditure for public-school education totaled \$31,157,149, of which payments for current operation took \$19,973,969. Teachers numbered 13,999 (10,160 white and 3839 colored). Their average salary for the year was \$967.06 (\$1146.09 for whites and \$493.22 for colored teachers). Louisiana authorized in 1938 an issue of \$6,000,000 of bonds for means to aid the construction of improvements to the public schools.

Charities and Corrections. Through its Department of Public Welfare the State provided toward the support of needy persons in divers groups not in institutions. Through its Board of Charities and Corrections it maintained a central authority over institutions for the care and custody of persons. The Department of Public Welfare acted for the State in the distribution of old-age assistance, public maintenance for children of destitute families, public support for the needy blind, general poor-aid, and temporary compensation to persons thrown out of employment. The Board of Charities and Corrections, composed of the Governor, ex officio, and four appointed members, with

an executive secretary (Dr. I. Boyd Wenger), supervised all penal and corrective institutions, State or municipal, and the State mental hospitals. The State institutions had separate individual governing boards. These institutions and their populations as reported late in 1938 were: State Industrial School for Girls, Alexandria, 80; Louisiana Training Institute (for boys), Monroe, 150; East Louisiana State Hospital (mental), Jackson, 3956; Central Louisiana State Hospital (mental), Pineville, 2671; State Colony and Training School, Alexandria, 1001; State Penitentiary, Angola, 3500.

Legislation. The Legislature met in May in regular session. In addition to the biennial appropriations it considered taxation designed to provide more amply for the distributions of money to the needy under the system of social security. See CHILD LABOR; MINIMUM WAGE.

Political and Other Events. In the hands of Governor Leche, Mayor Maestri of New Orleans, and one or two other former lieutenants of the late Huey Long, the political dynasty that he had founded remained in firm control of all branches of the State government. Aggressive crusading against wealth, such as Long had carried on, was not resumed, and the groups against which Long had prevailed kept quiet. Thus the year passed without any return of the strife characteristic of Long's regime. State Senator Noe, not at the time wholly in harmony with the political heads, introduced in the Legislature some bills judged to be of a factional character, but in the main, Long's political successors kept in harmony.

The C.I.O., however, braved the authorities in an effort to organize industrial unions in New Orleans. Meeting with opposition in June, to a strike among drivers of taxicabs, the C.I.O. appealed for aid from the Federal District Court, alleging that the police had beaten labor organizers, conveyed them out of the city, and threatened them with harm in case of their return. Governor Leche, in August, displayed pro-labor sympathies by serving coffee and sandwiches at Hammond to striking employees of the Hammond box factory. A tornado at Rodessa (February 18) killed 25 persons and caused damage amounting to \$500,000.

Approved by popular vote, a State constitutional amendment lowering the severance tax on sulphur to \$1.03 a ton, from \$2, stimulated sulphur-mining.

Elections. The voters (November 8) re-elected U.S. Senator Overton and the eight incumbent Democratic Representatives and adopted amendments, affecting taxation, to the State constitution.

Officers. Louisiana's chief officers serving in 1938 were: Governor, Richard W. Leche (Dem.); Lieutenant-Governor, Earl K. Long; Secretary of State, E. A. Conway; Treasurer, A. P. Tugwell; Auditor, L. B. Baynard; Attorney-General, G. L. Porterie; Superintendent of Education, T. H. Harris.

Judiciary. Supreme Court: Chief Justice, Charles A. O'Neill; Associate Justices, John B. Fournet, A. T. Higgins, W. G. Rogers, John R. Land, Fred M. Odom, A. L. Ponder, Jr.

LUTHERAN CHURCH. A church that expresses itself in groups of religious bodies and synods that receive and hold the canonical Holy Scriptures of the Old and New Testaments as the

inspired Word of God and the only infallible rule and standard of faith and practice, and that declare the unaltered Augsburg Confession to be a correct exposition of the faith and doctrine of the Evangelical Lutheran Church. The membership of the church, while found chiefly in central and northern Europe and in the United States and Canada, is distributed throughout the world, there being in 1938 a total of about 84,000,000 members in 75,000 congregations, served by more than 50,000 pastors.

In the United States, as the result of mergers and the formation of federations, the Lutheran Church expresses itself in practically a threefold equal division in the United Lutheran Church in America, the American Lutheran Conference (consisting of the American Lutheran Church, the Augustana Synod, the Norwegian Lutheran Church, the Lutheran Free Church, and the United Danish Church), and the Synodical Conference (consisting of the Missouri Synod, the Joint Wisconsin Synod, the Slovak Synod, the Norwegian Synod, and the Negro Missions).

Definite trends looking toward the spiritual deepening of its membership are recorded in the year 1938. In the United Lutheran Church under the direction of the Board of American Missions a great promotional campaign was carried through. One of the primary purposes of this campaign was to intensify and deepen the spiritual life of the whole church. Through publicity, through motion pictures, through sectional meetings and pastors' institutes, the message and program of the church was forcibly brought to the attention of its entire constituency.

Similarly the Norwegian Lutheran Church of America undertook a five-year special program, known as "The March of Faith," in preparation for the celebration of its centennial in 1943. Emphasizing the spiritual as of primary importance, the Norwegian Lutheran Church has moved out into a great program of evangelistic and financial expansion.

Other indications of spiritual deepening are to be noted in the fact that the Preaching Mission inaugurated by the American Lutheran Conference in 1937 is to be continued at the urgent request of those constituencies which were benefited by it.

The year 1938 also marks a definite advance with respect to better understanding among the Lutheran bodies of the United States. The reports of the respective commissions which had been appointed previously were made to the conventions of the United Lutheran Church, the American Lutheran Church, the Missouri Synod, and the American Lutheran Conference, with the result that the cause of Lutheran co-operation and unity was advanced. Resolutions were passed in each instance authorizing the continuation of these negotiations and the vigorous prosecution of effort to reach a better understanding. In the case of the Missouri Synod and the American Lutheran Church resolutions were passed by their respective conventions declaring that doctrinal agreement had been reached. This trend toward a better understanding among the Lutherans of America is the natural corollary of the spiritual deepening which is in evidence all along the line.

The outstanding event among Lutherans in America in 1938 was the Tercentenary Celebration of the founding of New Sweden on the banks of the Delaware in 1638. This, in reality, marks the beginning of organized Lutheranism in America, for the Swedes who came to settle in that early colony brought Lutheran pastors with them and

built churches. In addition to the civic and patriotic celebrations that were held at Wilmington and Philadelphia, a great Lutheran celebration of the event was held in Convention Hall, Philadelphia, on Tuesday, June 28, at which time representatives of the Swedish Government and of the Church of Sweden presented greetings to the Lutheran Church of America.

Another event indicating the trend toward greater solidarity among Lutherans was the merger of four synods belonging to the United Lutheran Church in Pennsylvania. The merging bodies were the East and West Pennsylvania, the Allegheny, and the Susquehanna Synods, which now form the Central Pennsylvania Synod, with 118,000 communicant members.

The statistics for the Lutherans having headquarters in the United States for 1937-38 are as follows: Pastors, 12,925; congregations, 19,738; baptized membership, 5,114,250; confirmed membership, 3,481,950; church schools, 21,407; officers and teachers, 175,422; scholars, 1,932,089; valuation of church property, \$366,883,568; congregational expenses, \$37,607,602; benevolence, \$8,308,682; total expenditures, \$45,916,284.

The annual meeting of the Executive Committee of the Lutheran World Convention was held in Uppsala, Sweden, May 21-25, 1938. The final program of the world assembly which is to be held in Philadelphia in 1940 was adopted. The chief theme of the 1940 Convention will be "The Church Today." This subject is to be considered under three heads: "The Church, the Word, and the Sacraments," "The Church and Other Churches," "The Church in the World." Three commissions were appointed to study these three subjects. The American Commission, which has been designated to prepare the topic "The Church in the World," consists of Dr. W. H. Greever, chairman, New York, N. Y.; Dr. E. E. Fischer, Philadelphia, Pa.; Dr. T. F. Gullixson, St. Paul, Minn.; Dr. B. M. Christensen, Minneapolis, Minn.; Dr. Conrad Bergendoff, Rock Island, Ill.; and Prof. E. C. Fendt, Columbus, O.

In preparation for the 1940 Convention, Dr. Hanns Lilje, Berlin, General Secretary, visited the United States, representing the Convention in many Lutheran centers. Archbishop Erling Eidem, Uppsala, Sweden, was appointed a member of the Executive Committee in place of Dr. Per Pehrsson, retired.

The headquarters of the National Lutheran Council are at 39 East 35th St., New York, N. Y., the executive director being the Rev. Ralph H. Long, D.D.

LUXEMBURG, lük'sem-bürg. A grand duchy adjoining southeast Belgium. Area, 999 square miles; population (Jan. 1, 1936), 296,776 compared with 299,993 (1931 census). In 1936 there were 4515 births, 3433 deaths, and 2374 marriages. Luxembourg (capital) had 57,996 inhabitants in 1936. Other towns are Esch-Alzette, the center of the mining district, 27,517; Differdange, 15,945; Dudelange, 13,572.

Production and Trade. Agriculture is carried on by approximately 32 per cent of the population, the principal crops being potatoes and oats. Livestock in the country (Jan. 1, 1935): 17,036 horses, 102,720 cattle, 163,337 swine, 7246 sheep, and 4391 goats. In 1937 the mining and metallurgical industries produced (in metric tons): Iron ore, 2,350,000 (metal content of ore); pig iron and ferroalloys, 2,513,000; steel, 2,511,000; basic slag, 544,000. Trade figures are included with those of Belgium

by reason of the Belgo-Luxembourg Economic Union which came into force on May 1, 1922. In 1937 there were 2636 miles of roads and 338 miles of railway line.

Government. For 1937 revenue was estimated at 327,705,146 francs; expenditure, 326,835,846 francs; total public debt (Dec. 31, 1936), 655,136,452 francs (franc averaged \$0.0405 for 1937). Executive power rests with the Grand Duchess who also holds the right to organize the government. Legislative power rests with the Grand Duchess and with the Chamber of Deputies (lower chamber) of 55 members (in 1937: Catholics, 25; Laborites, 18; Radical Liberals, 6; Independents, 3; Democrats, 3) elected for 6 years (one-half being renewed every 3 years). There is an upper chamber called the Council of State consisting of 15 members chosen for life by the sovereign. Ruler, Grand Duchess Charlotte (succeeded, Jan. 9, 1919).

History. A decree of Oct. 17, 1938, provides for the progressive reduction of hours of work to 40 per week in certain industries classified as dangerous, unhealthy, or particularly disagreeable.

LYNCHINGS. During 1938 Congress took no action on the pending Wagner-Van Nuys-Gavagan bill, of which much was heard during 1937. It is interesting to note, although the fact may or may not have been coincidental, that while Congress continued in session no lynchings occurred in the country. From June 10 to November 21, however, seven further lynchings were added to the list, making a total of authenticated lynchings since 1882 of 5120. The 1938 atrocities took place in the deep South with Negroes the victims in every case. Four occurred in Mississippi, one in Georgia, one in Florida, and one in Louisiana. The circumstances attending the lynchings were as follows: One man was beaten to death because of a trivial debt; two men were killed and burned because of murders they had committed; one man was shot and killed by a mob hunting suspects in the killing of a white man; one man, accused of assault upon a white woman, was taken from the custody of a peace officer and shot and killed; one man, suspected of slaying a white man, was hanged and burned; one man, on the charge of a 74-year-old white woman that she had been attacked and robbed, was trailed for several hours with bloodhounds by a mob of 200 white men and hanged. See UNITED STATES under *Congress*.

The Virginia Situation. Attention was called in the 1937 NEW INTERNATIONAL YEAR BOOK, p. 425, to the fact that an unusual situation arose when a group of employees on strike in Covington, Va., in July of 1937, were thrown into jail as a result of the invocation of the State Anti-Lynching Law. Tried on the charge "of assault and battery while a member of a mob," a number of participants in a textile strike were found guilty and sentenced to jail terms ranging from 3 years to 9 months. When it became common knowledge that the convicted persons had been tried under the State's Anti-Lynch Law, a storm of protest spread over the State, and although 16 defendants had been initially indicted, the prosecutions of 12 of them were subsequently dropped. While the convicted workers were in jail on contempt charges preferred by the local judge on the ground that they had violated an injunction issued by him against picketing, the Virginia legislature, as a result of public pressure, passed amendments to the Anti-Lynching Law in April, 1938. These provided that participants in disorders on picket lines should be amenable to the general law, rather than to the

law against lynching. In other words, if pickets committed a simple assault, as was the case at Covington, they were to be prosecuted for assault and battery and subjected to a maximum penalty of 12 months. As matters turned out in the Covington cases, the maximum terms served by any of the strikers was less than seven weeks; but there is no question that had not disapproval immediately been expressed, the strikers might have remained in jail for a long time under the initial sentences meted out. As Virginius Dabney, writing in the *New Republic* of Apr. 27, 1938, pointed out: "The cases served to illustrate, among other things, the importance of making anti-lynching statutes, whether state or federal, inapplicable to persons involved in labor disputes."

MACAO, *ma-kä'ô*. A colony of Portugal in South China. Total area, including the nearby islands of Taipa and Colôane, 7 square miles; population (1936 estimate), 170,000 compared with (1927 census) 157,175, of whom 3846 were Portuguese, 152,738 were Chinese, and 591 were various nationalities. Trade, mostly of a transit nature, was largely in the hands of the Chinese. In 1937 there were 66 miles of roads. In 1935 imports were valued at 19,621,058 patacas; exports, 10,336,460 patacas (approximate value of the pataca is \$0.48). In 1936, 2193 vessels (1,500,050 tons) entered and cleared the ports. In 1938 revenue was estimated to total 5,351,909 Macao dollars; expenditure, 5,157,879 Macao dollars (approximate value of Macao dollar is \$3.25); public debt (Dec. 31, 1937), 8,520,078 escudos (escudo averaged \$0.0448 for 1937). Macao was selected as an auxiliary airport to Hong Kong, where conditions are not always favorable, in the transpacific service of Pan American Airways. On Sept. 16, 1937, Macao was selected for the creation of a naval base by the Portuguese Admiralty. Portugal holds Macao by reason of the treaty with China of Dec. 1, 1887. The colony is administered by a governor.

MACAULAY, GENEVIEVE GARVAN BRADY (MRS. WILLIAM J. BABINGTON MACAULAY). An American philanthropist, died in Rome, Italy, Nov. 24, 1938. Born in Hartford, Conn., Apr. 11, 1884, she was educated at the College of the Sacred Heart, Manhassettville, in New York and abroad. On Aug. 11, 1906, she was married to Nicholas F. Brady of Albany, N. Y., who died on Mar. 27, 1930.

Mrs. Brady was known throughout the world for her philanthropies and welfare activities, and with her husband, she made many contributions to the Catholic Church, principally for charitable and educational purposes. For her share in these many activities, Pope Pius XI made her a Papal Duchess, the highest papal honor that can be conferred upon a woman. The Bradys donated funds to the Society of Jesus for the construction of the St. Isaac Jogues Novitiate at Wernersville, Pa., and in 1937 Mrs. Brady gave to that order her estate, *Inisfada*, at Manhasset, L. I., at which many important personages had been entertained. In this same year she gave to Georgetown University her notable collection of the writings and letters of Mark Twain.

The founder of the Carroll Club for Girls in New York City in honor of her mother, Mrs. Brady served as its president, and also gave to the Club a summer camp at Pawling, N. Y. Her interest in the Girl Scouts of America led to her election as chairman of the national board in 1928 to succeed Mrs. Herbert Hoover, and also to membership in the World Committee. To the Manhattan Council of Girl Scouts she gave a summer camp at Brewster

Falls, N. Y., which was named in her honor, Camp Genevieve Brady. In 1932 she organized the National Women's Committee of the Welfare and Relief Mobilization to aid in relieving severe distress throughout the country in the winter of 1932-33.

For her many benefactions to the Roman Catholic Church Mrs. Brady was made a Dame of Malta, a Dame of the Holy Sepulchre, and had received the Cross Pro Ecclesia et Pontifice from Pope Pius XI. In 1934 she received the Laetare Medal of the University of Notre Dame and the honorary degree of doctor of laws from Georgetown University. Also, in recognition of her many benevolences to the poor of France and for her contributions toward the Madame Curie Radium Fund she was honored by France and in 1928 she received the Order of the Crown of Belgium for her many gifts to Belgian girls.

On Mar. 6, 1937, Mrs. Brady was married to William J. Babington Macaulay, Irish Free State Minister to the Vatican, and thereafter, except for visits to the United States, she resided in Rome.

MCDUGALL, WILLIAM. A British psychologist, died at Durham, North Carolina, Nov. 28, 1938. Born in Lancashire, England, in 1871, he was educated at Owens College, Manchester, St. Thomas Hospital, London, Cambridge University (M.B.), and Oxford University (M.A.). He was a fellow of St. John's College, Cambridge (1898), a reader at University College, London (1902), a reader in mental philosophy (1904), and a fellow (1912) at Corpus Christi College, Oxford. In 1920 he came to the United States to become professor of psychology at Harvard University, where he remained until 1927 when he became head of the department of psychology at Duke University in Durham. One of the leading exponents of social psychology, his researches dealt particularly with abnormal and aboriginal psychology and problems of character, ethics, and economics. Also he was one of the leaders in the field of psychical research and served as president of both the British and American Societies. The British Society conferred upon him the degree of D.Sc.

Co-editor with Dr. J. B. Rhine of *The Journal of Parapsychology* from 1937, Dr. McDougall was the author of many books that expounded his theories of psychology. These included: *Physiological Psychology* (1905), a standard textbook in colleges in the United States and England; *Social Psychology* (1908), one of the most widely read textbooks in psychology; *Pagan Tribes of Borneo* (1911), which brought him recognition in the field of anthropology and election to the Royal Society; *Psychology* (1912); *Body and Mind* (1912); *Group Mind* (1920); *National Welfare and National Decay* (1921); *Is America Safe for Democracy?* (1921); *Outline of Psychology* (1923); *Ethics and Some Modern World Problems* (1924); *The Indestructible Union* (1925); *Outline of Abnormal Psychology* (1926); *Janus* (1927); *Character and the Conduct of Life* (1927); *Modern Materialism and Emergent Evolution* (1929); *World Chaos—the Responsibility of Science* (1931); *Energies of Men* (1933); *Religion and the Sciences of Life* (1934); *The Frontiers of Psychology* (1935); and *Psychoanalysis and Social Psychology* (1936).

McGILL UNIVERSITY. A coeducational institution of higher learning in Montreal, Que., Canada, founded in 1821. The enrollment for the 1938-39 session was as follows: Degree students, arts and science, 1073; commerce, 199; engineering, 419; architecture, 20; medicine, 457; dentistry,

59; law, 59; library science, 14; graduate studies, 212; music, 8; diploma students, 76; partial students, 234. At Macdonald College, an affiliated college at Sainte Anne de Bellevue, there were 90 degree students enrolled in the faculty of agriculture; 108 degree students in the school of household science; 38 diploma students in agriculture; 19 in household science; and 151 in the school for teachers. The registration in the French summer school for 1938 was 103. The number of members on the teaching staff was 519. The endowment amounted to \$20,419,455, while the income for 1937-38 was \$2,330,845. The library contained 385,210 volumes. Principal and Vice-Chancellor, Lewis W. Douglas.

McINTYRE, O(SCAR) O(DD). An American columnist, died in New York City, Feb. 14, 1938. Born in Plattsburg, Mo., Feb. 18, 1884, he went to live with his grandmother in Gallipolis, Ohio, at an early age. After attending the local schools and Bartlett's College in Cincinnati for a time, he became a reporter on the *Gallipolis News*, and in 1902 transferred to the *Gallipolis Journal*. Subsequently he was feature writer of the *East Liverpool (O.) Tribune* (1904-05), political writer, and later managing editor, on the *Dayton Herald* (1906), and telegraph editor, city editor, and assistant managing editor of the *Cincinnati Post* (1907-11).

In 1912 he came to New York to become associate editor on *Hampton's Magazine*, of which Ray Long, formerly editor of the *Post*, was editor. This venture was short-lived, and he then joined the *New York Evening Mail* as dramatic editor. He held this position but a short time, and out of a job, he had a nervous breakdown. His illness left him with a dislike of crowds and buildings, and having inherited a small sum of money, McIntyre decided to try his hand at writing a column about New York. He sent it out to several newspapers and finally it was accepted by the Bridgeport (Conn.) *Post*. In two years it was accepted by 26 papers.

Acting as press agent for the Hotel Majestic, where he lived, and issuing his syndicated column, he augmented his income by acting as press agent for various individuals, and in 1919 became associated with Florenz Ziegfeld in this capacity. This association lasted until 1922, when the McNaught Syndicate purchased his column for distribution. Subsequently it appeared in the Hearst newspapers, in New York in *The New York Journal and American*, and at his death, it appeared regularly in 580 newspapers.

Mr. McIntyre's New York was freely imaginative for he invested even the most prosaic of its attractions with glamor and excitement, but to those who lived outside of the City this was the "real" New York of their dreams. He was much attached to his dogs, and made many friends throughout the country through his frequent writings about them in his column.

Besides contributing to the *Cosmopolitan Magazine*, the *American Magazine*, and the original *Life*, he published his favorite columns and magazine articles in *White Light Nights* (1924); *Twenty Three Selected Stories* (1929); *Another Odd Book* (1931), and *The Big Town* (1935).

MACKAY, CLARENCE H(UNGERFORD). An American capitalist, died in New York, Nov. 12, 1938. Born in San Francisco, Apr. 17, 1874, the son of John W. Mackay, he was educated privately and at Vaugirard College, Paris, and at Beaumont College, Windsor, England. He returned to the

United States in 1892 and two years later entered the Commercial Cable and Postal Telegraph Cos. to learn the business. He was elected president of the American Forcite Powder Co. in 1896 but retired in 1899. Elected a director of the Commercial Cable and Postal Telegraph Cos. on Feb. 25, 1896, he was made vice-president on Jan. 21, 1897, in which position he obtained administrative control of their operation.

In October, 1902, after the death of his father, Mr. Mackay was elected president of these companies as well as of the Commercial Pacific Cable Co., which was then at work on the laying of the transpacific cable begun by John Mackay in 1901. It was completed under the younger Mackay's direction in 1904 at a cost of \$9,000,000. During the World War Mr. Mackay was removed as the executive of these companies when they were put under government control, and he was not restored to control until Aug. 1, 1919. In 1928 the International Telephone and Telegraph Co. was merged with the Mackay interests to form the Postal Telegraph and Cable Co., which combine merged telegraph, radio, cable, and telephone systems under one head. Mr. Mackay was appointed chairman of the board of this organization, and held that position at his death, and was also president of the Mackay Radio and Telegraph Co.

With his mother, Mr. Mackay gave a School of Mines, as well as other gifts, to the University of Nevada in memory of his father, and established a professorship of electrical engineering at the University of California. To the U.S. Army Air Corps in 1912 he presented the Mackay Trophy, and during the World War he established, with his mother, the Mackay-Roosevelt Hospital Unit. During 1907-08 he was treasurer of the Lincoln Farm Association. He was chairman of the board of St. Vincent's Hospital in New York, and for his many contributions to the Catholic Church he was made a Knight of St. Gregory in 1916 and a Knight of Malta, the highest Papal honor, in 1931. Mr. Mackay's home at Roslyn, L. I., was noted for its art treasures, many of which he was forced to sell during the depression, and for his collection of armor. He was a trustee of the Metropolitan Museum of Art and one of the sponsors of the Museum's free symphony concerts; chairman of the board of directors of the Philharmonic Society of New York, and a director of the Metropolitan Opera Co. In 1926 he received the gold medal of the National Institute of Social Sciences.

MACKENZIE, DISTRICT OF. See NORTHWEST TERRITORIES (CANADA).

MADAGASCAR. A French island colony in the Indian Ocean. Area, 241,094 square miles; population (1936 census), 3,797,936 (including that of the Comoro Islands). Chief towns (with 1936 populations in parentheses): Tananarive, the capital (119,823); Majunga (23,684); Tamatave (21,421); Antsirabe (18,215); Tulear (15,180); Diégo Suarez (12,237); Mananjary (11,426); Fianarantsoa (14,740). Education is compulsory in the primary schools. In 1936 there were 210,973 pupils enrolled in the 1643 schools of all kinds.

Production and Trade. The main agricultural products (with 1937-38 production figures, in metric tons) were maize (80,000), rice (644,000), potatoes (36,000), coffee (30,000), sugar (12,800), tobacco (6300), groundnuts (8200), copra (1200). Other products were vanilla, cacao, tapioca, manioc, and lima beans. On Jan. 1, 1937, there were 6,000,000 cattle in the colony. The forests are rich in cabinet woods, beeswax, raffia, resins, gums, and rubber.

Mineral production for 1936 was valued at Fr24,-184,773 of which graphite (2356 tons) accounted for Fr9,391,843; mica (410 tons), Fr5,189,999; phosphates (5348 tons), Fr668,000; precious stones, Fr336,000 (Franc averaged \$0.0611 for 1936; \$0.0405 for 1937). In 1937 imports were valued at \$22,010,000; exports, \$32,338,000.

Communications. On Jan. 1, 1937, there were 15,756 miles of highways suitable for motor traffic in the dry season. Railway lines had a total length of 534 miles. In addition there was an automobile service with a network of routes totaling more than 1375 miles. A regular air service connects Tananarive with Paris, France. During 1936, 7703 vessels aggregating 3,899,546 tons cleared the ports.

Government. The budget estimates for 1936 balanced at Fr268,846,000; the railway budget was Fr28,450,000. On Dec. 31, 1935, the contracted debt of the colony was Fr608,252,635. The government is administered by a governor-general, who is aided by a consultative council. An economic and financial delegation, consisting of 30 French citizens and 24 natives, meets once a year to examine budget proposals and questions of a general economic nature. In their relations with the government the natives are represented by chiefs. Governor-General, Léon Cayla (appointed Feb. 10, 1930).

Comoro Islands. An archipelago, comprising the islands of Mayotte, Anjouan, Grande Comore, and Moheli, forming a region under the general government of Madagascar. The chief imports were cotton fabrics, metals, and rice; the chief exports, sugar, copra, sisal, and vanilla. Area, about 800 square miles; population (1936), 128,608. Capital, Zandzi.

MADEIRA, *ma-dē'ra*; *Port.* *mã-dã'ra*. A group of islands (Madeira, Porto Santo, and three uninhabited islands) in the Atlantic Ocean, west of Morocco. The group is known as the district of Funchal and is considered an integral part of Portugal. Area, 314 square miles; population (1930 census), 211,601. Capital, Funchal (on the island of Madeira). In 1937 the production of wine was estimated to total 2,985,132 gallons. In 1936 a total of 41,724 tourists en transit stopped at Madeira, with an estimated expenditure of 4,172,400 escudos, and 4136 tourists temporarily resided there, with an estimated expenditure of 4,136,000 escudos. In 1937 there were 160 miles of roads.

MADOERA. See NETHERLANDS INDIES.

MAHÉ. See FRENCH INDIA.

MAINE. *Area and Population.* Area, 33,040 square miles; this included, in 1930, water, 3145 square miles. Population by census of Apr. 1, 1930, 797,423; by Federal estimate for July 1, 1937, 856,000; by census of 1920, 768,014. Portland had (1930) 70,810 inhabitants; Augusta, the capital, 17,198.

Agriculture. Acreage, production, and value of the chief crops of Maine, for 1938 and 1937, appear in the accompanying table.

<i>Crop</i>	<i>Year</i>	<i>Acreage</i>	<i>Prod. Bu.</i>	<i>Value</i>
Potatoes	1938	165,000	39,600,000	\$21,780,000
	1937	170,000	47,600,000	17,612,000
Hay (tame) .	1938	1,004,000	935,000 *	7,574,000
	1937	1,147,000	769,000 *	7,594,000
Oats	1938	114,000	3,876,000	1,589,000
	1937	113,000	3,955,000	1,819,000
Apples	1938	858,000	944,000
	1937	1,147,000	1,124,000

* Tons.

Finance. Maine's State expenditures in the year ended June 30, 1937, as reported by the U.S. Bureau of the Census, were: For maintaining and

operating governmental departments, \$21,230,023 (of which \$2,147,148 was for local education); for interest on debt, \$1,175,082; for capital outlay, \$5,612,327. Revenues were \$29,518,827. Of these, property taxes furnished \$5,275,558; sales taxes, \$6,134,783 (chiefly the tax on gasoline, \$5,269,331); departmental earnings, \$2,993,443; sale of licenses, \$6,405,643; unemployment compensation, \$1,871,986; Federal or other grants-in-aid, \$4,873,746. Funded debt outstanding on June 30, 1937, totaled \$30,056,300. Net of sinking-fund assets, the debt was \$29,969,380. On an assessed valuation of \$661,209,219 the State levied for the year ended June 30, 1938, ad-valorem taxes of \$4,929,480.

The State's alcoholic monopoly expended in the fiscal year \$4,258,804 and received \$5,568,422, not included in any sums above.

Education. Aided by an increase in the appropriation for the State's equalization fund, the towns of Maine were in many cases able in 1938 to lengthen the yearly period of operation of their public schools, to increase teachers' salaries, and to increase their supplies of library books and other equipment.

Political and Other Events. Maine as a whole was less extensively concerned with Federal undertakings and policies than it had been for some years previous. The year passed without essential economic, social, or political change. About 12,000 persons received old-age assistance. Despite high expenditure, the State budget was balanced.

Gov. Lewis O. Barrows (Rep.) was re-elected (September 12), defeating former Governor Louis J. Brann (Dem.) by a vote of about 9 to 8, proportionately somewhat more Republican than the vote that had beaten Brann for Senator in 1936. The three Republican U.S. Representatives were re-elected. In the campaign for Governor, Barrows declared that the question was, "whether Maine is going to have a New Deal kind of Government," and championed the negative; Brann declared for getting all possible money from the Federal Government and blamed Barrows for failing to take full advantage of Federal proffers. All three Republican Representatives had the endorsement of the organization supporting the Townsend plan for higher pensions to the elderly, and two of them actively advocated the plan.

Kennebunkport rejected at a town meeting in March, a proposal to resume its ancient name of Arundel.

Officers. The chief officers of Maine serving in 1938 were: Governor, Lewis O. Barrows (Rep.); Secretary of State, Frederick Robie; Treasurer, Belmont A. Smith; Auditor, Elbert D. Hayford; Attorney-General, Franz U. Burkett; Commissioner of Education, Bertram E. Packard.

Judiciary. Supreme Judicial Court: Chief Justice, Charles J. Dunn; Associate Justices, Charles P. Barnes, James H. Hudson, Harry Manser, Guy H. Sturgis, Sidney St. F. Thaxter.

MAINE, UNIVERSITY OF. A coeducational State institution of higher learning at Orono, founded in 1865. The enrollment for the fall of 1938 was 1876, of whom 1399 were men and 477 were women. The teaching members of the faculty number 171. The productive funds amounted to \$982,828 and the income for the year was \$1,704,114. The library has 129,000 volumes. The enrollment at the 1938 summer session, including the University's Biological station on Frenchman's Bay at Lamoiné, was 648. President, Arthur A. Hauck, Ph.D.

MALDIVÉ ARCHIPELAGO. See CEYLON.

MALONEY ACT. See FINANCIAL REVIEW.

MALTA. A British crown colony in the Mediterranean, 58 miles south of Sicily, consisting of the islands of Malta (95 sq. mi.), Gozo (26 sq. mi.), and Comino (1 sq. mi.). Total area, 122 square miles; civil population (Jan. 1, 1937), 262,165, compared with 241,621 (1931 census). During 1936 there were 8875 births, 4617 deaths, 1878 marriages. There were 35,197 pupils in the 302 schools of all kinds and 197 students in the university at the beginning of the school year 1936-37. Valetta, the capital, had 22,779 inhabitants in 1931. Maltese and English are the official languages. Malta is the headquarters of the British Mediterranean Fleet, and is an important link in British Imperial communications.

Production and Trade. Wheat, barley, potatoes, onions, beans, cumin, tomatoes, and grapes were the principal agricultural products: figs and honey are plentiful. Lace, cotton, fligree, beer, cigarettes, wine, and canned tomatoes are produced. Livestock in the colony (Jan. 1, 1937): 9247 horses, mules, and asses, 3823 cattle, 15,030 sheep, 33,707 goats. The fish catch (1936-37) amounted to 1200 tons valued at £76,000. In 1937 imports totaled £4,019,089; exports, including re-exports, £694,597. Vessels entered the ports during 1937 totaled 2507 and aggregated 4,395,908 tons. During 1937-38, 70,853 tourists visited Malta (116,925 in 1936-37).

Government. For 1937-38 revenue totaled £1,301,858; expenditure, £1,349,297. Estimated revenue for 1938-39 was £1,423,556, and estimated expenditure was £1,422,521. The Letters Patent of Aug. 12, 1936, revoking the Malta Constitution Letters Patent of 1921 (as amended in 1933, 1934, and 1936), were proclaimed in Malta on Sept. 2, 1936. They provide for an executive council of 8 members (5 ex officio and not less than 3 nominated by the governor). On July 29, 1938, it was announced that the British government intended to submit to the King draft Letters Patent for a new constitution for Malta, providing for a council of government consisting of 8 official and 2 unofficial members nominated by the governor, and 10 elected members. Governor and Commander-in-Chief, Gen. Sir Charles Bonham-Carter; Lieutenant-Governor, John A. Hunter.

History. The British Secretary for War visited Malta on Apr. 16, 1938, and inspected the fortifications. Malcolm MacDonald, the British Colonial Secretary, arrived in Malta on August 8 after having been to Palestine. He proposed to study local reaction to the new constitution (see under *Government*, above) which will restore partial self-government to Malta in 1939. During October, 1938, it was reported that there were deficiencies in the supply of gas masks and bomb-proof shelters for the civilian population, which contrasted sharply with the elaborate preparations made by the military authorities for the protection of the wives and children of the armed forces.

MANCHOUKUO, mǎn'jō'kwō'. A state established under Japanese protection Mar. 1, 1932, at first comprising the former Chinese provinces of Fengtien, Kirin, and Heilungkiang in Manchuria

and in 1933 extended to include Jehol in Inner Mongolia. Capital, Hsinking (formerly Changchun). Ruler in 1938, Emperor Kangtē, who was enthroned Mar. 1, 1934.

Area and Population. Including the South Manchuria Railway Zone under direct Japanese jurisdiction but excluding Kwantung (q.v.), the area of Manchoukuo is estimated by Japanese sources at 503,013 square miles. Excluding both the Kwantung Leased Territory and the South Manchuria Railway Zone, the population at the end of 1936 was estimated at 35,337,980 (34,200,923 on Dec. 31, 1935). The racial classification of the 1936 population was: Manchurians, 34,217,512 (all Chinese except about 900,000 Mongols); Koreans, 863,957; Japanese, 189,508; aliens, 67,003. The population of the South Manchuria Railway Zone at the end of 1935 was 501,396. During 1936, 360,000 Chinese entered Manchoukuo and 380,000 left. Korean immigration was limited to 10,000 annually.

Estimated populations of the chief cities on Dec. 31, 1935, were: Hsinking, 248,426 (excluding 63,095 in South Manchuria Railway Zone); Mukden, 443,229 (excluding 84,012 in S.M.R. Zone); Harbin, 458,379; Kirin, 128,754; Yingkou, 123,536; Tsitsihar, 96,652; Antung, 89,185 (excluding 77,053 in S.M.R. Zone); Chinchou, 87,695; Chengte, 46,951; Fushun, 41,656 (excluding 43,515 in S.M.R. Zone).

Education. The school enrollment for 1936 was: 960,600 pupils in 13,100 primary schools, 32,900 in 178 middle schools, 7600 in 80 normal schools, 8270 in 51 vocational schools, 1500 in 7 higher grade and technical schools, and 1987 students in 7 universities and colleges.

Production. Agriculture directly employs about 85 per cent of the population. The area under cultivation in 1937 was 33,619,170 acres and the yields of the chief crops were (in 1000 metric tons): Soybeans, 4121; other beans, 315; kaoliang, 3995; millet, 3163; corn, 2084; wheat, 1034; rice, 648; other crops, 1034; total, 16,394. The production of ginned cotton increased from 1369 metric tons in 1932 to 19,650 tons in 1937. Livestock in 1935 included 1,570,000 cattle, 753,000 mules, 1,998,000 horses, 394,000 donkeys, 5,350,000 swine, and 2,208,000 sheep. Over one-third of the total area is forested and lumbering is an important industry. Mineral and metallurgical output for 1936 was (in metric tons): Coal, 12,020,000; iron ore, 1,300,000 (metal content); pig iron and ferro-alloys, 647,000; steel, 344,000; magnesite, 231,000. Oil from shale, gold, and other minerals are produced. A state gold refinery was opened at Mukden Sept. 16, 1938. The value of gold production in 1937 was about 12,000,000 yen.

Flour milling and the manufacture of soybean oil and cake are long-established industries. Many additional industries were inaugurated under Japanese auspices after 1932. During 1938 a number of machine shops, metal foundries, and munitions works were opened at Mukden and other points.

Foreign Trade. Imports in 1937 were valued at 887,412,000 Manchoukuo yuan (691,830,000 in 1936) and exports at 645,298,000 yuan (602,759,000 in 1936). The value of the chief exports in 1937 was (in 1000 yuan): Soybeans, 226,076; bean cake, 62,336; coal, 35,610; bean oil, 25,343; peanuts, 16,370; millet, 14,197; iron, steel, and their manufactures, 13,350; other beans, 12,542. The value of the principal imports was (in 1000 yuan): Iron and steel, 76,429; machinery and tools, 65,901; automobiles and vessels, 46,406; bleached or dyed cotton cloths, 44,436; unbleached cotton cloths, 42,771;

cotton, raw, 32,202; silk, 30,646; electrical supplies, 26,502; paper, 24,865; sugar, 21,293. Japan took 321,511,000 yuan (49.8 per cent) of the 1937 exports; China, 113,753,000 yuan (17.6); Germany, 59,052,000 yuan (9.1); United States, 18,674,000 yuan (2.9). Of the 1937 imports, Japan supplied 666,270,000 yuan (75.1 per cent); United States, 57,523,000 yuan (6.5); British India, 45,624,000 yuan (5.1); China, 39,324,000 yuan (4.4).

Finance. The general accounts budget for the calendar year 1938 placed estimated receipts and expenditures at 304,555,000 yuan each. Actual general accounts revenues in 1937 amounted to 191,000,000 yuan (ordinary, 187,000,000; extraordinary, 4,000,000), compared with the budget estimate of 248,098,760 yuan.

The special accounts budget estimates for 1938 placed revenues at 1,128,936,828 yuan, including loans of 366,916,000 yuan, and expenditures at 1,088,572,518 yuan. The public debt on Aug. 31, 1935, was 176,720,000 yuan. In addition there were outstanding foreign loans contracted by former Manchurian governments totaling 1,668,624,973 yuan. The Manchoukuo yuan was pegged to the Japanese yen at the rate of one yuan for one yen on Oct. 28, 1935. The yen exchanged at an average of \$0.2879 in 1937; \$0.2845 in 1938.

Transportation, etc. The Manchoukuo state railways, with 5081 miles of line in 1937, and the South Manchuria Railway, with 702 miles of line, are operated jointly by the South Manchuria Railway Co., in which the Japanese Government has a controlling interest. The company also operated the North Chosen Railways (214 miles) in Korea. All of these lines in the fiscal year ended Mar. 31, 1938, carried 17,520,000 passengers, and 25,130,000 metric tons of freight. Completion of the Chengteh-Kupeikow railway in 1938 provided a second route from Manchoukuo to Peiping via the capital of Jehol Province. The operating income was 151,053,000 yen, expenditures, 61,340,000 yen, and profits, 89,713,000 yen. A large network of commercial and military highways have been constructed under Japanese direction. Air lines connect the principal cities with those of Korea and Japan. The Sungari River is an important artery of traffic in the north. Construction of a new port at Hulutao in Lianshan Bay near Chinchow was partially completed in 1938 and steamship services to Japanese ports were opened, permitting direct shipments of coal from the Fushun mines to Japan.

Government. Under the Constitution of Mar. 1, 1934, as amended July 1, 1937, Manchoukuo is a monarchy in which the Emperor exercises both executive and legislative powers, the latter being subject to the approval of the Legislative Council, an advisory body appointed by the Emperor. There is also a Privy Council of five members; a State Council, or cabinet, of six departments; and a General Affairs Board, attached to the State Council, which supervises budgets and national policies. A Planning Council is under the direct control of the Prime Minister.

Actual power rested in the hands of the Japanese Ambassador to Manchoukuo, who was also commander-in-chief of the Japanese and Manchoukuoan troops in Manchoukuo and Governor of Kwantung (q.v.). Japanese Ambassador in 1938, Gen. Kenkichi Uyeda. Prime Minister, Marshal Chang Ching-hui, whose cabinet was reorganized May 7, 1937.

HISTORY

Economic Trends. The transformation of Manchoukuo into a military, political, and eco-

nomic appendage of Japan continued at a rapid pace throughout 1938. Non-Japanese foreigners were progressively excluded from economic, professional, cultural, and religious activities. A growing proportion of Manchoukuo's internal and external trade was diverted to Japan through Manchoukuo state monopolies, embargoes on exports, trade quotas, tariff manipulations, exchange restrictions, and discriminations of various kinds against non-Japanese traders. The second five-year plan for industrial development, inaugurated in 1937, was revised during 1938 to bolster Japan's military campaigns in China and to prepare for the expected conflict with the Soviet Union. Capital was diverted increasingly into heavy industries and the manufacture of munitions and armaments, leaving a shortage of consumers' goods that caused a sharp rise in prices. The government fixed prices for wheat and flour to check profiteering.

On August 10 the Central Bank of Manchou assumed exclusive control of the buying and selling of foreign exchange for the purpose of segregating a maximum of foreign exchange to finance the development of heavy industries, of Japan's local munitions plants, and of war purchases. Licenses for imports from non-Japanese sources were drastically curtailed. A four-year program for the development of the Japanese Empire, Manchoukuo, and North China as a single economic bloc was launched shortly afterward.

Foreign Agreements. The diversion of Japanese and local Manchurian capital into war industries was due in part to the failure of Japanese efforts to raise loans in the United States and Great Britain for the development of Manchoukuoan industries. Some progress was made, however, in opening foreign markets for Manchoukuo's exports. On May 12, 1938, Germany concluded a treaty with Manchoukuo establishing diplomatic, consular, and commercial relations and thus formalizing Germany's previous tacit recognition of Manchoukuo as an independent state. Later Manchoukuo's barter agreement with Germany was extended to the end of May, 1941. In revised form, it provided for the annual purchase by Germany of beans, vegetable oils, and pig bristles to the value of 100,000,000 yen against an equivalent in foreign exchange and German goods.

On Sept. 1, 1938, a trade agreement between Italy, Japan, and Manchoukuo was ratified under which Italy was to supply products valued at 90,000,000 lire to Japan and 60,000,000 lire to Manchoukuo in return for Manchoukuoan products worth 120,000,000 lire (oil seeds, soybean oil, pepper oil, pig bristles, wild silk, magnesite) and Japanese products valued at 30,000,000 lire. Previously an Italian economic mission had visited Manchoukuo. Poland also made overtures toward recognition of Manchoukuo and the establishment of trade relations.

War Preparations. In preparation for war with the Soviet Union Japanese military authorities rushed the construction of strategic highways and railways and of fortifications at vital points along Manchoukuo-Soviet frontiers. Great quantities of military equipment and supplies were accumulated and an army of between 300,000 and 400,000 picked Japanese troops was maintained in Manchoukuo. Some of these troops concentrated their efforts upon the eradication of banditry, which the Japanese charged was supported and encouraged by Soviet agents. In the spring of 1938 Japanese sources estimated that anti-Japanese bandit and guerrilla bands had been reduced from about 350,-

000 men in January, 1932, to about 10,000, confined largely to mountainous districts along the lower Sungari River and the Manchoukuo-Korean-Siberian borders. In November foreign missionaries and Japanese news sources reported that Chinese Communists had won control of several isolated regions of Manchoukuo north of Harbin and northwest of Tsitsihar. The Japanese countered these moves by military expeditions and an intensive anti-Communist propaganda.

Late in April the Japanese authorities nipped in the bud a widespread conspiracy among Manchoukuoan army officers for an anti-Japanese rising. More than 40 of the conspirators were condemned to death by court-martial and a number of Japanese officers were imprisoned for permitting the plot to develop to a dangerous stage. Between 50 and 100 Japanese military planes were destroyed in a fire at the Mukden airport and oil tanks at Dairen were set ablaze just prior to the arrest of the conspirators. The bulk of the Manchoukuoan populace, enjoying prosperity resulting from the war boom, was reported acquiescent to Japanese control but not co-operative.

Japan brought pressure upon the Soviet Union to accede to Japanese demands for fishery rights in Soviet waters and for other concessions by causing the Manchoukuoan Government on March 17 to withhold the final installment of 5,981,625 yuan on the purchase price of the Chinese Eastern Railway. Meanwhile, there were sporadic clashes at various points along the Manchoukuoan-Soviet frontier, which culminated in July and August in the fighting for the heights of Changkufeng that brought Japan and the Soviet Union to the verge of a general war.

The Changkufeng Clash. On July 11 Soviet troops occupied the Changkufeng heights on the Soviet-Manchoukuo-Korean frontier a few miles inland from the head of the strategically important Possiet Bay. There they erected defense works dominating the railway line connecting the Northern Korean ports of Rashin and Yuki with the Manchurian railway network. Soon afterward Japan protested to Moscow that the Soviet troops were on the Manchoukuoan side of the frontier and demanded their withdrawal. Foreign Minister Litvinov replied that the Changkufeng heights were Soviet territory according to the Chino-Russian Treaty of Peking (1861) and the supplementary Hunchung Agreement of 1886. The war scare spread by the Japanese and Soviet press died down immediately after July 21 when the Soviet Foreign Minister sharply rebuffed the Japanese Ambassador's threat of forceful action.

Then on July 29 a large force of Japanese army regulars attacked the Soviet defense works and by July 31 occupied the disputed heights along a 4-mile front. The Russians immediately rushed troop reinforcements, airplanes, tanks, and heavy artillery to the fighting zone and counter-attacked. After heavy fighting, accompanied by Soviet air raids on towns in Northern Korea and Manchoukuo behind the Japanese lines, the Soviet First (Maritime) Army by August 10 apparently regained a considerable part of the Changkufeng heights.

Japan had meanwhile transferred considerable bodies of troops from North China and sounded out Germany as to the possibility of military aid in the event of a Japanese-Soviet war. The German Government apparently made no commitments and the Japanese decided that the time was not opportune for the long-expected showdown with Russia. Ac-

cordingly a Japanese-Russian armistice was concluded at Moscow shortly before midnight on August 10 and went into effect at noon (Changkufeng time) the following day. Under the agreement both sides were to hold the positions occupied at midnight of August 10. The disputed sector of the frontier was to be delimited by a mixed commission formed of two Soviet and two Japanese-Manchoukuoan representatives.

The composition of the commission represented an important concession by Japan, which had previously held out for equal representation for Manchoukuo in any Soviet-Japanese-Manchoukuoan negotiations. The Japanese, however, refused to accept a neutral arbitrator on the boundary commission or to sign an agreement and map showing the existing positions of the Japanese and Soviet troops. Casualties on both sides during the fighting at Changkufeng were estimated at between 1500 and 2000. An uneasy truce, marked by occasional minor clashes, reigned over the frontier during the remainder of the year.

MANITOBA, mǎn'ī-tō'ba. A prairie province in west-central Canada. Area, 246,512 square miles; population (June 1, 1938, estimate), 720,000 compared with 711,216 (1936 census). During 1936 there were 12,855 births (18.1 per 1000), 6219 deaths (8.7 per 1000), and 5756 marriages (8.1 per 1000). Chief towns (1936 population figures in parentheses): Winnipeg, the capital (215,814), Brandon (16,461), St. Boniface (16,275), Portage la Prairie (6538), and Transcona (5578). In 1936 there were 166,396 pupils enrolled in schools of all kinds, including 4915 in the universities and colleges.

Production. The gross value of agricultural production for 1937 was estimated at \$121,253,000 (\$77,659,000 in 1936) of which field crops represented \$90,930,000 (\$50,401,000 in 1936). Other important items making up the 1936 total of agricultural production were dairy products, \$11,631,000; farm animals, \$9,068,000; poultry and eggs, \$3,629,000. Livestock (June 1, 1937): 324,700 horses, 847,000 cattle (including 390,400 milch cows), 216,200 sheep, 228,900 swine, and 4,333,000 poultry. Fur production for the year ended June 30, 1936, totaled 379,191 pelts valued at \$1,291,854. The output of the forests in 1936 equaled 67,224 M cu. ft. valued at \$2,426,001. In 1937 the fish catch was valued at \$1,796,012.

Mineral production for 1937 was valued at \$15,751,645 of which gold (157,949 fine oz.) accounted for \$5,526,636; copper (44,920,835 lb.), \$5,874,747; zinc (36,221,314 lb.), \$1,775,569; silver (905,179 fine oz.), \$406,253; cadmium (164,223 lb.), \$269,326. In 1936, from the 1011 manufacturing plants, with a total of 22,507 workers, the net value of products was \$45,015,577 (central electric stations, and dyeing, cleaning, and laundry work ceased to be regarded as "manufacturing" industries for 1936).

Government. For the year ended Apr. 30, 1938, revenue totaled \$16,932,889; expenditure, \$16,427,700; bonded debt, \$127,493,497. The government is

administered by a lieutenant-governor (appointed by the governor-general in council) and he is advised by a ministry of 8 members who are members of the legislative assembly of 55 members elected for a term of 5 years by popular vote of the people. Manitoba is represented in the Dominion parliament at Ottawa by 6 Senators (appointed for life) and 17 members in the House of Commons. Lieutenant-Governor, William J. Tupper (appointed Nov. 17, 1934); Premier, John Bracken. See CANADA.

MARIANA (LADRONE) ISLANDS. See JAPANESE PACIFIC ISLANDS.

MARIE. Dowager Queen of Rumania and widow of King Ferdinand, died at Sinaia, Rumania, July 18, 1938. Born at Eastwell Park, Kent, England, Oct. 29, 1875, the daughter of the Duke of Edinburgh and the Grand Duchess Marie of Russia, and granddaughter of Queen Victoria and of Czar Alexander III, she was educated privately, and on Jan. 10, 1893, was married to Prince Ferdinand of Hohenzollern-Sigmaringen, at Sigmaringen, Germany.

On the death of King Charles, uncle of Ferdinand, on Oct. 10, 1914, Ferdinand ascended the throne, but the World War prevented his coronation, and he was not crowned until Oct. 15, 1922. After accession to the throne, the Queen exercised a strong influence upon the course of Rumanian and Balkan politics, and she was frequently credited with bringing Rumania into the World War on the side of the Allies. During the parlous war times, the Queen endeared herself to the people of her adopted country by her charitable and social work.

In 1926 it was announced that the Queen would make an extended tour of the United States and Canada, and many rumors arose concerning the purpose of the visit, the most common being that she came to raise a huge American loan for Rumania, but subsequent events failed to bear this out. She arrived in the United States on Oct. 18, 1926, accompanied by her daughter, Ileana, and her son, Nicholas, and amid a fanfare of publicity started on her journey. It was marred by bickering among her official party and hostile demonstrations in the large cities, and the Queen's prestige was considered lowered both at home and abroad. The trip was halted by the illness of King Ferdinand and the Queen and her entourage sailed from New York on Nov. 24, 1926.

King Ferdinand died on July 20, 1927, and, Prince Carol having renounced his rights of succession in 1925 and his son, Michael, being made heir, a Regency was appointed to rule until Michael should attain his majority. The Queen thereupon retired to private life, although it was claimed that she was disappointed at not being named sole regent. In 1929, when one of the members of the Regency died, she attempted to regain her former political influence, but the Premier did not present her name to Parliament as a candidate. After Carol returned to Rumania and was proclaimed King in 1930, the Queen continued to live a more or less retired life.

Marie was one of the most beautiful and talented women of her generation and was one of the most popular of royal rulers. She was often referred to as the "Mother-in-law of the Balkans," her children having married as follows: Carol, Princess Helen of Greece in 1921 (divorced, 1928); Marie, King Alexander of Yugoslavia (assassinated in 1934) in

1922; and Elizabeth, Prince George (King George II) of Greece in 1921 (divorced, 1935).

In 1934 the first volume of the Queen's memoirs appeared under the title of *The Story of My Life*, and in 1935 the second volume was published. Previously she had written a play, *The Lily of Life* (1913, produced in Paris in 1920); *My Country* (1916); *Stealers of Light* (1916); *Ilderim* (1925), and *The Mask*, a novel (1935), and during her American visit she wrote a syndicated column for the newspapers. In 1918 she was made an honorary member of the French Academy of Fine Arts.

MARIETTA COLLEGE. A nonsectarian coeducational institution at Marietta, O., chartered in 1797. The total registration for the autumn term of 1938 was 405, of whom 241 were men and 164 women. The 1938 summer school enrollment was 15. The faculty numbered 37. The endowment amounted to \$1,329,936 and the income for the year was \$135,056. The library contained 113,147 volumes. During 1938 the college raised \$368,417 of a \$1,500,000 endowment. President, Harry Kelso Eversull, D.D.

MARIISK AUTONOMOUS SOVIET SOCIALIST REPUBLIC. See RUSSIAN SOVIET FEDERATED SOCIALIST REPUBLIC.

MARINE DISASTERS. Although several vessels were damaged by storms and groundings, yet the loss of life was fortunately small. One of the nearest approaches to a heavy loss was the collision in a fog of the *Mandalay*, an excursion vessel, with the steamship *Acadia* in New York harbor, May 28. The *Mandalay* sunk in a few minutes after being struck, yet not a life was lost. Another accident which might have developed very seriously was an explosion which started a fire on the Hamburg-American liner, *Deutschland*, bound for New York, when about 200 miles southeast of Cape Race, Newfoundland, on October 25. SOS calls were sent out, but the fire, although a serious one, was under control in a few hours, and the *Deutschland* proceeded on to New York without assistance. Major marine disasters were the following:

January 15. During heavy storms in Great Britain, the coastal steamships *Glan Rhya* and *Lochshira* were lost with all on board. A total of 22 perished on the former.

February 13. The ferryboat *Rodney* capsized in Sydney Harbor, Australia, with 8 known drowned and 12 missing. The accident occurred when 150 passengers rushed to the side to view the sailing of the U.S. cruiser *Louisville*.

February 15. In a storm on the Mediterranean, the Italian S.S. *Janicolo* was feared lost with all on board.

March. The freighter *Anglo-Australian* disappeared in mid-Atlantic while on a voyage from England to Vancouver, B. C. Although reported on March 14 off the Azores, no trace of her was found.

June 2. At Maghagha, Upper Egypt, 30 drowned as a river boat capsized.

August 1. In an explosion on the Italian cruiser *Quarto* at Majorca, 15 sailors were killed and 20 wounded.

August 5. At Quarteira Beach, Portugal, a motorboat crash killed 29.

August 12. At Surat, India, a festival boat capsized in the Tapi River; 45 lost.

September 29. The British trawler *San Sebastien* struck a reef at Bjoernde, south of Spitsbergen. The crew of 15 perished.

MARQUESAS ISLANDS. See OCEANIA, FRENCH ESTABLISHMENTS IN.

MARQUETTE UNIVERSITY. An institution of higher education for men and women, under Roman Catholic direction, in Milwaukee, Wis., organized as a college in 1881 and chartered as a university in 1907. The total enrollment for the autumn of 1938 was 4003. The registration for the 1938 summer session was 864. The faculty numbered 392. Endowment funds amounted to \$2,510,713. The income for the year was \$1,323,230, which included the value of the services rendered gratis by the Jesuits in 1937-38. The library contained 90,740 volumes. President, The Rev. Raphael C. McCarthy, S.J., Ph.D.

MARSHALL ISLANDS. See JAPANESE PACIFIC ISLANDS.

MARTINIQUE, mār'ti-nēk'. A French West Indian colony. Area, 385 square miles; population (1936 census), 246,712. Capital, Fort-de-France; had 43,338 inhabitants in 1931. The production of chief crops, in metric tons, was: Sugar, 51,500 (1937-38 estimate); bananas, 25,176 (1936); cacao, 46 (exports, 1936). Other products are rum, pineapples, coffee, and tobacco. In 1937 the estimated value of merchandise imports (in old U.S. gold dollars) was \$6,600,000 (1936, \$5,500,000); exports, \$8,000,000 (1936, \$6,800,000). In 1936, 723 vessels entered and 718 vessels cleared Martinique ports. In 1937 there were 479 miles of roads. For 1936 the budget was balanced at 96,515,000 francs (franc averaged \$0.0611 for 1936). Government is under a governor assisted by an executive council, an elected general council, and elected municipal councils. It is represented by one senator and two deputies in the French parliament.

MARYLAND. Area and Population. Area, 12,327 square miles; included (1930) water, 2386 square miles. Population: Apr. 1, 1930 (census), 1,631,526; July 1, 1937 (Federal estimate), 1,679,000; 1920 (census), 1,449,661. Baltimore had (1930) 804,874 inhabitants; Annapolis, the capital, 12,531.

Agriculture. Acreage, production, and value of the chief crops of Maryland, for 1938 and 1937, appear in the accompanying table.

Crops	Year	Acreage	Prod. Bu.	Value
Corn	1938	501,000	18,537,000	\$10,195,000
	1937	516,000	18,576,000	11,331,000
Wheat	1938	471,000	9,420,000	5,935,000
	1937	476,000	9,044,000	9,225,000
Tobacco	1938	37,500	29,250,000 ^a	5,850,000
	1937	35,000	23,450,000 ^a	4,104,000
Hay (tame)	1938	382,000	543,000	5,104,000
	1937	385,000	518,000 ^b	6,009,000
Potatoes	1938	26,000	2,990,000	1,794,000
	1937	30,000	3,480,000	2,123,000

^a Pounds. ^b Tons.

Mineral Production. Coal mines in Maryland dug 1,570,000 net tons of coal in 1937, as against 1,703,589 (value \$3,351,000) in 1936. Coal from other States was brought in, and with it were made 1,513,752 net tons of coke (1937), as against 1,217,039 tons in 1936. Much of this coke went into making iron from imported ores.

Finance. Maryland's State expenditures in the year ended Sept. 30, 1937, as reported by the U.S. Bureau of the Census, were: For maintaining and operating governmental departments, \$28,426,967 (of which \$4,248,074 was for highways, \$6,581,972 was for charities, and \$4,366,230 was for local education); for interest on debt, \$1,911,646; for capital outlay, \$7,226,104. Revenues were \$48,778,527. Of these, property taxes furnished \$5,975,489; sales taxes, \$12,125,942 (including tax on gasoline, \$7,539,492); departmental earnings, \$4,211,818;

sale of licenses, \$9,689,609; unemployment compensation, \$6,907,061; Federal or other grants-in-aid, \$6,426,285. Funded debt outstanding on June 30, 1937, totaled \$52,004,400. Net of sinking-fund assets, the debt was \$50,787,303. On an assessed valuation of \$2,650,729,847 the State levied in the year ad-valorem taxes of \$5,494,031.

Education. After studying the subject of salaries in Maryland's public-school system, a committee of county superintendents recommended in 1938 that the Legislature revise the law as to minimum salaries, so as to vary the minima in accordance with teachers' training and experience, rather than according to the positions held.

Charities and Corrections. The Board of State Aid and Charities was in 1938 Maryland's chief administrative authority for the divers sorts of public support of the needy, for the State's subsidies to numerous hospitals, homes for the aged and for children, and other institutions and agencies. It also dealt with the State's yearly grants to 11 places of higher education. The institutions directly maintained by the State for the care and custody of persons (mental hospitals, sanatoria for the tuberculous, correctional institutions, a school for the feeble-minded, a school for the deaf, and the University Hospital) were run on separate budgets.

The cost of public non-institutional support for the needy in Maryland ran, during the year ended with Sept. 30, 1938, at an average somewhat over \$2,000,000 a month, exclusive of the temporary support for persons thrown out of employment, or unemployment compensation. The Federal Government paid about two-thirds of the monthly total, in the form of wages from the Works Progress Administration and maintenance of individuals in the Civilian Conservation Corps. The remaining third, which came to \$8,358,169 for the year (exclusive of the administrative expense), consisted of old-age assistance, support for children in needy families, and maintenance for the needy blind, all three of which were defrayed in part by the Federal Government, and of general poor-aid, for which counties or other local units paid. In September, 1938, the "families" receiving either general poor-aid, or support for elderly, minor, or blind indigents, or a combination of such forms of public support numbered 29,492. The State paid during the year, toward such support and for administrative costs, \$3,169,783; localities, \$3,109,322; and the Federal Government, \$2,891,564.

Political and Other Events. The movement to bridge tidal waters that cut the State's communications was advanced by assurance from the Federal Administration of readiness to provide money for some of the proposed work. President Roosevelt, on his speaking tour against Senator Tydings, in an address (September 4) near Morgantown, declared in particular that the projected bridge over the Potomac estuary, leading into Virginia, was both desirable for civil purposes and also a military necessity for the defense of Chesapeake Bay. He said that the bridge must be built "as fast as we can do it." A proposed bridge over the Susquehanna at Havre de Grace, gained approval for a grant of \$2,167,000 from the PWA late in September.

The Federal Government arranged to acquire from the Baltimore & Ohio Railway for \$2,000,000 the old Chesapeake & Ohio Canal, following the Potomac from Cumberland to Washington. It was to be maintained as a national monument.

Elections. Millard E. Tydings (Dem.) was re-

elected U.S. Senator at the general election (November 8), defeating Oscar Leser (Rep.). Six Democrats were elected to the Federal House of Representatives. Herbert R. O'Connor (Dem.) was elected Governor, defeating Gov. Harry W. Nice (Rep.), who sought re-election.

The re-election of Tydings followed his renomination (September 12) after a primary campaign made dramatic and singular by President Roosevelt's visiting the State to speak against Tydings, his fellow-Democrat. The President's address on Labor Day, at Denton, said that he proposed to keep the Democratic party liberal, praised Representative David J. Lewis, Tydings's opponent at the primary, and without mention of Tydings, drew a comparison between liberalism and conservatism, unfavorable to the latter.

Officers. The chief officers of Maryland serving in 1938 were: Governor, Harry W. Nice (Rep.); Secretary of State, E. Ray Jones; Treasurer, Hooper S. Miles; Auditor, James L. Benson; Comptroller, William S. Gordy, Jr.; Attorney-General, Herbert R. O'Connor; Superintendent of Schools, Albert S. Cook.

Judiciary. Court of Appeals: Chief Judge, Carroll T. Bond; Associate Judges, Benjamin A. Johnson, T. Scott Offutt, William Mason Shehan, Francis N. Parke, Hammond Urner, Walter J. Mitchell, D. Lindley Sloan.

MARYLAND, UNIVERSITY OF. A coeducational State institution of higher learning at College Park and Baltimore, Md., founded in 1807. The enrollment for the autumn term of 1938 was 4144. The 1938 summer school had an attendance of 1492. The faculty numbered 673. The total income from appropriations and other receipts for the year ended Sept. 30, 1938, amounted to \$3,732,000. The library contained 122,000 volumes. A large construction program, aggregating more than \$2,000,000, was under way. President, H. Clifton Byrd.

MASSACHUSETTS. Area and Population. Area, 8266 square miles; included (1930) water, 227 square miles. Population: Apr. 1, 1930 (census), 4,249,614; July 1, 1937 (Federal estimate), 4,426,000; 1920 (census), 3,852,356. Boston, the capital, had (1930) 781,188 inhabitants; Worcester, 195,311; Springfield, 149,900.

Agriculture. Acreage, production, and value of the chief crops of Massachusetts, for 1938 and 1937, appear in the accompanying table.

Crop	Year	Acreage	Prod. Bu	Value
Hay (tame)	1938	391,000	575,000 ^a	\$8,338,000
	1937	395,000	584,000 ^a	8,994,000
Cranberries	1938	13,700	300,000 ^b	3,150,000
	1937	13,700	565,000 ^b	4,520,000
Apples	1938	2,524,000	2,650,000
	1937	3,465,000	3,257,000
Potatoes	1938	15,700	2,041,000	1,531,000
	1937	16,700	2,254,000	1,600,000
Tobacco	1938	5,900	6,702,000 ^c	1,419,000
	1937	5,900	6,702,000 ^c	2,197,000
Corn	1938	39,000	1,482,000	1,052,000
	1937	40,000	1,640,000	1,410,000

^a Tons. ^b Barrels. ^c Pounds.

Education. Enrollments of pupils in the public schools in the academic year 1937-38 numbered 729,849; membership in the schools averaged 697,541 pupils. The enrollment comprised 444,950 in the elementary group, 108,241 in junior high schools, and 176,658 in high schools. The year's expenditure for public-school education, \$70,639,812 for support and \$2,377,468 for outlay, totaled \$73,017,280. Teachers, principals, and superintendents numbered 26,148; their estimated average salary for the year was \$1933.

Enactments in Massachusetts in 1938 admitted to participation in provisions of the system of retirement those teachers who were employed on part time; made additional provision for training adults in the duties of citizenship; furnished encouragement for public-school instruction in lip-reading; and required high schools and teachers' colleges to give courses on the State constitution.

Charities and Corrections. The task of restoring the State's administration of its mental hospitals to a suitable basis, after the disclosures and controversies of 1937, was hindered by Governor Hurley's political preoccupations and difficulties. The resignation of Commissioner Williams of the Department of Mental Diseases, which Hurley undertook to force in 1937, was not obtained for nearly a year. Eventually the Department was renamed and reorganized as the Department of Mental Health, headed by Dr. Clifton T. Perkins as Commissioner, and charged with supervision of the State and other mental hospitals. The 12 State mental hospitals had (July 27) 20,884 inmates; the Monson State Hospital, for epileptics, 1545; the three State schools for mental defectives, 5283.

Persons in the State's penal and reformatory institutions (November 1) numbered 4304; these institutions were the State Prison, at Charlestown; State Prison Colony, Norfolk; Reformatory, Concord; Reformatory for Women, Framingham; and State Farm, Bridgewater. The Governor's appointment of Dr. P. J. Jakmauh as Commissioner of Health was opposed by a committee of the Massachusetts Civic League, which demanded that someone with fuller special training for the task be named; this department had among its duties jurisdiction over four sanatoria for tuberculosis and a hospital for cancer.

The Department of Public Welfare (Walter V. McCarthy, Commissioner) supervised the aid given to divers needy groups through the localities, and the care of persons, numbering about 4200, in the State infirmary, Massachusetts Hospital School, Lyman School for Boys, Industrial School for Boys, and Industrial School for Girls.

Legislation. The General Court convened in regular annual session at the beginning of January and adjourned on August 24. The session outlasted any other up to that time. Governor Hurley contributed to its length in an effort to extract from it a great appropriation that he called necessary for additional support to the indigent in a situation that he described as an emergency. Hurley first asked the Legislature to provide, through the issuance of bonds, \$23,625,000 to be spent in the construction or improvement of State hospitals for the mentally afflicted, for road work, and for other purposes. Republican legislators, unwilling to put so great a sum in the Governor's hands shortly before his campaign for re-election, on a plea of emergency that did not carry conviction beyond the bounds of his own party, blocked the proposal. The Governor asked again, reducing the total of the demand to \$15,000,000, but again without result. In a third effort, made in June, he sought only \$9,000,000, with no more success. The Legislature, by way of compromise, thrice passed legislation to distribute among the cities and towns \$5,000,000 from the balance of the highway fund. Hurley, insisting on his proposal, vetoed this legislation twice; as the session could not terminate until he prorogued it, he kept it in existence for about six weeks beyond the time needed for other measures. Eventually he permitted the \$5,000,000 allocation to go through.

The appropriations, though less than the total that the Governor demanded, ran unusually high. Their total was reported somewhat to exceed \$77,000,000 for the new fiscal year. They included about \$22,000,000 for the expenditure of the State's Department of Public Works. The levy of the State's tax on property for the year was made \$17,000,000, exceeding that for the year before by some \$3,000,000.

Other acts of the session authorized all cities except Boston to decide by referendum whether they severally wanted local government by city managers and councils chosen on the plan of proportional representation; sent to Congress a memorial in favor of the Townsend plan for higher public support to the elderly; imposed a surtax at the rate of 10 per cent of the State's tax on incomes; provided for verification of voting lists throughout the State; authorized Boston to issue \$9,000,000 in bonds, wherewith to retire floating debt due to tax delinquencies and other bad bills; outlawed breach of promise to marry as a ground for lawsuits; provided for the teaching of the Italian language, where requested by parents of 25 pupils in any high school having 150 registered pupils; authorized Boston to grant policemen one day off in every seven; did away, for one year, with the employees' contributions to the State fund for unemployment compensation; and authorized the local creation of housing authorities to supervise the building of better housing in slums, thus rendering the State hospitable to an anticipated \$31,700,000 of Federal financing for such enterprises. An effort to repeal the act requiring of teachers an oath of loyalty was defeated. See CHILD LABOR.

Political and Other Events. Massachusetts was one of the 21 States that put into effect in January the payment of unemployment compensation to persons thrown out of work. The time being one of widespread industrial inactivity, about 117,000 persons registered as applicants for such payments in the first five days of the year. Payments began at the end of the month, out of an accumulated fund of about \$40,000,000 held for the State by the Federal Government. The total number of persons eligible at the time was put near 123,000.

Dr. David L. Williams, State Commissioner of Mental Diseases, who had been incapacitated by illness for several months after Governor Hurley sought his resignation early in 1937, and against whom proceedings had been put off, accused Lieutenant-Governor Kelly (March 7) of having assaulted him, shortly before his illness, in the previous May; Kelly denied the accusation and offered an alibi. Chairman Moynihan of the Commission on Administration and Finance, conducting an investigation of the State hospitals at the Governor's direction, reported unfavorably on the Medfield Hospital (April 7). Governor Hurley had repeated difficulties with the Executive Council over its refusals to confirm certain of his appointments. This, combined with his failure to obtain from the Legislature his demand for a large sum to be dispensed on public works by his administration, impaired his strength as a candidate for re-election. The State's Supreme Judicial Court upheld (January 17) the validity of the Governor's course in attaching his declaration, when approving the act abolishing the State's pre-primary conventions, that this act was an emergency measure; the effect of the decision was to defeat a Republican effort to bring the act before the voters,

for their disposal, by process of referendum. Another decision of this court upheld (May 26) the State's law against contraceptives as prohibiting their prescription by physicians, whatever the circumstances of the individual patient's case.

Events in Boston. Mayor Maurice J. Tobin took office in Boston at the beginning of January. He promptly began cutting down the expenditure of the municipality, in the effort to relieve the community of excessive taxation. Though the Mayor's authority extended scarcely to half of the yearly total of the city's disbursements, Tobin effected considerable reduction in that total. Retrenchments in his first few months of office included: A reduction of the Mayor's and certain other of the higher officials' salaries; the adoption of a substantially lower budget than that for the year before, despite a heavy allowance for purposes of public welfare; a reduction at the rate of about \$1,000,000 a year in current purchases of such material as supplies and automobiles; the closing of two municipal branch hospitals and a reduced service on a ferry to East Boston; and the rejection of a project for a new city hall, for which a grant of \$1,125,000, or 40 per cent, from the PWA had been expected. The city obtained from the Legislature authority for an extension of the subway on Huntington Avenue. The pending trial of Edmund L. Dolan and others on charges of corrupt transactions with the Legal Securities Corporation while Dolan was City Treasurer was interrupted by detectives' information that some of the defendants had conspired to buy the voices of 16 persons on the jury list; Dolan and two others were sentenced in May, upon this accusation, to two years' imprisonment in the Suffolk County jail, for contempt of court. See WATERWORKS AND WATER PURIFICATION.

September Hurricane and Floods. The New England hurricane (September 21) swept northward through the eastern part of the State. Its center traveled over Rhode Island before reaching Massachusetts; for this reason only a small stretch of coast east of the Rhode Island line suffered disastrous effects comparable with those in the neighbor State. More than 500 seashore cottages were reported to have been destroyed on Cape Cod; deaths estimated well above 50 occurred along the shore from Fall River to Chatham. About 165 persons were thought to have lost their lives in all the State and offshore. Inland, deaths resulted in some number from falling trees, roofs, bricks, and live wires. Cities and towns in the storm's track quite generally were deprived for a time of electric current, telephones, and the use of some highways and railroads. Damage to property attained a heavy total, supposedly in excess of \$100,000,000, but it was too widespread and various to admit of ready estimation. Losses in Boston were put at \$10,000,000; those to agricultural areas, as in the case of trees stripped of apples, were thought to approximate \$3,000,000. Floods in the Connecticut River basin did some damage; they were due in part to rains that had fallen before the hurricane arrived.

Elections. At the general election (November 8) Leverett Saltonstall (Rep.) was elected Governor, by 942,520 votes (unofficial count), to 793,655 for ex-Governor James M. Curley (Dem.). The other elective state offices were won by Republicans, except that of Attorney-General, which went to a Democrat. Republican majorities in both houses of the General Court were maintained. All the incumbent U.S. Representatives, 10 Republican and 5 Democratic, were re-elected. No

seat in the U.S. Senate came up for election. Ex-Governor Curley, reappearing as a political campaigner, had won the nomination as candidate for Governor in the Democratic primary with unexpected ease from Governor Hurley.

The voters adopted (November 8) the constitutional change, passed by the General Court, to render the regular legislative sessions biennial, instead of annual.

Officers. The chief officers of Massachusetts serving in 1938 were: Governor, Charles F. Hurley (Dem.); Lieutenant-Governor, Francis E. Kelly; Secretary of the Commonwealth, Frederic W. Cook; Treasurer, William E. Hurley; Auditor, Thomas H. Buckley; Attorney-General, Paul A. Dever; Commissioner of Education, James G. Reardon.

Judiciary. Supreme Judicial Court: Chief Justice, Fred Tarbell Field; Associate Justices, Charles Henry Donahue, Henry Tilton Lummus, Stanley Elrod Qua, Arthur W. Dolan, Louis S. Cox, James J. Ronan.

MASSACHUSETTS INSTITUTE OF TECHNOLOGY. A nonsectarian institution for scientific and technical education in Cambridge, Mass., founded in 1861. The enrollment for the autumn of 1938 was 3093, including 692 graduate students. For the summer session, the registration was 1393. There were 274 members on the faculty and 370 other members on the active staff. The productive funds amounted to \$35,567,839, and the income for the year was \$7,162,247. The library contained 332,000 volumes. President, Karl Taylor Compton, D.Sc., D.Eng., Ph.D., LL.D.

MASSACHUSETTS STATE COLLEGE. The land-grant college of Massachusetts, organized for resident instruction, extension education, research, and control services for agriculture founded in Amherst, Mass., in 1863. The student enrollment in the fall of 1938 was 1620. There were 222 enrolled in the summer session. The faculty numbered 260. The income for the year 1938 amounted to \$1,485,093, of which \$1,176,320 was from State appropriation; \$300,486 from Federal appropriation, and \$8287 from endowed funds. The library contains approximately 110,000 volumes and 160,000 pamphlets and reports. President, Hugh P. Baker, M.F., D.Oec., LL.D.

MAUD, CHARLOTTE MARY VICTORIA. Queen of Norway, died in London, Nov. 20, 1938. The youngest child of Edward VII and Alexandra, she was born at Marlborough House, London, Nov. 26, 1869, while her father was still Prince of Wales. She was educated privately and simply, was taught to cook and to sew, and became an accomplished linguist. Her real interest, however, was in sports and she became noted as a horsewoman. On July 22, 1896, the young princess was married at Buckingham Palace to her cousin, Prince Charles of Denmark, a lieutenant in the Danish Navy and a brother of the present Danish King, Christian X. On Nov. 18, 1905, Norway seceded from Sweden, and the Norwegians invited Prince Charles to become their king. He accepted and took the title Haakon VII. The democratic simplicity of the Norwegian court soon won for them the affection and respect of the Norwegian people. They had one son, Prince Olaf, the heir to the throne.

Queen Maud was a Dame Grand Cross of the Order of St. John of Jerusalem, Lady of the Imperial Order of the Crown of India, and Lady of the Royal Order of Victoria and Albert. In 1937 her nephew, King George VI, appointed her a Dame Grand Cross of the Royal Victorian Order.

MAURITANIA. See FRENCH WEST AFRICA. **MAURITIUS,** mô-rish'ûs; -rish'ûs. A British crown colony in the South Indian Ocean. Area, 720 square miles; population (Jan. 1, 1938), 402,071. The foregoing figures do not include the dependencies, a number of small islands between 230 and 1200 miles away, which had an area of 87 square miles and a population (Jan. 1, 1938) of 11,388 including 9977 on Rodrigues. During 1937 there were 14,097 births, 11,527 deaths, and 1951 marriages. The capital, Port Louis, with suburbs, had 55,912 inhabitants in 1936. There were 41,050 students enrolled, in 1937, in the 127 primary and 11 secondary schools.

Production and Trade. Agriculture is the main industry, and of a total cultivated area of 180,082 acres, 145,096 acres were devoted to sugar cane, 20,000 acres to fiber, and 14,986 acres to other crops. The sugar crop for 1938 was estimated at 310,800 metric tons. Tobacco, copra, tea, and alcohol, were also produced. Mauritius produces only a fraction of the foodstuffs required for internal consumption and imports most of the articles of food and drink, as well as manufactured goods. Rice is the staple food of the people. In 1937, exclusive of bullion and specie, imports were valued at Rs34,226,522; exports, including re-exports of Rs748,349, totaled Rs36,081,479 excluding the value of sugar quota certificates estimated at Rs4,900,000 (rupee averaged \$0.3733 for 1937). A sugar quota of 252,000 long tons was allocated to Mauritius for 1938-39.

Government. For the year ended June 30, 1937, revenue totaled Rs15,923,784; expenditure, Rs15,506,431; public debt, £2,977,871 against which the sinking fund totaled £1,857,369. The government is under a governor assisted by an executive council of 6 members (4 ex officio and 2 unofficial), and a legislative council of 27 members (8 ex officio, 6 nominated unofficial, 3 nominated official, and 10 elected by a moderate franchise). Governor, Sir Bede Clifford (appointed May 21, 1937).

MECHANICAL ENGINEERS, THE AMERICAN SOCIETY OF. An organization founded in 1880 to promote the art and science of mechanical engineering and the allied arts and sciences. It includes 16 professional divisions—aeronautic, applied mechanics, fuels, graphic arts, hydraulic, iron and steel, machine-shop practice, management, materials handling, oil and gas power, petroleum, power, process industries, railroad, textile, and wood industries—and a professional division group on heat transfer. The membership at the beginning of the fiscal year, Oct. 1, 1938, was 14,374.

There were held during the year 680 meetings of the local sections of the society, as well as meetings of the student branches and professional divisions. The major meetings, however, were the spring meeting, Los Angeles, Calif., Mar. 23-25, 1938; semi-annual meeting, St. Louis, Mo., June 20-23, 1938; fall meeting, Providence, R. I., Oct. 5-7, 1938; and the annual meeting, New York, N. Y., Dec. 5-9, 1938.

The technical committees of the Society carried on their work in research, standardization, and formulation of safety, power test, and boiler codes and rules. The regular publications during 1938 were: *Mechanical Engineering*, the monthly journal; *Transactions* (including the *Journal of Applied Mechanics*), which contains the year's papers of specialized interest and is also issued monthly, with several supplementary sections containing committee personnel and other general information, memorial biographies, and an index to all publications.

of the society for the year; and the *Mechanical Catalog and Directory*.

The officers for 1938-39 are: President, Alexander G. Christie; vice-presidents, Harte Cooke, Warren H. McBryde, H. H. Snelling, L. W. Wallace, W. Lyle Dudley, Alfred Iddles, James W. Parker; managers, Edward W. Burbank, Kenneth H. Condit, Samuel W. Dudley, Carl L. Bausch, Samuel B. Earle, Frank H. Prouty, Clarke Freeman, W. H. Winterrowd, Willis R. Woolrich; treasurer, W. D. Ennis; secretary, C. E. Davies; assistant secretaries, Ernest Hartford, C. B. LePage; editor, George A. Stetson.

The main office of the society is in the Engineering Societies Building, 29 West 39th St., New York, N. Y. There is a mid-west office at 205 West Wacker Drive, Chicago, Ill., and a mid-continent office, concerned principally with the problems of the petroleum industry, at 211 Midco Building, Tulsa, Okla.

MECKLENBURG. See GERMANY.

MEDICAL ASSOCIATION, AMERICAN. A fedecacy of the constituent, State and Territorial, medical associations, founded in 1847 to "promote the science and art of medicine and the betterment of public health." Members of the association must be members of constituent associations; those in good standing, who have qualified as fellows, constitute the scientific assembly of the association. On Nov. 1, 1938, there were 109,959 members, of whom 69,671 were fellows.

The eighty-ninth annual session was held in San Francisco, Calif., June 15-17, 1938, the house of delegates (in which are vested the legislative powers of the association) and the scientific assembly convening on June 15. At the section meetings leading authorities and investigators in the field of medical science announced and discussed the latest discoveries and methods in treating the sick. The scientific exhibit and the technical exhibit were also of great interest.

The officers elected for 1938-39 were: President, Irvin Abell, Louisville, Ky.; president-elect, Rock Sleyster, Wauwatosa, Wis.; vice-president, Howard Morrow, San Francisco, Calif.; secretary and general manager, Olin West, Chicago, Ill.; and treasurer, Herman L. Kretschmer, Chicago, Ill. The official publication is the *Journal of the American Medical Association*, Morris Fishbein, editor. Eight other scientific journals, each dealing with a special field of medicine, as well as *Hygeia*, a health magazine, the *American Medical Directory*, and the *Quarterly Cumulative Index Medicus* are published by the association. Headquarters are at 535 North Dearborn Street, Chicago, Ill.

MEDICAL JURISPRUDENCE. Identification. Problems in identification continue to play an important role in the year's contributions to Medical Jurisprudence. In his discussion of the Ruxton case, M. Edwin O'Neill (*La. Jour. of Crim. Law and Crimin.*, p. 279) considered identification by comparison of skulls with portraits. That case, it will be recalled, presented an unusual problem of reconstruction and identification of mutilated and dismembered bodies, and the extensive and elaborate evidence developed by police and medicolegal experts contained many unique features never before presented in a criminal trial. From the standpoint of scientific investigation the case is remarkable because of the range of procedures involved, including anatomical studies of the fleshy parts, examination of bones, comparison of feet and shoes, identification of blood stains, studies of teeth, identification of maggots as an indicator of the approxi-

mate time of death, fingerprint analyses, and the identification of various materials found with the bodies, such as fibers, straw, paper, and clothing.

The remains of the two bodies were found in 68 pieces about two weeks after death, considerably disfigured to remove evidence of identity and sex, and because of the extent and character of the mutilation the problem of identification necessitated detailed anatomical work not ordinarily required in cases of similar nature. Perhaps the most interesting procedure used, apparently for the first time in record, was that of making a comparison between the skulls and available portraits of the two victims. In a volume dealing with the scientific phases of the investigation, entitled *Medico-Legal Aspects of the Ruxton Case*, by Prof. John Glaister and Dr. J. C. Brash, the method employed is described in considerable detail. Briefly, this consisted of enlargement of the portraits to life-size, the photographing of the two skulls in natural size in positions as near as possible to that of the heads in the portraits, and superimposing the negative print of a skull with the positive of a portrait. This procedure was adopted after comparisons of the outlines of the skulls and portraits demonstrated close correspondence in all respects. Registration marks were placed on superimposed tracings of the outlines and then transferred to the prints of the portrait and skull. The positive portrait and negative skull, each with the transferred registration marks, were then re-photographed on x-ray films, superimposed, and photographed again on x-ray film by transmitted light; in this way a negative skull with a positive portrait were produced in a transparency in the same relative positions as the superimposed outlines. Observations were made in the outlines and portraits as to the relation of the eyes to their sockets, of the soft parts of the nose to the nasal bones, of the right ear to its bony aperture, of the contour of the skin and bones, and many others. The authors make clear the fact that such comparisons did not furnish absolute proof of identity; however, it was of sufficient importance to be included with the other identifying features of the bodies discovered by different lines of approach. Commenting upon this point, the authors stated (p. 161):

It may perhaps be claimed that the first results of a new technique—especially in the case of Skull No. 2 and the portraits of Mrs. Ruxton in two quite different positions—were surprisingly good. Improvement in technique and the comparison of a skull with a head in three positions might possibly lead to certainty in identification. Even as these comparisons stand, and in the light of the result of the trial and all the evidence of identity, it may be taken as certain that Skull No. 2 was the skull of Mrs. Ruxton, and that it would scarcely have been possible to find another skull that would have fitted the portraits in so many details.

A case of the burning of a new-born child and reconstruction of the skeleton was reported by H. Reuss (*Deut. Zeit. f. Ges. Ger. Medizin*, January, 1938, Bd. 29, s. 253). A woman died from post-partum haemorrhage. The new-born child could not be found. The man with whom the woman was living denied any knowledge of pregnancy or childbirth. In the living-room an intact placenta and umbilical cord measuring 60 cm. were found. In a Dutch oven in the room numerous pieces of bone were discovered, and these, when pieced together, formed the skeleton of a new-born infant. At the post-mortem examination of the woman it was decided that the haemorrhage was of tubal origin. The infant was fully developed, but it was not possible to decide if it had lived before the burning. The man was charged with the crime, although he persisted in denying any knowledge of the birth. Of

course the possibility of the woman as an accomplice could not be excluded.

Identification of Hair. In *Deut. Z. Ges. Ger. Med.*, February, 1938, 29, 399, W. Laves discussed the simple color reaction for use in the examination of hair roots and offered the following method of coloring hair as an aid to its microscopical examination.

Any fat is removed by placing the hair in a mixture of equal parts of alcohol and ether. It is then transferred for 5 to 10 seconds to 5 per cent zinc acetate solution, rinsed in distilled water, and submerged for a further 10 to 30 seconds in a 5 to 10 per cent solution of sodium nitroprusside, after which it is treated with pure alcohol and mounted in Canada balsam. Storage in the dark in a cool place stabilizes the color. The papillary hair bulb and the unhorned part of the root will be of a bright cherry-red color and yet remain transparent, whilst the epidermis cells attached to the hair shaft will remain uncolored. Clean hair, or hair that has fallen out, does not react; torn-out or combed-out hair bulbs show only colored striations corresponding with the cells of the inner root sheath, or a slight reaction in the residue of the unhorned cells at the base of the hair bulb. The advantages claimed for this method are its simplicity, the ease and rapidity with which it can be carried out, and the characteristic effects produced. The hair does not become so deeply coloured as to interfere with its examination in transverse section.

H. Desoille and M. Grinfeder (*Ann. de Med. Leg.*, April, 1938, 18, 306) considered identification of the hair of colored races. They noted that to the naked eye the head hair of a Negro is much more curly than that from the pubic region, and the pubic hair of the Negro in its turn is more curly than that of the European.

On microscopical examination the first thing noted about the hair of the head is its pigment. On slight enlargement the hair appears uniformly black, like horse-hair, and on further enlargement the grains of the pigment are seen to be numerous, dense, and thick, in many places to mask the medullary canal. The bulb shows important differences. In Europeans it is almost straight, as is also the hair that comes from it, which shows only the slightest inflexions. In the Negro, in addition to hairs with some almost straight bulbs, there are others with characteristics not met with in Europeans. Some of the bulbs have a glomerule form, others a helical spiral form, and in others, again, there is a hooked prominence, resembling a fish-hook, on the bulb and on the hair at the point of emergence. The hair itself is extremely frizzy, and gives the impression of a rubber tube of varying diameter, according to whether it is split or whole. The diameter varies; near the bulb it is between 70 and 80 μ , and in the region of the maximum diameter 90 and 100 μ . It is thus slightly wider than in Europeans (71 μ on the average according to Lambert and Balthazard). In the absence of artificial bleaching the medullary index can be estimated only at a few points; it is about 0.22 in comparison with 0.30 in Europeans. As regards pigment the pubic hair has the same appearance as the hair of the head. The bulb, however, is much less distinctive, but the characteristics noted in the head hair are still present, although to a much less pronounced extent. The diameter near the bulb is 90-100 μ (thinner than in Europeans—120 μ , Lambert and Balthazard). Friedenthal recorded similar characteristics in the pubic hair of the Chinese. The curly hair of a fair child showed a slightly twisted bulb, but had an entirely different pigment, thus indicating that a white with very curly hair might show some deviations from the normal, but that the difference from the hair of the Negro is still very pronounced.

Fingerprints. N. Rojas and J. R. Obiglio (*Rev. Assoc. med. argent.*, 1937, 50, p. 164; *Deut. Z. Ges. Ger. Med.*, February, 1938, 29, 260), writing on "Hereditary Destruction of the Papillary Ridges by Disease," described the case of a mother and daughter in whom the finger papillary ridges were so extensively destroyed as to be almost absent. They stress the importance of realizing the nature of possible changes due to pathological processes; those due to injury or certain occupations, or to such diseases as leprosy, tuberculosis, etc., are more readily recognized. They also describe a case in which the papillary ridges had in some places almost entirely disappeared as the result of progressive changes. These changes are hereditary and

may be found in many members of a family; they are due to hyperkeratosis and hyperidrosis, and extend over the entire surface of the hand. In the case reported the changes were due to a hereditary planar keratosis (Meledach disease). In such cases identification must be established by other characteristics, such as distribution of pigment in the iris, peculiarities of race, changes in the teeth, photographic records of the back of the eyes, etc.

Lie Detectors. In *People v. Forte*, 4 N. Y. Supp. (2d) 913 (1938), the court refused to permit a "pathometer" test to be made upon the defendant by Father Summers of Fordham University. Following are excerpts from the court's opinion:

It would be a rash prophet who would dogmatically assert that as a result of scientific research, a device that would be of inestimable value in accurately and unerringly ascertaining the truthfulness of testimony, is impossible of perfection. The extraordinary strides made in so many fields of human endeavor, as a result of scientific study, would stamp as foolhardy any such contention. Whether such a device now actually exists is beyond the question. . . .

There is neither unanimity, nor even approximate agreement, among writers upon the question whether such a device has been perfected.

The Court expresses no opinion on that subject.

To justify the use of any such test "there must first be proof of general scientific recognition that they are valid and feasible." . . .

Even if such tests were generally accepted by scientific men as valid and feasible, innumerable details of procedure would remain to be determined.

In the instant case the defendant, while tried, did not testify, nor has he even stated under oath his innocence. If a test were authorized and proved unfavorable to defendant, would testimony of the test be admissible over defendant's objection and refusal to testify? Some writers express the opinion that use against the defendant of the result of such tests would not violate the inhibition against self-incrimination.

It seems to the Court, that if such tests were authorized, definite rules should be authoritatively established for their conduct. Who would determine the questions to be asked of defendants? If there should be disagreement between the district attorney and counsel for defendant as to any question, how, when, and where should the controversy be determined? Innumerable other difficulties may easily be pictured, all of which, in my opinion, should be regulated before such an innovation is introduced in the law.

Intoxication. In "Diagnosis of Drunkenness," E. W. McCormick, who is a Metropolitan Police surgeon (*Practitioner*, May, 1938, 140, 625), asserted that there is no legal or medical definition of such a state. The Special Commission on Drunkenness of the British Medical Association laid down in their definition that "the word 'drunk' should always be taken to mean that the person concerned was so much under the influence of alcohol as to have lost control of his faculties and render him unable to execute safely the occupation on which he was engaged at the material time." But whether a man is drunk or sober is largely a question of degree. The Road Traffic Act of 1930 brought into use the term "under the influence of drink"; this definition, however, has done little toward simplifying the problem. Various facts have to be taken into consideration when deciding whether an individual is really drunk or not. To begin with, alcohol has a variable effect on different persons. The quantity and quality of the alcohol and the time at which it is taken must also be considered. The effect of alcohol on the nervous system varies with the individual; in some the legs are affected, in others the speech, and again some may be able to walk or speak correctly, but their humor may be maudlin or hilarious. Ocular changes occur in some, and in others the digestive system may be deranged. Thus diagnosis rests on an accumulation of signs and symptoms, and not on those evident in one organ, and an individual is

not diagnosed as drunk merely because his breath smells of alcohol. Discussing the legal aspects of drunkenness, the author goes on to say that following a diagnosis of drunkenness by a police surgeon the accused is then given the opportunity of calling in his own doctor, or of obtaining another opinion, and the fact that by the time the doctor thus called in arrives the accused person has had time to become sober, is one of the principal causes of conflict as regards medical testimony. The police surgeon, however, with his wide experience of such cases, has little difficulty in deciding whether or not a man is under the influence of drink; as evidence of this the author, reviewing the notes of 70 recent cases, states that 30 per cent were dismissed, but that few of those certified escaped later conviction in court.

A rapid chemical test of expired air for the determination of alcohol is described by R. N. Harger, E. B. Lamb, and H. R. Hulpieu in *Int. Amer. Med. Assn.*, Mar. 12, 1938, 110, 775. The advantages claimed are that it does away with the difficulty of obtaining blood and urine for such tests, and also the risk of absorption during such delay. Sulphuric acid (55 per cent) containing a small measured amount of potassium permanganate is used, and the concentration of alcohol is measured by determining the ratio of alcohol to carbon dioxide. A tube attached to a special apparatus is held in the breath stream, and a pump draws the sample through the apparatus, which consists of an all-glass reaction tube to contain the solution, a dehydration tube, and a tube filled with ascarite for the absorption of the carbon dioxide. Tests carried out on 121 subjects showed good correlation between the concentration of alcohol in the blood and the amount of alcohol accompanying 190 mg. of carbon dioxide in the breath. In these tests 4 litres of expired air contained about the same amount of alcohol as 1 cc. of the subject's blood. The authors state that analyses of the breath made on the volume basis should be checked by determining the carbon dioxide in the sample because of possible fluctuation in the amount of alveolar air in the samples.

The Ohio Court of Appeals for the Ninth Judicial District recently rendered an interesting decision bearing upon the question whether or not a motorist accused of driving an automobile while intoxicated could be compelled to submit to a scientific test for alcoholic intoxication (*State v. Gatton*, case No. 1043, decided May 12, 1938). The facts of the case were as follows: After the defendant had been arrested and accused of operating a motor vehicle upon a public highway while under the influence of alcohol, a deputy sheriff requested him to submit to a blood test or urinalysis for alcoholic intoxication. The defendant refused. At his trial, evidence was admitted as to the request to submit and to defendant's refusal; and this was followed by argument of the prosecutor to the jury that they should consider the defendant's refusal to submit to the tests as an inference of his guilt. The defendant objected to the admissibility of this evidence and to the prosecutor's comments, alleging that this constituted a violation of his privilege against self-incrimination. His objection was overruled, a conviction resulted, and the defendant appealed.

Upon appeal the court considered the problem as follows:

We are required to inquire into and ascertain what is meant by the provision of the constitution "No person shall be compelled, in any criminal case, to be a witness against himself." Did the court, when it permitted the

state to show that demand had been made upon the defendant to submit to examination, and defendant's refusal to submit, compel the defendant to be a witness against himself?

As to the prosecutor's comments, the appellate court considered this feature of the objection as merged with the other, because "if such evidence was admissible, then, of course, there was no error in the prosecutor's comment thereon" but "if it was inadmissible, the comment of the prosecutor aggravated the error of its admission."

In upholding the conviction the appellate court said:

It will be observed in the instant case that the evidence offered was not required to be given by the defendant himself, but was given by the deputy sheriff and the doctor called by the deputy to make the examination of defendant. We are unable to observe any merit in the defendant's claim that the introduction of such evidence violated his constitutional rights, and we believe, and hold, that the constitutional inhibition against self-incrimination relates only to disclosure by utterance. No such disclosure was required of defendant in this case.

The evidence offered was admissible, and the right of the prosecutor to comment thereon within reasonable limits invaded none of the defendant's constitutional rights.

There has been an increasing tendency in recent years upon the part of courts of many jurisdictions to extend the scope of the self-incrimination constitutional provisions to entirely unwarranted lengths. Modern-day transportation which enables criminals to travel with great rapidity from one part of a state to another, or from one state to another state, together with improvements in lethal instruments, has made the path of the law-enforcement officer exceedingly rough; and it seems to the members of this court to be high time to discontinue such an attitude towards those accused of criminal offenses, and to secure to them such rights as are clearly guaranteed by constitutional provisions, but no more. Maudlin sentimentality in favor of those accused of crime should not be encouraged.

A case of defense founded on *mania a potu* is described in the *Lancet* (Jan. 29, 1938, 1, 287). On Jan. 22, 1938, Walter Smith, a mate on a barge, was charged at Ipswich with the murder of his skipper in the cabin of the barge at Felixstowe dock in October, 1937. The defense put forward was acute *mania a potu*. The skipper was found dead with two bullet wounds in the heart and one in the head. A medical witness for Smith testified that the accused, when he shot his skipper, was in a condition of acute alcoholic insanity, but Dr. I. D. Dickson, Medical Officer at Norwich Prison, said that he could find no evidence of mental deficiency or insanity, although Smith showed the after-effect of amnesia, which was the usual sequel of a spasm of ungovernable fury due to *mania a potu*. Dr. H. Grierson described the characteristics of this condition, viz., a wild frenzy, lasting for about two hours, in the course of which a person might commit acts of violence of which he would have no subsequent memory. This condition was more likely to occur in persons not accustomed to heavy drinking. In the ordinary course of events, if a person presented a loaded firearm at another it was assumed that he intended to kill him, or to cause bodily injury; if, however, this person were in such a state of drunkenness as to be incapable of forming any intent, the act could be regarded as manslaughter and not murder. Smith's defense of *mania a potu*, disclosed in advance, had created a position with which the Crown was not familiar, but, after reviewing the medical evidence, the Judge asked the jury if they could see any proof of insanity. They returned a verdict of guilty, and the Judge passed sentence of death.

Testamentary Capacity. In a recent case before Mr. Justice Henn Collins (*Brit. Med. Jnl.*, Apr. 9, 1938, 1, 820), judgment was given in favor of a will, although the testator was shown to have been suffering from arteriosclerosis and cerebral

haemorrhage. The brothers of the testator, presenting the will for probate, gave evidence to the effect that the deceased had concentrated for a full hour on the making of the will, and during that time had given lucid answers to questions put by the solicitor. He disinherited his son on the grounds that he was already adequately provided for, and the son contested the will on the ground of testamentary incapacity. The family doctor testified that four days after the making of the will his patient was childish and in a state of mental confusion, and thus he had diagnosed cerebral thrombosis. Dr. J. P. Porter Phillips said that patients suffering from cerebral thrombosis were capable of pulling themselves together to deal with any matter in hand; he considered the testator to be suffering from arteriosclerosis and not cerebral thrombosis. Dr. R. D. Gillespie gave evidence to the effect that the testator might well have understood what he was carrying out, and the Judge, summing up, said that there had been a quarrel between the father and son which was the cause of the latter's disinheritance, and also the cause of his father's forming the opinion that his son had a grasping attitude toward some of his property. The question being one of fact and degree, it was to be concluded that the testator knew and approved of the contents of the will, and judgment in its favor was, therefore, given.

Sexual Pathology. K. Reuter, in *Deut. Zeit. f. Ges. Ger. Medizin* (January, 1938, 29, 186), reported the case of a 55-year-old man, found hanging, and nearby was a camera and attachment with which he had photographed himself in the act of hanging. Among the man's belongings were found other similar photographs of a sexual character, and this led to a verdict of accidental death by hanging. In discussing the report of this case Dr. Koopmann described another case—that of a man 62 years of age, who was found by a servant strangled at 10 o'clock in the morning. During the night the servant had heard a dull noise. The body was in a half-sitting position by a door and partly leaning against a wall, and round the throat was the mark of a string. The body was clothed with a vest, linen shirt, a woman's transparent chemise, a woman's stockings, and a woman's high-buttoned black boots, and was holding a glass. Under the left arm was a pile of six books. On the upper angle of the door there was a thin cord made into a sling which was broken in the middle. At a distance of a yard from the body a large mirror was propped against a stool. The man's wife was away from home. The nature of the findings excluded murder, and it was concluded that death was accidental and was the result of the slipping of the books during a staged psychopathological erotism.

Abortion. Histo-pathological examination of the internal genital organs after abortion was considered by M. Kernbach in *Annales de Medecine Legale* (February, 1938, p. 81). By the new French penal code therapeutic abortion is only permitted (1) when the life of a woman is in imminent peril or when pregnancy would aggravate a disease already present; (2) when it has not been possible to avoid the danger by other means. Apart from these exclusively medical reasons, if a woman desires the termination of her pregnancy she has to procure a certificate authorizing an abortion. Abortion on eugenic grounds is permitted only when hereditary neuro-mental pathological conditions are present. When the cause of an abortion is not known an anato-pathological examination may sometimes enable a definite conclusion to be drawn, but in

other cases clinical and bacteriological examinations are required. Various questions may be answered by the histo-pathological examination, such as (1) whether the pregnancy is uterine or extra-uterine; (2) whether the uterine cavity has been scraped, and if so how recently; (3) whether infection is present, and if so whether it is connected with abortive measures; (4) whether the abortion has been spontaneous, and if it was due to a pre-existent affection; (5) the date of the pregnancy; (6) whether in the case of perforation, there existed a previous affection of the uterine wall; (7) whether the abortion has been spontaneous or provoked, and, in the second case, whether it was indicated or not; (8) whether the death was due to measures to produce abortion or to the aggravation of a pre-existent uterine affection; (9) whether the anato-pathological lesions in the uterus are due to measures to produce abortion or whether they were pre-existent; (10) by what route infection had entered and spread; (11) explanation of the sudden death in suspected cases of septic abortion; (12) the nature of the traumatic abortion.

The author gives a number of cases illustrating the difference in microscopic and histological examination findings—such as the presence of corpus luteum of gestation in the ovaries in cases of disputed pregnancy, generalized purulent peritonitis, post-abortion endometritis, and purulent puerperal salpingitis, the presence of B. tetanus, the presence of poison in abortions procured by this means, the degree of inflammation indicating instrumental intervention, the presence of necrotic masses, and infiltration with lymphocytes and polynuclear cells. In a case of spontaneous abortion due to secondary infection, placental masses were found adherent to the fundus of uterus; there was a putrid odor and no sign of violence, and the histological examination revealed placental necrosis, thrombi, and numerous emboli in the capillary vessels of the myometrium. When abortion has been procured by the injection of fluid the presence of air bubbles in the cardiac musculature is conclusive evidence. In another case of spontaneous abortion a haemorrhagic mass was found in the uterine cavity, and histological examination revealed complete disappearance of the mucous membrane and replacement by fibrin, the entire zone being infiltrated with polymorphonuclears. On bacteriological examination B. tetanus was found, and death was regarded as being due to infection with that micro-organism.

Blood Determinations. B. Kratz and E. Plamböck (*Chem.-Zig.*, 1938, 62, 148-149) note that of the various methods used for the determination of alcohol in blood, that of Liebesny (in which the blood is heated and the alcohol vapor is brought into the reaction mixture by means of a current of air) gives the most accurate results, because volatile substances other than alcohol, which might also react, are drawn through the reagent unchanged. In the Widmark process, which is frequently used for forensic purposes, small amounts of such volatile substances as ether, ethyl chloride, or chloroform, which may be present in the blood, also react and cause the apparent alcohol figure to be too high. For example, in a case that was tried, a sample of blood gave 2.45 parts of alcohol per 100,000 by the Widmark process and 2.51 parts by the Liebesny process. The defense contended that ethyl chloride had been administered as an anaesthetic before the blood-sample had been taken, and that this substance accounted for part of the figure returned as alcohol. The agreement between the

results obtained by the two methods, however, proved that alcohol was unquestionably present, and that no other volatile substances had interfered with the determination. Had the alcohol been determined solely by the Widmark method, it would not have been possible to rebut this defense.

S. Schilling-Siengalewicz (*Deut. Zeit. f. Ges. Ger. Medizin*, February, 1938, Bd. 29, s. 339), writing on infra-red test for carbon monoxide in blood, pointed out that Eggerth and Merkelbach showed that carbon monoxide haemoglobin is very transparent to infra-red rays (920 mu), while haemoglobin is almost opaque in this spectral region. Thus the presence of carbon monoxide haemoglobin can be easily detected by means of infra-red photography. Two photographs should be taken, one on an infra-red-sensitive plate and the other on a panchromatic plate. If the infra-red-sensitive plate is blacker than the panchromatic, it shows that the blood under examination contains carbon monoxide. The test is also still positive if, for example, in a state of decomposition, the haemoglobin is already transformed into porphyrin.

Blood and Secretions. Fresh data on blood groups and other inherited factors in Europe and Egypt was presented by W. C. and L. E. Boyd (*Deut. Z. Ges. Ger. Med.*, April, 1938, 29, 401).

Blood group determinations, including tests for A₁ and A₂, as well as M and N, taste assay by means of phenylthiocarbamide, records of hairiness of the phalanges, characteristics of the hair, and color of the eyes, were made in Dublin, Wales, Zaporsk (nr. Moscow), Charkow, Tiflis, Cairo, Assiout, and San Sebastian. In the Irish the blood group O was present in 55.2 per cent, which is markedly different from results in England. In Wales the percentage of blood group B was 15.2. In Zaporsk the figures were: A and B, normal; M, 39.9; N, 16.1; MN, 44.° per cent.

In a group of 91 Basques the figures were: O, 57.2; A, 41.7; B, 1.1 per cent; AB, 0.

The extraordinary rarity of the factor B agrees with the results recorded for natives of Australia and the North American tribes. Non-Basques frequently showed only blood groups O and A in the ratio of 60:40. In Cairo and Assiout the blood group figures of Coptic and Mohammedan races agreed. The statistics of the blood-group findings showed that the factors A and B, and also M and N, conformed to the law of heredity.

Blood Tests and Paternity. On the strength of evidence provided by a blood test carried out by Dr. Roche Lynch, Senior Official Analyst to the Home Office, an affiliation order was refused at Marlborough, Wilts, on May 16. On April 4, 1938, the plaintiff applied for an affiliation order against the defendant, who denied paternity. The Bench agreed to a blood test, and on April 27 samples of the blood of the plaintiff, the child, and the defendant were taken at St. Mary's Hospital, Paddington, in the presence of Dr. Roche Lynch. The results of the test showed that the plaintiff's blood belonged to group AMN, the child's to group AN, and the defendant's to group OM. Thus, basing his conclusion on the fact that children of parents with blood group MN and M can only belong to groups M or MN, Dr. Roche Lynch stated that the defendant could not be the father of the child concerned, and the order was refused. This is the first case in England in which paternity has been definitely excluded by such tests (*Brit. Med. Jnl.*, May 28, 1938).

MEDICINE AND SURGERY. Sulfanilamide-Pyridine (Sulfapyridine). Interest in

chemotherapy was stimulated by the recent examples of the remarkable effectiveness of sulfanilamide in the treatment of certain bacterial infections, especially those caused by the beta-hemolytic streptococcus and the meningococcus. The fact that sulfanilamide has proved to be relatively inactive against the pneumococcus as compared to the hemolytic streptococcus has been disappointing and has prompted the search for a related compound which might produce as good results in pneumococcus infections as the original drug produced in infections caused by the beta-hemolytic streptococcus.

Whitby of the Bland-Sutton Institute of Pathology, Middlesex Hospital, London, has been especially active in the study of the bactericidal activity of sulfanilamide derivatives and according to a recent report (*Lancet*, 234, 1210, 1938) one of the compounds he has studied, 2-(p-aminobenzenesulphonamido) pyridine, is very markedly active in experimental pneumococcus infections in mice. 2-(p-aminobenzenesulphonamido) pyridine is a compound synthesized by the research staff of Messrs. May and Baker in England and is known there by its serial number, M & B 693. In America the compound is designated sulfanilamide-pyridine or sulfapyridine and the later term will be used in this discussion.

Whitby found that sulfapyridine distinctly prolonged the life of mice inoculated with 50,000 lethal doses of pneumococci. The period of survival varied considerably with the amount of the drug administered and was distinctly greater than that found in comparable experiments with sulfanilamide.

Its effectiveness in different types of pneumococcus infection varied. It appeared to protect mice against 10,000 lethal doses of pneumococcus Type I and to afford considerable protection against 10,000 lethal doses of other types of pneumococci. Its chemotherapeutic activity was greatest against pneumococcus Types I, VII, and VIII, but was also marked against Types II, III, and V.

It also was found that experimentally, sulfapyridine was equally as effective as sulfanilamide in experimental infections with hemolytic streptococci and with meningococci. The new compound seemed to have the further advantage of being non-toxic and effective in small doses.

It is interesting to note that of 64 related sulfanilamide derivatives studied by Whitby, the one striking success in chemotherapy of pneumococcus infections occurred with this particular drug.

Fleming of the University of London, England, studied the anti-bacterial action in vitro of sulfapyridine on pneumococci and streptococci. He employed the method of mixing known numbers of bacteria with defibrinated blood and various dilutions of the drug. Since normal human defibrinated blood has a considerable bactericidal power toward the ordinary pyogenic cocci, he decided to use this same test with blood from which the leukocytes had been removed. He found, in the first place, that sulfapyridine had no deleterious effect on leukocytes in concentrations that can be ordinarily attained in the body therapeutically. In addition, he also found that in the de-leukocytized blood, sulfapyridine had no power of killing pneumococci, but that it had a very evident bacteriostatic power even when present only in very small amounts. When the chemical was added to defibrinated blood containing a normal number of leukocytes, sulfapyridine completely prevented the growth of pneumococci, even when present in high dilution. He concluded from these observations that sulfapyridine "delays the growth of the cocci and does not inhibit the action of the

leukocytes, so that the leukocytes are able to deal with a much larger number of cocci than they are normally capable of killing."

A similar study using hemolytic streptococci instead of pneumococci produced exactly the same results. That is to say, there was no bactericidal effect, and in the absence of leukocytes, growth was merely delayed; but when leukocytes were present, growth was permanently inhibited.

A further study was undertaken to determine the value of the addition of type specific pneumococcus antiserum to the mixture of blood, pneumococci, and sulfapyridine. It was found that under these conditions growth of the organisms was completely restrained, but if de leukocytized blood were used the combination of sulfapyridine and immune serum was incapable of producing this complete inhibition of growth.

Fleming emphasizes then that, "If the best results are to be obtained from the use of such a chemotherapeutic agent . . . the patient should be immunized actively or passively to the highest degree possible" (*Lancet*, 135, 74, 1938).

Evans and Gaisford of the Dudley Road Hospital, Birmingham, England, were apparently the first to make an extensive clinical trial of sulfapyridine in the treatment of pneumonia. They studied 200 cases of lobar pneumonia admitted to the hospital from March to the middle of June of this year (1938), one-half of which were treated with sulfapyridine and the other half received only the usual routine nonspecific treatment and thus served as controls. No selection of cases for treatment was made, admissions to each group usually occurring on alternate days. The diagnosis of lobar pneumonia was based on a characteristic history and unequivocal signs of consolidation of the lung with X-ray confirmation in many of the cases.

In the early cases, relatively small amounts of the drug were administered but when it began to be apparent that the material was relatively safe, larger doses were used. In the later part of the work, the routine was to give 2 gms. of the drug on admission and 1 gm. every 4 hours thereafter for 4 or more days. There were no obvious toxic symptoms from the administration of this amount of sulfapyridine, although in about one-fourth of the patients cyanosis appeared. This was shown by spectroscopic examination to be associated with the presence of methemoglobin in six of these cases. No sulphhemoglobinemia was observed.

The results of the treatment, the authors believe, were quite favorable. There was usually a fairly prompt response in 12 to 36 hours, with a fall in temperature, accompanied by a diminution of toxemia and a clearing of the sensorium. The change, however, was not as dramatic as ordinarily seen in the crises of lobar pneumonia and improvement was usually slower. The case mortality rate in the treated series was 8 per cent as compared with 20 per cent in a control series observed at the same time. A particular study was made to determine if the administration of sulfapyridine caused granulocytopenia and in no case in this series was it observed.

Study of the concentration of sulfapyridine in the blood and of its excretion were not made. Typing of the pneumococcus from the sputum was attempted in all cases but identification of the higher types was not undertaken (*Lancet*, 135, 14, 1938).

In November a clinical report from the Royal Hospital, Wolverhampton, and the General Hospital, Walsall, by Dyke and Reid appeared (*Lancet*, 235, 1156, 1938). These authors report the case

records of eight patients with lobar pneumonia treated with sulfapyridine. First, there were no fatalities. In every case treatment was commenced from 12 hours to 4 days after onset of the symptoms. In each instance, exhibition of the drug was followed by an immediate fall in the temperature and pulse rate and immediate improvement in the condition; and in all cases in which the drug was administered in full and efficient dosage, the subsequent course was uneventful and recovery rapid. In this series of patients no specific serum therapy was used.

They observed no serious toxic effects. Only one of the eight patients showed any cyanosis.

They conclude: "Consideration of the cases recorded above, with experience of other cases seen since, leaves no doubt in our mind that up to the fourth day from onset, the proper exhibition of 2-(p-aminobenzenesulphonamido) pyridine will cut short the infective process and bring about speedy recovery."

In the United States, sulfapyridine has not yet been placed on the market. Merck and Co., Inc., owners of the patent rights for the drug, have very properly deferred offering the product for sale until competent investigators have studied more carefully its advantages and limitations. Such studies are now being conducted under close supervision in many clinics in the United States and while no reports are available as yet, there seems to be general agreement that sulfapyridine promises to be of real value in the treatment of pneumococcus infections. It will, of course, be impossible to form any critical estimate of its value until numerous well-controlled and carefully studied clinical trials have been made.

Brucellosis, PATHOLOGY OF. Parsons and Poston of the Duke University School of Medicine presented a very interesting report at the meeting of the Southern Medical Association in November. This dealt with the possible relationship between brucellosis (Malta fever) and Hodgkins disease.

Infection with brucella organisms, which may be of swine, goat, or bovine origin, produces a variable clinical picture, usually characterized by prolonged intermittent fever known as "undulant fever."

On the other hand, the etiology of Hodgkins disease, a slowly progressive granulomatous process involving primarily the lymph nodes and almost always terminating fatally, is at present quite unknown. Pathologically, the disease has many of the characteristics of a chronic infectious process and at various times attempts have been made to attribute its production to different organisms. The avian tubercle bacillus was at one time thought to be the causative organism. In 1914 Bunting and Yates isolated a diphtheroid bacillus which they thought was the causative agent in Hodgkins disease, but subsequent studies have failed to confirm the etiologic importance of these early investigations. It is true, however, that Hodgkins disease presents a fairly characteristic clinical picture and that a definite pathologic diagnosis can usually be made from a study of excised lymph nodes.

In studying a case of chronic brucellosis, closely followed for a period of 11 months, Parsons and Poston were very surprised to find at necropsy histologic changes in lymph nodes, from which brucella organisms had been cultured, which are generally considered to be characteristic of Hodgkins disease.

This autopsied case was of interest in many respects. Early in the course of the disease the patient had exhibited the usual immune reactions seen in

undulant fever. That is to say, the brucella organisms were agglutinated in high dilution and skin tests done with anti-brucella goat serum were positive. During this period a lymph gland had been excised which, on microscopic examination, showed merely a chronic inflammatory process with necrosis and none of the specific histologic changes of Hodgkins disease. Later, the immunity responses were lost, the various tests mentioned above became negative and at death, the histologic picture of the affected lymph nodes had changed from that of a simple non-specific chronic inflammatory reaction to one indistinguishable from Hodgkins disease.

This, of course, was a startling observation and led Parsons and Poston to study other cases of Hodgkins disease for a relationship to brucella infection. At the time of their report, three additional cases had been seen. In all of these, brucella organisms were cultured from excised lymph nodes which presented the histologic picture of Hodgkins disease and in all, likewise, the serologic studies were negative; that is, the brucella organisms were not agglutinated by the patients' blood, the skin tests were negative, and tests of the phagocytic index were negative.

The authors very wisely refused to draw any conclusion from their study as to the role of the brucella organism in Hodgkins disease, but simply point out that in the cases studied there was a histopathologic reaction to brucella infection in four cases indistinguishable from that described as characteristic of Hodgkins disease. They especially emphasize that in the cases studied, this histopathologic appearance was associated with certain definite alterations in the immunologic response of the patient.

Of course, the implication of this report is that so-called Hodgkins disease may merely represent one variety of response to infection with brucella organisms, and especially the type which occurs following the breakdown of the ordinary immunologic defense reactions.

Whether or not this concept of the relationship of brucellosis and Hodgkins disease proves to have any validity, it is at least a very stimulating one and offers a new avenue of approach to the study of this problem.

Jaundice, NATURE OF BLEEDING IN. One of the serious problems encountered in the management of patients with jaundice is the occasional occurrence of hemorrhage which may be spontaneous or may follow operative procedures. Furthermore, although serious bleeding occurs rarely, the surgeon has been unable to identify those cases in which it is apt to appear, since most of the clinical and laboratory tests of the clotting mechanism usually give negative results. The mechanism of this bleeding tendency is not as yet fully understood. However, in the past two years studies of the prothrombin content of the blood plasma have furnished considerable information which promises to be of value, not only in the detection of a latent bleeding tendency, but also in the prevention and treatment of hemorrhage.

Before discussing the defect in the process of coagulation which is probably the cause of bleeding in jaundiced patients, we must briefly summarize the present ideas concerning the clotting of blood. It is now thought that the precipitation of fibrin, which is the essential process in coagulation, is caused by the inter-action between a precursor of fibrin, fibrinogen, and thrombin; thrombin in turn probably results from the action of

calcium and thromboplastin on prothrombin. In 1935 Quick devised a method for the quantitative determination of prothrombin and subsequently he and others have studied the prothrombin content of the blood in experimental jaundice in animals and in jaundiced patients and it is with the results of these investigations that we are concerned (*Jr. Am. Med. Assn.*, 110, 1658, 1938).

Experimentally, a hemorrhagic tendency may be produced in several ways. One is by the production of a deficiency of vitamin K, a new food accessory substance discovered by Almquist and Stockstad in this country and Dam and Schönheyder in Denmark in 1935, the presence of which is essential for the normal coagulation of the blood. Quick found that when chicks were fed on a diet deficient in vitamin K there developed a rapid diminution of blood prothrombin and that when this had dropped below 20 per cent, a definite hemorrhagic tendency appeared. This could be cured by the addition to the chicks' diet of small amounts of alfalfa, a food particularly rich in vitamin K. The disappearance of the hemorrhagic tendency was associated with a rise in the prothrombin to normal levels.

In cattle who have been fed spoiled sweet clover a serious hemorrhagic disease is apt to occur. This has been found to be associated with a marked decrease in prothrombin. The toxin of the spoiled hay will produce a similar disease in rabbits and Quick found that when the rabbits' prothrombin fell below 10 per cent serious hemorrhage frequently resulted.

In cases of serious liver damage in dogs caused by chloroform anaesthesia or by the administration of carbon tetrachloride, the hemorrhagic diathesis was again shown to be associated with a prothrombin deficiency.

The significant point of these studies seems to be that ordinarily there is a wide margin of safety in the prothrombin factor and that serious bleeding ordinarily is not found unless the prothrombin is reduced to less than 10 per cent of the normal amount. This fact seems to explain the difficulty encountered in detecting the bleeding tendency since it is evident that a great part of the prothrombin reserve may have been dissipated before studies of coagulation time show any significant change. Also, this deficit helps us to understand why the additional damage done by anaesthesia or by the operative procedure may cause the prothrombin to fall below the critical level.

Clinical studies of prothrombin have not been extensive, but they seem to indicate that in man, as in the experimental animal, bleeding is usually associated with a low prothrombin.

Clinical confirmation of the importance of prothrombin deficiency in the bleeding occurring in jaundiced patients has been presented by Snell and his collaborators at the Mayo Clinic (*Proc. staff meet, Mayo Clinic*, 13, 74, 1938). They were also able to increase the prothrombin content of the blood by administration of vitamin K (derived from putrefied fish meal), bile, and bile salts. Similar results have been obtained by Smith, Warner and Brinkhaus using an extract of alfalfa (*Jr. Exp. Med.*, 66, 801, 1937).

From the therapeutic point of view, these studies probably will be of considerable value—first of all, in enabling the surgeon to detect a reduction of prothrombin before the patient develops any tendency to bleed. This will allow measures to be taken to restore the prothrombin before operation is undertaken and of course it also suggests steps

which may be taken to combat hemorrhage in jaundiced patients.

Blood transfusions will temporarily make up for the prothrombin deficiency. It is possible that in certain cases vitamin K deficiency may be a factor in the production of hemorrhage due to faulty absorption in the absence of bile acids in the intestinal tract. In such instances, the administration of powdered alfalfa leaf along with whole bile or bile acids may be of value. Because of the liver's important part in the production of prothrombin, the administration of large amounts of dextrose are usually advisable. It also seems likely that vitamins A and D are of value.

Attempts to isolate vitamin K and identify its chemical nature are now being undertaken. Recently Thayer, MacCorquodale, Binkley, and Doisy reported the preparation of a crystalline material derived from alfalfa leaves so potent that 0.6 microgram will reduce the clotting time to normal in about half the cases of the hemorrhagic condition produced in chicks by vitamin K deficiency. Also Lichtmoyn and Chambers have isolated a powerful clotting agent from the liver of dogs, pigs, and lambs (*Jr. Am. Med. Assn.*, 111, 2494, 1938).

Coccidioidomycosis. Coccidioidal granuloma is a well-known disease which is frequently encountered in California and especially in the San Joaquin Valley. It produces characteristic granulomatous lesions in the skin, bones, lungs, meninges, and occasionally in other organs which have been shown to be due to an infection with the fungus coccidioides. It takes its place, then, as one of the fungus diseases, better known examples of which are actinomycosis, blastomycosis, and sporotrichosis. The disease may be found in cattle and sheep, as well as in man, and is associated with the high mortality rate of approximately 50 per cent.

In the past there has been considerable speculation as to how the infection might be acquired. While in a few cases it has been possible to show that the local lesion resulted from the entrance of the fungus through a wound of the skin, in the vast majority no clue to the origin of the infection may be found. Careful studies have shown that there is no evidence for the transmission of the disease from man to man, from domestic animals to man, or from insects to man. The recent paper of Dr. Ernest C. Dickson of the Department of Public Health and Preventive Medicine, Stanford University School of Medicine, has clearly established that the common mode of invasion is by the inhalation of dust containing a vegetative form of the fungus (chlamydospores) which produces an infection of the upper respiratory tract. This is ordinarily a rather benign affair which subsides and leaves no sequellae, but in the occasional case may be followed by the appearance of coccidioidal granuloma (*Jr. Am. Med. Assn.*, 111, 1362, 1938).

Although some had suspected that the fungus might gain entrance into the body through the respiratory tract, it remained for an interesting accident in Dickson's laboratory to prove that the inhalation of chlamydospores caused coccidioides infection. In 1937 a young worker in the laboratory inadvertently opened an old petri dish culture and inhaled a quantity of cloudy material which he noted rose from the dish when the cover was lifted. Nine days later he became ill with a respiratory infection similar to one known to be very common in San Joaquin Valley and called "valley fever" or "desert fever." He recovered without complications. From his sputum fungus coccidioides was

isolated and proved to be virulent by animal inoculation.

"Valley fever," then, represents the initial invasion of the respiratory tract by the vegetative form of the fungus. It is a not especially characteristic condition, and is usually at first diagnosed as "flu," or later, when lung changes become evident, as bronchopneumonia or even tuberculosis. However, in a large, but as yet undetermined per cent of cases, in the second week of the disease painful red nodules appear in the skin, especially on the shins, and it is the appearance of this erythema nodosum which enables the physician to diagnose "valley fever." The skin nodules have been dubbed by the laity of the Valley "the bumps." In three to six weeks most of the individuals having "valley fever" recover without any complications, but rarely the fungus may secondarily invade other organs where the mature endosporeulating spherules produce the serious and characteristic granulomatous infection. Coccidioidal granuloma may follow "valley fever" in the case in which erythema nodosum is absent, as well as those in which it is present.

Dickson found that 72 of 112 specimens of sputum sent to his laboratory from the San Joaquin Valley were positive for coccidioides infection. He also observed that in cases of "valley fever" with erythema nodosum there was often an increase in the percentage of eosinophilic white blood cells. A study of cutaneous tests with a filtrate of coccidioides cultures (coccidioiden) showed much more marked reaction in "valley fever" than in the later stage of the disease, coccidioidal granuloma.

Dickson suggests that the term coccidioidomycosis be applied to the disease resulting from coccidioides infection. The acute initial infection he would call "primary coccidioidomycosis" and the stage of granuloma "secondary" or "progressive." It seems clear that Dickson's work represents a valuable contribution to the understanding of a hitherto puzzling disease.

Thrombocytopen. Recent studies from the Surgical Hunterian Laboratory of the Johns Hopkins University School of Medicine by Troland and Lee promise to throw light upon the subject of the pathogenesis of idiopathic thrombocytopenic purpura. This disease, which is characterized by a tendency to spontaneous bleeding, especially from mucous membranes, is associated with a marked decrease in the number of circulating blood platelets, and interestingly enough the surgical removal of the spleen is usually a curative measure, splenectomy being followed by a slow rise in the number of platelets and a disappearance of the hemorrhagic tendency. It has been postulated, then, that in this disease a toxin may be formed in the spleen which destroys blood platelets (or has a deleterious effect either upon their immediate precursors, the megakaryocytes, or upon the bone marrow in general). The work of Troland and Lee gives support to this idea (*Jr. Am. Med. Assn.*, 111, 221, 1938).

These workers prepared acetone extracts of the excised spleens of three patients suffering from thrombocytopenic purpura and found that the intravenous injection of this material into rabbits produced a sudden marked decrease in the number of platelets, followed after 24 hours by an abrupt rise back to normal levels. (For instance, in the first animal the platelets fell from a preinjection level of 620,000 per cubic millimeter to 58,000 in 8 hours, remained at this level for 16 hours, but 6 hours later numbered 610,000). By repeated injection of the extract the blood platelets could be held at low levels for several days. However, none

of the animals so treated developed purpura. This may mean that interference with the clotting mechanism by reduction of the number of blood platelets is but one factor in the causation of bleeding, and that there must be concomitant damage to the capillary wall before bleeding occurs.

Control tests made by injecting similarly prepared acetone extracts of normal spleen, of the spleen in other diseases, and of other tissues (thyroid and myomatous uterus) failed to produce any significant platelet-reducing effects.

The amount of material available at the time of their report was too small to permit any study of the chemical or pharmacologic aspects of the platelet-reducing agent. It is hoped that further investigation along these lines will more accurately define the nature of the active principle involved, for which the authors have suggested the name "thrombocytopen," and its relation to the occurrence of purpura.

Appendiceal Peritonitis, THE ROLE OF CLOSTRIDIUM WELCHII IN. In a series of studies Bower and his co-workers at the Temple University School of Medicine have emphasized the importance of the gas bacillus (*Clostridium welchii*) as an etiologic factor in the toxemia of spreading peritonitis following acute perforated appendicitis. The evidence which they have adduced may be summarized as follows: In approximately two-thirds of the cases of appendiceal peritonitis (both in man and dog), smears and cultures of the peritoneal exudate are positive for *Clostridium welchii*. Furthermore, *Clostridium welchii* anti-toxin could be demonstrated in the blood serum of 69 per cent of the patients who were convalescing or had recovered from appendiceal peritonitis. Finally they were able to effect a reduction in the mortality rate of experimentally induced appendiceal peritonitis by the administration of *Clostridium welchii* anti-toxin from a control figure of 90 per cent to less than 30 per cent.

In a further study (*Jr. of Immun.*, 34, 429, 1938: Mingle, Paxson, and Bower), they induced spreading peritonitis in a group of dogs previously immunized against *Clostridium welchii* toxin and found that the mortality rate in such animals was 35 per cent, contrasted with a control figure of 91 per cent.

While the clinical importance of these investigations cannot be evaluated yet, they certainly suggest the advisability of similar studies in appendiceal peritonitis in man which Bower is now undertaking.

Epilepsy, A NEW DRUG IN THE TREATMENT OF. At the annual session of the American Medical Association held in San Francisco in June of this year, Merritt and Putnam of the Department of Neurology, Harvard Medical School, described their experiences with the use of a new drug, sodium diphenyl hydantoinate, in the treatment of convulsive disorders. Using an experimental procedure for producing convulsions in animals by means of electrical stimulation, they were able to study the quantitative effectiveness of various drugs in the protection of the experimental animals. Among the materials studied, sodium diphenyl hydantoinate was found to be particularly effective. (This is a compound somewhat analogous in structure to the barbiturates, and its investigation was undertaken because of the authors' consideration that the phenol fraction in phenobarbital might account for its greater effectiveness in epilepsy than other barbituric acid derivatives.) Since extensive pharmacologic studies showed it to be relatively non-toxic

in animals, an attempt was made to evaluate the usefulness of the drug in human epilepsy.

The initial results of this study Merritt and Putnam considered to be promising. Using a group of subjects who had been suffering from some of the classic manifestations of epilepsy for many years and who had received little or no benefit from the usually accepted form of treatment, they found in 142 such patients (treated for periods varying from 2 to 11 months) that in major convulsive episodes ("Grand Mal attacks") 58 per cent were relieved and in an additional 27 per cent the attacks were greatly decreased in frequency. In the group with the so-called "Petit Mal," attacks were relieved in 35 per cent and greatly decreased in frequency in 49 per cent more. In those having so-called "psychic equivalent" attacks, relief was obtained in 67 per cent and the attacks were greatly reduced in frequency in an additional 33 per cent.

Their study indicates, however, that the use of sodium diphenyl hydantoinate is not without risk, as certain toxic manifestations were observed following its administration, of which the most common was the occurrence of a skin rash or toxic dermatitis. This developed in 10 patients and in 1 progressed to an exfoliative dermatitis. One patient had a mild purpura, not associated with a reduction of the blood platelets, and minor toxic reactions such as tremor, ataxia, and dizziness occurred in approximately 15 per cent. The authors point out that the drug should be used with caution until more definite evidence concerning the possible deleterious effects of its prolonged administration can be accurately studied. They further indicate that it is quite possible that the experimental method which they have devised for studying the effectiveness of drugs in the prevention of convulsions may later allow even more effective and safer ones to be found.

At the present, however, they conclude: "Sodium diphenyl hydantoinate is a valuable addition to the physician's armamentarium in the battle against 'epilepsy.' Its use should be restricted, for the present, to that group of patients who do not respond to the less toxic forms of therapy previously in common use."

Brief Notices. Davis and Koff of the University of Chicago reported the experimental production of ovulation in women by the administration of a gonadotropic substance derived from the blood serum of pregnant mares. The material they used was first observed by Cole and Hart in 1930 and subsequently purified and assayed by Cartland and Nelson in 1937.

It was administered intravenously to 36 women who were being prepared for abdominal operations. In about half of this group it was observed at operation that recent ovulation had occurred. This was determined by gross inspection of the ovaries and by microscopic examination of excised tissue. Especially interesting was the fact that very young corpora lutea were observed (most less than 18 hours old). This indicates, according to the authors, that the gonadotropic fraction of the pregnant mares' serum causes a very rapid growth of the ovarian follicle—maturation, ovulation, and corpus luteum formation all occurring within 24 to 36 hours.

The hormone used by these investigators differs in many respects from the gonadotropic hormones now available for clinical use and it is possible that subsequent study may show it to be of considerable value in the treatment of conditions associated with

disturbances of the ovulatory process (*Am. Jr. Obst. & Gynec.*, 36, 138, 1938).

During the past year suggestive evidence has been presented that sulfanilamide may be of considerable value in the treatment of undulant fever. Stern and Blake of Los Angeles reported three cases in which prompt clinical cure apparently followed the administration of the drug (*Jr. Am. Med. Assn.*, 110, 1550, 1938).

Welch, Wentworth, and Mickle of Hartford, Conn., were likewise impressed with its value in the treatment of five patients with undulant fever. They also studied the mode of action of sulfanilamide therapy in brucella infections and concluded: "In Brucella infections sulfanilamide appears to act through stimulation of the defense mechanism of infected animals by increasing the production of specific opsonins, thus affecting neutralization of the endotoxic or aggrassin-like substances produced by these organisms, with resulting phagocytosis" (*Jr. Am. Med. Assn.*, 111, 226, 1938).

Experiences of the past year have confirmed the value of nicotinic acid in the treatment of pellagra. In February, Spies, Cooper, and Blankenhorn reported that in a series of 17 cases of pellagra, dramatic improvement in the skin lesions occurred following the administration of nicotinic acid or certain of its derivatives (nicotinic acid amide and sodium nicotinate). This was accompanied by rapid healing of the inflamed mucous membranes of the tongue, mouth, urethra, vagina, and rectum (*Jr. Am. Med. Assn.*, 110, 622, 1938).

In a subsequent study Spies, Bean, and Stone obtained confirmatory results and observed further that the early and late mental symptoms of pellagra were dramatically benefited by the administration of nicotinic acid. There was also an improvement in associated conditions shown by the pellagrins, such as Vincent's infection, mucous colitis, and constipation or diarrhea. In 199 patients with clinical pellagra who had been accustomed to having one or two recurrences each year, relapse was prevented by the administration of nicotinic acid during the "pellagra season."

Studies were also made of the nicotinic acid requirements of the body and although this factor proved to be variable, being increased by infection, exercise or fever, they decided that about 500 mgms. a day was usually adequate.

Finally, they again stressed the necessity of such supplementary measures in the treatment of pellagra as a well-balanced diet, rest in bed, and effective treatment for co-existing disease (*Jr. Am. Med. Assn.*, 111, 584, 1938).

MEMEL. A territory north of and adjoining the eastern part of East Prussia; includes the city and port of Memel, on the Baltic coast, and a strip along the right bank of the lower Memel, or Niemen River, to its mouth. Area, 1099 square miles; population of entire territory, about 150,000; of the city of Memel (Jan. 1, 1936), 38,079. This area, German territory prior to the Treaty of Versailles, was ceded by that treaty to the League of Nations; seized by Lithuania, Jan. 15, 1923; and rendered partly autonomous, in recognition of a strong German element in the population, by the terms of the Memel Convention of May 8, 1924, signed by Great Britain, France, Italy, Japan, and Lithuania. Memel's special status included in 1938 a Governor (Viktoras Gailius), a Directorate, and an elected Landtag.

German annexation of Austria and parts of Czechoslovakia greatly weakened, in 1938, Lithu-

ania's tenure of Memel, strengthening the demands of the territory's German element. For years Memel had been included in a Lithuanian regime commonly described as martial law, and the most prominent of the pro-German leaders, Dr. Ernst Neumann, was in penal servitude, but the Landtag, or local diet forming part of the system of autonomy provided for Memel, remained in existence, dominated by the German party. See LITHUANIA under *History* for political developments in 1938.

MENTAL HYGIENE. See **PSYCHOLOGY**.

MERCHANT MARINE ACT. See **UNITED STATES** under *Congress*.

MERIT SYSTEM. (See also **CIVIL SERVICE REFORM**, *NEW INTERNATIONAL ENCYCLOPEDIA*, v, 378.) The year 1938 promises to be remembered as marking the most notable advances in the American Civil Service since the enactment of the first Federal law on that subject, Jan. 16, 1883. That event was duly commemorated by a mass meeting in Washington, sponsored by the A.F.G.E. and addressed by speakers prominent in government and reform circles. The Administration's "Reorganization Bill" (1937 YEAR BOOK, p. 399) met defeat in the House on April 8; but just before adjournment of the 75th Congress, both Houses adopted the conference report on the Postmasters' Bill (*ib.*) which was duly signed by the President and on June 24, he issued two Executive Orders (Fed. Reg. III, 1519 *sq.*), effective Feb. 1, 1939, embodying the main civil service features of the rejected bill and extending the Merit System to some 81,000 Government workers. Fourth-class postmasters have been under Civil Service for some years. The new act extends the same status to those of the 1st, 2d, and 3d class. Incumbents in these classes must pass non-competitive examinations after which they may be appointed for life, removable for cause only. Vacancies as they occur must be filled by promotion from within the service if such material is available; if not, selection is made from the three highest ranking applicants after a competitive test conducted under the auspices of the Civil Service Commission. But the one selected must have been, for one year, a resident of the community which he is to serve, and be confirmed by the Senate. It was announced on November 23 that the President had denied the request of the Federal Personnel Association to allow government employees access to their personnel files.

State and Local Systems. At the 30th annual conference of the "Civil Service Assembly of the United States and Canada" (composed of administrators, Federal, state, and municipal) which met in Washington, October 16-21, Executive Director Belsey reported civil service systems operating in "14 states, 169 counties, 5 special districts and 674 cities," and it was announced by the Associated Press that civil service bills would be introduced into the legislatures of 7 other states, mostly southern. *Maryland.* Early in December Governor Nice issued the 33d order "adopting" into the state civil service employees of 21 departments (all except 2). A legislative reorganization and consolidation of all these into 4 or 5 is also planned. *New Jersey.* On November 8 municipal merit systems were adopted in 9 of the 15 cities which voted on the question. *New York.* Before the National Municipal League, on December 1, Civil Service Commissioner Kern of New York City stated that the local judges, "almost unanimously from Tammany Hall," were an "obstacle" to civil service reform. But a correspondent of the *New York Times* complains of the "arbitrary ratings" in the city civil

service examinations. On November 17 it was announced that a "career man" had been appointed clerk of the Surrogate's Court of New York County in place of a deceased Tammany district leader (though the post was "exempt") and that another "career man" had succeeded the new appointee in his former position. But shortly afterward County Clerk Watson disclosed the appointment of another district leader as one of his deputies at a \$6000 salary. Due to recent eliminations of "exempt" posts by the City Civil Service Commission these had been reduced below 600 before the year's close, and in *Anderson v. Rice*, 277 N. Y. 271, the Court of Appeals on March 8 held unconstitutional the act "exempting" state police from competitive examinations. Previously, on January 11, the same court upheld the Appellate Division in declaring invalid the appointment of former Mayor Walker to a \$12,000 post which would also have entitled him to a pension. But in *Deodati v. Municipal Civil Service Commission*, Justice Collins of the Supreme Court denied respondent's right to fix a 50-year age limit for appointment as porters in the municipal service. *North Dakota*. The initiated proposal for a Civil Service Department and system, which the voters rejected on November 8 (see REFERENDUM), was disapproved by the State's Taxpayers' Association as "not a real civil service law," since it sought to "freeze in," without a test of any kind, all present employees and units.

Current articles on the subject include "The Government and Its Employees," *Yale L. J.*, XLVII, 1109 (C. Agger); "The Lawyer in the Civil Service," *Nat. Lawyers' Guild Quar.*, I, 294; "The Lawyer in the Public Service," *A.B.A. Jnl.*, XXIII, 712 (E. J. Woodall).

METALLURGY. Advances in ore dressing and in the reduction of ore to metal are difficult to attach to any one year. Progress continues from day to day in details, but a decade or more is required to establish a revolutionary new method of treatment or to utilize the new knowledge that fundamental scientific discoveries have put in the metallurgist's hands. Fifty years ago the cyanide process for treating gold and silver ores was developed and commercially applied. It has come to be almost universally used, but improvements in detail are still being made from year to year. Thirty years ago the flotation process of concentration of ores began to look important, since developing into one of the most remarkable and universal of the metallurgist's tools, and one whose utility is constantly being proved in more divergent fields, with frequent improvements in the minutiae of equipment and method. For decades following the discovery of electricity its use in metallurgy was largely confined to the electrolytic refining of copper and the electrothermic reduction of aluminum. In the last decade or two electrodeposition of metals, notably copper and zinc, from acid solutions of their ore minerals has grown into a big industry whose field may yet see its biggest expansion. Electrothermic methods are now to the fore. Certainly the electrometallurgist seems destined to accomplish much in the next decade or two.

Application of new fuels in the last three decades has meant much to the metallurgist: first pulverized coal instead of lump coal, and more recently oil, and even more recently gas, both natural and manufactured. As natural gas is piped to more remote places, it is constantly finding new uses in metallurgy. Other aids have been new refractories of greater heat resistance, and new alloys, themselves the end product of metallurgical ingenuity,

of greater utility in ore reduction chiefly because of their resistance to heat and chemical corrosion.

Early in the current century the blast furnace began to be displaced by the reverberatory for copper smelting; the former is now practically extinct, but almost every year witnesses one or more important improvements in reverberatory construction or in that of its accessory equipment. More recently, the old horizontal retort process of zinc distillation has been gradually displaced by improved vertical retorts of larger capacity, and still more recently the electrothermic process has been devised.

All these and many more developments have been the metallurgist's answer to the problem of constantly lower-grade ores in more inaccessible locations, and to generally increasing wage scales and unit costs. As a result, the common metals are still available today at about the same prices as 50 years ago, and some metals, notably aluminum, nickel, and many of the rarer metals, are selling for a small fraction of the prices charged in 1889. Furthermore, thanks largely to the electrometallurgist, practically all metals are commercially obtainable today of a purity undreamed of half a century ago. Zinc, with less than 0.01 per cent impurities present, for instance, now hardly commands a premium in price and in some instances is produced for even less than the cost of poorer grades. Small impurities in metals, incidentally, have recently been found to be of considerably more than academic interest; the properties of a metal that is 99.999 per cent pure may be radically different from those of one that is only 99.90 per cent pure. Realization of this, and development of methods for the commercial production of metals that are practically chemically pure (some of the troublesome impurities are gaseous and require atmospheric control) may well be one of the outstanding fields of progress in the metallurgy of the future.

Even though ore-reduction metallurgy has progressed greatly in the last half century, one who keeps in step with the new conceptions in physics and chemistry cannot help but feel that these new discoveries and those on the way have hardly touched the practice of winning metals from their ores. Fifty years from now should see our present methods much more outmoded than do those of 1889 seem to us today.

Ore Dressing. The practicability of using rod mills of large diameter, such as 9 ft., as a substitute for rolls has been demonstrated at the Ray property in Arizona. They will take $\frac{3}{4}$ -in. material and grind to about 80 per cent 14 mesh in one pass. For fine-grinding, the tendency continues to use but one grinding unit, in closed circuit with high-duty classifiers. The Hollinger experiments, mentioned in the 1938 YEAR BOOK, demonstrated thoroughly the desirability of open-end ball mills with a low pulp level, quick discharge, and high circulating load. Under these conditions the mills can also be run closer to their critical speed.

An interesting innovation in ball-mill accessories is the Hardinge "Electric Ear." When a ball mill is underloaded it makes a great amount of rather high-pitched noise; when it is overloaded it is comparatively quiet and muffled. The device mentioned picks up the sound coming from the mill by means of a microphone, set at the focal point of a parabolic receiver. The current that flows through the microphone varies directly with the amount of sound it receives, and this current actuates sensitive relays that cut in heavier control machinery that raises or lowers the feeding device of the

mill. The microphone is sensitive to three decibels of sound, whereas the human ear, by which the operation of a ball mill is ordinarily largely regulated, cannot detect sound volume changes of less than 20 decibels under mill operating conditions. Mill output can be increased by as much as 10 per cent by the installation of this device, which has been quite widely introduced.

The unique properties of stainless steel cloth have been utilized in the satisfactory operation of mills on regular tonnages in closed circuit with 65-mesh screens, with the total exclusion of classifiers. This is possible where truly dimensional sizing is desired, independent of the specific gravities of the constituent minerals.

Ore concentration by the separation of minerals in a fluid of heavy density, intermediate between the minerals to be separated, is of increasing current interest and application. The fluid medium may be water in which finely divided heavy substances are suspended, or it may be a chemical or mixture of chemicals of the desired specific gravity. In concentrating iron ore on the Mesabi Range of Minnesota finely divided galena suspended in water has been used, as it has for concentrating zinc ore in Tennessee and in the Tri-State field. More recently, however, in the Mesabi experiments, finely ground ferrosilicon (85 per cent iron) has been found more suitable. It is harder and can be recovered by magnetic means. The specific gravity of the fluid, using this material, can be made to range between 2.8 and 3.3. Use of chemicals for the heavy medium is a more recent development, so far applied only to coal on a pilot-plant scale. The general characteristics of such parting liquids, in order to be successfully used, are that they should be available in specific gravities between 1.3 and 3, have low vapor pressure with good mobility at working temperatures, have a low melting point and minimum miscibility with water, be stable toward water, air, light, and heat, be free from a tendency to emulsify with water, be of approximately the same viscosity as water, and be obtainable at low cost. Before submersion of the coal or ore in the parting medium, starch acetate or tannic acid in concentrations of 0.01 per cent are brought into contact with it, thus preventing the later adherence of the chemicals to the mineral particles, with subsequent loss, and making the process an economic one. The chemicals used in the work so far have been tetrabromethane, pentachlorethane, and trichlorethylene, having specific gravities of 2.96, 1.68, and 1.46 respectively.

Some experimenters are working on the magnetic permeability of ores, as a means of concentration. Powerful magnets have an effect on practically all ores, including those not generally considered magnetic, so that high-intensity magnetic separators may eventually find a rather wide application in this field.

What may become the outstanding recent development in gold metallurgy, though one whose utility remains to be proved, is being tested at a mill in the Philippines. It is the invention of T. G. Chapman. Briefly, his process consists in adding lime, cyanide, and activated carbon to the grinding mill; thickening and agitation of the pulp with concurrent dissolution of the gold by the cyanide solution, and adsorption by the activated charcoal; and finally, flotation of the carbon with its adsorbed gold. The process seems particularly applicable to low-grade ore and tailings. It reduces leaching time from the present 72 to 96 hours to an equivalent recovery in 10 to 12 hours. The principal ad-

vantages seem to lie in higher recovery, less plant investment per unit of capacity, and lower operating cost. The process is being thoroughly investigated by competent metallurgists.

Pyrometallurgy. In copper smelting, the most interesting recent development has been at the Phelps Dodge plant at Douglas, Ariz., where the reverberatories have been reconstructed. Inside dimensions are 26 by 107 ft., 1000 tons of solid charge per day is smelted, and the natural gas used gives a fuel ratio of 3,000,000 B.T.U. per ton smelted. A single 2500-h.p. waste-heat boiler is installed directly over the uptake of the furnace, 51 per cent of the heat in the fuel being recovered as steam. This position of the boiler is unique, and has proved highly successful.

In the smelting of iron ore, the Brassert acid-smelting process, first used commercially at the Corby iron smelting works in England some four years ago on 28 per cent iron ore, is continuing to expand in importance. Two Germans, Max Paschke and E. Paetz, are given at least a part of the credit for the discovery of the process, and it is now being applied to German plants in order to utilize their low-grade domestic ores. The customary basic smelting procedure is impractical on ores containing 20 to 30 per cent silica and only 25 to 35 per cent iron, the cost of limestone and fuel then being excessive, but the Brassert process can utilize this type of material economically. Direct smelting by the Brassert process, which, incidentally, takes place at lower temperatures, yields an easily fusible acid slag, with removal of the sulphur from the pig iron by sodium carbonate after the iron is tapped from the blast furnace.

With the current interest in light metals and alloys, mention should be made of improvements in the production of magnesium. Formerly the electrolysis of purified magnesium chloride, from which the chemically combined water had been removed at great expense, was the only commercial method of making this metal. Then, completely anhydrous magnesium chloride, obtained by heating purified magnesite with coke and byproduct chlorine, was utilized. The latest scheme is to produce magnesium directly from burned magnesite by electrothermic distillation. Powdered coke, sintered with powdered magnesia, is the reducing agent. The reaction is rapid when the sintered pellets are dropped into an electric furnace, the products of course being gaseous magnesium and carbon monoxide. These gases must be suddenly cooled, condensing the magnesium before it has a chance to reduce the carbon monoxide. Even with care and ingenuity, redistillation is necessary. The process may eventually make the cost of magnesium less than that of aluminum. In fact, some variation of the process may be applied to aluminum.

A new vertical retort process for zinc is also being commercially tested. As raw material, fine zinc sulphide concentrate is roasted to the oxide form in a cyclone-type roaster-separator. The oxide is allowed to fall through a vertical retort in the presence of carbon monoxide or natural gas, which reduces the material to gaseous metallic zinc. This is filtered through incandescent coke, and the zinc thus purified subsequently condensed. It is said that the economies apparently realizable by the new process may be sufficient to produce a profound effect upon the zinc industry.

METEOROLOGY. Perhaps the most striking event in the development of meteorological science during the year was the proof of the existence of sodium in the atmosphere. To anyone who

has seen sodium hissing and spitting on the surface of water, with a hydrogen flame playing around it, it must come with rather a shock to learn that there is free sodium in the atmosphere. It exists there, however, only in the form of an extremely rare vapor and doubtless it survives for an appreciable length of time only at levels where water is also rare, causing combination of the sodium atoms with water molecules to be a very infrequent event. The discovery and proof of the presence of sodium in the atmosphere are due to Cabannes, Dufay, and Déjardin. Spectroscopic methods were used; the well known D lines of sodium having been detected in the spectrum of the light from the sky both at twilight and, with much longer photographic exposures, during the night. Immediately after sunset, when the sky is darkening rapidly, the continuous spectrum of the sunlight scattered by the air fades much faster than does the light emitted by the sodium atoms in the air, so that the spectrum reveals this light by bright lines superposed on a faint background. The sky spectrum also shows the famous green auroral line now known to be due to atomic oxygen. While this oxygen line is visible without great change of intensity, from twilight onwards throughout the night, the sodium yellow lines, just as strong as the oxygen line about sunset, fade almost completely away during an interval of a few minutes. Accurate measurements of their wave-length, by interferometer methods, confirm the identity of these lines with the double D line of sodium, both at twilight and also during the night. The rapid fading of the sodium light at sunset indicates that the sodium is stimulated to luminescence by sunlight. At the time when the sodium light has sunk to insignificance compared with the oxygen green light, the lower limit of the sunshine still traversing the very high layers of the atmosphere is about 40 miles high so that the sodium must lie mainly below this level. During the night the emission of sodium light is at an altogether lower intensity, corresponding to a much weaker stimulus; it seems that the energy necessary to excite the sodium atoms at this time is given to them by collisions with other atoms or molecules around them, which already possess excess energy. The emission of green oxygen light throughout the night indicates the existence of metastable oxygen atoms, continually produced during the recombination of atomic oxygen to form oxygen molecules; evidently the sodium light derives its energy from the same source, that is, the energy of dissociation of oxygen by ultraviolet sunlight during the day.

The origin of atmospheric sodium is as yet unknown. Three different sources have been speculated about: (1) interstellar space, (2) the sun, and (3) the earth. In the case of the third it may be that when spray from the oceans evaporates in the air, sodium chloride is left behind, some of which may be in molecular form. The sodium chloride molecules may be carried up to great heights by atmospheric turbulence. Above the ozone layer such molecules could be dissociated into sodium and chloride ions, which in the presence of the many ions and electrons known to exist at high levels would soon become neutralized by gaining or losing an electron.

Much study has recently been given to meteorological conditions over the North Atlantic Ocean with a view of finding the best route for the operation of air craft between North America and Europe. Over the North Atlantic there are three alternative routes: (1) the northern route via

Iceland, Greenland, and Labrador; (2) the direct route via Ireland and Newfoundland; (3) the southern route via the Azores and Bermuda. The choice of a particular route depends largely on the meteorological conditions at possible air bases as well as along the route itself. During the summers of both 1937 and 1938 the French ship *Carimaré* was stationed between the Azores and Bermuda and its meteorological staff made regular surface, pilot balloon, and radiosonde observations. The value of these observations as an aid to safe flying of the North Atlantic cannot be overestimated.

The year has witnessed a great increase in obtaining and applying upper-air observations by radiosondes, small instruments attached to small balloons generally weighing less than 2 pounds which measure the pressure, temperature and humidity of the upper air and radio them to the ground by a small broadcasting set. The use of these observations has resulted in a slow but steady improvement of the accuracy of weather forecasts.

Brazell has just completed a study on the relation between the blueness of the sky and the polarity of the air and the wind and finds that there is a definite increase in blueness with an increase in wind speed.

Necrology. Hugo Hergesell, June 5; W. R. Gregg, September 14.

METHODIST CONNECTION (OR CHURCH) OF AMERICA, WESLEYAN. A branch of the Methodist Episcopal Church, organized in 1843 as an anti-slavery and non-episcopal denomination. In 1937 it comprised 29 annual conferences. There were 745 churches, 854 ministers, 663 local preachers, and 25,224 members. The Sunday schools numbered 771, with 9426 teachers and officers, 49,809 pupils, and 8804 persons enrolled in the home department, and on the cradle roll.

The church maintained the following educational institutions: Houghton College in Houghton, N. Y., Central College in Central, S. C., Marion College in Marion, Ind., and Miltonvale College in Miltonvale, Kans. The foreign missionary department of the Missionary Society continued its work in Africa, India, and Japan, and the department of home missions and church extension among the American Indians, Mexicans, and mountaineers of the South. The *Wesleyan Methodist*, weekly, is the official organ of the church. The officers are: President, the Rev. E. D. Carpenter; first vice-president,

Rev. F. R. Eddy; second vice-president, Joe Lawrence; and secretary, the Rev. E. F. McCarty. Headquarters are at 330 East Onondaga St., Syracuse, N. Y.

METHODIST EPISCOPAL CHURCH, THE. The year 1938, in the Methodist Episcopal Church, was marked by outstanding meetings, anniversaries, epochal events, and a forward movement in the work of the Church.

In early February, a National Methodist Council was held in Chicago, not for the raising of money, or the outlining of projects, but for the single purpose of facing squarely the opportunities and obligations of service that confront the Church. For three days more than 4100 delegates, from every State in the Union and from foreign countries, sat together under the banner, "I FELT MY HEART STRANGELY WARMED," as they discussed together, "We Look at Our World, Our Gospel, Our Church, Our Expectations, Our Faith, Our Christ, Our Future." This meeting, unequaled by any previous gathering of the Church, was the preliminary observance of the 200th anniversary of John Wesley's heart-warming experience in a little Chapel on Aldersgate Street, the beginning of the Methodist movement that has encircled the Globe.

Following the votes of the Methodist Episcopal and the Methodist Protestant Churches and the Annual Conferences of the Methodist Episcopal Church South, in 1936 and 1937, in favor of Union, the General Conference of the Methodist Episcopal Church South cast the final affirmative vote, preparing the way for the Uniting Conference to be held in Kansas City, Mo., on Apr. 26, 1939, when 900 delegates from the three Churches will complete the healing of the breaches that have existed between these three Churches for nearly a century.

The reports for 1937 show that the new Methodist Church will carry on work in the United States and 30 other countries, with 65 Bishops, effective and retired; 25,000 Ministers in 900 Districts, besides 1500 Ministers in Special Appointments, 10,000 Local Preachers and 2300 Deaconesses. There will be 7,740,000 members, 400,000 preparatory members, 864,000 members of Young Peoples Societies, and 5,916,000 enrolled in the Sunday Schools.

The work of the Church will be carried on in 45,500 churches, with 22,800 parsonages; 2900 schools and colleges; 177 hospitals; 135 homes; 88 Deaconess homes; and other co-ordinating agencies, with a total estimated value of property and endowments of \$1,220,000,000. In 1937, the churches contributed \$77,355,000 for local work and Church benevolences.

Reports from the Conferences of the Methodist Episcopal Church for 1938 show, in many instances, that the decreases of recent years have been halted, and increases are shown in baptisms, new members received, full members, ministerial support, and benevolences: while the decreases in Sunday School enrollment seem to have been checked.

During 1938, nearly 500 ministers died; among these were Bishop Charles Wesley Burns, resident in Boston, and Frederick Bohn Fisher, a Bishop of the Church in India from 1920 to 1930. Of 333 ministers whose ages at death were recorded, 14, or 4 per cent, were under 50 years of age; 36, or 11 per cent, were between 51 and 60; 86, or 26 per cent, between 61 and 70; 105, or 31 per cent, between 71 and 80; 81, or 24 per cent, between 81

and 90; and 11, or 3 per cent, between 91 and 100, with one man in his 100th year.

METHODIST EPISCOPAL CHURCH, COLORED. This denomination was organized in Jackson, Tenn., in 1870 and was composed of the colored membership of the Methodist Episcopal Church, South. In 1938 it reported 4087 churches with 370,200 members and 3185 ministers; 3310 Sunday Schools with an enrollment of 340,098 pupils; and 1900 Epworth Leagues with a membership of 63,048. The church has nine effective bishops. *The Christian Index* is the official organ, while the *Eastern Index* and *Western Index* serve their respective sections. A quadrennial general conference was held in May, 1938, at Hot Springs, Arkansas. Headquarters are in Jackson, Tenn.

METHODIST EPISCOPAL CHURCH, SOUTH. A separate branch of the Methodist Episcopal Church, formed in 1845 over the question of slavery. In 1938 there were 48 conferences and missions, of which 41 were in the United States and 7 in foreign countries; 16,441 churches; 7921 traveling preachers and 3909 local preachers; and 2,907,367 church members. Sunday schools numbered 15,418, with an enrollment of 1,988,242 pupils. Contributions for all purposes in 1938 amounted to \$29,144,794. The denomination sponsored 82 educational institutions, including 47 universities and colleges, 4 academies, and 31 mission schools. Important periodicals are the *World Outlook* and the *Christian Advocate*.

During the year 1938 the Aldersgate Commemoration (the second section of the Bishops' Crusade), being the celebration of the bi-centennial of the Aldersgate "heart-warming experience" of John Wesley, resulted in a great revival of spirituality throughout the Church and had much to do with bringing into the Church on profession of faith 117,432 members, the largest number yet tabulated.

The General Conference held at Birmingham, Ala., in April, 1938, by a vote of 434 for and 26 against, ratified the Plan of Union with the Methodist Episcopal and Methodist Protestant Churches, both of which had voted favorably on the matter in 1936. The Uniting Conference will be held at Kansas City, Mo., beginning on Apr. 26, 1939. Headquarters of the Church are in Nashville, Tenn.

MEXICO. A Federal republic of North America, comprising 28 States, 2 Territories, and the Federal District (City of Mexico and 11 surrounding villages). Capital, Mexico.

Area and Population. Mexico has an area of 760,290 square miles and a population estimated at 19,154,092 in 1937 (16,553,000 at the 1930 census). The urban population comprised 33 per cent of the total in 1930. The racial division of the population at the same census was: Indians, 4,630,880; whites, 2,444,466; mixed race, 9,040,590. Living births registered in 1937 numbered 764,329 (39.9 per 1000); deaths, 454,966 (23.8 per 1000); marriages, 120,739 (6.3 per 1000). The 1930 census populations of the chief cities were: Mexico, 1,029,068 (615,367 in 1921); Guadalajara, 175,539; Monterrey, 132,577; Puebla, 114,793; Mérida, 95,015; San Luis Potosí, 74,003; Tampico, 68,126; León, 69,238; Veracruz, 67,494; Torreón, 66,001; Aguascalientes, 62,244; Saltillo, 45,272; Chihuahua, 44,646; Orizaba, 42,904; Toluca, 41,234; Pachuca, 41,211.

Education and Religion. Illiteracy was estimated to have declined from 59 per cent of the adult population in 1930 to about 54 per cent in 1934. The population of school age (6 to 14 years)

was estimated at 3,956,115 in 1936. Enrollment in the 22,670 Federal, State, and municipal primary schools at the end of the 1937 school year was 1,938,964. In 1935 there were 564 secondary, preparatory, commercial, industrial, and technical schools, with 70,318 students. There are eight universities.

Roman Catholicism is the prevailing religion, but under the 1917 Constitution the Catholic and other churches are strictly controlled by the state. All foreign priests in Mexico were expelled in 1926 and by 1936 the number of priests permitted to exercise their functions had been reduced to about 350; in 1936-38, however, a number of State governments permitted the Catholic churches to reopen (see *History*). Churches and other buildings used for religious functions were nationalized by the law of Sept. 4, 1936.

Production. Agriculture, stock raising, mining, and manufacturing are the principal occupations. About 6 per cent (28,400,000 acres) of the total area was under cultivation in 1930 and there were 164,000,000 acres of pasture and 63,970,000 acres of forests. The value of agricultural production in 1935 was 305,627,720 pesos. Yields of the chief crops in 1936 were: Wheat, 13,581,000 bu. (10,586,000 in 1937); corn, 65,196,000 bu.; rice (rough), 4,221,000 bu. (in 1936-37); beans, 3,914,000 bu.; tomatoes, 69,000 metric tons; tobacco, 28,016,000 lb.; cacao beans, 1,975,000 lb.; coffee (1936-37), 103,109,000 lb.; cotton, 188,952,000 lb. (162,479,000 in 1937); sugar (1936-37), 650,357,000 lb. (628,311,000 in 1937-38); henequen, 112,000 metric tons; chickpeas, 1,589,000 bu.; alfalfa, 1,438,000 metric tons.

The value of metals and minerals mined in 1937, excluding petroleum and coal, was 514,015,000 pesos (414,202,000 in 1936); the value of the 1937 petroleum output was 135,378,000 pesos (137,367,000 in 1936). Output of the principal minerals in 1937 was (in metric tons): Copper (metal content of ore), 46,077; lead (metal content), 218,133; zinc (metal content), 154,625; antimony (metal content), 10,639; arsenic (white), 10,762; graphite, 11,210; mercury (metal content), 170; coal, 1,239,000. Petroleum production was 46,905,000 bbl. in 1937 (41,026,000 in 1936); gold, 846,000 troy oz. (754,000); silver, 84,699,000 troy oz. (77,462,000). According to the industrial census of 1935, there were 7241 industrial establishments, employing 215,003 persons, with a motive force of 881,526 h.p. and a value of production totaling 1,038,685,000 pesos of which 519,077,000 pesos represented the value of raw materials used. During 1937, 122,466 classified United States tourists visited Mexico, against 99,170, who spent \$14,828,142, in 1936.

Foreign Trade. General imports in 1938 were valued at 493,323,784 pesos (631,110,000 in 1937) and general exports at 838,126,841 pesos (894,535,000 in 1937). Of the 1937 imports, the United States supplied 62.7 per cent by value; Germany, 15.6; United Kingdom, 4.6; France, 3.3. The United States took 56.3 per cent of the 1937 exports; United Kingdom, 11; Germany, 9.4; Belgium, 4.6. United States trade figures for 1938 (excluding gold and silver) showed imports from Mexico of \$49,006,539 (\$60,120,159 in 1937) and exports to Mexico of \$62,043,324 (\$109,450,361 in 1937). United States silver imports from Mexico in 1938 were \$42,374,683 (\$30,801,613 in 1937); gold imports, \$37,168,193 (\$39,249,773 in 1937). Silver exports to Mexico were \$659,784 (\$598,-

947 in 1937); gold exports, \$696,625 (\$767,303 in 1937).

Finance. Actual budgetary operations for 1937 showed revenues of 450,131,000 pesos and expenditures of 459,076,000 pesos (preliminary returns). The budget for 1938 authorized expenditures of 431,110,000 pesos; that for 1939, expenditures of 445,876,000 pesos. These figures are exclusive of extrabudgetary operations of considerable size, for which official data were not available. The foreign debt as of July 1, 1937, was officially estimated at 1,133,995,000 pesos, including unpaid interest. The recognized internal debt as of Dec. 31, 1936, was 434,386,000 pesos (principal, 288,765,000; interest, 145,621,000). The average exchange value of the Mexican peso was \$0.2776 in 1936, \$0.2775 in 1937, and \$0.2212 (nominal) in 1938.

Transportation. The principal railway system, the National Railways of Mexico, was nationalized in 1937 and turned over to the railway workers union in 1938 (see *History*). The railway mileage in 1936 was 14,252, including auxiliary and branch lines; in that year 27,132,000 passengers and 14,338,000 metric tons of freight were carried, the gross receipts totaling 181,674,000 pesos. The principal of the National Railways debt was estimated in 1938 at \$240,609,000; the accumulated unpaid interest at 4¼ per cent since 1914 would total about \$245,000,000. There were 9005 miles of air routes under the national flag in 1938, maintained by 16 airlines operating 43 services. Roads and highways in 1937 extended 56,923 miles (number of automobiles, 105,401). During 1937, 12,375 vessels entered Mexican ports carrying 1,300,000 metric tons of cargo; cargo cleared, 4,764,000 metric tons.

Government. The Constitution of 1917, as amended in 1929 and 1933, vests executive power in a President elected by direct popular vote for six years and ineligible for re-election. Legislative power rests with an elective Congress of two houses—a Chamber of Deputies of 172 members, elected for three years, and a Senate of 58 members, renewed every six years. Former President Plutarco Elias Calles, acting through the National Revolutionary party which he organized in 1928, controlled the Federal government and Congress until President Lázaro Cárdenas (inaugurated Nov. 30, 1934) broke the power of Calles in 1935-36. In the elections of July 4, 1937, the National Revolutionary party captured about 130 out of 172 seats in the Chamber of Deputies. For developments in 1938, see *History*.

HISTORY

Internal Developments. President Cárdenas during 1938 continued methodically and relentlessly to carry his nationalistic and socialistic program into effect "against all opposition." He expropriated the extensive oil properties of United States and British-Dutch interests, speeded up the process of expropriating large agricultural holdings for redistribution to landless agricultural workers, turned the expropriated National Railways over to labor unions, progressively extended government control over business practices and commodity prices, radically revised Mexico's monetary, tariff, and trade policies, encouraged labor to extract extensive concessions from both foreign and Mexican employers with a view to ultimate socialization of additional branches of production, and sponsored a further reorganization of the political system. These measures aroused the violent opposition of both Mexican and foreign property-holding interests and plunged Mexico into an acute

economic and financial crisis. But Cárdenas moved steadily ahead, supported by Mexican nationalism and the revolutionary ardor of peasants, industrial workers, and intellectuals alike.

Expropriation of Oil Properties. The 20-year struggle between the Mexican Government and oilfield workers on the one hand and the British and American oil companies and governments on the other came to a dramatic climax in 1938. This struggle had been waged during 1937 (see 1937 YEAR BOOK, p. 455) on the issue of the oil workers' demands for an increase of at least 133 per cent in wages and social welfare benefits. On Dec. 18, 1937, the Mexican Labor Board issued its decision upholding most of labor's demands. While the companies' petition of Dec. 28, 1937, for a permanent injunction against the award was before the Supreme Court, President Cárdenas in a speech before the congress of the radical Confederation of Mexican Workers charged the oil companies with withdrawing their bank deposits from Mexico and launching a deliberate publicity campaign to disturb economic conditions and apply pressure on the courts. On Jan. 1, 1938, he had repudiated the Morrow-Calles agreement regarding the status of American oil companies by declaring their property rights subject to the payment of royalties.

The Supreme Court on Mar. 1, 1938, denied the injunction and sustained the findings of the Labor Board, which immediately fixed March 7 as the deadline for compliance with the award. The companies declared themselves unable to comply and on March 7 the government on petition of the oil workers' union seized company bank deposits to the amount necessary to cover wages unpaid during the 1937 strike. In conferences with the companies' representatives, President Cárdenas personally promised that the cost of the award would be limited to 26,300,000 pesos annually. The companies were said to have agreed to pay this sum if the provisions of the award depriving them of control of their personnel and management problems were set aside. This the government refused to do.

On March 15 the companies again notified the Labor Board that they would not accept its decision. The Syndicate of Petroleum Workers on March 17 petitioned the Board to end the labor contract between the companies and the union, which would make the companies liable under Mexico's radical Labor Law for dismissal wages for all their employees. The Board granted this request on March 18. The union then ordered work in the oil fields suspended at midnight. The same evening President Cárdenas issued a decree expropriating the properties of 17 American and British companies representing principally subsidiaries of the Standard Oil, Sinclair, and Royal Dutch-Shell companies.

The value of the confiscated properties was variously estimated at from \$100,000,000 to \$450,000,000, with the British-Dutch investment representing nearly two-thirds of the total. The decree was issued under the Expropriation Law of November, 1936, authorizing the taking over of private property on grounds of either "public necessity" or of "public and social welfare." It provided that the owners were to be paid within 10 years from a percentage of the petroleum and by-products produced by the expropriated wells, the indemnity to be fixed on the basis of the taxable value of the properties. On the basis of the Mexican minimum estimates of the value of the seized properties, a payment of at least \$10,000,000 annually would be required to indemnify the companies within a decade and there

seemed little possibility that this sum could be raised.

In response to the President's appeal of March 18 for national support of his expropriation decree, demonstrations in favor of his policy were held throughout the country on March 23. In Mexico City there was a great demonstration by 200,000 persons. The State governors met, unanimously backed the government's action, and offered to allot 5 per cent of their revenues to the Federal Treasury to indemnify the companies. They also suggested the issuance of "National Redemption Bonds" in the sum of 100,000,000 pesos for the same purpose, but this plan was dropped on June 26 because of the growing economic crisis.

A "national co-operation fund" to which individuals and groups contributed was also raised to pay the oil companies. Women offered their jewels and silverware. The labor unions voted to contribute one day's pay per month. Other contributions were collected in the Catholic churches. But on August 19 this fund amounted to only 2,016,263 paper pesos, 33,800 gold pesos, and \$25,290. On April 6 the government ordered 20 per cent of the profits on sales of petroleum abroad set aside for the same purpose. These moneys were all deposited in the National Labor Bank pending the determination of the sums which the Mexican Government might decide it owed the companies. According to President Cárdenas's annual message to Congress on September 1, these payments were to be limited to "that part of their justifiable investments which they (the companies) have not yet recovered."

The companies refused to accept any payments on this basis. They exhausted every legal recourse to regain their properties. On April 4 they sought an injunction against the expropriation decree on the ground that both the decree and the Expropriation Law were unconstitutional. This plea was rejected by the Federal District Court in June and by the Supreme Court on October 9. The companies also appealed to their respective governments for aid but with no better success (see below under *Foreign Relations*).

On March 30 President Cárdenas appointed an Administrative Council of Petroleum, comprising nine members headed by Finance Minister Eduardo Suárez, which gradually established a fairly efficient organization for operating the expropriated oil properties. By the middle of June production was at about 65 per cent of the former level, or about sufficient to pay the cost of operation. Oilfield workers, however, did not obtain the benefits that were called for under the Labor Board award and the Supreme Court decision. Payrolls declined and the 40-hour week and welfare provisions demanded of the foreign companies were not put into effect.

To end the growing discontent among the oil workers, the President on July 20 established Petroleos Mexicanos, a corporation jointly controlled by the government and the oil workers' union, to replace the Administrative Council of Petroleum. The government retained the controlling voice in the corporation's affairs. On July 22 the wages of oil workers were raised to a level 8 to 15 per cent below the scale adopted by the Labor Board. At the same time salaries of administrative posts were reduced from 15 to 25 per cent.

The refusal of the ousted British and American companies to buy or handle oil from the expropriated wells largely excluded Mexican oil from the United States and British markets. The companies controlled a large share of the available tankers

and were thus able to obstruct Mexican sales to countries where a market was available. In April, May, and June petroleum exports were less than half those for the same period of 1937. But this obstruction was gradually overcome. To find markets for the expropriated oil, the Cárdenas Government was forced to moderate its anti-Fascist policies and strike bargains with the Fascist dictatorships under which it bartered oil at bargain prices for German, Italian, and Japanese manufactures and other products. Barter deals were also made with Sweden, with the national petroleum monopoly of Uruguay, and with a few other countries. A considerable part of this trade was handled through W. R. Davis & Co. of New York City. On October 26 Roy R. Fisher, president of the Argo Oil Corp. of Detroit, announced an agreement with the Mexican Government to purchase its surplus oil (then estimated at 50,000 barrels daily) for sale in the United States. In December it was learned that the Mexican oil administration was supplying both the German and Italian navies with fuel oil which was first shipped to Houston, Tex., for refining. Under the oil-barter system, manufactures from Germany, Italy, Japan, Sweden, etc. virtually excluded United States and British manufactures from the Mexican market.

Land Expropriations. Despite growing opposition from the United States Government, President Cárdenas continued his program for the redistribution of large land holdings to peasants on a communal basis. In his message of Sept. 1, 1938, he reported that during the preceding year 2255 communal (*ejido*) grants involving 11,000,000 acres were made, benefiting 211,649 individuals. Altogether there had been 12,886 grants, representing more than 56,000,000 acres, benefiting 1,570,507 rural dwellers. Of the land expropriated for this purpose slightly more than 2,500,000 acres were owned by United States citizens. British and Spanish landowners were also heavily affected. Among the lands seized from American owners in 1938 were 17,980 acres owned by William Randolph Hearst in the State of Chihuahua, 4307 acres owned by Representative William Lemke in the State of Nayarit, and the \$8,000,000 La Mochis sugar and vegetable plantation in Sinaloa. None of the American and few of the other foreign and Mexican owners of expropriated properties were compensated. On November 21 President Cárdenas appealed to Mexican landowners to forego their claims for indemnification in fulfillment of a "high moral duty." No general response was recorded.

The accelerated land distribution program was due in part to the pressing necessity for propitiating thousands of landless agricultural workers who were unemployed as a result of the suspension of work on irrigation projects and other public works. Many of them seized agricultural properties on their own behalf, driving off the owners and occupying the land. Armed clashes between peasants and landowners and between State or Federal troops and agrarians were sporadic throughout the country during 1938.

Moreover, the new system of communal ownership of farms was not functioning as well as the former system. The lands distributed in the fertile Laguna and other districts during 1936-37 failed again in 1938 to produce up to the expected level under the new system of ownership, and the desperate agrarians were obliged to draw further financial aid from the hard-pressed Federal government. Red tape, ignorance, inefficiency, and corruption retarded the agrarian program. The Secretary of

Agriculture and Promotion, after studying the situation, reported that the change in the system of ownership of rural properties entailed reduced production, but that the agricultural economy was not greatly weakened by the agrarian reform.

Other Workers' Demands. The radical industrial and miners' unions, led by Vicente Lombardo Toledano, head of the Federation of Mexican Workers (C.T.M.), also exerted great pressure upon the Cárdenas regime to speed up the nationalization and socialization of foreign properties and even of Mexican-owned capitalistic enterprises operating on a large scale. The National Railways, which were nationalized in 1937, were turned over to the railway workers' union by a law passed by the Federal Congress on April 22. It was reported that 5.64 per cent of the operating revenues were to be handed over to the government by the union, but that no provision was made for paying the long-defaulted railway debt, estimated at \$240,609,000. In August it was reported that two small railways in the State of Chihuahua owned by United States and Canadian interests, respectively, would be transferred to the State section of the railway workers' union. The two companies had offered to surrender the lines on the ground that they could not operate and meet the wage demands of the union.

The workers employed their demands for higher wages and better working conditions as a lever for ousting foreign owners of other large-scale enterprises and taking over the properties. The government's desperate financial straits and the deepening economic depression, caused in large part by the expropriation of the foreign oil properties and other radical government and labor actions, led President Cárdenas to resist the more extreme labor demands for fear that they would make a difficult situation worse. A strike closed the Ford Motor Company's \$1,500,000 assembly plant in Mexico City on May 9, but when the company threatened to withdraw from the country rather than sign a collective labor contract, the Federal Labor Board declared the strike illegal.

American Electric Bond and Share properties in five Mexican States were closed by strikes in November. Government and labor officials warned the company that it might be necessary for the government to take over the properties if labor's demands were not met. The strike was settled November 19 after President Cárdenas induced the workers to moderate their demands. But as the year drew to an end the industrial workers displayed growing unruliness and disregard of President Cárdenas and their own leaders. Strikes and sabotage broke out in mines and industries whose continued operation was vital to the government's solvency and in opposition to Cárdenas's expressed wishes. An American mining foreman and several other foreign labor superintendents were shot by workmen. It was widely feared that the workers would attempt to take over and socialize all industry, including the mines, before Cárdenas considered the time ripe for such a move.

Under the radical pressure of the rank-and-file industrial workers Lombardo Toledano again emerged as a prospective rival of President Cárdenas for leadership of the Mexican revolution. The labor leader's influence was strengthened greatly by the oil expropriation. He was also the leading spirit in and first president of the Confederation of Latin-American Workers, organized at a conference in Mexico City on September 5-8 of representatives of radical labor unions from a num-

ber of the American republics. Among those present were John L. Lewis, head of the Committee for Industrial Organization in the United States; Léon Jouhaux, French labor leader; and Ramón Gonzales Pena, Spanish Loyalist Minister of Justice.

That the workers were prepared to defend their radical policies was demonstrated on May 1 when the armed workers' and peasants' militia, organized by President Cárdenas as a counter-weight to the army, made its first formal appearance in a parade through the capital. About 100,000 uniformed men and women marched in well-drilled units, giving the Leftist clenched-fist salute as they passed President Cárdenas in the balcony of the presidential palace.

Internal Politics. The revolutionary temper displayed by the workers and some of the other adherents of President Cárdenas provoked a strong Rightist movement among army officers, property owners, and other groups that insured a desperate struggle for control of the presidency in the 1940 elections. Cárdenas announced on February 20 that in accordance with the Constitution he would not be a candidate for re-election. He pledged himself to abstain from participation in the elections for various government offices, but urged that the electoral campaign be not started prematurely and that it be waged on a non-personal basis. Nevertheless, the lines of the approaching contest were drawn during 1938 and the end of the year found the struggle for the presidential nomination in full swing. A woman suffrage amendment to the Constitution, which received legal ratification on October 17, gave some 4,000,000 women the right to vote for the first time in the forthcoming elections.

The reorganization of the National Revolutionary party to eliminate conservative elements opposed to the Cárdenas reforms, was carried out at a "constituent assembly" in Mexico City early in April, attended by representatives of the peasants, industrial workers, soldiers, etc. A new party called the Party of the Mexican Revolution was formed in which the army was formally represented for the first time. Lombardo Toledano's unions exercised what appeared to be a dominant influence. The president of the new party, Luis I. Rodríguez, owed his selection largely to Lombardo Toledano's backing.

Soon afterward the popular enthusiasm aroused by the oil expropriation decree enabled Cárdenas to crush the power of Gen. Saturnino Cedillo, governor of the State of San Luis Potosí and a leader of the conservative anti-Cárdenas forces throughout Mexico. On May 18 Cárdenas moved Federal troops into San Luis Potosí, and demanded that Cedillo surrender all arms and munitions of his private army. Cedillo defied this ultimatum, precipitating armed hostilities. The Cedillo forces offered ineffectual resistance, however, and within 10 days were reduced to a few guerrilla bands. Their chief went into hiding in the hills. His whereabouts were still in doubt at the end of the year, but he had been eliminated as a factor in Mexican politics.

While President Cárdenas was liquidating Cedillo, a revolt against his more radical policies broke out in the National Congress. Army officers and other members of the Chamber of Deputies organized a majority bloc in opposition to the influence of the C.T.M. On June 2 they voted an investigation into conditions on the communal farms established by the government in the Laguna district. On June 29 the majority bloc in the Chamber of Deputies approved a bill regulating the activities

of State employees without giving them the right to strike. The Chamber thus rejected the demand, presented by Señor Rodríguez in May with the President's approval and accepted by the Senate, that government employees be authorized to strike. At the same time a group of army officers issued a statement accusing Lombardo Toledano of "attempting to dissolve the revolutionary army and deceive the workers into creating another Spain."

The conflict between labor Deputies and their radical allies on the one hand and the majority bloc in the Chamber rapidly became more violent, widening the Left-Right schism throughout Mexico. In July the C.T.M. unions launched a campaign of boycotts and strikes against newspapers supporting the moderates. On July 23 they forced the expulsion from the Party of the Mexican Revolution of Gen. Ramón F. Iturbe and Col. Bolívar Sierra, who had signed a manifesto denouncing both fascism and communism and urging establishment of a "democratic front" supported by the Mexican people. The violent debate provoked by this purge led the Chamber to the verge of a pistol battle on July 26.

These developments encouraged moderate elements in the industrial center of Monterrey and in other northern States to check the progress of the C.T.M. unions and resist the radical Cárdenas policies. The conflict between Gen. Román Yocupicio, Governor of Sonora, who vigorously defended the existing rights of individual small farmers, and of Cárdenas agents and the C.T.M. authorities, who demanded conversion of individual into communal farms, provoked sporadic armed clashes. There were clashes also between the pro-Stalinist C.T.M. workers and the Trotskyite General Confederation of Labor (C.G.T.), particularly over the continued presence of Trotsky in Mexico.

Church-State Controversy. Relations between the Catholic Church and the State improved steadily during 1938 as a result of President Cárdenas's conciliatory policies. The Federal and State anti-church laws were relaxed without being repealed. The Mexican episcopate on May 2 formally approved contributions by Catholics to the fund for payment of expropriated foreign oil properties, and collections for this purpose were taken up in churches. On May 30, however, four Catholics were killed when police in Villahermosa, capital of Tabasco, dispersed a Catholic demonstration asking the right to rebuild a Catholic church razed during the anti-church regime of Gov. Tomás Garrido y Canabal. Federal authorities on June 3 announced that explicit instructions against the persecution of Catholics in Tabasco had been issued. Negotiations regarding the reopening of the Tabasco churches were inaugurated in accordance with a tacit agreement to settle all Church-State issues in an amicable manner.

Anti-Foreign Measures. The radical nature of Mexican nationalism was illustrated by measures taken against foreigners in the country and those seeking to enter as immigrants or tourists. The complaints of Mexican merchants against the competition of Jews and other Semites from Poland, Syria, and other parts of the Levant led the government in February to order a nation-wide investigation of the status of all foreigners in the country. Some 18,000 Jews, whose status was alleged to be irregular, were ordered to abstain from ordinary business activities and to devote themselves to agriculture, industry, or the export trade.

The Mexican Government on May 11 denounced Nazi-inspired anti-Semitic propaganda, but it con-

tinued the expulsion of foreigners who entered the country in alleged violation of immigration laws. In June the unions and the official press charged small Jewish textile operators with responsibility for the crisis in the textile industry and demanded their expulsion. In October the Minister of Interior announced that Jewish refugees from Austria and Germany entering Mexico on tourist visas would be deported. New arrivals were not permitted to land except in a few instances. On November 1 the Secretary of Interior stated that foreigners who had lost their nationality might be admitted "in exceptional cases of notorious benefit for the country" provided they categorically affirmed that they had no racial prejudices and agreed to marry Indians. This was inspired by the desire of President Cárdenas, himself a mestizo, to promote the mixture of Indian and white elements.

Economic and Financial Conditions. The boom conditions that obtained during the first three years of the Cárdenas regime began to recede in the autumn of 1937. By Mar. 12, 1938, just before the expropriation of foreign oil concessions, the outflow of gold and foreign exchange had reduced the gold and silver reserve of the Bank of Mexico from 194,000,000 to 110,000,000 pesos and by June 1 it was down to 85,000,000 pesos. The United States Government saved Mexico from greater strain by agreeing on Jan. 11, 1938, to buy 35,000,000 oz. of silver (valued at \$15,750,000) in addition to its regular monthly purchases of 5,000,000 oz. The seizure of the foreign oil properties greatly aggravated the economic slump. It was a great shock to business confidence. The curtailed oil output and the deepening depression reduced the government's revenues. Washington suspended silver purchases from Mexico (March 27). The Mexican Government then temporarily abandoned its support of the peso, which depreciated from 27.80 U.S. cents to 20 cents. The result was an almost complete stoppage of imports. In an effort to check the gold outflow, President Cárdenas on January 19 boosted tariff duties between 100 and 200 per cent on most imports. On August 9 a 12 per cent tax was imposed on exported products whose price in Mexican currency exceeded the average price during the month of February, 1938. This measure enabled the Mexican Government to take a percentage of the profits realized by Mexican exporters as a result of the depreciation of the peso and at the same time to subsidize the importation of essential products whose prices had increased within the country as a result of the peso depreciation. Effective August 30, import duties on a wide range of articles was reduced in a further move to check soaring prices.

Measures were also taken to regulate internal prices. A decree of July 30 established the Committee to Regulate the Marketing of Prime Necessities, vested with authority to buy and sell or store commodities and to regulate prices. With the opening of foreign markets for oil, the termination of the gold outflow, and a rise in resources of private banks, economic conditions began a gradual improvement in August.

Foreign Relations. United States. The expropriation of American-owned oil properties offered a most severe test to the Roosevelt Administration's "good neighbor" policy and revived the tension in United States-Mexican relations that had been banished by Ambassador Morrow a decade before. On March 27 the State Department protested the expropriations in a note admitting Mexico's right to expropriate properties within its

jurisdiction but asserting that such properties should be paid for "by compensation representing fair, assured, and effective value."

President Cárdenas himself replied on March 31 that "Mexico will know how to honor its obligations of today and its obligations of yesterday." In this conciliatory atmosphere, the two governments started negotiations on the demand for fair compensation. On May 26 Mexico offered to sell all her oil exports to the American companies whose wells were expropriated at a price well below the world market, the difference to be applied as payment for the seized properties. This was rejected by the companies.

On July 21 Secretary Hull charged that Mexico had violated the principal requiring prompt and adequate payment for expropriated properties. He proposed arbitration of the issue "whether there has been compliance by the Government of Mexico with the rule of compensation as prescribed by international law" in the case of lands seized from United States citizens since 1927 "and if not, the amount of, and terms under which, compensation should be made." The Mexican reply of August 3 denied that payment of immediate or even deferred compensation was required by international law for expropriations of a general and impersonal character. It acknowledged Mexico's responsibility for adequate compensation but declared that the amount and manner of payment must be determined in accordance with Mexico's capacity to pay and with Mexican laws. It added that foreigners were not entitled to different treatment than that accorded Mexican citizens. Rejecting arbitration, the note proposed settlement by bilateral negotiation of the value of the properties expropriated and the manner of payment.

On August 22 Secretary Hull expressed his surprise and "profound regret" that Mexico denied the compensation principle. He requested that no more properties be taken without prompt compensation and urged Mexico to accept either his arbitration proposal of July 21 or the proposal made June 29 by Under-Secretary Welles. The latter suggested that each government appoint a commissioner to determine the amount of compensation, and that points of disagreement should be settled by an arbitrator selected by the Permanent Commission of Conciliation at Washington. President Cárdenas bluntly rejected the Hull arguments in a speech of September 1 before Congress and in the Mexican note of September 2. He refused to set aside monthly sums in escrow for the satisfaction of claims or to refrain from further expropriations. In view of this stand, his acceptance of the Welles proposal was regarded as an empty gesture by the State Department.

Negotiations continued on an amicable basis, however, and on November 12 a compromise agreement was reached. By an exchange of notes, Mexico agreed to pay the United States \$1,000,000 in May, 1939, and at least as much each year until the American-owned agricultural holdings confiscated since 1927 were paid for. The value of these lands was to be determined by a commission composed of a representative appointed by each government. Should the two disagree, a third commissioner was to be named by the Washington Commission of Conciliation established under the Gondra treaty of 1923. This agreement applied only to farm properties. It was expected that a similar adjustment of the much more important controversy over expropriation of American oil properties would follow. In Mexico this agreement was

regarded as a diplomatic victory, as it admitted the principle of delayed indemnity payments. It was announced that new taxes would be imposed on American companies in Mexico to meet the indemnity payments.

The special Mexican-American Claims Commission for the distribution to American claimants of sums paid by Mexico into the U.S. Treasury on account of damages to American properties in Mexico during 1910-20 completed its work on June 10. Mexico paid about 57 per cent of the original amount allowed by the commission, which was about 4 per cent of the amount claimed.

The agreements reached on agrarian properties and special claims failed to eliminate the tension in American-Mexican relations produced by the oil expropriations, the growing threat of confiscation of American mining and industrial properties in Mexico, the virtual exclusion of United States exports in favor of German, Italian, and Japanese bartered manufactures, the hostility displayed toward Americans in Mexico, and the discriminatory taxes and restrictions imposed upon foreign business. All these factors contributed to a substantial reduction in the number of American permanent residents in Mexico.

The criticisms by the United States Government and press of Mexico's expropriation policies provoked a growing barrage of Mexican press attacks upon the Roosevelt-Hull "good neighbor" policy, which was denounced as a screen for "imperialism." President Cárdenas and other Mexican officials and diplomats worked actively to secure support for their expropriation policies in other Latin-American countries. The Mexican campaign to encourage the nationalization of foreign capitalistic enterprises in other parts of Latin America made considerable progress (see COSTA RICA, CUBA, and ECUADOR under *History*). At the Pan American Conference (q.v.) at Lima, Peru, in December, the Mexican delegation sought to push through a proposal barring governments from intervening in any way on behalf of their citizens in another country. This was aimed primarily at the United States.

The British-Mexican Dispute. The British Government was less conciliatory than Washington in its reaction to the expropriation of British-owned oil properties. On April 8 it demanded restoration of Aguila Oil Co. properties on the ground that Mexico's right to expropriate them was limited by the obligation to pay adequate compensation. It characterized the Mexican action as "essentially arbitrary" and "tantamount to confiscation carried out under a veil of legality formed by basing it upon labor issues." The note charged "a denial of justice and a transgression by the Mexican Government of the principles of international law."

Mexico replied that the Aguila Oil Co., a Royal Dutch-Shell subsidiary, was a Mexican corporation and that therefore no foreign state had a legal right to defend its interests. It declared there had been no denial of justice, but expressed Mexico's purpose to make compensation. On April 27 the British Government signified its intention to boycott Mexican oil and on May 11 it sent a sharp note to Mexico requesting immediate payment of an overdue instalment of some \$82,000 payable under the Anglo-Mexican special claims convention. It pointed out that Mexico was in default to British creditors also on her external debt, on the National Railways debt, and on claims for expropriated farm properties.

The Mexican Government on May 13 handed

the British Minister a check for the requested instalment together with a note denying that Britain had any "right to analyze the interior situation in Mexico." At the same time it recalled the Mexican Minister from London and closed its Legation there. The British Government withdrew its Minister from Mexico City the following day. It was indicated that Britain intended to reserve its demands pending the outcome of the United States-Mexican negotiations on the oil issue.

The Netherlands Protests. The government of the Netherlands, citizens of which were heavily interested in Dutch-Shell, sent a series of notes to Mexico requesting "adequate, prompt and effective compensation or return of the properties expropriated to the companies affected." The Mexican Government declined to discuss the matter with the Netherlands and failed even to acknowledge receipt of some of its protests. On July 18, 10,000 tons of petroleum from Mexico were seized in the Netherlands port of Hansweert through an attachment filed by the Batavian Oil Co., alleging that the oil had been illegally confiscated by the Mexican Government. The Batavian Oil Co. had an interest in the Mexican Eagle Co., whose properties were expropriated.

Germany, Italy, and Japan seized the opportunity presented by Mexico's quarrels with the United States and Britain to strengthen their commercial and political positions in Mexico. Early in the year a German propaganda campaign designed to increase German trade and to promote Nazism and German foreign policies was launched. It developed in scope during the remainder of the year. Many Mexican newspapers were reported to have been subsidized secretly by German representatives and others used large amounts of Nazi advertising paid for by the German Government. When Lombardo Toledano on November 20 vigorously attacked Chancellor Hitler and the German propaganda in Mexico, the German Minister in a strongly worded note to the Mexican Government demanded his arrest and criminal prosecution for attacking the head of a friendly state.

MIAMI UNIVERSITY. A coeducational State-supported institution at Oxford, O., founded in 1809. The enrollment for the autumn of 1938 was 2997, as follows: Liberal arts, 1082; education, 829; business administration, 926; fine arts, 125; and graduates, 34. The enrollment in the summer session: 1st term, 793; 2d term, 297. The faculty numbered 221. The income from the State of Ohio, fees, gifts, and income on investments for 1937-38 was \$985,899. There were 145,131 bound volumes in the library. President, Alfred H. Upham, Ph.D.

MICHIGAN. Area and Population. Area, 57,980 square miles, exclusive of the State's part of the Great Lakes; included (1930) other water, 500 square miles. Population: Apr. 1, 1930 (census), 4,842,325; July 1, 1937 (Federal estimate), 4,830,000; 1920 (census), 3,668,412. Detroit had (1930) 1,568,662 inhabitants; Grand Rapids, 168,592; Flint, 156,492; Lansing, the capital, 78,397.

Agriculture. Acreage, production, and value of the chief crops of Michigan, for 1938 and 1937, appear in the table on p. 458.

Mineral Production. The total annual value of Michigan's production of native minerals was \$105,078,046 for 1936; iron ore made up more than one-fourth of it, petroleum 15 per cent, and cement, copper, gypsum, and salt each contributed substantially. The iron mines increased their output to 12,626,935 gross tons for 1937, from 10,491,270

<i>Crop</i>	<i>Year</i>	<i>Acreage</i>	<i>Prod. Bu.</i>	<i>Value</i>

* Tons. ♢ 100 lb. bags.

for 1936; by value, to \$41,136,202, from \$30,721,075. The yield of petroleum advanced sharply to 15,928,000 bbl. (1937), from 11,928,000 bbl. (value \$15,950,000) for 1936. The output of petroleum in 1937 exceeded that of any previous year; this resulted mainly from the discovery of the North Buckeye pool in January. This pool was held to be the most important discovery of petroleum that had yet been made in the State. The producers of Portland cement shipped 7,831,880 bbl. in 1937, as against 7,960,821 in 1936; by value, \$9,836,999, as against \$10,482,835. Copper mines tended to revert to ores of lower grade, which they could not profitably handle prior to the improvement in prices for the metal. Consequently, the mines' estimated production of copper fell off somewhat in quantity, to 94,928,000 lb. (1937), from 95,968,019 lb. (1936); but the value of the copper content rose to \$11,486,288 (1937), from \$8,829,058 (1936). Salt producers' sales increased to 2,476,406 short tons (1937), from 2,354,282 tons (1936); by value, to \$6,506,120, from \$5,882,718. The gypsum mines produced 553,242 short tons in 1937, as against 496,611 in 1937.

Education. Inhabitants of school age (from 5 to 19 years) were reckoned as numbering, May 31, 1937, 1,402,672. For the academic year 1936-37, the latest for which the data that follow had been issued, pupils' average membership in the public schools totaled 942,328. This comprised 551,127 in the elementary group, 369,925 in high schools, and 21,276 otherwise classified. The year's expenditure for public-school education totaled \$106,443,599. Teachers numbered 32,207; their average salary for the year was \$1454.88.

Teachers' study of curricula was promoted at the University of Michigan in 1938 by a "curriculum workshop," or seminar, held in the summer session. The State schools for the deaf and the blind passed from the previous controlling authority to that of the State Board of Education.

Charities and Corrections. The Department of Corrections (created in 1937) governed the State Prison of Southern Michigan, at Jackson, the Branch State Prison, at Marquette, and the Michigan Reformatory, at Ionia. As stated in December, the State institutions in its charge had 7104 inmates. It exercised jurisdiction over the paroled through a Bureau of Pardons and Poles, and over probation, through a Bureau of Probation, as well as inspection of jails and houses of correction, under a consolidation of such services, which went into effect in 1938.

The Welfare Department acted for the State in regard to poor-relief, old-age assistance, and other dispensations of public support.

Legislation. The Legislature met in special ses-

sion on Aug. 29 at the call of Governor Murphy and adjourned early in September. The purpose of his summons was to obtain additional means for meeting an unforeseen drain on the State government's funds, caused by the cost of maintaining a great number of indigent persons thrown on public support by the spread of inactivity in the automobile manufactories and other industries. The Legislature appropriated \$10,000,000 without any accompanying measure to raise the revenue; the sum was to be used for poor-relief and, in part, on public schools and support for the aged. It was to cover needs until March, 1939.

Political and Other Events. The automobile-manufacturing industry, a leading source of the population's livelihood, was severely affected by the relapse of economic activity that ran from the summer of 1937 until late in 1938. The number of persons thrown out of work approximated 400,000, according to a reported estimate. Apart from indigent persons supported by the Federal work-giving agencies, the State carried, early in February, some 100,000 cases on the rolls of its poor-relief. The support of the needy used up, in the 14 months to the end of August, all the \$16,000,000 that had been appropriated to care for them through the two years to end with June 30, 1939, plus a considerable sum in transferable funds. The State Government cut down on payments to schools and reduced its fund for assistance to the aged in order to continue its poor-aid. Eventually the appropriation made by the special session eased the pinch; by the end of August, moreover, the State had begun payments under its system of unemployment compensation, thus helping to keep down the number on direct poor-relief. Payments to those losing employment, out of the accumulated fund for the purpose, began August 1, after the registration of some 225,000 applicants in July.

Governor Murphy sought to impose a general reduction of the pay of employees of the State Government, effective July 1, by from 6 to 15 per cent. The Supreme Court, safeguarded by the State constitution, declined to allow a cut in its own pay, and judges of the Circuit Court did likewise; legislators' pay of \$3 a day was not reduced. The lower scale of pay went into general effect as to other salaries. Its effect was offset to some extent by an increase in the number of employees. The State Tax Commission made an effort to reach persons supposed to be dodging the State's taxes on personal and on intangible property; but the move was reportedly checked by Federal authorities' delay in furnishing the State with information on such persons' Federal income-tax returns. In the hunt for more revenue the valuations of railroads' property were raised, as a whole, by \$6,415,000 in April, despite railroads' financial distress, and the valuations of public utilities' property were increased by more than \$8,000,000. A special commission, created by the Governor to study the system of taxes, prepared proposals for alterations, intended for submission to the Legislature in 1939.

An emergency-appropriation commission created by an act of 1937 went into operation and authorized the use of additional funds, to the total of \$1,000,000 or more, toward filling up deficiency in the allowances for poor-relief. The 16,500 employees of the State were subjected to examinations, prior to June 30, to test their fitness for their jobs, in accordance with the requirements of the State's civil-service act of 1937. The State Supreme Court invalidated an act of 1937 that would

have submitted, for popular adoption at the November election, increases in the salaries of the higher officers of the State.

The great aggressive movement for the industrial organization of labor in the State and for increasing its power and emoluments, active all through 1937, slackened in 1938 under the repression of hard times, but attendant disturbances did not by any means cease. As the reduction of employment lowered the inflow of dues to the treasury of the United Automobile Workers of America, that union took to sending pickets, in April, to the gates of the manufactories, to prevent the entrance of employees who had not paid up what they owed it. Several hundred persons were reported thus to have been shut out in Flint on April 18 and 19. The Fisher Body Plant No. 1 and part of the assembling work of the Buick Motor Company were closed for a time on this account, and the President of General Motors condemned the union's forcible exclusion of workers as a breach of its contract and an attempt to set up a closed shop by coercion. A dozen more establishments connected with the manufacture of automobiles closed on the 21st. Homer Martin, president of the U.A.W.A., exerted himself to stop coercive collection of the union's dues. Some weeks later a long-standing difference between him and some of the more advanced liberals in the councils of the organization became acute. Martin proposed to the union's executive board (May 9) that Richard T. Frankenstein be removed from the office of assistant president. Each side charged the other with communistic affiliations or sympathies. Frankenstein and two of his associates, after hearings, were expelled from the union (August 6). The union suffered considerable factional disorganization because of this action, and there resulted an intermission in the long series of strikes and picketing incidents that had followed the signing of contracts between employers and the union early in 1937. The difference between the Martin and Frankenstein groups was later the subject of negotiations in which the C.I.O. endeavored to restore harmony.

A violent strike of a C.I.O. union of mine and smelter workers employed at the American Brass Company in Detroit started late in April with the seizure of the manufacturing premises. After holding the place 20 days, the occupants were expelled by the police. Later, aided by automobile workers inspired by Homer Martin, the strikers fought (May 26) with non-striking workers leaving the shop; about 50 persons were reported to have been injured in the resulting riot. In April the Utility Workers' Organizing Committee, an affiliate of the C.I.O., demanding that the Consumers' Power Co. guarantee not to cut wages, struck and seized dams and generating units of the company, but did not turn off current. The State Supreme Court, reviewing a criminal sentence that had been passed upon an officer of the U.A.W.A. for preventing an employee from working at the Capitol City Wrecking Co. at Lansing in 1937, declared the act of 1857 against molesting a worker in the lawful pursuit of his vocation to be valid (June 8), despite rights claimed by the unions under the Federal Labor Act.

Detroit's Municipal Affairs. Detroit carried a heavy burden of public assistance to the unemployed until late in the year. The economic reaction following upon the gains made by organized labor in 1937 strengthened a more conservative trend of opinion, first evidenced in the municipal election of that year. In 1938 (Sept. 13) the voters

rejected a proposal to amend the city charter so as to provide a five-cent fare and at the same time to repeal the Detroit Street Railway's system of preference in employment and promotion according to system-wide seniority. Favored by a union under the A.F.L., system-wide seniority had been granted by popular vote in 1937; its overthrow was then sought by an independent union of bus-drivers.

Detroit and Wayne County were hard pressed to meet the cost of support for the needy unemployed even before the end of June. Another collection of taxes thereafter made it possible to continue for a time, but it was declared on August 22 that the means for such support would give out by September 1, and in Wayne County outside the city support was actually shut off on August 22. The special session of the Legislature, which followed, brought further State assistance to the county and city for poor-aid. Federal arrangements made in June allowed the U.S. Housing Authority to spend \$14,200,000, to be augmented by \$1,600,000 raised in the city, in providing Detroit with 2753 new dwelling units, for rent at figures suitable to the poor.

Elections. At the general election (November 8) Frank D. Fitzgerald (Rep.), former Governor, was elected Governor, by a plurality of about 89,000 votes over Gov. Frank Murphy (Dem.), who had the organized support of the State branch of Labor's Non-Partisan League, a political body of voters fostered by the C.I.O. Wayne County (mainly Detroit, of which he had been Mayor) gave Murphy a margin of nearly 95,000 votes, somewhat increased by leads in 13 other counties, while Fitzgerald swept the rest of the State. The Democrats' loss of the governorship was attributed to widespread dislike of Murphy's tolerance of the so-called violence and coercion used in the C.I.O.'s seizure of factories in strikes during 1937. Republicans obtained majorities of about 3 to 1 in both houses of the Legislature and won all the State offices up for election. Twelve Republicans and five Democrats were sent to the U.S. House of Representatives. This made a net shift of 3 seats to Republicans.

In referenda, the voters adopted a proposed State constitutional amendment to forbid the diversion, from use for highways, of the taxes on gasoline and on automobiles by weight; and they rejected the Legislature's act of 1937 to reorganize the State's administration of welfare.

In the State primaries (September 13) there was put in use a "secret ballot" provided by a new law: The voter received a Democratic and a Republican primary ballot, fastened together, separated them in the voting booth, and voted whichever he chose, without having to divulge the party in which he voted.

Officers. Michigan's chief officers serving in 1938 were: Governor, Frank Murphy (Dem.); Lieutenant-Governor, Leo J. Nowicki; Secretary of State, Leon D. Case; Attorney-General, Raymond W. Starr; Treasurer, Theodore I. Fry; Auditor, George T. Gundry; Highway Commissioner, Murray D. Van Wagoner; Superintendent of Public Instruction, Eugene B. Elliott.

Judiciary. Supreme Court: Chief Justice, Henry M. Butzel; Associate Justices, Howard Wiest, George E. Bushnell, Edward M. Sharpe, William W. Potter, Bert D. Chandler, Thomas F. McAllister, Walter H. North.

MICHIGAN, UNIVERSITY OF. A State institution for the higher education of men and women at Ann Arbor, founded in 1817. In 1937-38 the

enrollment was 18,851, including extension students and the 1937 summer-session enrollment. The registration in the 1938 summer session was 5771. The teaching staff in the fall of 1938 was composed of 767 members. For current expenses and equipment, \$4,687,361 was received from the State, while \$5,526,870 was derived from other sources. Actual receipts from gifts during 1937-38, for endowment and current expenditure, were \$1,209,997. During the summer and fall of 1938, Federal PWA grants, amounting to \$2,522,250, were received, on the basis of which construction of buildings to a total cost of \$5,605,000 was facilitated. The buildings planned include two series of general dormitories for men, one of which is to be adjacent to the Michigan Union; a dormitory for medical students; a dormitory for women; an addition to the University Hospital to provide internes' quarters; an addition to the Dentistry Building; a new Student Health Service; and expansion of the heating and power plant to care for the increased load. The University's share of the cost is being met by the issue of revenue bonds except in the case of the addition to the Dentistry Building, which is provided by a gift from the W. K. Kellogg Foundation of Battle Creek. The determination to construct a series of dormitories for men marks a radical departure from the previous policy of the University, which was to rely chiefly upon privately owned and operated lodging houses for the housing of its men students. The University libraries contained 1,025,815 volumes. President, Alexander Grant Ruthven, Ph.D., LL.D., Sc.D.

MICROFILMING. See PHOTOGRAPHY.

MIDDLEBURY COLLEGE. A coeducational, nonsectarian college at Middlebury, Vt., founded in 1800. For the autumn term of 1938, 770 students were registered as undergraduates and 20 as graduates; of these, 421 were men and 369 women. The enrollment in the special summer schools of French, Spanish, German, Italian, and English, conducted by the college, amounted to 654. There were 65 members on the faculty. The productive funds of the college in 1937-38 amounted to \$4,313,707.95 and the income for the year was \$405,009.57. Gifts to the college were \$22,732.05. The library contained 100,000 volumes. President, Paul Dwight Moody, D.D.

MIDDLE CONGO. See FRENCH EQUATORIAL AFRICA.

MIDWAY ISLANDS. A group of islands in the North Pacific (28° 12' N.; 177° 22' W.), some 1200 miles to the northwest of Hawaii. Area, 28 square miles; population (1936), 118. The islands contain a relay cable station and, in 1935, became a base of the transpacific air service of the Pan American Airways. The islands are under the jurisdiction of the Navy Department of the U.S.A.

MILITARY PROGRESS. Germany. Germany has decreed the building of a 100-mile-long canal to link the Rhine, Main, and Danube into one waterway to enable vessels of 1200 tons' burden to travel across Europe from the North Sea to the Black Sea, to be completed by 1945. Her standing army has been increased by four corps. The strength of 36 divisions set by the 1935 conscription law, introducing Hitler's huge rearmament program, has been raised to 51 divisions. According to newspapers these include three especially equipped mountain divisions, five armored-car or tank divisions, and cavalry.

The Berlin *Lokal-Anzeiger* explained the increase of the four corps resulted from the inclusion of Austria and Sudetenland in the Greater Reich.

Her peace-time army probably consists of 1,000,000 men, second only to Russia. The "Army Group commands" are now six: At Berlin, Frankfurt-on-the-Main, Dresden, Leipzig, Vienna, and Hanover. The line of her fortifications on the western frontier extends from the North Sea, where Germany borders the Netherlands, to Switzerland. The French and German systems are separated along the Rhine by only a few hundred yards. Obstacles of all kinds have been set up to prevent advances. Traps for tanks are closely spaced humps of steel and concrete varying in height from 4 to 6 feet, four or five rows deep, like a bunch of bee-hives. Innumerable weapons for the land and air forces are at their disposal.

Japan. Japan has completed the building of the new 140-mile railroad between Peking and Chengteh, connecting the newly acquired North China territory with a thousand miles of railroads in Jehol province and Manchuria. In a war with Russia this line would be of vital importance. But as Japan strengthens her position in China with new railroads, Russia counters with constantly growing railroads in Siberia and elsewhere in the Soviet Union. The Lake Baikal-Amur railroad, 1800 and more miles in length, is north of and parallels the Trans-Siberian railway. The survey for the railway to Urga, the capital of Outer Mongolia, has been finished. That road when completed will have great military value. So Russia significantly pushes construction on it while Japan is busy fighting China. See CHINA under *History*.

Great Britain. In Great Britain the government in October adopted a general plan for the evacuation and compulsory billeting in the country of one-third of the urban population as the most effective form of civilian defense against air raids. A "national register" of voluntary service in which every man and woman will have a chance of stating what kind of work he or she could do in time of war was announced by the government on Dec. 1, 1938. Twenty million handbooks will be distributed listing all forms of work for which volunteers will be needed, not only in protecting the civil population against air raids but providing nurses, fire-fighters, and ambulance drivers and keeping vital industries in full blast. "The transition from the voluntary register to a complete compulsory register when war breaks, will be smooth, easy and expeditious," said Sir John Anderson, Minister for Civilian Defense. It is planned to make the nation's resources in man power organized and effectively employed.

A new force, Great Britain's "Army in Overalls," to consist of men between the ages of 38 and 50 years, is to be recruited among employees in the industrial plants throughout the country. It will be a reserve of the Territorial Army, corresponding to the National Guard of the United States. The duties of the new force will be to man light anti-aircraft guns placed on factory sites to protect them from low-flying bombing planes. Volunteers for the new factory workers' army will be required to attend 30 drills yearly and spend eight days each year in training camps. Its uniform will be two suits of canvas overalls, a great coat, cap, and badges of rank. Officers will wear overalls and Sam Browne belt. The whole idea is that in war the factory employees will remain at the civilian work for which they are paid, but ready to drop tools and man the guns in an emergency.

Bermuda has been told by the British War Office that her defenses in the event of war will have to depend on local volunteer forces, the regular military garrisons being withdrawn for re-

quired service elsewhere. So the governing authorities are studying the situation presented, some of them strongly urging compulsory training of youth for defense purposes.

World armament expenditures, according to the Foreign Policy Association, have increased from \$3,800,000,000 in 1932 to the unprecedented total of \$17,600,000,000 in 1938. Great Britain is diverting 7 per cent of her total national income for armaments and war materials. Italy is applying 8½ per cent of all she earns, France 14½ per cent, Germany 16 per cent, Russia and Japan around 40 per cent. Arms programs in every case are being financed by credit.

The British Broadcasting Company evaluated the part played in the European crisis by pointing out that the radio emerged with the airplane as a determining factor. "Broadcasting scotches rumor, creates steadiness of nerve which is bound to be the principal asset of any civilized people subjected to war conditions of the future."

The 1938 issue of Jane's *All the World's Aircraft* gives Great Britain credit for having the world's fastest fighting planes. Their "Supermarine Spitfire One," a single-seater fighter monoplane, is the fastest military aircraft. The Air Ministry reveals its speed to be 350 m.p.h.

The London *Times* military correspondent says the most efficient sections of the Territorial Army are the anti-aircraft units, the artillery and searchlights. But of the infantry he is more critical. The exercises of citizen soldiers are singularly unlike actual warfare, with their elements of unreality. His impressions are that the officers are not efficient, cannot draw up a simple exercise reasonably well, cannot picture a situation. Five territorial divisions have been converted into anti-aircraft troops, leaving nine divisions not grouped with higher formations for training. Only with such grouping and experience with regular army groups can more efficiency be obtained.

According to the press, the British Government intended to spend £20,000,000 to reinforce private homes, apartment houses, and other buildings as a protection from bombs. Sheet steel is to be inserted between the basement and the ground floor. It is believed that loss of life will be averted since families will take to the basement during raids. Air-raid protection is all very problematical and some of the recommendations of so-called experts are worthless. Overhead or vertical protection has been stressed too much to the neglect of side or horizontal protection from bombs falling at some distance. There is no question that shelters reduce the mean probability of being killed.

Australia. The coastal defenses of Australia, air-raid precautions, mobilization measures, and conversion of factories to munition manufacture are being hastened. The States, which heretofore had regarded defense as a Federal responsibility, agreed to co-operate by pooling loan funds. The number of cadets at the Royal Military College at Duntroon increased to 89, approaching the goal of 100 annually (80 Australians and 20 New Zealanders). See AUSTRALIA under *History*.

France. The national defense expenditures allotment of 29,945,000,000 francs for 1938 was increased after the Munich pact by 1,420,000,000 francs for the army and 887,000,000 for the navy. What the new funds were to be used for has not been disclosed, but evidently to push the rearmament program. Official statements have been frequently made that the Maginot fortifications are in perfect condition so it may be assumed that the

additional appropriations are not for them. According to Jane's 1938 edition France is credited with from 3200 to 3500 aircraft. But the figures cannot be taken as positive. The French aircraft industry has lagged considerably due to the 40-hour-per-week working time, administrative red tape, and the failure to put into effect mass production. For the first seven months of the year, a total production of 100 complete aircraft was planned as a monthly performance; the actual production was only about one-third of that.

For the defense of the French Colonial possessions a body of interpreters in Arabic as "officers of Mussulmen Military Affairs" has been formed with a colonel in charge. He is responsible for the command of the body and the education of linguists, psychologists, and kindred accomplishments. The plan is to obviate the necessity for a sudden call upon fighting units for officers capable of speaking one or more languages.

Netherlands, THE. In Holland air-raid protection is taken seriously. Intensive training of men and women is mainly for the purpose of avoiding the risk of a general panic. To detect the presence of gas dropped from airplanes, observation posts surround towns and are equipped with a testing apparatus which works day and night analyzing the air. If a post discovers a trace of poison, a single switch and every telephone throughout the city, whether in use or not, is connected with Central Gas Protection Service. If the radio is on, that is interrupted. Then the warning is given to all listeners. A large roll of gummed paper, always kept at hand, is, as soon as possible, used to cover all cracks and crevices in windows, and doors of the most suitable room are sealed up. Special equipment, with air-filter and oxygen bottle, are provided for members of the Dutch A.R.P. Service, whose duty is to attend to victims in the streets and take them to places of safety.

The Americas. The Inter-American Conference has achieved its major objective in getting a unanimous declaration on solidarity designed to serve notice to the totalitarian States that the American countries are ready to stand united for common defense against any foreign intervention. All 21 nations signed the agreement Dec. 24, 1938.

The Chaco settlement gave Paraguay the military gains of the recent war, but failed to give her any foothold in the Bolivian oil fields.

Brazil is strengthening her army, navy, and air forces with the assistance of French military officers training their army. For the past three years the coast artillery has been under the supervision of American coast artillery officers. The new program calls for an increase of the present army strength to 100,000 from 62,000 and the expenditure of several millions of dollars in modern armaments. The enlarged army, with 30,000 constabulary or state troops under army control, will give Brazil a peace-time establishment of over 130,000 men. In the air she plans to build a fleet of 1000 planes for land and sea.

The Lima Conference has focused attention to the Americas' armed forces. Their armed strength amounts to 2,000,000 trained soldiers with much greater potential man power. The standing armies and trained reserves, according to the United Press, were as shown in the table on p. 462.

Add to these Canada's 3000 and 134,000 and the United States' 170,000 and 300,000, respectively, and there would be 432,800 in the combined armies with 1,545,800 reserves to unite against any power that might become an aggressor necessary to curb.

	Army	Reserves
Argentina	36,000	450,000
Bolivia	5,000	54,000
Brazil	66,000	213,000
Chile	14,000	178,000
Colombia	14,000	50,000
Costa Rica	800
Cuba	15,000	11,000
Dominican Republic	3,000	12,000
Ecuador	7,000	25,000
El Salvador	3,000	700
Guatemala	5,000	8,000
Haiti	2,000	600
Mexico	58,000	30,000
Nicaragua	2,000	500
Paraguay	5,000	43,000
Peru	15,000	20,000
Uruguay	8,000	8,000
Venezuela	6,000	3,000

United States. The latest edition of Jane's *All the World's Aircraft* estimates the United States' strength in aircraft between 2700 and 3000. It states that the United States' bombers and fighters are among the world's speediest but admits the details of their newest machines have not been released and their real performance is not known. The fastest bombers are the Bellanca 28-90-B, with a maximum speed of 280 m.p.h. at 5000 feet. The fastest fighters listed are the Seversky P-35 single-seater monoplane with a maximum of 300 miles at 10,000 feet, and the Vought Vpl43 single-seater fighter with a speed of 300 m.p.h.

The estimate of Jane's is obviously wrong so far as the United States is concerned. The army's authorized quota of planes is only 2300, of which there are on hand not over 1800 and many of them obsolete. For continental United States there are only about a thousand, perhaps less. In the new type of national defense problem contemplated by the United States to implement the Monroe Doctrine and make the Americas safe for Americans, the army will have to complete modern equipment of all types, including ammunition reserves. The number of planes in the Air Corps would have to be "doubled, tripled, even quadrupled," according to the Assistant Secretary of War Johnson. Our rate of production to do that would have to be stepped up very considerably. The industrial war plans perfected by the Air Corps reach into the entire industrial life of the nation, with co-ordinated analyses of potential output by machine shops, steel mills, tire, instrument, and accessory manufacturers; transportation and power facilities essential to manufacture. The greatest single factor in any major contest will be the ability of combatants to cope with the appalling high rate of material absorption.

The heavy output of planes during peace is not desirable because of the rapid obsolescence of every type. The point of value is to have such an arrangement of production that the most advanced bomber, pursuit plane, attacker, and other types can be turned out within a minimum time after mobilization. At present the output of 30 planes per month for the army is not at all satisfactory.

The "shopping list" of the War Department calls for 7300 different articles or processes of production which would be needed immediately on the outbreak of war. The list comprises everything from socks for the soldiers to the most delicate mechanism necessary to make the modern anti-aircraft gun effective. In the first months of a major war the purchase of these articles would call for the expenditure of \$450,000,000. There are 55 critical items that cannot be produced at once or soon.

First on the list is aircraft. The production of

bomb-sights in quantity that would be needed in an emergency is impossible at the present time. Next the chemical service. One critical item is canisters for gas masks and another gas masks for horses. Then there is the anti-aircraft searchlight. It takes a long time to grind the lenses for the lights. Then there is the question of ordnance. Although the Ordnance Department has developed two improved modern heavy guns—the 155-millimeter gun and the 8-in. howitzer—the equal of any similar pieces in the world, yet there are only four of these guns in the whole Army! Also, it is practically without anti-tank guns of certain calibers.

The Chief of Staff, in his annual report, stresses again, as "a matter of major military importance," the necessity of acquiring sufficient war reserves—"articles of a purely military character that cannot be obtained promptly from commercial sources upon the outbreak of war"—to completely equip the 400,000 troops of the Regular Army and National Guard. The amount still needed for this purpose is about \$142,000,000. During the year 27,685 reserve officers out of 100,116 on the rolls had 14 days' training. The strength of the National Guard is 199,572, of whom 15,258 are officers and 184,334 enlisted men. It is organized into 18 infantry divisions, 7 separate reinforced cavalry brigades, 14 non-divisional infantry regiments, 2 155-mm. howitzer regiments, 1 corps and 1 army 155-mm. gun regiments, 19 air squadrons, 9 coast artillery regiments for harbor defense and 3 for the mobile service, and 10 anti-aircraft artillery regiments, in addition to quartermaster, medical, signal, and other units.

The allotment of airplanes is 195 with delivery of 95 of the latest type of observation planes being made and 48 more to come. The infantry units of the guard, 6000 officers and 91,500 enlisted men, are to be equipped with the new semi-automatic rifle now being supplied to the regular army. It is the Garand semi-automatic rifle to replace the old Springfield, the standard since 1903. It is rated at from 12 to 34 per cent more accurate than the Springfield, weighs 9 lb., and is generally of the same dimensions. A clip of eight cartridges is inserted and when the trigger is pulled a gas chamber opens, discharging the contents. The operation automatically ejects the empty cartridge, cocks the gun, and carries a new bullet into place. The trigger finger controls all this.

On Nov. 11, 1938, the War Department announced development and standardization for issue to troops of two new and "highly effective" weapons, one designed to combat aircraft and the other an anti-tank gun. The anti-aircraft gun of 37-mm. caliber, automatic type, is mounted on an all-around fire, four-wheeled trailer, which may be towed by a light truck at maximum speed. The unit has a wheel base of 120 inches with a 58-inch tread and weighs about 5000 lb.

In the anti-tank gun the development has been toward increased mobility and greater armor-piercing effect. It is also 37-mm. caliber, mounted on a carriage capable of being towed behind high-speed trucks or being hauled short distances by hand. The crew is protected by armor and in action one man loads the gun while the other aims and fires it. The unit is about 12 feet long, 5 feet wide, 3 feet high, and weighs about 950 lb.

An adjustable gas mask to fit all types and sizes of faces has been designed by the Chemical Warfare service at Edgewood Arsenal. The adjustable feature of the mask is obtained by the use of straps,

It should obviate the necessity of manufacturing many different sizes.

The new "terrain clearance indicator" should be a valuable addition to the airplane. The device will inform the pilot exactly how high above the ground he is and may be trained along the route of the plane to indicate the presence of obstructions dead ahead. Radio waves are projected from one wing of the airplane to the obstacle or the ground, then caught by a receiver on the rebound on the other wing. The time interval is measured in millionths of a second and translated into feet, giving terrain clearance.

A new type of indicator that warns a pilot when his airplane is about to stall has been developed by the National Advisory Committee for Aeronautics at Langley Field, Va. The stall indicator can be used to warn the pilot by blowing a horn, lighting a warning light, or shaking the control stick or rudder stock.

An instrument developed by Sperry and R.C.A. makes it possible for an airplane pilot to trace the course of any mobile unit on the ground below him. Also it may be used for the navigation of the plane itself and to determine angle of drift at any time.

There is only one cavalry brigade entirely mechanized in the regular army—the Seventh cavalry brigade at Fort Knox, Ky. It consists of 2100 officers and men and more than 600 vehicles. The question of co-ordinating the tactics of the horse units of cavalry with the tactics of the far more mobile mechanized units is one of the difficult problems to be solved.

The 155-mm. gun, known as T-4 model, fires a 95-lb. projectile with a 15-lb. explosive charge at the rate of 1 lb. per minute to a range of 26,000 yds. or about 15 miles. The shell reaches a height of 30,000 feet at the top of its trajectory. The gun, complete with the heavy, 10-wheeled, rubber-tired carrier on which it is towed, weighs 15½ tons. A powerful Linn "half track," or a truck having tractor treads in place of rear-drive wheels, pulls the gun at a speed of about 10 m.p.h. Intended for use mainly for counter-battery or interdiction fire against rear areas, the gun is the newest design of American make. The gun can be set up in firing position in from 30 to 45 minutes.

The Assistant Secretary of War presented an existing shortage in army equipment that does not spell confidence in our defensive ability. He specified shortages in artillery, tanks, combat cars, airplanes, machine guns, semi-automatic rifles, anti-tank guns, ammunition, gas masks, searchlights, telescopes, and quadrants. A formidable list of deficiencies! The Secretary of War in his annual report urged stronger defense at the Panama Canal; —it "must be made impregnable." There are but 400,000 officers and soldiers of the initial protective force provided for when war breaks, but there are deficiencies in organization, equipment, and personnel which must be corrected before we can be assured of a military force adequate for our defensive needs.

On December 5 war-department regulations announced that the entire army, aside from the mounted services, must don civilian-type trousers by February, 1939. Each enlisted man is to be provided with two pairs of woolen trousers and three of cotton khaki; tan socks will be worn.

The Chief of Staff in his annual report warns the people of the United States that this country's army stands eighteenth among the armies of the world. Our military establishment differs funda-

mentally from those maintained elsewhere. Its professional component, the regular army, is only the nucleus around which the civilian components gather in an emergency. Legislation has provided for and authorized a strength of 165,000 enlisted men. With such a small army it cannot be but defensive in type and non-provocative. And the more essentially must its armament be equal to what it may be called upon to face. The increase in officer personnel for the fiscal year 1939 amounted to 200 in the air corps and 75 in the medical department. Just a step in the direction of adequate strength.

In the National Guard there was an increase of 5000, bringing its total to 205,000. The ultimate objective is 210,000. In the organized Reserves 27,685 officers received active duty training during the year. In addition 4704 reserve officers performed duties with the Civilian Conservation Corps. At the close of the year there were 100,116 Reserve officers enrolled. In the Citizens' Military Training Camps 21,239 completed the month's training, an increase of 3 per cent over 1937. Congress authorized the re-establishment of the Regular Army Reserve made up of men who, upon completion of an enlistment in the regular army, elect to return to civil life but are willing to enroll in the Reserve and assume the obligation to return to active duty in an emergency. This reserve is to attain a strength of 75,000 men.

In the matter of aircraft General Craig states that the Air Corps is being equipped with airplanes and materials that are equal, if not superior, to any military planes in design, speed, endurance, and suitability for the military use for which intended. The record-breaking flight to Argentina by six U.S. Army bombers of the 2d bombardment group is cited as proving his contention. These airplanes, with normal crews, equipment, and training, gave a demonstration of speed, range, and navigation accuracy unexcelled by any military planes in the world. The Vultee V-12 attacking plane carries six machine guns and a crew of three. It has a 1000-h.p. motor to lift a bomb load of 3000 lb. and 500 gallons of fuel. Its flying range is 2000 miles.

See AERONAUTICS.

With the funds made available the motorization program will become approximately 67 per cent complete for the regular army and 50 per cent for the National Guard.

MILK. See DAIRYING.

MILLS COLLEGE. A college for women in Oakland, Calif., founded in 1852. The enrollment in the autumn of 1938 was 636, for the summer session of 1938, 252. The faculty numbered 95 members. The total productive funds amounted to \$1,883,128 and the total assets to \$4,449,580, while the gross income for the year ending June 20, 1938, was \$877,619. The library contained 77,000 volumes. President, Aurelia Henry Reinhardt, Ph.D., Litt.D., LL.D., I.H.D.

MINERALOGY. In the year 1938 the profound and significant researches of a group of Austrian and German petrographers, headed by Prof. Bruno Sander of the University of Innsbruck, have been made available to English-speaking mineralogists and petrographers. The Geological Society of America has issued as Memoir 6 of their series, *Structural Petrology* by Eleanor Bliss Knopf of Yale University and Earl Ingerson of the Geophysical Laboratory of Washington.

Part I of this Memoir discusses in 208 pages the Principles of Structural Petrology. In the preface to this part by the senior author, Dr. Knopf, she states that "the fundamental principles therein dis-

cussed bid fair to become to the study of rock structure what the methods of microscopic study, which were initiated by Sorby, have been to the study of rock composition."

Part II, contributed by Dr. Ingerson, deals with the laboratory technique of Petrofabric Analysis, to which about 50 pages are devoted. This section explains how the rock fabric diagrams are made by determining a crystallographic or an optical direction in a sufficient number of mineral grains to map their mass orientation. The work is very well illustrated by 81 line cuts and 27 plates which are admirably chosen and reproduced. An exceptionally complete index serves to distinguish this from the general run of technical treatises.

An outstanding paper which was both timely and exhaustive appeared in the November issue of the *American Mineralogist*, an issue devoted to results of research conducted under the auspices of Harvard University. This paper by Dr. Mark C. Bandy discusses "The Mineralogy of Three Sulphate Deposits of Northern Chile." These three deposits are situated at Chuquicamata, Quetena, and Alcaparrosa, localities which have been distinguished for the number and interest of the mineral species furnished by them in the past.

Dr. Bandy devotes 28 pages in Part I to the geology and paragenesis of the deposits. The remainder of the paper, Part II, comprising 62 pages, is taken up with a very complete discussion of the 76 minerals listed, including crystallographic studies, optical and physical properties, analyses, and individual bibliographies. The paper contains valuable tables of mineral sequences in the portion devoted to paragenesis.

The year 1938 has witnessed the discovery of a number of new mineral species, and compares favorably in this respect to other years in the past decade.

From Långban, Sweden, a locality which has proved a consistent source of rare species for the last half century, has come a new calcium, beryllium and aluminium hydrous silicate, occurring in small, clear, colorless, tetragonal crystals. It has been named *aminoffite* in honor of Prof. Gregori Aminoff of Stockholm, who has himself brought to light a number of new minerals from Långban.

A hydrous calcium silicate related chemically to foshagite (see YEAR BOOK 1925, p. 443) and centrollassite was found at a mine on the Yukspor Mountain in the Khibina tundra of Northern Russia. This mineral has been named *foshallassite*, expressive of its mineral relations. It occurs in small veins composed of minute white scales with perfect tabular cleavage and pearly luster.

Inderite, another new species from Russian territory, was found in the borate deposits near the Inder salt lake in western Kazakhstan, and was named from the locality. It is a hydrated borate of magnesia occurring in small white to pink nodules, reniform in shape.

An orthorhombic pyroxene, lilac in color and with strongly marked pleochroism, has been found in a metamorphic rock of the granulite type near Bidaloti in Mysore, India, and named *bidalotite* from the locality. It differs from the associated hypersthene, that occurs in the rock matrix, by reason of the presence of alumina.

A new silver antimonide that was found on an old specimen from Andreasberg, Harz, Germany, in the collection of Harvard University, was named *Goldschmidtine*, in honor of the late Victor Goldschmidt of Heidelberg. Goldschmidtine occurs in

thin, white to lead-gray, orthorhombic crystals, associated with native silver, ruby silver, and galena.

The copper-mining region of Northern Chile, which furnished the material for the paper by Dr. Bandy, noted earlier in this review, has furnished three new mineral species in 1938.

Leightonite, a hydrous sulphate of copper, calcium, and potassium, occurs in pale blue, triclinic crystals filling cross-fiber veins at Chuquicamata, Chile. Its name was given in honor of Dr. Thomas Leighton, of the University of Santiago, Chile.

Antofagastite, a hydrous copper chloride, occurs near Calama, Antofagasta, Chile, in bluish green to greenish blue orthorhombic crystals, which are ordinarily curved. Although hydrous copper chloride is a well-known artificial laboratory product, this is the first time that it has been found in nature. Antofagastite is named after the district from whence it comes.

Bandyite, named in honor of Dr. Mark C. Bandy, also comes from near Calama, Chile. It is a hydrous copper borate and copper chloride, occurring in deep blue tetragonal crystals aggregated as a crust on rock joints.

Examination in the Choctaw Salt Dome, Louisiana, the locality which produced hilgardite (see 1927 YEAR BOOK, p. 464), has revealed a new mineral species, *parahilgardite*, closely related to hilgardite chemically, but forming in triclinic crystals (hilgardite is monoclinic) which are invariably attached to the negative end of previously formed hilgardite crystals. They are clear and colorless. A new calcium borate was found at the old colemanite mine at Lang, Los Angeles County, Calif. It occurs in clear, colorless, monoclinic crystals with a silky luster. The new borate has been named *veatchite* in honor of Dr. John A. Veatch, who first (1856) found borates in California mineral waters.

Hardly a year passes without the announcement of a new mineral from the New Jersey Zinc Co.'s mines at Franklin, N. J. The 1938 addition to the long list credited to this famous locality is a silicate of zinc, manganese, and antimony occurring in triclinic, clove-brown plates embedded in willemitite. The name *yeatmanite* has been given to this new Franklin mineral in honor of Pope Yeatman, a distinguished mining engineer who has recently been associated with the Franklin mines.

MINIMUM WAGE. Federal Wages and Hours Law of 1938. With the invalidation of the National Industrial Recovery Act in 1935, not only collective bargaining and the abolition of child labor but the establishment of minimum wages and maximum hours was seriously jeopardized. Later the right to collective bargaining was established by statute under the National Labor Relations Act. On June 25, 1938, when the President approved the Fair Labor Standards Act of 1938, the breach in Federal legislation was further closed. The new act became effective 120 days following the date of its approval, that is to say, on Oct. 24, 1938. The law provided a minimum wage and maximum work week for employees engaged in interstate commerce and also virtually outlawed the employment of children under 16 years of age when engaged in activities that might also be classified as being interstate. (For a fuller discussion of the effects of the law on child labor, see the article CHILD LABOR.)

In the declaration of policy, Congress found that "the existence, in industries engaged in commerce or in the production of goods for commerce, of labor conditions detrimental to the maintenance of the minimum standard of living necessary for

health, efficiency and general well-being of workers" burdened commerce, and constituted an unfair method of competition, and that it led to labor disputes which hindered the free flow of goods in interstate commerce, and interfered with the orderly marketing of goods. The declared policy of the act, therefore, was to correct and eliminate these conditions "without substantially curtailing employment or earning power."

To administer the law, a Wage and Hour Division was created in the Department of Labor with the Administrator appointed by the President. This official was to operate through a series of committees, each one appointed for a particular industry. Investigatory powers were conferred on the Administrator and he also had the right to summon witnesses and to order the production of records of the employers subject to the act.

These industry committees, according to the law, were to include a number of persons representing the public and a like number of employers and employees. In making appointments, the Administrator was required to give due regard to the geographical regions in which the industry was being carried on. The act fixed a series of minimum wage payments which all employers producing or engaged in interstate commerce were required to observe, as follows: (1) During the first year, beginning Oct. 24, 1938, not less than 25 cents an hour. (2) During the next six years, not less than 30 cents an hour. (3) After the expiration of seven years, not less than 40 cents an hour, or the rate (not less than 30 cents an hour) prescribed by the Administrator. The Administrator was given the power to prescribe lower minimum wages for learners, apprentices and messengers, and for persons whose earning capacity was impaired by age or physical or mental deficiency.

The act required the Administrator from time to time to convene the industry committees for the purpose of reaching as rapidly as was "economically feasible," without curtailing employment, the 40-cent minimum wage rate. Such industry committee must investigate conditions in the industry and recommend "the highest minimum wage rates for the industry which, it determines, having due regard to economic and competitive conditions, will not substantially curtail employment in the industry."

The industry committees must recommend for each classification in the industries in which they functioned the highest minimum wage rate which they considered would "not substantially curtail employment in such classification." In making such determination, no classification might be made and no minimum-wage rate fixed solely on a regional basis. The industry committees and the Administrator must consider (1) competitive conditions as affected by transportation, living, and production costs; (2) the wages established for work of like or comparable character by collective labor agreements; and (3) the wages paid by employers who voluntarily maintain minimum-wage standards in the industry. No classification might be made on the basis of age or sex. After the industry committees filed reports with the Administrator with recommendations, notice and an opportunity to be heard must be given to interested persons. The Administrator must then approve and carry into effect the recommendations of the committees, provided the recommendations were made in accordance with law, and supported by the evidence. If the Administrator disapproved the recommendations, the matter must be referred again to the in-

dustry committees or to other committees for each industry for further consideration.

The law also laid down certain provisions for the fixing of maximum hours. During the first year, beginning Oct. 24, 1938, maximum hours were fixed at 44 per week; 42 for the second year; and 40 thereafter, unless the employee was paid a rate of not less than one and one-half times the regular rate. Exceptions were made in certain instances, such as seasonal industries and in the case of employers operating under collective bargaining agreements. Such agreements must guarantee 2000 hours' work a year or 1000 hours' work for six months. The provisions of the act limiting hours of labor did not apply in the case of an employer engaged in the following industries: In the first processing of milk, whey, skimmed milk, or cream into dairy products, or in the ginning and compressing of cotton, or in the processing of cottonseed, or in the processing of sugar beets, sugar-beet molasses, sugar-cane, or maple sap into sugar (but not refined sugar) or into sirup. In the case of an employer engaged in the first processing of, or in canning or packing, perishable or seasonable fresh fruits or vegetables, or in the first processing, within the area of production of an agricultural or horticultural commodity during seasonal operations, or in handling, slaughtering, or dressing poultry or livestock, an exemption of 14 weeks in any calendar year was granted in the case of the maximum-hour standards.

Additional exemptions were also provided. Thus the act did not apply to any employee engaged in a bona-fide executive, administrative, professional, or local retailing capacity, or in the capacity of outside salesman, or any employee engaged in any retail or service establishment the greater part of whose selling or servicing is in intrastate commerce. Again, seamen, employees of aviation companies, persons engaged in the fishing industry and in agriculture, were also exempt from the act. Exempt from the terms of the act also were employees of certain newspapers, street-car and bus-line employees, and persons engaged in canning or otherwise handling agricultural, horticultural, or dairy products. The hour provisions of the act did not apply to employees subject to the Interstate Commerce Act or those employed by interstate motor carriers.

The administrative procedure was significant. Reviews of orders of the Administrator might be obtained in the U.S. Circuit Court of Appeals for any circuit in which the person resided or had his principal office of business. However, the review by the court was limited to questions of law; and findings of fact by the Administrator, when supported by substantial evidence, were to be conclusive. The court might affirm, modify, or set aside the order of the Administrator in whole or in part and its judgment was final, subject to review by the U.S. Supreme Court. On and after the effective date of the act, it was to be unlawful for any person to ship or sell in interstate commerce any goods in the production of which any employee was employed in violation of the wage and hour provisions of the act. Any person wilfully violating the act was to be subject to a fine of not more than \$10,000 or imprisonment of not more than six months, or both. No penalty of imprisonment was imposed for a first offense. Any employer violating the hour or wage provisions of the act was to be liable to the employee affected in the amount of his unpaid minimum wages, or his unpaid overtime compensation, and also an equal amount as liquidated damages.

The employee might maintain an action to recover the amount due and was to be entitled to reasonable attorney's fees and court costs.

The act went into effect quietly on October 24, without any serious opposition being voiced by industry itself. Preliminary estimates made by Elmer F. Andrews, the Administrator, indicated it as his opinion that the statute immediately raised the pay of 750,000 workers and shortened the working hours of 1,500,000. Mr. Andrews stated that employers generally were co-operating to make the law work and assured industry that he would go slow in formulating the regulations called for by the law so that they would not cause unnecessary dislocations in business. Probably the most important regulation issued by Mr. Andrews during the year was that relating to the payment of wages for overtime at the rate of time and one-half in cash. The rate to be paid under the act was not the 25 cent minimum, but the amount of hourly wages paid by the employer up to the date of issuance of the regulations. Mr. Andrews interpreted the act to mean that Congress intended to penalize overtime work since it declared that: "No provision of this act shall justify any employer in reducing a wage paid by him which is in excess of the applicable minimum wage under this act." An employer was not supposed to let overtime of employees accumulate beyond the duration of the work week and such overtime accumulated during the week should be paid for in cash. Since the act was intended to raise the pay of the lowest paid workers, it was expected that the Administrator would not concern himself to any great extent with industries which paid a much higher rate. It was to be assumed, therefore, that employees making perhaps \$50 or more a week would be expected to settle their problems with their employers personally. Another regulation issued by the Administrator declared that the act did not cover plants where employees processed raw material derived from within the state and where none of the products moved in interstate commerce.

Immediate reports of the law's operations showed that some lumber and textile mills and some pecan shelling operations had closed on the first day of the act's operations. It was estimated, however, that not much more than 30,000 workers in all had been thus disemployed. Most of the shutdowns and layoffs of employees were reported in the South where wage rates lower than in the North had helped to bring industries in the past. Representatives of the pecan-shelling industry, seeking exemption from the statute, informed Mr. Andrews that the law compelled them to suspend operations because they could not afford to pay employees 25 cents an hour. The average wage in the industry was 10 to 15 cents. Mr. Andrews, however, was insistent that exemptions of industries engaged in interstate commerce was impossible and he voiced the hope that the shutdown movement was only temporary.

In a subsequent statement on November 10, he indicated it as his belief that many of the shutdowns and layoffs were not due primarily to the new act. Among the more important contributing factors were seasonal changes, substitution of efficient for inefficient workers, and curtailment as an offset to abnormally increased activity prior to the effective date of the act. He said further: "The significance of the layoffs is still further reduced by the fact that a large share of the total consists of marginal and handicapped workers, whose position in the economic system has long been insecure. . . . It is noteworthy that the layoffs have been concentrated in a very few industries in the South, most of which

are characterized by wretchedly low wage rates and other special conditions, or make use of a particularly inefficient part of the labor supply." He named specifically the following industries which had seen 90 per cent of all the layoffs: Pecan shelling, tobacco stemming, lumbering, and bagging. A considerable number of persons employed in the home production of garments and candlewick bedspreads were also affected by the act.

Two months after the act's inauguration, observers generally were agreeing that its acceptance was widespread throughout the country, particularly as regards the 25 cents an hour minimum. They were anticipating difficulties, however, as regards the overtime provision concerning which Administrator Andrews had ruled that overtime must be based on 44 hours of work a week and could not be averaged for several weeks' employment except where longer hours were permitted in cases of collective bargaining contracts. Mr. Andrews also had ruled that it was contrary to the intent of the law to rearrange hourly compensations in order to pay the same amount for a 48-hour week today as was paid for a 48-hour week prior to the act.

Pursuant to the authorization incorporated in the act, before the year closed Mr. Andrews set up two industrial committees, the first covering the textile industry, and the second, the apparel industry. The first committee, which was created prior to the date of operation of the law, held several meetings, named a number of subcommittees for various studies, and was well on the way to its ultimate goal—the fixing of a minimum wage for the industry. The second committee, affecting the clothing industry generally, was not set up until late in December.

State Minimum Wage Laws. During 1938 two new minimum wage laws were passed by legislatures—Kentucky and Louisiana; also, in Kansas a former minimum wage law was revived. To date, therefore, 25 states, the District of Columbia, and Puerto Rico carried minimum wage legislation on their statute books. The *Kentucky* law was of the wage board type, as were most of the laws recently enacted. Under it the Commissioner of Industrial Relations was authorized to investigate wages, and if it was found that a substantial number of women and minors were receiving oppressive and unreasonable wages, a wage board was to be appointed to determine and recommend a proper wage. The wages to be recommended were to be fairly commensurate with the value of the services rendered and sufficient to meet the minimum cost of living necessary for health.

In *Kansas*, the law originally enacted in 1915 had been inoperative since 1925 when the Supreme Court of the state held that the law was unconstitutional. After the U.S. Supreme Court, in 1937, decided that the minimum wage law of the State of Washington was constitutional, the Attorney-General of Kansas held that the original Kansas law was once more effective. The original Kansas law was of the wage board type, but amendments were adopted in 1921 which repealed the provisions authorizing the appointment of wage boards. The amended law provided that the Kansas Commission of Labor and Industry might investigate wages, hours, and sanitary and other conditions affecting women and minors in any industry in the state. If the Commission found that wages, hours, and conditions were prejudicial to the health or welfare of any substantial number of employees and were inadequate to supply the necessary cost of living, it might set minimum wages in that industry. The law stated that the wages to be paid must be rea-

sonable and not detrimental to the health and welfare of workers.

Living Standards for Working Women in New York. By authority of an act passed in 1937, the New York State Department of Labor was called upon to set up wage boards for the purposes of establishing minimum wages for women and minors, with a view to taking into consideration (1) the amount sufficient to provide adequate maintenance and to protect health; (2) the value of the service or class of service rendered; (3) wages paid in the state for work of like or comparable

character. Following these directions, the Department of Labor of New York State proceeded to make an exhaustive study of living standards of wage-earning women so that wage boards could be furnished with data as to what constituted adequate maintenance and the protection of health under conditions prevailing in New York State. In drawing up the commodity-quantity budget for women wage earners, the Department found it imperative to distinguish between the expenses of those who lived as members of families and those who lived alone. Attention had to be given, therefore, at different levels,

ANNUAL COST OF ADEQUATE MAINTENANCE AND PROTECTION OF HEALTH FOR WOMAN WORKERS IN NEW YORK STATE, 1937

* The food allowance is for 50 weeks only, since food for 2 weeks is included in vacation allowance.

to an adequate food budget, an adequate housing budget, an adequate clothing budget, and such other considerations as the following: Clothing upkeep, including dry cleaning, laundering, and shoe repairs; personal care, including toilet articles and beauty-shop services, etc.; medical and dental care; leisure-time activities, including movies, club dues, recreation and equipment for two weeks, church contributions, and reading materials; insurance and savings; and other living essentials such as transportation charges, contributions to charity, candy, and cigarettes.

Having budgeted the kinds and amount of goods and services required for adequate maintenance and protection of health, the next important step was to price these items in representative cities and towns of the state. The findings of the State Department of Labor indicated that the amount the working women in New York State required for adequate maintenance and the protection of health was \$1058.31 annually for the woman living as the member of a family, and \$1192.46 for the woman living alone. Itemized costs of the budget for the woman living alone and the woman living with her family in various types of communities are shown in the accompanying table (see p. 467).

Minimum Wages for Maritime Workers. Under the powers conferred on the U.S. Maritime Commission by the Merchant Marine Act of 1936, late in 1937 the Commission fixed minimum wages on vessels receiving operation-differential subsidies. The order affecting wages also established rules as to minimum manning scales and reasonable working conditions for approximately 10,000 sea-

men serving as officers and crews on the subsidized ships. Vacations with pay were granted to both licensed and unlicensed crews. Practically all deck and engine department men, but only about 50 per cent of the workers in the steward's department, were covered by the minimum wage scales prescribed. The table indicates the minimum monthly wage scales for licensed and unlicensed personnel and radio operators.

MINING AND METALLURGICAL ENGINEERS, AMERICAN INSTITUTE OF. An organization founded in 1871 and incorporated under the laws of New York State in 1905 "to promote the arts and sciences connected with the economic production of the useful minerals and metals and the welfare of those employed in these industries." It is made up of 31 local sections and has 42 student chapters in American colleges. On Nov. 16, 1938, there were 11,898 members, distributed as follows: Honorary, 17; members, 6644; junior members, 2074; associates, 615; student associates, 2412; Rocky Mountain members, 91; and junior foreign affiliates, 45.

In addition to the monthly meetings of the local sections and regional meetings held in various important mining or metallurgical centers, an annual meeting, or four-day convention, usually beginning on the third Tuesday in February, is held in New York City. The medals and prizes awarded by the Society during 1938 for notable work in the field of mining and metallurgy were: The James Douglas Gold Medal to H. W. Hardinge; the Lucas Medal for distinguished achievement in improving the technique and practice of finding and producing petroleum, to H. L. Doherty; the Robert W. Hunt Award to Thomas S. Washburn and John Hunter Nead; and the J. E. Johnson, Jr., Award to Roy A. Lindgren.

The Institute publishes *Transactions*, an annual in several volumes, containing the best papers of the year on mining and metallurgical subjects; *Mining Technology*, *Metals Technology*, and *Petroleum Technology*, technical pamphlets published several times during the year; *Mining and Metallurgy*, a monthly magazine; the *Directory*, which constitutes a "Who's Who" in the profession; and individual technical pamphlets. In connection with three other societies, it maintains the Engineering Societies Library and an employment bureau. The president in 1938 was Daniel C. Jackling, and the officers for 1939 are: President, Donald B. Gillies; Vice-presidents, W. B. Heroy, Henry Krumb, Paul D. Merica, H. G. Moulton, Harvey S. Mudd, and Wilfred Sykes; Treasurer, Karl Eilers; and Secretary, A. B. Parsons. Headquarters are in the Engineering Societies Building, 29 West Thirty-ninth St., New York City.

MINNESOTA. Area and Population. Area, 84,682 square miles, exclusive of State's part of Lake Superior; included (1930) other water, 3824 square miles. Population: Apr. 1, 1930 (census), 2,563,953; July 1, 1937 (Federal estimate), 2,652,000; 1920 (census), 2,387,125. Minneapolis had (1930) 464,356 inhabitants; St. Paul, the capital, 271,606; Duluth, 101,463.

Agriculture. Acreage, production, and value of the chief crops of Minnesota, for 1938 and 1937, appear in the accompanying table.

Mineral Production. Iron ore contributed nearly nine-tenths of the total yearly value (\$94,923,608) of native minerals produced in Minnesota in 1936. For 1937 the output of iron ore increased sharply, the mines' shipments jumping to 47,878,042 gross tons, from 32,938,883 for 1936; in value,

* Tons.

they rose to \$141,542,594, from \$83,523,720. The quantity of ore actually mined in the State in 1937 exceeded the shipments by about half a million tons. It constituted two-thirds of all the iron ore mined in the Union in that year, as to tonnage of ore, and somewhat more as to content of the metal. The reserves, or estimated total of known ore of iron in the ground, were officially stated to be 1,248,974,440 gross tons on May 1, 1937; this was 8,133,843 tons less than a year earlier. Ores containing manganese were mined in substantial quantity in 1937; the mines' shipments, much in excess of the previous year's, totaled 1,257,900 long tons, in value about \$3,500,000.

Finance. Minnesota's State expenditures in the year ended June 30, 1937, as reported by the U. S. Bureau of the Census, were: For maintaining and operating governmental departments, \$72,175,600 (of which \$12,584,723 was for highways and \$15,147,892 was apportioned for local education); for interest on debt, \$4,357,591; for capital outlay, \$26,224,591. Revenues were \$104,933,307. Of these, property taxes furnished \$17,880,161; income taxes, \$5,373,267; sales taxes, \$17,295,847 (including tax on gasoline, \$13,313,943); departmental earnings, \$6,440,995; rents and interest, \$7,303,417; sale of licenses, \$20,272,305; unemployment compensation, \$4,700,000; Federal or other grants-in-aid, \$21,638,865. Funded debt outstanding on June 30, 1937, totaled \$119,798,500; it included \$66,770,000 on account of rural credits but excluded \$8,352,705 of county-reimbursement road bonds, which were a charge on the State. Net of sinking-fund assets, the funded debt was \$62,559,097. On an assessed valuation of \$2,042,102,314 the State levied in the year ad-valorem taxes of \$17,374,196.

Education. Enrollments of pupils in the public schools in the academic year 1937-38 numbered 542,665; they comprised 394,452 from kindergarten to grade eight, inclusive, and 138,430 in high schools. In addition to those above, there were enrollments of 7430 as special students and 2353 in junior colleges. The year's expenditure for public-school education included \$42,546,642 for maintenance, \$4,022,442 for capital outlay, and \$5,435,000 for service of debt. Teachers numbered 22,179.

The public facilities for the transportation of pupils to and from public schools in Minnesota were much augmented and improved in 1938, according to the *Journal* of the National Education Association, and school houses built or receiving considerable additions numbered 60.

Charities and Corrections. The State's administration of all, save one, of its institutions of care and custody, as well as its dispensations of support to several classes of the needy, rested in the Department of Public Institutions, ruled by the Board of Control. Its Director of Public Assistance

(B. E. Youngdahl) had charge of old-age assistance, aid to the blind, work for child welfare, and aid to the support of children. Fourteen sanatoria for the tuberculous, maintained by counties, were under the supervisory authority of the Board of Control. The State institutions under its government had (June 30) 17,942 inmates. This included 9724 mentally unsound persons thus distributed: In the Anoka State Hospital, 1452; Hastings State Hospital, 1099; Willmar State Hospital, 1385; Fergus Falls State Hospital, 1855; Rochester State Hospital, 1594; St. Peter State Hospital, 1926; Moose Lake State Hospital, 175; Asylum for the Dangerous Insane, 238. The institutionalized feeble-minded and epileptic, 3518 in all, numbered 2414 in the School for the Feeble-minded and 1104 in the colony for Epileptics. Of the 733 delinquents, 445 were in the State Training School and 288 in the State Home for Girls. Of the 2472 under criminal sentence, 1398 in the State Prison, 995 in the Reformatory, and 79 in the Reformatory for Women. Outside these designations, a Hospital for Inebriates had 46 inmates; School for the Blind, 115 students; School for the Deaf, 305; State Public School, 433; State Sanatorium for Consumptives, 360 patients; and Hospital for Crippled Children, 236. The Minnesota General Hospital, not under the Board's control, was connected with the University of Minnesota.

Political and Other Events. At the general election (November 8) Harold E. Stassen (Rep.) was elected Governor, defeating by a vote of 678,839 to 387,263 (official count) Gov. Elmer A. Benson (Farmer-Labor party), who sought reelection. Republicans won 3 of the 5 Farmer-Laborite seats in the U. S. House of Representatives, in which they thus came to hold 6 of the 9 places, while the Farmer-Labor party retained 2 and the Democrats 1. The success of the Republican ticket in November was attributed in part to resurgence of conservatism in the State and in part to division in the Farmer-Labor party, resulting from a bitter and close struggle for its gubernatorial nomination. In this struggle, former Governor Hjalmar Petersen, who, as Lieutenant-Governor, had succeeded at Governor Olson's death in 1936, campaigned as the rival of his own successor and fellow-partisan, Benson. The latter had during his administration gone to conspicuous lengths of liberalism, while Petersen, as a member of the State Railroad and Warehouse Commission, had held a relatively conservative course and had favored ousting Communists from the Farmer-Labor party. Benson, in close accord with the New Deal, received aid from the Federal Administration in his campaign for the candidacy, President Roosevelt having ousted (June 10) Victor Christgau, State Administrator of the WPA, who had reportedly blocked plans of Benson's for the WPA to employ thousands of persons in pulling weeds throughout the State. Benson won the nomination from Petersen in the primary election by only a scant lead, although Petersen had campaigned without organized support; it appeared from the reduction of the totals of votes, below anticipated figures, in the Republican and Democratic primaries, that part of his vote came from outside the regular group of Farmer-Laborite voters.

In Minneapolis occurred (May 26) another incident in the persistent violence among organizations of labor in the Twin Cities; William S. Brown, head of the local General Drivers' Union, was shot to death by a companion said to have been his bodyguard. The widow of Walter Lig-

gett, journalist, who had been murdered in 1935 while engaged in writing articles hostile to Governor Olson, published in a popular magazine an article dealing with the deaths of her husband and several other individuals of note who had been assassinated in the State; this article, because of a reference to Olson, was barred from sale in Indianapolis, in virtue of a State law prohibiting defamation of the deceased.

The Associated Farmers of Minnesota was formed and, during the summer, became established among the agricultural population in a number of counties. Shaped after the league of similar name in California, it had the purpose of enabling people living by the soil to protect themselves, by lawful united action, against economic encroachments of organized labor. Starting a movement of opposition between farmers' and labor unions' interests, it worked in direct reverse to the purported spirit of the dominant Farmer-Labor party as evidenced in the latter's name. W. F. Shilling, leader of the new league, told farmers, "We think that there is something wrong when men who handle agricultural products get more for handling them than the producers do."

Officers. Minnesota's chief officers, serving in 1938, were: Governor, Elmer A. Benson (Farmer-Labor); Lieutenant-Governor, G. T. Lindsten; Secretary of State, Mike Holm; Treasurer, C. A. Halverson; Auditor, Stafford King; Attorney-General, William S. Ervin; Commissioner of Education, John G. Rockwell.

Judiciary. Supreme Court: Chief Justice, Henry M. Gallagher; Associate Justices, Andrew Holt, Royal A. Stone, Clifford L. Hilton, Harry H. Peterson, Charles Loring, Julius J. Olson.

MINNESOTA, UNIVERSITY OF. A coeducational State Institution for higher learning in Minneapolis, founded in 1851. The 1938 autumn registration of collegiate grade students was 15,148, while the summer session enrollment for the same year was 8610. The faculty numbered 1120. The income for the year ending June 30, 1938, amounted to \$11,961,872. Gifts received during the year amounted to \$570,278. The total of endowment funds for all purposes was \$15,538,834 on June 30, 1938. Income from endowment funds for the year totaled \$373,525. The following buildings were under construction during 1937-38: Business Administration Unit of the Social Science Group, estimated cost \$300,000; Forestry Building, estimated cost \$250,000; Board of Health and Psychology Building, estimated cost \$225,000. The library contained 1,016,799 volumes. Chancellor, Guy Stanton Ford, LL.D.

MINORITIES. See AUSTRIA, BRAZIL, BURMA, CANADA, CZECHO-SLOVAKIA, DENMARK, FRANCE, GERMANY, HUNGARY, LITHUANIA, POLAND, RUMANIA, UNION OF SOVIET SOCIALIST REPUBLICS, YUGOSLAVIA under *History*; JEWS.

MIQUELON ISLANDS. See ST. PIERRE AND MIQUELON.

MISSISSIPPI. Area and Population. Area, 46,865 square miles; included (1930) water, 503 square miles. Population: Apr. 1, 1930 (census), 2,009,821; July 1, 1937 (Federal estimate), 2,023,000; 1920 (census), 1,790,618. Jackson, the capital, had (1930) 48,282 inhabitants.

Agriculture. Acreage, production, and value of the chief crops of Mississippi, for 1938 and 1937, appear in the accompanying table.

Mineral Production. Natural gas continued to be the sole major mineral product of Mississippi. Production of natural gas rose to 12,248,000 M

Crop	Year	Acreage	Prod. Bu.	Value
Cotton	1938	2,600,000	1,715,000 *	\$ 77,175,000
	1937	3,467,000	2,692,000 *	115,371,000
Corn	1938	3,034,000	48,544,000	30,097,000
	1937	2,593,000	45,378,000	29,042,000
Hay (tame) .	1938	877,000	1,086,000 *	11,186,000
	1937	776,000	983,000 *	11,010,000

	1937	82,000	7,544,000	6,563,000

* Bales. ♢ Tons.

cu. ft. (1937), from 11,821,000 M (value \$2,646,000) for 1936. Of the total for 1937, 5,691,000 M cu. ft. were exported by pipe lines to consumers in Alabama, Georgia, Florida, and Louisiana. Almost all the gas came from the Monroe field; the old Amory field, though one well still produced in 1937, was reported as virtually depleted. While 1937 witnessed no great exploration for natural gas in the State, considerable geological work was done toward determining the prospects of petroliferous deposits. Salt domes, elsewhere often associated with petroleum, were located, and geophysical prospecting was carried on.

Finance. Mississippi's State expenditures in the year ended June 30, 1937, as reported by the U.S. Bureau of the Census, were: For maintaining and operating governmental departments, \$16,550,244 (of which \$2,516,688 was for highway maintenance and \$5,134,898 was for local education); for interest on debt, \$2,316,636; for capital outlay, \$21,292,443 (of which \$21,249,125 was for highway outlay). Revenues were \$40,635,105. Of these, property taxes furnished \$3,716,556; sales taxes, \$14,046,193 (including tax on gasoline, \$5,637,935); departmental earnings, \$1,952,333; income taxes, \$1,457,636; sale of licenses, \$2,807,809; unemployment compensation, \$1,137,382; Federal or other grants-in-aid, \$14,630,875. Funded debt outstanding on June 30, 1937, totaled \$52,816,584. Net of sinking-fund assets, the debt was \$51,459,688. On an assessed valuation of \$442,508,137 the State levied in the year ad-valorem taxes of \$3,540,065.

Education. Inhabitants of school age (between 6 and 20 years) in the academic year 1937-38 were stated to number 843,239. On account of separate provisions for the white and the colored the total of each was also given: White, 379,238; colored, 464,001. Enrollments of pupils in the public schools totaled 590,208; the white, 301,486, and the colored, 288,722. Those in the elementary group numbered 522,309, 242,389 being white and 279,920 colored pupils. Those in high schools numbered 67,899, of which the white component was 59,097 and the colored, 8802. The year's expenditures for public-school education totaled \$12,399,063. There were 16,326 teachers—10,396 white and 5930 colored. The salaries of all teachers averaged, for the year, \$600.

The Legislature increased in 1938 the State's grant toward the support of Mississippi's public schools by \$1,000,000. This action was intended to insure that all schools should give instruction for at least eight months a year. Other enactments sought to improve the transportation of public-school pupils and instituted a system for the certification of teachers.

Legislation. The Legislature met in regular biennial session in January. Among its enactments was a highway-financing measure authorizing the issue of \$60,000,000 of bonds, the greatest issue that had ever been authorized in the State. Of the total, \$20,000,000 was designed to pay notes that had been put out in the course of the previous two years to cover the State's share of the cost of the

earlier part of a project to build, with the aid of the WPA, roads at total expenditure of \$82,000,000. A separate act allocated the remaining \$40,000,000 of proceeds of the bonds to road-building in the several parts of the State: To the northern and southern districts, \$14,930,625 each, and to the central section, \$9,953,730. About \$12,000,000 was appropriated for public schools. The chancery courts were empowered to "padlock," or permanently close, as public nuisances, establishments openly selling liquor or running gambling machines and to put the operators of such establishments under bond not to resume operation for two years.

Political and Other Events. The State's seven U.S. Representatives, all Democratic, were re-elected at the general elections on November 8.

The State's progress in the creation of parks drew attention in 1938. Whereas as late as 1933 Mississippi was one of the seven States without State parks, it had by 1938 created nine of these, having a total area of 8200 acres and including several lakes, bathing beaches, and like facilities for recreation. The improvement of the park areas was effected with the aid of the National Park Service and the CCC.

Officers. The chief officers of Mississippi, serving in 1938, were: Governor, Hugh L. White (Dem.); Lieutenant-Governor, J. B. Snider; Secretary of State, Walker Wood; Attorney-General, Greek L. Rice; Treasurer, Newton James; Auditor, Carl N. Craig; Superintendent of Education, J. S. Vandiver.

Judiciary. Supreme Court: Chief Justice, Sydney Smith; Associate Justices, W. D. Anderson, James G. McGowan, George H. Ethridge, Harvey McGehee, V. A. Griffith.

MISSISSIPPI, UNIVERSITY OF. A coeducational, State institution of higher learning at University, Miss., chartered in 1844. The enrollment for the autumn of 1938 was 1314 (963 men, 351 women). The enrollment for the summer session of 1938 was 474. There were 112 faculty members at opening of the 1938 session. The endowment amounted to \$733,808, while the income for the year, exclusive of subsistence, was \$474,122. The library contained 65,319 volumes. Chancellor, Alfred Benjamin Butts, M.A., Ph.D., LL.B.

MISSOURI. Area and Population. Area, 69,420 square miles; included (1930) water, 693 square miles. Population: Apr. 1, 1930 (census), 3,629,367; July 1, 1937 (Federal estimate), 3,989,000; 1920 (census), 3,404,055. St. Louis (1930) had 821,960 inhabitants; Kansas City, 399,746; Jefferson City, the capital, 21,596.

Agriculture. Acreage, production, and value of the principal crops of Missouri, for 1938 and 1937, appear in the accompanying table.

Crop	Year	Acreage	Prod. Bu.	Value
Corn	1938	4,260,000	106,500,000	\$50,055,000
	1937	4,360,000	117,720,000	60,037,000
	1938	2,432,000	31,600,000	18,012,000
Wheat	1937	3,198,000	42,515,000	40,389,000
	1938	2,214,000	2,251,000 ^a	14,406,000
	1937	2,176,000	2,226,000 ^a	18,031,000
Hay (tame)	1938	368,000	337,000 ^b	14,828,000
	1937	558,000	404,000 ^b	15,887,000
Cotton	1938	1,900,000	45,600,000	10,032,000
	1937	1,550,000	43,400,000	13,888,000
	1938	54,000	5,832,000	2,916,000
Potatoes ...	1937	55,000	4,950,000	3,118,000

^a Tons. ^b Bales.

Mineral Production. Among the components of Missouri's total value (\$48,383,540) of native minerals produced in 1936, the leading item, clay products, slightly surpassed lead, previously the

leader. Coal and cement ranked next after these in importance. Thereafter the quantity of lead in ores produced yearly advanced greatly to 157,631 short tons for 1937, from 110,428 for 1936; by value, to \$18,600,458, from \$10,159,376. The bulk of the lead came from the southeastern part of the State. The production of coal was not stated separately for the State in the U.S. *Minerals Year Book*, for 1937; for 1936 it totaled 3,984,999 net tons, in value \$7,559,000; producers' shipments of cement diminished slightly to 4,565,448 bbl. for 1937, from 4,632,191 for 1936; by value they rose to \$7,041,016, from \$7,034,240. Ores almost all in the southwestern part of the State yielded zinc, of which the quantity rose to 20,600 short tons for 1937, from 18,709 for 1936, and the value to \$2,678,000, from \$1,870,900.

Finance. Missouri's State expenditures in the year ended Dec. 31, 1937, as reported by the U.S. Bureau of the Census, were: For maintaining and operating governmental departments, \$54,293,519 (of which \$6,543,402 was for highways, \$16,008,837 was for charities, and \$12,241,811 was for local education); for interest on debt, \$4,855,872; for capital outlay, \$22,455,877. Revenues were \$86,967,042. Of these, property taxes furnished \$6,065,436; income taxes, \$7,393,361; sales taxes, \$32,785,440 (including tax on gasoline, \$11,089,091); departmental earnings, \$5,868,137; sale of licenses, \$14,388,975; Federal or other grants-in-aid, \$16,966,280. Funded debt outstanding on Dec. 31, 1937, totaled \$121,294,839. Net of sinking-fund assets, the debt was \$119,214,908. On an assessed valuation of \$3,797,473,075 the State levied in the year ad valorem taxes of \$5,730,299.

Charities and Corrections. The State Social Security Commission administered aid to the aged poor (70 years old or over) and to other needy classes embraced by the Federal-and-State system of social security. It also had the administration of the poor-aid that might be given by the State "in cases of public calamity" and carried on the services of the former Children's Bureau. The Eleemosynary Board governed the four State hospitals for mental patients, the State School for the Feeble-Minded and Epileptic, and the State Tuberculosis Sanitarium.

The Department of Penal Institutions, headed by three Commissioners, including a Director (J. E. Matthews), governed the institutions for imprisonment, reform, and correction. These, as reported in December, held 5468 inmates. The State Penitentiary, at Jefferson City, held 4091 of these, including 85 female prisoners; the Intermediate Reformatory for Young Men at Algoa, 666; the Missouri Training School for Boys, Boonville, 406; the Industrial Home for Girls, Chillicothe, 229; the Industrial Home for Negro Girls, Tipton, 76. The State created in 1938 a Board of Probation and Parole with jurisdiction in all cases of committal to any of these institutions. To alleviate overcrowding and other faults at the Penitentiary, additional cell-houses and hospital buildings were constructed there in 1938 with the aid of the Federal WPA and PWA.

The new Board of Probation and Parole, as prescribed by an act of 1937, took over from other authorities the duties of investigating the cases of prisoners for parole, commutation, pardon, and relieve, with a view to recommending any such action to the Governor, and also started investigating defendants before sentence, with a view to advising courts as to probation and suspension of sentence. Authority to put the convicted under pro-

bation was granted, by the same act, to the Circuit and Criminal courts. The new Board of Probation and Parole consisted of three salaried members, two being four-year appointees and the third, the Lieutenant-Governor, *ex officio*. It maintained an executive Director (Robert C. Edson).

The Department of Penal Institutions continued, except as to matters in the hands of the new Board, to administer the State Penitentiary, Intermediate Reformatory, Missouri Training School for Boys, Industrial Home for Girls, and Industrial Home for Negro Girls. Patients in the State's four mental hospitals numbered, about the end of the year, 9266; the State School (for the feeble-minded and epileptic) had 1441; the State Sanatorium (for the tuberculous), 798; all these were under the authority of the State Board of Eleemosynary Institutions.

Political and Other Events. Ruling on the long-sustained legal contest over the control of distribution of about \$2,750,000 surrendered by fire-insurance companies as having been collected in excess of premiums on policies, the State Supreme Court (April 21) transferred the money to the Superintendent of Insurance for distribution among claimants. The same court held (May 16) that a legislative act of 1937, nullifying sale if in excess of half of the assets of a corporation that owed taxes, was unconstitutional. Governor Stark dismissed in May the supervisor of the State's department of inspection of traffic in liquor and removed, also, nearly half of the inspectors.

In Kansas City the sentencing of 52 more convicted defendants (May 29) to imprisonment or fines went far to clear the docket of pending cases in the wholesale and long-continued Federal prosecution of election officials for frauds in the general election of 1936. A system for running motor busses by overhead trolley was installed in the streets of the city's downtown district. The Sheffield Steel Co., the city's greatest single manufacturing enterprise, put into operation additional equipment designed to expand its potential output by one half. Bryce B. Smith, the Pendergast Democratic organization's candidate, was elected Mayor (March 29). At Osceola the public burning of \$250,000 of old bonds of St. Clair County marked the end of litigation that had brought over \$500,000 in judgments against the county since the issue of the bonds in 1870. These had originally been issued to aid the construction of a railroad in the county, which was never actually put through. The county judges had for many years failed to obey Federal Court orders to levy taxes to satisfy bondholders' claims and had served in jail under resulting sentences for contempt of court. See **CHILD LABOR**.

Elections. Bennett Champ Clark (Dem.) was re-elected U.S. Senator, defeating Ex-Governor S. Caulfield (Rep.); the Federal Administration had avoided any attempt to defeat Clark, such as it had made in the case of several other Democratic Senators who had failed to support all of its major proposals.

There were elected to the U.S. House of Representatives 12 Democrats and 1 Republican. Democratic control was maintained in the State Legislature. The majority of the State's elective offices were not due for election. The voters adopted a proposal to lower the age qualifying persons for old-age assistance to 65 years, from 70; they rejected a 10-year program of highway building and a proposed State constitutional convention.

Officers. The chief officers of Missouri, serving in 1938, were: Governor, Lloyd C. Stark (Dem.);

Lieutenant-Governor, Frank G. Harris; Secretary of State, Dwight H. Brown; Auditor, Forrest Smith; Treasurer, R. W. Winn; Attorney-General, Roy McKittrick; Superintendent of Public Schools, Lloyd W. King.

Judiciary. Supreme Court: Chief Justice, Charles Thomas Hays; Judges, James M. Douglas, Albert M. Clark, Ernest S. Gantt, C. A. Leedy, Jr., George Robb Ellison, Ernest M. Tipton.

MISSOURI, UNIVERSITY OF. A State institution of higher education in Columbia and Rolla, Mo., founded in 1839. The enrollment for all divisions for the first semester of 1938-39 was 5212, of whom 3883 were men and 1329 were women. The total enrollment for the 1938 summer session was 3361. There were 438 faculty members. The endowment amounted to \$2,438,809, while the total income from all sources was \$4,232,218. The libraries contain approximately 415,650 volumes. In 1938 new buildings were completed at a cost of \$1,450,000. President, Frederick A. Middlebush, Ph.D., LL.D.

MONACO, mōn'a-kō. A principality on the Mediterranean surrounded on its land sides by the French department of Alpes-Maritimes. Area, 370 acres; population (Jan. 1, 1938, census), 23,956. Chief towns: Monaco (capital), 1938 inhabitants; La Condamine, 11,339; Monte Carlo, 10,681. About 1,500,000 people visit Monaco each year. The gambling concession at Monte Carlo is the principal source of revenue. There was a profit of \$100,000 in 1937, while in 1936 there was a deficit of \$180,000. The budget estimates for 1933 balanced at 9,348,453 francs (franc averaged \$0.0503 for 1933). On Oct. 4, 1936, the National Bank of Monaco was formed. It has the exclusive right to issue national currency. The National Council, consisting of 12 members elected every four years, exercises with the Prince legislative power in the State. Ruler, Prince Louis II (succeeded, June 26, 1922).

MONEY. The table on page 473 from the 1938 annual report of the Secretary of the U.S. Treasury shows the distribution of the stock of money in the United States on June 30, 1938, with comparisons for May 31, 1938, June 30, 1937, Oct. 31, 1930, Mar. 31, 1917, June 30, 1914, and Jan. 1, 1879.

MONGOLIA. An extensive, vaguely defined region of east-central Asia, lying for the most part between the 40th and 50th parallels, N. lat., and the 90th and 120th meridians, E. long. On its southern border are China proper, Kansu, and Sinkiang; on the west and north, Russian Siberia, and on the east, Manchuria. An irregular line running through the Gobi Desert separates Outer Mongolia, on the north, from Inner Mongolia, on the south. Outer Mongolia, to some degree under Chinese authority in former times, now ranks as an autonomous republic, allied with the Russian Soviet Union, which by treaty in 1924 recognized the suzerainty of China over the area. Inner Mongolia comprises the Chinese provinces of Chahar, Suiyuan, and Ningxia, with Jehol and (in part) Hsining in Manchoukuo; a great section of this area, invaded from the east, was in 1938 held by Japanese forces.

According to estimates from Chinese sources the area of Mongolia approximates 1,024,000 square miles, inclusive of Jehol but not of any part of the

STOCK OF MONEY, MONEY IN THE TREASURY, IN THE FEDERAL RESERVE BANKS, AND IN CIRCULATION, BY KINDS, JUNE 30, 1938
[From Annual Report of the Secretary of the Treasury, 1938]

Kind of money	Money held in the Treasury			Money outside of the Treasury			Population of continental United States (estimated)
	Stock of money	Total	Reserve against gold and silver certificates (and Treasury notes of 1890)	Held by Federal Reserve banks and agents	All other money	Total	
Gold	\$12,962,953,931 ^a	\$12,962,953,931	\$156,039,431				
Gold certificates	(10,723,816,779) ^c	(7,829,838,380) ^e		(\$7,829,838,380) ^e

							48,231,000

^a Includes money held by the Cuban agency of the Federal Reserve Bank of Atlanta.

^b The money in circulation includes any paper currency held outside the continental limits of the United States.

^c Does not include gold other than that held by the Treasury.

^d Includes \$1,800,000,000 exchange stabilization fund.

^e These amounts are not included in the total, since the gold or silver held as security against gold and silver certificates and Treasury notes of 1890 is included under gold, standard silver dollars, and silver bullion, respectively.

^f This total includes credits with the Treasurer of the United States, payable in gold certificates in (1) the gold certificate fund, Board of Governors, Federal Reserve System, in the amount of \$7,820,450,860, and (2) the redemption fund for Federal Reserve notes in the amount of \$9,387,520.

^g Includes \$59,300,000 lawful money deposited as a reserve for postal savings deposits.

^h The amount of gold and silver certificates and Treasury notes of 1890 should be deducted from this amount before combining with total money held in the Treasury to arrive at the total amount of money in the United States.

NOTE.—A part of the gold and silver included in the stock of money is held as a reserve against other kinds of money, as follows: (1) As a reserve for United States notes and Treasury notes of 1890—gold bullion varying in amount from \$150,000,000 to \$156,039,431 during the years included in the table; (2) as security for Treasury notes of 1890—an equal dollar amount in standard silver dollars (these notes are being canceled and retired on receipt); (3) as security for outstanding silver certificates—silver in bullion and standard silver dollars of a monetary value equal to the face amount of such silver certificates; and (4) as security for gold certificates—gold bullion of a value at the legal standard equal to the face amount of such gold certificates. Federal Reserve notes are obligations of the United States and a first lien on all the assets of the issuing Federal Reserve bank. Federal Reserve notes are secured by the deposit with Federal Reserve agents of a like amount of gold certificates or of gold certificates and such discounted or purchased paper as is eligible under the terms of the Federal Reserve Act, or, until June 30, 1939, of direct obligations of the United States if so authorized by a majority vote of the Board of Governors of the Federal Reserve System. Federal Reserve bank notes maintain a reserve in gold certificates of at least 40 per cent, including the redemption fund which must be deposited with the Treasury of the United States, against Federal Reserve notes in actual circulation. "Gold certificates" as herein used includes credits with the Treasurer of the United States payable in gold certificates. Federal Reserve bank notes and national bank notes are in process of retirement.

province of Hsingan in Manchoukuo; the population, 9,738,000. Other estimates vary widely, one putting the area as high as 1,875,000 square miles and the population as low as 850,000. The Mongols and Kalmuks, races that have long inhabited Mongolia, are pastoral and to some extent nomadic. The more recent settlement of Chinese has brought a population of farmers and added materially to the number of the inhabitants, particularly in Inner Mongolia. In Outer Mongolia, Mongols under Russian direction have made progress with agriculture, which, however, commonly needs irrigation to make it thrive.

Outer Mongolia. By a Chinese estimate the area of Outer Mongolia is 622,744 square miles; the population, 1,800,000. By Russian estimate, the area is 596,177 square miles; the population, 767,000. The capital, Urga, more recently named Ulan Bator Khoto, is reputed to have about 100,000 inhabitants. Trade, which is carried on largely with the Russian Soviet Union, is a governmental monopoly. Wool, hides, skins, and gold make up the chief part of the exports. In 1936 Mongolia ranked eighth in importance among the Soviet Union's export markets, taking Russian products to the value of 50,433,000 rubles, while exports from Outer Mongolia into the Soviet Union attained the total value of 32,120,000 rubles. Gold and coal are mined; an area between the Selenga and Orkhon rivers bears forests of potential value for marketable timber. An industrial establishment aided by the Russian Soviet Union is in operation at the capital, and a plant for cleaning wool by steam is established at Chat Chil. The social system and scheme of government bear much resemblance to the soviet pattern; privileges formerly enjoyed have been taken away from the Mongol princes and from the numerous class of Buddhist priests and monks; collective ownership embraces lands, forests, and mineral resources. Supreme authority rests in the Great Huruldan, a representative assembly elected by the males and females 18 years old or over; it meets at least once a year and names 30 of its members to form the Little Huruldan, to which executive powers are intrusted. This body in turn commits the care of ordinary current matters to a board of five, whose head may be called the chief executive of the republic. The smaller separate adjoining republic of Tannu Tuva (q.v.) is similar in government and population.

The Japanese forces established in the neighboring territory of Inner Mongolia did not attempt in 1938 to extend their advance into the territory of the Outer Mongolian Republic. Troops of the republic, however, were reported in January to have taken post in a fortified area just northwest of the border of Suiyuan, in which province the Japanese had established themselves.

Inner Mongolia. By the Chinese estimate already cited for Mongolia as a whole, Inner Mongolia's area totals about 401,266 square miles; its population, 7,938,000. The figures exclude parts of Hsingan province in Manchoukuo. The area in the military possession of the Japanese in 1938 included Chahar and part of Suiyuan (see map on p. 152). It did not appear that the Japanese had found a firm foothold farther west than Paotowchen on the Hwang Ho, at the western end of a railroad from Peiping. Under Japanese supervision a new state was to some extent organized, under the name of Meng Chiang, having its capital at Kweiwhaching, and in September it was announced that the Inner Mongolian government would be included in a Chinese United Council to be held at Peiping

by representatives of divers parts of China then in Japanese hands. A Japanese step of practical importance to the invaders was the effort made in 1938 to operate in the occupied part of Inner Mongolia a banking system that would afford the Japanese a currency with which to pay for the goods and services that they might require. An old bank of Charnan, reorganized to form a state bank, offered old notes of the three eastern provinces, stamped by it and the Bank of Manchoukuo, proceeded to take over other currencies, and sought to establish a degree of control over exchange. Military movements of the Japanese in Mongolia during the year were entirely subordinate to those in other, more crucial fields (see CHINA under History).

MONOPOLY INQUIRY ACT. See UNITED STATES under Congress.

MONTANA. Area and Population. Area, 146,997 square miles; included (1930) water, 866 square miles. Population: Apr. 1, 1930 (census), 537,606; July 1, 1937 (Federal estimate), 539,000; 1920 (census), 548,889. Helena, the capital, had (1930) 11,803 inhabitants.

Agriculture. Acreage, production, and value of the principal crops of Montana, for 1938 and 1937, appear in the accompanying table.

Crop	Year	Acreage	Prod. Bu.	Value
Wheat	1938	4,458,000	72,349,000	\$34,728,000
	1937	2,624,000	21,918,000	21,480,000
Hay (tame) .	1938	1,255,000	1,940,000 *	10,670,000
	1937	1,159,000	1,416,000 *	12,319,000
Sugar beets ..	1938	78,000	1,955,000 *
	1937	70,000	1,852,000 *	4,490,000
Oats	1938	248,000	8,928,000	2,143,000
	1937	170,000	4,080,000	1,469,000
Barley	1938	132,000	3,828,000	1,225,000
	1937	91,000	2,093,000	1,088,000
Potatoes	1938	18,000	1,620,000	1,215,000
	1937	19,000	1,900,000	950,000
Corn	1938	156,000	2,340,000	1,217,000
	1937	139,000	1,251,000	813,000

* Tons.

Mineral Production. Of the total value (\$65,586,710) of all minerals produced in Montana in 1936, the metals gold, silver, copper, lead, and zinc furnished over three-fifths. Copper led all other products. Petroleum, natural gas, and coal led as to production among the non-metals. The output of petroleum dropped slightly to 5,765,000 bbl. for 1937, from 5,868,000 bbl. (value, \$7,700,000) for 1936. The production of natural gas rose to 23,879 M cu. ft. for 1937, from 23,003 M (value, \$6,217,000) for 1936; the increment was in the main taken by growing demand. Wells completed in 1937, adding heavily to the potential production of natural gas, were all driven in proved territory, as the sufficiency of the existing supply did not stimulate exploration. Coal, despite the competition of the other fuels, held its own, the yearly mined total rising somewhat, to 3,075,000 net tons (1937) from 2,988,524 tons (value, \$4,437,000) for 1936.

Montana's yearly production of gold, silver, copper, lead, and zinc, according to the U.S. Bureau of Mines' preliminary figures for 1938, dropped severely, to the aggregate value of \$27,625,000, from \$58,402,106 for 1937—a shrinkage of 53 per cent. Most of the decline occurred in the production of the predominant metal, copper, of which the yearly total dropped to 153,886,000 lb. (1938), from 289,056,000 (1937) and, in value, to \$15,080,828, from \$34,975,766. Though less important as to totals, the production of lead and that of zinc were even more sharply depressed. That of lead went down to some 17,228,000 lb. (1938), from 35,914,000

(1937), and to \$809,716, from \$2,118,926. That of zinc, to 15,410,000 lb. (1938), from 78,336,000 (1937), and to \$755,090, from \$5,091,840. Production of silver and of gold, though their prices did not directly depend on supply and demand, declined also. That of silver fell to about 6,306,792 oz. for 1938, from 11,812,093; by value, to \$4,077,118, from \$9,136,564. That of gold, to 197,200 oz. (1938), from 202,252 (1937), and to \$6,902,000, from \$7,078,820. The decrease in the production of gold and silver was largely attributable to reduced operations in the Butte district, where ores of copper and zinc yielded gold and silver as well. Curtailment of operations at Butte, the copper-mining center, varied greatly during the year; operations fell, in the summer, as low as one-eighth of the full possible rate and came back to a normal rate before the close of the year.

Charities and Corrections. Besides providing support, in concert with the Federal system of Social Security, for the aged poor and for needy children and blind persons, the State operated nine institutions for the care or custody of individuals. These were governed by the State's Board of Public Welfare, composed of five members and acting through an Administrator-Secretary (I. M. Brandjord). The administrative organization connected with the Board was the State's Department of Public Welfare. The State institutions under the Board's authority were: The State Industrial School, at Miles City; State Prison, Deer Lodge; State Training School, Boulder; State Vocational School, Helena; School for the Deaf and Blind, Great Falls; State Orphans' Home, Twin Bridges; State Hospital, Warm Springs; Montana Soldiers' Home, Columbia Falls; and Tuberculosis Sanitarium, Salem. Inmates of these institutions, by the latest count in 1938, numbered 3877. Outside the State institutions, poor farms had 518 inmates and county jails 642.

Political and Other Events. In the general election (November 8) the Republicans gained one of the State's two seats in the House of Representatives from the Democrats. The State was affected by Federal legislation authorizing the construction of a hydroelectric generating station at the Fort Peck dam; the maintenance and operation of this station, as well as its construction, were assigned to the Secretary of War, and the Federal Power Commission was authorized to set and change the charges for the sale of electricity thus produced; a considerable portion of the current was reserved for sale to public bodies and co-operatives prior to Jan. 1, 1941. The farmers in the State were not troubled during the year by any recurrence of the general drought that had blasted crops for several seasons previous; but a plague of grasshoppers did serious damage to growing grains in parts of eastern Montana in July.

Officers. The chief officers of Montana, serving in 1938, were: Governor, Roy E. Ayers (Dem.); Attorney-General, Harrison J. Freebourn; Secretary of State, Sam W. Mitchell; Treasurer, Ray N. Shannon; Auditor, John J. Holmes; Superintendent of Public Instruction, Ruth Reardon.

Judiciary. Supreme Court: Chief Justice, W. B. Sands and (successor, December 7) Howard A. Johnson; Associate Justices, Samuel V. Stewart, Ralph J. Anderson, C. F. Morris, Albert H. Angstman.

MONTANA STATE UNIVERSITY. A State institution for the higher education of men and women at Missoula, Mont., established in 1895. The enrollment for the autumn of 1938 was

2021; in the summer session of 1938, it was 866. The staff of the University totaled 136 including a faculty of 91. The income for current expenditures for the year amounted to \$468,582. There were about 230,000 volumes in the library. A dormitory for women costing \$240,000 was completed in 1938; and a Chemistry-Pharmacy Building, at a cost of \$300,000, and an addition to the Natural Science Building, at a cost of \$45,300, were under construction. President, George Finlay Simmons.

MORAVIA AND SILESIA. See CZECHOSLOVAKIA.

MORAVIANS. A religious denomination, formed in Bohemia in 1457 among the followers of John Huss and Jerome of Praha. In 1741 Moravians, settling at Bethlehem, Pa., founded the first Moravian church in the United States, called also the Unitas Fratrum or United Brethren. There were later established the Evangelical Union of Bohemian and Moravian Brethren in North America and the Independent Bohemian and Moravian Brethren Churches. The doctrine of the denomination is evangelical, and in its policy it follows a modification of the episcopacy.

Unitas Fratrum. There are two co-ordinate provinces of this, the largest branch of the Moravian Church in the United States. The Northern Province, with headquarters in Bethlehem, Pa., has a provincial synod which meets every fifth year. The provincial synod of the Southern Province, whose headquarters are in Winston-Salem, N. C., meets every third year. On Jan. 1, 1938, the provincial elders' conferences of these provinces reported 152 churches, 158 ministers, 38,253 communicant members, and 149 Sunday schools with 23,657 pupils. The Society of the United Brethren for Propagating the Gospel among the Heathen carried on its work in Alaska, Nicaragua, Honduras, the West Indies, Labrador, Surinam, the Himalayas, Unyamwesi, Central Africa, and South Africa, reporting in 1937 a missionary membership of 148,034. The denomination also maintained the following educational institutions: Linden Hall at Lititz, Pa.; Moravian College and Theological Seminary and Moravian Seminary and College for Women at Bethlehem, Pa.; and Salem Academy and College for Women at Winston-Salem, N. C. The official periodical is *The Moravian*, a weekly. The Rev. S. H. Gapp was president of the provincial elders' conference of the Northern Province in 1938. The provincial elders' conference of the Southern Province was headed by the Rt. Rev. J. Kenneth Pfohl.

MORDVA AUTONOMOUS SOVIET SOCIALIST REPUBLIC. See RUSSIAN SOVIET FEDERATED SOCIALIST REPUBLIC.

MOROCCO. A region of northwestern Africa, divided politically into (1) the French Zone (area, 162,162 sq. miles; population, 6,296,000 at the 1936 census), comprising about 85 per cent of the total area and population; (2) the Spanish Zone (area, 13,125 sq. miles; population, estimated at 795,202 including 44,379 Europeans and 12,918 Jews in 1934); and (3) Tangier (q.v.). The 1936 census returns of the French Zone showed 5,875,000 Moslems, 206,500 Europeans and other foreigners, and 161,300 Jews. Populations of the chief cities of the French Zone in 1936 were: Casablanca, 259,000; Marrakech, 191,000; Fez, 144,000; Rabat (capi-

tal), 84,000; Meknes, 75,000; Oudjda, 35,000. Estimated populations of the principal towns in the Spanish Zone in 1934 were: Melilla, 64,328; Tetuan (capital), 49,535; Ceuta, 38,945; Alcazar, 30,762; Larache, 29,477. French and Spanish are used as the official and business languages in the French and Spanish Zones, respectively, but the natives speak mainly Moorish-Arabic and the various Berber dialects. Unless otherwise specified, the following statistics refer to the French Zone only.

Education. About 90 per cent of the population are illiterate. The school enrollment in 1937 was: Primary, about 30,000 Europeans, 15,000 Jews, and 17,000 Moslems; higher schools, 8000, mostly Europeans.

Production. The chief occupations are agriculture and stock raising. The acreage of sown land in 1937 was 10,079,165 exclusive of 59,220 acres of vineyards. The 1937 crop yields were: Wheat, 20,895,000 bu.; barley, 37,942,000 bu.; oats, 2,718,000 bu.; linseed, 398,000 bu.; wine, 15,385,000 gal.; and olive oil, 2,248,000 gal. Livestock in 1937 included 10,372,818 sheep, 6,275,801 goats, 2,025,813 cattle, 726,967 asses, 210,310 horses, 158,650 camels, 140,939 mules, and 56,673 swine. The estimated 1936 wool clip was 33,353,000 lb. Output of the chief minerals in 1937 was (in metric tons): Phosphate rock, 1,378,507; coal, 108,150; manganese ore, 75,671; salt, 11,208; lead ore, 28,002; and antimony, 22. Casablanca and Fedhala are important fishing centers.

The Spanish Zone raises much the same crops as the French Zone but in limited quantities. Tunny fishing and stock raising are important occupations and considerable iron ore (579,000 metric tons, metal content, in 1936) is exported from the Melilla district. Some antimony is mined. There are flour mills at Melilla and Larache.

Foreign Trade. Imports of merchandise in 1938 were valued at 2,126,400,000 francs (1,765,600,000 in 1937) and merchandise exports were 1,502,400,000 francs (1,143,900,000 in 1937). Refined sugar, cotton fabrics, gasoline and benzine, tea, wheat, and automobiles were the leading 1937 imports, in the order cited, and phosphate rock, wool, wheat, sardines, and eggs were the principal exports. France in 1937 supplied 31.6 per cent of the imports and purchased 46.9 per cent of the exports. Imports of the Spanish Zone were valued at about \$4,800,000 (old U.S. gold dollars) in 1937 and exports at \$2,400,000.

Finance. Budget estimates for 1937 placed revenues at 902,374,500 francs and expenditures at 902,362,310 francs.

Transportation. There were 1122 miles of normal-gauge railway lines in operation in 1937; 4425 miles of roads; 38,280 automobiles; and air services linking Casablanca with Toulouse, France, and Dakar, Senegal. During 1937, 3035 ships of 5,500,129 tons entered the French Zone ports. In the Spanish Zone there are about 72 miles of railway line and 540 miles of good roads.

Government. The Sultan of Morocco, who resides in the French Zone, usually at Rabat, exercises nominal executive authority in both the French and Spanish Zones. But in the French Zone his acts are subject to the approval of the French Resident-General. In the Spanish Zone the Sultan delegates his authority to a Khalifa, named by him from a list of two candidates submitted by the Spanish Government. Actual authority is exercised by the Spanish High Commissioner residing at Tetuan. Sultan in 1938, Sidi Mohammed, proclaimed Nov. 18, 1927. Resident-General and com-

mander-in-chief of the French Zone, Gen. Albert Nogués, appointed Sept. 16, 1936. Spanish High Commissioner, representing Gen. Francisco Franco's government, Col. Juan Beigbeder y Atenza (appointed Apr. 17, 1937). Khalifa of Spanish Morocco, Sidi Muley Hassan Ben el Mehedi.

History. In both French and Spanish Morocco the year 1938 passed with less political disturbance than had occurred in 1937. In Tetuan the partisans of Franco, who controlled the government of the Spanish zone, were inhospitable to the Moroccan Nationalist group, while many of the latter courted the Spanish Republican government. As Franco's party in Spain had reason to oppose Nationalist agitation in the Spanish part of Morocco, there was no opportunity for using the Spanish zone as a focus from which to spread nationalism into French Morocco. In Paris on February 2, Albert Sarraut, the cabinet member in charge of North African affairs, reported to a committee of the French Senate that the government was watching the proceedings of Nationalist and pan-Islamic leaders in Morocco as well as in Tunis and Algeria, and that the French chief authorities in each of the three divisions of French North Africa had received greater freedom to deal with special situations and had been supplied with additional armed forces.

In a riot reported from Casablanca (July 26) 15 Moroccans and two policemen were injured; the disturbance was said to have started in an attack made by some natives upon Algerian cavalrymen accused of mistreating a Moroccan, and there appeared no indication that the riot had any political character. At the time of the diplomatic deadlock over the German demands upon Czecho-Slovakia, Sultan Sidi Mohammed announced that he and his subjects would side with France if that country became involved in a European war. In November the unveiling, at Casablanca, of a commemorative statue of Marshal Louis Hubert Lyautey, the man who had established the French power in Morocco, gave occasion for a display of the soundness of the existing relations between the Moroccans and the French government. Sultan Sidi Mohammed attended the ceremony and delivered over a radio network an address said to be his first public utterance; in this address he declared the friendship of France and Morocco "henceforth indispensable to the happiness and greatness of our two countries."

MORTGAGES. See FINANCIAL REVIEW.

MOTION PICTURES. Despite increased expenditures on many productions and a high-pressure advertising campaign at the end of the year, 1938 found the motion picture in a far from vigorous state. Due in part to the general recession, but also in part to a growing sales resistance on the part of the film public, production came to a virtual standstill at Easter and did not pick up again until mid-summer. Faced with a drop in attendance estimated as high as 40 per cent and the drying up of foreign markets, the industry became confused. It resorted either to costly, spectacular shows to tempt patrons back into theaters, or to cheap copies of former successes to cut down production costs. The result was a period which was certainly not notable for screen artistry.

It is highly indicative that the most popular and most entertaining photoplay of 1938 was Walt Disney's full-length animated cartoon, *Snow White and the Seven Dwarfs*, which was made quite outside the conventional field of Hollywood producing. Representing a vast improvement in the technique of pictorial animation, this adaptation of the

Grinim fairy tale was worthy of all the extravagant praise it received. A screen masterpiece in any terms of the cinema, as well as its own peculiar idiom, it won new adherents to the screen, made enormous profits for its creator, and paved the way for future achievements in one of the medium's oldest and most enchanting forms.

Of the conventional films, by far the best was *The Citadel*, made in England by Metro-Goldwyn-Mayer. At a time when producers were extremely chary about handling controversial material, it struck out with a challenging analysis of medical practice and the relation of the doctor to the community. Although it was staged by a crack American director, King Vidor, and had Rosalind Russell in a leading role, it derived a great deal of its provocative quality from the fact that it was made abroad, with authentic English backgrounds and an integrity of treatment that was rarely to be found in Hollywood productions. It was inspired by A. J. Cronin's best-selling novel, but it bettered its original in nearly every respect. In a manner somewhat similar to *The Life of Emil Zola* of the year before, it built its climax on a speech, with a physician fighting for his professional career in disbarment proceedings. Played with great skill by Robert Donat, the scene showed anew that ideas are not alien to the screen.

Translations of stage plays bulked large in the offerings of the year. *You Can't Take It With You*, converted by Frank Capra from a rousing Broadway success, was an exceedingly entertaining photoplay, even though it did not rank with the best of that eminent director's achievements. Dealing with an unconventional patriarch and his unconventional family, it gave domestic comedy intriguing accents of social commentary. *A Slight Case of Murder*, made over from Damon Runyon's amusing drama about gangsters, corpses, and the Saratoga racing scene, was one of the most hilarious comedies of the year. *Jezabel*, *If I Were King*, *Holiday*, *The Amazing Dr. Clitterhouse*, and *Tovarich* were other successful and popular films which stemmed from the theater.

Marie Antoinette, with its production cost of over two millions, was the most lavish spectacle presented. Although it had fine performances by Robert Morley, Norma Shearer, and John Barrymore, it was more spectacular than dramatically significant. Like so many of the screen's historical reconstructions, the story was frequently out of focus with the background of events. The same was true of *In Old Chicago*, *The Adventures of Robin Hood*, *Wells Fargo*, and *The Buccaneer*. Of these *The Adventures of Robin Hood*, with its exciting movement and color, was by far the best. In any case, historical subjects were in high favor, particularly those dealing with various phases of our national development. As a rule, they succeeded in achieving authenticity of settings, but showed little imagination in dramatic development or characterization.

The smaller budget films were uniformly of a low standard, although there were exceptions. The Hardy family series, starring the popular and gifted youngster, Mickey Rooney, proved engaging entertainments and were vastly successful. *A Man to Remember*, directed by a newcomer from the theater, Garson Kanin, was an extremely sincere and touching drama of a small town doctor, played with deep feeling by Edward Ellis. *Boys of the Street* dramatized the slums as breeding ground for gangsters effectively and unpretentiously. Then too, there was an excellent drama of domesticity,

Four Daughters, which gained immeasurably in conviction by its lack of production pomp and high-salaried stars. John Garfield, who made his debut in the film, gave notice that he is an actor to be watched.

Musical extravaganzas were conspicuous for their absence. In their stead were what can best be described as screen plays with music. The most successful of these was *Alexander's Ragtime Band*, in which a preposterous tale about an orchestra leader and a singer who went from the Barbary Coast to Broadway, was embroidered with an anthology of Irving Berlin tunes. Far better in quality were the two Deanna Durbin pictures, *Mad About Music* and *That Certain Age*. *The Goldwyn Follies*, which followed the old formula for film musical offerings, was pretentious and extremely dull. Incidentally Shakespeare was unrepresented for the first time in several years.

While the so-called "screwball comedy" cycle was extended in a score of presentations, there was a healthy tendency to base comedies on characterization rather than nonsense situations. *Sing, You Sinners*, with Bing Crosby, proved a delightful entertainment and so did *Vivacious Lady*, which had Ginger Rogers and James Stewart giving soundly amusing impersonations. There were several aviation films which made effective use of the melodramatic aspects of flying, particularly *Test Pilot*, and the usual quota of gangster photoplays, of which the best was *Angels With Dirty Faces*. What is known as social drama was scarcely touched, although Walter Wanger's production of *Blockade* made a half-hearted attempt to deal with the Spanish civil war; *Boys' Town* considered the plight of depression youngsters, and *Yellow Jack* celebrated the heroic struggle against yellow fever.

Color photography had no such widespread acceptance as had been anticipated in some quarters. On the whole, tinted photography was most agreeable when it was least conspicuous and when it dealt with adventure or outdoor stories. Of the score or more films made in color, those in which the dramatic effect was actually heightened were *The Adventures of Robin Hood*, *The Adventures of Tom Sawyer*, *Men With Wings*, and *Snow White and the Seven Dwarfs*, of course.

There was a slight drop in the total number of feature-length films produced as compared with 1937, but the total figure was again approximately 500. An estimate of the national weekly attendance at movie playhouses has been placed as high as 85,000,000, although there were several periods when patronage dropped far below that point. Although the number of theaters has been placed as high as 18,000, more than 2000 of these remained closed during most of the year. Production costs during 1938 are said to have totaled \$165,000,000. The industry invested \$600,000 in the Motion Picture's Greatest Year campaign which closed the period. It undoubtedly had a beneficial effect on the box office. The Federal anti-trust suit instituted during the year, aimed at divorcing production control from distribution and theater chain management caused alarm in the studios, but did not reach a definitive phase.

The biggest money-makers of the year were *Snow White and the Seven Dwarfs* and *Alexander's Ragtime Band*. Other films which have not already been noted which were popular were *Of Human Hearts*, *Three Comrades*, and *White Banners*. Short subjects flourished and some commentators saw in this fact, added to the increased length of many feature pictures, an indication that

the double-feature system was on the wane. In the specialized field of documentary films, the outstanding offering was Pare Lorentz's *The River*, a government subsidized screen enterprise.

The players who stood out most prominently were James Cagney, Spencer Tracy, Robert Donat, Robert Morley, Franchot Tone, James Stewart, John Barrymore, Charles Boyer, Edward Ellis, Clark Gable, Tyrone Power, and John Garfield among the men, and Margaret Sullivan, Bette Davis, Alice Brady, Katharine Hepburn, Ginger Rogers, Beulah Bondi, and Fay Bainter among the women. Shirley Temple continued to be the most popular of the child stars, although Mickey Rooney and Deanna Durbin, in a slightly older age classification, were also enormously successful as box office attractions. There was another large influx of foreign stars, with Hedy Lamarr making an instantaneous hit in *Algiers*.

France. While Hollywood had few fine films to offer, the French cinema, although highly disorganized, presented a series of excellent photo-plays. *Grand Illusion*, a study of the war through the eyes of prisoners, directed by Pierre Renoir, son of the famous impressionist painter, and played brilliantly by Jean Gabin, Pierre Fresnay, Erich von Stroheim, and Dita Parlo, was the best of these. Other superior productions included Julien Duvivier's *Life Dances On*, *Generals Without Buttons*, *Ballerina*, and *The Story of a Cheat* by and with Sacha Guitry.

Germany. The screen continued to languish artistically under Nazi guidance. Heavy-handed farces and silly musicals were the chief offerings of the German studios. Except for an occasional good performance by such a veteran as Emil Jannings, there was nothing to recommend them.

Great Britain. Although all reports were to the effect that the British screen was in a bad way, it did not fail to produce some of the most noteworthy films of the year. *The Lady Vanishes* proved another masterly melodrama staged by Alfred Hitchcock. Robert Stevenson's absorbing pastoral, *To the Victor*, based on "Bob, Son of Battle," was a brilliant achievement, while other first-rate English screen dramas included *South Riding*, *Pygmalion*, *The Beachcomber*, and *Three on a Week-end*.

U.S.S.R. For the most part the Soviet films which reached this country proved definitely inferior to those of former years. The Lenfilm studio turned out several minor offerings which had genuine screen excellence, and *Professor Mamlock*, which described the growth of Nazi influence in a German city and its effect on a Jewish surgeon, is worthy of special mention, but there was a lack of dramatic vigor and unity in the majority of offerings.

Awards. The New York Film Critics, making their selections for the third successive year, chose *The Citadel* as the best English-language film of 1938 and *Grand Illusion* as the best foreign screen drama. Alfred Hitchcock's staging of *The Lady Vanishes* was adjudged the best job of direction; James Cagney's performance in *Angels With Dirty Faces* the best male portrayal; that of Margaret Sullivan in *Three Comrades* the best piece of feminine acting, and a special award was given Walt Disney for *Snow White and the Seven Dwarfs*.

MOTORBOATING. See SPORTS.

MOUNTAIN CLIMBING. See EXPLORATION.

MOUNT HOLYOKE COLLEGE. An institution for the higher education of women at South Hadley, Mass., founded in 1837. The registration for the autumn session of 1938 was 1024 in residence, including 42 graduate students, 237 seniors, 220 juniors, 243 sophomores, 279 freshmen, and 3 unclassified students; 19 attending Mount Holyoke Freshman Year in Hartford, 5 juniors in France, and 2 in Germany. The faculty numbered 131. The endowment funds amounted to \$5,128,762, and the income for the preceding year was \$1,254,850. The total amount of gifts and bequests during the year 1937-38 was \$123,259. There were 152,000 volumes in the library. Ground has been broken for a new dormitory, the gift of Mrs. Emily Abbey Gill of Springfield. President, Roswell Gray Ham, Ph.D., LL.D.

MOZAMBIQUE, mō'zam-bēk' (**PORTUGUESE EAST AFRICA**). A Portuguese colony in East Africa, consisting of two separate administrative units: (1) The Province of Mozambique (245,773 sq. mi.), comprising seven districts, and (2) the two districts of Manica and Sofala (51,881 sq. mi.), administered by the Mozambique Company under a royal charter expiring in 1941. Total area, 297,654 square miles; total population (1932), 4,028,746. Lourenço Marques (capital of the Province) had 47,390 inhabitants (1935); Beira (capital of Manica and Sofala), 24,502.

Production and Trade. The chief products of the Province are sugar, maize, cotton, copra, sisal, and minerals. Livestock (1932): 519,149 cattle, 271,745 goats, 102,442 sheep, and 30,388 swine. In 1937 (in old U.S. gold dollars) imports were valued at \$11,700,000 (\$9,700,000 in 1936); exports, \$10,200,000 (\$8,200,000 in 1936). Imports into Manica and Sofala in 1936 totaled 1,839,694 gold escudos; exports, 1,849,341 gold escudos (the chief exports were maize, sugar, and gold).

Communications. In 1936, 2838 vessels aggregating 12,094,559 tons cleared the ports of the colony. The area administered by the government had 1408 miles of state railways in 1937, and 17,745 miles of roads. In Manica and Sofala there were 3123 miles of roads suitable for automobile traffic. Ships clearing the port of Beira in 1936 totaled 4,031,970 tons.

Government. The budget for 1938 balanced at 581,839,500 escudos. On Dec. 31, 1937, the public debt amounted to 21,973,003 escudos (escudo averaged \$0.0448 for 1937). The Province of Mozambique (the seven districts, Cape Delgado, Inhambane, Lourenço Marques, Mozambique, Nyasa, Quelimane, and Tete) is administered by a governor-general who is represented in each of the seven districts by a governor. Governor-General, Col. José Pereira Cabral. Governor of Manica and Sofala, Rear Admiral Luis Magalhães Correia.

History. During June of 1938, it was announced that a commercial treaty between Mozambique on the one side and Bechuanaland, Swaziland, and Basutoland on the other had been signed in Lisbon. The treaty provides for reciprocal most-favored nation treatment, with some exceptions. During 1938 a Portuguese military mission visited Mozambique and Angola to strengthen their defenses. See PORTUGAL under History.

MUNICH ACCORD. See CZECHO-SLOVAKIA under History. For repercussions, see CHINA, FRANCE, GERMANY, GREAT BRITAIN, IRELAND, ITALY, JAPAN, PANAMA, POLAND, RUMANIA, and YUGOSLAVIA under History.

MUNICH FESTIVAL. See MUSIC.

MUNICIPAL GOVERNMENT. The largest city to adopt the council-manager plan during the year was Yonkers, N. Y., which had a population of 134,646 by the 1930 Census. The vote on November 8, which included approval of proportional representation for members of the council, was 23,767 to 20,598. The plan becomes effective Jan. 1, 1940. Two previous attempts to adopt the manager plan were unsuccessful. Other cities adopting the council-manager during the year were Dover-Foxcroft and Milo, Me., Bendix, N. J., and Verdun, Que., by means of referendum; and, by ordinance, Ephrata, Penn., Lexington and Tappahannock, Va. Favorable preliminary action on the plan was taken at Greenwood, S. C., and Traverse City, Michigan. The most notable popular defeat, including both a proposed city manager and a council elected by proportional representation, was at Cambridge, Mass., on November 8; the final vote, which was a recount, was 21,722 to 19,955. Other Massachusetts cities that voted down the council-manager in November were Chicopee, Northampton, and Quincy, the first two by small majorities. Elsewhere during the year defeats were reported at Chesterfield, Va., Forsythe, Ga., Battle Creek, Berkeley, and Tecumseh, Mich., Des Moines, Iowa, Hutchinson, Kan., Little Rock, Ark., and Monterey Park, Calif. The voters of South Dakota disapproved a constitutional amendment authorizing managers for counties under 10,000 population. Proposals to give up the manager plan were defeated at Springfield, Vt., Wheeling, W. Va., Paducah, Ky., Beloit and Fort Atkinson, Wis., Huron, S. D., Excelsior Springs, Mo., and San Angelo, Texas, but carried at Ashland, Ky., the latter not effective until Jan. 1, 1940. At the close of the year there were 472 cities and 7 counties under the council-manager plan. Of the cities, 16 were in Canada, 1 in Puerto Rico, and 4 in Ireland. (For details see *Directory of Council-Manager Cities and Counties*, revised to October, 1938, by International City Managers Association of Chicago.) Among amendments to the Constitution of New York State affecting local government submitted to popular vote on November 8 was one prohibiting proportional representation, aimed particularly at New York City. It was defeated. Another one that met defeat was designed to make nearly all the decisions of state administrative bodies subject to court review in matters of fact as they are already in law. This was aimed particularly at the regulation of the rates of public utilities by the public service commission. An amendment that carried prohibits special acts of the legislature affecting New York City except on request of the mayor with the approval of the city council or on request of two-thirds of the council. By another amendment, New York City is empowered to repeal all special acts of the legislature passed since 1923 on the pretext of an emergency. The legislature retains control over education.

ton); Ridley and Nolting, *The Municipal Year Book*, 1938 (Chicago); Sinclair, *The Big City, A Human Study of London*; Woolston, *Metropolis, A Study of Urban Communities* (New York).

MUNICIPAL OWNERSHIP. On January 3 a unanimous decision of the U.S. Supreme Court upheld the constitutionality of the PWA loans and grants to municipalities for the construction of electric light and power plants that would result in competition with plants of private companies. The suit was brought by the Alabama Power Co. against Harold L. Ickes, Federal Emergency Administrator of Public Works, to prevent PWA aid to Guntersville, Hartselle, and Russellville, Ala. By a brief collateral opinion the ruling was held against the Duke Power Co. and in favor of Greenwood County, S. C. The decision upheld an opinion of the District of Columbia Court of Appeals which in turn supported the trial court in the same district. The gist of the decision was that in the absence of fraud, coercion, malice, conspiracy, none of which was shown in the cases at bar, municipalities could legally compete with private companies even to the financial injury of the latter; and that such competition being legal PWA aid was also legal. On January 21, three Federal district judges upheld the constitutionality of the TVA Congressional Acts of 1933 in a suit brought by 19 electric utility companies operating in Tennessee, Alabama, Mississippi, the two Carolinas, the two Virginias, and Georgia. (U.S. Court for Eastern District of Tennessee, North Division: Tennessee Electric Power Co., complainants, vs Tennessee Valley Authority, defendants, Jan. 21, 1938, Equity, 228.) Among the rulings in the decision were: No conspiracy of the TVA, by itself or with PWA, against the utilities; no coercion of the municipalities to buy power from the TVA; that although the complainants will suffer damages by being forced to meet TVA rates these will be "damages in the absence of legal injury"; and that the primary function of the TVA is flood control and navigation, with power production secondary. An appeal is pending in the U.S. Supreme Court.

On September 2 Knoxville, Tenn., took over the local distribution of the Tennessee Public Service Co., a subsidiary of the National Power & Light Co., controlled by the Electric Bond & Share Co. Current will be bought from the TVA, recent purchaser of the property of the Tennessee Public Service Co. outside of Knox County. The cost of the properties of the last-named company was \$8,035,000, of which Knoxville paid \$5,483,000. (See *Public Management* Chicago, October, 1938.) At Memphis, Tenn., following the U.S. Supreme Court decision already mentioned, the city received from the PWA \$1,031,000 from a grant of \$3,092,000 for the construction of a system to distribute TVA power. Negotiations for the purchase by the city of the property of the Memphis Power & Light Co., a subsidiary of the National Power & Light Co., were broken off in September because of non-agreement on price. On November 30, the city made a "final" offer of \$17,385,000 for the local gas and electric plants. Meanwhile, the city had gone on with the construction of its own distribution system and was supplying TVA electric current to several thousand consumers. Arrangements completed November 15 brought to 88 the number of municipalities that will buy electric current from the TVA. The mayors of Jackson, Brownsville, and Humboldt, Tenn., signed agreements with the West Tennessee

Power & Light Co. to buy local systems from it from which current will be distributed to 18 other communities. The TVA will acquire transmission lines which will be sold later to co-operatives. Voters of Ogden, Utah, on August 8 disapproved a contract for building a municipal electric light and power system for \$2,600,000, payable in bonds to be redeemed by income from the system. The legality of the contract had been attacked by the Utah Power & Light Co. and the Intermountain Branch of the Associated General Contractors. The State Supreme Court held that revenue bonds could be issued outside the debt limit and that competitive bidding was not required on construction contracts paid for by revenue bonds. A referendum vote was necessary and resulted in defeat of the project. In the waterworks field, Utica, N. Y., took over the property of the Consolidated Water Co. on November 1, paying \$7,900,000. Of this sum, \$7,000,000 were provided by the sale of water revenue bonds through the U.S. Reconstruction Finance Corporation. The bonds, which bear interest rates of 2.75 and 2.6 per cent, according to maturity, were sold at 101, making the net charge 2.637 per cent.

MUNROE, CHARLES EDWARD. An American chemist, died at Forest Glen, Md., Dec. 7, 1938. Born in Cambridge, Mass., May 24, 1849, he was educated at Harvard University (B.S., *summa cum laude*, 1871) where he became assistant in chemistry after graduation. He remained at Harvard until 1874 and established and conducted there the first summer school of chemistry. He joined the faculty of the U.S. Naval Academy as professor of chemistry in 1874, serving until 1886. During this period he was also connected with the U.S. Naval Institute and was editor of the *Proceedings* of the Institute, 1880-86. Then he was named chemist to the torpedo corps of the U.S. Naval Torpedo Station and War College, Newport, R. I. Here he began his study of explosives that resulted in his invention of indurite in 1889, the first smokeless powder used by the U.S. Navy for the larger guns. At this time he also developed the principle of detonation known in the Navy as the "Munroe effect."

Munroe delivered the Lowell Lecture in Boston during 1891-92, and in the latter year he joined the faculty of Columbian College in Washington, D. C., as professor of chemistry, as dean of the Corcoran Scientific School (until 1893), and as dean of the faculty of graduate studies. In 1904 the University was renamed George Washington. Dr. Munroe was retired as professor emeritus in 1918.

Active in all phases of his profession, he was first interested in sanitary chemistry, then in technical chemistry, and finally in the chemistry of explosives, in which he became a recognized authority. He was a member of the U.S. Assay Commission in 1885, 1890, and 1893, and during the Spanish-American War organized and directed a voluntary torpedo corps at Analostan Island and was a consulting engineer of the Engineering Board on the defense of Washington. He organized and conducted the first national census of the chemical industry in 1900 and conducted the same for the succeeding censuses of 1905 and 1910. Also, he was consulting expert for the U.S. Geological Sur-

vey (1907-10), the U.S. Bureau of Agriculture (1908-09), of the Bureau of Mines (1910-19), for which he was chief explosive chemist during 1919-33; and of the U.S. Forestry Service from 1934. In 1900 he was appointed by the Swedish Academy of Science to nominate the candidate for the Nobel prize in chemistry. Also, he was chairman of the advisory committee of the American Railway Association which in 1905 drafted the regulations governing the transportation of explosives.

One of the leading chemists of his day, he was the last-surviving charter member of the American Chemical Society, which he served as president during 1898-99. He held membership in leading scientific societies; was president of the Washington Chemical Society (1896), giving as his presidential address a history of the development of smokeless powders; and was president of section IIb of the 8th International Congress of Applied Chemistry and the section on Applied Chemistry of the 2d Pan American Scientific Congress. Dr. Munroe was decorated by Turkey in 1901 and by Belgium in 1920.

The author of many pamphlets and articles in scientific magazines, he also wrote *Chemistry and Explosives* (1888); compiled an *Index to the Literature of Explosives* (Pt. I, 1886; II, 1893), and with Clarence Hall wrote *Primer for Coal Miners* (1909; 1911) and *Primer for Metal Miners* (1915).

MUSIC. General News. Despite the unfavorable economic outlook in the United States during the first half of the year and two major political crises in Europe, 1938 brought no apparent lessening of the intensity of musical activities in America or Europe. The absorption of Austria into the German Reich in March naturally brought about important changes in the general scheme of musical activities in the former republic. Jewish musicians, including prominent figures such as Bruno Walter, were ousted from organizations such as the Vienna State Opera and Vienna Philharmonic Orchestra, which were incorporated into the Reich's national musical plan.

A conspicuous result of the German annexation of Austria, from a musical point of view, was its effect upon the Salzburg Festival which, especially since Arturo Toscanini had become its principal figure, had been the most internationally noted summer event of its kind. Mr. Toscanini canceled his 1938 engagement in January, as soon as he had heard of the Berchtesgaden agreement which foreshadowed the *Anschluss*, and Bruno Walter was forced to withdraw on racial grounds in March. He was active in Paris in the spring and fall opera and orchestral seasons, and became a French citizen in September. Although the originally planned schedule was carried out, the Salzburg Festival became an event of mainly German, rather than international, interest.

The Federal Music Project, organized as a part of the Works Progress Administration in 1935, continued its efforts along the same general lines as in 1937, offering an extensive program of orchestral, band, chamber music, and soloists' concerts and, in some cities, opera. A national festival of American music was held from February 21 to 23 in over 100 communities. According to figures published in the autumn, 2642 persons were employed in 38 Federally sponsored orchestras throughout the country. No general program has yet been prepared to meet the possibility of the government's withdrawal from this field, but in some cases the Federal support of an organization has

been supplemented by private contributions, permitting a larger personnel or an expanded schedule.

Plans for Federal support of the arts on a more permanent basis than that provided by the WPA received considerable discussion. Hearings on bills presented by Senator Claude Pepper of Florida and Representative John Coffee of Washington, calling for the establishment of a Federal Bureau of Fine Arts, were held before the Senate's sub-committee on Education and Labor early in March. Objections to two features of the plan, the carrying over of all artists employed in WPA projects into the new set-up and the influence assigned to "organizations representing the artists employed in the projects within the region" in choosing the proposed regional administrators and committees, were vigorously voiced at the hearings by Walter Damrosch, dean of American conductors. He thought that the plan would operate as a relief measure rather than for the best interests of the arts and would give the unions concerned too much power in administration and policies. The bills also had influential support but did not reach a vote in Congress. In December Mr. Damrosch published a plan of his own for a Federal Fine Arts Bureau.

The American Guild of Musical Artists devoted attention principally to the organization of the opera field, seeking agreements recognizing it as the sole bargaining agency for the artists of the various companies and establishing minimum standards of pay and working conditions. After six months' negotiations, an agreement was signed with the Metropolitan Opera Association on July 26, and another with the San Francisco Opera Association in August, leaving the Chicago City Opera Co. as the only organization of consequence still unsigned.

The Guild's first agreement of this kind, made in October, 1937, and renewed in 1938, with the Southern California Symphony Association, which directs the summer and winter activities of the Los Angeles Philharmonic Orchestra, proved to be the source of a controversy between the Guild and Yehudi Menuhin over the young violinist's engagement as soloist with the Los Angeles Philharmonic on November 3 and 4. The agreement provided that all soloists appearing with this orchestra, except in special cases, should be Guild members. Mr. Menuhin, however, declined to join the Guild, claiming that its conditions of membership and policies jeopardized his freedom as an artist. The Guild's governing board published a statement censuring his attitude as unwillingness to co-operate with his fellow artists in aiding their colleagues as a whole, and declined to grant the Los Angeles organization exemption in his case. Mr. Menuhin, however, kept his engagement, while the Guild took no further steps in the controversy, the first to arise from its agreements, before the end of the year.

Early in the winter 48 representative American composers organized the American Composers' Alliance with Aaron Copland as chairman of its executive board. Its announced general purpose was to promote the cultural and economic interests of all writers of "serious music" in the United States, while its first objective was the collection of due royalties for performances of copyright works.

One of the principal American musical prizes of the year, the Joseph H. Bearns award of \$900, offered by Columbia University for music by a young American composer, was divided between Elizabeth Marting of Rutherford, N. J., for a string quartet, and Ernest V. Lubin of New York for his *Variations on a Bach Theme* for string quartet and *Suite in Old Style* for strings. Charles

Naginski of New York, an American composer born in Egypt, won the Damrosch Fellowship for study at the American Academy in Rome. The year's most notable prize competition in Europe was the Ysaye Contest for pianists held at Brussels in the spring. Out of 100 entrants from 25 countries, 12 aspirants reached the finals. Emil Guilels, a Russian, 22 years old, won the first prize of 50,000 Belgian francs.

Early in the year an unknown *Rumanian Rhapsody* for piano by Franz Liszt was discovered in the Liszt archives in Weimar, Germany. Two unpublished songs by Handel, thought to be the first which he had composed to English texts, were discovered in a manuscript volume which the British Museum had acquired in 1882, by William C. Smith, a specialist in Handelian. Prof. Alfred Orel discovered among the papers of the Vienna Society of Friends of Music a fragment of a quartet by Franz Schubert in C minor, dated Apr. 23, 1814, in the composer's handwriting. This was performed in Vienna by the Graf Kurz Quartet on February 9.

An important project for a new Italian edition of Palestrina's music with Mgr. Raffaele Casimiri as editor was announced in October, calling for 34 volumes in chronological order, each with instructions for performance. Their issue was expected to take five years.

Artists. To meet the perennial question of how to restrict free admissions to recitals and at the same time to provide some sort of audience for young or little-known concert artists, New York concert managers announced in August that free passes would be replaced by non-taxable student coupons costing from 15 to 25 cents. These, it was claimed, would cost their holders little more than the Federal tax which they had paid on their passes, while the receipts from this source would go to the artist instead of the government.

Two of the still surviving pupils of Franz Liszt, Emil Sauer and Moriz Rosenthal, were still in active concert service during 1938, the former in Europe and the latter in America, where he celebrated the fiftieth anniversary of his New York debut with a Carnegie Hall recital on November 13, five weeks before his 76th birthday. Another prominent pianist, Josef Hofmann, who celebrated the semi-centennial of his American debut with a long tour of the United States in the winter and a London concert April 25, resigned on September 26 from the directorship of the Curtis Institute of Music, in Philadelphia, one of the principal American endowed music schools. He had held this position for 10 years. Ignace Jan Paderewski, nearly 78 years old, gave a 40-minute piano recital over the radio on September 25 at Lausanne. This was only the second time that he had played for the radio.

The year's most acclaimed newcomer to the American concert stage was Robert Virovai, a 17-year-old violinist from Yugoslavia, who had studied in Budapest with the late Jeno Hubay and had already won considerable *réclame* in Central Europe. In his American debut as soloist with the New York Philharmonic-Symphony Orchestra on November 3 in Vieuxtemps's concerto in D minor, he won unusually warm praise from the critics for musicianship, fire, and expressive ability, in addition to technical virtuosity. This impression was confirmed three days later in the Brahms concerto. Gertrude Pitzinger, a mezzo-soprano from the Sudeten German region, was praised as a lieder-singer of exceptional interpretative ability in her American debut in a New York recital January 17,

The Town Hall, one of New York's two principal concert auditoriums, inaugurated a new plan to aid young musicians by inviting critics to name the artist under 30 years old who, in their opinion, had given the season's best performance in this hall, and assigning the artist chosen a place in the Endowment Fund Series, in which the other participants are musicians of box-office prominence. Rosalyn Tureck, an American pianist, received the first award.

Beniamino Gigli, Italian tenor, sang in London at Covent Garden in its spring season for the first time since 1931, and began his first American tour in six years in October, singing with the San Francisco and Chicago City Opera companies and in concerts. The Metropolitan Opera in New York, which he had left in 1932 after a disagreement over a salary reduction, engaged him for five performances beginning in January, 1939.

Vladimir Horowitz, Russian pianist and Arturo Toscanini's son-in-law, resumed his concert activities after a three-year lapse owing to illness with a recital in Zurich on September 26.

Chamber Music. Celebrating the 20th anniversary of her first chamber-music festival on this site, Mrs. Elizabeth Sprague Coolidge presented a three-day festival from September 21 to 23 at South Mountain, Pittsfield, Mass., where the first day's schedule was carried through despite the hurricane which was devastating New England at the time. Among the participating artists were the members of six string quartets (Berkshire, South Mountain, Gordon, Coolidge, Kolisch, and Roth), and the solo quartet of St. Bartholomew's Church in New York. Works heard for the first time were Anton von Webern's quartet, Op. 28; Frederick Jacobi's *Hagiographa* for string quartet and piano, Louis Gruenberg's second quartet, and Frank Bridge's fourth quartet. Ernst Toch was the pianist with the Roth group in the second performance of his quintet, which they had first played during the summer season at Stanford University. Berkshire Festivals had been held annually at Pittsfield through 1924, and also in 1928 and 1934.

At the Library of Congress in Washington, which has been the principal center of the chamber-music activities sponsored by Mrs. Coolidge since 1925, the Roth and the Coolidge Quartets presented several programs during the winter and spring, devoting a generous portion of the programs to works of living composers. In the eastern United States, summer chamber music was centered mainly in New England, but this form of music flourished even more in California in the San Francisco area, with summer concerts by the Kolisch Quartet at the University of California in Berkeley, by the Roth Quartet at Stanford University in Palo Alto, and by the Pro Arte Quartet at Mills College, Oakland.

In New York the second season of concerts by the New Friends of Music at Town Hall on Sunday afternoons at 5:30, with a repertoire of songs and chamber music by Mozart, Schubert, and Schumann, closed on March 20. The balance sheet showed a net profit of \$338.54, as compared with a deficit of \$407.95 in 1936-37.

The last completed work of the late Albert Roussel, a trio for strings, Op. 50, was first played in January at Basel, Switzerland, by the local section of the International Society for Contemporary Music, which had commissioned the trio and Béla Bartók's sonata for two pianos with percussion for this concert. The composer and his wife, Ditta Bartók, were the soloists in the latter work.

Choral Music and Societies. Two European choruses of differing types paid their first visits to America in the season of 1937-38. One, the Helsinki University Chorus from Finland, made its first appearance in Boston, with the Boston Symphony, December 31. The other, the Mozart Boys' Choir of Vienna, conducted by Dr. George Gruber, former leader of the Wiener Saengerknaben, was first heard in New York on January 26.

The Schola Cantorum of New York, under Hugh Ross, gave the first performance of *The End of St. Petersburg* by the Russian-American composer Vladimir Dukelsky and the American première of Delius's *Mass of Life* on January 12. On December 16 it sang for the first time in America *The Deeds of the Holy Brothers Cyril and Methodius* by Bozidar Sirola, a Yugoslav composer. Most of the larger American cities continued to support large choral societies, while, from coast to coast, a large number of glee clubs and community choral groups made less conspicuous but valuable contributions to American activity in this field. There is still a lack of choral organizations giving frequent performances, such as the former Society of the Friends of Music in New York, and widening the opportunity for acquaintance with the less familiar choral classics, such as Bach's cantatas, and with significant modern works. The Mutual Broadcasting System, under Alfred Wallenstein's direction, did valuable work in this regard by opening a weekly series of Bach cantata programs on Sunday nights in the fall.

American Festivals. The eighth annual American Music Festival, held by the Eastman School of Music in Rochester, N. Y., under Howard Hanson's direction, took place from April 25 to 29, with orchestral, choral, chamber, and band music occupying one program each and, as usual, a ballet program on the last evening. Over 20 composers were represented. Among the orchestral works heard for the first time in public were David Diamond's *Élegie in Memory of Ravel*, La Vahn Maesch's *Suite on Children's Tunes*, and Charles Vardell's *Folk Symphony from the Carolina Hills*.

The third combined Talbott Festival and Festival of Contemporary American Music of the Westminster Choir School took place at Princeton, N. J., May 23 to 26, with programs of choral and chamber music. A virtual festival of modern American music was supplied by the principal concerts of the annual summer Music Period at the Yaddo estate in Saratoga Springs, N. Y., on September 4, 10, and 11. Two *Choric Dances* by Paul Creston, of New York, were cited as the most impressive of the new scores offered.

The 48th festival of the University of Michigan Choral Union at Ann Arbor consisted of six programs from May 11 to 14, in which the Philadelphia Orchestra, under Eugene Ormandy's direction, took part with the Choral Union under Earl V. Moore. Among the principal works offered were Rachmaninoff's *The Bells* and Bizet's *Carmen*, given in concert form with Bruna Castagna and Giovanni Martinelli, of the Metropolitan Opera, as principals. Mr. Ormandy also took the Philadelphia Orchestra to White Plains, N. Y., for the 14th annual Westchester Music Festival on May 20 and 21.

Frederick A. Stock and Hans Lange conducted the Philadelphia Orchestra in the Northwestern University Festival Association's festival at Evanston, Ill., in May. An unaccompanied choral work, Albert Noelte's *Night Song* had its first performance with Max Krone conducting. Albert Stoessel

continued as director for the 79th festival at Worcester, Mass., from October 3 to 8, which closed with a stage performance of Verdi's *Rigoletto* sung in English by Metropolitan Opera artists.

Bach's *St. John Passion* and Mass in B minor were the principal works sung by the Bach Choir of Bethlehem, Pa., in its annual festival on May 27 and 28 under Bruce Carey's direction. Dr. Carey later resigned and was succeeded by Ifor Jones. Other Bach festivals were held by the Baldwin-Wallace Conservatory at Berea, Ohio, June 10 and 11, and at Carmel, Calif., for a week in July.

The fifth annual Berkshire Symphonic Festival, and the third in which the Boston Symphony Orchestra took part under its regular conductor, Serge Koussevitzky, was the first to be held in the semi-open-air Music Shed on the Tanglewood estate at Lenox, Mass. Beethoven's Ninth Symphony, with the Cecilia Society of Boston as the assisting chorus, was performed in the first of the six concerts during the first fortnight of August.

A festival at Silvermine, New Canaan, Conn., launched in 1937 with a single concert, was expanded to a length of four days, August 18 to 21, and included three concerts by the New York Philharmonic-Symphony Orchestra under José Iturbi and Eugene Ormandy, plus a children's concert, and three chamber-music concerts by the Roth Quartet.

Foreign Festivals. The International Society for Contemporary Music chose London for its annual festival from June 17 to 24 with the BBC Symphony Orchestra and Chorus, the London Select Choir, and other choral organizations and chamber-music groups among the participants. The conductors were Sir Adrian Boult, Hermann Scherchen, Arnold Fulton, Boyd Neel, Clarence Raybould, and Leslie Woodgate. Critics united in the choice of Anton von Webern's *Das Augenlicht* for orchestra and chorus as by far the most genuinely modern and convincing work in the programs.

The annual British Three Choirs Festival, the 218th of this venerable series, took place in Worcester from September 4 to 9. A novelty in the programs, which were mainly devoted to familiar choral and instrumental music, was Lennox Berkeley's *Domini est Terra*.

The 14th annual festival of early music played on instruments of its period under Arnold Dolmetsch's direction at Haslemere, England, began July 18 with a schedule of 12 concerts. The programs gave due prominence to English 17th- and 18th-century music, but were international in character. An American work, Josephine Forsyth's setting of the Lord's Prayer, was chosen as a test piece for the principal competition of the National Welsh Eisteddfod in August at Cardiff. This was won by the Siloam Chapel Choir of Swansea. Another American work, Bryceson Treharne's *The Banshee*, had its first public hearing.

Sir Thomas Beecham was the musical director of a Sibelius Festival in London from October 27 to November 12, consisting of four orchestral concerts, one concert of chamber music and other works in the smaller forms, and one concert of music for small orchestra.

There was a notable profusion of music festivals in Germany, including the operatic summer series at Bayreuth, Munich, and Salzburg. A feature of the Reich Music Week Festival at Düsseldorf from May 22 to 29, at which Joseph Goebbels, Minister of Propaganda, proclaimed the regime's intention of saving German music from the danger of de-

cadence, was an exhibition of "degenerate music," including records with facilities for playing them, books, articles, and scores, and a special division for the "theorists of atonality."

The annual international festival in Stuttgart was held May 18 to 26 with programs of opera, choral, orchestral, chamber, and solo music. Another international festival of contemporary music, the third of the series, took place in Baden-Baden April 22 to 25 under the direction of Gotthold Lesings, conductor of the local Kur Orchestra. The programs included Hungarian, Italian, Swiss, Belgian, and French music in addition to German works. At about the same time the Neue Bachgesellschaft held its 25th Bach festival in Leipzig.

The Munich Festival, which opened with the world premier of Richard Strauss's one-act opera, *Friedenstag*, extended from July 24 to September 7, and was regarded as probably the most interesting, as well as the longest, of the three major German opera festivals. Strauss's collaboration with an unmistakably Aryan writer, Joseph Gregor of Vienna, for the libretto, implied that the composer had made his peace with the Nazi regime. The plot, laid in a besieged German city at the end of the Thirty Years' War, was considered unusual for a Strauss opera, and the music was also described as marking a new departure in style and form. Clemens Krauss conducted and Hans Hotter, Viorica Ursuleac, Ludwig Weber, and Julius Patzak sang leading roles. Wagner and Mozart again played the most important parts in the repertoire of the festival which, thanks to Krauss, was thought to have marked an improvement over its predecessors.

According to the usual schedule at Bayreuth, this would have been an off year, but a Wagner festival was held along the usual lines in July and August as an observance of Wagner's 125th anniversary. The repertoire included *Tristan und Isolde*, *Parsifal*, and the *Ring* with Karl Elmen-dorff, Heinz Tietjen, and Franz von Hösslin as the conductors.

The musical repertoire for the Salzburg Festival, July 23 to August 31, followed the plan outlined before the *Anschluss*. The Vienna Philharmonic Orchestra gave several concerts, and there were also the usual Cathedral concerts of religious music, "serenades" with Mozart programs at the Residenz, and a performance of Mozart's Mass in C minor in St. Peter's Church. Foreign critics thought that the general musical standard was below that of previous seasons or that of the other two major 1938 opera festivals. The Festspielhaus was altered and enlarged, and further improvements were promised for 1939.

The 29th annual fortnight of performances of Wagner music dramas in the outdoor theater at Zoppot, near Danzig, July 17 to August 4, had the most ambitious program in the history of the series, including *Lohengrin* and the *Ring* with Dr. Hermann Menz, of Danzig, as artistic director.

The new international festival at Lucerne began late in July and continued for six weeks. Arturo Toscanini conducted an orchestra composed of Switzerland's best instrumentalists at the Villa Tribschen on August 25 and at the Konzerthaus in Lucerne two days later. Other conductors taking part were Fritz Busch, Bruno Walter, Willem Mengelberg, and Count Gilbert Gravina (Liszt's grandson). Soloists and recitalists included Dusolina Giannini, American soprano; Adolf Busch, violinist; Rudolf Serkin and Alfred Cortot, pianists, and Emanuel Feuermann, cellist. Plans for

the 1939 festival, in which Mr. Toscanini agreed to take part, included the addition of opera and the construction of a Festspielhaus.

The fourth annual Musical May Festival in Florence began its six weeks' schedule on April 28. The only absolute operatic novelty was Malipiero's *Antonio e Cleopatra*, based on Shakespeare's play, which was produced May 4. With a style harking back to Monteverdi, it was regarded as pointing a way in which a modern opera might be written, if not as completely successful in itself. Bruno Walter conducted Beethoven's *Missa Solemnis* and Brahms's *A German Requiem*. The Berlin Philharmonic Orchestra gave two concerts under Furtwaengler, and France was represented by Serge Lifar and three other solo dancers from the Paris Opéra.

The sixth international festival of contemporary music in Venice, organized by Mario Corti and Goffredo Petrassi, took place September 6 to 13. Thirty-three composers, of whom 15 were Italian, were represented in the programs, which included one work from the United States, a concerto for piano and orchestra by Leo Sowerby. There was also a "retrospective concert" of music composed within the last 30 years.

Opera in America. The fifty-third regular season at the Metropolitan Opera House in New York and the third under the general management of Edward Johnson began Nov. 29, 1937, and continued for 16 weeks, 2 more than its last four predecessors. A 3-weeks' tour began March 21, followed by 3 post-season performances in New York on April 13, 15, and 16. Including the weekly opera concerts, the company gave 139 performances in 1937-38, as compared with 117 in the shorter 1936-37 season, at the Metropolitan, and 171 performances as compared with 154, including those given out of town. Owing, however, to the decision not to present a third popular-priced spring season, the grand total of 1937-38 performances did not quite equal that of 1936-37. The usual series in Brooklyn was abandoned, while the Philadelphia series was increased from six to eight performances. Two performances were given in Hartford and one in Newark. On the tour, 3 performances were given in Baltimore, 13 in Boston, 8 in Cleveland, and 1 in Rochester.

In all, 94 singers, 10 more than in 1936-37, were heard in solo roles. Ten European artists sang for the first time with the company: Rose Pauly, soprano, who specialized in the title role of *Elektra*; Zinka Milanov, Yugoslav dramatic soprano; Mari- ta Farrell, a German-Czech soprano; Enid Szan- tho, Hungarian contralto; Carl Hartmann, German tenor, whose best work was in *Siegfried*; Bruno Landi, Italian tenor; Jan Kiepura, Polish tenor; Carlo Tagliabue, Italian baritone; Adolf Vogel, German bass-baritone, and Nicola Moscona, a young Greek basso. Two American newcomers each sang only once, Amri Galli-Campi, coloratura soprano, in Cleveland, and Glenn Darwin, baritone, in the single performance of Walter Damrosch's *The Man without a Country*, which had been first produced in the spring season of 1937. Two of the young Americans taken into the regular company after spring appearances, Helen Traubel and Maxine Stellman, sopranos, also sang in the Damrosch opera. The others, Donald Dickson and Robert Weede, baritones, sang only in the Sunday concerts.

Erich Leinsdorf, a 26-year-old Viennese musician engaged as an assistant conductor, directed several Wagnerian performances and one of

Strauss's *Elektra*, winning much praise, and was named a regular conductor the following season. Meanwhile the Wagnerian wing of the company, headed by Kirsten Flagstad, Marjorie Lawrence, Kerstin Thorborg, Lauritz Melchior, Friedrich Schorr, Ludwig Hofmann, and Emanuel List, again held the greatest artistic prestige.

Among 35 operas the only work new to the Metropolitan was *Amelia Goes to the Ball*, with book and music by Gian-Carlo Menotti, a young Italian composer who had studied at the Curtis Institute of Music. This was produced in George Mead's English version on March 3, with Muriel Dickson, Mario Chamlee, John Brownlee, and Norman Cordon as the principals, and won a very favorable reception. *The Man without a Country* also counted as a novelty. Opera in English was also represented by a restoration of Puccini's *Gianni Schicchi* after a year's absence, and a single Cleveland performance of Smetana's *The Bartered Bride*.

Three of the revivals were of works by Richard Strauss, hitherto never represented at the Metropolitan by more than one opera at a time. These were *Der Rosenkavalier* (December 2) with Kerstin Thorborg, Lotte Lehmann, and Emanuel List; *Elektra* (January 7) with Mmes. Pauly and Thorborg and Irene Jessner, and *Salome* (February 4) with Marjorie Lawrence in the title role. Verdi's *Otello*, absent for nearly 25 years, had a generally distinguished revival on December 22 with Giovanni Martinelli as Otello, Elisabeth Rethberg as Desdemona, and Lawrence Tibbett as Iago. This proved to be one of the season's most successful offerings at the box office, receiving 8 performances, not counting those out of town, as compared with 9 for *Tristan und Isolde*. Works restored to the repertoire after shorter absences included Mozart's *Don Giovanni*, Gounod's *Romeo et Juliette*, and Rossini's *Il Barbiere di Siviglia*.

The American Ballet gave four ballets, besides those in the operas. Its contract was not renewed, the Metropolitan engaging Boris Romanoff, a Russian ballet master, who had served as the Royal Opera in Rome, to organize a new ballet corps for 1938-39.

Before the opening of the 16-week 1938-39 season with *Otello* November 21, Mr. Johnson and the two assistant general managers, Edward Ziegler and Earle R. Lewis, were re-engaged for two years. Aiming to restore the company's Italian-singing contingent to its former prestige, which had waned in the last few years, Mr. Johnson engaged 6 new Italian singers in a total list of 14 newcomers: Maria Caniglia, soprano, who sang Desdemona on the opening night; Mafalda Favero, Marisa Morel, and Lina Aimaro, sopranos; and Galliano Masini and Alessio De Paolis, tenors. There were four new German artists: Herbert Janssen and Hans Hermann Nissen, baritones, both well known in Europe; Erich Witte, tenor, and Herbert Alsen, basso. Jussi Björling, Swedish tenor, and three Americans, Rise Stevens, contralto, John Carter, tenor, and Leonard Warren, baritone, completed the debutant list.

The repertoire included no novelties. The first revival was Gluck's *Orfeo ed Euridice*, which had an entirely new production November 26 with Mme. Thorborg as Orpheus. Verdi's *Falstaff* was revived December 16, with Lawrence Tibbett in the title role for the first time. Works restored in December after short absences were *Mignon*, with Rise Stevens, *Tosca* with Mme. Caniglia, *Lakmé* with Lily Pons, and *Fidelio* with Kirsten Flagstad.

The touring San Carlo Opera Co. introduced

opera to the large Center Theater in Rockefeller Center in May, and reappeared there in September before large audiences. Other operatic activities in New York were limited to occasional low-priced performances of variable quality at the Hippodrome; productions at the Juilliard School, including a new work, *The Sleeping Beauty*, with text by John Erskine and music by Beryl Rubinstein, head of the Cleveland Conservatory, January 19, and a fortnight's visit in January by the London Intimate Opera Company, a group of three. The Columbia Broadcasting System presented its second commissioned radio opera, *Beauty and the Beast*, by Vittorio Giannini and Robert A. Simon on November 24.

The San Francisco Opera Association under Gaetano Merola's direction presented an ambitious repertoire in its sixteenth season, October 7 to November 3, including the local premières of Debussy's *Pelléas et Mélisande* with two French artists, Georges Cathelat and Janine Micheau, imported for the occasion in the title roles, Erich Leinsdorf conducting, and Strauss's *Elektra* with Mme. Pauly, Fritz Reiner conducting. Another relatively unfamiliar offering was *Don Giovanni* with Ezio Pinza as the Don; Wagner was represented only by *Die Meistersinger*. In all, there were 21 performances.

The company's personnel consisted of 33 guest artists, including most of the principals, of whom several were from the Metropolitan, and 18 resident artists. Newcomers to San Francisco, besides Mme. Micheau and Mr. Cathelat, were Irene Jessner, Mafalda Favero, and Anne Jamison, sopranos; Ebe Stignani, contralto; Alessandro Zilliani and Galliano Masini, tenors; Carlo Tagliabue, baritone, and Salvatore Baccaloni and Carlton Gauld, basses. Beniamino Gigli made his first American operatic appearance in six years on the opening night as the protagonist of *Andrea Chenier*. Mr. Merola and Gennaro Papi completed the list of conductors, with Armando Agnini and Herbert Graf, of the Metropolitan, in a guest status, as stage directors. Six performances in Los Angeles followed the San Francisco season.

The Chicago City Opera Co.'s sixth season under Paul Longone's management again lasted for seven weeks, October 29 to December 18, with 45 performances of 27 operas. Two sopranos well known in Europe, Hilde Reggiani and Maria Reining, made their American debuts. Other newcomers to the company included Beniamino Gigli, Dusolina Giannini, Joel Berglund, Bruna Castagna, James Melton, Annunziata Garrotto, Adolf Vogel, Douglas Beattie, Hertha Glatz, Deszö Ernster, Constance Merrell, and Anthony Marlow.

Eva Turner and Alexander Kipnis made their first Chicago operatic appearances since the days of the Civic Opera sponsored by Samuel Insull. The Metropolitan had several representatives in the roster, including Kirsten Flagstad and Lily Pons. The conductors were Roberto Moranzoni, Angelo Canarutto, Louis Hasselmans, Henry G. Weber, and Edwin McArthur.

For first-class opera, Philadelphia depended mainly upon the Metropolitan, but occasional performances of Italian and German works were given by the local Civic Grand Opera Co. In Baltimore a local company gave the première of *The Captive*, by Gustav Strube and Frederick Arnold Kummer, both of that city, on February 28 with a Baltimorean cast. The San Carlo Opera Co. made its 28th and 29th transcontinental tours, and the Salzburg Opera Guild, after touring throughout the

winter, left several artists who joined the Metropolitan, Chicago, and San Carlo companies. Among college performances of opera was what was thought to be the first American production of Gluck's *Alceste* at Wellesley College, with Malcolm Holmes conducting.

Apart from the annual Municipal Opera season of light opera and musical comedy in St. Louis, the principal summer opera series in the United States was the seventeenth Zoo Opera season in Cincinnati, which ran for six weeks with casts including some of the Metropolitan's younger artists and singers.

Floro M. Ugarte was reappointed general director for the opera season at the Teatro Colón in Buenos Aires, from May to September. The principal conductors were Tullio Serafin, Albert Wolff, and Erich Kleiber. As usual, the casts consisted mainly of singers well known in Europe and the United States. Two artists from that country, Rise Stevens, contralto, and Frederick Jagel, tenor, made their Argentine debuts. Among works heard for the first time in Buenos Aires were Pizzetti's *Orseolo*, Henri Rabaud's *Roland et la mauvais Garçon*, conducted by the composer; Monteverdi's *L'Incoronazione di Poppea*, and Mozart's *Die Entführung aus dem Serail*. An Argentine opera, Constantine Gallo's *Petronio*, was revived after 20 years.

Opera in Europe. The annual international opera season in London at Covent Garden was seven weeks long, beginning May 2 with a German and Italian repertoire. Erich Tauber made his London grand opera debut on the opening night as Tamino in Mozart's *Die Zauberflöte*, with Tiana Lemnitz, Gerhard Hüsch, and Herbert Janssen in other leading roles. The Wagnerian list included *Der Fliegende Holländer*, in which a young Polish soprano, Margaret Kubatzki, made her debut on May 3, *Lohengrin*, *Tannhäuser*, and two *Ring* cycles. Sir Thomas Beecham, Wilhelm Furtwaengler, and Fritz Zweig conducted. Vittorio Gui made his London debut as conductor of the Italian repertoire, in which Beniamino Gigli was the principal figure in the casts.

A three-weeks' season of operas in English was presented by the Covent Garden English Opera Society in the fall. *The Serf*, by a young Cornish composer, George Lloyd, with a libretto by his father, William Lloyd, had its première October 20 with Albert Coates conducting. The music was regarded as promising, but some critics thought the libretto too literary and too given to Anglo-Saxon words. London's permanent English opera company at Sadler's Wells had an ambitious year with a repertoire including *Don Giovanni*, *Die Walküre*, *Tannhäuser*, *Boris Godunoff*, in the original version, *Don Carlos*, and a revival of Nicholas Gatty's *Greysteel*.

The fifth opera season presented by John Chrystie at Glyndebourne, Sussex, May 21 until early in July, was mainly devoted to Mozart, but for the first time added two operas by other composers: Verdi's *Macbeth* with the American soprano Franca Somigli (Marian Clark) as Lady Macbeth, and Donizetti's *Don Pasquale*. Fritz Busch again was the musical director.

The year's first novelty at the Paris Opera was Florent Schmitt's choreographic drama, or danced tragedy, *Oriane et le Prince d'Amour*, produced January 7. Wagner's *Flying Dutchman* had its first performance in this theater later in the month. Reynaldo Hahn conducted a revival of his *Merchant of Venice* in May, and in the fall Kirsten Flagstad

was a guest artist in a Wagner series conducted by Franz von Hösslin. The Paris Opéra-Comique produced Darius Milhaud's *Esther de Carpentras* in a well-received première in February. Marcel Rousseau's *Le Roi Dagobert* and Jean Duperier's *Zadig* were among the spring productions. The Bizet centenary was celebrated at this theater late in October with a gala performance of *Carmen*, in which Renée Gilly and Georges Thill headed the casts and Eugene Bigot conducted.

In the winter season at the Royal Opera in Rome the first revival was Mascagni's *L'Amico Frits*, followed by a restoration of Boito's *Mefistofele* in March in a new edition by Tullio Serafin. Later additions to the repertoire included first performances of Franco Vittadini's *Caracciola* and Pietro Canonica's *Miranda* and the Roman première of Strauss's *Die Frau ohne Schatten* (*La Donna senz' ombra*) with Rosa Pauly and Benvenuto Franci as principals.

The season's first novelty at the Teatro alla Scala in Milan was *Margherita di Cortona*, the second opera by the priest-composer Licinio Refice with a book by Emilio Mucci. Augusta Oltabella sang the title role. The music was described as fluent, rather eclectic, and sometimes over-orchestrated. Other novelties of the winter season were Renzo Bianchi's *Proserpina* and Enzo Gamussi's *Il Volto della Vergine*. In April the Munich State Opera visited La Scala to present Wagner's *Ring* under Clemens Krauss. Milan also had a summer outdoor season of 46 performances of a repertoire of 12 works.

Ernest Bloch's *Macbeth*, first produced in Paris in 1910, was produced March 5 at the San Carlo Opera in Naples under Antonio Guarnieri's direction, and Felice Lattuada's *La Caverna di Salamanca* in one act was first produced in April at the Carlo Felice Theater in Genoa.

In addition to *Friedenstag*, another short opera by Richard Strauss, *Daphne*, whose book was also by Joseph Gregor, had a first hearing in 1938, at the Dresden State Opera on October 15 with Margarete Teschenacher in the title role and Karl Böhm conducting. From the standpoint of those interested in modern music, a more important production of a new German opera was that of Paul Hindemith's *Mathis der Maler*, with a libretto by the composer, at the State Theater in Zurich, Switzerland, on May 28. Robert Denzler conducted and Asger Stig sang the title role. It was also produced at Zurich in November, after Hindemith had made a few slight revisions.

The Zurich State Theater which, under Karl Schmid-Bloss's direction, had become one of the principal lyric stages of Europe from an artistic point of view, also produced *Die Wirtin von Pinsk* by Richard Mohaupt of Breslau. This work had been praised on the occasion of its first production at Dresden, February 10, but was soon withdrawn, owing, it was rumored, to having met official disfavor.

The Scarlet Letter, by the American composer, Vittorio Giannini, was first produced in Hamburg June 2 under the German title of *Das Brandmal*, with the composer's sister, Dusolina Giannini, as Hester Prynne, and Eugen Jochum conducting. This was well received. Relatively few operas had their world premières in Berlin, although both the State Opera and the Deutsches Opernhaus offered many revivals and restagings. Herbert von Karajan, the young general music director of the Aachen Opera, joined the State Opera's conductorial staff after winning much praise for his guest performances.

The Leipzig Opera observed the 125th anniversary of Wagner's birth with a festival series of all his works, including the fragmentary *Die Hochzeit* and the oratorio *Das Liebesmahl der Apostel*, from February 13 to June 20.

One indirect result of the political changes of the early fall in Czechoslovakia was the closing on September 26 of the German Opera House in Prague, an institution which had attained much cultural importance in Central Europe. Among the Prague Czech Opera's novelties of the year were Boleslav Vomcik's *Vodník*, Zdenek Fibich's *Hedy*, and Bohuslav Martinu's fourth opera, *Juliette*. Wagner played an important part in a rather eventful winter and spring season in Stockholm. The Wagner Society of Amsterdam presented a Dutch opera, *De Snock*, with music by Willem Andre, in April. Despite the Spanish civil war, there was a 1937-38 opera season in Barcelona with a repertoire of French and Spanish works.

Orchestras in America. The NBC Symphony Orchestra, organized in New York in the fall of 1937 with Arturo Toscanini as musical director, gave 33 radio programs on Saturday nights, 11 of these under Mr. Toscanini, who was in charge from Christmas Day until March 5. Conductors for the remainder of the series through June 23 were Pierre Monteux, Artur Rodzinski, Carlos Chavez, Hugh Ross, Howard Hanson, Sir Adrian Boult, Dimitri Mitropoulos, and Hans Wilhelm Steinberg, who was engaged as Mr. Toscanini's assistant for the next season. Mr. Toscanini, who had agreed to conduct this orchestra up through 1940-41, began his second season on October 15, conducting eight concerts before he was relieved by Dr. Artur Rodzinski for four programs. His lists included a fair proportion of unfamiliar works, but his only absolute novelties were two short works: an Adagio for strings and an *Essay for Orchestra* by a young American composer, Samuel Barber.

In its summer Sunday radio concerts, the Columbia Broadcasting System's orchestra under Howard Barlow presented many new American works, of which a few had been commissioned in advance.

The Philharmonic-Symphony Society of New York gave all its regular concerts of 1938 under John Barbiroli, who began a three-year term as its conductor in 1937, except for five weeks, from January 4 to February 6, under Georges Enesco. Mr. Enesco introduced to America works by three of his Rumanian compatriots, Alfred Alessandresco, Theodor Rogalski, and Michael Andric, in addition to Germaine Tailleferre's violin concerto (January 8) with Yvonne Astruc as soloist. Under Mr. Barbiroli, the orchestra gave the American premières of five new parts of William Walton's *Façade* suite (March 30), Delius's *Appalachia* with the Schola Cantorum's chorus (April 13), and John Ireland's *A London Overture* (April 10). American works first performed in these concerts were Quincy Porter's first symphony (April 2) and Charles Haubiel's *The Plane Beyond*, both chosen in the Philharmonic-Symphony Society's composers' competition, and Anis Fuleihan's second piano concerto (December 10) with Eugene List as soloist. The 1938-39 season, also 28 weeks long, was the Society's 97th. Ernest Schelling, who had been unable to take part in the Young People's concerts in 1937-38 and had been relieved by Rudolph Ganz, resumed charge of this series in the fall.

The training orchestra of the National Orchestral Association under Leon Barzin gave first performances of Anis Fuleihan's first piano concerto

(January 24), Robert McBride's *Fugato on a Well Known Theme*, and Anton Bilotti's piano concerto (March 21) and Aurelio Giorini's *Symphony in D major* (April 25). The New York Women's Symphony Orchestra, in its fourth season under Antonia Brico, offered a \$500 prize for a new American composition and played the winning work, Philip James's *Song of the Night*, on March 15.

The post of musical director of the Philadelphia Orchestra was revived for Eugene Ormandy, who received a new three-year contract beginning with 1938-39. Stravinsky's *Jeu de Cartes* had its American concert premiere on January 14, and Harl McDonald, of the University of Pennsylvania, was represented by two new works, his fourth symphony (April 8) and *Lament for the Stolen* for orchestra with women's chorus (December 30). Bernard Wagenaar's concerto for flute, harp, and cello was first performed March 18. The opening of the new season on October 7 coincided with a drive for a \$100,000 maintenance fund to wipe out a seven years' deficit. Leopold Stokowski was announced to conduct for three and possibly four weeks at the end of the season.

Serge Koussevitzky began his fifteenth season with the Boston Symphony Orchestra and that organization's 58th year on October 7. Daniele Amfitetoff conducted for two weeks in January and Eugene Goossens for a week in November, and other guests were Georges Enesco and Nadia Boulanger, who was the first woman to conduct this organization. Richard Burgin, the concertmaster, also conducted a few programs. American works heard for the first time were Walter Piston's first symphony (April 9), Leo Sowerby's organ concerto (April 22) with E. Power Biggs as soloist; Nicolai Berezowsky's *Toccata, Variations, and Fugue* for string quartet and orchestra, with the Coolidge Quartet; Edward Burlingame Hill's violin concerto, with Ruth Posselt as soloist (November 11) and Vladimir Dukelsky's *Dedicaces* (December 16). Foreign works played for the first time in the United States included Prokofieff's *Peter and the Wolf* (March 25), a cello concerto by Thomas de Hartmann, an Ukrainian (April 14), played by Paul Tortelier, and Ernst Krenek's second piano concerto, played by the composer (December 22). The orchestra gave its annual "Pop" series under Arthur Fiedler in May and June.

Fritz Reiner, who was one of the guest conductors who shared the direction of the reorganized and enlarged Pittsburgh Symphony Orchestra in 1937-38, began his first season as its regular conductor November 18, when music from Strauss's ballet *Josephslegende* was played for the first time in the United States. The National Symphony Orchestra of Washington, D. C., continued a successful career under Hans Kindler, and José Iturbi began his third season with the Rochester (N. Y.) Orchestra in the fall.

Frederick A. Stock, with Hans Lange as associate conductor, began his 35th season with the Chicago Symphony Orchestra on October 13. Among the season's novelties were a concerto grosso by David Van Vactor, the orchestra's first flutist (February 17), and Zoltan Kurthy's symphonic rhapsody *Pusztá* (January 13). Paul Hindemith conducted the American premiere of his somewhat lengthy *Symphonic Dances* on March 3. Other works introduced to America were Nicolai Mjaskovsky's *Fourth Symphony* (October 20) and *Hymns on Gregorian Melodies* by Karl Hoeller, a young German composer (November 3).

The year's first novelty in the programs of the Cleveland Orchestra under Artur Rodzinski was Arthur Shepherd's *Song of the Pilgrims* (January 13). Ernest Bloch's violin concerto had its first performance anywhere on December 15, with Joseph Szigeti as soloist, and Reinhold Gliere's third symphony, composed in 1897, was introduced to America November 3. Georges Enesco and Albert Stoessel conducted in December during the four weeks of Dr. Rodzinski's guest engagement with the NBC Symphony.

Eugene Goossens continued as conductor of the Cincinnati Symphony Orchestra, with José Iturbi and Hans Lange as guest leaders during his absence in England for the first six weeks of the 1938-39 season, the orchestra's 44th. For this season special features, including opera, which had been tried during the last few years, were dropped on grounds of expense. Mr. Goossens introduced John Moeran's new symphony to the United States in March and gave the first performance of his *Two Nature Poems*, originally written for piano 20 years before, on April 22.

In March, Vladimir Golschmann was reappointed for his eighth season as conductor of the St. Louis Symphony Orchestra, which began October 28. He directed the world premiere of Roland Manuel's *Pena de Francia*, February 25, and offered *Lohengrin* in concert form March 18. Albert Stoessel, in a guest appearance February 4, introduced a suite from his opera *Garrick*. Two new permanent conductors, Franco Ghione and Dimitri Mitropoulos, took charge of the Detroit and Minneapolis Symphony Orchestras in 1937-38. Mr. Ghione, whose associate was again Victor Kolar, introduced several Italian works to the United States. The Minneapolis Symphony substituted visits to other Minnesota cities for a tour.

The Portland (Oregon) Symphony Orchestra, conducted by Willem van Hoogstraten since 1924, suspended its activities for at least two years after 1937-38, owing to a six years' accumulated deficit. Nikolai Sokoloff, national director of the Federal Music Project, succeeded Basil Cameron in the fall as conductor of the Seattle Symphony Orchestra. The San Francisco Symphony Orchestra, late in February, gave the world premiere of Ernest Bloch's *Evocations* under Pierre Monteux. Otto Klemperer received a new three-year contract as conductor of the Los Angeles Philharmonic Orchestra, beginning with 1938-39.

Several of the regular conductors of the principal American symphony orchestras shared the direction of the various major summer outdoor orchestral series, such as the Stadium Concerts in New York and the Robin Hood Dell concerts in Philadelphia, both lasting for eight weeks, the six-week season on the Chicago Symphony at Ravinia, Ill., the five weeks of concerts in Washington, and the two months' season of the Los Angeles Philharmonic in the Hollywood Bowl, in which opera played an important part. Fifteen instrumental organizations, including the Chicago Symphony, and several internationally prominent soloists took part in 67 free summer concerts at Grant Park in Chicago under the auspices of the Chicago Federation of Musicians.

As before, Canada's principal organization was the Toronto Symphony Orchestra conducted by Sir Ernest MacMillan, with 85 musicians. Reginald Stewart again conducted a weekly Promenade series in Toronto from May 26 to October 13. Montreal had Les Concerts Symphoniques under Wilfred Pelletier and the Montreal Orchestra under

Douglas Clarke. The Orquesta Sinfonica de Mexico held its tenth summer season of weekly concerts under Carlos Chavez in Mexico City. Havana had two active orchestras, the Philharmonic under Amadeo Roldan and the Symphony under Gonzalo Roig.

Orchestras Elsewhere. Sir Henry Wood celebrated the 50th anniversary of the beginning of his career as a conductor with a jubilee concert in London at the Albert Hall on October 5, with Sergei Rachmaninoff as soloist. London was well served orchestally in the winter, spring, and fall with the BBC Symphony Orchestra under Sir Adrian Boult, the London Philharmonic Orchestra under Sir Thomas Beecham, and the London Symphony Orchestra under guest conductors as the principal organizations. The BBC (British Broadcasting Corporation) Symphony Orchestra closed its 1937-38 season with a festival series under Toscanini in May and June. The Berlin Philharmonic Orchestra under Furtwaengler visited London in the spring and the Prague Philharmonic, under Rafael Kubelik, in November. Among prominent foreign conductors making guest appearances with the London orchestras were Felix Weingartner, Willem Mengelberg, Nicolai Malko, and Georg Szell, who is John Barbirolli's successor as conductor of the Scottish Orchestra.

Among new works presented in London were E. J. Moeran's first symphony, in G minor (L.P.O. under Leslie Heward, January 13); Robin Milford's Concerto Grosso, and Jean Françaix's piano concerto (Courtauld-Sargent concert under Malcolm Sargent, February 7); Arthur Benjamin's Romantic Fantasy for violin and viola (L.P.O., March 24, with the composer conducting); Ernst Krenek's piano concerto (BBC under Boult, April 8), and Cyril Scott's harpsichord concerto (L.P.O., in May). Jelly d'Aranyi introduced Schumann's violin concerto to England February 16 with the BBC Symphony under Boult. Its reception by the London critics was somewhat more favorable than that given by their New York colleagues earlier in the season.

The 44th season of London's Promenade Concerts under Sir Henry Wood had a 10 weeks' schedule beginning August 6. Novelties included a suite from Constant Lambert's ballet *Horoscope*, Benjamin Britten's piano concerto and variations on a theme by Frank Bridge, and Anthony Lewis's wordless choral overture.

Paris again had what was probably the largest quantity, if not the highest quality, of orchestral concerts among the world's large musical centers, with seven or more orchestras regularly in the field. One of the year's numerous new productions was Stravinsky's *Dumbarton Oaks* concerto, neoclassic in style, which was first played in a *La Serenade* concert in the spring. The critical reception was unfavorable.

The transfer of the Berlin Philharmonic Orchestra to state control made it possible to curtail the number of its miscellaneous concerts and guest conductors. The regular 1938-39 schedule offered two major subscription series of 10 concerts each, besides the morning public rehearsals, with Wilhelm Furtwaengler in charge of seven concerts of the first series. Owing to the public demand, Mr. Furtwaengler had to schedule a repetition of his programs, but this series was also sold out in advance. A third series under several conductors replaced the former popular series.

After the *Anschluss*, the personnel of the Vienna Philharmonic was Aryanized, and Wilhelm

Jerger, a double-bass player, was placed in charge as commissar. Siegmund von Hausegger resigned his post as conductor of the Munich Philharmonic Orchestra after 20 years' service, and was succeeded by Oswald Kabasta of Vienna.

Vaclav Talich continued as conductor of the Prague Philharmonic Orchestra. The principal orchestral centers in Italy during 1938 were Rome and Florence, with Bernardino Molinari as regular conductor of the Adriano concerts in the capital. Milan, apart from a few concerts by the orchestra of La Scala, depended mainly upon visiting organizations.

The post of associate conductor of Willem Mengelberg's Concertgebouw Orchestra of Amsterdam, long reserved for prominent conductors, was given to a Dutch conductor, Edward van Beinum, in January. Karl Krueger, the American conductor of the Kansas City Philharmonic, made guest appearances with the Budapest Concert Orchestra at home and on tour in Italy and Yugoslavia. A feature of the Warsaw Philharmonic Orchestra's winter season was the first performance of *The New Age* by the young Russian composer, Igor Markevitch. In Switzerland the Musik-Kollegium municipal orchestra in the small city of Winterthur gave a notably ambitious season under Hermann Scherchen and prominent guests.

Arturo Toscanini reappeared with the Palestine Symphony Orchestra in April, directing six concerts in three cities. The rest of the season was shared by Hans Steinberg, Eugen Szenkar, and Malcolm Sargent. In the opening concert of its autumn season the Tokio New Symphony Orchestra under Josef Rosenstock gave the first performance of a Japanese work, Saburo Moroi's second symphony, which was mainly Western in style, but distinguished by some Japanese touches. Malcolm Sargent and Georg Szell both made guest appearances in July and August with the principal orchestras of Australia.

MUSICA, PHILIP (F. DONALD COSTER). An American manufacturer, committed suicide in Fairfield, Conn., Dec. 16, 1938. Philip Musica was born in Naples in 1877 and brought to New York City by his parents in 1883. The family subsequently entered the importing business, and in 1909 Philip was convicted of bribing customs weighers and was sentenced to Elmira Reformatory. Pardoned by President Taft in the following year, he, with others of the family, established the United States Hair Co. They were highly successful, but in 1912 the business collapsed revealing a gigantic fraud in which American and foreign banks were swindled out of a million dollars. The Musicas were captured just as they were about to escape to Honduras. Accepting full responsibility, Philip pleaded guilty, but in order that he might help the authorities untangle the affairs of the company, his sentence was deferred. He remained in the Tombs Prison, New York, from 1914 to 1916, when he received a suspended sentence and was released. Subsequently he worked as an investigator, under the name of William Johnson, for the U.S. Attorney's office in New York City. In 1920 he was indicted for subornation of perjury in the Baff murder case. Thereafter Philip Musica disappeared.

In 1922 Frank D. Coster established Girard & Co., manufacturers of hair tonic. His business so expanded that in 1926 he borrowed a million dol-

lars and purchased the drug firm, McKesson & Robbins Manufacturing Co., which he merged with his own business. During the ensuing years he bought several wholesale drug firms, the whole forming the firm of McKesson & Robbins, Inc. The firm prospered exceedingly, but in November, 1938, there were rumors that all was not well, and in December a petition was filed for reorganization declaring that the Company, in its last financial statement, overvalued its assets, the shortage appearing to be in the crude drug department ruled over by the president—F. Donald Coster. An investigation was immediately begun and after a search for an \$18,000,000 shortage, Coster was arrested on December 14. On the following day his fingerprints revealed the astounding fact that he was Philip Musica. Three of his brothers, also masquerading under false names, were associated with the firm and they too were arrested. Rather than face the charges brought against him, Philip committed suicide. Subsequent investigation of his business dealings led to the belief that he was implicated in other illegal activities.

Possessing great natural ability as a promoter, Musica fabricated elaborate frauds and created phantom companies and profits, as well as inventing a new life for himself, including a birth certificate, an education, and a profession.

MUSICK, EDWIN C. An American aviator, died in an airplane accident near Pago Pago, American Samoa, Jan. 11, 1938. Born in St. Louis, Mo., in 1894, his family moved to Los Angeles when he was a child and he received his education there in the local schools. Becoming interested in aviation, he learned to fly at a commercial school in California, and from 1914 to 1917 engaged in exhibition and commercial flying. He then entered the U.S. Army Air Corps, graduating from the flying school at San Diego, Calif., and served as a civilian instructor during the War.

After the Armistice he once again engaged in commercial flying. In 1921 he was associated with the Aeromarine Airways, learned the differences of overland and overwater flying, and began the study of navigation. Subsequently he was with the Mitten Air Transport, flying between Washington and Philadelphia. On Oct. 28, 1927, he joined the Pan American Airways and his first assignment was the opening of the initial 90-mile link between Key West and Havana. His reputation as a skillful and careful flyer brought him advancement, and in 1930 he was made chief pilot of the Caribbean division of the airline, which included the then longest overwater run in the world, 664 miles between Cristobal, C. Z., and Kingston, Jamaica. His experiments and the data gathered while on this post he later applied to the San Francisco-Manila run made in 1935. In 1934 he conducted with Colonel Lindbergh the test flights of the *Brazilian Clipper* at Bridgeport, Conn., and in August of that year made the initial flight of the *Clipper* to Buenos Aires and return in two days.

In 1935, Captain Musick made the first trial flight of the *China Clipper*. Starting from Alameda, Calif., on April 16, he landed at Pearl Harbor, Honolulu, the next day, establishing a record for the 2410-mile hop across that part of the Pacific, the time being 17 hours, 45 min. A second trial flight was made in June, a third in August, and a fourth in October. In November, the *Clipper* made the first regular transpacific passenger and mail commercial air flight to Manila under his command. They left Alameda, November 22, arrived at Honolulu, November 23, 2410 miles in 21 hours,

2 min.; left Honolulu, November 24 and arrived at the Midway Islands, November 24, 1320 miles in 9 hours, 1 min.; left Midway, November 25 and arrived at Wake Island the same day, covering 1269 miles in 8 hours, 28 min.; left Wake Island, November 26 and arrived at Guam, November 27, 1507 miles in 10 hours, 3 min.; left Guam, November 28, and arrived in Manila, November 29, 1508 miles in 11 hours, 25 min. The total distance was approximately 8115 miles, and the time taken 7 days or, in actual flying time, 59 hours and 47 min. This feat won for Captain Musick the Harmon Award for 1935 as the world's outstanding flyer and for his pioneering work in the transpacific service.

Later in March, 1937, the Pan American Airways sent him southward from Honolulu on a survey for an airway to Auckland, N. Z. Stops were made at a steamer anchored inside Kingman Reef and at Pago Pago, American Samoa. After completing the survey, he returned to Manila where the clipper was named the *Hong Kong Clipper* and put into service between Manila and Hong Kong. Later in the year it was remade into a plane for the New Zealand service and rechristened the *Samoa Clipper*, and on December 23, Captain Musick left Honolulu, reaching Auckland on December 26 and inaugurating the Auckland commercial service on December 29. Making its second round trip on this line linking the United States with Australia early in 1938, the *Samoa Clipper* was destroyed by a sudden fire resulting from the dumping of surplus fuel when preparing for landing at Pago Pago with one of its four engines not functioning. Captain Musick and his six associates perished.

With 15,000 hours and almost 2,000,000 miles of sea flying to his credit without a serious accident, Captain Musick ranked with Charles Lindbergh and Wiley Post among American aviators. Never a spectacular flyer, his pioneering work was done in the regular routine of his job, but he was more than an airplane pilot, being an expert navigator, a scientist, a meteorologist, and an economist. His voluminous reports and opinions were the basis for many of the plans of the American international air-mail and passenger system. His death closed a perfect record of 25 years.

NARCOTICS. The Advisory Committee on Traffic in Opium and other Dangerous Drugs held its 23d session in Geneva from June 7 to 24, 1938. From May 23 to June 15, the Advisory Committee met as a "preparatory committee for a conference to consider the possibility of limiting and controlling the cultivation of the opium poppy and the production of raw opium."

The Committee's report to the Council dealt mainly with: (1) Progress achieved in the application of the Opium Conventions; (2) the illicit traffic; (3) the position in the Far East; (4) the preparation of the conference for limiting the cultivation of the opium poppy and the production of raw opium.

On the basis of the annual reports, which were

more numerous in 1938 (145 as compared with 126 in 1937), the Committee reviewed the results obtained in the application of the 1925 and 1931 Conventions. It was noted with satisfaction that there was an increasing activity in the legislative field, several governments having announced the promulgation of new laws or the modification of existing legislation to bring it into conformity with their international obligations. In Argentina, the government had decided to accede to the Conventions of 1912, 1925, and 1931. A state monopoly had been set up for narcotic drugs, applicable in the province of Córdoba.

In Uruguay, the government, which had already established a state monopoly for the import and distribution of narcotic drugs in 1937, put into force the regulations in application of that law. A new law intended to give effect to the provisions of the International Conventions of 1912, 1925, and 1931 went into force in Czecho-Slovakia. Under the law a strict control was instituted over the production and sale of narcotic drugs and severe penalties were imposed. In Iran, since the institution of the monopoly, the system of export authorizations based on import certificates had been applied. Regulations had been issued with a view to limiting the use of smoking opium among workers in factories.

Information communicated to the Committee by the representatives of the United States of America pointed to an appreciable reduction in the number of addicts.

In Japan, important and rapid results had been obtained, according to the annual report of that country, in the treatment of drug addicts at the clinic established by the Medical Police Bureau at Tokyo in the Musashino Hospital. Of 536 addicts receiving treatment at the hospital, 522 had been discharged as cured following an average treatment of 12 days and 176 had relapsed.

In Egypt addiction has also decreased. The number of addicts in prison had fallen from 3500 in 1930 to 300 at the present time, a reduction of 95 per cent. The government proposed, after the abolition of the system of capitulations, to establish a definite and strict jurisdiction with a view to regulating foreign maritime traffic in Egyptian waters, thus barring the way to the international traffic in drugs, especially in the Suez Canal, where the passage of large quantities of drugs from the Far East destined for the United States of America was a real international danger.

In its report for 1937 the Committee reached the following general conclusions:

The manufacture of the five principal drugs (morphine, diacetylmorphine, cocaine, codeine, and dionine) had greatly decreased since 1931 in comparison with previous years, and the surplus from lawful manufacture, which might have escaped into the illicit traffic, had disappeared.

After 1931, the lawful world production of morphine corresponded very closely to legitimate world requirements; during the period 1931 to 1935, it almost coincided with the average annual requirements (approximately 29 tons).

From 1931 to 1935, through the stricter and more general application of the international conventions, not only was it possible to reduce considerably the total quantity of drugs manufactured and dealt in, but manufacture actually showed a definite tendency to become stabilized at the level of legitimate requirements.

The examination of the statistics for 1936 (the last year for which complete statistics are available) shows that as compared with 1935, there was a general and very marked increase in manufacture, a more or less pronounced increase in consumption and likewise a very marked increase in the quantities of morphine converted into other drugs. As regards world stocks of the five drugs in question, the position remained almost unchanged; on the other hand, there was a considerable falling off in the exports of those drugs.

The manufacture of morphine rose from about 30.8 tons in 1935 to 36.8 tons in 1936; of codeine, from 19.9 tons in

1935 to 24.3 tons in 1936; of dionine, from 1850 kg. in 1935 to 2600 kg. in 1936. The increase in the manufacture of heroin morphine amounted to 30 per cent of the total quantity, manufactures rising from 679 kg. in 1935 to 870 kg. in 1936. The quantity of cocaine manufactured in 1935 was approximately 4 tons and in 1936 4.2 tons.

The Opium Committee examined in detail the situation in the Far East and received substantial information which showed that the position to which attention was drawn in 1937 in the report to the League Council had grown still worse. These statements were made by the representatives of China, United States of America, Egypt and Canada. The Advisory Committee also heard a statement by the representative of Japan.

The Chinese representative reported that of the seven provinces which were still authorized to cultivate the opium poppy, two had already suppressed cultivation (Ninghsia and Shensi); two had advanced the date of suppression by two years, from 1940 to 1938 (Kansu and Kweichow); two provinces (Suiyuan and Szechuan) would have to suppress cultivation in 1939, while only one province (Yunan) had been obliged to postpone by one year the date of suppression (1939 instead of 1938).

With respect to manufactured drugs, hostilities had resulted in bringing about the disappearance of the Japanese and Korean traffickers in the territories not occupied by the Japanese troops. There was as a result an improvement in the situation. In the Chinese territories where Japanese influence was at work or which were occupied by Japanese troops, the production and consumption of opium or manufactured drugs was not only tolerated, but encouraged by the Japanese authorities. At Nanking the Chinese Government had succeeded in suppressing the use of opium and manufactured drugs. These products were openly sold after the occupation of the capital by the Japanese.

According to information supplied by the representative of the United States, a civil government set up by the Japanese army in Hopei had immediately taken charge of the supervision of narcotic drugs. The temporary laws of the Chinese National Government against opium and such drugs had been rescinded. Legal supervision of narcotic drugs in Northern China had ceased to exist in August, 1937, and illicit traffic and clandestine manufacture had grown to a considerable extent. The manufacturers had at their disposal an unlimited supply of raw materials in the shape of crude morphine from the factory of the Manchoukuo Opium Monopoly and Iranian opium.

The system established by law and by the regulations promulgated under the law seemed designed for no other purpose than to secure to the Government Monopoly the profits from manufactured drugs as well as those from raw and prepared opium. At the beginning of March, 1938, the Monopoly shops in Manchoukuo were selling opium without restrictions and without the production of permits. This opium came from Korea and its illicit introduction into Manchuria had been openly encouraged, aided, and abetted by the Governor-General of Korea. The exports notified by Korea as having been effected directly to Manchuria had increased from 1899 kg. in 1933 to 11,238 kg. in 1936.

According to information supplied by the Representative of Egypt, the existence of a heroin and opium Monopoly in Manchoukuo was an admitted fact. In 181 cities in Manchuria and Jehol there were 3840 opium saloons and 8400 heroin dens.

The representative of Japan, after explaining the position in the light of this information, chal-

lenged the accuracy of the details provided by the representatives of China, the United States, and Egypt and denied some of them. He categorically denied that the Japanese military authorities or any officer of the Japanese army had encouraged illicit traffic or illicit manufacture of narcotics or that the army was implicated in cases of the kind. The Japanese Government was of the opinion that the promulgation of regulations in narcotic drugs in Manchoukuo and the application of the opium legislation by a unified administration would result in reducing difficulties in the future and enabling the government to carry out its program for the control of opium and narcotic drugs. At the end of the debate the Committee adopted a resolution in which it drew the attention of the Council "to the gravity of the situation," and recommended that the Council should officially communicate to the governments of China and Japan and to the other governments concerned, through the Secretary-General, the minutes of the Advisory Committee's discussions on the situation in the Far East.

NATAL. See SOUTH AFRICA, UNION OF.

NATIONAL ACADEMY OF DESIGN.

An organization of American artists, established in New York City in 1825 and incorporated in 1828 for the purpose of "the cultivation and extension of the arts of design." In 1906 the Society of American Artists merged with the Academy.

The Academy maintains annual Exhibitions of painting, sculpture, and engraving, to which all artists may contribute, subject to jury. At these exhibitions various prizes are awarded. It conducts an Art School at which no tuition is charged. It also administers the Henry W. Ranger Fund for the purchase of paintings, to be presented to various museums. Its membership is limited to professional painters, sculptors, engravers, and architects.

The Academicians elected at the annual meeting in April, 1938, were: Randall Davey, Raymond P. R. Neilson, George Oberteuffer, Abram Poole, J. Scott Williams, and Andrew Winter, painters; Gaetano Cecere and Sidney Waught, sculptors; and Paul P. Cret, architect. The Associates elected in March, 1938, were: Kenneth M. Adams, Carl Oscar Borg, Jon Corbino, Frederick G. Hall, Bernard M. Keyes, Antonio Martino, Ogden M. Pleissner, Helen Sawyer, and Alice Kent Stoddard, painters; Eleanor M. Mellon and Wheeler Williams, sculptors; and Ralph Adams Cram, Wallace K. Harrison, and Charles Z. Klauder, architects; Asa Cheffetz and Stow Wengenroth, Workers in the Graphic Arts.

The officers were: Jonas Lie, president; Charles C. Curran, corresponding secretary; Charles S. Chapman, recording secretary; and Henry Prellwitz, treasurer. Headquarters are at Amsterdam Avenue and 109th Street, New York City, where there also is located the Academy's School, Charles L. Hinton, dean, and Virginia Ferrell, clerk of the Academy.

NATIONAL ACADEMY OF SCIENCES.

The National Academy of Sciences was incorporated by Act of Congress in 1863 for the purpose of investigating, examining, experimenting, and reporting upon any subject of science or art whenever called upon by any department of the United States Government. Membership is by election, in recognition of outstanding achievements in scientific research, and is limited to 350 active members and 50 foreign associates. Members must be citizens of the United States. New members are elected by the Academy on nominations from its 11 Sections: Mathematics, Astronomy, Physics,

Engineering, Chemistry, Geology and Paleontology, Botany, Zoology and Anatomy, Physiology and Biochemistry, Pathology and Bacteriology, and Anthropology and Psychology. The names considered by the Sections in their nominating ballots originate from suggestions made by the members.

At the Annual Meeting held in Washington, D. C., Apr. 25-27, 1938, 15 new members were elected, as follows: Carl David Anderson, Walter Hermann Bucher, Edward Adelbert Doisy, John Adam Fleming, Theodore von Karman, Warren Kendall Lewis, William de Berniere MacNider, Carl Shipp Marvel, Theophilus Shickel Painter, Worth Huff Rodebush, Lewis John Stadler, George Walter Stewart, Marshall Harvey Stone, Louis Leon Thurstone, Simeon Burt Wolbach. Four additional foreign associates were elected: Alfred Fowler, of London; Pierre Janet, of Paris; S. P. L. Sørensen, of Copenhagen; and D. M. S. Watson, of London. Two gold medals were presented at the dinner on April 26: The Agassiz Medal for Oceanography, which had been awarded to Edgar Johnson Allen, director emeritus of the Plymouth Laboratory of the Marine Biological Association of the United Kingdom, Plymouth, England, in recognition of his personal researches on marine biology and the great influence which he has exerted on the study of marine organisms in their relation to the marine environment, was received for him by a representative of the British Embassy, for transmission through diplomatic channels. The Public Welfare Medal was presented to Mr. Willis Rodney Whitney, of the General Electric Company research laboratories, in recognition of his outstanding work in the fundamentals of scientific research for the public good.

The Autumn Meeting was held at the University of North Carolina, Chapel Hill, N. C., Oct. 24-26, 1938. The Academy publishes an Annual Report, Biographical Memoirs of its deceased members, occasional scientific Memoirs, and monthly Proceedings.

The officers of the Academy are: Frank R. Lillie, president; Arthur L. Day, vice-president; L. J. Henderson, foreign secretary; F. E. Wright, home secretary; Arthur Keith, treasurer. The Academy building is at 2101 Constitution Avenue, Washington, D. C.

NATIONAL ADVISORY COUNCIL ON RADIO IN EDUCATION. THE. An organization established in 1930 to promote the more effective utilization of the art of broadcasting in the general field of American education. It was incorporated in December, 1931, and membership, which is open to those interested in the development of educational broadcasting, is active and associate. Active membership is limited, but associate is unlimited. Funds for the basic administration and maintenance of the organization, for a minimum period of three years, were provided by John D. Rockefeller, Jr., and by the Carnegie Corporation of New York. The Council is now maintained by a grant from the Carnegie Corporation.

The fifth Annual Assembly of the Council was held in Columbus, Ohio, in May, 1935, in conjunction with the sixth Annual Institute for Education by Radio. The second National Conference on Educational Broadcasting was held in Chicago, Ill., Nov. 29, 30, and Dec. 1, 1937, under the sponsorship of various organizations interested in the various aspects of education and radio. Bulletins and publications relating to the Council's work and kindred subjects are issued at intervals.

The officers in 1938 were: President, Robert A.

Millikan; vice-presidents, Livingston Farrand, Robert M. Hutchins, Meta Glass, Walter Dill Scott, Robert G. Sproul; treasurer, William J. Donovan; secretary, Levering Tyson. Headquarters are at 60 East 42d St., New York City.

NATIONAL ASSOCIATION OF MANUFACTURERS. A voluntary organization of corporations and individuals engaged in production of manufactured goods. Founded in Cincinnati in 1895, the membership numbers approximately 6000 manufacturers from all industrial centers of the United States. These members, who are conservatively estimated to employ more than 50 per cent of the manufacturing employees of the country, contribute to the support of the Association. Offices are maintained in New York, Washington, D. C., and San Francisco, and the policies are controlled by a Board of Directors, consisting of representatives of large and small firms in various industries from all parts of the country. The general aims and purposes of the Association as set forth in its Constitution are:

The promotion of the industrial interests of the United States, the fostering of the domestic and foreign commerce of the United States, the betterment of the relations between employer and employee, the protection of the individual liberty and rights of employer and employee, the education of the public in the principles of individual liberty and ownership of property, the support of legislation in furtherance of those principles and opposition to legislation in derogation thereof.

Activities are grouped under four general headings: Public Relations, Economic Research, Employment Relations, and Legislative. To serve its members the Association issues a weekly *News Letter*, a bi-monthly *Social Security Bulletin*, a monthly *Labor Relations Bulletin*, a monthly *Law Digest*, and occasional bulletins on agriculture, tariffs, and other subjects related to industrial management. Also, it maintains a research staff and an industrial library to furnish information to its members. Principal among the institutions which the Association has fought for during the past 42 years are the Panama Canal, the U.S. Department of Commerce, the original "pure-foods" laws, an enlarged foreign trade, the Parcel Post, the Federal Reserve System, the non-partisan, semi-judicial tariff commission, a strong merchant marine, Workmen's Compensation, and Safety Work. The Association also was instrumental in forming the National Industrial Council Board, the National Safety Council, and the Chamber of Commerce of the United States.

At the annual meeting of the Association, held in New York, Dec. 7-10, 1938, and at which Anthony Eden was the principal speaker, a "Program for American Progress" was adopted which strongly urged reduction and revision of Federal taxes; amendment of the Wagner Act and the Wage-Hour Act; and enactment of additional legislation to encourage employment providing investment in public industry.

The officers of the Association for 1938 were: Chairman of the Executive Committee, C. M. Chester, Chairman of the Board of General Foods Corporation; Chairman, Board of Directors, William B. Warner, President, McCall Corporation; President, Charles R. Hook, President, The American Rolling Mill Co.; Vice-Presidents, Edgar M. Queeny, President, Monsanto Chemical Co.; Walter J. Kohler, Chairman of the Board, Kohler Co.; S. Clay Williams, Chairman of the Board, R. J. Reynolds Tobacco Co. There are also seven regional Vice-Presidents. Walter B. Weisenburger

is Executive Vice-President of the Association and the active full-time head.

NATIONAL BAPTIST CONVENTION OF AMERICA (NEGRO). The Convention held its session in the Masonic Mosque at Fort Worth, Texas, Sept. 7-12, 1938. "Christ, the Hope of the World" was the slogan for the entire five days' session. Reports were made to the parent body by the Publishing Board, the Woman's Auxiliary, the Foreign Mission Board, Home Mission Board, Benevolent Board, B.Y.P.U. Board, Evangelical Board, and the Railroad Commission. These reports were all adopted and became a part of the convention's work.

There were 44 accomplishments during the week, as were set out in detail in the *National Baptist Union-Review*, following the close of the convention's fifty-eighth annual session. Fraternal representatives brought greetings to the convention from the Southern Baptist Convention (white). One additional state convention was added to the list of members, bringing the affiliated state organization up to 67 in number.

There was reported 22,240 ordained ministers, with a church membership of 3,780,320. There were 21,802 organized Sunday Schools and Baptist Young People's Unions with an enrollment of 2,651,510. Contributions from all sources of the convention raised by the various churches, state, and district associations in sympathy with or members of the convention, passed the \$10,000,000 mark.

The next session of the convention was awarded to Los Angeles, Cal., the dates will be Sept. 6-10, 1939. No changes were made in the personnel of the chairmen and secretaries of the several boards operating under the convention that are to do the work of the entire body during the interim.

The headquarters of the National Baptist Convention of America were designated as 523-2d Avenue North, Nashville, Tenn., at the National Baptist Publishing Board's plant. The personnel of the officials is Rev. G. L. Prince, D.D., president, Galveston, Texas; Rev. C. P. Madison, D.D., secretary, Norfolk, Va.; Rev. A. A. Lucas, D.D., treasurer, Houston, Texas; Rev. G. C. Coleman, D.D., first vice-president, Oakland, Cal.

NATIONAL CHILD LABOR COMMITTEE. See CHILD LABOR.

NATIONAL CIVIC FEDERATION, THE. This movement was organized in 1900 to seek the solution of some of the great problems related to social and industrial progress. It provides especially for the discussion of questions of national import, aids in the crystallization of an enlightened public opinion, and promotes legislation when desirable.

During 1938 it inaugurated a movement for the Protection of American Civil and Property Rights in foreign countries with particular reference to the expropriation by the Mexican Government, without probability of payment, of American-owned mining, oil, timber, fruit and farm lands, factories, and other properties. The purpose of the undertaking is to uphold Secretary of State Cordell Hull in his attitude against confiscation, urging the continuation and, if necessary, the extension of his firm policy in relation thereto. It takes the position that the action of the Mexican Government places in jeopardy the vast structure of our investments and prestige; and that, to admit the right of any government through its own legislation to take the property of American citizens without just and

immediate compensation would imply the acceptance by our own Government of the nullification of a universally accepted principle of international law based upon reason, equity, and justice.

As there have been, since Jan. 1, 1934, criminal violations of our laws, the Federation has advocated that there be invoked, in the interest of law enforcement, the Federal Act providing punishment for seditious conspiracy and the various state statutes penalizing criminal syndicalism and criminal anarchy. It has continued to urge that the Congress of the United States make sufficient and adequate appropriation to enable the Bureau of Investigation of the U.S. Department of Justice to be fully advised at all times of the activities of any party, group, or organization, which seeks the overthrow of the Government of the United States by force, violence, or any unlawful means.

The Federation maintains as its definite policy the findings of its Municipal Ownership Commission in favor of private operation of municipal utilities with adequate regulation, and is furthering the study thereof.

The executive in charge is the founder of The National Civic Federation, Ralph M. Easley, Chairman Executive Council. The headquarters are at 570 Lexington Ave., New York City.

NATIONAL COMMITTEE ON EDUCATION BY RADIO. This Committee, appointed by the U.S. Commissioner of Education (see *NEW INTERNATIONAL YEAR BOOK* for 1934, p. 609), is the official representative of the nine important national educational associations which constitute its membership. It acts as a spokesman in radio for organized education. It assists in protecting the privileges of educational broadcasting stations, promoting broadcasting to schools, and stimulating the improvement of the public broadcasting service.

The Committee's activities include publishing the periodical—*Education by Radio*. The Committee called a national conference on "The Use of Radio as a Cultural Agency in a Democracy." This conference, held on May 7 and 8, 1934, adopted a set of fundamental principles which are basic to the setting up of a sound system of broadcasting. The Committee has encouraged research in education by radio and has promoted and co-ordinated experiments in the use of radio, both in school and adult education. It has sent representatives to state, national, and international conferences and has furnished speakers for important national civic groups.

At present the Committee is sponsoring the development of a Public Broadcasting Service. The purpose of this Service is to create a working organization through which educational institutions and agencies, service departments, and citizens' groups can mobilize their broadcasting resources, raise the standards of their presentation, and demonstrate a co-operative method of maintaining working relationships between broadcasting stations and the producers of noncommercial programs. This can be done on local, regional, or national bases.

The chairman of the Committee is Arthur G. Crane, president, University of Wyoming. The vice-chairman is H. J. Umberger, director, division of extension, Kansas State College of Agriculture and Mechanic Arts. The secretary, who administers the Committee's activities, is S. Howard Evans. The offices of the Committee are located at Room 308, 1 Madison Avenue, New York, N. Y.

NATIONAL CONGRESS OF PARENTS AND TEACHERS, THE. A national welfare body organized on Feb. 17, 1897, in Washington,

D. C. The co-founders were Mrs. Theodore W. Birney and Mrs. Phoebe H. Hearst, both of Washington. The original name was "National Congress of Mothers." In 1908 the name was changed to "National Congress of Mothers and Parent-Teacher Associations," and again was changed to "National Congress of Parents and Teachers" in 1924. It functions through approximately 27,000 local parent-teacher associations in urban and rural communities in every state, District of Columbia, Hawaii, and Alaska.

The local parent-teacher association has a three-fold purpose: To know the child through child study and parent education; to co-operate with the schools and other educational agencies in his training, through shared participation with teachers and educators; and to control and build his environment through the development of public opinion and civic activity.

The Congress membership as of Apr. 15, 1938, was 2,222,218. Persons interested in child welfare become members of the National Congress by joining a Congress parent-teacher association. The annual dues for membership in the National Congress is five cents. The life membership fee is \$50.

The P.T.A. is founded on the premise that the community itself is the true school of youth, and that all activities of the community tend to modify the development of children and young people. The P.T.A. capitalizes on all community institutions and sentiments that tend to improve the environment of children.

Because the objects of the organization are broad enough to cover practically all needs and interests of American children and youth, the program of work of the P.T.A. has been very flexible through the years. The fields covered include civic welfare, health, education, and family relationships.

The Congress publishes many books, leaflets, pamphlets, bulletins, and other publications on subjects of major interest to its local associations. The annual *Proceedings and Parent Education Yearbooks*; leaflets on organization and standing committee subjects; the *Parent-Teacher Manual*; and the monthly *National Congress Bulletin* are among its most widely used publications. The *National Parent-Teacher* is the official magazine.

The Congress holds an annual convention in the spring to which its state branches send delegates. Reports and papers of permanent value presented at these meetings are included in the *Proceedings of the Convention*. The Board of Managers, composed of selected officers, chairmen of standing committees, and presidents of state branches, meets semi-annually.

The National Office of the Congress is located at 1201 Sixteenth Street, N.W., Washington, D. C.

NATIONAL EDUCATION ASSOCIATION OF THE UNITED STATES. An organization of approximately 200,000 persons actively engaged in educational work or interested in the promotion of education. Its purpose is to "advance the interests of the teaching profession, promote the welfare of children, and foster the education of all the people." The Association was organized in Philadelphia in 1857 and incorporated by an act of Congress in 1906. The *Journal of the National Education Association* is the official monthly publication. Various branches of education are represented in the Association by 24 departments. A large group previously organized separately came into the Association as a department during the year with the name American Association for Health, Physical Education, and Recrea-

tion. As a continuation of the Horace Mann Centennial celebration, the Association is sponsoring Future Teachers of America, an organization which serves youth in high schools and colleges.

The seventy-sixth annual convention of the Association was held in New York City, June 26-30, 1938. There was an address by President Franklin D. Roosevelt in which he pointed out the need for Federal aid to equalize educational opportunity throughout the nation. The convention registered an attendance of 15,075 with 1672 delegates to the representative assembly. The winter convention under the direction of the American Association of School Administrators was held in Atlantic City, N. J., Feb. 27 to Mar. 3, 1938. The subject of the yearbook prepared for discussion at this meeting was *Youth Education Today*.

The officers of the NEA for 1938-39 are: President, Reuben T. Shaw, Philadelphia, Pa.; executive secretary, Willard E. Givens, Washington, D. C.; secretary emeritus, J. W. Crabtree, Washington, D. C.; and treasurer, R. E. Offenbauer, Bowling Green, O. Headquarters are at 1201 Sixteenth Street, N. W., Washington, D. C.

NATIONAL FIRE PROTECTION ASSOCIATION. See FIRE PROTECTION.

NATIONAL FORESTS. See FORESTRY.

NATIONAL GALLERY OF ART. See ART MUSEUMS.

NATIONAL HOUSING ACT. See UNITED STATES under CONGRESS; FINANCIAL REVIEW.

NATIONAL INDUSTRIAL RECOVERY ACT (NIRA). See MINIMUM WAGE.

NATIONAL KINDERGARTEN ASSOCIATION. An organization founded and incorporated in New York City in 1909, with the object of helping to secure the advantages of kindergarten education for all of the nation's children. The Association is supported entirely by voluntary gifts. The money is used for the purpose of promoting a knowledge of and an interest in the value of the kindergarten as an integral part of the public school system. Field Secretaries are employed in every state to keep this matter before the public and assist parents in having classes organized for their children.

The Association has been instrumental in securing the establishment to date of 2229 kindergartens, which have enrolled over 868,106 children. Where no adequate provision has been made in the State school laws for the maintenance of kindergartens, the Association has worked to stimulate an effort to secure the enactment of improved laws and has been instrumental in obtaining their passage in 16 instances.

Early in 1938 the work being done on the Cope-land-Bloom Pregrade Education Bill, which was introduced into Congress by the Association in 1937, was transferred to the Harrison-Thomas-Fletcher Bill. It was expected that before the latter was passed, an amendment in favor of pregrade classes would be secured. The Association plans to continue the effort in 1939.

The officers of the Association are: Maj. Bradley Martin, president; Hon. P. P. Claxton, honorary president; Miss Lena Madesin Phillips, vice-president; Mrs. Roger C. Aldrich, secretary; Miss Bessie Locke, executive secretary; and Julian M. Gerard, treasurer. Headquarters are at 8 West Fortieth Street, New York City.

NATIONAL LABOR RELATIONS BOARD (NLRB). See LABOR ARBITRATION; LABOR UNIONS; MINIMUM WAGE; UNITED STATES under Administration.

NATIONAL MUNICIPAL LEAGUE. An organization which acts as a central clearing house for current information on improvements in local and State government, founded in 1894 and incorporated in 1923. Its aim is to promote honest, efficient, economical, and responsive local government. Among its committees are those on model corrupt practices law, public works, county government, liquor legislation, model tax collection law, new municipal program, model administrative code, citizen organization for municipal activity, selection of judiciary, model special assessment law, model State constitution, proportional representation, and personnel. The national federation of citizens' councils is a section of the league.

The 44th annual meeting of the league was held in Baltimore, Md., Dec. 1-3, 1938. Co-operating in this conference were the Proportional Representation League and the National Association of Civic Secretaries. The officers elected for 1938-39 were: President, Clarence A. Dykstra, Madison, Wis.; vice-president, Marguerite M. Wells, Washington, D. C.; treasurer, Carl H. Pforzheimer; and secretary and editor of the *National Municipal Review*, Howard P. Jones. Headquarters are at 309 East Thirty-fourth Street, New York City.

NATIONAL PROGRESSIVES OF AMERICA. See WISCONSIN.

NATIONAL RECREATION ASSOCIATION. An association organized in 1906, under the name of the Playground Association of America, for the purpose of uniting in a national movement the efforts made in various parts of the United States to provide safe and adequate areas where children might play under experienced leadership. In recent years, however, its work has expanded to include the community as a whole, a staff of field workers being maintained to assist cities in organizing year-round programs for adults as well as for children.

The association carries on its work through such services as physical education, music, drama, park recreation, recreation for girls and women and for institutions, a bureau of colored work, and, in co-operation with the U.S. Department of Agriculture, a service to rural leaders. It conducts institutes for the training of recreation workers and an annual Recreation Congress. Its official magazine is *Recreation*, a monthly. The officers in 1938 were: President, John H. Finley, Ph.D.; treasurer, Gustavus T. Kirby; and secretary, Howard S. Braucher. Headquarters are at 315 Fourth Avenue, New York City.

NATIONAL RESEARCH COUNCIL. An organization of American scientists, originally established in 1916 by the National Academy of Sciences for the purpose of co-ordinating the research facilities of the United States for work on war problems involving scientific knowledge, and reorganized in 1918 as a permanent body for the general encouragement of research in the natural sciences. The Council has close relationship with governmental scientific agencies, and has the formal recognition and co-operation of over 80 national scientific and technical societies, its membership being composed mainly of appointed representatives of these societies.

Among the major undertakings of the Council during 1938 were the administration of postdoctorate fellowships (numbering 42); the publication of the third report of the Committee on Photochemistry; and the compilation of material for a sixth edition of the list of industrial research laboratories of the United States; plans for the establishment

of a journal for the publication of contributions in the field of psychosomatic medicine; investigations upon educational uses of the radio, motion pictures, phonograph, microphotography for record purposes, and the development of special calculating machines; and research upon problems relating to the physics of the earth, highway construction and highway safety, electrical insulation, heat transmission, the preservation of books and records, the chemistry of cellulose and allied substances, problems of mathematics as related to chemistry, density currents, the chemistry and pharmacology of narcotic drugs, psychobiological aspects of sex, endocrinology, the effects of radiation on living organisms, aerobiology, and problems of neurotic behavior.

The general administrative officers of the Council for 1938-39 were: Chairman, Ross G. Harrison, Sterling professor of biology, emeritus, Yale University, New Haven, Conn.; Treasurer, Arthur Keith, geologist, 2210 Twentieth Street, N.W., Washington, D. C.; Executive Secretary, Albert L. Barrows. Headquarters: National Academy of Sciences Building, 2101 Constitution Avenue, Washington, D. C.

NATIONAL RESOURCES COMMITTEE. See CITY, DISTRICT, STATE, REGIONAL, and NATIONAL PLANNING; SEWERAGE AND SEWAGE PURIFICATION; WATERWORKS AND WATER PURIFICATION.

NATIONAL SAFETY COUNCIL. A co-operative association, devoted to the conservation of human life through a continuous campaign of accident prevention in industry, on the highway, in the home, and elsewhere. In 1938 there were nearly 5000 members, including corporations, firms, individuals, public officials, schools, chambers of commerce, clubs, and civic organizations. About 70 per cent of the members were industrial concerns. Affiliated with the national organization were 56 local councils in as many communities throughout the United States.

During 1938 the Council's activities laid especial emphasis on the highway accident problem. The Council was happy to report a markedly lower total of traffic accident fatalities for 1938—the first decrease in six years.

The Seventh Annual National Traffic Safety Contest was conducted, in which 1158 municipalities in 47 States participated.

The Council publishes the *National Safety News* and *The Industrial Supervisor* for industry; *Public Safety*, a magazine that treats all phases of the automobile traffic accident problem, for public officials, police chiefs, etc.; *Safety Education* for schools; *The Safe Worker* and *The Safe Driver* for industrial employees. It also issues *Safe Practices* and *Health Practices Pamphlets* for industry.

The 27th National Safety Congress was held in Chicago, Ill., Oct. 10-14, 1938. The officers for 1938-39: President, D. D. Fennell; Vice-President for Membership, R. T. Solensten; Vice-President for Industrial Safety, Frank H. Harrison; Vice-President for Public Safety, Dr. Miller McClintock; Vice-President for Engineering, Walter S. Paine; Vice-President for Safety Councils, A. V. Rohweder; Vice-President for Education, Albert W. Whitney; Vice-President for Finance and Treasurer, C. W. Dempsey; Secretary and Managing Director, W. H. Cameron. National Safety Council offices: Civic Opera Building, 20 North Wacker Drive, Chicago, Ill. See PSYCHOLOGY.

NATIONAL YOUTH ADMINISTRATION. See CHILD WELFARE.

NATURAL GAS. See GAS.

NAURU, nā'ōō-rōō. An atoll in the Pacific (166° E. longitude and 26 miles south of the equator), mandated to the British Empire, on Dec. 17, 1920, by the League of Nations. Area, 8.43 square miles; population (Apr. 1, 1937), 3097, including 194 Europeans. The principal industry is the mining of phosphate (688,900 tons exported in 1937); a small amount of copra is exported. In 1937 imports were valued at 144,453 Australian pounds; exports, £A513,989. In 1936, 91 vessels (441,804 gross tons) entered and cleared. There is a wireless station on the island. For 1936 revenue amounted to £24,906; expenditure, £23,989.

During July, 1919, Great Britain, Australia, and New Zealand agreed that Australia should appoint the first administrator for a term of five years, and subsequently the administrator was to be appointed as the three governments should decide. The administrator has all the powers of government (administrative, legislative, and judicial) in the island. Administrator, Commander Rupert C. Garsia (appointed, Jan. 17, 1933).

NAVAL EXPANSION ACT. See UNITED STATES under Congress.

NAVAL PROGRESS. The struggle among naval powers to gain relative superiority over potential opponents continued at an accelerated rate. The admiralties gave ample evidence that advantage in sea power, not merely a quantitative superiority, was the end sought. This competition for the utmost in fighting strength of individual units brought about continually increasing expenditures for each ship built; a striking example of that being the increase in estimated costs of America's new battleships from \$50,000,000 when first proposed to the latest figures of \$80,000,000. Naval progress was concerned not only with more, faster, and stronger combatant vessels, but with development of naval aviation, training, and indoctrination of skilled personnel, provisions for well-equipped and well-defended naval bases, and with availability of suitable and ample auxiliaries.

During 1938 the money and the efforts expended in connection with those subsidiary activities for increasing naval power and mobility were noteworthy. The United States organized a board, headed by a former Commander-in-Chief of its fleet, to make an exhaustive study of the naval needs for fleet and air bases. Japan continued to provide high-speed auxiliaries for naval service, particularly tankers, and vessels capable of rapid conversion into aircraft carriers. Italy went forward with her development of bases, and apparently was firmly entrenched in the Spanish Balearic Islands. England, with work on the great Singapore base completed, gave attention to the development of facilities at Alexandria and Capetown. Germany not only expanded her building plants in the homeland; but gave well-informed observers cause for alarm over alleged occupancy of advance bases in Spanish territory. France made further provisions for removing naval upkeep and repair facilities on the African coast to a greater distance from Italian air bases. Smaller powers made progress in developing their own plants in order to lessen dependency on the great powers for building and major repairs.

Governments and their technicians found increasing difficulty in making qualitative comparisons between their fleets and those of other powers because large and rapid building programs resulted in considerable variations in the characteristics of ships of the same size being built by the various

powers, and because the nature of new devices and even the general characteristics of ships were kept secret. Legislative bodies and publicists concerned themselves principally with numbers of ships and the size of guns, but technicians were no less interested in speed, cruising radius, amount of armor, and the like. The powers who adhered to the 1936 London Naval Treaty exchanged information with one another in accordance with terms of that treaty as to ships laid down, their size, and the number and sizes of guns but not as to other features. But such important powers as Russia and Japan were neither parties to that treaty nor to similar ones; and they carefully guarded all information connected with their naval building activities.

While no new types of ships were brought forth certain general tendencies were evidenced. The United States sacrificed some speed in her new battleships in order to mount 16-inch guns and to use more horizontal and vertical armor. Germany chose to build a large number of small submarines rather than fewer large ones. Japan was reported as emphasizing armament; so much so, that some naval constructors felt that stability may have been too much sacrificed. Italy and France were insistent on very high speed for light forces; and the former country apparently gave great attention to use of mines. Great Britain followed its usual conservative trend, but gave increased consideration to anti-aircraft protection, and elected to arm her destroyers with 4.7-inch guns rather than with the 5-inch more generally adopted. That country also gave more attention than did any other to the development of escort and patrol vessels. The smaller powers devoted large proportions of their naval expenditures to submarine construction, and, in general, demanded high speed for such light-surface craft as they ordered.

The large number of battleships under construction and authorized clearly showed that all powers regarded those heavy ships as the bulwark of naval power, and that the doubts of a few years past that they would be able to withstand aircraft attacks had been dispelled. The treaty tonnage of most of those laid down during the year was 35,000; but those building in Japan were believed to be somewhat larger. Plans for some projected ships authorized but not commenced were being drawn for 45,000 tons. The United States ships were to carry 16-inch guns in their main batteries; the newest construction in Great Britain and Japan was expected to have guns of that same caliber; while the heavy ships of other powers were reliably reported as being equipped with 15-inch types. Their anti-aircraft batteries were no longer to be 3-inch but 4.5-inch or 5-inch. Questions of weight and ammunition supply prevented adoption of 6-inch guns for that purpose. In some instances separate batteries were provided for anti-aircraft and anti-torpedo craft defense; in others, guns and mounts were designed and arranged to serve the double purpose. Machine-gun batteries of .50 caliber or more were provided to supplement the primary anti-aircraft defense.

The trend in size of destroyers continued upward, so much so that there remained but little line of demarcation between large destroyers and small cruisers except that the former carried more torpedoes. There was an increased proportion of the number that carried all torpedo tubes on the center line, and quadruple tubes were becoming commonplace.

Among naval air forces there were no marked

changes in the normal line of developments, but there was a considerable numerical increase. From an administrative viewpoint there was a growing tendency toward closer association between naval air and surface activities, and wider separation between naval air and other air arms. In addition to aircraft carried in ships several major naval powers maintained forces of flying boats specially equipped and trained to carry out certain naval functions. During the year progress was made in increasing the strategic mobility of those squadrons through the construction and development of suitable bases and building of specially designed tenders.

The accompanying tabulation of numbers and tonnages of the various classes of combatant ships for each of the great naval powers furnishes a basis of comparison in those particulars. In some instances the data while not official are based upon reliable information.

COMPARATIVE DATA—THE GREAT NAVAL POWERS AS OF JULY 1, 1938
[Classifications according to 1936 London treaty]

^a Japan data only partially reliable. Information as to the number and tonnage of ships building or appropriated for subject to considerable error.

Argentina. The new cruiser, *La Argentina*, which had been building at Vickers-Armstrong in England, was completed late in the year and was

expected to be commissioned early in 1939. Except for the two battleships built in 1915, she was the largest vessel in the navy. With a displacement of 7000 tons she carried 9 6-inch guns in 3 triple turrets, 4 4-inch A.A. guns, 6 21-inch torpedo tubes, 2 small aircraft, and made a speed of 31 knots. The disposition of her turrets, 2 forward and 1 aft, the arrangement of her A.A. battery aft, and the general layout gave her the appearance of the British *Arethusa* class except for the flush deck. Like British cruisers in general her two funnels were wide apart with the catapult between. This arrangement came from placing engine and fire rooms alternately to minimize danger of losing all motive power from flooding two machinery compartments.

Brazil. As a part of its 10-year building program 6 destroyers were ordered built in England at a total cost of £1,628,000. No action was taken regarding the 2 cruisers of the program. The 3 minelaying submarines built in Spezia, Italy, were

delivered. The 6 destroyers mentioned, *Jaruema*, *Jaguaripe*, *Javary*, *Jutahy*, *Japura*, and *Jurua*, were to displace 1500 tons, make 36 knots, carry 4 5-inch

guns and 8 torpedo tubes; the general characteristics being of the English *Hero* class. Brazilian authorities hoped that expansion of their own shipyards would make it unnecessary to let contracts abroad for future construction. They expected, however, that it would continue to be necessary to purchase armament and machinery from other countries.

China. The Chinese Navy, never an effective force, ceased to exist. Ships that were not "sitting targets" for Japanese aircraft were sunk in attempts to blockade streams against the enemy advances or were otherwise destroyed by the Chinese themselves.

Denmark. The Commander-in-Chief and Director General of the Ministry of Marine stated that the most important duty the Danish Navy might be called upon to perform would be preservation of neutrality by closing the Baltic and safeguarding the Kattegat. The budget for 1938-39 amounted to 40 million kroner. This permitted continuation of the program announced last year, viz., construction of 3 submarines of 330 tons, 3 torpedo boats of 350 tons, 1 minelayer of 500 tons, 3 trawlers, 3 subchasers, and several small auxiliary craft. In addition to these, 24 seaplanes were being added to the navy. An oil and gas depot with a permanent garrison of about 112 officers and men was established on the southwest coast of Greenland. Construction of a new naval academy was begun at Holmen, Copenhagen.

Estonia. The current program included building 4 400-ton torpedo boats at Tallinn, each equipped for minelaying; and 3 250-ton submarines in Finland. Several fast motorboats with special apparatus for destruction of mines was provided for. The program was to be financed in part at least by voluntary popular subscription.

Egypt. The scheme for Egyptian military organization and armament included expenditure of £E40,000,000 in a five-year period. Of this amount £E1,000,000 was made immediately available for the navy. Hitherto, this had consisted of 3 patrol vessels and 5 coastal motorboats. The nucleus fleet to be ordered was tentatively set as 36 units made up of destroyers, submarines, minelayers, minesweepers, and torpedo boats. The official intimation of this decision was accompanied by an explanation that, "these vessels, with the shore defenses will be able to defend Egypt from an attack by sea if the British Fleet is engaged elsewhere." This program was, of course, independent of the British development of Alexandria as a naval base; a development made necessary by the change in the strategic value of Malta when Italian air power grew strong enough to seriously threaten that base.

France. Naval construction that had been greatly retarded for several years because of recurring labor troubles continued to suffer severely from delays in building yards. A striking instance was that of the submarine *Sidi Ferruch* 1930 program, laid down in 1932 and completed in 1938. The three cruisers of the *DeGrasse* class were hardly past the planning stage. Orders were placed, however, for the third and fourth battleships of the *Richelieu* class, the *Clemenceau* and the *Gascogne*. The *Joffre*, first of the new aircraft carriers, was laid down in November; and the second, the *Painleve*, was scheduled to follow shortly afterwards. Four of the 1350-ton aircraft tenders of the *Sans Souci* class were laid down. Progress on the 630-ton minesweepers, *Elan* class, was slow, but three of them being launched during the year.

The train of events in the Far East prompted

France to make some readjustment of her naval forces there and to improve the base facilities at Saigon. Some improvements were also effected at Camranh (It was there that the ill-fated Rojdestvensky stopped on his way to Tsushima in 1904).

On the coast of Africa, work went forward on a new naval base that the French authorities insisted would be one of the finest on the Mediterranean. It was being developed at Mers-el-Kebir on the Bay of Oran, Algeria, at an estimated cost of 275 million francs. The value of the base at Bizerta had become increasingly uncertain with the rapid development in range and striking power of the Italian air force.

No long-term building program was in prospect of adoption but the one for 1938 included, in addition to the 2 battleships mentioned, an 8000-ton cruiser, 6 destroyers of moderate size, and 4 800-ton submarines.

The *Strasbourg*, sister-ship of the *Dunkerque*, was completing rather lengthy tests before commissioning. The latter ship with its quadruple turrets was reported as being very successful. At first much criticized as a risky innovation, French naval officers were coming to consider it with great pride. Each turret with its equipment and 14-inch armor weighed over 2000 tons but handled smoothly enough at all angles of elevation; and the 4-gun salvos caused no internal disarrangement or discomfort.

Important vessels under construction or appropriated for are listed in the accompanying table.

FRANCE: WARSHIPS BUILDING OR APPROPRIATED FOR, 1938

Class and name	Laid down	Standard displacement	Speed
Capital Ships:			
<i>Strasbourg</i>	1934	26,500	29.5
<i>Richelieu</i>	1935	35,000	30
<i>Jean Bart</i>	1936	35,000	30

Four <i>Aurores</i> were appropriated for as were four others of almost the same size.			

Germany. The most important news from Germany came late in the year when it was learned that representatives of the British Admiralty were informed that Germany would invoke the escape clause of the 1935 Anglo-German naval agreement and would increase her submarine tonnage to parity with that of Great Britain. The agreement mentioned had provided for a 10 to 3.5 ratio in each class of ships subject to certain escape clauses. It was generally assumed rather than known that increase in Russian naval building was the reason assigned for the sudden expansion in submarine tonnage. The British, having made great strides toward meeting a submarine menace, were less jittery over the announcement than might have been expected.

During the past two years the size of battleships, destroyers, and submarines had increased considerably; and the displacements of ships under construction were up to full treaty limits: For the first time aircraft carriers were building for the German Navy. They differed from those being built in other countries in that they had unusually heavy A.A. batteries; and a considerable measure of protection at the expense of the number of planes to be carried.

Although many enthusiastic reports were circulated as to the success of the Diesel engines of the *Deutschlands* it was noted that steam machinery was being installed as the main motive power in the new battleships, a clear indication that the heavy oil engines were not yet ready to completely supplant the more conventional types. The newly commissioned 26,000-ton battleship *Gneisenau*, however, did have Diesel engines for cruising speeds. No further information was divulged as to the hydrogen-oxygen submarine motor that was designated to obviate the necessity for periodic "surfacing" in order to recharge batteries.

No announcement had been made regarding personnel for the new carrier aircraft. The naval wing that had supplied personnel for seaplanes and aircraft of catapult ships was the VIth Area of the German Air Force. The officers had all previously served in the navy but they wore air force uniforms. The main base for naval air units was Holtenau, Kiel.

While the additions to the cruising fleet during the year were only one battleship and several destroyers and submarines, material progress was made on the ships under construction and there was every indication that within a few years Germany would be completely built up to the limit of 35 per cent of British tonnage.

Important vessels under construction or appropriated for are listed in the table in next column.

Great Britain. The 1938 net estimates were £123,707,000 exclusive of additional amounts for the 1938 building program which would require supplementary estimates when taken in hand. The corresponding amount for the preceding year was about £18,000,000 less. Provision was made for a maximum personnel strength of 119,000 as compared with 112,000 in 1937. The fleet air arm was to receive an increase to £5,718,000 from £4,200,000. Nearly all the increase otherwise was attributable directly to ship construction.

The building program for the year called for 2 battleships of about 42,000 tons with 16-inch guns; 1 carrier; 4 large and 3 small light cruisers; 3 submarines; and various small craft and auxiliaries. The total number of ships was the smallest in years, but the reduction was readily understandable to informed authorities, acquainted with the

tremendous number of ships ordered in the years immediately preceding, who realized that the navy already had under contract or authorized 5 battleships, 5 aircraft carriers, 17 cruisers, about 40 destroyers, and 17 submarines. The omission of destroyers occasioned some surprise and not a little criticism, however, even though that type had been built steadily for a long period of years and some thirty-odd were in the combined program of the two preceding years. But though no destroyers were provided for, the Admiralty did place orders for 12 high-speed motor torpedo boats. Heretofore, it had looked with no great favor on that type, but during the preceding year 6 of them with experimental hulls had been used in the Mediterranean. They proved satisfactorily seaworthy in relatively sheltered water, and demonstrated their capability of cruising several hundred miles. Those ordered were to be 68 feet long, displace 28 tons and carry 2 torpedoes.

The *Afridi*, first of the *Tribal* class of destroyers to be ready for service, was the largest and most powerfully gunned vessel of that category ever constructed for the British Navy. Fifteen others either joined the fleet or were expected to do so early in 1939. They displaced 1850 tons, developed 40,000 shaft horsepower, and made 36 knots with Parsons geared turbines. The most interesting feature in connection with them was that they carried but 4 torpedo tubes but were equipped with 8 4.7-inch high-angle guns. That fact suggested that they were intended less for the form of warfare associated with their classification than for patrol duties and anti-aircraft defense. They seemed to form a fairly effective response to the superdestroyers of some of the Continental powers.

Another small vessel completed during the year worthy of note was the *Egret*, illustrative of the kind being built for escort duty. Of but 1100 tons, she was completed in but little over a year; her speed was 20 knots; and she carried 6 4-inch A.A. guns and 5 smaller ones.

The carrier *Ark Royal* was easily the most important vessel completed, as she was the first modern vessel of that type to take her place in the fleet.

Her period of service was too short to draw conclusions as to how satisfactory her design would prove. A general account of her characteristics appeared in the 1937 YEAR BOOK. Among the more interesting features was the arrangement of her 16 4.5-inch quick-firing high-angle guns disposed in 8 twin mounts on sponsons carried well out from the sides of the ships, 2 each side forward and 2 each side aft.

Important vessels under construction or appropriated for are shown in the accompanying table.

9 Tarpon class			

Greece. The two destroyers *Krol Jerzy I* and *Krolowa Olga* were nearing completion in England. Their displacement was reported as 1350 tons; speed 35 knots; armament 4 5-inch guns and six torpedo tubes. Two small submarines were begun by Krupp.

Italy. Light craft continued to be delivered from the builders with great regularity; the time from drafting room to service in the fleet being remarkably short. Fifteen-hundred-ton destroyers of the *Oriani* class laid down in 1936 were delivered in 1938, and the smaller ones were built in less time. All 19 submarines of the 1937 program were launched and a few were completed. No cruisers were built or building but toward the end of the year it became generally known that no fewer than 12 3500-ton ships were about to be started. In effect, they were to be built as protected destroyer leaders, with some 300 tons of armor. The reported speed of 39 knots, and provisions for mines fol-

lowed the Italian practice in those respects. The armament of 8 5.5-inch guns was subject to modification if it were found desirable to use a smaller caliber in order to gain in volume of anti-aircraft fire.

In view of her strategic situation Italy took no steps to follow the practice of other naval powers in providing aircraft carriers for her fleet, but she did carry on numerous exercises that involved close co-ordination by and with air units. The larger combatant ships were, of course, supplied with a few aircraft for reconnaissance purposes.

Thorough modernization of the last 2 of the 4 pre-war battleships was completed and all could make 27 knots. Satisfactory progress was made on the 2 battleships laid down in October, 1934; and in May the 35,000-ton *Impero* was laid down, followed in September by the sister ship *Roma*. Their general characteristics were to follow those of the *Littorio* with 9 15-inch, 12 6-inch, and 12 3.5-inch guns and a speed approaching 30 knots.

The cost of the construction work was enormous. The budget for the year called for over two billion lire, an increase of more than 155 million from the preceding year. About 600 million was allocated for new construction and 150 million for maintenance and repairs.

With the rapid expansion of the fleet had necessarily followed increase in personnel as was shown by the 5000-odd officers and over 70,000 enlisted men of 1938 as compared with 3000 officers and 44,000 men in 1930. Some difficulty had been experi-

ITALY: WARSHIPS BUILDING OR APPROPRIATED FOR, 1938

<i>Bagnolini</i>		1,500	

Twenty others, 4 of 1,000 tons and 16 of about 1,500 tons were being planned for or under construction.

While no cruisers are shown in the foregoing tabulation plans were being drawn to build 12 of 3,500 tons.

enced in developing officers to meet the growing demands.

Important vessels under construction or appropriated for are shown in the table on p. 500.

Japan. Not only did little official information as to her navy come out of Japan, but the unofficial reports were largely sensational and lacked confirmation. It was definitely established, however, that rumors of the instability because of over-gunning of cruisers of the *Mogami* type were well founded for at least the last two of the class had one turret removed leaving 12 6-inch guns instead of the original 15. It was also known that one of the destroyers launched was of about 2000 tons, considerably larger than had been expected. Work undoubtedly was done on small harbor-defense submarines. The *Sirakami*, a new minelayer of about 800 tons, was launched. Although importation of fuel oil and strategic war materials continued at a high rate, the navy was sufficiently well provided to operate for a considerable period without outside supply.

The 10,000-ton repair ship *Akasi* that was launched was the first large repair ship built for the navy; a fact indicative of the efforts that were being made to increase the mobility of the fleet by lessening reliance on the shore establishment for upkeep and repairs.

The carrier *Soryu*, completed in 1938, was four years in building, and the first to join the fleet since the small *Ryujō* in 1933. On a displacement of 10,000 tons she carried 12 5-inch guns, made 30 knots and had accommodations for 40 planes. The older carriers *Kaga* and *Akagi* were designed as a battleship and a battle cruiser respectively but, as a result of the 1922 Washington Limitation of Arms Treaty, were converted and completed as carriers in 1928. Despite their 27,000 tons they carried but 30 planes each.

The naval budget of 677 million yen was about one-fourth of the national budget, but supplement-

tary credits and special war expenditures tended to obscure the true figures of naval expenditures. A thoroughgoing change was made in the spring among the flag officers of the naval forces in China. No official explanation was forthcoming, although some of them had held their commands but a short time. Foreign observers in positions to judge of the proficiency of the light forces and naval aircraft in connection with the activities in China had generally been favorably impressed.

The table in the first column lists important vessels known to be under construction. As it is doubtless incomplete, the footnote which follows it should be read in conjunction therewith.

Netherlands. Contracts were awarded for two 36-knot destroyers to carry 5 5-inch guns and 8 torpedo tubes. The particularly unusual feature was to be provision for a Fokker seaplane. As that category had never before been so equipped, this requirement attracted widespread attention. The 7000-ton cruiser *Java* built in 1925 and completely refitted 10 years later was transferred to the Dutch East Indies, where a large part of the fleet was already concentrated. Formerly that colony paid all maintenance and half the construction costs for its own defensive fleet, but some years back that was changed to maintenance costs only. The 1938 collection costs for that purpose were five million guilders.

Orders were placed for an 8000-ton light cruiser of 32 knots to carry 10 6-inch guns, 12 A.A. guns, 6 torpedo tubes, and 2 airplanes for service in the colonies. In addition to this and the two destroyers previously mentioned, provision was made for additional submarines, escort ships, and a division of motor torpedo boats that had become so popular among European powers. Another interesting development was the budgeting of two million florin for armament of merchant ships for defensive purposes.

Norway. Plans accepted for the two new destroyers indicated a displacement of 1200 tons as compared with 600 tons for the *Gyller* recently launched and two others already building. It was not planned to have the larger ones ready for service before 1940 or 1941 at which time a submarine would be undertaken. Meantime, one or two smaller destroyers and a motor torpedo boat were to be built; and 2 350-ton minesweepers were ordered. In addition, six torpedo planes with a cruising radius of 1700 miles were ordered from a German firm.

Poland. The unusual practice of raising funds for naval construction by popular subscription met some success; the submarine *Orzet* and a coastal motor torpedo boat being the latest addition to the navy from such funds. The submarine *Scp* building in Holland was launched; two gunboats *Czapla* and *Zuraw* were launched at Gdynia. The minelayer *Gryf* built in France gave satisfactory results during its trials.

Portugal. The escort vessel *João de Lisboa* built at the naval arsenal Lisbon was completed and made 16 knots on trials. She had Diesel engines, steaming radius 8000 miles, carried 2 4.7-inch guns. Appropriation was made for a tanker; and two light cruisers and a seaplane tender were projected. An English engineer rear admiral became technical adviser at the new Alfeite arsenal.

Rumania. Work began on the long-planned new naval base at Tsalal. It was to be considerably larger than the Canstantza base. Two 650-ton submarines of the *Delfinul* type were ordered in Italy. The *Transylvania*, a new 10,000-ton motor passen-

JAPAN: WARSHIPS BUILDING, 1938

[See note following this table]

Class and name	Laid down	Standard displacement	Speed

<i>I-75</i>	1934	1,400	20
These submarines may have been completed.			

* The foregoing tabulation contains no ships of the April, 1937, five-year replenishment program concerning which all official information has been withheld. Reports from well-informed sources indicated that program to be about as follows:

- 3—battleships 45,000 tons, 16-inch guns.
- 5—seaplane carriers (no flight deck).
- 8—cruisers, 6-inch guns (*Mogami* class?).
- 40—destroyers.
- 10—submarines.

ger ship had its decks strengthened and other provisions made for rapid conversion into an auxiliary cruiser.

Siam. The 2200-ton gunboats *Dhonburi* and *Ah-idea* and four submarines, all built in Kobe, were delivered. These completed the first construction program begun in 1935, which resulted in virtually tripling the size of the navy. Bids were asked for the construction of 2 5000-ton light cruisers. Work on the fortified naval base Satahib, 170 miles south of Bangkok, was being pushed.

Spain. The most important naval battle of the Civil War occurred on the coast between Alicante and Cartagena. The Nationalists apparently presumed too much on the passive attitude of their enemy and approached unduly close in the early morning with the cruisers *Baleares*, *Canarias*, and *Almirante Cervera*. Three destroyers attacked with torpedoes and made their escape. The *Baleares*, largest of the cruisers, was sunk. Two British men-of-war in the vicinity assisted in rescue of the crew. Shortly afterwards, as the survivors were being transferred to the other two cruisers, attacks by shore-based aircraft inflicted damage on those ships. During the year the Nationalists purchased four destroyers and two submarines, all obsolescent, from Italy.

Sweden. Progress on the new construction program forecasted the preceding year was evident. For construction already underway 7,600,000 crowns was allotted and 300,000 more was made available for modernization work on the old battleship *Oscar II*. The 1000-ton destroyer *Malmo* was launched in September, the sister-ship *Karlskrona* was somewhat less far advanced; and the 2 580-ton minelaying submarines *Sjohunden* and *Sjobjornen* were by no means ready for acceptance trials.

Turkey. Four 650-ton submarines, *Atilay*, *Bati-ray*, *Salidiray*, and *Yilderay*, were under construction, 2 in Germany and 2 at Ismit under German supervision. In addition, several motor torpedo boats were building. As a result of a British loan, £6,000,000 of which was allotted for defense, it was expected that contracts for some naval building would be made with British firms but no such orders were placed. An official bulletin from Ankara some time later announced that Germany would extend a \$70,000,000 credit which would be used in part for naval building, but no public developments followed the announcement.

Union of Soviet Socialist Republics (Russia). It was learned that Russian admirals and naval experts were executed to about the same extent as were officers of the Red Army. Nonetheless, progress had been made in building up the material of the navy. More reliable information in that regard had become available than for many years. Modernization of a 23,000-ton battleship was completed in the Black Sea. The aircraft carrier *Stalin* was commissioned; laid down in 1914 as a 9000-ton cruiser, construction was suspended for many years before she was redesigned and completed as a carrier. The cruiser *Kirov* of about the same size and carrying 6 7.1-inch guns and making 33 knots was another ship laid down in 1914, construction suspended, and completed in 1938. The *Vorishilov* and two other cruisers were laid down in 1936 or later, three additional ones were being planned for. The 2900-ton destroyers *Karkov*, *Minsk*, and *Leningrad*, all fitted for carrying mines, were completed. About 12 740-ton destroyers, at least two of which were in the Black Sea, had been completed during the preceding two years. Eight

of the large *Karkov* class were building; one, the *Tashkent*, being under construction in Italy. There were over a hundred submarines operating that had been completed within 10 years. About 40 per cent were of 200 tons and the others equally divided between 600 tons and 1000 tons. Approximately 20 more were building.

United States. Navy personnel, the President, and Congress continued vigorous action to insure that the naval defenses would be adequate to the occasion; for maintenance of peace, for protection of American interests, or for defeating an enemy navy at sea. Training of personnel and development of material proceeded at an intensified rate. New construction for orderly replacement of over-age vessels and aircraft, although still somewhat slow, was pushed forward at a more satisfactory rate than in preceding years. Congress authorized an ultimate increase of 20 per cent in under-age vessels over the strength provided in the 1934 Act; and authorized a naval aircraft strength of not less than 3000 useful aircraft. The appropriation bill had carried funds for commencement of replacements for 2 battleships, 2 cruisers, 8 destroyers, and 6 submarines; and after passage of the aforementioned act a deficiency bill carried further funds for 2 battleships, 2 cruisers, and 1 aircraft carrier. See UNITED STATES under Congress.

The status of auxiliaries upon which combatant ships are so dependent for operations and mobility was but slightly improved; but appropriations were made to commence 1 minelayer, 1 large and 2 small seaplane tenders, 1 destroyer tender, 1 submarine tender, 3 tankers, 2 minesweepers, and 3 tugs.

Actual naval expenditures for fiscal year 1938 were closely estimated as \$599,000,000, including some \$25,000,000 from certain emergency funds allotted to the navy. The estimated similar figures for fiscal year 1939 were \$668,000,000, including \$25,000,000 of emergency funds. One of the principal items was \$117,000,000 for hulls, equipment, and machinery of new vessels, and \$21,000,000 for their arms and armament.

The U.S. Fleet, which constitutes the great bulk of the mobile combatant vessels of the navy continued to remain concentrated on the Pacific Coast. In the spring it held an extensive fleet problem in the Hawaii-Pacific area as a part of its training for war. The Asiatic Fleet performed its normal functions and in addition was occupied on the coast and rivers of China in protecting American life and property during the Sino-Japanese conflict. The Commander-in-Chief, Adm. H. E. Yarnell, received general official and popular approbation for settling amicably and to the best interests of the United States many vexatious military-naval questions that arose as a result of the Far Eastern conflict. An Atlantic squadron consisting of three older battleships and various cruisers, destroyers, submarines, etc., was formally organized and operated in the Atlantic.

An important law enacted regulating promotion of officer personnel, was designed to reduce losses from the active officer list, but at the same time continuing selection of the best-fitted officers to fill vacancies in the successive grades. Many forward steps were taken in the training of the Naval Reserve, an essential component of the navy.

Among the important new ships completed were the carriers *Yorktown* and *Enterprise*; the 10,000-ton, 6-inch cruisers *Savannah*, *Nashville*, *Phoenix*, *Boise*, and *Honolulu*; the 1850-ton destroyer leaders *Sampson*, *Davis*, and *Jowett*; and various destroyers and submarines. Operations of the large

new cruisers with their 15 6-inch guns in 5 triple turrets attracted widespread attention among naval officers in America and abroad. The general consensus seemed to be that they were superior to any others of the type that any power had yet produced. The two new carriers were some 5000 tons heavier than the *Ranger* but carried about the same number of planes.

Important vessels under construction or appropriated for are shown in the accompanying table.

UNITED STATES: WARSHIPS BUILDING OR APPROPRIATED FOR, 1938

Class and name	Laid down	Standard displacement	Speed
Capital Ships:			
<i>North Carolina</i>	1937	35,000	
<i>Washington</i>	1938	35,000	
<i>Alabama</i>		35,000	
<i>Indiana</i>		35,000

Venezuela. Two 625-ton gunboats *Orinoco* and *Urdanito* built in Italy had 15 knots speed, carried 1 3-inch and 2 4-inch guns. The 2 Italian minelayers *Milazzo* and *Dardanelli*, 615 tons, 15 knots, were reported as purchased and renamed *General Urdaneta* and *General Soublotte*.

Yugoslavia. The construction program includ-

ed 1 flotilla leader, 3 to 5 destroyers, 2 minelaying submarines of 600 tons, 2 small submarines, and 8 motor torpedo boats. Three of the destroyers *Zagreb* (building in France), *Ljubljana*, and *Zagrer* were nearing completion. The flotilla leader, to be the largest ship in the navy, was laid down at Split.

NAVIGATION. See SHIPBUILDING; SHIPPING; NAVAL PROGRESS; MARINE DISASTERS.

NAZARENE, CHURCH OF THE. Near the close of the 19th century, there developed a movement for the spread and conservation of scriptural holiness in organized church form in various parts of the United States. See NEW INTERNATIONAL YEAR BOOK, p. 497.

In 1937 the Church of the Nazarene had attained a membership of 143,330, with 2428 organized churches. Of these 87 churches and 3039 members were in Canada and the British Isles. There were 2885 ordained and 1272 licensed ministers. The 2313 Sunday Bible schools had a total enrollment of 277,250. To the 1686 Young People's Societies belonged 56,316 members. The 802 Junior Societies had a membership of 17,071, and the 2164 Woman's Missionary Societies a membership of 45,938.

The general board has separate departments of foreign missions, home missions and evangelism, publication, ministerial relief, church schools, and education. Foreign missionary work is carried on in the Cape Verde Islands, South Africa, Palestine, Western India, China, Japan, Mexico, Central America, Peru, and Argentina. The department of education supervises its educational institutions: Eastern Nazarene College, Wollaston, Mass.; Olivet College, Olivet, Ill.; Treveca Nazarene College, Nashville, Tenn.; Bethany-Peniel College, Bethany, Okla.; Bresee College, Hutchinson, Kans.; Pasadena College, Pasadena, Calif.; Northwestern Nazarene College, Nampa, Idaho; and Northern Bible College, Red Deer, Alberta. The department of publication issues the official periodical, the *Herald of Holiness*.

The next meeting of the quadrennial general assembly will be held in June, 1940. There are 45 assembly districts. The general superintendents in 1938 were: The Rev. J. W. Goodwin, D.D.; the Rev. R. T. Williams, D.D.; the Rev. J. B. Chapman, D.D., and the Rev. J. G. Morrison, D.D. The Rev. E. J. Fleming was general church secretary, and Mervel S. Lunn, general treasurer. Headquarters of the church are at 2923 Troost Avenue, Kansas City, Mo.

NAZISM. See AUSTRIA, BELGIUM, BRAZIL, BULGARIA, CHILE, CZECHO-SLOVAKIA, DENMARK, FINLAND, GERMANY, HUNGARY, LITHUANIA, NETHERLANDS, THE; RUMANIA, SOUTH-WEST AFRICA, SWITZERLAND, and YUGOSLAVIA under *History*; FASCISM.

NEBRASKA. Area and Population. Area, 77,520 square miles; included (1930) water, 712 square miles. Population: Apr. 1, 1930 (census), 1,377,963; July 1, 1937 (Federal estimate), 1,364,000; 1920 (census), 1,296,372. Omaha had (1930) 214,006 inhabitants; Lincoln, the capital, 75,933.

Agriculture. Acreage, production, and value of the chief crops for Nebraska, for 1938 and 1937, appear in the table on p. 504.

Finance. Nebraska's State expenditures in the year ended June 30, 1937, as reported by the U.S. Bureau of the Census, were: For maintaining and operating governmental departments, \$21,730,647 (of which \$1,157,143 was for local education and \$4,766,147 for highways); for interest on debt, \$16,974; for capital outlay, \$10,357,181. Revenues were \$30,609,315. Of these, property taxes fur-

Crop	Year	Acreage	Prod. Bu.	Value
Corn	1938	7,430,000	107,735,000	\$47,403,000
	1937	7,904,000	82,992,000	42,326,000
Wheat	1938	4,691,000	55,714,000	29,528,000
	1937	3,601,000	47,184,000	46,240,000
Hay (tame) ..	1938	1,170,000	1,709,000 *	8,374,000
	1937	1,412,000	1,514,000 *	13,172,000
Oats	1938	1,867,000	55,076,000	9,363,000
	1937	1,697,000	35,637,000	11,404,000
Potatoes ...	1938	80,000	6,240,000	3,120,000
	1937	71,000	8,165,000	4,082,000

Rye	1938	417,000	4,796,000	1,583,000
	1937	390,000	3,900,000	2,691,000

* Tons.

nished \$4,129,086; sales taxes, \$9,226,217 (including tax on gasoline, \$7,680,612); departmental earnings, \$2,045,452; sale of licenses, \$1,922,938; Federal or other grants-in-aid, \$11,320,741. Funded debt outstanding on June 30, 1937, totaled \$500,300. On an assessed valuation of \$2,174,013,251, the State levied for the year ad-valorem taxes of \$3,776,482.

Education. Inhabitants of school age (between 5 and 21 years) were reckoned, for the school year 1937-38, at 382,601. The enrollments in public schools totaled 289,916; they comprised 206,779 in the elementary group and 83,137 in high schools. Expenditures for public-school education totaled \$20,067,257. Teachers numbered 13,864. Their salaries, except for the rural group, averaged \$1110.81 a year for men and \$968.20 for women; the rural averages were \$513.61 for men and \$493.12 for women.

Political and Other Events. Governor R. L. Cochran (Dem.), who ran for a third term, was re-elected, defeating Charles J. Warner (Rep.) in a close count, while Charles W. Bryan (Independent) ran a poor third. Both Warner and Bryan proposed in their campaigns to have the minimum monthly rate of support to the elderly poor set at \$30 a month. Three Republicans and two Democrats were elected U.S. Representatives.

Among farmers in parts of the State there arose opposition to the State's projected hydroelectric works on the Platte River. Several of the officials of the Platte River Power and Irrigation District having resigned, allegedly because of "dictation from the Federal power bureau," one of their number, F. A. Buehler, headed a movement of protest to Washington. Farmers' grievance against the hydroelectric development of the Platte River was that, as they apprehended, water that they needed for irrigation would be withheld from their use. Plans were made by the State's power and irrigation districts, with the approval and expected financial aid of the PWA, to issue \$20,865,000 in bonds and buy out 10 of the State's 13 private purveyors of electricity with the proceeds.

The State Supreme Court ruled in February that the statutory moratorium on the foreclosure of mortgages, then more than five years old, was no longer valid; the emergency declared as the warrant for the moratorium, the Court held, had passed, and the act's infringement of constitutional rights had no longer the support of necessity. Inhabitants dissatisfied with the State's average payment of \$16 a month in old-age assistance to about 26,000 persons petitioned for a referendum on a proposal to legalize slot machines of a gambling character, taxed to add to income for such assistance.

Officers. The chief officers of Nebraska, serving

in 1938, were: Governor, R. L. Cochran (Dem.); Lieutenant-Governor, N. N. Parsons; Secretary of State, Harry R. Swanson; Auditor, William H. Price; Treasurer, Walter H. Jensen; Attorney-General, Richard C. Hunter; Superintendent of Public Instruction, Charles W. Taylor.

Judiciary. Supreme Court: Chief Justice, Charles A. Goss; Associate Justices, William B. Rose, Fred W. Messmore, George A. Eberly, L. B. Day, Bayard H. Payne, Edward F. Carter.

NEBRASKA, UNIVERSITY OF. A State institution of higher education in Lincoln, Neb., founded in 1869. The net enrollment for the autumn of 1938 was 6810. There were 2229 students enrolled in the summer session of 1938. The faculty numbered 375 full-time members. The permanent endowment fund amounted to \$961,580. The library contained 330,000 volumes. Chancellor, Chauncey Samuel Boucher, Ph.D.

NECROLOGY. The following list contains the names of notable persons who died in 1938. Articles will be found in this volume, in their alphabetical order, on those whose names are given below without text.

ABEL, JOHN JACOB, died May 26, 1938.

ABERCROMBIE, LASCALLE. British poet and critic; born in Ashton-upon-the-Mersey, Jan. 9, 1881; died in London, Oct. 27, 1938; professor of English Literature at London University (1929-35) and Oxford University (1935-38). His *Collected Poems* were published by the Oxford University Press in 1930, and he was the author of several plays and numerous critical works.

ADAMOWSKA, ANTOINETTE SZUMOWSKA. Polish pianist; born in Lublin, Poland, Feb. 22, 1868; died in Rumson, N. J., Aug. 18, 1938; pupil of Paderewski. She emigrated in 1894 to the United States, where she played with the Boston, Cincinnati, and New York Symphony Orchestras and other musical groups.

ADAMS, CHARLES DARWIN. American philologist and educator; born in Keene, N. H., Oct. 21, 1856; died in New Milford, Conn., May 28, 1938; professor of Greek at Dartmouth College, 1893-1927. He edited *The Classical Journal* (1908-13) and various Greek texts.

AHERN, MARY EILEEN. American librarian and editor (1896-1931) of *Public Libraries*; born near Indianapolis, Ind., about 1863; died near Atlanta, Ga., May 22, 1938. She conducted the distribution of books for the A.E.F. in France.

AIRD, SIR JOHN. Canadian banker; born in Longueuil, Que., Nov. 15, 1855; died in Toronto, Ont., Nov. 30, 1938; president (1924-37) of the Canadian Bank of Commerce, with which he was associated for sixty years; head of the Canadian Bankers' Association and the Canadian branch of the American Bankers Association. He was knighted in 1917 in recognition of his financial services during the World War.

ALAS, LEOPOLDO. Spanish politician and Rector (1933-36) of the University of Oviedo; shot by the Nationalists, 1938; former Deputy for Asturias and professor of law.

ALEXANDER, SAMUEL. English philosopher; born in Sydney, New South Wales, Jan. 6, 1859; died in Manchester, Sept. 13, 1938; professor of philosophy at the Victoria University of Manchester, 1893-1924. He wrote *Space, Time and Deity* (1920) and other philosophical works.

ALHUCEMAS, MARQUES DE, MANUEL GARCIA PRIETO. Spanish politician; born in Astorga, León, Dec. 15, 1860; died in San Sebastián, Sept. 15, 1938; premier of Spain, 1917-23. He organized the Democratic party and headed a liberal coalition until ousted by the Rivera coup in 1923.

ALLEN, FREDERICK INNES. American patent lawyer and mineralogist; born in Auburn, N. Y., June 19, 1859; died in New York, N. Y., May 17, 1938; U.S. Commissioner of Patents, 1901-07. He practised law in New York, 1907-28, and continued his study of mineralogy, announcing in 1914 that thaumasite is a decomposition product of anhydrite.

ALTAMIRANO, GEN. LUIS. Chilean politician; died in Santiago, July 25, 1938; cabinet minister, 1923-24, and head of a "governing junta" which ruled Chile from September, 1924, to January, 1925.

ALTHEIMER, BENJAMIN. American banker and philanthropist; born in Darmstadt, Ger., Mar. 6, 1850; died in New York, N. Y., Apr. 30, 1938; treasurer and a founder of the National Jewish Hospital in Denver; originator of Flag Day and Bundle Day.

ALVAREZ QUINTERO, SERAFIN. Spanish dramatist; born in Utrera, 1871; died in Madrid, Apr. 12, 1938. He collaborated with his brother, Joaquín, in writing more than 200 plays, sketches, and monologues, many of which were translated into other languages. They dealt almost exclusively with Andalusia and revived in drama the prose interludes of

the 16th century strolling player, Lope de Rueda. Among their principal works are *Las de Cain*; *Amores y amorsos*; *Puebla las mujeres*; *El amor que pasa*; *Doña Clarines*; *El genio alegre*; *Mañana del sol*; *Piñola*; *El centenario*; *El cuartito de hora*; *Las Flores*; and *Malvaloca*.

ANDERSON, ALBERT BARNES. American jurist; born near Zionsville, Ind., Feb. 10, 1857; died in Indianapolis, Ind., Apr. 27, 1938; Federal judge of the District of Indiana, 1902-25; judge of the U.S. Circuit Court of Appeals at Chicago, 1925-29. He was the presiding judge when Mayor Donn Roberts of Terre Haute and 100 politicians were convicted of election abuses and when Governor McCray of Indiana was convicted of using the mails to defraud. In 1919 he set an important precedent by granting an injunction against the United Mine Workers of America to avert a nationwide coal strike.

ANDERSON, GEORGE WESTON. American jurist; born in Acworth, N. H., Sept. 1, 1861; died in Deland, Fla., Feb. 14, 1938; judge of the U.S. Circuit Court of Appeals in Boston, 1918-32. His most famous opinion, given in 1920 in connection with the release of a group of Communists from deportation, stated that the Communist party was a lawful party and evidence that it advocated forcible overthrow of the government was insufficient.

ANDERSON, PAUL Y. American journalist; born in Knox County, Tenn., Aug. 29, 1893; died a suicide in Washington, D. C., Dec. 6, 1938; associated with the *St. Louis Post-Dispatch*, 1914-37. His articles on the Teapot Dome and Elk Hills oil leases resulted in the reopening of a Senate investigation and won him the 1928 Pulitzer Prize for reportorial work.

ANDREWS, LAUNCELOT WINCHESTER. American chemist; born in London, Ont., June 13, 1856; died in Boston, Mass., Apr. 14, 1938; professor of chemistry at the University of Iowa, 1885-1904. He formed the Andrews Chemical Works in Davenport to manufacture oxalic acid by a process he invented in 1909.

ANIDO, GEN. SEVERIANO MARTÍNEZ. Spanish soldier and politician; born May, 1862; died in Valladolid, Dec. 24, 1938; promoted to brigadier general in 1914 following his activities in Moroccan campaigns; military governor of San Sebastián and Barcelona, 1921-23; vice-premier and Minister of the Interior under Rivera. After Rivera's downfall he was exiled to France until the outbreak of the Civil War, when he returned to become Minister of Public Order under Franco.

ANNUNZIO, GABRIELE D', died Mar. 1, 1938.

ARMSTRONG, SIR HARRY GLOSTER. British diplomat; born in Belturbet, Ireland, Jan. 17, 1861; died in Port Washington, N. Y., Feb. 6, 1938; British Consul-General in New York, 1919-31; commercial adviser to the Manchester Ship Canal Co.

ASHE, CAPT. SAMUEL A' COURT. American soldier, editor, and public official; born in Wrightsville Sound, N. C., Sept. 13, 1840; died in Raleigh, N. C., Aug. 31, 1938; lawyer, and editor of the *Raleigh News and Observer* (1879-94). His publications include a *Biographical History of North Carolina* (8 vols., 1905-08) and a *History of North Carolina* (1907). He was the last surviving officer of the regular Confederate Army.

ASTON, MAJ.-GEN. SIR GEORGE (GREY). British soldier and writer; born Dec. 2, 1861; died in Salisbury, Eng., Dec. 2, 1938; retired, 1917. He wrote biographies of Nelson and Foch and a number of works on military subjects.

ASTRUC, GABRIEL. French writer and social leader; born in Bordeaux, Mar. 14, 1864; died in Paris, July 8, 1938; director of the French Radio-News Agency, 1914-38. He founded an art review, *L'Amateur*, built two theaters, and introduced a number of spectacles to Paris, including the *Ballets XLI*.

ATATURK, KEMAL, died Nov. 10, 1938.

ATHOLSTAN, FIRST BARON, OF HUNTINGDON AND EDINBURGH, HUGH GRAHAM. Canadian publisher and philanthropist; born in Atholstan, Que., July 18, 1848; died in Montreal, Jan. 28, 1938; founder and proprietor of the *Montreal Star*, 1869-1938. He contributed to hundreds of charitable organizations, especially in the field of medicine.

ATTERIDGE, HAROLD RICHARD. American librettist; born in Lake Forest, Ill., July 9, 1886; died in Lynbrook, N. Y., Jan. 14, 1938. He wrote more than 40 librettos for Shubert musical productions, including 10 yearly editions of *The Passing Show*.

AUSTEN, MAJ. ERNEST EDWARD. British naturalist; born in London, Oct. 19, 1867; died in London, Jan. 16, 1938; foremost authority on the tsetse fly. He joined the staff of the British Museum in 1889, being keeper of the Department of Entomology, 1927-32.

AVERESCU, MARSHAL ALEXANDRU. Rumanian soldier and politician; born in Bessarabia, 1859; died in Bucharest, Oct. 2, 1938; Minister of War, 1907; Chief of the Army General Staff in the war against Bulgaria, 1912-13, and in the World War; premier in 1918, 1920-21, and 1926-27; organizer and president of the People's Party. He was instrumental in the return of Carol to the throne in 1930 but later became a sharp critic of the king.

BACON, ROBERT LOW. American politician; born in Boston, Mass., July 23, 1884; died in Long Island, N. Y., Sept. 12, 1938; U.S. Congressman (Republican) from New York State, 1922-38. He advocated repeal of the 18th Amend-

ment, economy, adequate tariffs, and restricted immigration. A colonel in the army, he received the Distinguished Service Medal during the World War.

BAKLANOV, GEORGE. Russian baritone; born in St. Petersburg (now Leningrad), 1882; died in Basel, Switzerland, Dec. 6, 1938; studied in Rome. After making his debut with the Russian Imperial Opera in 1905, he sang throughout Europe and with the Boston and Chicago Opera Associations. He created the title roles in Mussorgsky's *Boris Godunov* and Rachmaninov's *Parsifal* and was famous also as *Iago* in Verdi's *Otello*.

BALCOM, HOMER GAGE. American construction engineer; born in Kendall, N. Y., in 1870; died in New York, N. Y., July 3, 1938. He designed the steel construction of some 500 buildings both in the United States and abroad, including the Empire State Building, the Chrysler Building, and Rockefeller Center in New York and government buildings in Washington.

BARCELO, ANTONIO R. Puerto Rican politician; born in Fajardo about 1868; died in San Juan, Oct. 15, 1938; member of the Senate, 1917-38, and president of that body for 13 years. He was a merchant and municipal judge at the time of the American occupation in 1898, and always championed the cause of Puerto Rican independence.

BARCLAY, ARTHUR. President of Liberia, 1904-08; born in Barbados about 1854; died in Monrovia, July 11, 1938. As president, he attempted numerous reforms and advocated co-operation between the Republic and the native tribes. Subsequently, he became a follower of Marcus Garvey.

BARNARD, GEORGE GREY, died Apr. 24, 1938.

BARR, SIR JAMES. British physician; born Sept. 25, 1849; died in London, Nov. 16, 1938; consulting physician of the Liverpool Royal Infirmary. He was well-known as a eugenicist and a crusader for English prison reform.

BARRETT, JOHN, died Oct. 17, 1938.

BARSE, GEORGE RANDOLPH. American artist; born in Detroit, Mich., July 31, 1861; died a suicide in Katonah, N. Y., Feb. 25, 1938; National Academician (1899). His works, which hang in a number of collections, are largely allegorical in nature. He executed eight panels for the Library of Congress in 1896.

BAUER, OTTO. Austrian Socialist politician; born in Vienna, 1881; died in Paris, July 4, 1938; member of Parliament, 1920-34, where he was leader of the Socialist Deputies. As Secretary for Foreign Affairs in 1918, he vainly advocated the union of Austria and Germany. He clashed frequently with Chancellor Dollfuss, who exiled him in 1934.

BAYLY, ADMIRAL SIR LEWIS. British naval officer; born Sept. 28, 1857; died in London, May 16, 1938; Commander-in-Chief of the Western Approaches, 1915-19; retired in 1919 after 50 years of service. Considered an outstanding contributor to Anglo-American friendship, he was decorated by the United States as well as Great Britain, France, and Italy.

BEACH, JOHN KIMBERLY. American jurist; born in New Haven, Conn., Oct. 18, 1855; died in New Haven, July 6, 1938; professor of commercial law and admiralty at Yale, 1908-23; Associate Justice of the Connecticut Supreme Court of Errors, 1912-25. He was considered an authority on patent law.

BÉDIER, (CHARLES MARIE) JOSEPH, died Aug. 30, 1938.

BEER, EDWIN. American urologist; born in New York, N. Y., Mar. 28, 1876; died in New York, Aug. 13, 1938; chief of the urological service of the Mount Sinai Hospital, New York. His method of treating tumors of the bladder by high-frequency current was generally adopted. He received the first gold medal of the International Society of Urology, Brussels, in 1927, and other awards.

BENTLEY, HENRY. American civic leader; born in Ludlow, Ky., July 25, 1880; died in Cincinnati, O., Oct. 21, 1938; Cincinnati lawyer, 1903-38; head of the Cincinnati City Charter Committee (1924-35) and the Citizen party, which fought the spoils system in politics. Through the City Charter Committee, he originated the proportional representation system and other municipal reforms, which were widely adopted.

BERMAN, ROBERT. American economist; born in Quincy, Mass., June 9, 1897; died in Washington, D. C., May 31, 1938; professor of economics at the University of Illinois, 1921-33; economic analyst in the Bureau of Labor Statistics, 1934-36; senior labor economist in the Division of Social Research of the WPA, 1936-38. His writings were in the field of labor disputes and insurance, on which he was considered an authority.

BERTON, SAMUEL READING. American banker and economics expert; born in Port Gibson, Miss., Feb. 26, 1865; died in Oyster Bay, N. Y., June 30, 1938; established (1894) and headed the international banking firm of Bertson & Storrs, which was succeeded by Bertson, Griscom & Co., Inc. He was a leader in war relief work, served on diplomatic and economic missions, and headed several international development projects in Central Europe.

BEYERS, FREDRIK WILLIAM. South African politician; born in Paarl, Cape Province, Oct. 15, 1867; died in Cape Town, Sept. 15, 1938; member of the Transvaal Legislative Assembly, 1907-10; member of the Parliament of the Union of South Africa, 1918-29; Minister of Mines and Indus-

tries, 1924-29; Justice of Appeal of the Union Supreme Court, 1932-37. A Witwatersrand pioneer, he settled in Johannesburg in 1888, where he practised law. As a Cabinet Minister, he negotiated a trade treaty which gave German goods preferences equal to those of British goods.

BIGELOW, EDWARD FULLER. American naturalist and writer; born in Colchester, Conn., Jan. 14, 1860; died in Greenwich, Conn., July 13, 1938; founder and curator of the Bruce Museum in Greenwich, 1912-38; naturalist of the Boy Scouts and later of the Camp Fire Girls, and lecturer in various schools and institutions. He founded (1908) and edited *A Guide to Nature* and served in an editorial capacity with *St. Nicholas Magazine*, *Popular Science*, *Boys' Life*, etc. His publications include *Bigelow's Descriptive Plant Analysis*, *How Nature Should Be Taught*, and *The Spirit of Nature Study*. He conducted natural history excursions for more than 100,000 boys and girls.

BINDING, RUDOLF G. German writer; born in Basel, Switzerland, Aug. 13, 1867; died in Starnberg Lake, Bavaria, Aug. 4, 1938. Under the influence of d'Annunzio, he abandoned medicine for literature, producing novels, poems, essays, and a biography of the sculptor, Kolbe. His *Antwort eines Deutschen an die Welt* (1933) was a political essay which sought to justify Nazism.

BIRD, ROBERT MONTGOMERY. American chemist and educator; born in Petersburg, Va., June 13, 1867; died June 4, 1938; professor of chemistry at the University of Virginia, 1907-38. He wrote *Chemical Science Reader* (1911), *Typical Reactions of General Chemistry* (1912), *Notes on Organic Chemistry* (1923), etc.

BLACKWELL, ROBERT EMORY. American educator; born in Warrenton, Pa., Nov. 15, 1854; died in Atlanta, Ga., July 7, 1938; professor of languages (1876-1902) and president (1902-38) of Randolph-Macon College, Ashland, Va.

BLACKWOOD, REAR ADMIRAL NORMAN JEROME. American naval officer and surgeon; born in Philadelphia, Pa., Jan. 3, 1866; died in Santa Clara, Calif., Apr. 1, 1938. After the World War, during which he commanded the U.S.S. *Solace* and U.S.S. *Mercy*, he was in charge of naval hospitals at Boston (1918-23), New York (1923-27), and Puget Sound, Wash. Retiring from the Navy in 1930, he became medical director of Provident Hospital, Chicago.

BLEDSE, BENJAMIN FRANKLIN. American jurist; born in San Bernardino, Calif., Feb. 8, 1874; died near Crestline, Calif., Oct. 30, 1938; judge of the Superior Court of San Bernardino County, 1900-14; Federal judge for the Southern District of California, 1914-25. Among the trials at which he presided was the litigation between the U.S. government and the Southern Pacific Railway involving oil lands. He was also a railway executive, a Masonic leader, and an official in various civic organizations.

BLOOMFIELD, MEYER. American vocational expert; born in Bucharest, Rumania, Feb. 11, 1878; died in New York, N. Y., Mar. 12, 1938; founder and director (1901-09) of the Civic Service House, Boston; head of the Boston Vocational Bureau, 1909-17; founder and publisher of *Industrial Relations and Bloomfield's Labor Digest*, and author of works on vocational guidance; vocational adviser at the College of the City of New York (1929-35) and Hunter College (1935-38). As vocational expert, he served the government in Puerto Rico (1911), with the Bureau of Indian Affairs (1912), with the Shipping Board's Emergency Fleet Corporation (1918), and as observer in Soviet Russia (1922).

BOAS, ISMAR (ISIDOR). German physician; born in Exin, Posen, Mar. 28, 1858; died in Vienna, Mar. 27, 1938; founder in Berlin (1882) of the first clinic for treatment of diseases of the stomach and intestines; professor of gastroenterology at the University of Berlin after 1907. An authority on stomach ills, he conducted important researches in methodology, diagnosis, and therapeutics. His textbooks were translated into many languages.

BOGGS, THOMAS RICHMOND. American diagnostician and educator; born in Memphis, Tenn., Oct. 2, 1875; died in Fredericksburg, Va., Sept. 2, 1938; member of the staff of Johns Hopkins Hospital, 1901-38; associate professor at Johns Hopkins University, 1911-31; physician-in-chief of Baltimore City Hospital, 1911-38; president of the Association of American Physicians, 1937. During the World War he became a colonel in the Medical Reserve Corps, having served as chief medical officer of Base Hospital 18 in France and medical consultant of the A.E.F. Air Service.

BONE, WILLIAM ARTHUR. English chemist; born in Stockton-on-Tees, Mar. 19, 1871; died in London, June 12, 1938; professor of fuel industries at Leeds University (1905-12) and of chemical technology at London University (1912-36). In 1913 the Franklin Institute, Philadelphia, awarded him the Potts gold medal for his invention of the Bonecourt system of incandescent surface combustion and radiophragm heating, which he applied to industrial heating appliances. For his work in fuels he received medals from the Royal Society of Arts, the Institute of Fuel, the Society of Chemical Industry, and the Royal Society. He wrote extensively on fuel and combustion research and served on government committees for the study of fuel problems.

BORCHARDT, LUDWIG. German Egyptologist; born in Berlin, Oct. 5, 1863; died in Berlin, Sept. 7(?), 1938; founder

and for 23 years director of the German Institute for Egyptology in Cairo. He wrote widely on Egyptian architecture.

BOURDON, GEORGES (HENRI). French journalist and playwright; born in Vouziers, Jan. 5, 1868; died in Paris, Nov. 9, 1938; general secretary of the *Syndicat des Journalistes*.

BOWCHER, FRANK. British sculptor and engraver; born 1868(?); died in London, Dec. 6, 1938. His works included portraits in marble of the royal family and a large number of medals.

BOYLAN, JOHN JOSEPH. American politician; born in New York, N. Y., Sept. 20, 1878; died in New York, Oct. 5, 1938; member of Tammany Hall; Assemblyman (1910-12) and Senator (1913-22) in the New York State Legislature; U.S. Representative (Democrat) from New York State from 1923 until his death. He was interested in penal reform, tax legislation, and the repeal of the 18th Amendment, and was the author of New York's Habit-Forming Drug Law, the first State law of its kind.

BOYLE, JAMES ERNEST. American economist; born in Boyle, Kans., Nov. 22, 1873; died in Ithaca, N. Y., Sept. 18, 1938; professor of economics at the University of North Dakota, 1904-16; professor of rural economy at Cornell University, 1917-36. He believed in a slow and orderly approach to the solution of farm problems, a subject on which he wrote a number of books.

BRACE, CHARLES LORING. American philanthropist; died in Santa Barbara, Calif., May 24, 1938; retired, 1927. See Vol. III, p. 637.

BRADFORD, MAY CARROLL CRAIG (MRS. EDWARD TAYLOR BRADFORD). American educator; born in New York, N. Y., about 1860; died in Denver, Colo., Jan. 15, 1938; superintendent of schools in Denver, 1909-12; Colorado State superintendent of public instruction and librarian for six terms; executive committee member of the World Federation of Education Associations (1925); a life director and president (1917-18) of the National Education Association. She was the first woman to be elected to a State office in Colorado.

BRIDGES, CALVIN BLACKMAN. American geneticist; born in Schuyler Falls, N. Y., Jan. 11, 1889; died in Los Angeles, Calif., Dec. 27, 1938; staff member of the Carnegie Institution for 19 years and subsequently of the California Institute of Technology. Starting his research work as assistant to Thomas Hunt Morgan of Columbia, he became a specialist on the chromosome theory of heredity and sex determination, working mainly with the fruit-fly, *Drosophila*. He wrote *The Mechanism of Mendelian Heredity* (1915, 1923); *Contributions to the Genetics of Drosophila Melanogaster* (with Morgan, 1919, 1923); *Genetics of Drosophila* (1925), etc.

BRIGMAN, BENNETT MATTINGLY. American engineer and educator; born in Louisville, Ky., Feb. 25, 1881; died in Louisville, Feb. 8, 1938. He organized the School of Engineering (1923) and the Speed Scientific School (1924) at the University of Louisville, with which he was associated from 1916 until his death.

BROOKS, WILLIAM PENN. American agriculturist; born in South Scituate (Norwell), Mass., Nov. 19, 1851; died in Springfield, Mass., Mar. 8, 1938; professor of the Imperial College of Agriculture, Sapporo, Japan, 1877-88, and at Massachusetts State College, 1889-1927. He was decorated with the Japanese Order of the Rising Sun for his work in developing the Imperial College of Agriculture.

BROOMHALL, GEORGE JAMES SHORT. British wheat expert and grain broker; born in Madras, India, about 1856; died in Liverpool, June 23, 1938; founder of the daily *Corn Trade News* (1888) and *Milling* (1891). The statistics which he began to compile in 1888 established Liverpool futures as the world barometer of wheat values.

BROUSSEAU, KATE. American psychologist; born in Ypsilanti, Mich.; died July 9, 1938; professor of psychology at Mills College, 1907-28, and subsequently director of the psychological service of the Los Angeles Institute of Family Relations. During the World War, she served with the French Army as director of *foyers du soldat* on the Lorraine front and with the French Army of Occupation in Germany, being decorated by the French government. She wrote *L'Education des Nègres aux Etats-Unis* and *Mongolism*.

BROWN, CARROLL N. American classical scholar and archaeologist; born in Abington, Mass., about 1870; died in New York, N. Y., Dec. 15, 1938; professor of classical languages and literatures at the College of the City of New York (1905-38); author of a modern Greek-English dictionary (1924), a number of translations, and articles on archaeology; former president of the American Hellenic Society. He was decorated by Greece for his championship of the cause of modern Greek freedom.

BROWN, ERNEST WILLIAM, died July 22, 1938.

BROWNIE, JAMES THOMAS. British trade union leader; born in Port Glasgow, Scotland, June 23, 1865; died at sea, Oct. 13, 1938; president of the Amalgamated Engineering Union, 1913-30.

BRUNOT, FERDINAND. French philologist; born in Saint-Dié, Nov. 6, 1860; died in Paris, Jan. 30, 1938; professor at the University of Paris, 1900-36; member of the In-

stitute of France and the Amsterdam, Brussels, and Copenhagen Academies. He gave courses at the Sorbonne and founded and directed the vacation courses of the *Alliance Française* in Paris, doing much to reform French educational methods. Among his works are *Histoire de la langue française des origines à 1900* (15 vols., from 1902), *La Pensée et la langue* (1922), and *La Langue post-classique* (1932).

BRYANT, REAR ADM. SAMUEL WOOD. American naval officer; born in Washington, Pa., May 24, 1877; died in Asheville, N. C., Nov. 4, 1938; advanced to rear admiral in 1933 and retired four years later. During the World War he received the Navy Cross, having commanded a torpedo boat destroyer and served on the staff of the destroyer flotillas. He was commander of the battleship division of the U.S. Fleet, 1934-35.

BUKHARIN, NIKOLAI, died Mar. 14, 1938.

BULLEN, HENRY LEWIS. American printer; born in Ballarat, Victoria, about 1858; died in Elmhurst, N. Y., Apr. 27, 1938; manager of the advertising and engineering departments of the American Type Founders Co., which he joined in 1892; designer of much equipment now in general use. An international authority on printing, engraving, and binding, and a prolific writer, he revived and made popular old masterpieces of type design. He founded the Typographic Library and Museum, now part of the Columbia University library, which comprises 80,000 volumes and thousands of other items.

BURNET, SIR JOHN JAMES. British architect; born in Glasgow, 1857; died in Edinburgh, July 2, 1938; Royal Academician (1925); medalist of the Royal Institute of British Architecture and the Paris Salon. His many public, ecclesiastical, and domestic structures include the Royal Institute of Fine Arts and the Athenæum in Glasgow, the Institute of Chemistry, Second Church of Christ Scientist, Adelaide House, and Vigo House in London.

BURNHAM, CHARLES. American theatrical producer; born in New York, N. Y., about 1853; died in Winter Park, Fla., Jan. 19, 1938. Starting as an aide to Augustin Daly, he became a theater manager in 1873, managing the Star Theater (1886-95) and Wallack's (1896-1915) for Theodore Moss. After the death of Moss in 1901, he produced, at the Wallack, such successes as *The Squaw Man*, *The County Chairman*, *The Sultan of Sulu*, and *Alias Jimmy Valentine*. He brought the first New York production of *The Mikado* from Europe in 1885.

BURNS, CHARLES WESLEY. American Methodist Episcopal bishop in the Helena Area (1920-24), the San Francisco Area (1924-32), and the Boston Area (1932-38); born in Willow Grove, Pa., May 28, 1874; died in Portland, Me., Jan. 19, 1938.

BURR, GEORGE LINCOLN. American historian; born in Oranget, N. Y., Jan. 30, 1857; died in Ithaca, N. Y., June 27, 1938; member of the faculty of Cornell University (1888-1922), where he occupied the chair of medieval history after 1892; editor of the *American Historical Review* (1905-16) and the *Century Historical Series*; president of the American Historical Association, 1916-17. He was historical expert on the Venezuelan Boundary Commission (1896-97) and was considered an authority on witchcraft, publishing *The Literature of Witchcraft* (1890), *Narratives of the Witchcraft Cases, 1648-1706* (1913), etc.

BURRELL, MARTIN. Canadian politician; born in Farington, Berks, England, Oct. 15, 1858; died in Ottawa, Ont., Mar. 20, 1938; emigrated to Canada in 1883; Conservative member of the House of Commons for Yale-Cariboo after 1908; Minister of Agriculture, 1911-17; Secretary of State and Minister of Mines, 1917-19; Parliamentary Librarian, 1919-38.

BUTLER, MARION. American politician; died in Takoma Park, Md., June 3, 1938. See Vol. IV, p. 220.

BUTLER, SIR (SPENCER) HARCOURT. British administrator in India; born Aug. 1, 1869; died in London, Mar. 2, 1938; governor of the United Provinces (1921-23) and of Burma (1923-27); chairman of the Indian States Committee (1928-29). He spent 40 years in the Indian service and his reports were considered standard works on Indian life.

BYFORD, HENRY TURMAN. American gynecologist; born in Evansville, Ind., Nov. 12, 1853; died in Chicago, Ill., June 5, 1938; professor at the University of Illinois Medical School, 1892-1914; consulting gynecologist of St. Luke's and Chicago Lying-in Hospitals; honorary president of the International Congress of Gynecology, 1896. He conducted extensive research in the field of anemia in women, cancer, eczema, and sugar. He was the author of *Manual of Gynecology* and joint author of *Diseases of Women, American Text Book of Gynecology*, etc.

CARANA, OLIVER, JR. American industrialist; born in Island Pond, Vt., Feb. 9, 1865; died in Buffalo, N. Y., Jan. 21, 1938; organizer (1885) and president of the Buffalo Specialty Co., subsequently renamed the Liquid Veneer Corp.; chairman of the board of the Liberty Bank of Buffalo after 1915; political leader in upstate New York.

CABOT, ELIOT. American actor; born in Boston, Mass., June 22, 1899; died in New York, N. Y., June 17, 1938. He made his debut in *Six Characters in Search of an Author* in 1922, played leading roles for the theater guild

between 1928 and 1934, and scored in *The Great Gatsby* (1926), *Coquette* (1927), etc.

CALLENDER, SIR THOMAS OCTAVIUS. British industrialist; born in Glasgow, Scot., Apr. 9, 1855; died in Bidborough Court, Kent, Eng., Dec. 2, 1938; founder and director for 50 years of Callender's Cable & Construction Co. He introduced electric street lights in London and wired the first important public building there.

CAMPBELL, WILLIAM WALLACE, died June 14, 1938.

CAPEK, KAREL, died Dec. 25, 1938.

CAPOTOSTI, LUIGI, CARDINAL. Italian Roman Catholic prelate; born in Montegiberto, Feb. 9(?), 1863; died in Vatican City, Feb. 16, 1938; created Cardinal-Priest of St. Pierre es Liens in 1926; chief of the Apostolic Datary after 1933.

CAPP, JOHN ALLEN. American engineer; born in Philadelphia, Pa., Jan. 14, 1870; died in Schenectady, N. Y., Jan. 6, 1938; organizer and director (1897-1927) of the testing laboratory and engineer of materials (1927-38) for the General Electric Co.; a founder of the American Standards Association.

CAR, STANISLAW. Polish politician and lawyer; born in Warsaw, 1882; died in Warsaw, June 17, 1938; Minister of Justice, 1926, 1929, and 1930; member after 1933 and president after 1935 of the Sejm (Diet); editor and publisher of the law review, *Paletta*, after 1923. Closely associated with Pilsudski, he drafted the 1935 constitution, which transformed Poland from a democracy to a quasi-dictatorship.

CARDOZO, BENJAMIN NATHAN, died July 9, 1938.

CAREW, JAMES. American actor; born in Goshen, Ind., Feb. 5, 1876; died in London, Eng., Apr. 4, 1938; star of a number of London successes, including *Madame X*, *Where the Rainbow Ends*, *The Jew*, *Savitr*, and *The Apple Cart*; film and radio actor. He married Ellen Terry in 1907, being separated from her in 1913.

CARRÉ, ALBERT. French theatrical producer and playwright; born in Strasbourg, June 22, 1852; died in Paris, Dec. 12, 1938; director of the Opéra Comique, 1898-1914; lieutenant-colonel during the World War; director of the Comédie Française, 1919-35. He was noted for his excellent staging.

CARRINGTON, EDWARD CODRINGTON. American business man and corporation lawyer; born in Washington, D. C., Apr. 10, 1872; died in Baltimore, Md., Dec. 30, 1938; president of the Hudson River Navigation Corp. and the Americana Corp. He was a political leader in Maryland until 1916, when he moved to New York City.

CARSE, DAVID BRADLEY. American consulting engineer; born in Jeffersonville, Ind., Dec. 1, 1862; died in West Cornwall, Conn., Oct. 30, 1938; head of D. B. Carse & Co., Inc., of New York, the American Reduction Co., and Superior Sign Co. Until his retirement in 1923 he examined for bankers many of the nation's outstanding industrial concerns and developed several New England water power companies.

CAULK, JOHN ROBERTS. American urologist; born in McDaniel, Md., Oct. 30, 1881; died in St. Louis, Mo., Oct. 13, 1938; connected with Washington University in St. Louis as chief of the clinic after 1915 and professor after 1923; president of the American Urological Association (1925) and the American Association of Genitourinary Surgeons (1933). His important innovations in surgical practice included ultra-violet-ray treatment of tuberculosis of the bladder, simplified kidney surgery, an operation for the relief of megaloureter, the cautery punch operation for prostatic growths, and the infiltration method of anesthetizing the neck of the bladder.

CAVENDISH, VICTOR CHRISTIAN WILLIAM. See DEVONSHIRE.

CELISO, COUNT AFFONSO. Brazilian writer and historian; born in Ouro-Preto, Mar. 31, 1860; died in Rio de Janeiro, July 12, 1938; a noted lecturer and author of *Vultos e fatos* (4th ed., 1896), *Porque me ufano do meu país* (5th ed., 1912), *I corsos* (1926), etc. He was for a time member of the Brazilian Chamber of Deputies and dean of the faculty of law of Rio de Janeiro.

CHADBOURNE, THOMAS L. (LINCOLN), died June 15, 1938.

CHALIAPIN, FEDOR IVANOVITCH, died Apr. 12, 1938.

CHALMERS, FIRST BARON OF NORTHAM, ROBERT. British civil servant and Orientalist; born Aug. 18, 1858; died in Oxford, Nov. 17, 1938; governor of Ceylon, 1913-16; joint secretary of the Treasury, 1916-19; president of the Royal Asiatic Society, 1922-25; an authority on the Pali language and a financial expert.

CHALMERS, WILLIAM JAMES. American manufacturer; born in Chicago, Ill., July 10, 1852; died in Chicago, Dec. 10, 1938; engaged in machinery manufacturing with Fraser and Chalmers, 1872-1901, Allis-Chalmers Co., 1901-06, and Chalmers and Williams after 1911. He was a noted philanthropist and was decorated by Belgium for raising relief funds during the World War.

CHEKHOV, MIKHAIL A. Russian commissar of Agriculture (1934-38); born 1891; convicted of treason and executed in Moscow, Mar. 14(?), 1938.

CHILDS, WILLIAM. American restaurateur; born near Basking Ridge, N. J., about 1866; died in Bernardsville, N. J., May 22, 1938. With his brother he opened in New

York in 1889 the first of a chain of more than 100 restaurants in 30 cities, which reached a value of \$37,000,000. The Childs family lost control of the business in 1929.

CHKALOV, VALERI. Soviet Russian aviator; born about 1904; died in a plane crash near Moscow, Dec. 15, 1938; one of three aviators who made a non-stop flight of nearly 5300 miles across the North Pole from Moscow to Vancouver, Wash. (1937).

CHRYSTOMOS, ARCHBISHOP. Primate of the Greek Orthodox Church after 1911; born in Thrace, 1868; died in Athens, Oct. 22, 1938. He served also as Metropolitan of Corinth and professor of ecclesiastical history at the University of Athens.

CLAFLIN, JOHN. American merchant; born in Brooklyn, N. Y., July 24, 1850; died in Morristown, N. J., June 11, 1938. Upon his father's death in 1885, he acquired control of H. B. Claflin & Co., then one of New York's largest wholesale dry goods houses, and in 1900 he organized the Associated Merchants' Co. to control a number of retail stores as outlets. The Associated Merchants' Co. merged with affiliates to form under his presidency the United Dry Goods Co., which was one of the most important holding companies in the country until it went into bankruptcy in 1914.

CLAGHORN, KATE HOLLADAY. American sociologist and writer; born in Aurora, Ill.; died in Greenwich, Conn., Mar. 22, 1938; instructor at the New York School of Philanthropy, now the New York School of Social Work, 1912-32.

CLARKE, JOHN BATES, died Mar. 21, 1938.

CLARKE, WILLIAM EAGLE. British ornithologist; born in Leeds, Eng., Mar. 16, 1853; died in Edinburgh, Scot., May 12, 1938; keeper of the natural history department of the Royal Scottish Museum, 1906-21; president of the British Ornithologists' Union, 1917-20; editor of *Annals of Scottish Natural History* and *Saunders' British Birds*; author of *Studies in Bird Migration* (1912), etc.

COAKER, SIR WILLIAM FORD. Newfoundland labor leader; born in St. John's, Newfoundland, Oct. 19, 1871; died in Boston, Mass., Oct. 29, 1938; organizer and president (1908-38) of the Fishermen's Protective Union; member of Parliament, 1913-24; Minister of Marine and Fisheries (1919-23) and without Portfolio (1928-32).

COCKE, MATTY L. American educator; born Oct. 5, 1855; died at Hollins College, Va., Aug. 15, 1938; president of Hollins College, 1901-33.

CODREANU, CORNELIU ZELEA. Rumanian Fascist leader; born about 1899; died near Bucharest, Nov. 30, 1938; organizer (1927) of the Fascist, anti-Semitic Legion of the Archangel Michael, later renamed the Iron Guard. He was accused but acquitted of the assassination of Premier Duca in 1933, and the Iron Guard was dissolved though it continued its activities as the All-for-the-Fatherland party. A bitter enemy of Mme. Lupescu, he exerted considerable influence on national policy until King Carol's assumption of dictatorial powers in 1938. Charged with a revolutionary plot, he was imprisoned in May and was shot on November 30 with 13 other political prisoners, allegedly while attempting to escape.

COFFMAN, LOTUS DELTA, died Sept. 22, 1938.

COLLINS, GUY N. American botanist; born in Mertensia, N. Y., Aug. 9, 1872; died in Lanham, Md., Aug. 14, 1938; associated with the Bureau of Plant Industry of the U.S. Department of Agriculture after 1900, becoming senior botanist in 1924. He introduced into the United States the avocado, Mexican acala cotton, and many successful types of hybrid corn.

COMPTON, GEORGE BROKAW. American lawyer; born in Ovid, N. Y., Dec. 21, 1883; died in New York, N. Y., Mar. 24, 1938; senior member of Compton, Dillon, & Clark; a major in the World War. Active in New York City Republican politics, he managed the campaign for adoption of the city charter in 1936.

CONNAUGHT, PRINCE ARTHUR OF. British soldier and diplomat, only son of the Duke of Connaught and grandson of Queen Victoria; born in Windsor, Eng., Jan. 13, 1883; died in London, Sept. 12, 1938; colonel-in-chief of the Royal Scots Greys (retired, 1920); High Commissioner for South Africa, 1920-23. He was mentioned in dispatches for his World War duties and served as an unofficial ambassador on diplomatic missions.

CONRAD, CON (CONRAD K. DOBER). American song writer; born in New York, N. Y., about 1893; died in Van Nuys, Calif., Sept. 28, 1938; wrote scores for musicals and motion-pictures. Among his compositions were "Margie," "Barney Google," and "The Continental," for which he received with Herb Magidson the Motion-Picture Academy Award for the best song of 1935.

COOK, PHILIP. American Protestant Episcopal bishop in Delaware after 1920; born in Kansas City, Mo., July 4, 1875; died in Baltimore, Md., Mar. 25, 1938; president of the National Council of the Church, 1934-37.

COOPER, DEXTER PARSHALL. American hydraulic engineer; born in Rushford, Minn., July 10, 1880; died in Boston, Mass., Feb. 2, 1938. With his brother he designed and constructed hydroelectric power projects valued at more than \$250,000,000, including the Wilson dam and power project at Muscle Shoals. He conceived the plan for the Passamaquoddy power dam in Maine.

COOTE, BERT. British comedian of stage and screen; born in London, 1868; died in London, Sept. 2, 1938. Beginning his career at the age of five, he starred in *The Windmill Man* (1921) and many other successes.

COOVER, JOHN EDGAR. American psychologist; born in Remington, Ind., Mar. 16, 1872; died in Palo Alto, Calif., Feb. 19, 1938; member of the faculty of Leland Stanford University after 1910. He wrote *Metapsychics and the Incredible of Psychologists* (1927), etc.

COPELAND, ROYAL S (AMUEL), died June 17, 1938.

CORNISH, EDWARD JOEL. American industrialist; born in Sidney, Ia., Dec. 15, 1861; died in New York, N. Y., May 3, 1938; president of the National Lead Co., 1916-33; member of the National Industrial Conference Board.

COSTER, FRANK) DONALD. See MUSICA, PHILIP.

COVADONGA, DON ALFONSO, COUNT OF. Former Prince of the Asturias and heir to the Spanish throne; born in Madrid, May 10, 1907; died in Miami, Fla., Sept. 6, 1938. Although handicapped by poor health, he joined the King's Regiment and commanded a flying squadron during the Rif war in Morocco (1925). He renounced his right to the throne when he married a Cuban commoner in 1933. His death was caused by a hemorrhage after an automobile accident, having suffered from hemophilia.

CRAIG, JOE. American politician; born in Fairfield, Ia., Dec. 24, 1877; died in Los Angeles, Calif., Mar. 2, 1938; U.S. Representative (Republican) from California, 1927-33. He introduced a record total of 533 bills during the second session of the 72d Congress (1933).

CRICHTON-BROWN, SIR JAMES, died Jan. 31, 1938.

CROFT, MAJ. GEN. EDWARD. American soldier; born in Greenville, S. C., July 11, 1875; died in Greenville, Jan. 28, 1938; Chief of Infantry, 1933-37; retired 1937. During the World War he commanded the 2d Battalion, 26th Infantry, A.E.F., in France.

CYRIL, VLADIMIROVITCH, died Oct. 12, 1938.

DAGGETT, BRIG. GEN. AARON SIMON. American soldier; born in Greene Corner, Me., June 14, 1837; died in West Roxbury, Mass., May 14, 1938; retired 1905. He served throughout the Civil War in the 6th Corps, Army of the Potomac, in the Spanish-American War, the Philippines, and the Boxer Rebellion in China.

DALEY, GEORGE HERBERT. American journalist; born in New York, N. Y., Dec. 26, 1869; died in New York, Feb. 8, 1938; sports editor of the *New York Tribune* (1900-16), *World* (1916-31), and *Herald-Tribune* (1931-38). He introduced the All-Star football game to New York.

D'ANNUNZIO, GABRIELE. See ANNUNZIO, GABRIELE D'.

D'ARCY, CHARLES FREDERICK. Irish Protestant Primate; born in Dublin, Jan. 2, 1859; died in Armagh, Northern Ireland, Feb. 1, 1938; Archbishop of Dublin, 1919-20; Archbishop of Armagh and Primate of the Church of Ireland, 1920-38; noted lecturer and author on ethical subjects.

DARROW, CLARENCE, died Mar. 13, 1938.

DART, HARRY GRANT. American cartoonist; born in Williamsport, Pa., about 1869; died in Laconia, N. H., Nov. 15, 1938; on the staff of the *New York World, Herald, and Recorder* and the *Denver Times*. He originated "The Joy Family" in the *New York Tribune* and "Mr. Home, Sweet Home" in the *World*.

DAVIS, BRIG. GEN. MILTON FENNIMORE. American soldier and educator; born in Mantorville, Minn., Nov. 15, 1864; died in Cornwall-on-Hudson, N. Y., May 31, 1938; professor and commandant (1909-22), superintendent (1922-36), and president (1936-38) of the New York Military Academy. He retired from the army as a major in 1909, having served in the Spanish-American War and in the Philippines, but during the World War was colonel of the Signal Corps and chief of training in the Air Service. He won the Distinguished Service Medal and was commissioned brigadier general in the Air Corps Reserve. He was also a mountain climber and explorer of note.

DAWSON, SIR PHILIP. British electrical engineer; born January, 1867; died in Berlin, Ger., Sept. 24, 1938; conservative member of Parliament after 1921; recipient of various engineering awards. He served the Belgian and Egyptian governments, as well as his own, in an advisory capacity. He wrote *Germany's Industrial Revival* (1926) and textbooks on power supply.

DAY, JOHN GODFREY FITZMAURICE. Irish Protestant Primate; born May 12, 1874; died in Dublin, Sept. 26, 1938; consecrated Primate of All Ireland in April, 1938.

DAY, WILLIAM BAKER. American scientist and educator; born in Peru, Ill., Feb. 15, 1871; died in Chicago, Ill., Dec. 10, 1938; professor after 1898 and dean after 1919 of the University of Illinois School of Pharmacy; author of *Introduction to Plant Histology* (1908).

DAYTON, REAR ADMIRAL JAMES HENRY. American naval officer; died in South Bend, Ind., Nov. 15, 1938. See VOL. VI, p. 548.

DAZEY, CHARLES TURNER. American playwright; born in Lima, O., Aug. 13, 1855; died in Quincy, Ill., Feb. 9, 1938. His best-known work was *In Old Kentucky*, a melodrama which played 26 consecutive seasons on the road and appeared in three cinema versions.

DEARBORN, GEORGE VAN NESS. American neuropsychiatrist, born in Nashua, N. H., Aug. 15, 1869; died in New

York, N. Y., Dec. 12, 1938; professor at Tufts College, 1904-16; founder of the psychological research laboratory of the U.S. Veterans' Bureau, with which he was associated from 1921 to 1937. He was one of the first to explore scientifically the relationship between emotion and blood pressure.

DE FOREST, HENRY WHEELER, died May 28, 1938.

DEGOUTTE, GEN. JEAN MARIE JOSEPH, died Oct. 31, 1938.

DE KAY, JOHN WESLEY, American promoter and author; born in New Hampton, Ia., July 20, 1872; died in Takoma Park, Md., Oct. 4, 1938. He started in the newspaper business at the age of 19, but in 1899 went to Mexico, where he organized and headed (1902-13) the Mexican Packing Co., valued at \$25,500,000. Indicted in 1913 in connection with the failure of the Atlantic National Bank of Providence, he was acquitted in 1925. Meanwhile, he took refuge in Europe, where he was accused of other fraudulent schemes, some involving millions of dollars. The charges were gradually withdrawn. He wrote some twenty books, including *Judas*, a play, in which Bernhardt appeared in London.

DENBY, CHARLES, American diplomat; born in Evansville, Ind., Nov. 14, 1861; died in Washington, D. C., Feb. 14, 1938; consul-general at Shanghai (1907-09) and Vienna (1909-15). He held various posts in China, 1893-1905, 1918, and 1922-23, heading the provisional government of the Tientsin district after the Boxer Rebellion.

DENHAM, SIR EDWARD BRANDIS, British colonial administrator; born in 1876; died in Kingston, Jamaica, June 2, 1938; colonial secretary of Mauritius (1920-23) and Kenya (1923-28), governor of Gambia (1928-30) and British Guiana (1930-34), and governor-in-chief of Jamaica (1934-38).

DENNIS, COL. JOHN STOUGHTON, Canadian engineer and soldier; born in Toronto, Ont., 1856; died in Victoria, B. C., Nov. 26, 1938; chief engineer of the Bassano Dam and irrigation project of the Canadian Pacific Railway (1902) and subsequently head of the Railway's department of colonization for the Calgary area, where he was known as "Calgary Jack." Up to 1917, he recruited 40,000 World War volunteers in New York and Chicago. He was decorated for his war work with the Canadian Brigade in Russia and received the Kennedy gold medal of the Engineering Institute of Canada.

DENT, STANLEY HUBERT, American lawyer and politician; born in Eufaula, Ala., Aug. 16, 1869; died in Montgomery, Ala., Oct. 6, 1938; U.S. Representative (Democrat) from Alabama, 1909-21; lawyer in Eufaula, until 1899, and Montgomery. He was the chairman of the House Committee on Military Affairs throughout the World War, led the anti-prohibition movement in Alabama, and re-codified the laws of his State.

DERRICK, CALVIN, American penologist; born in Buffalo, N. Y., May 16, 1870; died in Jamesburg, N. J., Nov. 13, 1938; superintendent of the New Jersey State Home for Boys, 1921-23 and 1927-38, and other institutions; past president of the American Prison Association; U.S. delegate to the International Prison Conference in London, 1925; originator of the centralized parole plan, the New Jersey credit-marking system, and the parole procedure of the New York City Department of Correction.

DE SCHWEINITZ, GEORGE EDMUND, See SCHWEINITZ, GEORGE EDMUND DE.

DEVONSHIRE, 9TH DUKE OF, VICTOR CHRISTIAN WILLIAM CAVENDISH, British statesman and head of one of England's greatest feudal families; born May 31, 1868; died at Chatsworth House, Derbyshire, May 6, 1938; Liberal Unionist member of Parliament from 1891 until 1908, when he entered the House of Lords; civil lord of the Admiralty, 1915-16; governor-general of Canada, 1916-21; secretary of state for the Colonies, 1922-24; member of the Privy Council after 1905. He was one of the wealthiest landowners in England.

DEWING, THOMAS WILMER, American figure and portrait painter; died in New York, N. Y., Nov. 5, 1938. See VOL. VI, p. 751.

DICKINSON, CLEMENT CARELL, American legislator; born in Prince Edward Court House, Va., Dec. 6, 1849; died in Clinton, Mo., Jan. 14, 1938; U.S. Representative (Democrat) from Missouri, 1910-21, 1923-29, and 1931-35; member, Ways and Means Committee.

DOBER, CONRAD K. See CONRAD.

DONALDSON, HENRY HERBERT, died Jan. 23, 1938.

DORE, JOHN FRANCIS, American lawyer and politician; born in Charlestown, Mass., Dec. 11, 1881; died in Seattle, Wash., Apr. 18, 1938; mayor of Seattle, 1932-34 and 1936-38; defeated for mayor in 1938 after campaigning against the C.I.O.; noted for a pro-labor attitude which he later modified. See YEAR BOOK, 1936, p. 783, and 1937, p. 773.

DOUGLAS, JOHN, American surgeon; born in New York, N. Y., Aug. 5, 1875; died in New York, Dec. 5, 1938; consulting surgeon at St. Luke's, Bellevue, Knickerbocker, and Harlem Eye and Ear hospitals in New York City; instructor (1904-12) and clinical professor of surgery (1912-38) at New York University and Bellevue Medical College. An authority on cancer, he disproved the theory that the disease is hereditary in nature.

DOWNES, SIR ARTHUR HENRY, English physician and public health official; born in Shropshire, Eng., Oct. 11, 1851; died in Haifa, Palestine, Mar. 11, 1938. He revealed the destructive action of light on organisms of putrefaction and disease.

DRURY, SAMUEL SMITH, American Protestant Episcopal clergyman and educator; born in Bristol, R. I., Oct. 9, 1878; died in Boston, Mass., Feb. 21, 1938; rector of St. Paul's School, Concord, N. H., 1911-38.

DUFFIELD, EDWARD DICKINSON, American insurance executive; born in Princeton, N. J., Mar. 3, 1871; died in South Orange, N. J., Sept. 17, 1938; associated with the Prudential Insurance Co. of America after 1906, becoming president in 1922; chairman of the board of trustees and acting president (1932-33) of Princeton University. He influenced the Prudential Co. to make large loans for housing, in which he was interested.

DUPUIS, CHARLES, French jurist and writer; born in 1867; died in Paris, Aug. 6, 1938; professor after 1899 at the École des Sciences Politiques; author of works on international law and economics.

DURVEA, CHARLES E., died Sept. 28, 1938.

EAST, EDWARD MURRAY, American biologist; born in Du Quoin, Ill., Oct. 4, 1879; died in Boston, Mass., Nov. 9, 1938; member of the Harvard University faculty after 1909, serving as professor of experimental plant morphology (1914-26) and of genetics (1926-38); president of the American Society of Naturalists (1918) and the Genetics Society of America (1937). He investigated self-sterility in plants, developed a scientific method of maize breeding, and formulated the multiple factor theory of inheritance of size characters. Interested in population and other human problems, he wrote *Mankind at the Crossroads* (1923) and *Heredity and Human Affairs* (1927), as well as works on plant breeding.

EDGERTON, JAMES ARTHUR, American prohibition leader and writer; born in Plantsville, O., Jan. 30, 1869; died in Alexandria, Va., Dec. 3, 1938; vice-presidential nominee of the Prohibition Party, 1928; president of the National (1909-14) and International (1914-24) New Thought Alliance.

EDGERTON, JOHN EMMETT, American manufacturer; born in Johnston Co., N. C., Oct. 2, 1879; died in Lebanon, Tenn., Aug. 4, 1938; a founder and coproprietor until 1912 of the Columbia (Tenn.) Military Academy; president of the Lebanon Woolen Mills, 1912-38; president of the National Association of Manufacturers, 1921-31. He was an advocate of prohibition and a bitter foe of the New Deal labor policies.

EDMONDSON, THOMAS WILLIAM, American mathematician; died at Mount Vernon, N. Y., Nov. 4, 1938. See VOL. VII, p. 474.

EDSTROM, DAVID, Swedish-American sculptor; born in Hvetlanda, Sweden, Mar. 27, 1873; died in Los Angeles, Calif., Aug. 12, 1938. After working as newsboy and factory hand in Iowa, 1880-94, he returned to Europe and studied with Björkstén, Injalbert, and Matisse. Later he lived in New York and Los Angeles. He executed famous psychological studies, "Fear," "Pride," "Envy," "Caliban," and "The Cry of Poverty," portraits of prominent people, and war memorials. A noted lecturer, he wrote *The Road to Parnassus* (1931) and *The Testament of Caliban* (1937) and many articles.

EDWARDS, HARRY STILLWELL, American author; born in Macon, Ga., Apr. 23, 1855; died in Macon, Oct. 22, 1938; editor of the Macon *Telegraph*, 1881-87; author of *Sons and Fathers* (Chicago *Record* prize, 1896), *The Answer* (second prize in *Life* short-story contest, 1916), *Aeneas Africanus* (1919), a short story which sold more than a million copies, and other dialect stories and studies of plantation life.

EDWARDS, S. ARLENT, American etcher; born in London, Eng., July 12, 1862; died in Westport, Conn., Nov. 4, 1938; studied at the South Kensington Museum; emigrated to the United States in 1890. He successfully revived the art of color-printing from a mezzotint plate.

EGAN, MARTIN, American journalist and publicist; born in Martinez, Calif., June 18, 1872; died in New York, N. Y., Dec. 7, 1938; member of the Associated Press Staff, covering the McKinley assassination, the Philippine Insurrection, the Boxer Rebellion, and the Russo-Japanese War; editor of the Manila *Times*, 1908-13; liaison officer with the press and Far Eastern adviser for J. P. Morgan and Co. after 1914; civilian aide to Gen. Pershing in 1918; president of the American Asiatic Association, 1929-38. His transmission of the story of the siege of Port Arthur (1904) was an outstanding journalistic feat.

EINSTEIN, ISADORE, American prohibition agent (1920-28); born in Tarnow, Austria, Aug. 8, 1880; died in New York, N. Y., Feb. 17, 1938. Teamed with Moe Smith, he made nearly 5000 arrests. The two, known as "Izzy and Moe," were famous for their disguises and comic ruses.

ELDRIDGE, ROBERT, American construction engineer; born in Ottawa, Ill., about 1874; died in New York, N. Y., Oct. 12, 1938; supervising engineer for New York's first subways, the Grand Central Terminal, and the Lincoln Tunnel. He built dams for the Colorado Light

& Power Co., the Ebro Irrigation & Power Co. in Spain, and the Foundation Co. in South America.

ELLIS, ALVARADO LEBOY. American electrical engineer; born in Lynn, Mass., Nov. 25, 1875; died in Swampscott, Mass., Apr. 29, 1938; on the staff of the General Electric Co. after 1898; noted for his improvement of electrical instruments (Pan-American Exposition medal) and marine appliances (Coffin award). He designed the submarine detector used by the Allies in the World War.

EMERSON, CHARLES PHILLIPS. American physician and educator; born in Methuen, Mass., Sept. 4, 1872; died in Indianapolis, Ind., Sept. 26, 1938; professor and dean (1911-32) of the Indiana University School of Medicine; president of the Association of American Medical Colleges, 1923; author of *Essentials of Medicine* (1908), *Emerson and Betts Physiology of Hygiene* (with Betts, 1920), *Physical Diagnosis* (1928), etc.

ENNIS, LAWRENCE. British construction engineer, with Dorman Long & Co. after 1903; born Aug. 31, 1871; died in London, May 6, 1938; built the Sydney Harbour Bridge in Australia. During the World War he established a government shell plant and, as president of the Iron and Steel Trades Association, participated in industrial negotiations.

FAIRCLOUGH, HENRY RUSHTON. American philologist; born near Barrie, Ont., July 15, 1862; died Feb. 12, 1938; professor of classics at Stanford University, 1897-1927; director of the English-Speaking Union; president of the American Philological Association, 1926; translator and editor of numerous Greek and Latin texts. A lieutenant-colonel in the American Red Cross, he directed Belgian and American Relief, 1918-19, and was commissioner to Montenegro, 1919-20.

FARZANDI-KHAS, H. H. See PATIALA.

FEQUANT, GEN. PHILIPPE. French aviator; born about 1883; died in Paris, Dec. 24, 1938; an air squadron commander during the World War and after 1918 chief of staff of the 1st Division; subsequently commander of the Military School of Aeronautics; chief of the Air Force General Staff after 1936; Grand Officer of the Legion of Honor. He won a speed record in 1911 and made the first exploration flights in Senegal in 1912.

FERNALD, CHESTER BAILEY. American author; drowned off Dover, Eng., Apr. 10, 1938. See VOL. VIII, p. 476.

FERRETTI, DOM PAOLO MARIA. Italian musician; born in Subiaco, Dec. 3, 1866; died in Bologna, May 5, 1938; abbot in Palma until summoned to the Vatican as consultor in the revision of the Antiphonary; president of the Pontifical Institute of Music after 1911; wrote on the Gregorian chants.

FEY, MAJ. R. EMIL, died Mar. 16, 1938.

FIFER, JOSEPH WILSON. American lawyer and politician; born in Staunton, Va., Oct. 28, 1840; died in Bloomington, Ill., Aug. 6, 1938; governor (Republican) of Illinois, 1889-93; member of the Interstate Commerce Commission, 1899-1906; known as "Private Joe" because of his Civil War service.

FILIPESCU, GRIGORE. Rumanian editor and Conservative leader; born in 1886; died in Geneva, Switzerland, Aug. 24, 1938; editor of the newspaper *Epoca* after 1918.

FILIPPI, FILIPPO DE. Italian explorer; died in Florence, Sept. 27, 1938. See VOL. VIII, p. 548.

FINKE, HEINRICH. German historian; born in Krechting, June 13, 1855; died in Freiburg, Dec. 21, 1938; member of the faculty of the University of Münster, 1887-1928. He was an authority on papal and Spanish history and received the Reich Eagle Shield in 1935.

FINLAY, KIRKMAN GEORGE. American Protestant Episcopal bishop, serving in Upper South Carolina (1922-38); born in Greenville, S. C., Oct. 1, 1877; died in Hendersonville, N. C., Aug. 27, 1938.

FIRESTONE, HARVEY S (AMUEL), died Feb. 7, 1938.

FISHER, FREDERICK BOHN. American Methodist Episcopal bishop of India (1920-30); born in Greencastle, Pa., Feb. 14, 1882; died in Detroit, Mich., Apr. 15, 1938; secretary of foreign missions, 1910-20. He retired from the bishopric in 1930 in order to return to the pulpit.

FLAHERTY, FREDERICK H. American surgeon; born in Chittenango, N. Y., Apr. 21, 1873; died in Syracuse, N. Y., Sept. 7, 1938; professor at the Syracuse University School of Medicine after 1908; wrote on hernia.

FLANAGAN, JOHN J. Irish athlete; born about 1868; died in Ireland, June, 1938; winner of the Olympic hammer-throw title, 1900, 1904, 1908. He established a world's record of 180 ft. in 1909 (upset by Ryan in 1913) and introduced the double-turn technique.

FLANDRAU, CHARLES MACOMBE. American author and critic; born in St. Paul, Minn., Dec. 9, 1871; died in St. Paul, Mar. 28, 1938; author of *The Diary of a Freshman* (1902), *Viva Mexico!* (1908), etc.

FLEURIAU, AIME JOSEPH DE. French diplomat; born in La Rochelle, Jan. 24, 1870; died in Ismailia, Egypt, Jan. 20, 1938; minister to China, 1921-24; ambassador to London, 1924-33.

FLICK, LAWRENCE F. American physician; born near Carrolltown, Pa., Aug. 10, 1856; died in Philadelphia, Pa., July 7, 1938. His fight against tuberculosis led to the founding of Benjamin Rush Hospital in Philadelphia,

the White Haven Sanitarium, of which he was president, 1901-35, and the Phipps Institute for the Study of Tuberculosis, where he was medical director. Early in life he cured himself of tuberculosis and later proved that the disease is not hereditary. His *Consumption, a Curable and Preventable Disease* (1903) became a standard textbook; Laetare Medal of the University of Notre Dame (1920).

FLOOD, NED ARDEN. American industrial banker; born in New Market, N. H., Sept. 12, 1870; died in New York, N. Y., Nov. 8, 1938; negotiator in the organization, transfer, or incorporation of many large concerns, including F. W. Woolworth Co., Goodrich Rubber Co., and Cluett, Peabody & Co.

FORBES, JAMES. American playwright; born in Salem, Ont., Sept. 2, 1871; died in Frankfort-on-the-Main, Ger., May 26, 1938; wrote *The Chorus Lady* (1906), *The Famous Mrs. Fair* (1919), *Young Blood* (1925), etc.

FRANCIS I DE PAULE (MARIA KARL AUGUST FRANZ VON PAULA). Prince of Liechtenstein; born in Liechtenstein, Aug. 28, 1853; died in Feldsberg, Czechoslovakia, July 25, 1938; ruler of Liechtenstein from 1929 until the spring of 1938, when he delegated his powers to his nephew. He spent much of his life in Austria, serving as Austrian ambassador to Russia (1894-98), and was a confidant of Emperor Francis Joseph. He owned one of the world's finest private art galleries and a personal fortune estimated at \$100,000,000. In 1921 he secretly married the former Baroness Guttman, daughter of a Jewish banker.

FRANCO, LIEUT.-COL. RAMON. Spanish aviator; born about 1896; died in an airplane crash near Palma, Majorca, Oct. 28, 1938; one of three aviators who made the first flight across the South Atlantic (Cadiz to Buenos Aires, 1926). He engaged in revolutionary activities until the republic was established in 1931, when he directed the aeronautics division of the Ministry of War for a time. When his brother, Gen. Francisco Franco, revolted in 1936, he became chief of the rebel air forces in the Balearic Islands.

FRASER, ALEXANDER (JOSEPH). American pathologist; born in West River, N. S., Can., Jan. 8, 1869; died in Beechurst, N. Y., Sept. 18, 1938; on the staff of the New York University College of Medicine, 1911-34. He lectured on social hygiene and biology and wrote on gonorrhea, tumors, etc.

FREDERICK, PAULINE. American actress; born in Boston, Mass., Aug. 12, 1885; died in Beverly Hills, Calif., Sept. 19, 1938; star of *When Knights Were Bold* (1907), *Samson* (1909), *Joseph and His Brethren* (1913), *Madame X*, and many other plays and motion pictures. She played both comic and tragic roles and was noted for her great beauty.

FRERE, WALTER HOWARD. Anglican bishop of Truro (1923-35); born in Cambridge, 1863; died in Mirfield, Eng., Apr. 2, 1938; superior (1902-13 and 1916-22) of a monastic order, the Community of the Resurrection, which he helped to found in 1892; liturgical scholar and historian.

FROBENIUS, LEO V. German explorer and morphologist; born in Berlin, June 29, 1873; died in Intra, Italy, Aug. 9, 1938; founder (1922) and president of the Institute for Cultural Morphology at Frankfurt; director of the Frankfurt Ethnographic Museum. An authority on prehistoric African art, he made 12 expeditions to Africa and wrote about 60 books, including *Atlantis* (12 vols. of African legends, 1921-30) and *Kulturgeschichte Afrikas* (1933).

FROST, WADE HAMPTON. American epidemiologist; born in Marshall, Va., Mar. 3, 1880; died in Baltimore, Md., Apr. 30, 1938; surgeon with the U.S. Public Health Service, 1905-29, studying epidemiology, poliomyelitis, stream pollution, and influenza; professor after 1921 and dean (1931-34) of the Johns Hopkins University School of Hygiene and Public Health.

FROST, WILLIAM GOODELL. American educator; died in Berea, Ky., Sept. 11, 1938; retired, 1920. See VOL. IX, p. 312.

FRY, C (CHARLES) LUTHER. American sociologist; born in Philadelphia, Pa., Mar. 16, 1894; died in Rochester, N. Y., Apr. 12, 1938; director of the Bureau of Standards of the Institute for Social and Religious Research in Rochester, 1922-33; professor of sociology at Rochester University, 1933-38. He directed surveys of migratory labor, race relations, religious changes (for President Hoover), etc.

FUGATE, JAMES R. American administrator; assassinated at Upi, Mindanao Island, the Philippines, Dec. 14, 1938; governor of Sulu Province, 1925-36, and subsequently adviser to Quezon on Moro affairs. He was of invaluable service in the pacification of the Moros in 38 years as teacher and official. In 1936 he was involved in a factional dispute among the claimants to the Sultanate.

FULTON, OTHO H. English inventor; born in Hull, Eng., about 1868; died in New York, N. Y., Mar. 1, 1938. In 1912 he transmitted what was thought to be the first picture sent by wireless.

FURUSETH, ANDREW. American labor leader; born in Hedemarken, Norway, Mar. 12, 1854; died in Washington, D. C., Jan. 22, 1938; entered the United States in 1880; president of the International Seamen's Union of America from its foundation in 1908; member of the first legislative committee of the A.F.L. He united the various

seamen's unions in 1892 and fought in Washington for many marine laws, notably the La Follette Seamen's Act (adopted 1915), which he helped to draft and advocated for 21 years.

FUTCHER, THOMAS BARNES. American diagnostician; born in St. Thomas, Ont., Can., Jan. 1, 1871; died in Baltimore, Md., Feb. 25, 1938; on the staff of Johns Hopkins Hospital (after 1894) and University (after 1896); president of the Association of American Physicians, 1932. During the World War he was a lieutenant-colonel in the Canadian Medical Corps.

GALE, ZONA (MRS. WILLIAM LLEWELLYN BREESE), died Dec. 27, 1938.

GALLOWAY, BEVERLY THOMAS. American botanist; died in Washington, D. C., June 13, 1938. See VOL. IX, p. 426.

GAMBRILL, STEPHEN WARFIELD. U.S. Representative (Democrat) from Maryland, 1924-38; born near Savage, Md., Oct. 2, 1873; died in Washington, D. C., Dec. 19, 1938; an influential member of the Naval Affairs Committee.

GANN, THOMAS (WILLIAM FRANCIS). British explorer, archaeologist, and authority on tropical medicine; born about 1868; died in London, Feb. 24, 1938; chief medical officer of British Honduras; discoverer of the Maya cities of Coba, Tzibanche, Ichpaatum, and Xumucha. He directed British Museum expeditions to the interior of British Honduras (1928) and to Minanha (1929) and wrote widely on Maya culture.

GARNER, JAMES WILFORD, died Dec. 9, 1938.

GASQUE, ALLARD HENRY. U.S. Representative (Democrat) from South Carolina after 1923; born in Marion (now Florence) County, S. C., Mar. 8, 1873; died in Washington, D. C., June 17, 1938; advocate of veterans' benefits.

GASTON, MRS. WILLIAM. See PINCHOT, ROSAMOND.

GAVIN, FRANK STANTON BURNS. American Protestant Episcopal clergyman and scholar; born in Cincinnati, O., Oct. 31, 1890; died in Brooklyn, N. Y., Mar. 20, 1938; professor of ecclesiastical history at General Theological Seminary, New York, 1923-38. Influential in various interdenominational organizations, he campaigned for a united Christendom and fought anti-Semitism.

GELINEAU, VICTOR. American erosion engineer; born in Lowell, Mass., Jan. 21, 1886; died in New York, N. Y., Jan. 21, 1938; director of the N. J. State Board of Commerce and Navigation after 1919; writer of authoritative works on beach erosion and riparian law. He supervised erosion prevention projects on Long Island, N. Y., and the New Jersey coast, and at Miami, Fla.

GETZ, GEORGE FULMER. American coal merchant; born in Mechanicsburg, Pa., Dec. 26, 1865; died in Miami Beach, Fla., Feb. 11, 1938; organizer (1919) of the \$25,000,000 U.S. Distributing Co., the largest corporation of its kind in the country; treasurer of the Republican National Committee, 1933-35; associate director of the American Red Cross in France during the World War; co-promoter of the Dempsey-Tunney fight (1927) and a sports enthusiast.

GIBSON, HENRY RICHARD. American lawyer and U.S. Representative (Republican) from Tennessee, 1895-1904; born on Kent Island, Md., Dec. 24, 1837; died in Washington, D. C., May 25, 1938; associate reviser of the Code of Tennessee (1918).

GILBERT, S. (EYMOUR) PARKER, died Feb. 23, 1938.

GILLET, ARTHUR LINCOLN. American theologian; born in Westfield, Mass., Jan. 5, 1859; died in Ogunquit, Me., Sept. 9, 1938; member of the Hartford Theological Seminary faculty, 1888-1928.

GLACKENS, WILLIAM J. American portrait, landscape, and figure painter; born in Philadelphia, Pa., Mar. 13, 1870; died in Westport, Conn., May 22, 1938; studied at the Pennsylvania Academy and in Paris; National Academician (1933). He began his career as a newspaper and magazine illustrator and, by his masterly drawing and fine sense of character, attained a ranking position in that field. As a painter, he first exhibited at the New Arts Club, being a member of "The Eight" with Henri, Sloan, Prendergast, Shinn, Davies, Luks, and Lawson. His early work showed a subordination of color to form, but later, influenced by Renoir, he became one of the greatest American impressionists. He won medals at the Buffalo Exposition (1900), the St. Louis Exposition (1904), the Panama-Pacific Exposition (1915), the Temple gold medal (1924), second prize at the Carnegie International Exhibition (1929), Beck gold medal (1933), and the Sesnan medal (1936) and the Scheidt memorial prize (1938) of the Pennsylvania Academy. His work is represented in the principal galleries of the nation.

GLUCK, ALMA (MRS. EFREM ZIMBALIST), died Oct. 27, 1938.

GODOWSKY, LEOPOLD, died Nov. 21, 1938.

GOGA, OCTAVIAN, died May 7, 1938.

GOLDBERG, ISAAC. American author and critic; born in Boston, Mass., Nov. 1, 1887; died in Brookline, Mass., July 14, 1938; literary editor of *The American Freeman*, 1923-32; music critic of *The American Mercury*, 1930-32; founder of a monthly news survey, *Panorama*; biographer of Gershwin, Mencken, Havelock Ellis, and W. S. Gilbert. He wrote works on Spanish-American literature, on which

he was an authority, on theatrical and music appreciation, and also *The Fine Art of Living* (1929) and *Dictatorship over the Intellect* (1935).

GOLDSMID-MONTEFIORE. See MONTEFIORE.

GONZALEZ, RUF. American typographical expert; born in Oriente Province, Cuba, about 1892; died in New York, N. Y., June 6, 1938; designer of the "Ruf Bold" type for display cards and various prize-winning types; on the staff of the New York *Herald-Tribune* after 1924.

GOULD, HOWARD. American actor; born in St. Anthony, Minn., Mar. 19, 1863; died in Winthrop, Mass., Feb. 3, 1938; starred in *The Prisoner of Zenda* for four years, *The Witching Hour* (1908-10), *Madame X* (1910-11), *The Garden of Allah* (1915-18), *Three Wise Fools* (1919-21), etc.

GOW, GEORGE COLEMAN. American music professor at Vassar College (1895-1932); born in Ayer, Mass., Nov. 27, 1860; died in Poughkeepsie, N. Y., Jan. 12, 1938; composer of songs; author of *Structure of Music* (1895), etc.; president of the Music Teachers' National Association, 1912-13.

GRAHAM, SIR HUGH. See ATHOLSTAN.

GRANVILLE-SMITH, WALTER. American painter and illustrator; born in South Granville, N. Y., Jan. 28, 1870; died in Jackson Heights, N. Y., Dec. 7, 1938; National Academician (1915). Noted for his Long Island landscapes, he won several Academy prizes.

GRAYSON, REAR ADMIRAL CARY T. (RAVERS), U.S.N., RET., died Feb. 15, 1938.

GREENOUGH, CHESTER NOYES. American educator; born in Wakefield, Mass., June 29, 1874; died in Belmont, Mass., Feb. 27, 1938; member of the Harvard University faculty (1899-1907 and 1910-37) and dean (1921-27); author of authoritative texts on English literature of the 17th and 18th centuries.

GREGG, WILLIS RAY. American meteorologist; born in Phoenix, N. Y., Jan. 4, 1880; died in Chicago, Ill., Sept. 14, 1938; associated with the U.S. Weather Bureau after 1904, becoming Chief in 1934; special adviser on airplane flights and author of *Aeronautical Meteorology* (1930), etc.

GREIG, JOHN HAROLD. Anglican bishop of Gibraltar (1921-27) and Guildford (1927-34); born Feb. 13, 1865; died in London, Mar. 28, 1938. He attracted much attention by preaching on the Epsom Downs track on Sundays before the races.

GRIESHABER, HUGO E. American inventor; born in New York, N. Y., 1880; died in New London, Conn., May 22, 1938. With the Electric Boat Co. of Groton, Conn., after 1897, he designed submarines built for the United States and other governments, and developed new submarine devices, notably a system of rescue tanks.

GRIFFITH, SIR JOHN PURSER. Irish civil engineer and senator of the Irish Free State (1922-36); born in Holyhead, Wales, Oct. 5, 1848; died in Dublin, Oct. 21, 1938; president of the Irish Institute of Civil Engineers, 1919-20.

GIGGS, FREDERICK LANDSEER MAUR. British etcher and landscape painter; born 1876; died in Chipping Campden, Eng., June 7, 1938; Royal Academician (1931).

GRINKO, GRIGORIY FEDOROVICH. Russian commissar of Finance (1930-38) and Ukrainian official; born 1890; convicted of treason and executed in Moscow, Mar. 14(?), 1938.

GRINNELL, GEORGE BIRD, died Apr. 11, 1938.

GRUELLE, JOHN. American cartoonist and writer; born in Arcola, Ill., Dec. 25, 1880; died in Miami Springs, Fla., Jan. 9, 1938; originator of the comic-strip "Brutus," which won the New York *Herald* competition in 1910, and other serials. He wrote more than 1000 stories for the United Press and United Features, contributed regularly to *Judge*, *Life*, *The Delinquent*, etc., and wrote 14 juvenile books, including *Raggedy Ann* (more than 3,000,000 copies).

GUILLAUME, CHARLES EDOUARD, died June 13, 1938.

GUIMARAES, REAR ADMIRAL PROTOGENUS. Brazilian naval officer; born about 1877; died in Rio de Janeiro, Jan. 6, 1938; Minister of Marine under Vargas, 1931-35; governor of the State of Rio de Janeiro, 1935-37. His naval blockade helped to quell the São Paulo revolt in 1932.

HADLEY, WILLIAM BURGESS. American publishing official; born in Brooklyn, N. Y., 1867; died in Roselle, N. J., Oct. 13, 1938; manager of the Book Department of the Funk and Wagnalls Co., of New York, 1913-38.

HAERTL, PAUL. German balneologist; born about 1879; died in Würzburg, Feb. 22, 1938; director of the Bavarian hot springs research laboratory at Bad Kissingen; adviser in the development of Saratoga Springs, N. Y.; member of the Georgia Warm Springs Foundation.

HALE, GEORGE ELLERY, died Feb. 21, 1938.

HALL, BOLTON. American lawyer, writer, and single-tax crusader; born in Armagh, Ireland, Aug. 5, 1854; died in Thomasville, Ga., Dec. 10, 1938; immigrated to the United States about 1867; originator of the back-to-the-land movement for the poor. He practised law in New York, where he fought Tammany Hall and advocated slum clearance. He founded the Free Acres settlement near Scotch Plains, N. J., to demonstrate the ideal community advocated by single-tax theorists.

HALL, EDWIN HERBERT. American physicist; died in

Cambridge, Mass., Nov. 20, 1938; retired, 1921. See Vol. X, p. 595.

HAMILTON, ALBERT HINE. American criminal investigator; born in Weedsport, N. Y., Dec. 10, 1859; died in Auburn, N. Y., July 1, 1938; expert on microchemistry, handwriting, and ballistics. He testified at about 300 trials, including the Sacco-Vanzetti trial (1921).

HAMLIN, CHARLES SUMNER, died Apr. 24, 1938.

HAMMOND, WILLIAM ALEXANDER. American educator; born in New Athens, O., May 20, 1861; died in Washington, D. C., May 7, 1938; professor of philosophy at Cornell University, 1891-1930, and dean, 1920-30; consultant to the Library of Congress, 1930-38; formerly co-editor of *The Philosophical Review*.

HAN FU-CHU, GEN. Chinese soldier and official; born in Pashien, Hopen Province, 1890; executed at Hankow, Jan. 24, 1938, found guilty of yielding to the Japanese and abusing his powers as governor (1930-38) of Shantung Province. Originally an aide of Feng Yu-siang, he sided with the government in Feng's 1929 revolt. He was appointed governor of Honan in 1928 and commander of the First Army in 1930.

HANAUER, JEROME J. American financier; born in New York, N. Y., July 30, 1875; died in Murray Bay, Que., Can., Sept. 3, 1938. As a partner of Kuhn, Loeb & Co., he helped reorganize large industrial firms and railroads.

HANNA, DAVID BLYTHE. Canadian industrialist; born in Thornliebank, Scot., Dec. 20, 1858; died in Toronto, Ont., Dec. 1, 1938; president of the Canadian National Railways, 1918-22; director of various concerns.

HARDY, JOHN CRUMPTON. American educator; born in Newton County, Miss., Dec. 24, 1864; died in Belton, Tex., Oct. 30, 1938; president of Mississippi Agricultural and Mechanical College, 1900-12, and of Mary Hardin-Baylor College in Belton, 1912-37.

HARRAP, GEORGE GODFREY. British publisher; born Jan. 18, 1867; died in London, Oct. 29, 1938; founder (1901) of the publishing firm of George G. Harrap & Co., which published *Harrap's Standard French Dictionary* (1934) and textbooks.

HARRISON, FAIRFAX. American railway executive; born in New York, N. Y., Mar. 13, 1869; died in Baltimore, Md., Feb. 2, 1938; president of the Chicago, Indianapolis, and Louisville Railway Co., 1910-13, and of the Southern Railway Co. and its affiliates, 1913-37.

HARRISS, JOHN A. American realtor and traffic expert; born in New York, N. Y., about 1875; died in New York, Oct. 11, 1938; a director of the Fifth Avenue Association and president after 1929 of the Broadway Association. As adviser to the New York City Police Commission after 1910, he originated New York's signal light system and one-way street plan, and advocated express elevated highways and roads along the riverfronts.

HARSHE, ROBERT BARTHOLOW. American museum director and painter; born in Salisbury, Mo., May 26, 1879; died in Chicago, Ill., Jan. 11, 1938; director of the Art Institute of Chicago, 1921-38. He was foreign representative for the San Francisco Exposition (1915) and the Carnegie International Exhibition (1919), and director of the exhibition at the Century of Progress Exposition (1933-34).

HART, FRANCIS RUSSELL. American financier; born in New Bedford, Mass., Jan. 16, 1868; died in Boston, Mass., Jan. 18, 1938; head of the United Fruit Co., 1933-38. He lived in Colombia, South America, from 1891 until 1919, becoming president of the Cartagena-Magdalena Railway and later consul.

HASTINGS, WILLIAM WIRT. American legislator; born of Cherokee parentage in Delaware Co., Okla., Dec. 31, 1866; died in Muskogee, Okla., Apr. 8, 1938; U.S. Congressman (Democrat) from Oklahoma, 1915-21 and 1923-35. He was national attorney for the Cherokee Tribe (1907-14) and represented his people in Washington for more than 45 years.

HAWKS, FRANK MONROE, died Aug. 23, 1938.

HAWLEY, ALAN RAMSAY. American aeronaut; born in Perth Amboy, N. J., July 29, 1869; died in New York, N. Y., Feb. 16, 1938. In the James Gordon Bennett international balloon race (1910) he and Maj. Augustus Post in the *American II* set a long-distance record (unbroken) of 1172 miles for free balloons. He won the national race from Indianapolis (1910) and the Lahm Balloon Cup, and helped to found the Aerial Reserves of New York, the Lafayette Escadrille in France during the World War, and the Automobile Club and the Aero Club of America.

HAYES, PATRICK, CARDINAL, died Sept. 4, 1938.

HEATH, THOMAS K. American vaudeville actor, teamed with James McIntyre after 1874; born in Philadelphia, Aug. 11, 1853; died in East Setauket, N. Y., Aug. 18, 1938. After appearing at circuses, fairs, and small vaudeville houses, McIntyre and Heath acted at Tony Pastor's Theater in New York, earning the record salary of \$2000 a week. Subsequently they were featured in vaudeville houses all over the country and in several musical comedies. Their most famous acts were "The Ham Tree" and "The Georgia Minstrels," which was presented more than 12,000 times.

HEISLER, JOHN CLEMENT. American anatomist and edu-

cator; born in Jersey Shore, Pa., Feb. 27, 1862; died in West Philadelphia, Pa., Sept. 9, 1938; professor of anatomy at the University of Pennsylvania, 1916-30; author of *Embryology for Medical Students* (1907) and *Practical Anatomy* (1912).

HEITFELD, HENRY. U.S. Senator (Populist) from Idaho (1897-1903); born in St. Louis, Mo., Jan. 12, 1859; died in Spokane, Wash., Oct. 21, 1938.

HELD, HEINRICH. German statesman; born in Erbach, June 6, 1868; died in Regensburg, Aug. 4, 1938; member of the Bavarian Diet after 1907; organizer and chairman of the Bavarian People's Party after the World War; premier of Bavaria, 1924-33. He advocated a larger measure of State sovereignty for Bavaria and restoration of the monarchy by constitutional methods, and bitterly denounced Nazi activities. In 1934 he resumed publication of a Catholic paper he had founded in 1906, the *Regensburg Anzeiger*, which was banned several times for criticism of the Nazi regime.

HERCESELL, HUGO. German meteorologist; born in Bromberg, May 29, 1859; died in Berlin, June 5, 1938; founder of the Aerological Institute of the University of Strassburg; president of the International Commission for Scientific Aeronautics, 1896-1914; Reich Commissar for Aeronautics, 1908-14; director of the Prussian Aeronautical Observatory at Lindenberg, 1914-33. An associate of Count Zeppelin, he played an important part in dirigible development and did stratospheric research in the Arctic.

HERING, DANIEL WEBSTER. American physicist and educator; born in Smithsburg, Md., Mar. 23, 1850; died in New York, N. Y., Mar. 24, 1938; professor of physics at New York University (1885-1916) and curator of the clock collection (1926-38). He was especially interested in acoustics, X-rays, and rain control, and wrote *Essentials of Physics for the College Student* (1912), etc.

HERRESHOFF, NATHANIEL GREENE, died June 2, 1938.

HERRICK, ROBERT, died Dec. 23, 1938.

HERTY, CHARLES HOLMES, died July 27, 1938.

HEWITT, JOSEPH WILLIAM. American educator; born in Leeds, Eng., Aug. 23, 1875; died in Middletown, Conn., July 8, 1938; professor of classics at Wesleyan University after 1913.

HEWSON, ADDINELL. American anatomist and surgeon; born in Philadelphia, Pa., Sept. 2, 1855; died in Bryn Mawr, Pa., Oct. 27, 1938; professor at the University of Pennsylvania, 1897-1928.

HILL, JOSEPH ADNA. American statistician; born in Stewartstown, N. H., May 5, 1860; died in Washington, D. C., Dec. 12, 1938; director of the 1920 and 1930 censuses and Chief Statistician of the Census Bureau, 1933-38; president of the American Statistical Association, 1919.

HILL, LOUIS CLARENCE. American civil engineer; born in Ann Arbor, Mich., Feb. 22, 1865; died in Los Angeles, Calif., Nov. 5, 1938; supervising (1905-14) and consulting (1914-38) engineer for the U.S. Reclamation Service; president of the American Society of Civil Engineers, 1937-38. He helped build the major southwestern dams.

HIRSCH, ALCAN. American chemical engineer; born in Corpus Christi, Tex., Feb. 1, 1885; died in New Rochelle, N. Y., Nov. 24, 1938; organizer of the Rector Chemical Co. (1917); president of the Hirsch Laboratories; chemical adviser to Japan, the U.S.S.R., and various American industrial concerns. He received the Carnegie award of the British Iron & Steel Institute (1913) and introduced the pyrophoric alloy industry in the United States (1915).

HLINKA, ANDREAS, died Aug. 16, 1938.

HOBING, CHARLES A. American educator; born in Lexington, Ky., May 27, 1871; died in Rochester, N. Y., Mar. 9, 1938; member of the University of Rochester faculty after 1898, being professor of Latin (1914-33) and dean of the graduate school (1928-33).

HOGGATT, WILFORD RACON. U.S. governor (1906-09) and prominent mine owner in Alaska; born in Paoli, Ind., Sept. 11, 1865; died in New York, N. Y., Feb. 26, 1938.

HOOKE, ELON HUNTINGTON. American industrialist; born in Rochester, N. Y., Nov. 23, 1869; died in Pasadena, Calif., May 10, 1938; organizer (1903) and president of the Hooker Electrochemical Co., one of the world's largest electrolytic producers of chemicals, with plants at Niagara Falls and Tacoma, Wash.; adviser to Theodore Roosevelt, and a leader in the Progressive Party; president of the Manufacturing Chemists' Association, 1923-25, chairman of the National Industrial Conference Board, 1938, and of the Research Corporation. He was an outspoken critic of the New Deal's power-utility program and the St. Lawrence waterway treaty.

HOUSE, EDWARD MANDELL, died Mar. 28, 1938.

HOWARD, CHARLES P. American labor leader; born in Harvel, Ill., Sept. 14, 1879; died in Colorado Springs, Colo., July 21, 1938; president of the International Typographical Union, 1926-38. Although his union was an A.F.L. affiliate, he was an original backer of the C.I.O.

MCCLEINTIC, HOWARD HALE. American engineer; died in Pittsburgh, Pa., Aug. 5, 1938; founder of McCleintic-Marshall Construction Co., which built the locks for the Panama Canal. The company was valued at \$64,000,000 in 1931, when it was merged with Bethlehem Steel.

MCCRAY, WARREN T. American grain dealer and Republican governor of Indiana (1920-24); born near Kentland, Ind., Feb. 4, 1865; died near Kentland, Dec. 19, 1938; an organizer and president of the National Grain Dealers Assn. He was convicted in 1924 of using the mails to defraud and served three years in the Atlanta Penitentiary.

MACDONALD, WILLIAM. American historian and editor; born in Providence, R. I., July 31, 1863; died in New York, N. Y., Dec. 15, 1938; professor of history at Brown University, 1901-17; correspondent and editorial writer for *The Nation* (1918-31) and *The Commercial and Financial Chronicle* (1924-38); book reviewer and editor of numer-

ous American historical documents; author of *Jacksonian Democracy* (1905); *From Jefferson to Lincoln* (1913); *A New Constitution for a New America* (1921); *Three Centuries of American Democracy* (1923); *The Menace of Recovery* (1934), etc.

MCDUGALL, WILLIAM, died Nov. 28, 1938.

MCDOWELL, WILLIAM GEORGE. American Protestant Episcopal bishop of Alabama (1922-38); born in Lexington, Va., Aug. 2, 1882; died in Mobile, Ala., Mar. 20, 1938.

MACE, WILLIAM HARRISON. American educator; born near Lexington, Ind., Nov. 27, 1852; died in Ganoquo, Ont., Aug. 10, 1938; professor of history at Syracuse University, 1891-1916; author of many textbooks.

MCINTYRE, OSCAR ODD (O.O.), died Feb. 14, 1938.

MACKAY, CLARENCE HUNGERFORD, died Nov. 12, 1938.

MCKEEVER, STEPHEN W. American baseball official; born in Brooklyn, N. Y., 1853; died in Brooklyn, Mar. 7, 1938; part-owner after 1912 and president after 1932 of the Brooklyn National League Baseball Club.

MACKENZIE, ARTHUR STANLEY. Canadian educator; born in Pictou, N. S., Sept. 20, 1865; died in Halifax, N. S., Oct. 2, 1938; president of Dalhousie University (1911-31) and responsible for its expansion.

MACKENZIE, THE HON. LORD, CHARLES KINCAID MACKENZIE. Scottish jurist; born in Edinburgh, Mar. 9, 1857; died in Edinburgh, Apr. 2, 1938; a Lord of Session, 1905-22.

MCKENZIE, ROBERT TAIT. American sculptor and physical director; died in Philadelphia, Pa., Apr. 28, 1938. See VOL. XIV, p. 587. He served as major in the Royal Army medical corps during the World War and subsequently designed well-known war memorials, including those in Edinburgh, Scot., Cambridge, Eng., and in the Parliament Building in Ottawa, Can.

MACKAY, HARRY A(RISTA). American politician; born in Susquehanna, Pa., June 26, 1873; died in Philadelphia, Oct. 17, 1938; mayor (Republican) of Philadelphia, 1928-31.

MCKINLEY, EARL BALDWIN. American bacteriologist; born in Emporia, Kans., Sept. 28, 1894; lost when the *Hawaii Clipper* disappeared on a Guam-Manila flight, July 29, 1938; professor at Baylor University (1923-24) and Columbia University (1928-31); dean of the medical school of George Washington University, 1931-38. An expert in tropical diseases and immunology, he was adviser to the Philippine governor-general, 1927-28, and director of the Columbia School of Tropical Medicine in Puerto Rico, 1928-31.

MACKINTOSH, THE ALFRED DONALD MACKINTOSH OF. Scottish chief of Clan Chattan (after 1876); born June 24, 1851; died in Moyhall, Inverness, Nov. 14, 1938.

MACLEAN, GEORGE EDWIN. American educator; born in Rockville, Conn., Aug. 31, 1850; died in Washington, D. C., May 3, 1938. See VOL. XIV, p. 595. He made studies of higher education in the British Isles, 1914-16.

MCLEAN, MAJ. GEN. HUGH HAYLOCK. Canadian army officer; born in Fredericton, N. B., Mar. 22, 1854; died in St. John, N. B., Nov. 22, 1938; commander of the 7th Infantry Brigade, C.E.F., during the World War; officer in the Militia for 59 years; member of the House of Commons, 1908-21.

MCMICHAEL, THOMAS HANNA. American educator and Presbyterian clergyman; born in Bellbrook, O., July 7, 1863; died in Monmouth, Ill., June 23, 1938; president of Monmouth College, Ill., 1903-36.

MACMILLAN, KERR DUNCAN. American educator; born in Mount Forest, Ont., Can., Mar. 17, 1871; died in Clifton Springs, N. Y., Mar. 13, 1938; president of Wells College, Aurora, N. Y., 1913-36.

MCCNEILL, JAMES. Irish Free State high commissioner (1923-28) and governor-general (1928-32); born in Glenarm, Co. Antrim, Mar. 27, 1869; died in London, Dec. 12, 1938.

MACPHAIL, SIR ANDREW. Canadian pathologist; born in Orwell, Prince Edward Island, Nov. 24, 1864; died in Montreal, Sept. 23, 1938; professor at McGill University, 1906-37; essayist, and formerly editor of the *Canadian Medical Journal*. He served as major with the Sixth Field Ambulance throughout the World War and wrote the official history of the Canadian medical forces (1925).

MAGRATH, GEORGE BURGESS. American criminologist; born in Jackson, Mich., Oct. 2, 1870; died in Boston, Mass., Dec. 11, 1938; instructor (1907-31) and professor (1931-37) of legal medicine at the Harvard Medical School; medical examiner of Suffolk Co. (Boston), Mass., 1907-35. He participated in more than 20,000 criminal cases as expert or examiner.

MAGRUDER, REAR ADM. THOMAS PICKETT. American naval officer; born in Yazoo Co., Miss., Nov. 29, 1867; died in Jamestown, R. I., May 26, 1938; head of the Division of Naval Affairs, Navy Department, 1916-17; commander of Squadron Four of the Atlantic Patrol Force, 1917; commandant of the 8th Naval District (1921-24) and the 4th Naval District (1926-27); commander of the Pacific Base Force, 1929-31; retired 1931. In 1927-28 he was kept on the "waiting orders" list because he had published magazine articles attacking extravagance and inefficient administration in the Navy. He was cited for gallantry in the

Spanish-American War and received the Distinguished Service Medal and other awards.

MALINOFF, ALEXANDRE. Bulgarian premier (1908-11, 1918, and 1931); born in Pandakly, Bessarabia, 1867; died in Sofia, Mar. 20, 1938; leader of the Democratic Party, 1900-32. He signed the armistice in 1918 and offered the crown to Boris III.

MARPHIS, CHARLES GILMORE. American educator; born near Edinburgh, Va., Feb. 12, 1865; died in Charlottesville, Va., May 14, 1938; professor of secondary education (1911-19) and director of extension (1920-25) of the University of Virginia; organizer (1927) and director of the Institute of Public Affairs at the University of Virginia.

MARIE, died July 18, 1938.

MARKS, OF WOOLWICH, 1ST BARON, GEORGE CROYDON MARKS. British engineer; born in Eltham, Kent, June 9, 1858; died in Bournemouth, Sept. 24, 1938; author of works on hydraulics and patents; Liberal member of Parliament, 1906-24.

MARTIN, LOUIS ADOLPHE. American educator; born in Hoboken, N. J., Nov. 5, 1880; died in Newton, N. J., Aug. 16, 1938; professor of mechanics after 1908 and dean (1910-28) of the Stevens Institute of Technology; author of a six-volume *Text-Book of Mechanics* (1906-16), widely used in colleges.

MASUDA, BARON TAKASHI. Japanese industrialist; born in Tokyo, November, 1847; died in Tokyo, Dec. 28, 1938; managing director of the Mitsui Bussan Kaisha, holding company of the vast Mitsui commercial interests, which he helped to organize. Born a Samurai, he gave up a military career for commerce at the beginning of Japan's expansion, and became one of the wealthiest men of his country.

MAUD CHARLOTTE MARY VICTORIA, died Nov. 20, 1938.

MAUDE, AYLMER. English author; died near Chelmsford, Aug. 25, 1938. See Vol. XV, p. 257.

MAURY, CARLOTTA JOAQUINA. American paleontologist; born in Hastings, N. Y., Jan. 6, 1874; died in Yonkers, N. Y., Jan. 3, 1938; consulting paleontologist to the Royal Dutch Shell Petroleum Co. and the Brazilian government. She organized the Maury expedition to the Dominican Republic in 1916 and was an expert on the stratigraphy and fossil faunas of Venezuela and Brazil.

MAXWELL, WILLIAM BABINGTON. English author of about 40 novels and several plays; born in 1876(?); died in London, Aug. 4, 1938; formerly chairman of the Society of Authors and the National Book Council. His novels, written for the most part on pathological and somewhat sensational subjects, were well-constructed and very popular. They included *The Ragged Messenger* (1904), *The Guarded Flame* (1906), *The Devil's Garden* (1914), and an autobiography, *Time Gathered* (1938).

MEANS, GASTON BULLOCK. American investigator; born near Concord, N. C., 1879; died in Springfield, Mo., Dec. 12, 1938; author of *The Strange Death of President Harding* (1930), an alleged expose (later repudiated) of the Harding administration, based on his activities as agent of the Bureau of Investigation, 1921-23. He confessed to acting as an espionage agent for Germany during the World War and was a prominent witness at the investigation of Attorney General Daugherty for bribery. Acquitted on a charge of murder in 1917, he served two years for bribery (1926-28). When he died, he was serving a fifteen-year term for obtaining from Mrs. Evelyn Walsh McLean of Washington the sum of \$100,000, with which he promised to ransom the kidnapped Lindbergh child.

MEIER, FRED CAMPBELL. American plant pathologist, with the U.S. Department of Agriculture after 1915; born in Riggston, Ill., Apr. 5, 1893; lost at sea when the *Hawaii Clipper* disappeared on a Guam-Manila flight, July 30, 1938; principal pathologist of the Bureau of Plant Industry, 1930-34; noted for his research on aerial dissemination of micro-organisms.

MICHALAKOPOULOS, ANDREW. Greek premier (1924) and leader of the Conservative-Republican Party; born in 1875; died in Athens, Mar. 27, 1938; Minister of National Economy (1917) and Foreign Affairs (1926, 1932, and 1933).

MICHEL, VIRGIL GEORGE, O.S.B. American Roman Catholic clergyman, dean of St. John's University, Collegeville, Minn., from 1933; born in St. Paul, Minn., June 26, 1899; died in Collegeville, Minn., Nov. 26, 1938; entered the Benedictine Order in 1910 and ordained in 1916; founder-editor of *Orate Fratres* (1926-30) and an active leader in the liturgical movement.

MILFORD HAVEN, 2d MARQUESS OF, GEORGE LOUIS VICTOR HENRY SERGIUS MOUNTBATTEN. British peer, great-grandson of Queen Victoria, and commander in the Navy; born Nov. 6, 1892; died in London, Apr. 8, 1938.

MILLER, FRANK JUSTUS. American educator; born in Clinton, Tenn., Nov. 26, 1858; died in Westport, Conn., Apr. 23, 1938; instructor after 1892 and professor (1909-25) of Latin at the University of Chicago; editor of *The Classical Journal*, 1908-28.

MINNS, SUSAN. American collector; born in Lincoln, Mass., 1840(?); died in Boston, Mass., Aug. 2, 1938. She donated her valuable collection of macabre items to the University of Louvain, Belgium, and made extensive gifts to Harvard, Wellesley, and to the Massachusetts Institute of Technology, where she had studied.

MITCHELL-THOMSON, SIR WILLIAM. See SELSDON.

MOFFET, HAROLD. American actor; born in Chicago, Ill., Aug. 9, 1892; died in New York, N. Y., Nov. 7, 1938. He appeared in many supporting roles between 1925 and 1938, creating that of Gilhooley in *Of Thee I Sing* and *Let 'Em Eat Cake*.

MOLITOR, COL. FREDERIC ALBERT. American engineer; born in Detroit, Mich., Apr. 21, 1868; died in Stamford, Conn., Mar. 12, 1938; consultant and builder of important railroads in the United States, Philippines, and Brazil; commander of the 22d Regiment of Engineers in France during the World War (cited for distinguished service).

MOND, SIR ROBERT LUDWIG. English leader in the nickel industry; born in Farnworth, Lancs., Sept. 9, 1867; died in Paris, France, Oct. 22, 1938; president of the Egypt Exploration Society and the French Institute of Chemical Industry; ex-president of the Faraday Society; founder of the Infants' Hospital in London; medallist of the Society of Chemical Industry (1936). He assisted his father in the discovery of new carbonyles and carried on research in electrochemistry, color photography, etc. He financed the Mond archaeological expedition in Egypt, as well as exploration in Thebes, Palestine, and Brittany.

MONTEFIORE, CLAUDE JOSEPH GOLDSMID. British Jewish leader and author; born in London, 1858; died in London, July 9, 1938; president of the Anglo-Jewish Association (1896-1921), the Liberal Jewish Synagogue, and the University College of Southampton (1915-34).

MONTFORD, PAUL RAPHAEL. Australian sculptor; born in London, Nov. 1, 1868; died in Melbourne, Jan. 15, 1938; member of the Royal Society of British Sculptors. Among his works are the war memorials at Croyden and Camperdown, Victoria.

MOODY, WALTER SHERMAN. American electrical engineer, with the General Electric Co. (1892-1932); born in Chelsea, Mass., Sept. 20, 1864; died in Pittsfield, Mass., Nov. 7, 1938; designer of transformers.

MOORMAN, CHARLES HARWOOD. U.S. judge of the 6th Circuit Court of Appeals (1925-38); born in Big Spring, Ky., Apr. 24, 1876; died in Louisville, Ky., Jan. 26, 1938. He participated in a decision favorable to the TVA in 1937, and in 1928 ruled that \$44,000,000 in excessive Federal taxes on the sale of Ford Motor Company stocks must be refunded.

MORAWETZ, VICTOR. American lawyer and economist; died in Charleston, S. C., May 18, 1938. See Vol. XVI, p. 240. He helped to organize the American Law Institute and added to his writings *Elements of the Law of Contracts* (1927).

MORET, ALEXANDRE. French Egyptologist; born in 1868; died in Paris, Feb. 2, 1938; keeper of Guimet Museum, 1906-23; professor at the Collège de France, 1923-38; member of the Académie des Inscriptions et Belles-Lettres after 1926.

MORICE, ADRIAN GABRIEL. Canadian Roman Catholic missionary and historian of western Canada; born in Mayenne, France, Aug. 27, 1859; died in St. Boniface, Man., Apr. 21, 1938. An expert on Indian languages, he compiled a dictionary of the Dene or Carrier language.

MORRIS, EDWARD PARMELEE. American Latinist; died in New York, Nov. 16, 1938; retired 1919. See Vol. XVI, p. 285.

MORRIS, ROBERT CLARK. American lawyer; born in Bridgeport, Conn., Nov. 19, 1869; died in New York, N. Y., Oct. 13, 1938; Republican leader in New York State. An expert on Federal law, he represented the U.S. government before the Venezuelan Claims Commission and the German Mixed Claims Commission.

MORRISON, (HOWARD) PRIESTLY. American actor and director; born in Baltimore, Md., July 5, 1871; died in Kew Gardens, N. Y., Jan. 26, 1938; producer of *Smilin' Through* (1919), *Mama's Affair* (1920), *Alias the Deacon* (1925), *The Barker* (1927), and other Broadway successes.

MOTT, SIR BASIL. English engineer; born Sept. 16, 1859; died in London, Sept. 7, 1938; chief engineer of the Mersey Tunnel; builder of subways.

MOUNTBATTEN, SIR GEORGE. See MILFORD HAVEN.

MULDENER, LOUISE. American actress; born in Brooklyn, N. Y., Feb. 23, 1854; died New York, N. Y., May 10, 1938; leading lady for Joseph Jefferson, Edwin Booth, Salvini, and Rossi, and for several years with the Boston Theater Company; noted for Shakespearean roles and, in later years, appeared in *The Melting Pot*.

MUMFORD, HERBERT WINDSOR. American educator and expert on cattle breeding; born in Moscow, Mich., Feb. 26, 1871; died in Champaign, Ill., May 31, 1938; chief in animal husbandry after 1901 and dean of the College of Agriculture after 1922 at the University of Illinois.

MUNROE, CHARLES EDWARD, died Dec. 7, 1938.

MURAT, PRINCE JOACHIM. French leader of the Bonapartist cause and representative of Prince Louis Napoleon in France; born in Paris, Aug. 6, 1885; died in Paris, May 12, 1938; great-grandson of Gen. Murat, who married Napoleon's sister and became King of Naples.

MURCHISON, KENNETH MACKENZIE. American architect and banker; born in New York, N. Y., Sept. 29, 1872; died in New York, N. Y., Dec. 15, 1938; designer of the U.S. Marine Hospital, Staten Island, the Beaux-Arts Apartments in New York City, terminals in Hoboken, Buffalo, Baltimore, and Havana, etc.

NIKOLAI BUKHARIN

MUSICA, PHILIP (F. DONALD COSTER), died Dec. 16, 1938.

MUSICK, CAPT. EDWIN C., died Jan. 11, 1938.

MUTRIZ, JAMES. American baseball manager; born in Chelsea, Mass., June 13, 1851; died in New York, N. Y., Jan. 24, 1938; organizer and first president (1883-90) of the New York Giants.

NEIL, EDWARD J. American journalist; born in Methuen, Mass., Jan. 17, 1900; died in Saragossa, Spain, Jan. 2, 1938, from shell wounds received on the Teruel war front. As Associated Press correspondent, he covered the Italo-Ethiopian War, the coronation of George VI, and the Spanish Civil War.

NEUSTÄDTER-STÜRMER, BARON ODO. Austrian cabinet minister under Dollfuss and Schuschnigg (1933-34, 1934-35, and 1936-37); died a suicide near Vienna, Mar. 18, 1938, following the Nazi occupation of Austria; minister to Hungary, 1936.

NEWBOLT, SIR HENRY JOHN. English poet and naval historian; born in Bilston, Staffordshire, June 6, 1862; died in London, Apr. 20, 1938. His works, which glorified English traditions, included *Admirals All* (1897), *The Year of Trafalgar* (1905), and *A Naval History of the War* (1920).

NICOLAIDES, KIMON. American artist; born in Washington, D. C., June 10, 1892; died in New York, N. Y., July 18, 1938; instructor at the Art Students League of New York, 1923-38, noted for his original and highly successful methods of instruction; represented by murals at the Irving Trust Co. in New York and in many collections.

NICOLAS, PRINCE OF GREECE. Third son of George I and uncle of George II of Greece; born in Athens, Jan. 9, 1872; died in Athens, Feb. 8, 1938. When the royal family was exiled from Greece (1917-20 and 1924-35), he became a painter and exhibited at the Paris salon. His third daughter married the Duke of Kent of England.

NOBLE, WILLIAM CLARK. American sculptor and painter; born in Gardiner, Me., Feb. 10, 1858; died in Washington, D. C., May 10, 1938. He executed a number of public statues and designed coins.

NOMA, SEIJI. Japanese publisher; died in Tokyo, Oct. 17, 1938; managing director of the newspaper *Hochi* after 1930. He introduced popular magazines in Japan, founding nine publications with a circulation of ten millions which were an important influence in the changing language and customs of Japan. His son, TSUNE NOMA, died Nov. 8, shortly after succeeding him as head of the Noma Company.

NORTHAM, FIRST BARON OF. See CHALMERS, FIRST BARON OF NORTHAM, ROBERT.

NOURSE, ELIZABETH. American artist residing in Paris; born in Cincinnati, O., in 1860; died in Paris, France, Oct. 8, 1938; sociétaire of the Beaux Arts Institute; represented in the Art Institute of Chicago and other museums.

NOVELLO, ARMANDO ("TOTO"). American clown, popular in circus and vaudeville; born in Geneva, Switzerland, Oct. 27, 1888; died in New York, N. Y., Dec. 15, 1938.

O'HARA, FRANK. American economist; born in Lanesboro, Minn., Mar. 24, 1876; died in Washington, July 30, 1938; professor at Catholic University, 1909-38, and founder (1919) of Columbus University.

OLAND, (JOHAN) WARNER. American motion-picture actor; born in Umea, Sweden, Oct. 3, 1880; died in Stockholm, Sweden, Aug. 6, 1938; famous for Oriental roles, notably Fu Manchu and Charlie Chan. He played the villain in *The Perils of Pauline* and other early serials, having previously been known in Ibsen and Shakespearean roles on the stage.

O'LEARY, HENRY JOSEPH. Canadian Roman Catholic leader; born in Richibucto, N. B., Mar. 13, 1879; died in Victoria, B. C., Mar. 5, 1938; bishop of Charlottetown (1913-20), where he expanded St. Dunstan's College; archbishop of Edmonton, 1920-38.

ORBISON, THOMAS JAMES. American psychiatrist; born in India, Nov. 13, 1866; died in Sawtelle, Calif., Mar. 26, 1938; practised in Philadelphia prior to 1907 and subsequently in Los Angeles; captain in the Medical Corps of the A. E. F. He testified in a number of sensational murder trials, including those of Thomas Massie in Honolulu and William Edward Hickman.

O'REILLY, THOMAS CHARLES. American Roman Catholic bishop; born in Cleveland, O., Feb. 22, 1873; died in Miami Beach, Fla., Mar. 25, 1938; pastor of the Cathedral of St. John the Evangelist in Cleveland, 1911-28; bishop of Scranton, Pa., 1928-38.

ORLOV, VLADIMIR R. Soviet Russian commissar for Naval Forces; executed for treason in 1938.

OSSIETZKY, CARL VON, died May 4, 1938.

OSTRANDER, JOHN EDWIN. American mathematician; born in Slingerlands, N. Y., Mar. 20, 1865; died in Amherst, Mass., Oct. 19, 1938; professor at Massachusetts State College, 1897-1935; known for studies of the magnetic needle.

OSWALD, JOHN CLYDE. American publisher; born in Ft. Recovery, O., July 11, 1872; died in Pelham Manor, N. Y., June 22, 1938; editor and publisher of *The American Printer*, 1897-1925; ex-president of the National Editorial Association and the Federation of Trade Press Associa-

tions; founder of the Benjamin Franklin Society and a collector of Franklin items.

PACE, EDWARD ALOYSIUS. American Roman Catholic clergyman and educator; born in Starke, Fla., July 3, 1861; died in Washington, D. C., Apr. 26, 1938; professor of philosophy at the Catholic University of America, 1891-1935; president of the American Council of Education, 1926.

PAGET, LADY MURIEL. British welfare leader; born in 1877; died in London, June 16, 1938; director of the Anglo-Russian Hospital at Petrograd during the World War. She organized relief work for British subjects in Russia after the revolution and child welfare work in several European countries.

PALACIO VALDES, ARMANDO, died Feb. 2, 1938.

PALMER, PAULINE LENNARDS (MRS. ALBERT PALMER). American portrait, still life, and landscape painter; born in McHenry, Ill.; died in Trondheim, Norway, Aug. 15, 1938. She worked in Chicago, where she received many awards from the Art Institute and other groups.

PAPE, ERIC. American painter; died in New York, N. Y., Nov. 7, 1938. See VOL. XVIII, p. 18.

PARKS, LEIGHTON. American Protestant Episcopal clergyman; born in New York, N. Y., Feb. 10, 1852; died in London, Eng., Mar. 21, 1938; rector of St. Bartholomew's in New York, 1904-25; noted for his attacks on fundamentalism and the conservative elements in the Church.

PARRISH, STEPHEN. American etcher; died in Plainfield, N. H., May 15, 1938. See VOL. XVIII, p. 112.

PATIALA, LIEUT.-GEN. H. H. FARZAND-I-KHAS, MAHARAJA OF. Indian prince; born October, 1891; died in Lahore, Mar. 23, 1938; chancellor of the Chamber of Indian Princes, 1926-30, 1933-35, and 1937-38; delegate to the Indian Round Table Conference (1930), the Imperial War Conference (1918) and the League of Nations Assembly (1925); served during the World War and the Afghan War; known for his progressive policies and friendship with Great Britain. An absolute ruler of the greatest Punjab State, he was enormously wealthy; his extravagance and generosity were widely publicized.

PATTERSON, SHIRLEY GALE. American educator; born in New York, N. Y., July 24, 1884; died in Hanover, N. H., May 28, 1938. He taught Romance Languages at Dartmouth College, 1915-38.

PEABODY, GEORGE FOSTER, died Mar. 4, 1938.

PEARCE, CAPT. S. BARTLEY. American speedboat designer and racer; born in 1864; died in Brielle, N. J., Jan. 29, 1938; winner of the Harmsworth International trophy with the *Dirie* in 1907 and 1908.

PEARSON, PAUL MARTIN. American administrator and lecturer; born near Litchfield, Ill., Oct. 22, 1871; died in San Francisco, Calif., Mar. 26, 1938; professor at Swarthmore (Pa.) College, 1902-19, and founder of Swarthmore Chautauqua Association; governor of the Virgin Islands, 1931-35. His administration of the Virgin Islands resulted in personal differences both with native leaders and with officials in Washington. An investigation, begun in the Senate and then dropped, was followed by Pearson's resignation.

PEASE, FRANCIS GLADHEIM. American astronomer; born in Cambridge, Mass., Jan. 14, 1881; died in Pasadena, Calif., Feb. 7, 1938; instrument designer (1904-07 and 1908-13) and astronomer (1911-38) at the Mount Wilson Observatory in Pasadena; noted for photographs of the moon, spectograms of nebulae and star clusters, and the first measurements of the diameters of stars, accomplished by an interferometer; associated with A. A. Michelson in measuring the speed of light. He designed most of the instruments used at the Mount Wilson Observatory, including its 100-inch telescope, and developed the method by which the 200-inch mirror of the California Institute of Technology was ground.

PENNYBACKER, MRS. PERCY V. (ANNA J. HARDWICKE). American clubwoman; born in Petersburg, Va., May 7, 1861; died in Austin, Tex., Feb. 4, 1938; president of the General Federation of Women's Clubs, 1912-16; author of a *History of Texas* (1888). Active in a number of organizations, she lectured widely on suffrage, education, and world peace.

PERLEY, SIR GEORGE HALSEY, died Jan. 4, 1938.

PERRY, EDWARD DELAVAN. American Greek scholar; died in New York, N. Y., Mar. 28, 1938; retired, 1931. See VOL. XVIII, p. 366.

PERRY, SIR (EDWIN) COOPER. British physician; born Sept. 10, 1856; died in Worthing, Eng., Dec. 17, 1938; chairman of the London School of Hygiene and Tropical Medicine; chairman of Worthing Hospital; senior consulting physician of Guy's Hospital; Principal Officer of the University of London, 1920-26.

PETERS, ANDREW JAMES. U.S. Representative (Democrat), 1907-14, and mayor of Boston, 1918-22; born in Jamaica Plain, Mass., Apr. 3, 1938; died in Boston, June 26, 1938. Capital, Katmandu (population, about 80,000). The chief imports are woolen piece goods, silk, raw cotton, brass, petroleum, tobacco, spices, sheep and goats, cattle, salt, sugar, drugs and dyes, leather, iron and copper wares, twist and yarn, and cotton. The chief exports are jute (1937 estimate, 10,000 metric tons to India), saltpeter, tobacco, oil seeds, rice and other grains, wheat, gums, resins and dyes, opium and other drugs, cattle, hides and skins, pulse, clarified butter, spices, and timber. The yearly gross revenue is estimated at 15,000,000 rupees (rupee approximates \$0.6180 at par). The government is a military oligarchy. Reigning sovereign in 1938, Tribhubana Bir Bikram (succeeded, Dec. 11, 1911).

NETHERLANDS, THE. A constitutional monarchy of northwestern Europe. Capital, Amsterdam. Seat of the government, The Hague ('s Gravenhage). Sovereign in 1938, Queen Wilhelmina, who succeeded to the throne on Nov. 23, 1890.

Area and Population. The area, including water belonging to municipal territories, is 13,515 square miles. The population in August, 1938, was

estimated at 8,689,000 (7,935,565 at the 1930 census). In 1930 94 per cent of the people lived in communities of 2000 or more. Living births in 1937 numbered 170,323 (19.8 per 1000); deaths, 75,501 (8.8 per 1000); marriages, 65,776 (7.6 per 1000). Estimated populations of the chief cities on Jan. 1, 1938, were: Amsterdam, 788,379; Rotterdam, 605,734; The Hague ('s Gravenhage), 490,186; Utrecht, 162,981; Haarlem, 135,356; Groningen, 118,400; Eindhoven, 108,504; Tilburg, 93,003; Nijmegen, 92,922; Arnhem, 87,646; Leiden, 76,048.

Education and Religion. There is practically no illiteracy. The school enrollment in 1936-37 was: Kindergartens, etc., 212,339; elementary, 1,236,982; secondary (including day and night commercial schools), 74,730; trades, crafts, domestic science, minor arts, 134,788; agricultural, 29,668 (1935-36); universities and colleges, 12,388. According to the 1930 census, there were 2,890,022 Roman Catholics, 2,732,333 members of the Dutch Reformed Church, 876,958 other Protestants, 111,917 Jews, 10,182 Jansenists, 169,575 belonging to other creeds, and 1,144,393 professing no religion.

Production. According to the 1930 census, 39 per cent of the working population was engaged in industry, 20 per cent in agriculture, 12 per cent in commerce, and 9 per cent in transportation. About 2,280,000 acres (26 per cent of the land area) is cultivable and there are 3,272,000 acres of meadow. The livestock census of May, 1937, showed 2,626,000 cattle, 1,406,000 swine, 608,000 sheep, 300,000 horses, and 28,518,000 poultry. Butter production in 1937 was 223,326,000 lb.; cheese, 267,418,000 lb.; condensed milk, 379,853,000 lb.; powdered milk, 59,965,000 lb. Yields of the chief cereals in 1938 were (in metric tons): Wheat, 412,000; (341,700 in 1937); barley, 136,000 (135,500); rye, 540,000 (480,800); oats, 367,000 (371,100). The potato harvest in 1937 was 91,858,000 bu.; sugar beets, 1,416,000 metric tons; beet sugar (1937-38), 236,000 metric tons; flax, 30,192,000 lb.

Mine and factory production in 1936, with 1937 figures in parentheses where available, was: Coal, 12,803,000 metric tons (14,321,000); lignite, 89,000 metric tons (148,000); briquets, 1,150,000 metric tons (1,328,000); salt, 76,271 metric tons (132,770); cotton yarn (for sale), 63,034,000 lb.; wool yarn, 9,477,000 lb.; boots and shoes, 14,340,000 pairs; margarine, 130,697,000 lb. (151,635,000); cocoa powder, 15,648,000 lb.; cocoa butter, 41,656,000 lb.; potato flour (1936-37), 198,414,000 lb. (310,200,000 in 1937-38); bicycles, 393,000; vessels launched, 81,000 gross tons.

Foreign Trade. Imports for consumption totaled 1,550,167,000 florins in 1937 (1,414,800,000 in 1938); exports of Netherlands products, 1,148,110,000 florins (1,039,200,000 in 1938). The 1937 imports, in order of value, were iron and steel, machinery, wood and cork, tin ore, yarn and thread, wheat and corn. The chief 1937 exports, with values in U.S. currency, were: Vegetable oils, \$35,295,000; tin in blocks, \$30,742,000; radio apparatus, \$28,983,000; condensed and other milk, \$26,372,000; cotton piece goods, \$24,611,000; butter, \$24,266,000. Germany supplied 21.1 per cent of the imports for consumption in 1937 (23.3 in 1936); Belgium, 11.6 (11.7); United States, 8.8 (7.1); United Kingdom, 8.3 (9.2); Netherlands Indies, 8.1 (7.8). Of the 1937 exports, the United Kingdom took 21.7 per cent (22.3 in 1936); Germany, 15.4 (15.7); Belgium, 11 (11.5); Netherlands Indies, 8.2 (5.9); France, 6.6 (7.4); United States, 5.1 (6.0). United States trade figures for 1938

showed exports to the Netherlands of \$96,752,583 (\$93,523,696 in 1937); imports from the Netherlands, \$31,370,871 (\$53,286,683).

Finance. Provisional budget returns for 1937 showed receipts of 706,000,000 florins (670,000,000 in 1935) and expenditures of 775,000,000 florins (812,000,000 in 1935). Revised budget estimates for 1937 placed receipts at 651,000,000 and expenditures at 793,000,000 florins (751,000,000 and 883,000,000 florins, respectively, for 1938). There is no foreign debt. The internal debt totaled 3,698,463,000 florins on Jan. 1, 1938. The florin (guilder) had an average exchange value of \$0.5505 in 1937 and \$0.5501 in 1938.

Transportation. At the end of 1936 the Dutch railways, operated by two state-controlled private companies, had 2232 miles of line in operation. During that year they carried 44,540,000 passengers and 13,889,000 metric tons of freight, the gross receipts totaling 96,970,000 florins. There were nearly 20,000 miles of paved roads at the end of 1938 and a network of super-highways, permitting a speed up to 90 miles an hour without undue danger, was under construction between the chief cities. Much of the country's heavy freight is carried on the waterways, aggregating about 5200 miles in length. Automobiles registered on Jan. 1, 1938, numbered 147,905. There were about 3,250,000 bicycles in use. The great commercial air system (K.L.M.) reported the following statistics for 1937: Local lines, 19,079 passengers, 354,807 lb. of merchandise, 5073 lb. of mail; European lines, 101,702 passengers, 3,110,990 lb. of freight, 1,143,410 lb. of mail; Netherlands Indies lines, 3897 passengers, 132,183 lb. of freight, and 302,773 lb. of mail; West Indies lines, 5899 passengers, 89,366 lb. of freight, and 6846 lb. of mail. The Amsterdam-Batavia line's passenger traffic in 1937 increased 41.3 per cent over 1936; mail, 65.5 per cent; freight, 44.3 per cent. Total receipts in 1937 were \$4,950,200, or \$1,112,400 more than in 1936. The operating loss, covered by government subsidy, was \$305,900. The Netherlands merchant marine on June 30, 1938, comprised 1482 vessels of 2,855,382 gross tons. During 1937, 21,600 ships of 79,167,000 net cubic meter tons entered the ports in the foreign trade.

Government. Executive power is vested in the sovereign and legislative power jointly in the sovereign and the States-General (parliament). There is an Upper Chamber of 50 members elected by the Provincial States for six years and a Lower Chamber of 100 members elected by direct suffrage for four years. Premier in 1938, Dr. Hendrik Colijn (Anti-Revolutionary party), who assumed office May 24, 1933. For the standing of the parties in parliament, see 1937 YEAR BOOK, p. 534.

HISTORY

Internal Affairs. The year 1938 was marked by the birth of a daughter on January 31 to Crown Princess Juliana and Prince Bernhard of Lippe-Biesterfeld, who were married on Jan. 7, 1937. The infant Princess Beatrix of Orange-Nassau and Lippe-Biesterfeld, as she was styled, was in line of direct succession to the throne. On September 6 Queen Wilhelmina observed the 40th anniversary of her coronation. Both of these events were widely celebrated and served to enhance the attachment of the Dutch people to their dynasty. Although Social Democratic Labor party doctrine opposed the monarchical principle, leaders of the party joined in the enthusiastic speeches at official functions celebrating the birth of the princess. They were re-

buked for this at the party's Eastern Congress in April.

The internal problems that most engaged the attention of the government and people during the year were national defense and economic policy. In 1937 the growing European crisis won even the pacifist Social Democratic Labor party over to the necessity for higher defense appropriations. In 1938 the Austrian and Czecho-Slovak crises and the growing Japanese menace to the Netherlands Indies (q.v.) spurred the country to greater defensive preparations. During the Austrian crisis in March, Premier Colijn canceled all army leaves, extended the conscript training period, and provided for a 20 per cent increase in the number of conscripts. On April 6 the Lower Chamber raised the tax on dividends and bonuses for one year for the benefit of the defense fund, which was expected to gain some 10,000,000 guilders.

Opening the States-General's fall session on September 29 at the peak of the Czecho-Slovak crisis, the Queen called for additional defense expenditures to maintain and reinforce "our carefully constructed policy of independence." Defense appropriations voted for 1939 totaled 134,858,170 guilders against 110,359,238 in 1938 and the 1939 sum was to be increased by an additional 8,000,000 guilders in 1940 and by 5,000,000 more in 1941. New armaments authorized included an 8300-ton cruiser, 20 torpedo boats, a flotilla leader, and 9 submarines. To provide the necessary funds, income taxes were imposed on all salaries, rents, and profits. At the same time indirect taxes were cut and the tax burden on large families was reduced.

Extensive military precautions were taken during the Czecho-Slovak crisis to insure the Netherlands' neutrality in the event of a European conflict. The Munich accord was received with temporary relief but with forebodings as to the long-time results. The armament program was speeded and Amsterdam was blacked out for air-raid drills in October. During September the government requested extraordinary powers to insure adequate food supplies in war time. On September 13 a royal decree terminated the ban prohibiting Social Democratic Labor party members from holding rank in the defense forces. This action indicated that the government no longer regarded the Socialists as revolutionary. The ban remained in effect against the Communists, National Socialists (Nazis), and a few other small groups.

The political importance which economic policies had attained as a result of large-scale unemployment and other economic maladjustments that had been chronic since 1930 was evidenced by a revision of the Constitution early in 1938, the seventh since the Statute of the Netherlands was adopted in 1814. The amendment gave the government power to intervene more actively in economic affairs by establishing regulatory bodies in certain professions, trades, and industries. With more than one-fourth of all available non-agricultural labor unemployed at the beginning of 1938, the government was obliged to undertake further measures of economic rehabilitation, despite the growing unbalance in the national budget. In the spring the number of persons on public-works projects was increased from 53,000 to 75,000 and in September it was decided to put an additional 100,000 unemployed to work on further reclamation of the Zuider Zee and other large projects. A concerted effort was also made to combat demoralization among the unemployed.

The Industrial Establishment Bill, passed by the

Lower Chamber March 10, placed under government control the establishment of new industrial enterprises or the increase of capacity of those already established. The subsidies given to nearly all classes of agricultural production were continued, the funds being raised by special import and excise taxes excluded from the regular financial accounts. The Emergency Tariff Powers Law of 1934, under which many of the import restrictions were imposed, was amended to permit even greater protection of Netherland industries against foreign competitors. The gold embargo act of Oct. 1, 1936, was abrogated on Aug. 5, 1938, but as the Netherlands Bank remained unobligated to redeem its banknotes in gold, the move did not signify a return to the gold standard.

Foreign Relations. The Netherlands had for years based its policy of armed neutrality upon the balance of power system in Western Europe. When that balance was ruptured by the Munich accord between France, Germany, Great Britain, and Italy, the Netherlands were impelled to weigh the desirability of revising their foreign policy, particularly after it was reported late in 1938 that Germany coveted certain of the Dutch colonies in the East Indies. As the British navy was the main defense of the Netherlands Indies against both Germany and Japan, the events of 1938 drew the Netherlands and Great Britain more closely together.

The coolness displayed by the Netherlands toward Germany as a result of incidents in 1937 (see 1937 YEAR BOOK, p. 535) was aggravated in 1938. There were unauthorized flights of German airplanes over Netherland territory. On March 8 the German Government apologized for the ill treatment accorded a Netherland army aviator who had been arrested by the Gestapo in Germany in 1935, charged with high treason, and imprisoned for nearly two years while awaiting trial. He charged that he had been systematically ill treated while in prison. Criticisms of this and other developments in Germany voiced by the Netherland press led Hitler's newspaper on May 4 to threaten economic reprisals unless the press attacks were ended.

The German press assumed a more menacing tone toward the Netherlands after the Munich triumph. It suggested that the Netherland Government would be wise to co-operate with Germany in both economic and political affairs. All sports relations between the two countries were suspended late in the year. Dutch hostility toward Germany was particularly aroused by the Nazi purge of the Jews in November. Despite the difficult unemployment situation, which led the government to close the border to German and Austrian refugees in the spring, about 1200 refugees were admitted from Germany in November. Premier Colijn took a leading part in initiating international measures at London for the succor of Jewish refugees. See JEWS.

Meanwhile, the Netherlands completely abandoned reliance upon the collective security system of the League of Nations and terminated its League obligations to impose military and economic sanctions against aggressors. In this policy it acted in co-operation with the other Oslo Powers (see DENMARK under History). The effort of the Netherlands and the other Oslo Powers to lead the way toward a restoration of international trade was also abandoned with the abrogation on May 11, 1938, of The Hague trade convention of May 28, 1937. The Netherlands' decision to recognize the

Italian conquest of Ethiopia was announced Feb. 14, 1938. On July 27 the government decided to exchange representatives with the Insurgent Government of Spain, but stated that this action did not imply recognition of the Franco regime. King Leopold of Belgium visited The Hague late in November and discussed with the Queen and the government a policy of mutual co-operation in trade matters and in the adjustment of political issues (see BELGIUM under *History*).

The Netherland Government repeatedly protested to Mexico against the expropriation without immediate compensation of British-Dutch oil properties in that republic (see MEXICO under *History*). On Feb. 11, 1938, the Netherland Supreme Court upheld the decision of lower courts that the municipality of Rotterdam was not obliged to pay at the gold rate on its 1924 dollar loan. It declared that American law must be applied by Dutch courts in enforcing the bond contract of a loan payable exclusively in the United States.

NETHERLANDS GUIANA. See SURINAM.
NETHERLANDS INDIES. A group of large islands in the East Indies forming a colony of the Netherlands. Capital, Batavia, on the island of Java.

Area and Population. The area, population at the 1930 census, and population density of the various islands is shown in the accompanying table.

NETHERLANDS INDIES: AREA AND POPULATION

Group of islands	Area, sq. miles, 1930	Population, 1930	Density per sq. mile
Java and Madoera	51,032	41,718,364	817
Sumatra	164,148	7,677,826	47
Riouw-Lingga	12,235	298,225	24
Bangka	4,611	205,363	45
Billiton	1,866	73,429	39
Borneo:			
West district	56,664	802,447	14
South and east districts	151,621	1,366,214	9
Island of Celebes:			
Celebes	38,786	3,093,251	80
Manado	34,200	1,138,655	33
Molukka Islands and New Guinea	191,682	893,400	5
Timor Archipelago	24,449	1,657,376	68
Bali and Lombok	3,973	1,802,683	454
Total	735,268	60,727,233	83

The estimated population on Dec. 31, 1937, was 67,400,000. Over 92 per cent of the population is rural. Living births among the natives of Java and Madoera in 1936 numbered 1,162,923; deaths, 790,422. The 1930 census populations of the chief cities, all of which were in Java except as noted, were: Batavia, including Meester Cornelis, 533,015; Soerabaja (Surabaya), 341,675; Semarang, 217,796; Bandoeng, 166,815; Soerakarta, 165,484; Djokjakarta (Jogjakarta), 136,649; Palembang, in Sumatra, 109,069; Malang, 86,645; Makassar, in Celebes, 84,855; Medan, in Sumatra, 76,584; Pekalongan, 65,982; Bandjermasin, in Borneo, 65,698; and Buitenzorg, 65,431.

Education and Religion. According to the 1930 census, there were 4,296,579 literate persons, of whom 400,877 were able to write Dutch. The school attendance in 1936-37 was: Primary vernacular, 1,821,620; elementary, with instruction in Dutch language, 140,360; advanced elementary and secondary, 15,673; university, 1020. The natives are predominantly Moslem, but there are several million converted Christians and Animists and about a million Buddhists.

Production. Agriculture is the main occupation. The area harvested by native agriculturalists in

Java and Madoera in 1937 was 16,457,000 acres; by European estates (plantations) in all the islands in 1936, 2,715,866 acres. Production of the chief crops in 1937 was: Sugar (Java only), 1,414,000 metric tons; rubber (exports), 439,000 metric tons; coffee (exports), 217,925,000 lb.; tea, 147,083,000 lb.; rice (Java and Madoera), 353,474,000 bu.; corn (Java and Madoera), 80,075,000 bu.; peanuts (Java and Madoera), 403,000,000 lb.; tobacco (exports), 110,442,000 lb.; cassava roots (Java and Madoera), 8,055,000 metric tons; copra (exports), 1,094,000,000 lb.; cinchona (European estates), 23,390,000 lb.; kapok (exports), 41,830,000 lb.; palm oil (estate production), 434,634,000 lb.; sisal and agave (exports), 191,677,000 lb. In 1936 there were 4,402,203 cattle, 3,212,016 buffaloes, and 656,000 horses; in 1932, 1,802,000 sheep, 4,068,000 goats, and 1,258,000 swine.

Mineral and metal production in 1937 was (in metric tons): Tin (metal content of ore), 39,793; coal, 1,372,000; natural gas, 1,094,000 (1935); manganese ore, 8493; salt, 145,000; asphalt, 2199; sulphur, 12,400; phosphate rock, 20,000; bauxite, 198,000. The output of gold was 56,327 troy oz.; silver, 500,000 troy oz.; diamonds, 754 carats (1936); petroleum, 52,214,000 bbl. (46,282,000 in 1936); iodide of copper, 359,252 lb. (1936). Manufacturing, formerly confined largely to the processing of agricultural and mineral products for export, is expanding with government aid into the production of such commodities as cloth, tires, soap, flashlights, etc., for domestic consumption. On Jan. 1, 1936, there were 5904 factories and workshops under the Factory Act, including 172 sugar mills, 375 rubber mills, 803 rice mills, 273 tea factories, 255 coffee mills, 23 fiber processing plants, 116 sawmills, 312 power stations, 131 ice plants, and 22 cigarette factories. In addition, some 1,535,000 workers were engaged in minor indigenous industries in 1936.

Foreign Trade. According to preliminary figures, total imports in 1938 were valued at 485,400,000 florins and exports at 665,300,000 florins. In 1937 imports for consumption were 497,850,000 florins; exports of Netherlands Indies products, 950,633,000. The chief 1937 imports were cotton piece goods, iron and steel, machinery and apparatus, foodstuffs, and yarn and thread. The value of the principal 1937 exports in U.S. currency was: Rubber, \$163,303,000; gasoline, \$42,905,000; copra, \$34,422,000; tin ore, \$28,339,000; sugar, \$27,634,000; tea, \$27,006,000; crude tin, \$17,605,000. Of the 1937 imports for consumption, Japan furnished 25.4 per cent by value; the Netherlands, 19.1; United States, 10.2; Germany, 8.5; United Kingdom, 8.3; Singapore, 7.4. Of the 1937 exports, the Netherlands took 20.1 per cent; Singapore, 18.8; United States, 18.7; United Kingdom, 5.3; Japan, 4.5. United States trade figures showed imports from the Netherlands Indies of \$68,710,733 in 1938 (\$115,188,694 in 1937); exports to the Netherlands Indies, \$27,518,254 (\$25,050,275).

Finance. The 1939 budget estimates placed revenues at 591,100,000 florins and expenditures at 634,700,000 florins (550,833,614 and 570,946,433, respectively, in 1938). The actual receipts for 1938 totaled 508,100,000 florins (515,100,000 in 1937). The public debt totaled 1,381,800,000 florins on Dec. 31, 1937 (1,424,900,000 on Dec. 31, 1936). The average exchange value of the florin was \$0.5505 in 1937 and \$0.5501 in 1938.

Transportation. The railway mileage in 1936 was 4561 (government lines, 2703 miles). Roads and highways in 1937 extended about 35,900 miles

(number of automobiles, 62,334). The Netherlands and British trunk air lines connect the islands with Europe, Australia, and intermediate points. The Royal Netherlands Indies Airways (KNILM), operates inter-island services which during 1937 carried 17,601 passengers, 170,012 lb. of freight, and 65,245 lb. of mail. On July 3, 1938, this system launched an independent service to Australia and on Aug. 30, 1938, one connecting Batavia with Saigon, French Indo-China, via Singapore. During 1936 a total of 13,704 vessels of 31,743,000 net registered tons entered Netherlands Indies ports.

Government. Administrative and executive authority is exercised by the Governor-General, assisted by an advisory council of five members and by the Volksraad (assembly). Both the Governor-General and the Council members are nominated by the Queen of the Netherlands. The Assembly of appointed and elected delegates (natives, Netherlands, and Orientals) shares limited legislative powers with the Governor-General. Governor-General in 1938, Jhr. Dr. A. W. L. Tjarda van Starkenborgh Stachouwer (appointed June 8, 1936).

History. In his annual speech at the opening of the Volksraad on June 15, 1938, the Governor-General emphasized the continued unsatisfactory condition of Netherlands Indies' trade, resulting from the generally unfavorable world economic situation. The islands had been deprived of the benefits gained from devaluation of the guilder in September, 1936, by the decline in world commodity prices. Nevertheless, adverse effects of devaluation in the form of higher prices of imported consumers goods remained. On the other hand, food crops raised by natives were ample for local needs and profitable prices were received for them, in contrast to the prices of export products.

The Governor-General stated that the government's policy included continued organized improvement of the quality of Netherlands Indies' export products, increased production for the domestic market, and the encouragement of emigration from the more densely populated island of Java to the outlying possessions. In view of the discouraging budgetary outlook, it was decided to increase the income surtax, the wage tax, and the surtax on ad valorem import duties at the beginning of 1939.

The Japanese invasion of South China, Japanese activities in the Netherlands Indies, and the German drive for colonies gave a great stimulus to defensive preparations during 1938 by the governments of both the Netherlands Indies and the mother country. The measures taken by the Netherlands Government and parliament (see NETHERLANDS, THE, under *History*) were primarily designed to safeguard the rich East Indian colonial empire. In January the Netherlands Indies authorities announced more stringent measures to ascertain the purpose of Japanese fishing vessels in their territorial waters. Some vessels halted by the Coast Guard were found to have powerful wireless sets, complete geodetical equipment, and larger personnel than usual on fishing boats. Several of these vessels refused to halt until fired on.

To meet this threat Netherlands naval, air, and military forces in the East Indies were reinforced. A newly constructed cruiser arrived at Batavia. Another one was due in 1939. A third cruiser was laid down in the Netherlands for the East Indian service. And the old cruiser *Java* was being modernized. The destroyer flotilla was reinforced by more and larger vessels and by four new minesweepers. A submarine construction program was under way. At the same time the army air force

in the Netherlands Indies was strengthened materially by several dozen Martin bombers and 12 Lockheed transport planes were ordered. British-Dutch co-operation in defense of their mutual possessions in Malaya was evidenced by the visit of the Governor-General of Australia and Lady Gowrie to Batavia in April.

The autonomous powers of the nine provincial rajahs of Bali were largely restored on June 29, 1938, in accordance with the Dutch policy of interfering as little as possible with native affairs.

NEUTRALITY. See INTERNATIONAL LAW; UNITED STATES under *Administration*; BELGIUM, DENMARK, FINLAND, NETHERLANDS, NORWAY, SWEDEN, SWITZERLAND under *History*.

NEVADA. Area and Population. Area, 110,690 square miles; included (1930) water, 869 square miles. Population: Apr. 1, 1930 (census), 91,058; July 1, 1937 (Federal estimate), 101,000; 1920 (census), 77,407. Reno had (1930) 18,529; Carson City, the capital, 1596.

Agriculture. Acreage, production, and value of the chief crops of Nevada, for 1938 and 1937, appear in the accompanying table.

Crop	Year	Acreage	Prod. Bu.	Value
Hay (tame)	1938	184,000	370,000 *	\$2,220,000
	1937	182,000	376,000 *	3,271,000
Potatoes	1938	2,100	336,000	202,000
	1937	2,300	345,000	190,000

* Tons.

Mineral Production. The value of the yearly production of gold, silver, copper, lead, and zinc in Nevada, stated approximately, for 1938, by the U.S. Bureau of Mines, totaled \$23,720,353. As happened in the cases of other Mountain States, this total fell far short of that for 1937, which was \$34,617,056. The production of all these metals, save gold, was lower in 1938; but most of the decline, in terms of value, occurred in the mining of copper. The quantity of gold recoverable from ore mined advanced to some 289,500 oz. (1938) from 281,332 for 1937; in value, to \$10,138,500, from \$9,846,620. The production of silver fell to about 4,078,000 oz. (1938), from 4,864,750 (1937), and by value, to \$2,636,283, from \$3,762,884. That of copper dropped to 97,860,000 lb. approximately for 1938, from 149,206,000 for 1937; by value, to \$9,590,280, from \$18,053,926. That of lead, to 9,100,000 lb. (1938), from 18,694,000 (1937), and to \$427,700 from \$1,102,946. That of zinc, to some 18,910,000 lb. (1938), from 28,472,000 (1937), and to \$926,590, from \$1,850,680. The quantity of the year's production of gold was the greatest attained in any year after 1918. The increase in quantity resulted in part from the growth of two still young mining enterprises. The higher output of the mines operated for gold was in part offset by a drop in the production of gold as a secondary yield of the ores of copper.

Finance. Nevada's State expenditures in the year ended June 30, 1937, as reported by the U.S. Bureau of the Census, were: For maintaining and operating governmental departments, \$3,534,431 (of which \$561,520 was for local education and \$1,254,988 for highways); for interest on debt, \$43,485; for capital outlay, \$4,097,971. Revenues were \$7,367,888. Of these, property taxes furnished \$1,333,729; sales taxes, \$1,295,950 (chiefly the tax on gasoline, \$1,108,473); departmental earnings, \$198,260; sale of licenses, \$653,564; Federal or other grants-in-aid, \$3,581,829. Funded debt outstanding on June 30, 1937, totaled \$851,000. Net

of sinking-fund assets, the debt was \$662,330. On an assessed valuation of \$194,660,001 the State levied for the year ended June 30, 1938, ad-valorem taxes of \$1,437,722.

Education. Enrollment of pupils in the public schools in the academic year 1937-38 totaled 19,845; this comprised 10,119 in the kindergarten and elementary groups and 9726 in high schools. Expenditures for public-school education totaled \$2,341,486. Teachers numbered 206 in high schools and 580 in elementary positions. Their salaries for the year averaged \$1839 in high schools and \$1419 in elementary positions.

The popular vote (November 8) adopted by referendum a change in the constitution of Nevada, whereby the limitation of taxes was removed from levies for the support of the public schools. There occurred in 1938 a fair amount of activity in building and modernizing public schools.

Political and Other Events. Patrick A. McCarran (Dem.) was re-elected U.S. Senator at the general election (November 8), defeating Tasker L. Oddie (Rep.), former Senator. E. P. Carville (Dem.) won the election for Governor from John Fulton (Rep.). J. G. Scrugham (Dem.) was re-elected U.S. Representative. Senator McCarran, though he had disregarded the desires of the President by opposing important New-Deal legislation, notably the bill to alter the Supreme Court, encountered no Federal opposition to his re-election. His political strength in Nevada rendered it useless to try to terminate his Senatorial career.

The U.S. Department of Justice, conducting a Federal prosecution of persons accused of directing a ring that carried on commercialized unlawful practices in Nevada, obtained the conviction in New York City (February 12) of W. J. Graham and J. C. McKay, on charges of conspiracy and using the mails to defraud. The defendants were alleged to have been politically influential in Reno. Two previous efforts to obtain convictions in New York had failed.

Officers. Nevada's chief officers, serving in 1938, were: Governor, Richard Kirman (Dem.); Lieutenant-Governor, Fred S. Alward; Secretary of State, Malcolm McEachin; Treasurer, Dan W. Franks; Comptroller, Henry C. Schmidt; Attorney-General, Gray Mashburn; Superintendent of Public Instruction, Mildred Bray.

Judiciary. Supreme Court: Chief Justice, Ben W. Coleman; Associate Justices, F. J. L. Taber, Edward A. Ducker.

NEVADA, UNIVERSITY OF. A coeducational State institution of higher education in Reno, Nev., founded in 1874. There was an enrollment of 1100 students for the autumn term of 1938, and 147 in the summer session. The faculty included 81 members. The productive funds amounted to \$334,468, and the income for the year to \$697,584. The library contained 61,024 bound volumes. Acting President, L. W. Hartman, Ph.D.

NEWARK. See NEW JERSEY.

NEW BRUNSWICK. An eastern maritime province of Canada. Area, 27,985 square miles; population (June 1, 1938, estimate), 445,000 compared with 408,219 (1931 census). During 1936 there were 10,513 births (24.2 per 1000), 4803 deaths (11.0 per 1000), and 3397 marriages (7.8 per 1000). Chief towns (with 1931 population figures in parentheses): Fredericton, the capital (8830), Saint John (47,514), Moncton (20,689), and Campbellton (6505), Edmundston (6430). In 1936 there were 99,826 students enrolled in schools

and colleges of all kinds, including 1529 students of university grade.

Production. The gross value of agricultural production for 1937 was estimated at \$26,517,000 (\$29,767,000 in 1936) of which field crops accounted for \$13,598,000 (\$18,396,000 in 1936). Other important items in the 1936 total of agricultural production were dairy products, \$5,025,000; farm animals, \$3,421,000; poultry and eggs, \$1,323,000; fruits and vegetables, \$1,164,000; fur farming, \$873,000. Livestock in the province (1937): 52,300 horses, 214,500 cattle (including 111,400 milch cows), 107,100 sheep, 95,200 swine, and 1,339,300 poultry. Fur production for the year ended June 30, 1936, totaled 53,802 pelts valued at \$740,789. The output (1936) of the forests equaled 161,560 M cu. ft. valued at \$8,848,883. In 1937 the value of the fish catch was \$4,447,688.

Mineral production (1937) was valued at \$2,763,643 of which coal (364,714 tons) represented \$1,180,611; natural gas (576,671 M cu. ft.), \$283,922; gypsum (36,906 tons), \$131,727. In 1936, from the 784 manufacturing plants, employing a total of 13,710 workers, the net value of products was \$56,225,201 (central electric stations, and dyeing, cleaning, and laundry work ceased to be regarded as "manufacturing" industries for 1936). At the port of Saint John, 2,018,412 tons of cargo (import and export) were handled during 1937.

Government. For the fiscal year ended Oct. 31, 1937, ordinary revenue totaled \$7,869,483; ordinary expenditure, \$7,840,393; net public debt, \$66,433,682. The government is vested in a lieutenant-governor, assisted by an executive council of 8 members who also are members of the legislative assembly of 48 members elected for a term of 5 years by the people. In the Dominion parliament, New Brunswick is represented by 10 Senators and 10 members in the House of Commons. Lieutenant-Governor, Col. Murray MacLaren (appointed Feb. 5, 1935); Premier, A. A. Dysart. See CANADA.

NEW CALEDONIA. A colony in the Pacific belonging to France, consisting of the island of New Caledonia and the following dependencies: Isle of Pines, Wallis Archipelago, Futuna and Alofi, Loyalty Islands, and Huon Islands. Total area, 8548 square miles; total population (1936 census), 53,245. Nouméa (capital), on the island of New Caledonia, had 17,055 inhabitants in 1936.

Production and Trade. Coffee, copra, cotton, manioc, maize, tobacco, pineapples, nickel, chrome, cobalt, manganese, and iron are the chief products. In 1936 the blast furnaces produced 6075 tons of nickel matte valued at 23,458,713 francs; chrome ore produced from the mines amounted to 21,300 metric tons; phosphates totaled 2000 metric tons. Exports in 1936 were: Coffee, 1400 metric tons; copra, 2800 metric tons. Livestock in the colony included 98,912 cattle, 6052 sheep, 10,613 goats, 11,605 horses, and 10,560 pigs in 1936. In 1937 the estimated value of merchandise imports (in old U.S. gold dollars) was \$2,700,000 (1936, \$2,100,000); exports, \$2,400,000 (1936, \$2,000,000).

Communications. In 1936, 108 vessels (273,015 tons) entered and 107 vessels (271,829 tons) cleared New Caledonian ports. There was a 20-mile long narrow-gauge railway from Nouméa to Paita, and from Nouméa to Voh there was a daily motor-road service in 1936.

Government. The local budget for 1936 was balanced at 29,225,891 francs (franc averaged \$0.0611 for 1936). The colony is administered by a governor assisted by a privy council, and an elec-

tive council-general of 15 members. Governor, Y. Marchesson (appointed in 1937).

NEWFOUNDLAND, nü'fün(d)-län'd'. A large island at the entrance to the Gulf of St. Lawrence, forming, with Labrador (q.v.), a British colony. Capital, St. John's.

Area and Population. The area of Newfoundland is 42,734 square miles and that of Labrador 110,000 square miles. The population at the 1935 census was 289,516 (Newfoundland, 284,800; Labrador, 4716), compared with a total of 263,033 at the 1921 census. The estimated population of Newfoundland (without Labrador) was 289,000 on Dec. 31, 1937. Births in 1937 numbered 7496; deaths, 4123; immigrants, 9179; emigrants, 9282. The 1935 census populations of the chief towns were: St. John's, 54,886 (47,801 in 1921); Bonavista, 4022; Harbour Grace, 2215; Grand Falls, 4244; Corner Brook, 6374; Carbonear, 3367; Twillingate, 3203; Burin, 2277; Grand Bank, 2209.

Education and Religion. From 7 to 10 per cent of the adult inhabitants are illiterate. The schools are supported mainly by the government but are conducted by religious denominations. In 1936-37 there were 62,497 pupils in primary and secondary schools. In the same year the government appropriated \$1,026,610 for education. According to the 1935 census, there were on the island 93,925 Roman Catholics, 92,709 Anglicans, 76,134 members of the United Church, 18,054 Salvation Army members, 1460 Presbyterians, and 7306 belonging to other denominations.

Production. Fishing, farming, lumbering, mining, and manufacturing are the principal occupations. The production of dried salt codfish in 1937 was 108,640,000 lb.; catch of the seal fishery, 113,340 seals, valued at \$205,022. There are about 188,000 acres under crops and 16,000,000 acres of forests. Livestock statistics for 1936-37 showed 24,400 cattle, 8500 swine, 15,250 goats, 88,550 sheep, and 14,700 horses. The estimated value of agricultural and livestock production in 1937 was \$6,372,000. In the same year there were produced 1,610,000 short tons of iron ore valued at \$4,105,000, 192,000 short tons of lead-zinc-copper concentrates valued at \$5,454,000, and 298,000 short tons of newsprint worth \$13,202,000.

Foreign Trade. For the fiscal year ended June 30, 1938, imports were valued at \$27,912,351 (\$23,924,886 in 1936-37) and exports at \$34,943,240 (\$28,058,073). The chief sources of imports in 1937-38 were: Canada, \$9,973,700; United States, \$9,408,729; United Kingdom, \$6,351,620. Exports went mainly to: United Kingdom, \$13,243,676; United States, \$8,168,162; Canada, \$3,146,570. Flour, textiles, coal, hardware, and foodstuffs are the principal imports and codfish, cod and seal oil, paper and wood pulp, canned lobster, iron pyrites, seal skins, and herring the leading exports.

Finance. For the fiscal year ended June 30, 1938, actual budget receipts totaled \$12,275,456, the highest in the country's history, and expenditures were \$13,593,311, leaving a deficit of \$1,317,855 to be met out of a British Government grant-in-aid. The public debt on June 30, 1937, comprised the funded debt of \$19,316,750, loans from the British Government totaling £1,002,388, and loans of \$625,000 (Canadian) from Canadian banks. Money in circulation consists almost entirely of Canadian bank notes. The gold Newfoundland dollar has a par value of \$1 in former U.S. gold dollars and of \$1.6931 in U.S. currency dollars.

Transportation. The railways in 1937 had 838

miles of line (government line, 750 miles) and carried 184,969 passengers and 611,990 long tons of freight. There were about 42,734 miles of roads and highways. Number of automobiles on Jan. 1, 1938, 4665. Work proceeded during 1938 on airport facilities for the proposed transatlantic air service, for which the survey flights were made in 1937. Cobb's Arm near Botwood was being developed as a base for seaplanes and flying boats, while a landplane base was under construction at Hattie's Camp, about 30 miles east of Botwood. The latter base is on a dry unobstructed plateau about 500 feet above sea level and is seldom obscured by the mists that handicap the seaplane base. The airport has four main runways and the most modern facilities. The total cost of the landplane base alone was estimated at about £500,000. Gander Lake, a 30-mile stretch of water one-fourth of a mile south of Hattie's Camp, offered an alternative to the Botwood base. During 1936-37 a total of 1573 vessels of 1,581,708 net registered tons entered the ports of Newfoundland.

Government. As a result of a grave financial and economic crisis, the Newfoundland and British parliaments in 1933 passed legislation through which Newfoundland temporarily relinquished its status as a self-governing dominion. Full legislative and executive powers were vested in a governor acting on the advice of a specially created commission of 6 members (3 from Newfoundland and 3 from the United Kingdom) appointed by the British Government to administer the six governmental departments. The Governor and Commission are responsible to the British Secretary of State for Dominion Affairs. The British Government assumed responsibility for the finances of the island during the reconstruction period. Members of the Commission in 1938 were: Robert Benson Ewbank (Natural Resources), Sir Wilfrid Wentworth Woods (Public Utilities), J. H. Penson (Finance), all Britishers, and J. A. Winter (Home Affairs), L. E. Emerson (Justice), and J. C. Puddister (Public Health), all Newfoundlanders. Governor, Vice Adm. Sir Humphrey Thomas Walwyn, who assumed office Jan. 21, 1936, for a three-year term. In March, 1938, the Dominions Office extended his term of office to five years.

History. Newfoundland's struggle toward economic rehabilitation appeared in the first part of 1938 to be meeting with some degree of success. The Commissioner of Finance reported that budget revenues for 1937-38 exceeded the estimate by more than £400,000 without any increase in the estimated expenditures. Consequently the British Government's grant-in-aid to meet the deficit was reduced from an estimated £695,832 to £263,571. Signs of returning prosperity led the government to increase the 1938-39 expenditure estimates to \$15,350,000, leaving an anticipated deficit of nearly \$4,000,000. About 10 per cent of the expenditures were set aside for outlays of capital as follows: Roads, \$308,000; a fresh fish plant, \$163,000; hospital building, \$163,000; science laboratory, \$82,000; and various other projects. The Commission sought to relieve widespread poverty, particularly among the seasonally employed fishing population, by establishing new industries and providing alternative employment through subsistence farms and other projects.

However, the economic recession in the United States and other countries and the consequent decline in the prices of Newfoundland's export products proved a severe blow to rehabilitation plans and produced a new wave of discontent. Members of the Commission were bitterly criticized and there

were demands for the restoration of local self-government, sponsored at least in part by politicians who hoped to return to public office. There was a mild recurrence of the rioting of previous years. On August 24 a mob of unemployed fishermen attempted to seize Commissioners Woods and Puddester when they appeared at Bonne Bay aboard the cruiser *Shulamite* to investigate reports of distress among relief recipients. Planning to hold the Commissioners for a week and to feed them on the regular dole ration, 200 men attempted to pull the cruiser ashore. But the captain broke the ropes by ordering full speed astern and carried off six rioters who had leaped aboard. The ringleaders of the mob were subsequently arrested and tried.

Later in the year the dull outlook in the pulp and paper market caused extensive lay-offs in the lumbering industry, with the loss of \$2,500,000 in wages. In an effort to sustain employment in this industry, the government on October 1 reached an agreement with Bowater-Lloyd Ltd. for a 226-ton increase in the daily capacity of the Cornerbrook pulp mill which Bowater-Lloyd had recently acquired from the International Paper and Power Co. On November 29 another agreement was announced for the purchase of 5000 square miles of timberlands from the Reid Company on Gander Lake to supply the Bowater-Lloyd mill. The latter company agreed to export annually a minimum of 50,000 cords of unmanufactured wood and to produce 30,000 air-dry tons of pulp annually at the Cornerbrook sulphate plant.

NEW GUINEA, *gīn'ī*. The name of an island in the East Indies, and also of those territories in the Western Pacific (including part of the island of New Guinea) mandated to Australia by the League of Nations. Total area of the island of New Guinea, 308,000 square miles; population, about 1,000,000. See NETHERLANDS INDIES; NEW GUINEA, TERRITORY OF; PAPUA, TERRITORY OF.

NEW GUINEA, TERRITORY OF. The territory administered by Australia under mandate of the League of Nations, consisting of Northeast New Guinea (also called the Mainland), 69,700 square miles; Bismarck Archipelago (consisting of New Britain, New Ireland, Lavongai, Admiralty Islands), 19,200 square miles; Solomon Islands (consisting of Bougainville, Buka, and adjacent small islands), 4100 square miles. Total area, 93,000 square miles; population (June 30, 1938), 563,387 (6270 non-indigenous, and 557,117 enumerated native), exclusive of the unknown number of natives in areas of the territory not yet under government control. Rabaul (on New Britain) is the capital.

Production and Trade. The area under cultivation in 1937-38 totaled 245,184 acres, of which 239,869 acres were devoted to coconuts. Coffee, kapok, cacao, tobacco, native foods, and tropical fruits are also grown. Gold is an important mineral product. Copper, osmiridium, iron, sulphur, platinum, and brown coal have been found. 1937-38 imports were valued at £A1,610,967 (£A1,311,623 in 1936-37); exports, £A2,980,360 (£A3,089,072). The £A averaged \$3.9394 for 1937. Shipping entered and cleared during 1936-37 totaled 656,472 net tons. An air service between Sydney, Australia, and New Guinea was put into operation on May 30, 1938.

Government. For 1937-38 (1936-37 figures in parentheses) revenue totaled £A506,397 (£A481,070); expenditure, £A508,612 (£A460,118); public debt, £A39,378 in 1937-38. The territory is under an administrator assisted by an executive council of 9 members, of whom 1 shall not be an officer of

the territory. The legislative council consists of the administrator, the 8 official members of the executive council and 7 non-official members, the latter nominated by the administrator and appointed by the governor-general of Australia. Administrator, Brig.-Gen. W. R. McNicoll (appointed, Sept. 13, 1934). See AUSTRALIA under *History*.

NEW HAMPSHIRE. Area and Population. Area, 9341 square miles; included (1930) water, 310 square miles. Population: Census of Apr. 1, 1930, 465,293; Federal estimate for July 1, 1937, 510,000; census of 1920, 443,083. Manchester (1930) had 76,834 inhabitants; Concord, the capital, 25,228.

Agriculture. Acreage, production, and value of the chief crops of New Hampshire, for 1938 and 1937, appear in the accompanying table.

Crop	Year	Acreage	Prod. Bu.	Value
Hay (tame)	1938	386,000	405,000 *	\$4,374,000
	1937	383,000	405,000 *	4,494,000
Potatoes	1938	9,600	1,296,000	1,102,000
	1937	10,200	1,479,000	1,065,000
Corn	1938	16,000	656,000	466,000
	1937	15,000	630,000	485,000
Apples	1938	623,000	748,000
	1937	1,204,000	1,252,000

* Tons.

Finance. New Hampshire's State expenditures in the year ended June 30, 1937, as reported by the U.S. Bureau of the Census, were: For maintaining and operating governmental departments, \$12,663,871 (of which \$554,137 was for local education and \$5,112,044 for highways); for interest on funded debt, \$503,304; for capital outlay, \$3,732,100. Revenues were \$18,514,798. Of these, property taxes furnished \$2,868,783; sales taxes, \$3,825,650 (mainly the tax on gasoline, \$3,229,762); departmental earnings, \$1,299,113; sale of licenses, \$3,745,206; unemployment compensation, \$2,282,617; from the State monopoly of alcoholic beverages, \$835,394; Federal or other grants-in-aid, \$2,607,305. Funded debt outstanding on June 30, 1937, totaled \$14,132,636. Net of sinking-fund assets, the debt was \$13,900,701. On an assessed valuation of \$588,825,853 the State levied for the year ended June 30, 1938, ad-valorem taxes of \$2,655,296.

Education. New Hampshire's inhabitants of school age (from 5 to 16 years) were reckoned, for the school year 1937-38, at 89,630. The year's enrollments of pupils in public schools numbered 76,390. This comprised 54,867 elementary pupils, 20,304 in high schools, and 1219 evening students. Expenditures in the year for public-school education came to \$7,568,577. Salaries paid to the 2957 teachers, according to groups, averaged \$1918.89 for men and \$1418.45 for women in high schools; and in elementary positions, \$1413.05 for men and \$1093.77 for women. A State-wide system for the retirement of teachers in the public schools of New Hampshire went into effect at the outset of 1938.

Charities and Corrections. Changes that went into effect in 1938 rearranged the functions of the State in the provision of public support for the divers classes of needy inhabitants. The State government of New Hampshire left to the counties, cities, and towns the entire administration and financing of ordinary poor-aid (unemployment relief). Authority over old-age assistance (pensions for the elderly poor) was transferred to the State Welfare Administrator. Support for dependent minors was put in the hands of counties, cities, and towns for financing, under the State's supervision.

Public aid for the needy blind was transferred to the State's administration. A newly created Department of Public Welfare, headed by a directing board and an Administrator, assumed the State's duties, specified above, as to the aged, the blind, and children; it also took the supervision of the State's institutions caring for members of any of these groups. The temporary support for persons thrown out of work (unemployment insurance) was administered by a special division of the State's Bureau of Labor. The State set up a Department of Probation.

Political and Other Events. The State's 12th constitutional convention, meeting early in the year and adjourning in June, drew numerous amendments to the State constitution. A State law requiring both parties to undergo tests to demonstrate freedom from venereal disease as a prerequisite to marriage went into effect on October 1.

The New England hurricane of September 21-22 did widespread damage to trees and buildings. An estimate in the press set the attendant loss of life at 13. Keene, among the most severely affected of the cities, lost a great number of the elms for which it had been noted. The economic loss through the devastation of pieces of woodland was estimated as high as \$10,000,000. The estimate of all damage was \$24,000,000.

Under an act of 1935 the State undertook the construction of a dam and reservoir in the town of Pittsburg, near the head of the Connecticut River, at the anticipated cost of \$2,300,000, to intercept floodwaters and generate hydroelectric power, thus designedly extinguishing the cost in the long run. In litigation as to this enterprise the State Supreme Court held (April 9) that the State's proceeding was constitutionally valid.

Elections. Gov. Francis P. Murphy (Rep.) was re-elected at the general election (November 8), defeating John L. Sullivan (Dem.). Representative Charles W. Tobey (Rep.) won the election for U.S. Senator from the incumbent, Fred H. Brown (Dem.). Both the State's seats in the U.S. House of Representatives were gained by Republicans; one of these, Arthur B. Jenks of Manchester, who had served in the 75th Congress until ousted by the House in favor of his Democratic opponent, Alphonse Roy, was elected for the new term, defeating Roy by a substantial margin.

Officers. The chief officers of New Hampshire, serving in 1938, were: Governor, Francis P. Murphy (Rep.); Secretary of State, Enoch D. Fuller; Treasurer, F. Gordon Kimball; Attorney-General, Thomas P. Cheney; Comptroller, Charles T. Paten; Commissioner of Education, James N. Pringle.

Judiciary. Supreme Court: Chief Justice, John E. Allen; Associate Justices, Thomas L. Marble, Oliver W. Branch, Peter Woodbury, Edwin L. Page.

NEW HAMPSHIRE, UNIVERSITY OF. A co-educational State institution of higher learning at Durham, N. H., founded in 1866 in Hanover, N. H., and transferred to Durham in 1893. The 1938-39 enrollment was 1940, of whom 1319 were men and 621 women. The summer session had a registration of 437. The faculty and research and extension staff totaled 326. The endowment amounted to \$1,240,381, and the income for the year was \$1,837,492. A field house and cage, a class and laboratory building for the plant and animal sciences, and a new wing to a women's dormitory were completed in 1938-39, and a new class and laboratory building and service building were occupied for the first

time. The library contained 97,610 volumes. President, Fred Engelhardt, A.M., Ph.D.

NEW HEBRIDES, hēb'ri-dēz. A British-French condominium comprising a group of islands in the South Pacific. Espiritu Santo, Malekula, Efate, Ambrym, Erromanga, Epi, Aoba, Pentecost, Maéovo, Gaua, and Vanua Lava were the main islands. Total area, 5700 square miles; population (1938 estimate), 43,205, including 2205 non-natives. Vila, the capital, had about 1200 inhabitants; Malekula had 9000 natives.

The principal products are copra, cacao, coffee, cotton, maize, sulphur, and vanilla. In 1937 total imports were valued at £152,722; total exports, £149,247; joint revenue totaled £27,729; joint expenditure, £21,982; executive power is vested in a British Resident Commissioner (who is under the British High Commissioner stationed at Suva, Fiji Islands) and a French Resident Commissioner (subordinate to the French High Commissioner stationed at Nouméa, New Caledonia).

NEW JERSEY. Area and Population. Area (1930, but revised to exclude 64 square miles of water yielded to Delaware in a revision of boundary), 8160 square miles; included water, 646 square miles. Population: Apr. 1, 1930 (census), 4,041,334; July 1, 1937 (Federal estimate), 4,343,000; 1920 (census), 3,155,900. Newark (1930) had 442,337 inhabitants; Jersey City, 316,715; Paterson, 138,513; Trenton, the capital, 123,356.

Agriculture. Acreage, production, and value of the chief crops of New Jersey, for 1938 and 1937, appear in the accompanying table.

<i>Crop</i>	<i>Year</i>	<i>Acreage</i>	<i>Prod. Bu.</i>	<i>Value</i>
Corn	1938	187,000	7,486,000	\$4,641,000
	1937	208,000	8,528,000	5,714,000
Potatoes	1938	54,000	10,530,000	5,160,000
	1937	58,000	10,498,000	5,459,000
Hay (tame) ...	1938	216,000	357,000 *	4,605,000
	1937	222,000	370,000 *	5,032,000
Apples	1938	4,607,000	2,847,000
	1937	5,463,000	3,901,000
Sweet potatoes .	1938	14,000	1,470,000	1,470,000
	1937	17,000	2,414,000	1,714,000
Peaches	1938	1,172,000	1,641,000
	1937	1,651,000	1,651,000

* Tons.

Mineral Production. Of the total yearly value of New Jersey's native mineral products, \$37,405,369 for 1936, clay products produced nearly one-half; their total attained \$18,311,062. More than half of the remainder was derived from the mining of zinc; the State ranked second among the members of the Union in zinc-mining. The content of zinc in ore mined yearly rose to 101,408 short tons (1937), from 89,883 tons (1936), and the value of the metal to \$13,461,309, from \$9,868,010. There occurred, in 1937, more than the usual small production of iron ore from some of the extensive deposits in the State. The quantity of ore mined jumped to 544,635 gross tons (value, \$2,474,087), from 194,295 tons for 1936.

Education. Enrollments of pupils in the public schools of New Jersey in the academic year 1937-38 numbered 762,197. This comprised 37,076 in kindergartens, 491,560 in elementary study, 49,894 in junior high schools, 34,441 in senior high schools, 139,297 in four-year high schools, 802 in post-graduate courses, and 9127 in special classes. Enrollments in all groups but the four-year high schools were lower than for the year before. The year's expenditures for public-school education attained \$100,378,140; this included \$17,280,540 for service of debt, but excluded \$5,022,416 for out-

lays. The teachers numbered 28,473; their salaries for the year averaged \$2004.90.

Acts of 1938 assured the tenure of their positions to public-school secretaries and, in two counties, to city superintendents. The New Jersey Teachers' Association, renamed, became the New Jersey Education Association.

Charities and Corrections. While the State made temporary provision for bearing a considerable part of the heavy cost of locally administered poor-relief, there persisted a demand for measures to put this participation on an ample and durable basis. As to other kinds of support, care, and custody of individuals, the State had a highly centralized system under the general control of its Department of Institutions and Agencies (W. J. Ellis, Commissioner). Unemployment compensation (temporary support for those thrown out of employment) was, however, separately administered. Dependent children to the number of 33,814 received from the Department of Institutions and Agencies either support under the system of Social Security or other forms of State care; through a Commission for the Blind, the Department gave either support or other services to 3351 persons, some of them blind and the rest seriously handicapped as to vision; those who received money numbered 583. An Old-Age Assistance Division distributed Social-Security support to 26,971; a Parole Division supervised 3343 parolees. The State Institutions governed by the Department contained, in October, 20,772 inmates.

Legislation. The annual session of the Legislature convened on January 11 and recessed on June 17. Much time and effort early in the session went into an endeavor of the Republican majority to scrutinize the heavy Democratic vote in Hudson County, which had effected the election of Governor Moore in November, 1937, and which the Rev. Lester H. Clee, Republican candidate, had denounced as fraudulent (see *Events*, below).

Dealing with the State's share of the cost of the support of the indigent unemployed, numerous because of the then-current economic slump, an act appropriated \$5,000,000 toward work on the State's roads, to be available on condition that the Federal WPA should grant \$20,000,000 to the same program. By other legislation, notably that allowing the use of transferrable balances in certain State funds, a sum estimated as close to \$11,000,000 was provided toward the direct support of indigents who could not get such employment; this sum was to be distributed among the local governing bodies as an addition to their own provisions, which totaled about \$4,000,000. The yearly appropriation act, as passed, carried \$39,256,036 for the State's expenditures through the ensuing fiscal year.

Second and final passage was given to a resolution submitting to disposal by popular vote a proposal to amend the State constitution so as to permit betting under the pari-mutuel system at race tracks. By recessing until late in the year, instead of adjourning, the Legislature prevented the people's voting on this proposal in 1938; a clause of the State constitution required that four months elapse between the adjournment and the vote. enactments giving effect to recommendations of the Princeton Local-Government Survey Commission imposed more strict State regulation of local governments' finances, through a local-government commissioner and an advisory board of four appointees of the Governor.

Acts for social and economic regulation included: Authority for the State to enforce price-fixing

contracts between producer and retailer, as to gasoline and liquor; prohibition of sales of merchandise below what it had cost the dealer; imposition on both parties to an intended marriage, as a prerequisite to their getting a license, of the requirement that they present physicians' certificates declaring each free from syphilis in a communicable stage; and requirement that expectant mothers undergo medical test for syphilis. A bill to prohibit strikers' seizure and unwarranted occupation of the premises at which they had been employed was passed by the Senate but was deferred by the Assembly, under pressure of a demonstration carried on outside the Capitol by several hundred followers of pro-labor organizations.

Power to make the assessments of public utilities' property, for the purpose of apportioning among them about \$12,000,000 of taxes, was restored by the Legislature, over a veto, to the State Tax Commissioner, from whom it had been taken by a legal decision in 1937. Acts dealing with public housing permitted municipalities to create housing authorities, of the sort contemplated in the Federal program for low-rent living quarters, and granted power to condemn property needed for the housing projects.

Political and Other Events. Jersey City, the political domain of Mayor Frank Hague, was assailed from two directions early in the year. The mainly Republican Assembly endeavored to find fraud in the records of the vote by which this community had upset in 1937 the Republican majority in the rest of the State and elected a Democratic Governor. Partisans of the C.I.O., aided by champions of political liberalism, waged a separate campaign to break down the city's practice of excluding labor organizers and liberal agitators. Neither of the moves met with extensive success.

The Legislative investigation in Jersey City was based upon a charge, made by the late Republican candidate for Governor, the Rev. Lester H. Clee, that 55,000 fraudulent ballots had been counted for Moore in Hudson County, of which Jersey City was the chief part. A committee was appointed (January 20) by authority of the Assembly to investigate the county's vote. The committee demanded the surrender of the poll books and registry lists of the county, but these were kept locked in a safe-deposit vault in Jersey City. The Assembly then sent its sergeant-at-arms on the same errand, directing him to summon to his aid the State Police, if necessary. Superintendent Kimberling of the State Police declined to help the Assembly, citing an opinion from the Attorney-General's office, that the law did not authorize him to do so. The committee then summoned certain of the county's election officers. Refusing to testify, three were charged with contempt of the Legislature's authority, arraigned in Essex County, and held for action by a grand jury. Habeas corpus proceedings were instituted on their behalf. Vice-Chancellor Kays, ruling in these proceedings, held (March 25) that the order of the Assembly creating the committee usurped judicial functions and was void, and he ordered the discharge of the prisoners. A petition of Senator Clee, that the State Supreme Court institute an investigation of the vote in Hudson County, was dismissed.

The liberals' and laborites' crusade in Jersey City had started in connection with efforts to unionize industrial employees there in 1937. Suit on behalf of the C.I.O. was filed (Jan. 7, 1938) in the Federal District Court at Newark, for an injunction to prevent Jersey City's authorities from restricting the

efforts of the C.I.O. to organize unions. While this suit was pending, there occurred a series of picturesque agitations of a sort likely to put the Hague administration vividly before the public as a repressive regime. Efforts to distribute handbills, notably one of the text of the Bill of Rights, were made, until the authorities decided (April 1) that the Federal Supreme Court's decision in the Griffin, Ga., case rendered Jersey City's ordinance against handbills unenforceable. Norman Thomas, former Socialist candidate for President, attempted to hold a public meeting in the street on April 30; he was seized by the police and put aboard a ferry boat bound for New York City; he later tried to have a case prosecuted against the city authorities for kidnapping, under the Federal "Lindbergh Law." U.S. Representatives O'Connell of Montana and Bernard of Minnesota announced that they would hold a street meeting on May 7, in Journal Square, but a hostile crowd said to number 50,000 persons filled the square and the visitors did not appear. O'Connell was later taken (May 27) by the police while making a speech in a park and put on a train bound for Newark. Mayor Hague produced a demonstration on his own behalf (June 6) in the form of an "Americanism parade" said to have been attended by more than half of the population of the city.

Hague appeared and gave testimony (June 14 and after) in the hearings of the C.I.O.'s injunction suit in Newark. He frankly upheld Jersey City's repression of those whom he regarded as agitators of discord and revolution, deserving to be deported or removed to Alaska. The court, October 27, granted the plaintiffs an injunction. An investigation made by the Federal Department of Justice in the summer ended in an announcement (September 7) that the Department had found no evidence of Hague's having violated the Federal statute against conspiracy to deprive a citizen of constitutional rights.

Governor Moore Begins Third Term. Inaugurated January 18, Governor Moore started his third term. None of the terms were consecutive, for the State constitution did not allow a Governor to succeed himself immediately. Moore was the first Governor of the State to take the office for more terms than two. Leaving the U.S. Senate to become Governor, Moore, by his first official act in his new term, appointed as his temporary successor in the Senate John Milton, a lawyer and former prosecuting attorney of Hudson County, closely connected with the political organization of Mayor Hague of Jersey City. The Governor maintained a degree of harmony with the mainly Republican Legislature, despite the Assembly's effort to invalidate his election. Industrial unemployment, severe until late in the year, remained the State's foremost administrative problem. Unemployed working persons dependent on public assistance numbered around 60,000 for most of the year. The program of road work for which the Legislature had provided \$5,000,000 was carried on by the WPA, which allotted the requisite \$20,000,000 of Federal money thereto. This program brought employment for about 20,000 of the dependent workers. Difficulty was encountered during the summer in making the State's monthly contributions to the direct support of the remaining 40,000 unemployed persons, as part of the State's taxes on railroads, expected to supply some of the \$11,000,000 made available by the Legislature, remained unpaid awaiting the outcome of litigation. The State's unemployment-relief commission started in July a

drive against persons who failed to take work offered by the WPA, threatening to remove a great number of them from among the beneficiaries of direct aid by the State and localities.

Other State Matters. Congress gave consent to an agreement between New Jersey and Pennsylvania for the construction and operation, by local public bodies in the two States, of a vehicular tunnel under the Delaware River near Philadelphia. The State Superintendent of Weights and Measures increased the State's blockade against the entry, from Pennsylvania, of anthracite coal illicitly taken by "bootleg" miners in that State. No coal without a certificate of origin was allowed to enter New Jersey. The State began in January a system of semiannual compulsory inspection of all automobiles by its motor-vehicle bureau; this involved determining the mechanical fitness of not far from 1,000,000 vehicles under the State's regulation, and requiring owners to correct defects; the purpose was to reduce the risk in travel on the roads; about half of the vehicles first inspected were reported to have been defective in some respect.

Municipal and Local. Newark's extensive program to supply to its poor, by collaboration with the U.S. Housing Authority, living quarters at small rent, made a start in September. The President gave final approval to Federal allotment of 90 per cent of the cost of three of the six housing enterprises projected in the city; of this cost, \$6,697,000, Newark was to meet the other 10 per cent. The Newark Housing Authority proceeded toward acquiring the intended sites. The Newark Airport, important to travel by air to and from the whole New York area, threatened to run short of money in August and faced prospect of curtailed operation for a time. The city's higher budget for the year and heavy reductions in assessments caused the announcement of a rise in the rate of the tax on property in Newark to \$5.46, from the previous \$3.69 per \$100. Norman Thomas, previously expelled from Jersey City, tried to make a speech in Military Park, Newark (June 4), and was pelted with eggs and shouted down by a band that included many men in veterans' caps. A vehicular toll bridge over the Delaware River between Phillipsburg, N. J., and Easton, Pa., was opened for use (January 14); it had been built by a joint commission created by the two States and had cost \$2,500,000. At Camden, "Westfield Acres," a set of 514 apartments, costing about \$3,000,000 and restricted to occupancy by families having incomes of not over \$1,300 a year, was opened (April 30) by the U.S. Housing Authority. Camden created a Camden Housing Authority to qualify it for participation in further Federal financing of construction of living quarters at low rentals. An ordinance of Camden, imposing a tax at the rate of \$10,000 a year on self-service chain stores selling foods, was contested in the State courts. At Union City, war veterans (October 2) invaded a hall and prevented a meeting at which Fritz Kuhn, leader of the German-American Bund, regarded as a Nazi organization, was to speak.

Elections. At the general election (November 8) W. Warren Barbour (Rep.) was elected U.S. Senator for the unexpired term to end Jan. 3, 1941, by a vote of 815,659 to 707,339 (unofficial tally) for William H. J. Ely (Dem.). Barbour, formerly Senator, had lost his seat to Smathers in 1936. The vacancy that he won in 1938 was that created by the resignation of Senator Moore early in the year, to become Governor (see above). The Republican campaign for Senator made much of

the unfavorable publicity that had been showered on Hudson County, the State's Democratic Gibraltar, during the year. Eleven Republicans and 3 Democrats were elected to form the State's delegation of 14 in the House of Representatives; four seats that had been Democratic thus went to Republicans. The Republican majority in the State Senate was increased by one; that in the Assembly remained numerically the same.

Officers. New Jersey's chief officers, serving in 1938, were: Governor, A. Harry Moore (Dem.); Secretary of State, Thomas A. Mathis; Treasurer, William H. Albright; Comptroller, Frank J. Murray; Attorney-General, David T. Wilentz; Commissioner of Education, Charles H. Elliott.

Judiciary. Chancellor, Luther A. Campbell; Supreme Court, Thomas J. Brogan (Chief Justice), Thomas W. Trenchard, Charles W. Parker, Clarence E. Case, Joseph L. Bodine, Ralph W. E. Donges, Harry Heher, Joseph Perskie, Newton H. Porter.

NEW JERUSALEM, CHURCH OF THE. An organization which is also known as the New Church, and popularly called Swedenborgian because based upon the statement of Christianity set forth in the writings of Emanuel Swedenborg, Swedish scientist, philosopher, theologian, and seer (1688-1772). The two bodies that now compose it in the United States are the General Church of the New Jerusalem and the General Convention of the New Jerusalem. For history see THE NEW INTERNATIONAL ENCYCLOPEDIA under *Swedenborgians*.

The General Church of the New Jerusalem. This body, which separated from the General Convention over the question of the divine inspiration of Swedenborg's writings, was organized in 1897 under episcopal government. Its headquarters are in Bryn Athyn, Pa., where it maintains a cathedral of unusual architectural interest and the Academy of the New Church, with departments from kindergarten to junior college and including also a theological and a normal school. On Jan. 1, 1938, the General Church had a world-wide membership of 2180 adults, exclusive of South African native missions. Of its 21 societies and 5 "circles," 16 were in the United States and Canada, 3 in England, and others in France, the Netherlands, Sweden, Natal, New South Wales, and Brazil, while a native mission was maintained in South Africa. The Church was served by 3 bishops, 37 pastors, and 2 ministers. Its official periodical is *New-Church Life*.

The General Convention of the New Jerusalem in the United States of America. In 1938 the General Convention consisted of about 5500 communicant members, united into 86 societies, territorially organized as 14 associations and 3 independent societies. The ministerial membership was 98. The Convention maintained the New-Church Theological School in Cambridge, Mass., Urbana College in Urbana, Ohio, and the Waltham School for Girls in Waltham, Mass. Among its periodicals were the *New-Church Messenger*, weekly, Brooklyn, N. Y., and *The Helper*, weekly, Philadelphia, Pa. *The New Christianity*, quarterly, Brooklyn, N. Y. At the Convention's 117th annual meeting, held in Washington, D. C., May 3-10, 1938, the Rev. Fred Sidney Mayer of Baltimore, Md., was re-elected president; Lloyd A. Frost, of Cambridge, Mass., vice-president; Albert P. Carter, of Boston, Mass., treasurer; Benjamin A. Whittemore of Boston, recording secretary, and Horace B. Blackmer, of Malden, Mass., assistant secretary.

NEW MEXICO. Area and Population. Area, 122,634 square miles; including (1930) water,

131 square miles. Population: Apr. 1, 1930 (census), 423,317; July 1, 1937 (Federal estimate), 422,000; 1920 (census), 360,350. Sante Fe, the capital, had 11,176 inhabitants in 1930.

Agriculture. Acreage, production, and value of the chief crops of New Mexico, for 1938 and 1937, appear in the accompanying table.

Crop	Year	Acreage	Prod. Bu.	Value
Cotton	1938	99,000	95,000 *	\$4,275,000
	1937	159,000	163,000 *	6,862,000
Hay (tame)	1938	136,000	268,000 *	2,198,000
	1937	129,000	264,000 *	2,772,000
Corn	1938	193,000	2,606,000	1,720,000
	1937	203,000	2,740,000	2,055,000
Grain sorghums .	1938	350,000	2,975,000	1,160,000
	1937	375,000	4,500,000	2,070,000
Dry beans	1938	166,000	531,000 *	1,865,000
	1937	184,000	681,000 *	2,464,000
Wheat	1938	263,000	2,680,000	1,608,000
	1937	269,000	3,139,000	3,233,000

* Bales. ♢ Tons. ° 100-lb. bags.

Mineral Production. Of the total yearly value (\$45,858,089) for 1936, of the production of New Mexico's native minerals, petroleum, increasingly important, supplied one-half, while coal and natural gas contributed, together, nearly one-fourth. The metals gold, silver, copper, lead, and zinc accounted for most of the remainder. The yield of petroleum mounted to 38,797,000 bbl. for 1937, from 27,223,000 (value, \$22,930,000) for 1936. Actively developed in 1937, the Eunice and Monument pools, in Lea County, both surpassed the Hobbs field, the former leader in output. Although no new fields were found during the year, the known area of some fields was considerably extended. The production of natural gas was stated for 1936 as 33,928 million cu. ft.; in value, \$5,489,000. In 1937 about 23,773 million cu. ft. were marketed and 56½ billion were stripped of gasoline, while increasing quantities were utilized in divers ways in the petroleum operations. The mining of coal increased to 1,795,000 net tons (1937) from 1,596,775 tons (value, \$4,325,000) for 1936.

Gold, silver, copper, lead, and zinc were produced in New Mexico to the aggregate value of \$8,438,091 for 1938, as approximated by the U.S. Bureau of Mines. This was much below the total, \$14,038,790, for 1937. Most of the decline was due to a fall in the production of copper, to some 35,090,000 lb. for 1938, from 64,106,000 for 1937; by value, to \$3,439,212, from \$7,756,826. The yearly total of zinc rose in quantity to some 51,954,000 lb. (1938), from 47,854,000 (1937), but owing to lower prices fell in value to \$2,545,746, from \$3,110,510. The production of gold diminished to some 38,600 oz. (1938), from 41,171 (1937), and by value, to \$1,351,000, from \$1,440,985. Silver and lead, produced in relatively small amounts, did not either of them yield as much as \$1,000,000 for either year.

Education. The State's Department of Education augmented in 1938 its supervision of public transportation for public-school pupils in New Mexico, with a view to effecting greater safety and efficiency, as well as economy. Federal aid was provided for the vocational training of persons engaged in distributive occupation. Assuming more of the cost of the public schools' support, the State carried 76 per cent of this cost, leaving only 24 per cent to counties and local units.

Charities and Corrections. The State institutions providing care and custody for persons were governed by separate respective boards. The New Mexico State Penitentiary, for the year ended June 30, 1938, averaged 649 inmates.

Legislation. The Legislature met in special

session late in August, to enact various measures, including provision of primary elections, in place of partisan conventions, for the nomination of candidates to elective office.

Political and Other Events. Negotiations with other States for the sharing of the water of rivers (valuable above all for agricultural irrigation) were active. A new agreement on the allocation of such waters was signed (March 16) at Santa Fe by the Governors of New Mexico, Colorado, Texas, and Utah. Accusations of political manipulation of the Federal WPA organization in the State were followed (September 24) by the dismissal of Fred Healy, WPA Administrator for New Mexico. Another huge limestone cavern, near Carlsbad but 12 miles south of the previously discovered Carlsbad Cavern, was found by a sheep-rancher early in the year and explored for a distance of several miles.

Elections. John E. Miles (Dem.) was elected Governor, defeating A. K. Mitchell (Rep.). The State's U.S. Representative, J. J. Dempsey (Dem.), was re-elected.

Officers. The chief officers of New Mexico, serving in 1938 were: Governor, Clyde Tingley (Dem.); Lieutenant-Governor, Hiram M. Dow; Secretary of State, Elizabeth F. Gonzales; Auditor, Jose O. Garcia; Treasurer, James J. Connelly; Attorney-General, Frank H. Patton; Superintendent of Public Instruction, H. R. Rodgers.

Judiciary. Supreme Court: Chief Justice, Howard L. Bickley; Associate Justices, Thomas J. Mabry, Charles R. Rice, A. L. Zinn, Daniel K. Sadler.

NEW SOUTH WALES. An Australian State. Area, 309,432 square miles; population, exclusive of full-blood aborigines (Mar. 31, 1938, estimate), 2,717,873 compared with 2,600,847 (1933 census). During 1937 there were 47,497 births, 25,235 deaths, and 23,188 marriages. Sydney (the capital), including suburbs, had 1,279,080 inhabitants on Dec. 31, 1937. Other important cities (with 1933 census populations) are Newcastle and suburbs, 104,485; Broken Hill, 26,925; Goulburn, 14,849; Cessnock, 14,385; Lithgow, 13,444. The 3452 State schools had 377,715 pupils enrolled in the last quarter of 1936; the 745 private schools and colleges (exclusive of many business schools), 99,073 pupils; the University of Sydney, 3206 students; the Technical College, with branch schools, 21,364 students.

Production. Wheat, barley, oats, maize, rice, sugar cane, tobacco, bananas, oranges, grapes, and apples are the principal agricultural products. During 1937-38, 56,000,000 bu. of wheat were produced from a total of 4,416,000 acres. The principal dairy products for 1936-37 were butter, 109,830,751 lb.; cheese, 7,417,640 lb.; bacon and ham, 22,069,860 lb. Wool (greasy), 505,700,000 lb. (1937). Livestock (1936): 53,166,010 sheep, 3,288,169 cattle, 549,829 horses, 390,780 pigs.

Minerals produced during 1937 were valued at £A11,988,088, of which coal accounted for £A5,823,469; silver and lead, £A4,310,613; gold, £A595,855; tin, £A336,628; copper, £A72,406. The 8720 factories, with 208,497 employees, had a value of production for 1937 amounting to £A76,753,978 net (£ Australian averaged \$3.9394 for 1937).

Government. For the fiscal year ended June 30, 1938, revenue totaled £A60,090,000; expenditure, £A59,976,000; public debt, £A354,168,000. Budget (1938-39): Revenue, £A55,325,000; expenditure, £A55,317,000. The executive power of the State rests in the hands of a governor (appointed

by the King), aided by an executive council. Parliament consists of the legislative council of 60 members (elected jointly by both houses of parliament), and the legislative assembly of 90 members elected by universal adult suffrage (at the State general election of Mar. 26, 1938, the standing of the political parties in the legislative assembly was: United Australia, 37; Country, 22; Labor, 28; Independent Labor, 1; Independent, 1). Governor, Lord Wakehurst (assumed office April, 1937); Premier, B. S. B. Stevens. See AUSTRALIA under History.

NEW YORK. Area and Population. Area, 49,204 square miles, exclusive of State water in the Great Lakes, but including (1930) other water, 1550 square miles. Population: Apr. 1, 1930 (census), 12,588,066; July 1, 1937 (Federal estimate), 12,959,000; 1920 (census), 10,385,227. New York City had (1930), 6,930,446 inhabitants; Buffalo, 573,076; Rochester, 328,132; Syracuse, 209,326; Albany, the capital, 127,412.

Agriculture. Acreage, production, and value of the chief crops of New York, for 1938 and 1937, appear in the accompanying table.

Crop	Year	Acreage	Prod. Bu.	Value
Hay (tame) ..	1938	4,009,000	5,436,000 *	\$39,139,000
	1937	4,108,000	5,747,000 *	47,125,000
Corn	1938	685,000	25,345,000	16,474,000
	1937	672,000	23,856,000	16,938,000
Potatoes	1938	220,000	26,840,000	16,104,000
	1937	227,000	28,375,000	15,890,000
Apples	1938	16,380,000	13,104,000
	1937	24,340,000	14,942,000
Oats	1938	782,000	26,588,000	8,774,000
	1937	752,000	18,800,000	8,272,000
Wheat	1938	303,000	7,533,000	4,746,000
	1937	346,000	8,276,000	8,193,000
Dry beans ...	1938	161,000	1,449,000	3,774,000
	1937	158,000	1,264,000	3,920,000
Barley	1938	146,000	4,307,000	2,067,000
	1937	133,000	3,059,000	1,866,000
Buckwheat ..	1938	161,000	2,496,000	1,323,000
	1937	144,000	2,448,000	1,591,000

* Tons. ♢ 100-lb. bags.

Mineral Production. Apart from the processing and fabrication based on imported minerals, New York State's production of its native minerals attained for 1936 the total of \$76,224,969. The greatest single item in this total was the production of Pennsylvania-grade petroleum, which increased to 5,478,000 bbl. for 1937, from 4,663,000 bbl. for 1936; the value of the output for 1936 was \$11,380,000. The relatively high price of this superior petroleum encouraged its recovery from wells by water flooding. The production of 1937 was said to be the State's highest, for petroleum, in more than half a century. Natural gas yielded, in 1936, 12,341 million cu. ft. (value, \$8,645,000). The output of stone, chiefly of the crushed sort, attained an aggregate value of \$10,033,000 for 1936. The makers' shipments of Portland cement increased in quantity to 6,106,083 bbl. (1937), from 5,651,412 (1936), and in yearly value to \$8,825,785 from \$8,794,448. The total value of clay products for 1936 was \$8,882,646. The output of salt rose slightly to 2,084,867 short tons (1937), from 2,021,983 (1936); by value, to \$5,795,551 from \$5,609,932.

Industry in the treatment of minerals from elsewhere included the production of coke, which advanced to 4,951,703 net tons (1937), from 4,835,921 tons (value, \$28,566,271) for 1936. Producers' shipments of pig iron rose to 2,702,072 gross tons (1937), from 2,216,751 (1936) and in value to \$55,789,609, from \$35,181,959. There were made in the State (1936) 187,016 long tons of ferro-alloys (value, \$16,346,231).

Finance. New York's State expenditures in the year ended June 30, 1937, as reported by the U.S. Bureau of the Census, were: For maintaining and operating governmental departments, \$335,965,861 (of which \$17,582,746 was for highways, \$83,507,099 for charities, \$36,210,864 for hospitals, and \$120,874,021 for local education); for interest on debt, \$23,125,710; for capital outlay, \$62,496,708. Revenues were \$486,822,450. Of these, property taxes furnished \$2,159,711; income taxes, \$104,892,155; inheritance taxes, \$33,649,970; sales taxes, \$57,156,956 (including tax on gasoline, \$43,584,556); departmental earnings, \$11,673,135; sale of licenses, \$100,176,996; unemployment compensation, \$47,858,100; Federal or other grants-in-aid, \$49,087,674. Funded debt outstanding on June 30, 1937, totaled \$663,760,000; the floating debt, \$62,263,576. Net of sinking-fund assets, the funded debt was \$525,900,265. On an assessed valuation of \$25,667,925,760, the State levied in the year ad-valorem taxes of only \$2,159,711; the general State tax on property, formerly an important source of revenue, now was levied solely to cover judicial and military expenses.

Education. For the academic year 1936-37, inhabitants of ages up to 18 years were reckoned to number 3,879,546; this was about 1 per cent less than the corresponding total for the year before. Enrollments in all public day schools numbered 2,284,831, or 0.2 per cent less than the year before. Those in elementary schools totaled 1,586,962—2.9 per cent down for the year; those in high schools, 697,869—up 4 per cent. There was an additional enrollment of 180,014 in evening, vocational, and Americanization classes. Teachers numbered 82,147; their salaries for the year averaged \$2383.15. The year's expenditures for public-school education attained \$375,175,802, inclusive of expended proceeds of debt issues; exclusive of this component, the total was \$334,889,510. This included current expenditure, \$278,029,918; service of debt, \$52,230,824; and capital outlay not met by debt issue, \$4,628,768.

The Board of Regents' inquiry into the character and cost of public education was completed in 1938. According to the *Journal of the National Education Association*, this inquiry, which had continued for three years, was expected to afford a basis for improving New York's system of public education. See **EDUCATION IN THE UNITED STATES**.

Charities and Corrections. The administration of the divers sorts of care and custody of individuals on the part of the State was the function of three departments, each dealing with a separate group. The Department of Social Welfare had charge of the State's disbursements for purposes of general poor-relief and of old-age assistance (Federal and State support for the elderly poor); it also attended to the inspection of charitable institutions, matters of children's welfare, the treatment of delinquent minors, care of the Indian poor, certain help to the blind, and the direction of three training or industrial schools for young delinquents, and of the Thomas Indian School, at Iroquois, and the State Women's Relief Corps Home at Oxford. The Department of Correction administered State prisons, reformatories, special institutions for defective delinquents, and asylums for the criminal insane. The State prisons had (December 31) 10,005 inmates; the reformatories, 2772; institutions for defective delinquents and insane criminals, 4622. The Department of Mental Hygiene had authority over the State hospitals for the mentally unsound, and institutions for

the care of epileptics and of the feeble-minded, except the special institutions for criminals in such categories.

On July 1 the State hospitals under the Department of Mental Hygiene had 66,625 inmates; the institutions for mental defectives, 12,547; and the Colony for Epileptics, 2521. The total population of these institutions, 81,693, did not include some 8000 former inmates released but still on parole.

Legislation. Convening in regular annual session on January 5, the Legislature adjourned on March 19. It passed a budgetary act appropriating \$386,364,615 for the ensuing year's expenditure by the State government; a supplementary budget act provided an additional \$1,900,000. Other appropriations included \$1,350,000 for the expenses of the State constitutional convention held in 1938. Initial passage was given to resolutions proposing, for submission to the disposal of the popular vote, the following amendments to the State constitution: To set up a "revolving" or self-renewing fund of \$200,000,000 for loans by the State to aid enterprises for building dwelling-quarters for occupancy at low rent; to exempt from the constitutional debt limit loans made by cities for this purpose; and to allow wagers under the pari-mutuel system at horse races. See **CHILD LABOR**; **MINIMUM WAGE**.

Sympathetic with some of the aims of Governor Lehman despite its strong Republican element, the Legislature enacted many measures of sociological bearing at his recommendation. The already-mentioned constitutional proposals as to housing were part of his program; the legislators further followed his suggestions by admitting persons earning over \$3000 a year to eligibility for the benefits of compensation for unemployment; by restricting the services of private detectives in industrial disputes; by forbidding rises in the rentals of tenements in New York City (essentially the "old-law" tenements) that failed to comply with the multiple-dwelling law; and by permitting the mutual savings banks to sell industrial life-insurance policies of not over \$3000. The chief object of the latter measure was to enable purchasers of this type of insurance to save on the cost, in premiums, necessitated by the prevailing method of companies' weekly or monthly collections. Dealing with public health, an act required the parties to an intended marriage to undergo a physician's test showing the absence of communicable syphilis, not more than 20 days before the granting of a wedding license. A separate act required that a syphilis test be made in all cases of pregnancy; and another measure created a special commission to study problems of health and shape a program to guide the Legislature in 1939. The proposal to ratify the pending Federal Constitutional amendment to allow regulation and prohibition of the labor of persons under 18 years of age ("child-labor amendment") was again brought up for ratification and was defeated by a strong adverse vote.

The State's moratorium on foreclosure for failure to pay back the principal of a mortgage at maturity was extended again, until Jan. 1, 1940; that on deficiency judgments was extended only until July 1, 1939.

The State's system of taxation was maintained, inclusive of the "emergency" taxes on incomes and on gasoline; the law as to the taxation of capital gains, however, was modified. Discrimination on account of the applicant's age, in tests for the civil service, was prohibited.

New York City's temporarily granted powers of taxation were made to continue for another year.

The city also received power to levy an occupancy tax in order to obtain money with which to meet the interest on bonds issued for the cost of building housing for the poor. The city was allowed to continue operating its subways on a five-cent fare for two years more, the suspension of the requirement that the service pay for itself being again prolonged. In four counties—Westchester, Nassau, Erie, and Monroe—dog-racing as a commercial undertaking was made lawful for the period of one year, with a view to making a trial before passing further legalization.

Laws bearing on crime included an anti-lynching act, imposing penalty of imprisonment, for from 20 years to life, on any member of a mob causing the death, by violence, of a person suspected of, or arrested for, a crime. Persons holding conscientious objection to the penalty of death were excluded from panels for murder juries.

Constitutional Convention. Delegates elected in 1937 convened (Apr. 5, 1938) at Albany in a convention to revise and amend the State constitution. This was the constitution of 1894, as altered from time to time by numerous piecemeal amendments. The convention adjourned on August 26, having amended the constitution in a great number of respects, some of them committing the State to new policies, others being controversial on other accounts. All amendments voted by the convention were submitted to the voters of the State at the general election (November 8). To insure that some, if rejected, should not cause the rejection of the whole, as had happened with the proposed constitution of 1915, the changes and additions were put before the people in nine separate propositions. The popular vote rejected propositions 2, 5, and 7, and adopted the other six. Of those rejected, No. 2 would have changed, favorably to the up-State counties, the basis for reapportioning representation in the Legislature, No. 5 would have given the State judiciary authority to review the questions of fact, as well as those of law, attaching to quasi-judicial decisions rendered by the State's administrative authorities, and No. 7 would have prohibited to the local governments the adoption or maintenance of the system known as proportional representation as the means of electing local representative bodies. See PROPORTIONAL REPRESENTATION.

Of the six adopted parts by the popular vote, No. 1 contained all of the proposed new constitution that dealt with matters sufficiently sure of acceptance not to require to be submitted by themselves. No. 3 put into the constitution a plan for carrying out the elimination of grade crossings of railroads and highways in the State and of apportioning its cost among State, subdivisions, and railroads. No. 4 gave the State and local governments extensive ability to spend and borrow in order to build living quarters for the poor and to do away with slums. No. 6, a "bill of rights" for labor, guaranteed to employees the rights of organization and of bargaining with employers collectively through employees' chosen agents; it also committed the State government to the maintenance of 40 hours of work a week, as a maximum, at wages on the prevailing scale of rates, in all public contracts. No. 8, dealing with governmental promotion of the individual welfare of the population, authorized the Legislature to furnish protection, by insurance or otherwise, against the hazards of unemployment, sickness, and old age; the inclusion of "sickness" was commonly taken to open the way to the State's creating a system of health insurance. No. 9, deal-

ing with municipal acquisition of privately-owned transit in New York City, permitted the city to incur additional debt up to \$315,000,000, exempt from its constitutional debt limit, wherewith to purchase the transit properties of private companies.

Apart from matters that thus came individually before the voters for adoption, the new constitution contained many features of difference from its predecessor. The Legislature's power to pass a special law affecting some single city was somewhat restricted. Amplifications were made in New York City's power of self-government. Into the bill of rights was inserted a guarantee against "unreasonable" interception of communications by telephone or telegraph, aimed at the practice of police and others, to "tap" wires for evidence; but a proposal to render evidence thus obtained inadmissible in the courts failed to pass the convention. For the servants of the State and those of its subdivisions, membership in a public pension system was made a contractual relation, and the diminution of rates of the pensions was forbidden. Suspension or impairment of the power of grand juries to investigate public officials' conduct of their duties was prohibited; any officials refusing to waive their constitutional immunity to making incriminating admissions were thereby to forfeit office.

Political and Other Events. Eligibility for payments from the unemployment-compensation fund, previously instituted by the State and the Federal Social Security Board, began at the outset of the year. The paying of claimants started February 1; the list of applications from persons who had recently lost employment then totaled 613,853. The payments to such persons totaled \$46,837,260 up to June 30, and the number of beneficiaries exceeded 600,000. Although the period was one of mainly shrinking employment the taxes collected from employers for the fund mounted faster than the outgo. The payments helped in some degree to keep down the need for the ordinary public support to indigents.

Relations with Federal Government. The WPA continued to afford support, in the form of employment on devised tasks, to a great number of the needy both in New York City and elsewhere about the State. The Federal Power Commission was asked by the Power Authority of the State for permission to intervene in proceedings as to the amendment of the license of the Niagara Falls Power Co., so that the Authority could offer plans for co-ordinating hydroelectric resources in the State, the Niagara and St. Lawrence Rivers included. A decision of the Federal Supreme Court, upholding the application of the Federal income tax to salaries of the Port of New York Authority, coupled with other and similar decisions of the same court as to taxing incomes from some other agencies of States, led Attorney-General Bennett to take steps for the purpose of averting Federal efforts to collect taxes in such cases retroactively. The State's Commissioner of Agriculture co-operated with the Federal Secretary of Agriculture to institute regulation of the marketing of milk in the area supplying New York City. The expected effect was to raise the prices paid to dairy-farmers. This action, taken under the Federal Marketing Agreement Act of 1937, was approved in August by a referendum of the affected farmers in several States and went into effect September 1.

State Courts' Decisions. The Court of Appeals (highest State tribunal) held (May 24) that funds of the public schools could not be employed, as they had been in New York City, under a State

act of 1936, to supply the pupils of the non-public (chiefly Catholic parochial) schools with transportation to and from home. The same court rejected (March 8) as unconstitutional a State law that exempted the State Police organization from the need to choose its personnel by competitive examinations. Judge O'Dwyer of Kings County dismissed indictments (June 11) against nine strikers for rioting, holding that to let the indictments stand would whittle away the right of picketing. The State Labor Relations Board, formed under the State's Labor Relations Act of 1937, ruled (February 1) that an employer must negotiate with employees' representatives even though the employees were on strike.

Local Occurrences. The hurricane of September 21, severely felt in the whole southeastern corner of the State, was calamitous in Suffolk County, Long Island, and particularly along the island's southern shore, from Fire Island Inlet to Montauk Point. The Ocean washed over Fire Island at Salt-air; Westhampton and Quogue were in part flooded by waters raised by the gale, and Westhampton Beach was largely demolished by wind and water. Some scores of persons were thought to have lost their lives, although as most of the stricken communities were seaside summer resorts the missing could not be counted with certainty.

At Niagara Falls, the Falls View International Bridge, carried from its bases by the pressure of an ice jam, fell on January 27. The Thousand Islands Bridge, an international bridge over the upper end of the St. Lawrence River, between New York and Canada, was officially opened on August 18. At Wellsville, a fire at the refinery of the Sinclair Oil Company (July 18) caused loss of property estimated to approximate \$5,000,000. At Riverhead, persons connected with the German-American Settlement League, Inc., operating a camp at Yaphank for a group regarded as sympathizers with the German Nazi movement were convicted (July 12) of violating the State's law as to civil rights and subjected to severe sentences, but the defendants appealed the case and the conviction was reversed (Nov. 4, 1938).

New York City. The task of providing public support for several hundreds of thousands of indigents not among those maintained by the Federal WPA continued to burden New York City. The magnitude of the undertaking in 1938 may be judged from figures published in that year, covering 1937: Receipts of over \$71,000,000 from special city taxes for the purpose, plus \$40,500,000 from the State for "unemployment and home relief" in the city, went into the support of indigents; this formed about one-eighth of all the municipal expenditure outside of repayments of debt. Current economic relapse increased the need early in 1938 for such support, by 9 per cent over the rate of a year before, while the Legislature's having taken, in 1937, for the State a tax of 2 per cent on public utilities' receipts, diminished the city's means for giving poor-aid. Mayor La Guardia obtained from the Legislature authority for the City to impose a new tax on cigarettes and other levies for replenishing such means.

The year's levy of the tax on property, the chief source of the municipal revenue, rose slightly, to \$2.80 per \$100; its level indicated that the city had escaped, in the main, the tendency to excessive rates and consequent loss of assessable value, of which complaint had been made in some other leading municipalities. The municipal government prepared to participate in the new Federal plans for

the creation of more public housing at low rentals for the poor; it created a Housing Authority and imposed a new special tax on the occupancy of premises for business, designed to meet charges on debts of \$20,000,000 to be contracted by this body.

Preliminary moves were made toward effecting the long-postponed municipal policy of acquisition of the lines of the private transit companies. In addition to obtaining from the Constitutional Convention (see above) provision of the exemption of bonds for this acquisition, from the limit to the municipal debt, the city dealt with the affected interests for new terms on which the properties might be bought. A tentative offer of the Interborough Rapid Transit lines at \$170,213,508—about \$68,000,000 below a previous figure—coming through the Transit Commission, a body to which the Mayor was antagonistic, was set aside in March on the ground that the company was in bankruptcy and unable to decide a sale for the creditors; but the discussion of the subject was soon renewed. The city arranged in April to purchase the Sixth Avenue line of the Manhattan Elevated Railway for \$12,500,000. Before consummating the deal it bought in as tax liens at public auction its own claims against the Manhattan for unpaid taxes and penalties of \$8,061,316, carrying power of foreclosure, and became able to pay for the Sixth Avenue line in part with the liens. The line was closed for demolition (December 5).

Among notable structural changes started or carried out in the city were: The building, set under way by the city's Housing Authority, with \$30,000,000 in credit from the U.S. Housing Authority, of 5748 living quarters for poor families in Red Hook, Brooklyn; preliminary work on a peripheral parkway about Brooklyn and Queens boroughs, to cost \$27,900,000, inclusive of a grant of \$12,000,000 from the PWA; the commencement of a Criminal Court Building and City Prison on Centre Street opposite the old building of like name, to cost \$18,500,000, a grant of \$8,325,000 from the PWA included; the demolition of the former New York Post Office, at the southern end of City Hall Park; and progress on buildings at the site of the projected World's Fair in Queens Borough. Dealing with the project of decomposing the city's sewage at treating plants instead of discharging it into the tidal waters, the Bureau of Sanitation reported (August 6) that one-fifth of the sewage actually was treated in two existing plants that had cost \$26,720,000; that other such plants, to cost \$18,000,000, were in construction; and that about \$118,000,000 more of such construction would be needed to do away wholly with the discharge of raw sewage. Such improvement in the surrounding waters as had actually occurred appeared in a bulletin of the U.S. Bureau of Fisheries stating that shad to a total weight of 2,000,000 lb. or more had been taken in the year's run in the Hudson River, as against 847,000 lb. in 1935.

Bowling Green, at the southern end of Broadway, Manhattan, was restored to its proportions of Colonial days. Renovations and improvements were made in Grant's Tomb. The State Merchant Marine Academy was moved to quarters built for it at the abandoned Fort Schuyler, near Throggs Neck, by the WPA. The Cloisters (a collection of medieval art made by the late George Gray Barnard [q.v.], sculptor), established on a site at the northern end of Fort Tryon Park, was given to the Metropolitan Museum of Art by John D. Rockefeller and opened (May 10) as a branch of the museum.

The city started in March the construction of works to bring, at completion in 1947, 440,000,000 gallons of water a day from the headwaters of the Delaware River, as originally projected in 1927. The Board of Estimate authorized (May 9) a contract by which the city established a corporation as the operator of the free port, or foreign-trade zone, that had been constructed at Stapleton, Staten Island.

Changes in the municipal government made by the new charter adopted in 1936 came into effect with 1938. A City Council of 26 members elected under the system of proportional representation in the previous November took the place of the Board of Aldermen in January. This system of election, involving the counting of voters' second choices in cases where their first choices of candidates did not score a sufficiently high total to elect, involved complications and uncertainties as to the result of the count. When these were resolved the Council turned out to have its fair share of members unknown to the general public or lacking in previous experience of public business. Three of the members-elect were excluded for 11 weeks because of the difficulty of determining whether they had been residents of the areas from which they were elected. The efficacy of proportional representation was questioned both in the city and at the State Constitutional Convention, which voted a constitutional change forbidding the use of this system of election by localities; the rejection of this amendment by the popular vote in November indicated at least an aversion to being tied down to electing municipal bodies by small districts, as had been done with the city's aldermen. A new City Planning Commission came into existence. Headed by A. A. Berle, Jr., and composed of appointees, the body was designed primarily as an agency for fitting together the numerous and independently designed plans for the development and improvement of the city. It had also, among divers tasks, that of ruling on the admissibility and therefore on the priority, of plans involving capital outlay, submitted by the several branches of the municipal government—a function necessary to keeping such outlay within designed bounds. This duty was in its turn involved in that of drawing and submitting the city's yearly budget of capital outlay. The much older Regional Plan Association, an unofficial body, remained active and submitted to the Commission its proposals for general plans as to systems of highways and of parks.

District Attorney Thomas E. Dewey of New York County continued his energetic prosecution of influential persons in the criminal world for the operation of blackmail on business enterprise, the so-called "racket." In connection with the alleged sale of political and police protection to the dealers in policy tickets, a form of gambling similar to lotteries and therefore illicit, Dewey brought to trial James J. Hines, long Democratic leader in the 11th Assembly District; however, after a month of duration Justice Ferdinand Pecora declared a mistrial (September 12) on account of Dewey's having brought another matter, prejudicial to Hines and foreign to the case, before the jury.

Elections. At the general election (November 8) Gov. Herbert H. Lehman (Dem.) was re-elected by a vote unofficially totaled as 2,383,584 to 2,316,078 for Thomas E. Dewey (Rep.). The other elective State offices went to Democrats, but majorities of Republicans were elected to both houses of the Legislature. Two U.S. Senators were elected: For the full term, Sen. Robert F. Wagner

was re-elected, defeating John L. O'Brien (Rep.); for the rest of the term of the late Sen. Royal S. Copeland, James M. Mead (Dem.) defeated Edward F. Corsi (Rep.). To the U.S. House of Representatives were elected 25 Democrats and 20 Republicans; this made a net change of four seats from the Democratic to the Republican side. Representative John J. O'Connor, chairman of the committee on rules, was defeated for re-election by James H. Fay (Dem.). O'Connor, a Democrat while in Congress, was attacked by President Roosevelt as one of the selected list of members of Congress that the President wanted sent back to private life as out of sympathy with the Administration's liberal doctrines; he was the only member of the lower house thus singled out. He nevertheless ran in the primaries, appearing as a candidate on both the Democratic and the Republican ticket; losing his own party's nomination, he became the Republican candidate.

Voting on a new State constitution submitted in the form of nine propositions, the people adopted six of these and rejected three (Nos. 2, 5, and 7; see *Legislation*, above).

Officers. The chief officers of the State of New York, serving in 1938, were: Governor, Herbert H. Lehman (Dem.); Lieutenant-Governor, M. William Bray; Secretary of State, Edward J. Flynn; Comptroller, Morris S. Tremaine; Attorney-General, John J. Bennett, Jr.; Commissioner of Education, Frank P. Graves.

Judiciary. Court of Appeals: Chief Judge, Frederick E. Crane; Associate Judges, Irving Lehman, John F. O'Brien, Irving G. Hubbs, John T. Loughran, Edward R. Finch, Harlan W. Rippey.

NEW YORK, COLLEGE OF THE CITY OF. A co-educational institution in New York City, founded in 1848. It is governed by the Board of Higher Education and supported by municipal taxation. The enrollment for the autumn of 1938 was 25,547. The total enrollment for the summer session of 1938 was 6239, and for the preparatory high school, 1191. The faculty numbered 1055. The income for the year was \$3,917,861. The library contained 221,406 volumes and 61,452 pamphlets. Construction of an addition to the library was in progress. President, Frederick B. Robinson, LL.D., resigned Dec. 15, 1938. Acting President, Nelson P. Mead, Ph.D.

NEW YORK CITY. See NEW YORK; AQUEDUCTS; BRIDGES; MUNICIPAL GOVERNMENT; PAINTING; RAPID TRANSIT; SCULPTURE; TUNNELS.

NEW YORK UNIVERSITY. A nonsectarian and privately governed institution for the higher education of men and women in New York City, chartered in 1831. It comprises the following divisions: At University Heights, a college of arts and pure science, college of engineering, Guggenheim school of aeronautics; at Washington Square, the graduate school of arts and pure science, school of law, school of commerce, accounts, and finance, Washington Square College, school of education, graduate division for training in public service; at the Wall Street division, the graduate school of business administration and courses in the school of commerce, accounts, and finance. The medical college is on East 26th St.; the dental college on East 23d St.; the school of architecture and allied arts, on Sixth Avenue at Bryant Park, the graduate institute of fine arts at 17 East 80th Street, and Hofstra College at Hempstead, Long Island.

The enrollment for the year 1937-38 in all divisions of the university, after deducting all duplica-

tions, was 47,771, including University college of arts and pure science, 1123; school of law, 1079; college of medicine, 653; college of engineering, 2442; graduate school of arts and science, 1034; school of education, including both graduate and undergraduate divisions, 11,274; school of commerce, accounts, and finance, including Wall Street division, 12,262; Washington Square college, 5396; graduate school of business administration, 1764; school of retailing, 931; college of dentistry, 538; school of architecture and allied arts, 509; the combined summer divisions (1938), 7831; division of general education and related courses, 7396; Hofstra College, 579.

The faculty of the university numbered 2096, including 209 professors, 139 associate professors, 224 assistant professors, and 876 instructors. The productive funds for the year 1937-38 amounted to \$9,218,621, and the income was \$299,830. The total income of \$8,135,634 was derived as follows: Student fees, \$7,104,875; dormitory rents, \$61,940; gifts, \$265,841; other income, \$403,146, and income from endowment, \$299,830. The libraries contained 541,690 volumes. Chancellor, Harry Woodburn Chase, Ph.D., L.H.D., Litt.D., LL.D.

NEW ZEALAND. A self-governing British dominion in the South Pacific. Capital, Wellington.

Area and Population. Exclusive of certain small annexed islands the area of New Zealand totals 103,722 square miles, of which North Island has 44,281 and South Island 58,092. The population, as estimated for June 30, 1938, was 1,604,244 (including 87,145 Maoris). By the census of 1936, the population was 1,573,810, of which North Island had 1,018,036 and South Island 554,455. By racial origin, 1,484,528 of the population of 1936 were European, 82,326 Maoris (to include 15,014 half-castes), and 2899 Chinese. While inhabitants averaged only about 15 to the square mile, a great part of them lived in cities, and as the latest census indicated, 59.54 per cent of them dwelt in communities of at least 1000 persons. The populations of the chief cities (1936) were: Auckland, 212,159; Wellington, 149,971; Christchurch, 132,559; Dunedin, 81,961; Wanganui, 25,795; Invercargill, 25,772; Palmerston North, 24,067. Births and deaths in 1936 came respectively to 16.6 and 8.7 per 1000 inhabitants; marriages, to 9.2. Yearly immigration (year ended with Mar. 31, 1936), amounted to 31,293; emigration, to 32,416.

Education and Religion. Illiterates form less than 2 per cent of the population. Schools maintained by public authority give the young a free, secular education. While education is compulsory, it need not be obtained at the free schools, and a considerable part of the elementary education is given by private schools. The public primary schools numbered (December, 1937) 2349 and had 6226 teachers and 207,653 pupils; the registered private primary schools numbered 306 and had 27,931 pupils. Special village schools for the Maoris had at that time 9642 scholars. For education beyond the elementary stage there are 86 secondary departments of district high schools, 21 technical high schools and day schools, and 46 colleges and grammar schools, while the endowed and private secondary schools number 57. The University of New Zealand, which had, in 1937, 5010 students, includes Auckland University College, Victoria University College, Canterbury University College, and the University of Otago. Two agricultural colleges, at Lincoln and at Massey, have 228 students, and are affiliated with the University. Prevalently of British origin, the people of New Zealand, as to

religious faith, are reckoned (1936) mainly as Anglican (40.28 per cent), Presbyterian (24.66), Methodist (8.11), and Roman Catholic (13.09).

Production. Of the whole land, 1,521,000 acres, a mere 2.3 per cent, was classed as under cultivation in 1937, and even this included some land bearing grass; 17,250,000 acres were grouped as grass and pasture land; 13,416,000, as forest; and 23,612,000, as unimproved. The value of the agricultural crops was estimated for the year 1936-37, in New Zealand pounds (£NZ), at 8,800,000; the yield of marketed animals, at £NZ47,100,000; dairy products, poultry, and apiary yields, at £NZ37,200,000; and the revenue of forests, at £NZ3,600,000. The country, principally pastoral and occupied with animal husbandry, supported, in 1937, 31,306,000 sheep, 4,389,000 cattle, and 802,000 swine. The chief crops, in the harvest of 1936-37, produced as follows: Wheat, 7,169,000 bu.; barley, 747,000 bu.; oats, 3,525,000 bu.; corn (maize), 302,000 bu.; peas, 481,000 bu.; potatoes, 4,716,000 bu.; grass seed and clover seed, 16,194,000 lb. The animal products of the year 1936-37, in thousands of pounds, were: Butter, 307,948; cheese, 204,546; pork, bacon and ham, 95,368; mutton and lamb, 623,440; beef, 309,641; wool, 302,900. Veal output, by number of carcasses, was 1,054,507.

Mining industry included the production of gold, totaling, for 1936, 164,575 troy oz.; of silver (1936), 432,973 oz.; the yearly quantity of coal mined was (1937) 2,278,000 long tons. Manufactures, according to data for the year 1936-37, furnished products to the value of £NZ105,941,722, of which £NZ35,273,647 represented the value added by manufacture; the manufacturing establishments numbered 5728, employed 96,401 persons, and paid their employees yearly wages of £NZ18,333,077. Important components of the manufactured output of 1936-37 were: Wheat flour, 132,987 long tons; ale, 15,077,000 gal.; leather, 5,795,000 lb.; boots and shoes, 2,001,000 pairs; rough-sawn lumber, 305,889,000 ft.; furniture, £NZ1,380,000; printing, publishing, and binding, £NZ4,407,000; clothing and hosiery, £NZ4,224,000.

Foreign Trade. For the year ended Mar. 31, 1938, New Zealand's imports amounted to 58,065,000 New Zealand pounds; exports, to £NZ65,008,000; the consequent excess of exports, to £NZ6,943,000. This excess, though more than one-eighth of the year's imports, fell far below the recent norm, of some £NZ12,400,000. The conjectured total required to meet the year's debits not visible in the foreign trade totals approximated £NZ10,000,000, and there occurred, as reported later in 1938, considerable reduction of foreign balances of the New Zealand banks. By contrast, the totals for the next previous year (1936-37), imports of £NZ47,621,000, exports of £NZ60,235,000, and £NZ12,614,000 as the excess of exports, showed the results of a normal year.

In terms of U.S. dollars, the imports of the calendar year 1937, totaling \$222,907,000, included among leading items \$22,985,000 for automobiles, \$12,710,000 for electrical machinery, \$7,717,000 for cotton goods, \$4,496,000 for woollen goods, \$4,824,000 for silk and rayon goods, \$7,200,000 for clothing, and \$7,369,000 for gasoline. The same year's exports, totaling \$256,905,000, consisted mainly of butter, \$67,421,000; frozen meats, \$56,175,000; wool, \$75,783,000; and cheese, \$21,322,000. In 1937 the United Kingdom took 76 per cent of the exports of New Zealand, the United States 7.2, Japan 4.7, Australia 2.6, and Canada 2.5; of the imports, the United Kingdom sent 49.6 per cent, the United

States 12.4, Australia 11.7, Canada 8.1, and Japan 1.9.

Finance. The budget for the fiscal year ended Mar. 31, 1939, estimated receipts of the consolidated fund at £NZ35,845,000 and expenditures therefrom at £NZ35,787,000. The consolidated fund, however, was to meet only a minor part of the proposed expenditure of £NZ20,719,000 for public works. For the year ended Mar. 31, 1938, the reported receipts of the consolidated fund totaled £NZ36,059,443, and the expenditures therefrom £NZ35,248,621.

The gross public debt, as of Mar. 31, 1937, had been commonly reckoned as £NZ287,670,000, which represented securities charged upon public revenues. The figure had risen by the corresponding date of 1938, to £NZ290,201,000. The Minister of Finance later declared, however, that other liability of the government, related to discharged soldiers and to rural advances, and totaling £NZ6,913,000, had been discharged since Mar. 31, 1937, more than offsetting the apparent increase of the total debt.

The monetary system is based on the New Zealand pound, closely related to the pound sterling but not (since Dec. 6, 1938) exchangeable with it at a fixed ratio. The rate of exchange of the New Zealand pound in U.S. dollars, on Dec. 31, 1938, was \$3.74; averaging, for 1934, \$4.0246, the rate descended slightly to an average of \$3.9691 for 1937, and to \$3.9235 for 1938.

Transportation. The railroads are virtually all owned by the government. They have a total of 3320 miles of line (March, 1937). They carried, in the year ended with Mar. 31, 1938, 22,441,212 passengers and 7,516,494 tons of freight. Additional mileage of line is under construction. The aggregate length of highways in 1937 was 57,673 miles; automobiles numbered 214,849. Post offices, in 1936, numbered 1766. The government owns the telegraph and telephone systems; telephones in use, Mar. 31, 1937, numbered 178,599. The Pan American Airways deferred opening in 1938 a route between Auckland and Honolulu; airplanes maintain a daily express service between Auckland and Dunedin. There is air service to Australia and London. Ships in foreign trade, entering ports of New Zealand, numbered 631, totaling 2,962,880 net tons, in 1937, as against 638, of 2,889,708 net tons, in 1936.

Government. Executive power is exercised by the Governor-General, appointed by the Crown for five years on recommendation of the Dominion Government. Legislative power rests with the Governor-General and a Parliament of two chambers—the Legislative Council of 39 members appointed by the Governor-General for seven years, and the House of Representatives of 80 members, elected by general male and female suffrage for four years. Governor-General and Commander-in-Chief in 1938, Viscount Galway, who assumed office Apr. 12, 1935. Prime Minister, Minister of External Affairs, of Cook Islands, of Broadcasting, and Native Minister, Michael J. Savage, heading a Labor Cabinet appointed Dec. 5, 1935.

HISTORY

Labor Wins General Election. After one of the most strenuous campaigns ever known in New Zealand, Prime Minister Savage's Labor Government was returned to power with a net loss of one seat in the elections to the House of Representatives held Oct. 15, 1938. The standing of the parties in the new House, with their standing at dissolution

in parentheses, was: Labor, 54 (55); National party, 24 (19); Independents, 2 (6). Labor held only two farming districts but increased its voting strength in the cities and towns.

The victory of Labor on a platform calling for far-reaching socialization was attributed in part to three years of prosperity in New Zealand resulting from a general rise in the prices of the islands' export products. This prosperity had been distributed to all sections and classes of the population through the Labor Government's measures. These measures included heavy expenditures on public works, social services, housing, and other pump-priming and unemployment-relief projects, financed by heavy taxation in the higher income brackets (see 1935, 1936, and 1937 YEAR BOOKS for legislation in those years).

New Legislation. In 1938 a number of important new laws of a similar nature were enacted previous to the general election. These included a bill passed on March 15 giving the government the sole right to mine iron ore and authorizing it to establish and operate iron and steel mills. A loan of £NZ5,000,000 was authorized to finance the scheme, which called for the employment of about 1200 workers and the production of 100,000 tons of semi-finished steel annually after two years. A Social Security Bill consolidating and increasing pension benefits and providing for universal free medical services was passed by Parliament on September 14. The bill increased some and reduced other existing state pensions and extended the pension system to include orphans and persons 60 years of age and over. The program was financed by a tax of one shilling on the pound on wages and incomes, the existing registration fee of one pound per annum paid by males over 20 years old, a State subsidy of one pound per one pound of contributions from taxpayers, and a tax of one shilling per pound on chargeable company income, with certain exemptions.

Other measures put into force during the year included state control of citrus fruit and banana imports; increases on tariff duties effective March 1 and affecting 67 items, which were designed to foster existing secondary industries and encourage the erection of new plants; and a government guarantee of prices for dairy products. The Labor leaders even applied to themselves their theories of a more equitable distribution of income. All Labor cabinet members and legislators deposited their salaries in a common pool, from which each contributor drew the same amount regardless of his position. Thus Prime Minister Savage received \$2730 annually like all the others instead of the \$10,000 legally due him.

The Labor Program. In addition to pointing to its past performances, the Labor party fought the election on a platform calling for still more radical legislation. Among its proposals were greater state control over currency and credit; extension of credit on easier terms to farmers and to parties desirous of establishing secondary industries; an extension of guaranteed prices for farm and livestock products to compensate the farmer in accordance with his actual services rendered; further government construction of housing; provision of family allowances on a scale needed to enable every mother to maintain each child; and more education and health services.

Effects of Labor Policies. Conservative businessmen and financiers joined forces with the Nationalist party opposition in attacking the Labor economic policies as ultimately ruinous. They de-

clared that the government's heavy expenditures might be borne during a period of rising prices and buoyant revenues but that they would cause disaster when prices dropped and revenues declined. They pointed out that the surplus of exports over imports in the year ended Sept. 30, 1938, was only £NZ3,743,000 compared with a surplus of £NZ11,638,000 in 1936-37 and with the £NZ9,000,000 or £NZ10,000,000 required each year for the service of the Dominion's overseas debt, held chiefly in Great Britain.

While the voters paid little attention to these warnings in the general election, there was growing uneasiness among capitalists and the larger property owners. This was reflected in a steady flight of capital to neighboring Australia, which increased after the Labor electoral victory. A recession in world prices and trade, affecting New Zealand's exports, and misgivings as to the outcome of the Labor Government's policies caused a severe decline in the overseas reserves of New Zealand banks. As a result, the government (December 6) suspended the statutory obligation of the Reserve Bank of New Zealand to redeem its notes in sterling and all imports and exports were made subject to official permit. Meanwhile the banks in New Zealand complained that while taxes upon their operations were increased, their income had been drastically reduced and their labor costs increased by the Labor policies.

Empire Relations. The Labor platform in the 1938 election had a plank calling for co-operation with the other members of the British Commonwealth in mutual defense preparations. Prime Minister Savage and the members of his government strongly criticized the British Government's efforts at Geneva in September to repudiate the League principles in fulfilling its bargain with Mussolini on the Ethiopian and other issues (see GREAT BRITAIN and ITALY under *History*). But in the European crisis produced by Czech-German controversy in the same month, the government and people of New Zealand made it plain that they stood wholeheartedly behind the mother country.

NICARAGUA, nik'ä-rä'gwä. The largest in area of the Central American republics. Capital, Managua.

Area and Population. With an area of 49,500 square miles, Nicaragua had a population estimated at 1,000,000 in 1938 (638,119 at the 1920 census). Estimated populations of the chief cities in 1938 were: Managua, 115,000; León, 32,669; Granada, 21,172; Masaya, 15,000; Matagalpa, 5200. The people are mainly of Spanish, Indian or mixed blood, but there is a considerable infusion of West Indian Negroes on the east coast.

Education and Religion. The adult population is about 60 per cent illiterate. In 1937, 48,911 children of school age were enrolled in the schools (37,212 in 1936). All secondary schools are privately owned. There are universities at Managua, León, and Granada. Roman Catholicism is the dominant religion.

Production. Agriculture, cattle raising, lumbering, manufacturing for local consumption, and gold and silver mining are the leading occupations. In 1937 there were exported 34,808,000 lb. of coffee, 2,472,000 bunches of bananas, 2,980,000 lb. of cotton, 5,433,000 lb. of cotton seed, 13,930,000 bd. ft. of timber (1,458,000 bd. ft. of mahogany), and 752,000 lb. of hides and skins. Cacao, beans, plantains, corn, and yucca also are grown. There is some sugar grinding and coffee cleaning.

Foreign Trade. Imports in 1937 were valued

at 5,621,000 U.S. currency dollars (\$5,580,000 in 1936) and exports at \$7,038,000 (\$4,648,000 in 1936). The United States furnished 54.2 per cent by value of the 1937 imports (46.2 in 1936); Germany, 15.2 (24.0); United Kingdom, 8.5 (12.5); Japan, 4.3 (2.6). Of the 1937 exports, the United States took 55.4 per cent (53.9 in 1936); Germany, 21.4 (16.0); France, 8.3 (13.0); Japan, 4.8 (2.9). The value of 1937 coffee exports was \$3,078,000; bananas, \$985,000; gold, \$849,000; cotton, \$553,000.

Finance. For the fiscal year ended July 31, 1937, actual budgetary receipts were 7,494,000 cordobas and expenditures 6,850,000 cordobas. The 1937-38 budget estimates placed receipts at 5,586,000 cordobas and expenditures at 6,340,000 cordobas. No official figures were available for extra-budgetary operations. On Apr. 30, 1938, the public debt was reported at 7,319,000 cordobas, of which 2,722,000 was external, 3,744,000 internal, and 753,000 floating. The cordoba (nominal parity, \$1.693) had an average value in the official exchange market in 1937 of \$0.68, in the uncontrolled market \$0.40, and in the curb market \$0.34.

Transportation. Railway lines in 1936 totaled 353 miles (283 government and about 70 private). The road and highway mileage in 1937 was 1670; number of automobiles, 775. During 1937, 450 steamers of 758,179 net registered tons entered Nicaraguan ports in the foreign trade. There were about 314 miles of air routes in 1936.

Government. The Constitution of 1913 vested executive power in a President elected for four years and legislative power in a congress of two houses—a Chamber of Deputies of 43 members elected for four years by limited suffrage and a Senate of 24 members elected for six years. President, Gen. Anastasio Somoza (Liberal), who was elected virtually without opposition on Dec. 8, 1936, and assumed office Jan. 1, 1937.

HISTORY

Internal Affairs. With less than half of his four-year term of office served, President Somoza took steps during 1938 to perpetuate his control of the government and to strengthen his dictatorial powers. In accordance with the suggestion advanced by Dr. Carlos A. Morales, a Liberal justice of the Supreme Court, in an article in the Managua newspaper *La Prensa* on May 14, Congress convened on August 6 and declared itself dissolved after abolishing the existing Constitution and requesting the President to convoke elections for a Constituent Assembly to draft a new fundamental law.

Elections were held November 6 for a Constituent Assembly of 45 members, to which 27 Liberals, 11 Conservative Nationalists, and 7 Conservatives were chosen under the watchful eye of the Somoza-controlled National Guard. Among the deputies elected were former President José María Moncada, former Vice-President Enoc Aguado, and Dr. Morales. Dr. Aguado was elected President of the Constituent Assembly which met at Managua on December 15. The Assembly was still at work upon the new Constitution at the year end.

These proceedings aroused bitter protests from opponents of President Somoza in exile. Former President Emiliano Chamorro, long the leader of the Conservative party, from his refuge in Mexico City denounced Somoza as an unconstitutional usurper of the presidency who was seeking to prolong his dictatorship by further unconstitutional methods (see *La Prensa*, New York, July 2, 1938). A group of Nicaraguan exiles in New York City,

organized as the Nicaraguan Patriotic Committee of New York, issued a manifesto of protest early in August. The draft of Somoza's new Constitution, they charged, abrogated existing bars against re-election of a President, against the election of a relative as his successor, and against the candidacy of military men in active service for public office. It modified the educational laws to make military instruction obligatory and to permit the appointment of National Guard members as school teachers. It made the National Guard independent of the national courts of justice. It gave the President, who was also commander-in-chief of the Guard, dictatorial powers in finance, the making of treaties, negotiation of loans, the declaration of war, and the proclamation of a state of siege.

Although President Somoza repeatedly proclaimed his attachment to democratic principles during the year, he played the role of a full-fledged dictator. On January 22 he announced at a press conference that he would "not tolerate either political or religious discussions in the newspapers or in the pulpits"; nor would he permit "the energies of the people to be wasted in fruitless arguments." Following this, Congress on January 25 enacted legislation forbidding the dissemination of fascism, communism, or any other alien political philosophy by foreigners or Nicaraguans. About the same time the government increased all government salaries with the exception of the President, and arranged to secure the funds by doubling various taxes and raising the rates for public utilities. Wage levels for certain private industries also were boosted by government decree. In July President Somoza freed all prisoners guilty of common crimes and all National Guard soldiers serving terms for violation of military regulations. The safe arrival of his three children from New York by steamer inspired this decree. On the eve of the convening of the Constituent Assembly prominent citizens in Managua formed the Nicaraguan Democratic Union to fight communism, nazism, and fascism. The President's actions and declarations led some Nicaraguans to charge that he sought to implant fascism as a vehicle for the extension of his personal power.

The depreciation of the cordoba and the lack of foreign exchange, which became acute in 1937 (see 1937 YEAR BOOK, p. 549), continued to harass the country during 1938. The cost of living rose to a level that caused acute suffering among the lower classes. To check speculation in foreign exchange, profits of merchants were limited to 20 per cent by a law of January 22. Early in February President Somoza undertook to lower costs of necessities to the poor by establishing government commissaries at various points. Yet an increase in customs duties during the same month to promote government revenues added to the cost of living. A new financial and exchange law of June 8, 1938, served to raise the value of the cordoba as against the dollar and thus tended to depress prices somewhat within the country. The government's financial position remained difficult, however, and in December the country's economic system suffered another blow when locusts destroyed the bean crop, one of the chief foods of the people.

It was announced in April that the directorate of the National Bank of Nicaragua, established in 1912, would be moved from New York to Managua. The Nicaraguan Government purchased all of the stock from New York banking groups in 1934. A contract for additions to the national palace, then under construction at Managua, was

signed with a New York firm in April also. The palace, to cost \$1,000,000, was to house all the government offices, most of which had operated from rented quarters since the 1931 earthquake. On November 13 President Somoza announced that the Campo de Marte, site of the presidential palace and of barracks for the National Guard, would be converted into a university and the Guard troops moved outside of Managua's limits.

Foreign Relations. The reciprocal tariff concessions granted under the Nicaraguan-United States commercial treaty of Mar. 11, 1936, were ended as of Mar. 1, 1938, in accordance with notes exchanged at Managua on Feb. 8, 1938. Washington officials agreed to this modification of the treaty in view of Nicaragua's difficult financial situation. Another agreement adjusting financial issues between the two governments was signed in Washington April 14. This wiped off the books Nicaragua's debt (principal and interest) of about \$484,000 due the U.S. Government for arms, munitions, and military equipment. In return for this, plus \$72,000 to be paid the Nicaraguan Government by the United States, Nicaragua's claim of \$641,116 (principal and interest) against the U.S. Government for allegedly illegal income taxes levied upon the government-owned Pacific Railway of Nicaragua was liquidated.

Developments in Europe and the Far East during 1938 greatly increased prospects for the construction by the United States of the long-discussed Nicaraguan inter-oceanic canal. President Somoza in 1937 attempted to secure United States financial aid for canalization of the San Juan River, part of the canal route. But in June, 1938, the U.S. Navy Department and four other official agencies urged further study of the larger canal project before any action was taken. The Munich Accord of Sept. 29, 1938, greatly influenced United States naval defense problems and on December 4 the New York Times announced that the Nicaraguan canal was receiving serious study from government officials and members of Congress.

The boundary dispute between Nicaragua and Honduras that was revived in 1937 remained largely quiescent during 1938 while efforts to negotiate a settlement proceeded unsuccessfully at San José, Costa Rica (see HONDURAS under History). Nevertheless President Somoza took steps to modernize and strengthen his armed forces. A shipment of artillery, bomb throwers, anti-aircraft guns, tanks, and armored cars reached Managua on January 14.

NICKEL. World consumption of nickel in all forms during 1938 amounted to approximately 204,000,000 lb. This is a decrease of some 16 per cent from the 1937 record of 240,000,000 lb. The decrease was due mainly to the abrupt drop in business in the United States in the last half of 1937 and the first half of 1938. Estimates of the United States consumption for the last six months of the past year indicate a definite improvement in this important market which normally takes half the total output. European and other markets continued to be relatively steady.

According to the U.S. Bureau of Foreign and Domestic Commerce, exports of nickel amounting to 11,842,937 lb. in 1938 were valued at \$2,892,423 (in 1937, 7,633,189 lb. valued at \$2,685,304); imports were valued at \$13,089,284 in 1938 (in 1937, \$23,986,004).

According to a survey issued in December by Robert C. Stanley, President of International Nickel Co. of Canada, the following percentages give a general picture of the relative importance of

the various forms in which nickel entered world industry in 1938:

Steels	60%
Constructional steels, stainless steels and other corrosion and heat resisting steels, and steel castings	
Nickel cast iron	3%
Nickel-iron alloys	1%
Nickel-copper alloys and nickel silvers	14%
Nickel brass, bronze, and aluminum alloy castings ..	2%
Heat resistant and electrical resistant alloys	3%
Monel, malleable nickel, nickel clad, inconel	9%
Electrodeposition	6%
Non-metallic materials for the chemical industry ...	1%
Nickel salts, ceramic materials, storage battery, materials, and catalysts	
Miscellaneous and unclassified	1%

NIGER. See FRENCH WEST AFRICA.

NIGERIA, ni-jě'ri-a. A British area in West Africa consisting of the Colony (1381 sq. mi.; pop., 368,495 in 1936) and the Protectorate (including British Cameroons, 34,081 sq. mi.; pop., 831,103) divided into the Northern Provinces and Southern Provinces. Total area, 372,674 square miles; total population (1938 estimate), 20,476,795. The main towns are Ibadan with 386,907 inhabitants; Lagos (capital), 130,400; Kano, 77,153; Ogbomoshó, 86,744; Iwo, 57,817; Oshogbo, 49,568; Oyo, 48,714; Abeokuta, 53,319; Ilorin, 42,066; and Iseyin, 36,805.

Production and Trade. The principal products (with 1937 export figures, in metric tons) are palm oil (148,200), palm kernels (154,800, palm oil content), cotton (8900), groundnuts (473,600), cacao (98,800), tin ore (11,000, metal content of ore), and coal (296,000 produced during 1936). Gold produced in 1937 totaled 25,720 troy oz. Other products are hides and skins, bananas, ginger, tobacco, rice, mahogany, columbite, wolfram, silver-lead ore, and ghee. Livestock in the Northern Provinces in 1936 included 4,172,383 goats, 2,650,373 cattle, 1,572,557 sheep, 457,891 donkeys, 175,297 horses, 40,750 swine, and 1792 camels. In 1937 imports were valued at £18,567,675, including cotton goods (£4,851,041), provisions, tobacco, automobiles and trucks, etc.; exports, £19,575,665, including groundnuts (£4,057,893), palm kernels (£3,647,717), palm oil (£2,368,924), cacao (£3,657,367), and tin ore (£2,628,175).

Communications. There were in 1938 over 21,018 miles of highways and 2340 miles of railway line. During the year 1936-37 the Nigerian Railways carried 8,314,870 passengers and 891,848 tons of freight. Lagos is linked with a weekly air-mail service from London by way of Kano and Khar-toum. Airdromes are being built throughout the country in preparation for the establishment of an internal air service to link together the remote provincial centers. Shipping aggregating 4,139,695 tons entered and cleared the ports during 1936.

Government. For the year ending Mar. 31, 1938, revenue totaled £7,342,450; expenditure, £7,375,570; public debt, £24,764,599. Revenue for the year 1938-39 was estimated at £6,574,149. Nigeria, including the British Cameroons attached to the Protectorate for administrative purposes, is under the control of a governor assisted by an executive council; and a legislative council (Order in Council of November, 1922, amended 1928) for the Colony and the Southern Provinces of the Protectorate with control over Protectorate government expenditure in the Southern Provinces. The legislative council includes the governor as president, 28 official members, 3 nominated official members, 3 elected members representing Lagos, 1 elected member representing Calabar, and 15 nominated

unofficial members. Legislation for the Northern Provinces is in the governor's hands. Governor and Commander-in-Chief, Sir Bernard H. Bourdillon (appointed, June 21, 1935).

NIGHTINGALE ISLANDS. See ST. HELENA.

NITROGEN. See FERTILIZERS.

NOBEL PRIZES. The prizes presented annually according to the will of Alfred Nobel, Swedish inventor and philanthropist, to the persons who were considered to have made the greatest contributions toward the progress of the world and the welfare of mankind in the fields of physics, chemistry, medicine, literature, and the promotion of peace, were awarded for 1938 at Oslo on December 10 (the anniversary of the death of the donor) to the following: Physics, to Professor Enrico Fermi of the University of Rome for "his discovery of new elementary radioactive substances produced by irradiation of neutrons"; literature to Pearl Buck, American novelist, the author of "The Good Earth" and other novels about China; and peace, to the Nansen International Office for Refugees at Geneva, an organization that collects information on the material and moral welfare of refugees and gives general directions to relief institutions. The prizes for chemistry and medicine were reserved until 1939.

NON-FEDERATED MALAY STATES. See UNFEDERATED MALAY STATES.

NORTH CAROLINA. Area and Population. Area, 52,426 square miles; included (1930) water, 3686 square miles. Population: Apr. 1, 1930 (census), 3,170,276; July 1, 1937 (Federal estimate), 3,492,000; 1920 (census), 2,559,123. Charlotte had (1930) 82,675 inhabitants; Raleigh, the capital, 37,379.

Agriculture. Acreage, production, and value of the chief crops of North Carolina, for 1938 and 1937, appear in the accompanying table.

Crop	Year	Acreage	Prod. Bu.	Value
Tobacco	1938	603,000	519,530,000 *	\$119,187,000
	1937	674,000	595,530,000 *	142,726,000
Corn	1938	2,442,000	46,398,000	29,231,000
	1937	2,326,000	45,357,000	30,843,000
Cotton	1938	857,000	400,000 *	17,400,000
	1937	1,103,000	780,000 *	33,457,000
Hay (tame) .	1938	962,000	863,000 *	11,392,000
	1937	967,000	924,000 *	12,195,000
Peanuts	1938	243,000	249,075,000 *	8,967,000
	1937	238,000	297,500,000 *	9,818,000
Potatoes	1938	79,000	8,690,000	5,648,000
	1937	94,000	9,588,000	5,849,000
Sweet potatoes	1938	81,000	8,748,000	5,686,000
	1937	80,000	7,680,000	5,683,000
Wheat	1938	473,000	5,440,000	4,515,000
	1937	493,000	5,817,000	6,748,000
Oats	1938	253,000	5,566,000	2,338,000
	1937	230,000	4,830,000	2,705,000

* Pounds. * Bales. * Tons.

Finance. State expenditures in the year ended June 30, 1937, as reported by the U.S. Bureau of the Census, were: For maintaining and operating governmental departments, \$48,384,519 (of which \$9,867,610 was for highways and \$22,097,259 was for local education); for interest on debt, \$7,043,658; for capital outlay, \$19,281,207. Revenues were \$93,491,264. Of these, property taxes furnished only \$32,572, in tardy payments, due in previous years; sales taxes, \$33,881,119 (including tax on gasoline, \$21,654,023); income taxes, \$11,324,441; departmental earnings, \$5,861,465; sale of licenses, \$15,922,951; unemployment compensation, \$5,602,580; Federal or other grants-in-aid, \$11,457,866. Funded debt outstanding on June 30, 1937, totaled \$162,606,500. Net of sinking-fund assets, the debt

was \$136,419,505. There was no State levy of ad-valorem taxes.

Education. For the academic year 1936-37, the latest for which data were obtained, the inhabitants of school age (from 6 to 21 years) were stated to number 1,105,241. Enrollments of pupils in public schools totaled 882,006. They comprised 708,450 in the elementary group and 173,556 in high schools. The year's current expenditure for public-school education totaled \$25,550,073. The public schools employed 23,495 teachers, whose salaries for the year averaged \$764.

A movement in progress in 1938 sought legislation to provide for teachers in North Carolina's public schools a system of retirement, with support, in old age and an extension of the State's provision of a minimum of schooling, already in effect for the lower grades, to cover all twelve grades of the public-school system.

Charities and Corrections. Besides administering public support for the aged poor and the needy children, the Board of Charities and Public Welfare exercised general supervision over 14 State institutions for the care or custody of persons and over 85 prison camps situated about the State. The institutions had each a directing board of its own. Persons in the State's care or custody numbered (November 30) 18,983. Of these, 9752 were convicts in prison camps; in the State institutions were 9231. The institutions and the respective numbers in their charge were: Caswell Training School, at Kinston, 723; State Hospital, Goldsboro, 2132; State Hospital, Morganton, 2278; State Hospital, Raleigh, 2263; Orthopedic Hospital, Gastonia, 158; Sanatorium, at Sanatorium, 533 (tuberculous); Western Sanatorium (also for the tuberculous), Black Mountain, 129; Confederate Women's Home, Fayetteville, 42; Eastern Carolina Training School, Rocky Mount, 110; Stonewall Jackson Training School, Concord, 474; State Industrial School for Girls, Wagle Springs, 165; Morrison Training School, Hoffman, 171; Efland School (Negro girls), 10; Farm Colony for Women, Kinston, 43.

Political and Other Events. The State's policy of reducing its public debt, adopted several years before, was carried on; the State's Treasurer announced that, in the fiscal year ended with June 30, \$5,924,000 of the bonded debt had been redeemed. This brought the debt down \$54,600,000 below the peak that it had attained in the fiscal year 1932. See CHILD LABOR.

An inscribed stone, reported in January to have been found on the bank of the Chowan River, purported to be a relic of the lost colony of Roanoke. It carried 17 lines about the fate of Virginia Dare and her parents. Its authenticity was not established.

Elections. U.S. Senator Robert R. Reynolds (Dem.) was re-elected at the general election (November 8), easily defeating Charles A. Jonas (Rep.). Democrats were elected to all the State's 11 seats in the House of Representatives.

Officers. The chief officers of North Carolina, serving in 1938, were: Governor, Clyde R. Hoey (Dem.); Secretary of State, Thad Eure; Treasurer, Charles M. Johnson; Auditor, George Ross Pou; Attorney-General, Harry McMullan; Superintendent of Public Instruction, Clyde A. Erwin.

Judiciary. Supreme Court: Chief Justice, Walter P. Stacy; Associate Justices, Michael Schenck, Heriot Clarkson, A. A. F. Seawell, W. A. Devin, J. Wallace Winborne, M. V. Barnhill.

NORTH CAROLINA, THE UNIVERSITY OF. A State institution for the higher education of men and, with restrictions as to admission, of women in Chapel Hill, N. C., founded in 1789. The enrollment in the autumn of 1938 was 3510, of whom 3119 were men and 391 women. In correspondence and extension courses 1700 were registered. In the summer session of 1938, 1974 students were registered. The resident faculty numbered 280. The endowment amounted to approximately \$2,000,000 and the budget for the year was \$1,872,700. The library contained about 375,000 volumes. President, Frank Porter Graham, LL.D.

NORTH CAUCASUS TERRITORY. See RUSSIAN SOVIET FEDERATED SOCIALIST REPUBLIC.

NORTH CENTRAL COLLEGE. A coeducational institution of higher learning at Naperville, Ill., founded in 1861. In the autumn of 1938 there was an enrollment of 578 students, of whom 333 were men and 245 women. There were 41 members on the faculty. The productive funds amounted to \$987,000, and the current income for the year was \$187,350. Gifts included \$25,000 Student Aid Fund and \$5800 others. The library contained more than 22,000 volumes. President, Edward Everett Hall, Ph.D.

NORTH DAKOTA. Area and Population. Area, 70,837 square miles; included (1930) water, 654 square miles. Population: Apr. 1, 1930 (census), 680,845; July 1, 1937 (Federal estimate), 706,000; 1920 (census), 646,872. Bismarck, the capital, had (1930) 11,090 inhabitants.

Agriculture. Acreage, production, and value of the chief crops of North Dakota, for 1938 and 1937, appear in the accompanying table.

Crop	Year	Acreage	Prod. Bu.	Value
Wheat	1938	8,955,000	79,839,000	\$42,315,000
	1937	7,018,000	57,005,000	54,155,000
Barley	1938	1,254,000	21,318,000	5,543,000
	1937	1,280,000	21,120,000	8,448,000
Corn	1938	981,000	16,186,000	6,960,000
	1937	908,000	17,252,000	8,108,000
Oats	1938	1,391,000	31,298,000	4,695,000
	1937	1,312,000	29,520,000	6,494,000
Hay (tame) .	1938	1,046,000	1,162,000 *	4,648,000
	1937	990,000	1,008,000 *	5,141,000
Potatoes	1938	130,000	9,750,000	3,900,000
	1937	114,000	11,970,000	4,668,000
Flaxseed	1938	298,000	1,490,000	2,310,000
	1937	292,000	1,548,000	2,802,000
Rye	1938	961,000	12,974,000	3,503,000
	1937	672,000	6,720,000	3,965,000

* Tons.

Political and Other Events. U.S. Senator Gerald P. Nye (Rep.) was re-elected at the general election (November 8), defeating William Langer (Independent) and J. J. Nygard (Dem.). John Moses (Dem.) was elected Governor, by a moderate margin over John P. Hagan (Rep.). The two Republican U.S. Representatives-at-large composing the State's delegation to the House of Representatives were re-elected. The rate of \$40 a month for pensions to the elderly poor was adopted by vote.

Governor Langer's failure to win the Senatorship in November ended nearly a year of effort on his part to gain this post. Wielding a strong organization within the State's old Non-Partisan League, he nevertheless was defeated for the Republican nomination for Senator at the nominating primary on June 28. This failure was attributed to his inability to obtain the support of Representative William Lemke; Lemke, at first put on the League's slate for renomination, refused to endorse Langer, whereupon the League dropped Lemke for another choice. Lemke thereafter campaigned on his own

account for the Republican nomination and made use of the opportunity to attack Langer's own record and campaign for Senator. The Republican primary accepted all the candidates on the League's slate except Langer himself and Lemke's opponent, both of whom it rejected. Langer thereupon ran for election as an independent, advocating a plan for raising the monthly rate of old-age assistance in the State to \$40, which was put on the ballot. The pension plan, though carried in the election, did not help him sufficiently to overcome the vote for Nye.

Officers. The chief officers of North Dakota, serving in 1938, were: Governor, William Langer (Ind.); Lieutenant-Governor, T. H. H. Thoresen; Secretary of State, James D. Gronna; Auditor, Berta E. Baker; Treasurer, John Gray; Attorney-General, Alvin C. Strutz; Superintendent of Public Instruction, Arthur E. Thompson.

Judiciary. Supreme Court: Chief Justice, A. M. Christianson; Associate Justices, P. O. Sathre, A. G. Burr, James Morris, W. L. Nuessle.

NORTH DAKOTA, UNIVERSITY OF. A State institution of higher education for men and women at University Station, Grand Forks, N. D., founded in 1883. The enrollment for the autumn of 1938 was 1807. The 1938 summer session had an attendance of 372. The faculty numbered 140. The income, derived from State appropriations, land-grant funds, student fees, etc., amounted to approximately \$501,000. The library contained 82,455 catalogued volumes. President, John C. West, Ed.D.

NORTHEAST NEW GUINEA. See NEW GUINEA, TERRITORY OF.

NORTHERN RHODESIA. See RHODESIA, NORTHERN.

NORTHERN TERRITORY (AUSTRALIA). An Australian Territory. Area, 523,620 square miles; population, 5552 (Mar. 31, 1938, estimate), compared with 4850 (1933 census). Figures for population are exclusive of full-blood and half-caste aboriginals (19,214 at the census of 1933). Darwin, the capital, had 1730 inhabitants on Dec. 31, 1937.

Production. Rice, tobacco, coconuts, mangoes, bananas, cotton, various fodder plants, and peanuts are grown on a small scale but agriculture has made little progress to date. The natural grasses of the large pasture lands are rich in nutriment and provide food for livestock. There were in the Territory on Dec. 31, 1936, 855,398 cattle, 31,056 horses, 470 pigs, and 11,162 sheep. Wool (greasy) produced during 1937-38 was estimated to total 35,000 lb. The mineral output for the year ended June 30, 1937, was estimated to be valued at 127,849 Australian pounds, of which gold represented £A91,543 and tin, £A7696 (Australian £ averaged \$3.9394 for 1937).

Government. The Territory is controlled by an administrator, with headquarters at Darwin, aided by a deputy administrator in Stuart (Alice Springs). In the Australian House of Representatives at Canberra, the Northern Territory is represented by an elected member who takes part in the debates but does not vote. Administrator, C. L. A. Abbott.

NORTH OSETIAN AUTONOMOUS SOVIET SOCIALIST REPUBLIC. See RUSSIAN SOVIET FEDERATED SOCIALIST REPUBLIC.

NORTHWESTERN UNIVERSITY. A coeducational institution of higher learning in Evanston and Chicago, Ill., founded in 1851. It is composed of a college of liberal arts, a graduate school, and schools of engineering, commerce, jour-

nalism, music, education, and speech, in Evanston; and schools of law, medicine, dentistry, commerce, journalism, and University College in Chicago. For the autumn term of 1938 there was an enrollment of 5743 full-time and 9315 part-time students. In the 1938 summer session 4516 students were enrolled. The faculty included 634 full-time and 674 part-time members. The endowment as of Aug. 31, 1938, was \$25,000,000; the total budget for the fiscal year 1938-39 was \$4,800,000. The total gifts to the University during the year ending Aug. 31, 1938, amounted to \$2,300,000. In the various libraries of the University there were approximately 600,000 bound volumes and 200,000 pamphlets. President, Walter Dill Scott, Ph.D.

NORTHWEST TERRITORIES (CANADA). The vast area in northern Canada, east of the Yukon, provisionally divided, for administrative purposes, into the districts of Franklin (554,032 sq. mi.), Keewatin (228,160 sq. mi.), and Mackenzie (527,490 sq. mi.). Total area, 1,309,682 square miles; population (1937 estimate), 10,000 as against 9723 including 4670 Eskimos and 4046 Indians in 1931. Seat of government, Ottawa.

Production. The 211,551 pelts of fur-bearing animals taken during the year ended June 30, 1936, were valued at \$1,188,285. Mineral production (exclusive of radium and uranium) for 1937 was valued at \$117,978, of which silver (135,442 fine oz.) accounted for \$60,788.

Government. The Northwest Territories are governed from Ottawa by a commissioner, a deputy commissioner, and a council of five members (all appointed by the Governor General in Council). Commissioner, Charles Camself.

NORWAY. A constitutional monarchy of northern Europe. Capital, Oslo. Sovereign in 1938, King Haakon VII, who was elected by the Storting (parliament) Nov. 18, 1905.

Area and Population. With an area of 124,587 square miles (land area, 119,148 sq. mi.), Norway had a population estimated at 2,907,000 on Dec. 31, 1937 (2,814,194 at the 1930 census). In 1930, 28.5 per cent of the population lived in incorporated towns and cities. Living births in 1937 numbered 44,482 (15.3 per 1000); deaths, 30,025 (10.4 per 1000); marriages, 23,864 (8.2 per 1000). The 1930 census populations of the chief cities were: Oslo, 253,124; Bergen, 98,303; Trondheim (Nidaros), 54,458; Stavanger, 46,780; Drammen, 25,493.

Education and Religion. Primary education is compulsory and there is practically no illiteracy. Enrollment in elementary schools in 1935-36 was 369,861 pupils; in secondary schools, 27,680 (1934-35); in the university, 5518 in 1936. According to the 1930 census the entire population adhered to the national church (Evangelical Lutheran) with the exception of 12,207 Methodists, 7788 Baptists, 2827 Roman Catholics, 667 Mormons, and 81 Quakers.

Production. According to the 1930 census 29.9 per cent of the working population was engaged in agriculture, forestry, and gardening, 27.6 per cent in industry, 10.1 per cent in commerce, 9.6 per cent in transportation, 7 per cent in fishing and whaling, and 5.5 per cent in public administration and the liberal professions. The national income totaled 2,637,000,000 crowns in 1937 (2,305,000,000 in 1936). The 1929 land survey showed 1,924,000 acres under cultivation, 549,000 acres of meadow, and 18,531,000 acres of forest. The value of agricultural production was 516,000,000 crowns in 1937. Yields of the chief cereals in 1938 were (in metric tons): Wheat, 71,100 (68,000 in 1937); barley, 124,600 (129,200); rye, 11,000 (11,200); oats,

181,700 (188,500). The 1937 potato crop was 31,-620,000 bu.; sown hay, 2,901,000 metric tons; fodder roots, 720,000 metric tons. The 1938 fishing catch was valued at 86,101,000 crowns (81,563,000 in 1937); whaling catch, 1937-38, 988,000 bbl. of oil valued at 42,900,000 crowns (1,058,000 bbl. worth 72,800,000 crowns in 1936-37). Industrial production in 1938 was valued at about 1,890,000,-000 crowns (1,990,000,000 in 1937). Iron ore production in 1938 reached the record figure of 1,545,-000 tons (1,076,000 in 1937); pyrites in 1937, 1,050,000 metric tons. Output of other minerals in 1936 was (in metric tons): Feldspar, 24,695; titanium ores, 67,194; pig iron, 32,710; aluminum, 15,-405; zinc, 45,028; fine silver, 215,405 troy oz. The output of mechanical wood pulp for sale was 699,-348 metric tons in 1936; chemical wood pulp, 411,-290 metric tons; paper, 814,851,000 lb.; margarine, 121,983,000 lb.; beer, 12,006,000 gal.

Foreign Trade. Imports in 1938 totaled 1,188,-436,000 crowns and exports 786,746,000 crowns as compared with 1,292,717,000 and 923,258,000, respectively, in 1937. Ships, iron and steel, coal, mineral oils, and yarns and cordage were the chief 1937 imports, in order of value. The main exports were, in U.S. currency dollars: Fish and shellfish, \$32,285,000; wood pulp, \$27,718,000; paper, including newsprint, \$20,322,000; fur skins, \$10,298,-000; saltpeter, \$10,026,000. Of the 1937 general imports, 18.3 per cent by value came from the United Kingdom, 16.9 from Germany, 15.2 from Denmark and Sweden, and 8.5 from the United States. Of the 1937 exports, Britain took 25.1 per cent, Germany 13.1, Denmark and Sweden 11.6, and the United States 9.8.

Finance. For the fiscal year ended June 30, 1938, total actual budget revenues were 603,500,000 crowns and expenditures 558,900,000 crowns, leaving a gross surplus of 44,600,000 and a net surplus of 36,600,000 crowns. For 1936-37 receipts and expenditures balanced at 456,997,000 crowns. The budget estimates for 1938-39 balanced at 565,800,-000 crowns. The national debt on Dec. 31, 1938, totaled 1,430,390,000 crowns (1,471,420,000 at the end of 1937). The average exchange value of the Norwegian crown was \$0.2484 in 1937 and \$0.2457 in 1938.

Transportation. Norway in 1937 had 2272 miles of government railway lines and 212 miles of private lines. In 1936-37 the state lines carried 20,-669,000 passengers and 11,188,000 metric tons of revenue freight. Gross receipts were 76,834,000 crowns. Highways extended 25,289 miles in 1937; number of automobiles, 69,872. Civil aviation statistics for 1937 were: Miles flown, 574,920; flying hours, 5742; passengers, 16,080; baggage, 117,027 lb.; express and freight, 223,678 lb.; mail, 83,705 lb. Regular flying schedules are confined to the period May to September, inclusive. The Norwegian merchant marine as of June 1, 1938, comprised 1965 vessels of 100 tons or over with a capacity of 4,614,005 gross tons. The gross freight earnings of this fleet was estimated at 600,000,000 to 620,000,000 crowns in 1938 (750,000,000 in 1937). During 1937 a total of 10,716 vessels of 9,320,000 net registered tons entered Norwegian ports.

Government. Executive power is vested in the King, who acts through a cabinet responsible to the Storting (parliament). The Storting consists of 150 members, elected for three years by universal male and female suffrage. When assembled, the Storting divides itself into the Lagting and Odelsting, comprising one-fourth and three-fourths of the membership, respectively. The two sections

function much as do the upper and lower houses of a bicameral parliament. Premier in 1938, Johan Nygaardsvold (Labor), heading a cabinet formed Mar. 20, 1935. The composition of the Storting following the election of Oct. 19, 1936, was: Labor, 71; Conservative, 36; Liberal, 23; Agrarian, 18; Christian People's, 2.

History. The year 1938 was uneventful in Norwegian domestic affairs, except for the death of Queen Maud (q.v.) in London on November 20 and the action of the Storting on June 20 in making women eligible for government posts, including appointments to the clergy, under the same conditions as men. Like the other small democracies of northwestern Europe, Norway was alarmed by the growing danger of war in Europe and sought to chart a neutral course among the rivalries of the great powers. The Foreign Ministers of Finland, Denmark, Norway, and Sweden, met at Oslo on April 5-6 to formulate joint plans for the defense of their neutrality. On May 21, Norway formally recognized Italy's sovereignty over Ethiopia. Ten days later the Storting unanimously approved a declaration that Norway reserved the right to maintain complete neutrality in any war resulting from action by the League of Nations that she did not approve. Subsequently, on July 23, Norway joined with the six other members of the Oslo bloc in announcing at Copenhagen that she was "definitely determined never to participate in any conflict between great powers."

With the other Oslo powers, Norway agreed, on May 11, to abrogate the Hague Convention of May 28, 1937, for the gradual reduction of trade barriers. To defend its neutrality policy, the government in March asked for a moderate increase in defense appropriations. Foreign Minister Beck of Poland visited Oslo early in August in furtherance of his policy of creating a neutral bloc of eastern and northern European powers. The threat of war arising from the German-Czech crisis in September, led Norway to tighten her coast defenses. On September 26 Norway concluded a new agreement with Germany covering the transfer of funds for the service of German and Austrian loans. The Norwegian motorship *Norseman*, flying the flag of Panama, was seized by the Insurgent Government of Spain late in the year while en route from the Black Sea to Oslo with a cargo of wheat for the Norwegian Government. Foreign Minister Halvdan Koht addressed several protests to the Franco Government against this seizure, but an Insurgent court at Palma, Majorca, declared the ship and cargo a lawful prize.

An unemployment insurance law, providing for the compulsory insurance of about 544,000 industrial workers, was enacted June 24, 1938.

See DENMARK under *History*.

NORWEGIAN LITERATURE. See SCANDINAVIAN LITERATURE.

NOTRE DAME, UNIVERSITY OF. A Roman Catholic institution at Notre Dame, Ind., founded in 1842 for the higher education of men. The enrollment in the summer session of 1938 was 949, of which number 645 were religious, sisters of religious communities being permitted to attend. The enrollment for the first semester of 1938-39 was 3114. The faculty numbered 230. The endowment amounted to \$1,010,000, while the income for the year 1937-38, including student fees and departmental income, was \$1,904,599. The library contained 188,708 volumes and 1212 periodicals. President, the Rev. John F. O'Hara, C.S.C., Ph.D.

NOVA SCOTIA, nō'va skō'shya. An eastern maritime province of Canada. Area, 21,068 square miles; population (1938 estimate), 548,000 compared with 408,219 (1931 census). During 1936 there were 11,808 births (22.0 per 1000), 5897 deaths (11.0 per 1000), and 4129 marriages (7.7 per 1000). Chief cities (1931 population figures in parentheses): Halifax, the capital (59,275), Sydney (23,089), Glace Bay (20,706), Dartmouth (9100), New Glasgow (8858), Truro (7901), Sidney Mines (7769), New Waterford (7745), Amherst (7450), Yarmouth (7055). In 1936 there were 137,604 students enrolled in the schools including 11,570 students in the universities and colleges.

Production. The estimated gross value of agricultural production for 1937 was \$27,932,000 (\$29,039,000 in 1936) of which field crops accounted for \$10,570,000 (\$13,593,000 in 1936). Other important items included in the 1936 total of agricultural production were dairy products, \$6,495,000; fruits and vegetables, \$4,067,000; farm animals, \$2,548,000; poultry and eggs, \$1,216,000; fur farming, \$448,000. Livestock in the province (1937): 42,500 horses, 228,900 cattle (including 115,700 milch cows), 137,600 sheep, 50,000 swine, and 1,244,100 poultry. The apple crop for 1937 amounted to 2,252,636 barrels. In 1937, with 18,088 men employed in the fisheries, the fish catch was valued at \$9,229,834. The 1936 output of the forests equaled 121,446 M cu. ft. which was valued at \$6,199,647.

Mineral production (1937) was valued at \$30,314,188 of which coal (7,256,954 tons) accounted for \$25,640,819; gypsum (926,796 tons), \$978,288; gold (19,918 fine oz.), \$696,931; zinc (5,485,550 lb.), \$268,902; salt (47,865 tons), \$216,401. In 1936, from the 1158 manufacturing plants, with 15,944 employees, the net value of products was \$67,784,970 (central electric stations, and dyeing, cleaning, and laundry work ceased to be regarded as "manufacturing" industries for 1936).

Government. For the year ended Nov. 30, 1937, revenue totaled \$11,096,227; expenditure, \$11,033,838; net funded public debt, \$87,599,662. Estimates for the year ending Nov. 30, 1938, indicate revenue of \$11,653,961 and expenditure of \$11,646,062. The government is administered by a lieutenant-governor (appointed by the Dominion government) who is assisted by an executive council of 8 members who also are members of the House of Assembly of 30 members elected for a term of 5 years by popular vote of the people. Nova Scotia is represented in the Canadian parliament at Ottawa by 10 members in the Senate and 12 members in the House of Commons. Lieutenant-Governor, Robert Irwin (appointed May 1, 1937); Premier, A. L. MacDonald.

History. On Apr. 14, 1938, the legislative assembly of Nova Scotia passed a law, effective on June 30, 1938, providing for the control of the sale of goods by the installment system. Dealers must obtain an annual license from the attorney general if they wish to sell goods on the installment plan and their books must always be open for inspection by members of the department of the attorney general. See CANADA.

NYASALAND (nyä'sä-länd'; nī-äs'a-) **PROTECTORATE.** A British protectorate in East Africa. Land area, 37,374 square miles; population (Jan. 1, 1938), 1,639,329 including 1894 Europeans and 1631 Asiatics. The main settlements are Zomba, the headquarters of the government, Blantyre, Limbe, Lilongwe, Karonga, Fort Johnston, Livingstonia, and Port Herald.

Production and Trade. Cotton, tobacco, tea, maize, coffee, and rubber were the principal prod-

ucts. Livestock in the protectorate (1936): 260,764 goats, 222,718 cattle, 55,516 sheep, 72,371 pigs, 182 asses and mules, and 38 horses. Minerals known to exist include gold, copper, iron, bauxite, asbestos, mica, graphite, manganese, and coal. In 1937 (excluding transit), imports were valued at £746,575 (cotton piece goods, provisions, and hardware were the main items); exports, £901,925, of which tobacco (14,536,933 lb.) accounted for £423,994; tea (8,816,788 lb.), £326,038; cotton (4,628,821 lb.), £105,722. In 1938 there were 3371 miles of highways.

Government. For 1937 revenue amounted to £476,261; expenditure, £443,800. On Oct. 12, 1938, the report of the commission appointed in 1937 to inquire into the financial position of Nyasaland was issued. The public debt was about £5,250,000 and was represented mainly by railway development. Budget estimates for 1938 indicated revenue of £425,299 and expenditure of £425,000; in addition to the ordinary expenditure, about £200,000 is required for public debt payments and railway guarantees and this additional expenditure is made from loans and grants-in-aid from the Imperial government. The protectorate is administered by a governor who is aided by an executive council of 4 official members and a legislative council (consisting of the governor, the 4 members of the executive council, and 4 unofficial members), the governor having the right of veto (Order in Council of Sept. 4, 1907). Governor and Commander-in-Chief, Sir Harold B. Kittermaster (appointed Apr. 9, 1934). See RHODESIA, NORTHERN, under *History*.

OATS. The 1938 production of 31 countries reporting to the International Institute of Agriculture was placed at 3,291,952,000 bu. and the acreage at 90,048,000 acres. The production was 5.6 per cent above that of 1937 and 10 per cent above the average for the five years 1932-36, while the acreage was practically the same as for the preceding year and only 2.7 per cent below the 5-year average. The leading countries and their yields, not including the United States, the Soviet Republics, and countries of the southern hemisphere, were as follows: Germany, including Austria, 462,218,000 bu., Canada 400,897,000 bu., France 375,418,000 bu., Poland 178,847,000 bu., and Sweden 98,119,000 bu. For the four years 1932-35 the Soviet Republics reported an average production of 1,099,236,000 bu. and for the five crop years 1932-33 to 1936-37, Argentina, the leading producing country south of the equator, reported an average yield of 55,885,000 bu. In the crop-year 1937-38 the Argentine yield was placed at 47,468,000 bu., harvested from only 1,777,000 acres, although 3,254,000 acres were sown. The acreage for the crop year 1938-39 was reported at 3,361,000 acres, and the yield was estimated at 51,671,000 bu.

The Department of Agriculture estimated the 1938 oats crop of the United States at 1,053,839,000 bu. and the harvested acreage at 35,477,000 acres. The yield was 9 per cent less than the 1,161,612,000 bu. produced in 1937 but 1 per cent above the average for the 10 years 1927-36 and the acreage was slightly above the 1937 acreage but 7 per cent below the 10-year average. Of the 1938 area seeded, 1,138,000 acres were not harvested for grain. The average yield per acre this year was 29.7 bu. compared with 32.9 bu. in 1937 and the 1927-36 average of 27.1 bu. The leading states and their yields were reported as follows: Iowa 198,086,000 bu., Minnesota 128,700,000 bu., Illinois 110,534,000 bu., and Wisconsin 76,105,000 bu. Iowa led also in acreage with 5,913,000 acres, followed by Minnesota with

3,900,000 acres, Illinois with 3,509,000 acres, and Wisconsin with 2,455,000 acres. The average yields in the 48 states ranged from 14.2 bu. in Florida to 48.4 bu. in Washington. From Iowa and Minnesota eastward the crop suffered losses from rust, lodging, and sprouting in the shock while in Nebraska, North and South Dakota, and Montana the yield was better than in recent years although part of the acreage was cut early to reduce grasshopper and other insect damage and loss from drought.

During the fiscal year ended June 30, 1938, the United States exported 11,361,000 bu. of oats, 3,625,000 lb. of oatmeal, groats, and rolled oats in bulk and 13,827,000 lb. in packages and imported 11,000 bu. of grain and 212,000 lb. of oatmeal, rolled oats, and other like products.

OVERLIN COLLEGE. A nonsectarian institution for the higher education of men and women in Oberlin, Ohio, founded in 1833. The registration for the first semester of 1938-39 was 1832, College of Arts and Sciences 1335, Conservatory of Music 411, Graduate School of Theology 86, while that for the summer session of 1938 was 154. The faculty had 196 members. The productive funds of the institution as of Aug. 31, 1938, amounted to \$18,674,134, and the income for the year was \$1,561,297. The library contained 386,664 bound and 234,263 unbound volumes. President, Ernest Hatch Wilkins, Ph.D., Litt.D. LL.D.

OBITUARY RECORD OF THE YEAR.

See NECROLOGY.

OCEANIA, FRENCH ESTABLISHMENTS IN. A French colonial possession in the Pacific, consisting of the following main groups of islands: Society, Marquesas, Tuamotu, Leeward (Iles sous le Vent), Gambier, Tubuai, and Rapa. Total area, 1520 square miles; population (1936 census), 43,608 including 37,786 natives and about 5290 French. The main island is Tahiti (600 sq. m.; 19,029 inhabitants in 1936) of the Society Islands. Capital, Papeete (7061 inhabitants in 1931).

The chief products are copra, sugar, rum, bananas, oranges, mother-of-pearl, vanilla, and phosphates (1936 estimate, 147,000 metric tons). In 1937 the estimated value of merchandise imports (in old U.S. gold dollars) was \$1,600,000 (1936, \$1,300,000); exports, \$1,700,000 (1936, \$1,400,000). In 1935, 432 overseas vessels (442,852 tons) entered the ports. For 1936 revenue and expenditure balanced at 12,961,630 francs (franc averaged \$0.0611 for 1936). The establishments are administered by a governor aided by an administrative council. Governor, Henri C. Sautot (appointed, May 9, 1935).

OCEAN ISLAND. See GILBERT AND ELLICE ISLANDS.

OGLETHORPE UNIVERSITY. An institution of higher education for men, founded in 1913 as a revival of the famous institution which existed in Milledgeville and in Atlanta, Ga., from 1835 to 1872. The enrollment for the autumn term of 1938 was 800. The 1938 summer session had an attendance of 210. There were 31 members on the faculty. The income for the year amounted to \$120,000. The library contained 60,000 volumes. President, Thornwell Jacobs, LL.D., Litt.D.

OHIO. Area and Population. Area, 41,040 square miles, exclusive of State's waters in Lake Erie, but including (1930) 300 square miles of other water. Population: Apr. 1, 1930 (census), 6,646,697; July 1, 1937 (Federal estimate), 6,733,000; 1920 (census), 5,759,394. Cleveland had (1930) 900,429 inhabitants; Cincinnati, 451,160; Toledo,

290,718; Columbus, the capital, 290,564; Akron, 255,040.

Agriculture. Acreage, production, and value of the chief crops of Ohio, for 1938 and 1937, appear in the accompanying table.

Crop	Year	Acreage	Prod. Bu.	Value
Corn	1938	3,568,000	156,992,000	\$83,206,000
	1937	3,796,000	163,228,000	83,246,000
Wheat	1938	2,381,000	46,420,000	28,780,000
	1937	2,432,000	46,136,000	46,597,000
Hay (tame) ..	1938	2,637,000	3,695,000 ^a	20,322,000
	1937	2,472,000	3,255,000 ^a	25,064,000
Oats	1938	1,121,000	36,993,000	8,508,000
	1937	1,246,000	35,511,000	11,364,000
Potatoes ...	1938	118,000	12,626,000	8,207,000
	1937	118,000	10,030,000	7,823,000
Apples	1938	3,565,000	3,565,000
	1937	12,636,000	7,364,000
Tobacco ...	1938	27,500	24,617,000 ^b	3,438,000
	1937	30,900	28,587,000 ^b	3,850,000
Soy beans ..	1938	253,000	5,313,000	4,250,000
	1937	171,000	3,249,000	2,664,000

^a Tons. ^b Pounds.

Mineral Production. Of the yearly total, by value (\$147,832,820), for 1936, of the production of Ohio's native minerals, clay products, coal, and natural gas were the major items. The clay products amounted to \$46,115,626 for 1936. The production of coal, 24,500,000 net tons for 1937, closely approximated the 24,110,078 tons of 1936, which totaled \$38,838,000 in value. The output of natural gas, 46,994 million cu. ft., in value \$22,153,000 for 1936, was stimulated by a ready demand, which led to the completion of many productive wells in 1937. The yield of petroleum diminished to 3,559,000 bbl. for 1937, from 3,847,000 bbl. (value, \$6,090,000) for 1936. The production of lime, in which Ohio led the Union, rose to 1,069,374 short tons (1937), from 905,358 tons (1936), and by value to \$8,653,571, from \$7,354,902.

Industry in the treatment on non-native minerals included a heavy production of coke, which rose to 6,731,363 net tons (1937), from 6,242,300 tons (value, \$26,938,007) for 1936. Furnaces' shipments of pig iron increased to 7,724,882 gross tons (1937), from 7,351,407 tons (1936); in value, to \$167,076,855, from \$125,097,158; in this production the State ranked second in the Union. The production of open-hearth steel, however, diminished to 9,067,944 gross tons (1937), from 9,789,985 tons (1936).

Education. Shrinkage in revenue brought, in 1938, some renewal of the problem of support, from which the public schools of Ohio had lately emerged into fairly normal conditions. The regulations for the certification of teachers were amended in a manner thought likely to increase the competence of the teaching body.

Charities and Corrections. Ohio's administration of the chief sorts of public support for needy inhabitants was affected by the year's political campaigning. Governor Davey, opposed by a strong faction of his fellow-Democrats, had difficulty in obtaining from the Legislature (see *Legislation*, below) additional appropriations and money-raising acts with which to augment the localities' means of poor-relief. In the course of the State campaign the State's Division of Aid for the Aged, administering old-age assistance, was accused of having sent out to the recipients of this form of public support letters urging that they give political support to Davey; the Federal Social Security Board, taking up the accusation, summoned Davey for questioning; treating the proceedings as a political move against him, he failed to attend when summoned.

The State's 23 institutions for the public care and custody of persons, all operated by the Department of Public Welfare (Mrs. Margaret M. Allman, Director), contained in 1938 a daily average of 38,516 inmates. These institutions were: State mental hospitals at Athens, Cleveland, Columbus, Dayton, Macedonia, Lima, Cincinnati, Toledo, and Massillon; Ohio Hospital for Epileptics, Gallipolis; institutions for the feeble-minded, at Columbus, Orient, and Apple Creek; Ohio State Sanatorium, Mount Vernon; Ohio Soldiers' and Sailors' Home, Sandusky; Madison Home, Madison; Boys' Industrial School, Lancaster; Girls' Industrial School, Delaware; Ohio Penitentiary, Columbus; Prison Farm, London; Ohio State Reformatory, Mansfield; Reformatory for Women, Marysville, Bureau of Juvenile Research, Columbus. The Department's non-institutional services included aid to the needy among the aged and the blind, assistance of various sorts to children, supervision of probation and parole, work of criminal identification, and the operation of prison industries. See OLD-AGE PENSIONS.

Legislation. The second special session of the Legislature, continuing from 1937, adjourned at the beginning of March. It made considerable but, in the outcome, insufficient provision for the State's contribution to poor-aid: it authorized the withdrawal of \$6,500,000 from the proceeds of the sales tax, for distribution among the local subdivisions at the rate of \$2 from the State for every \$1 granted by a subdivision for the support of indigents; and it imposed an excise tax at the rate of 0.65 per cent on the receipts of public utilities, intended to produce about \$4,000,000 a year for the same purpose. It passed, but Governor Davey vetoed a bill limiting the receipt of poor-relief to citizens and to those having declared intention to become citizens, and one creating a Director of Relief, subject to a board of review. The Senate created a committee to hunt for improper practices in the State administrative offices.

A later (third) special session of the current Legislature, summoned by Governor Davey to make further allowance for the support of the poor, convened on May 16 and adjourned on July 8. It enacted the means of the State's supplying about \$12,000,000 toward the support of the indigent for the remainder of 1938. The expiring temporary taxes for raising money to this use were made to stay in effect through 1941, and authority was given the State administration to borrow money by pledging future receipts of some taxes.

Political and Other Events. Dependency on public support was reported in May to have spread to a greater extent than ever before in Ohio. The WPA then had on its payrolls 233,500 individuals, and the cases listed with the State's Auditor as receiving State and local public support numbered 144,795. The actual recipients commonly represented whole families; consequently the total of the persons supported at Federal or State-and-local cost was estimated at 1,272,500—one-fifth of the population of the State. Cleveland had one-sixth of those dependent on the latter kind of support. Toledo, because of the idleness of its glass-making industry, had a great number, as did Dayton and Columbus; State aid in these cities gradually ran out in the spring. Their own authorized means were worked to exhaustion, Cleveland in particular owing about \$2,000,000 to vendors of foodstuffs on food orders that it had issued to poor families who had used them to pay for nourishment. The situation was complicated by considerable popular antagonism to meeting the cost of poor-aid in the

affected cities. Areas not affected objected to being taxed for a need not their own, and many people in the cities themselves grudged paying taxes to support indigents who had come in from other parts not many years before and were consequently still regarded as outsiders. Cuyahoga County, embracing Cleveland, went so far as to avoid collecting the necessary but disliked taxes, though dependency almost trebled in Cleveland, from December, 1937, until May. By providing that money might be borrowed on future receipts of certain taxes, the Legislature bypassed the obstacle of popular opposition to immediate further taxation for poor-relief, so that difficulties diminished at least temporarily after the midyear. Ohio's system of unemployment-compensation in accordance with the Federal Social Security Act, though already in effect as to the collection of taxes to build up the fund for the purpose was not to start the intended payments to persons thrown out of work until the outset of 1939. Absence of such payments in 1938 accounted for part of the need for other kinds of public assistance, but the outlook indicated that this need would diminish after the year-end, as unemployment-compensation came into play.

Proceedings Against Governor Davey. Several groups moved, by official proceedings and otherwise, during the months prior to the State primary elections, to bring up charges damaging to Governor Davey. These groups included a committee of the strongly Democratic State Senate, Democratic National Committeeman Charles Sawyer and his political supporters, the State Attorney-General's office, and the Committee for Industrial Organization. The Senate's committee, inspired by members of Davey's own party, acted with energy worthy of a non-partisan or a Republican body; it drew forth testimony that the State had paid for coal of a more expensive grade than it had received, that a solicitor had promised that the State would buy automobiles of the General Motors' make if a contribution of \$25,000 were given to Davey's campaign fund of 1934, and other like matter. The committee terminated at the close of the second special legislative session, the lower house of the Assembly having failed to vote funds for its continuance after the March adjournment.

Charles Sawyer, starting in January a campaign for the Democratic nomination as candidate for Governor, sharply criticized Davey in public speeches and an open letter. Convened by the Attorney-General, a grand jury of Hamilton County heard testimony that over 100 employees of the State liquor stores in and about Cincinnati had been solicited to give a percentage of their salaries as contributions to Davey's third-term campaign fund; this grand jury brought indictments in June and July against 18 persons, including Director of Finance Allison, on charges of political assessment of salaries of persons in the State's civil service. Through the publications of some of the labor organizations within the C.I.O., Davey was denounced in July as having been harmful to the C.I.O.'s policies and undertakings, and the vote of members of the component unions was marshaled to defeat his renomination.

Other State Matters. An act passed by the Legislature in 1937, supposedly for the minor purpose of refunding to taxpayers about \$250,000 in penalties and interest on delinquent taxes paid up between 1930 and Jan. 1, 1937, was found likely to involve the refunding of a much greater total. It was contested in the courts; the State Supreme Court ruled (May 4) that the law was uncon-

stitutional. The effort of the 91st Assembly to obtain for its members payments to the aggregate of some \$27,000 as mileage on supposititious trips between their homes and the Capital at the times of a number of "constructive" or fictitious weekly meetings and recesses written into the official journals as having occurred between July 22 and Dec. 8, 1936, was also fought in the courts. The opponent of the measure, a farmer of West Jefferson, named Arnett Harbage, won in the Court of Common Pleas a decision (May 24) enjoining payments not yet made and ordering those already made (payments to the Senators) to be restored.

Delegates from Ohio and seven other States concerned in the sanitary condition of the water of the Ohio River drew in Cincinnati a compact, for adoption by their respective States, for measures to rid the river of pollution. The desired Federal legislation for aid to works to end the pollution was not enacted during the year. In the administration of the law assigning to the counties a proportion of the proceeds of the State's sales tax, the question arose, whether the State could withhold payment to counties that had failed to pay sums due to the State. A suit of Montgomery County, to mandamus the payment, to it, of its full share of the tax, led to a decision of the Supreme Court (March 9) upholding the State Auditor's retention of enough of a county's share to satisfy unpaid debt. The renewed depression in business was accompanied by a sharp fall in receipts from the sales tax for a considerable part of 1938. The completion of the Muskingum project by the Federal Government was marked by a ceremony (July 17) at the Bolivar Dam, near New Philadelphia; the whole work, including 14 dams, was delivered into the control of the Muskingum Watershed Conservancy District. The undertaking was expected to do away with the severe floods that had afflicted the population along this river and also along the Ohio River, below the junction of the two.

Municipal Affairs. In Cincinnati the Charterites (local political party) lost the control of the City Council, which they had dominated for 12 years; Republican members, with Independent aid, elected (January 1) the Mayor, James G. Stewart. The city's planning commission rejected as too costly a plan submitted by the U.S. Army Engineers, for a \$6,000,000 wall at the river bank, to shut out floods. Columbus was deprived of the service of street cars and busses for a week, because of a strike of the operating force, which ended (April 23) without the strikers' gaining their demands for a closed shop and higher pay.

Elections. In the general election (November 8) Robert A. Taft (Rep.), son of the late President William H. Taft, was elected U.S. Senator, by a heavy majority over Senator Robert J. Bulkley (Dem.), a thoroughgoing supporter of the New Deal, who sought re-election. For Governor, John W. Bricker (Rep.) defeated Charles Sawyer (Dem.); the whole Republican State administrative ticket was elected. Republicans were chosen to occupy 15 of the State's 24 seats in the U.S. House of Representatives; the remainder, 9 seats, went to Democrats; Republican net gain in the delegation to the House was 13 seats. Both Houses of the State Assembly passed into Republican control.

The almost universal defeat of the Democratic candidates in November, while in line with results in some of the other northern, central, and eastern States, befell a party handicapped by months of

domestic strife. Democrats opposed to Governor Davey (see above) had brought his administration into public mistrust. He nevertheless retained a powerful political organization and sought a nomination for a third term. His opponent Sawyer, backed by the anti-Davey faction, won the Democratic nomination only by a narrow margin, in the primary on August 9.

Officers. Ohio's chief officers, serving in 1938, were: Governor, Martin L. Davey (Dem.); Lieutenant-Governor, Paul P. Yoder; Secretary of State, William J. Kennedy; Auditor, Joseph T. Ferguson; Treasurer, Clarence H. Knisley; Attorney-General, Herbert S. Duffy; Director of Education, E. N. Dietrich.

Judiciary. Supreme Court: Chief Justice, Carl V. Weygant; Judges, George S. Myers, Roy H. Williams, Arthur H. Day, Charles B. Zimmerman, Robert N. Gorman, Edward S. Matthias.

OHIO NORTHERN UNIVERSITY. An institution for the higher education of men and women at Ada, Ohio, founded in 1871, and under the direction of the Methodist Episcopal Church. The enrollment for the fall quarter of 1938 was 757. The 1938 summer quarter had an attendance of 299. The faculty consisted of 40 members. The productive endowment of the institution, as of June 30, 1938, amounted to \$402,508, and the income for 1937-38, to \$175,486. The library contained 21,000 volumes. President, Robert Williams, DD., LL.D.

OHIO STATE UNIVERSITY. A State institution for the higher education of men and women in Columbus, Ohio, founded in 1870. The enrollment for the autumn of 1938 totaled 13,148, distributed as follows: Graduate School, 1341; agriculture, 1554; arts and sciences, 2492; arts-education, 95; commerce and administration, 2205; dentistry, 200; education, 2280; engineering, 1864; law, 220; medicine, 303; nursing, 33; optometry, 115; pharmacy, 219; veterinary medicine, 227. There were, in addition, 6054 students registered in the summer session. The faculty numbered approximately 1000. Endowment amounted to \$1,574,000, total income for the year was \$8,372,800, and total expenditures were \$8,670,580. The library contained 497,175 volumes. Acting President, William McPherson, LL.D.

OHIO UNIVERSITY. A State university for the higher education of men and women, founded at Athens, Ohio, in 1804. The student enrollment for the 1st semester of 1938 was 3288, of whom 194 were in the College of Applied Science, 503 in the College of Arts and Sciences, 431 in the College of Commerce, 610 in the College of Education, 73 in the College of Fine Arts, 116 in the Graduate College, 1350 in the University College, and 11 in the Division of Physical Welfare. The enrollment for Extension Division and Correspondence Study courses was approximately 1090. The faculty numbered 241. The library contained 114,365 bound volumes. The amount of endowment and income for the period July 1, 1937, to June 30, 1938, was endowment, \$85,814; interest, \$4909. President, Herman G. James, Ph.D., J.D., LL.D.

OHIO WESLEYAN UNIVERSITY. An institution for the higher education of men and women in Delaware, O., under the control of the Methodist Episcopal Church, chartered in 1842. For the autumn semester of 1938 the total enrollment was 1421. The faculty numbered 116. The productive endowment of the university amounted to \$3,633,354 and the income for 1937-38 for educational enterprises was \$467,733 and for auxiliary enterprises \$321,954. The library contained 153,566

volumes. Acting President, Edward L. Rice, Ph.D., Sc.D. See PRINTS.

OIL. See PETROLEUM.

OKLAHOMA. Area and Population. Area (1930, with later revision to exclude 45 square miles yielded to Texas in a revision of the boundary), 70,012 square miles; included (1930) water, 643 square miles. Population: Apr. 1, 1930 (census), 2,396,040; July 1, 1937 (Federal estimate), 2,548,000; 1920 (census), 2,028,283; Oklahoma City, the capital, had (1930) 185,389 inhabitants; Tulsa, 141,258.

Agriculture. Acreage, production, and value of the chief crops of Oklahoma, for 1938 and 1937, appear in the accompanying table.

Crop	Year	Acreage	Prod. Bu.	Value
Wheat	1938	5,302,000	58,322,000	\$33,827,000
	1937	4,610,000	65,462,000	62,844,000
Cotton	1938	1,732,000	570,000 *	22,515,000
	1937	2,372,000	773,000 *	27,891,000
Corn	1938	1,754,000	35,080,000	16,488,000
	1937	1,720,000	30,960,000	17,028,000
Oats	1938	1,307,000	27,447,000	6,038,000
	1937	1,334,000	27,347,000	9,845,000
Grain sorghums	1938	1,211,000	12,716,000	5,468,000
	1937	1,381,000	13,810,000	7,319,000
Hay (tame) .	1938	582,000	815,000 *	4,564,000
	1937	555,000	680,000 *	5,644,000
Potatoes	1938	33,000	2,376,000	1,663,000
	1937	34,000	2,516,000	1,686,000

* Bales. * Tons.

Mineral Production. The yearly total value of Oklahoma's production of native minerals attained, for 1936, \$305,152,286, of which petroleum contributed more than three-fourths, while most of the remainder came from natural gas and from gasoline extracted therefrom. The State led the Union in the production of zinc, which, however, supplied little more than 4 per cent of the State's yearly mineral total. The yield of petroleum, while still limited to some extent by proration, advanced to 228,924,000 bbl. for 1937, from 206,555,000 bbl. (value, \$232,100,000) for 1936. The Fitts district, which had become a substantial producer only in 1935, contributed half the gain of 1937; its total, 30,977,000 bbl. for that year just exceeded that of the declining Seminole field, from which it took second place in the State's production. The Oklahoma City district somewhat increased its production after several years of previous decline and kept a long lead as the State's foremost source of petroleum. No remarkable finds of petroleum in new territory were reported for 1937. The quantity of natural gas produced and sold to consumers in 1936 was 280,481 million cu. ft.; its value, \$28,847,000. From gas processed for the purpose, including some not sold to consumers thereafter, gasoline was extracted to the total of 486,704,000 gal. in 1937, as against 418,591,000 gal. (value, \$17,516,000) in 1936. The quantity of zinc in ore mined yearly rose to 135,696 short tons for 1937, from 129,175 for 1936; the value of the metal total advanced to \$17,640,480, from \$12,917,500. Coal mined in 1936 attained, in quantity, 1,540,303 short tons; in value, \$3,500,000. Production of lead was 29,840 short tons for 1937 and 25,427 for 1936; by value, \$3,521,120 (1937) and \$2,339,284 (1936).

Finance. Oklahoma's State expenditures in the year ended June 30, 1937, as reported by the U.S. Bureau of the Census, were: For maintaining and operating governmental departments, \$57,638,597 (of which \$13,822,775 was for local education and \$14,293,454 for highways); for interest on debt, \$561,025; for capital outlay, \$13,181,108. Revenues were \$80,900,143. Of these, property taxes fur-

nished (from former years' levies) \$141,787; sales taxes, \$28,191,411 (including tax on gasoline, \$13,297,461); income taxes, \$7,226,455; departmental earnings, \$2,336,780; sale of licenses, \$7,299,939; unemployment compensation, \$3,727,492; Federal or other grants-in-aid, \$16,060,399. Funded debt outstanding on June 30, 1937, totaled \$12,898,600. Net of sinking-fund assets, the debt was \$11,935,899. The assessed valuation of taxable property was \$1,214,908,401 for 1937, but the State levied no ad-valorem taxes for that year.

Education. Obtaining more ample aid from the State, the public schools of Oklahoma were able in 1938 to effect improvement in a variety of ways. According to the *Journal* of the National Education Association, the public schools were kept open longer on the average, some increase occurred in teachers' salaries, and schools' equipment and the service of transporting pupils improved.

Political and Other Events. The Social Security Board stopped payments (March 2) of Federal money under its control, toward aid to the pensions for the elderly indigents and assistance to other groups in Oklahoma covered by the Social Security Act. In doing so it alleged misuse of public funds in the State's administration of old-age assistance. The State's system of old-age assistance, adopted in 1936 and in effect in 1937, had begun by taking over about 37,000 persons from poor-relief, without due investigation of their cases on its own part. This was possible because the management of the old-age assistance rested largely in the county commissioners and lacked sufficient central control. The investigation of cases already on the rolls, attempted by the workers that the law provided for the purpose, was halted by widespread protests. The number of the recipients mounted above 68,000 before the beginning of 1938. It greatly exceeded expectations and the means at hand for meeting the State's half of the monthly payments. The monthly payments, over \$1,000,000, ran nearly to double the average for the 48 States, while the average check of the recipient was less than four-fifths of the average for the Union. This anomaly was explained by the fact that Oklahoma paid assistance to 6 out of every 10 inhabitants of qualifying age, or thrice the corresponding ratio for the whole Union; no other State, indeed, approached Oklahoma's ratio. About 20,000 more persons were said to be seeking old-age assistance at the time when the Federal contributions ceased. Investigators for the Social Security Board were reported to have found in each of three counties more recipients than the estimated number of sufficiently aged people. See CHILD LABOR; OLD-AGE PENSIONS.

The formation of soil-conservation districts, chartered by the Secretary of State as authorized by a State act, began in April. Such districts were to have power to elect supervising boards and to adopt regulations, restricting the use of land, by popular vote.

Elections. Leon C. Phillips (Dem.), elected Governor at the general election (November 8), won by an ample margin over Ross Rizley (Rep.). U.S. Senator Elmer Thomas (Dem.), winning reelection, easily defeated Harry O. Glasser (Rep.). All the nine Democratic candidates were elected U.S. Representatives. Senator Thomas was marked as a friend of the New Deal, by President Roosevelt's own declaration (July 9) in a public address at Oklahoma City, of his sentiment for the Senator. Thomas won the Democratic nomination at the primaries (July 12).

Officers. Oklahoma's chief officers, serving in 1938, were: Governor, E. W. Marland (Dem.); Lieutenant-Governor, James E. Berry; Secretary of State, Frank C. Carter; Auditor, C. C. Childers; Treasurer, Hubert L. Bolen; Attorney-General, Mac Q. Williamson; Superintendent of Public Instruction, A. L. Crable.

Judiciary. Supreme Court: Chief Justice, Monroe Osborn; Associate Justices, Thurman S. Hurst, Wayne W. Bayless, Earl Welch, James I. Phelps, N. S. Corn, Thomas L. Gibson, Orel Busby, Fletcher Riley. Criminal Court of Appeals: Thomas H. Doyle, Bert B. Barefoot, James S. Davenport.

OKLAHOMA, UNIVERSITY OF. A State institution for the higher education of men and women in Norman, Okla., founded in 1890. The enrollment for the autumn of 1938 totaled 6728, of whom 4668 were men and 2060 were women. For the summer session of 1937, 2347 students were registered. There were 329 faculty members. The productive funds amounted to \$3,841,071, and the income for 1938-39 was \$2,378,171. The library contained 220,000 volumes. President, William Bennett Bizzell, Ph.D.

OLD-AGE PENSIONS. Work of the Social Security Board. It will be recalled that under the Social Security Act, signed on Aug. 14, 1935, provision was made for matching Federal grants-in-aid to the states in order to provide old-age assistance. The intention here was to extend to needy aged 65 years and over cash allowances to permit them to live in their own homes or with relatives and friends and to complete their last years outside of the walls of county poorhouses. This system was inaugurated at once and in August, 1935, 314,000 aged persons were receiving the assistance provided for. By September, 1938, this total had mounted to 1,737,781, with all the jurisdictions in the United States co-operating. In addition, the law established a system of old-age benefits based upon the accumulation of a reserve fund out of which after 1942 persons 65 years and over were to receive monthly benefit or retirement allowances.

In September, 1938, total obligations of \$34,400,000 were incurred for payments to the 1,737,781 aged persons. The average payment for all the jurisdictions in the United States as a whole amounted to \$19.21. The state averages ranged from \$6.37 in Mississippi to \$32.39 in California.

The Aged Pensioners. A survey made by the Social Security Board of the 475,000 aged persons who were placed on the state rolls during the eight months ending June 30, 1937, indicated the following characteristics of the aged pensioner group receiving old-age assistance. The typical new pensioner, according to the Board's findings, was between 70 and 75 years of age, a native-born American in good physical health, living with his spouse or other members of his family, and without any source of income other than his pension. In this last connection, the Board revealed that not less than 81 per cent of the recipients of old-age pensions had no other sources of income. It was also revealed that aged persons hesitated to seek any help other than the pensions granted them by the states, and that only one-fourth of those pensioned during the eight-month period in question had been assisted by private or public agencies in the month immediately preceding acceptance of their applications. Of the aged who were aided, 99,000 had received general relief, 13,000 had been employed on the WPA, and 5000 had been cared for by private

agencies. It was also significant to note that in the eight-month period in question 5123 aged men and women in 38 jurisdictions had been removed from county poorhouses. It was also revealing to learn that the pension grants were meeting the needs of fully 95 per cent of the aged persons. Thus, fully 71 per cent of all the pensioners lived in homes where no other public aid was received, while another 19 per cent were in households in which another member was receiving old-age assistance. The fundamental social value of old-age pensions as a means of keeping families together was further established by the fact that 75 out of every 100 pensioners lived at home, more than half of them with their spouses. The great majority of men and women enjoyed good health, fully 86 per cent of the men and 82 per cent of the women being able-bodied. Despite the fact that 15 of the 39 jurisdictions reporting to the Board extended aid to non-citizens, only 2119 pensioners, or only $\frac{1}{2}$ of 1 per cent of the entire pension group, had not become naturalized. Negroes represented 11 per cent of the persons on the pension rolls, approximately corresponding to the proportion in the general population.

Politics and Old-Age Pensions. It was becoming increasingly evident during the year that the old-age pension systems in a number of states were becoming infected with the virus of party politics. Upon the old-age pensioners were descending political spoilsmen and patronage seekers who were flagrantly using the device for the purposes of building up their machines and obtaining political support in election campaigns. Mr. John T. Flynn openly charged that a "damnable system of political patronage and spoils" was developing in the administration of old-age pensions in a number of states, notably Ohio, Missouri, Colorado, and Oklahoma. Writing in *Collier's*, he declared that the outrageous situation in these states had led him to the conclusion that "our social security system has been poisoned at its very inception by the induction of political elements into the organization and launching" of the program.

Conditions in Oklahoma and Ohio were particularly deplorable. From the start, Oklahoma led the nation in the ratio of pensioners to the total aged population of the state. In February, 1938, for example, Oklahoma had 580 out of every 1000 persons 65 years of age and over on pensions as against only 133 and 104 such pensioners per 1000 aged in the states of New York and New Jersey respectively. Charging that the pension lists were padded with persons who were totally ineligible for aid and that the administration was faulty in that administrators and relief workers were not qualified from a technical standpoint, the Social Security Board, after extensive hearings, in March, 1938, withdrew Federal subsidies for old-age assistance, aid to the blind, and aid to dependent children from the state. On May 27, assured that necessary changes in the pension rolls and administrative machinery would be effected, the Social Security Board announced that Federal subsidies to Oklahoma would be resumed as of April 1. Public criticism, particularly in the state itself, continued to be felt, however, and the result was that the Social Security Board reconsidered its action, and on June 7 decided that "Federal grants to Oklahoma will be made only on the basis of cases for which eligibility has been established by investigation or by reinvestigation by the state agency since March 2nd." How necessary such surveillance was was indicated by the fact that as a result of reinvestigations of but 13,500

cases, no less than 28 per cent had to be dropped from the rolls. Of the 3500 cases dropped, over 1000 were those of persons who, though dead, had still been on the rolls; another 1000 recipients had income or property in excess of the state qualifying standards; and 500 did not meet the age requirements of the state laws. In November, the Social Security Board once again moved against Oklahoma when it stopped funds to the state on the grounds that the State Welfare Commission was not instituting an honest merit system for the selection of pension personnel and that the overloaded pension rolls had not been purged of the ineligible.

A somewhat similar situation developed in Ohio when in September, as a result of prolonged hearings which revealed lax administration of old-age pensions and flagrant manipulation of the system for political purposes in the selection of personnel, in political appeals to pensioners and in blanket increases of grants by Gov. Martin L. Davey seeking re-election, the Social Security Board ordered the cessation of Federal aid to the state of Ohio beginning October 1. The Director of the State Division of Aid for the Aged refused to recognize the validity of the Federal charges and in turn accused the Social Security Board of "violating the Federal law in this effort to interfere in the selection, tenure of office and salaries of state employees." Referring to the Federal charge of improper investigation of pension applicants, the Ohio official told the Federal authorities he doubted "if you have any right to tell Ohio how many people to put on our rolls." Governor Davey failed in his campaign for re-election and because of the continued defiance of his administrators, it seemed likely that Ohio would have to wait until January, 1939, when a new administration was to take over, before the pension controversy could be settled. In the meantime, the Governor, on November 10, ordered the Finance Director to borrow 1,000,000 from the state's general fund in order to pay the full October pension. In issuing the order, Governor Davey accused the Social Security Board of "robbing" the state of the Federal share of funds and declared he would demand a Congressional investigation of the Board's "tyrannical action."

In Colorado, the question of old-age pensions provoked a good deal of acrimonious controversy as a result of the decision of Colorado political leaders to adopt a plan calling for the payment of \$45 a month at the age of 60 to all aged persons. It was becoming increasingly evident that with such a heavy toll taken from the public revenues, the state of Colorado was heading for financial difficulties. Eight months after the writing of the plan into the constitution, that is to say in May, 1938, a petition signed by 40,000 persons called for the repeal of the constitutional amendment on which the present program was based. Under the present arrangement 85 per cent of the sales and legal taxes, as well as several other state levies, were being allocated to pensions. That the financial strain was already making itself felt was revealed by the fact that in January, 1938, despite the constitutional provision requiring the payment of \$45 monthly, the average payment was \$39.60 and in May, 1938, \$26.62. Not only did the citizens of Colorado begin to realize that a reduction in funds was necessary, but most of the state institutions had been without funds for some time and were being compelled to resort to the expedient of buying supplies on credit.

With the approach of the 1938 elections, to quote Mr. Abraham Epstein, Secretary of the American

Association for Social Security, "a frenzied wave of lunacy and old-age pension proposals" spread over the country. California led the parade, although somewhat similar proposals, perhaps a little more modest in character, made their appearance in virtually every section of the country. The California scheme, which had the support of the Democratic candidate for the United States Senate, Mr. Sheridan Downey, promised pensions of \$30 every Thursday to every unemployed Californian who attained the age of 50. Payments were to be made in self-liquidating state warrants. The warrants were to be financed by a 2 per cent tax consisting of two-cent stamps and attached to each dollar warrant each week. The warrants theoretically would be acceptable for transactions within the state as real money. Estimates of the cost of the scheme varied, but the accepted figures were that about 811,000 persons in California could qualify, receiving \$24,300,000 in warrants every week. Before the end of the first year it was estimated there would be in circulation in the State of California warrants of a face value of considerably more than one billion dollars that could be redeemed for currency only if \$1.04 in stamps was affixed to each \$1 warrant.

Somewhat similar devices made their appearance in Oklahoma, Oregon, Arkansas, Washington, and Florida. In most of these states, politicians, seeking to capitalize on the great hold that the Townsend movement had established over the minds of the aged, were promising pension allowances to the aged anywhere from \$50 to \$100 monthly. Republican leaders, notably, were clamoring on what Mr. Epstein called the "utopian bandwagon." In Massachusetts, in Maine, in New Hampshire, in Oregon, and in Illinois, Republicans seeking election either endorsed the Townsend plan or promised to raise pensions to a minimum of from \$30 to \$50 monthly for all aged persons 60 years and over.

Mr. Epstein drew the following conclusions from this new wave of "pension lunacies sweeping the country."

The tide can be stemmed in only one way: the old-age assistance programs must be made more adequate and aid must be paid without red tape to all those in need of assistance under systems which are strictly nonpolitical. The old-age and unemployment insurance programs must be immediately amended, not so much by extending their inadequate provisions to newer groups, but principally by making them adequate and socially constructive measures for meeting the problems which exist today, not those of a generation hence.

The election results indicated that while the American voters on November 8 hesitated to adopt the more absurd plans of the old-age pension advocates, nevertheless they voted into office candidates who promised bigger and better pensions. The California "\$30 every Thursday" scheme was voted down in a popular referendum. Similarly, Oregon voters turned down the plan submitted to them in a referendum for \$100 a month at the age of 65, but the electorate instructed the state legislature to ask Congress for a convention to approve the Townsend plan. On the other hand, the voters of North Dakota approved a referendum calling for a minimum pension of \$40 monthly, and the people of Colorado also turned down the proposal to repeal the constitutional amendment requiring \$45 monthly pensions at the age of 60.

It is interesting to note that no questions of utopianism were involved in the social security referenda in Missouri and New York. In Missouri the voters approved the reduction of the pensionable age from 70 to 65. In New York, the electorate voted overwhelmingly for a constitutional amend-

ment permitting the use of state funds for social security, including old-age, unemployment, and health insurance. A proposal for the legalization of slot machines and the application of such funds to old-age pensions was defeated in Nebraska.

Amendment of the Social Security Act. During the year, increasing attention was being directed to the inadequacies and shortcomings of the Social Security Act, notably as it applied to the questions of the care of the aged and the unemployed. Constructive programs for change, as regards the problem of the aged, emanated from two sources during the year, Mr. Abraham Epstein, Secretary of the American Association for Social Security, and the Advisory Council on Social Security. Mr. Epstein presented the following program for the amendment of the old-age provisions of the Social Security Act. (1) There was no necessity for increasing the present Federal maximum allowance of \$15 a month. Disappointment with this section was due not to the present limit but to the fact that there existed a lack of national uniformity resulting in the great disparity in pensioners and allowances in the different states. Instead of increasing the Federal grant to say \$20 a month, Mr. Epstein proposed that the Federal grant-in-aid be based upon the state average pension for all those aided instead of upon the amount paid to each individual pensioner. By raising the average, the wealthy states would thus be able to increase the present grants of many necessary cases above \$30 monthly without involving the Federal Government in higher costs. To take care of the problem presented at the poorer states, the Federal Government should make the \$15 average for all persons available to any state which contributes at least an average of \$5 for the pensioners it aids.

(2) Mr. Epstein was opposed to the suggestions, currently receiving a good deal of attention, that the present scale of old-age insurance benefits be paid in 1940 instead of 1942. He said in reply to this proposal,

The problems raised by the present provisions are not those of postponed inauguration but of inherent incapacity to meet the existing needs for a long time to come. Under the present scheme, a workman must earn at least \$100 monthly for 20 years before he can receive a pension of about \$30 per month. . . . The mere advancement of the first date of the present benefit payments is thus meaningless since the small benefits under the present set-up would fail to meet the needs of the aged.

(3) Monthly benefits should be increased for those retiring in the early years. However, Mr. Epstein warned that this recommendation could not be applied until the insurance coverage was limited to those earning below \$3000 annually.

(4) Mr. Epstein was in favor of extending old-age insurance benefits to the aged wife of the insured during his life and after his death.

(5) Mr. Epstein pointed out that theoretically there was no defense for excluding those groups now remaining outside of the present Social Security Act, notably seamen, bank employees, and workers in non-profit making organizations. He pointed out, however, that if the present complicated method of administering the Act remained unchanged, its extension to domestic and farm laborers was impossible. In conclusion he referred to the following: (a) The present insurance system was started solely by taxes on workers, which directly reduced the income of the very group supposed to benefit by the legislation, and by taxes on payrolls which because of their transfer to the price of goods and services were in reality direct taxes on the consuming public. From Jan. 1, 1937,

to June 30, 1938, according to Mr. Epstein, the Federal Government collected in old-age insurance taxes \$709,000,000. Up to June 30, 1938, however, it had spent the total insignificant sum of \$5,400,000 in lump sum payments to those insured persons who had reached the age of 65 and to the survivors of insured persons who died. (b) Most of the present evils associated with the Act could be overcome if the Federal Government would assume a share of old-age insurance cases as is done by all other nations.

Such a step would also offer us the best method of scrapping the utterly fantastic and dangerous reserve basis of the old-age insurance program. This reserve, which is to reach \$47,000,000 by 1980, is totally unnecessary and inapplicable to a governmental social insurance program. Reserves held by a government are in effect nothing but a fiction as they constitute liabilities rather than assets.

(c) The program should promptly be put on a pay-as-you-go basis and the increase from the present contribution—1 per cent of wages of workers and 1 per cent of payrolls of employers—should be effectuated only when further funds would be necessary.

Mr. Epstein's position was supported very largely by the report released on December 18 by the Advisory Council on Social Security, appointed jointly by a special Senate Finance Committee and the Social Security Board. After labor for 14 months, the Advisory Council on Social Security, in a thoroughgoing analysis, called for enlarging the scope of the benefits of the Social Security Act's old-age insurance program, for extending the system to cover a larger proportion of the population, and for an improved method of financing the program and handling the necessary funds. The recommendations were divided into three main groups, those on benefits, on coverage, and on finance.

With respect to *benefits*, the council recommended that old-age benefit payments, which are now scheduled to begin on Jan. 1, 1942, begin instead on Jan. 1, 1940, and that the scale of benefits payable in the early years of the program be increased. In addition, it suggested that the system of old-age benefits be broadened to include payments to wives, widows, and dependent children of insured persons. In order to compensate in part for the cost of these additional benefits, it recommended that payments to single individuals after the plan has been in operation for a number of years be reduced below those in the present schedules. The eventual annual cost of the recommended benefits in relation to the covered payroll should, in the opinion of the council, not be increased beyond the eventual annual disbursements under the present act. "We should not," said the report, "commit future generations to a burden larger than we would want to bear ourselves."

The recommendations on *coverage* would, if adopted, greatly increase the number of persons coming within the scope of the act. The council believed, first, that employees of private non-profit religious, charitable, and educational institutions should immediately be brought into coverage; second, that coverage of farm employees and domestic employees is socially desirable and should take effect, if administratively possible, by Jan. 1, 1940; third, that the old-age insurance program should be extended as soon as feasible to include additional groups and that studies should be made of the problems involved in the coverage of self-employed persons and governmental employees.

The recommendations on *finance* included, first, the suggestion that the Federal Government contribute to the old-age insurance system by means of revenues derived from sources other than pay-

roll taxes; second, that the proceeds of payroll taxes for old-age benefits be paid directly into the reserve account instead of the general fund of the Treasury, as at present; third, that the old-age account be specifically made a trust fund with designated trustees; fourth, that provision be made for a reasonable contingency fund to insure the ready payment of benefits at all times. Other financial aspects of the program are recommended for further observation and study, including possible changes in payroll tax schedules and the timing of Government contributions.

Regarding the old-age reserve account, one of the most controversial features of the present act, the council believed that, with the recommended changes in the benefit structure and the introduction of a definite program of governmental contributions, the size of the old-age insurance fund would be kept within much lower limits than are involved in the act as it now stands. "Under social insurance programs," said the report, "it is not necessary to maintain a full invested reserve such as is required in private insurance, provided definite provision is made for governmental support of the system."

Railroad Retirement Benefits. Under the Railroad Retirement Act, from the date of its passage in 1935 to the spring of 1938, pensions were applied for by grant by 97,000 railroad employees, of whom 75,000 were found eligible. The number of pension recipients during these three years equaled more than 60 per cent of the total number of pensions received under all pension plans in the railroad industry during the period 1900 to 1933. The upshot was that retirement of older employees was greatly speeded and employment and promotion opportunities for younger men were increased. The railroad industry, according to Murray W. Latimer, Chairman of the Railroad Retirement Board, was to an unusual degree affected by the older worker problem. This had resulted largely from the practice of the seniority system—one which made the length of service a condition for the employee's right to receive promotion, to be held in service in dull times, or to be recalled after layoff when business improved. This policy of seniority obviously grew out of a need for a trained and experienced personnel. However, some of these same skilled employees became superannuated after long periods of service and their retirement was desirable, for their retention at high salaries tended to prevent the employment of younger men whom the industry needed. The result was a growing demand for the establishment of retirement and pension plans and the private companies sought to cope with this problem by inaugurating individual railroad systems. These systems generally were inadequate to meet the needs of the industry, and the result was the passage of Federal legislation in 1934. Compulsory retirement was not provided for by the Railroad Retirement Act; hence it was necessary, if the older workers were to be induced to leave active service, that the pensions be sufficient in amount to make retirement desirable to the employee. When, under the amended legislation of 1935, the relatively high annuities established for railroad employees became available, according to Mr. Latimer, requisitions for immediate retirement were made with the upshot that there began to appear a greater efficiency in railroad labor and more employment opportunities for younger men.

OMAN. See ARABIA.

ONTARIO, ōn-tār'i-ō. A province of Canada. Area, 412,582 square miles; population (1938 estimate), 3,731,000 compared with 3,431,683 (1931 census). The Indian population was 30,631 in 1934. During 1936 there were 62,451 births (16.9 per 1000), 37,571 deaths (10.2 per 1000), and 27,734 marriages (7.5 per 1000). Chief cities (with 1931 population figures in parentheses): Toronto, the capital (631,207), Hamilton (155,547), Ottawa (126,872), London (71,148), Windsor (63,108), Kitchener (30,793), Brantford (30,107), Fort William (26,277), St. Catharines (24,753), Kingston (23,439), Oshawa (23,439). In 1936 there were 765,397 students enrolled in the schools, including 35,708 students in the colleges and universities. Ontario has five universities (Toronto, Queen's, Western Ontario, McMaster, and Ottawa), an agricultural college at Guelph, and the Royal Military College at Kingston (maintained by the Dominion government).

Production. The estimated gross value of agricultural production for 1937 was \$357,201,000 (\$360,329,000 in 1936) of which field crops accounted for \$150,367,000 (\$166,284,000 in 1936). Other items included in the 1936 agricultural total were dairy products, \$91,282,000; farm animals, \$46,732,000; poultry and eggs, \$22,939,000; fruits and vegetables, \$17,693,000; tobacco, \$8,070,000. Livestock in Ontario (1937): 557,900 horses, 2,454,200 cattle (including 1,278,300 milch cows), 874,700 sheep, 1,487,900 swine, and 18,934,000 poultry. Fur production for the year ended June 30, 1936, totaled 599,710 pelts valued at \$2,649,647. The 1936 output of the forests equaled 558,792 M cu. ft. valued at \$31,570,806. In the fishing industry during 1937, with a total of 4440 men employed, the fish catch was valued at \$3,615,666.

Mineral production (1937) was valued at \$230,042,517 of which gold (2,587,095 fine oz.) represented \$90,522,454; nickel (224,790,974 lb.), \$59,469,423; copper (322,039,208 lb.), \$41,716,364; platinum (139,355 fine oz.), \$6,751,750; natural gas (10,746,334 M cu. ft.), \$6,588,798; silver (4,693,047 fine oz.), \$2,106,286; palladium, rhodium, iridium, etc. (119,829 fine oz.), \$3,179,782; salt (407,701 tons), \$1,539,599. In 1936, from the 9753 manufacturing plants, with a total of 288,992 workers, the net value of products was \$686,470,917 (central electric stations, and dyeing, cleaning, and laundry work ceased to be regarded as "manufacturing" industries for 1936).

Government. For the year ended Mar. 31, 1938, revenue was estimated at \$94,849,324, and expenditure at \$92,566,418. The government is vested in a lieutenant-governor who is advised by an executive council of 10 members who also are members of the legislative assembly of 90 members elected for a term of five years by popular vote of the people. Ontario is represented in the Dominion parliament at Ottawa by 24 members in the Senate and 82 members in the House of Commons. Lieutenant-Governor, Albert Matthews (appointed Nov. 30, 1937); Premier, Mitchell F. Hepburn (Liberal). See CANADA under History.

OREGON. Area and Population. Area, 96,699 square miles; included (1930) water, 1092 square miles. Population: Apr. 1, 1930 (census),

953,786; July 1, 1937 (Federal estimate), 1,027,000; 1920 (census), 783,389. Portland had (1930) 301,815 inhabitants; Salem, the capital, 26,266.

Agriculture. Acreage, production, and value of the chief crops of Oregon, for 1938 and 1937, appear in the accompanying table.

Crop	Year	Acreage	Prod. Bu.	Value
Hay (tame) .	1938	838,000	1,486,000 *	\$12,631,000
	1937	806,000	1,428,000 *	12,852,000
Wheat	1938	1,088,000	23,567,000	12,019,000
	1937	993,000	20,424,000	15,726,000
Potatoes	1938	43,000	7,310,000	4,020,000
	1937	49,000	7,840,000	3,528,000
Oats	1938	269,000	6,725,000	2,421,000
	1937	280,000	10,360,000	3,937,000
Apples	1938	4,142,000	3,314,000
	1937	3,900,000	2,584,000
Hops	1938	19,800	16,434,000 *	2,590,000
	1937	22,300	24,530,000 *	3,300,000
Barley	1938	136,000	3,400,000	1,496,000
	1937	130,000	4,160,000	2,454,000
Corn	1938	55,000	1,595,000	1,005,000
	1937	66,000	2,178,000	1,416,000
Pears	1938	4,326,000	1,947,000
	1937	3,550,000	2,746,000

* Tons. * Pounds.

Mineral Production. Oregon's yearly production of gold increased to 77,100 oz. (approximate figure of the U.S. Bureau of Mines) for 1938, from 52,662 oz. for 1937; by value, to \$2,698,500 (1938), from \$1,843,170 (1937). These values made up 97 per cent of all the State's production for 1938 and 12 per cent for 1937 of the five metals—gold, silver, copper, lead, and (none mined in 1938) zinc. Mercury also was produced in 1937, to the value of \$384,527, or about one-seventh of the United States' production. The aggregate value of the State's mineral product of 1936, including such items as stone, coal, cement, sand, and gravel, attained \$7,146,732.

Finance. Oregon's State expenditures in the year ended June 30, 1937, as reported by the U.S. Bureau of the Census, were: For maintaining and operating governmental departments, \$19,694,983 (of which \$4,862,256 was for highways and \$329,871 was for local education); for interest on debt, \$2,232,665; for capital outlay, \$13,358,657. Revenues were \$41,412,925. Of these, property taxes furnished \$1,656,308; income taxes, \$3,032,100; sales taxes, \$10,129,461 (including tax on gasoline, \$9,550,149); departmental earnings, \$2,128,179; sale of licenses, \$7,318,047; unemployment compensation, \$2,990,528; Federal or other grants-in-aid, \$9,726,126. Funded debt outstanding on June 30, 1937, totaled \$48,788,601; chiefly, \$22,141,750 for highways and \$22,775,000 for aid to veterans. Net of sinking-fund assets, the debt was \$26,388,583. On an assessed valuation (1936) of \$892,807,998 the State levied, for the fiscal year 1938, ad valorem taxes of \$1,032,324.

Keeping separate accounts, the State's monopoly of alcoholic beverages made, in the year, receipts of \$8,114,175, expenditures of \$6,108,094 for cost of goods and operation, and a contribution of \$1,548,392 to the State's general revenue (included in the total revenue stated in the paragraph above).

Education. The inhabitants of school age (from 4 to 19 years, inclusive) were reckoned at 269,663 for the academic year 1937-38. The enrollments of pupils in public schools totaled 210,219; they comprised 148,156 in elementary study and 62,063 in high schools. In addition, there were 12,344 enrolled in private and parochial schools. Expenditure for public-school education in the State totaled \$17,663,167 for the year. Teachers, supervisors, etc., numbered 7925; their year's pay averaged \$1060.84.

The work of standardizing the scope and operation of the public high schools, in which Oregon made progress in 1938, was based on a previous study of these schools throughout the State.

Charities and Corrections. The majority of the State institutions for the care and custody of individuals were under the government of a branch of the State's administrative government, the Board of Control, having as its executive agent a Secretary (Daniel J. Fry). The 10 institutions under the Board's authority had among them (December 1) 6834 inmates. The institutions and their respective numbers of inmates were: Oregon State School for the Blind, at Salem, 96; Oregon State School for the Deaf, Salem, 133; Fairview Home, 1000 (feeble-minded); Eastern Oregon State Hospital, Pendleton, 1286 (insane); Oregon State Hospital, Salem, 2622 (insane); Industrial School for Girls, Salem, 49; State Penitentiary, Salem, 1053; Training School for Boys, Woodburn, 86; State Tuberculosis Hospital, Salem, 327; Eastern Oregon State Tuberculosis Hospital, The Dalles, 182. The Oregon Blind Trade School, at Portland, was under a separate Commission for the Blind.

Political and Other Events. Opposition between the liberal and conservative social elements became more sharply drawn during the year. The advocates of more generous dispensations of public money among the population brought forward, by route of the popular initiative, a citizens' retirement annuity bill. Its purpose was to support elderly citizens of the State, in retirement from active life, on pensions at the maximum rate of \$100 a month. The method of doing this involved the taxation, at 2 per cent, of every transaction in values, except those in interstate commerce, or made by governmental agencies, and exclusive of the payment of wages. Features of the plan were designed to compel the prompt expenditure of pensions and the continued retirement of the recipients from gainful occupation. The measure was presented for popular disposal on the November ballot.

On the conservative side, four organizations of farmers, displeased with labor unions' restrictions on the movement of agricultural products to market, offered by initiative a bill to forbid interference with the marketing of products, agricultural and other, and picketing and boycotting, save in case of a genuine labor dispute. The measure also regulated labor unions' dues and accounts. Governor Martin continued his opposition to both the C.I.O. and the A.F.L., regarding their persistent and economically costly struggle for the domination of labor in the lumber industry and other lines of activity. See STRIKES AND LOCKOUTS.

Senator Steiwer, a conservative Republican, resigned unexpectedly (January 27), throwing a seat in the U.S. Senate into the year's political campaign. Alfred E. R. Medford (Dem.) was appointed by the Governor to succeed Steiwer *ad interim*.

Elections. At the general election (November 8), Charles A. Sprague (Rep.) was elected Governor by a substantial majority over Henry L. Hess (Dem.), who had been favored by the Federal Administration. For U.S. Senator, Rufus C. Holman (Rep.) defeated Willis Mahoney (Dem.), who had championed the New Deal. The conservative initiated measure to restrict unions' picketing and boycotting and forbid their interference with marketing was adopted by popular vote; the liberal initiated measure to pension the elderly at \$100 a month was defeated. Hess, the Democratic candidate for Governor, had won the nomination

from Governor Martin, so that the conservative vote for Governor had to concentrate on the Republican candidate.

Officers. Oregon's chief officers, serving in 1938, were: Governor, Charles H. Martin (Dem.); Secretary of State and Auditor, Earl Snell; Treasurer, Rufus C. Holman; Attorney-General, I. H. Van Winkle; Superintendent of Public Instruction, Rex Putnam.

Judiciary. Supreme Court: Chief Justice, Henry J. Bean; Associate Justices, Harry H. Belt, J. O. Bailey, Percy R. Kelly, Hall S. Lusk, John L. Rand, George Rossman.

OREGON, UNIVERSITY OF. A coeducational institution under State control and support at Eugene, founded in 1872. The total enrollment for the fall term of 1938 was 3333. The attendance at the 1938 summer sessions was 940. The instructional staff for the fall term numbered 248. The total income for the year ending June 30, 1938, was \$981,604, exclusive of gifts. The library contained 289,859 volumes. President, Donald M. Erb, Ph.D.

OREGON STATE COLLEGE. The Federal land-grant college of Oregon, established under Federal and State support at Corvallis in 1868. Oregon State College is one of the six institutions constituting the Oregon State System of Higher Education. In the reorganization of Oregon higher education, inaugurated in 1932, the State College has been made the center of science, and of the professional and technical schools based upon the natural sciences. The enrollment for the autumn term of 1938 was 4406. The 1938 summer-sessions enrollment was 785. There were 308 members on the resident teaching faculty. Income is from millage levy plus varying supplemental appropriations. The library contained 160,180 catalogued volumes. During the fall of 1938, in addition to various improvements in campus walks, landscaping, and drainage under WPA projects, a new nursery-school building was being constructed for the school of home economics and a new chemistry building was under way for the school of science, to cost \$500,000. President, George Wilcox Peavy, M.S.F., Sc.D., LL.D.

ORGANIC COMPOUNDS. See CHEMISTRY.

ORT, WOMEN'S AMERICAN. A society organized in America in 1927 for constructive relief for the Jews of Central and Eastern Europe. It is an autonomous group functioning in conjunction with the American Ort Federation.

The name Ort is derived from the initial letters of three Russian words meaning Organization for the Promotion of Trades and Agriculture. The Ort was founded in 1880 by prominent Russian Jews, among whom were Baron Ginsburg, S. Poliakov, and Prof. N. Bakst. Today it is a world organization giving agricultural and industrial training in eight countries of Europe: Poland, U.S.S.R., Rumania, Latvia, Lithuania, Bulgaria, Germany, and France. It is supported both by groups in these countries and by groups in other countries of the world. Among Ort's activities in 1938 were the support of technical and vocational schools for youths and adults of both sexes, organization of industrial co-operatives, the purchase of agricultural implements, seeds, livestock for Ort colonies, supplying of tools and machinery to artisans, technical and legal advice to artisans and farmers, vocational training of German refugees. The Ort has a guardians' bureau to finance orphans through a three-year course in its schools in Poland and Rumania. A number of individuals in various chapters of the

Women's American Ort undertook adoption of children to provide for the maintenance and training of orphans under the Ort Guardianship Plan. Ort was granted permission to undertake a reclaiming of land project in Austria during the spring of 1938.

The Women's American Ort has 25 chapters in the United States and Canada. Headquarters of the World Ort Union are in Paris. The national headquarters of the American Ort Federation and of the Women's American Ort are at 212 Fifth Avenue, New York City.

OSLO BLOC. A bloc of small states of northern and western Europe formed for the purpose of restoring international trade through mutual reductions of tariffs, quotas, and other restrictions. It comprises Belgium, Luxembourg, Denmark, Finland, The Netherlands, Norway, and Sweden, all signatories of the Oslo Convention of 1931 from which the bloc takes its name. For developments in 1938, see each of these countries under *History*.

OSSIETZKY, CARL VON. A German writer, pacifist, and Nobel Prize winner, died in Berlin, May 4, 1938. Born in Hamburg, Germany, Oct. 3, 1889, as a young man he was a member of the peace movement of Alfred Hermann Fried, but with the outbreak of war in 1914 he joined the German Army and served throughout the War.

Subsequently he joined the staff of the *Berliner Volke-Zeitung*, and in 1928 he became editor of *Weltbuehne (The World Stage)* and used that paper for an expression of his anti-militaristic views. In 1931 he was found guilty of the betrayal of military secrets by the Federal Supreme Court. A plea for pardon was denied him, but in December, 1932, he was released in the general amnesty. With the coming into power of Hitler in January, 1933, Ossietzky was advised to leave the country but he refused, and in March, 1933, was arrested as an "enemy of the state." Although no charges were brought against him and he was refused a trial, he was sent to a concentration camp. When released in November, 1936, his health was permanently impaired.

On Dec. 10, 1936, he was awarded the Nobel Peace Prize for 1935, totaling \$39,303, which raised a storm of protest in official Germany as a "challenge and an insult." Thereafter Germans were forbidden to accept such awards.

OUTER MONGOLIA. See MONGOLIA.

PACIFIC RELATIONS, INSTITUTE OF. An organization formed in Honolulu in 1925 as an unofficial body for the study of the peoples of the Pacific and their mutual relations. It is governed by a Pacific Council composed of representatives of similar unofficial bodies in Australia, Canada, China, France, Great Britain, Japan, the Netherlands and Netherlands Indies, New Zealand, the Philippines, the Union of Soviet Socialist Republics, and the United States. In addition to carrying on a regular international conference and research program covering such subjects as land utilization, population, migration, economic development, trade, colonial problems, cultural relations, and diplomatic relations, the Institute is at present conducting an Inquiry into the background of the present Sino-Japanese conflict. Offices of the International Secretariat are now at 129 East 52d St., New York City.

The American Council, in addition to its participation in the international program, carries on its own extensive research and educational activities. Research projects now under way, and shortly to be published, treat such questions as American

shipping in the Pacific, the economic and legal aspects of North Pacific fisheries, America's trade and credit relations with China and Japan, Far Eastern news in the American press, American policy in the Orient, the effect of the war on American philanthropic and educational institutions in China, and a variety of similar problems. Appearing in its new publication series *Studies of the Pacific* are "American Far Eastern Policy and the Sino-Japanese War" by Miriam S. Farley, reporting the findings of the American Regional conferences described below, and "Rural Australia and New Zealand" by Edmund DeS. Brunner. Other new publications include: *Propaganda from China and Japan* by Bruno Lasker and Agnes Roman, a case study in propaganda analysis, and two pamphlets, "America's Stake in the Far East" by M. S. Farley, and "British and American Relations in the Far East" by William W. Lockwood, Jr.

As part of its educational program, the American Council has arranged a series of regional conferences throughout the country on American Far Eastern policy and the Sino-Japanese war with the aim of aiding the development of an informed and intelligent public opinion on foreign policy. Experimental language schools in Chinese and Russian have been developed to facilitate the acquisition of these language tools by American scholars. The Council has also participated in the editing of educational material in connection with the release of educational motion pictures on Pacific subjects, taken part in radio and conference programs, published reading lists and bibliographies, provided library facilities for students and writers, sent out bibliographical exhibits and news releases for news and editorial use, and engaged in a variety of activities aimed at stimulating interest and research in the problems of the Pacific Area.

Its fortnightly organ, *Far Eastern Survey*, covers significant economic developments in the Far East, and more especially at the present time the economic aspects of the Sino-Japanese war and American policy in relation to that war.

The officers of the American Council of the Institute of Pacific Relations are Dr. Carl L. Alsberg, chairman, Francis S. Harmon, treasurer, and Frederick V. Field, secretary. It maintains offices at 1795 California St., San Francisco, 129 East 52d St., New York, and the Dillingham Building, Honolulu.

PAINTING. Probably never before was the art of painting practiced so widely as in the United States in 1938. All over the country persons on their own initiative, and frequently with little instruction, turned to painting seriously as a possible medium of individual expression, and in some instances did, under the circumstances, surprisingly well. Exhibitions of paintings on which the paint was still scarcely dry were held without number, and the press of the country heralded each newcomer as a potential genius—at least until toward the latter part of the year, when the weakness and excesses along this line ceased to amuse and began to annoy.

In part, this orgy of painting was occasioned by the extensive employment given by the WPA Art Project, to the prominence given it by the news writers, and to the letting down of standards which reduced competition in this field and diminished the necessity of technical proficiency. Economically, there was no relation at all between production and demand, no recognition of the fact that long before

1938 opened, the saturation point for mediocre paintings had already been long passed.

These conditions furthermore caused great confusion in the ranks of the artists academically trained, who, in many instances, striving to bring their work up-to-date, lost their sincerity of expression. Also, it tended to discourage patronage on the part of the public, engendering fear of instability in value.

Despite all this, however, the U.S. Government continued to commission mural paintings for permanent placement in Federal buildings throughout the country, and the WPA Art Project but slightly reduced the support of artists producing easel paintings and murals.

Between the first of January, 1938, and June 30th, no less than 243 commissions (chiefly for mural paintings) given by the Painting and Sculpture Section of the Procurement Division of the Treasury Department were completed. This brought the number of such works executed under these auspices, to 429.

In most instances these commissions were given through competitions, a few of which were national in scope, but the majority regional and limited. Thirteen additional competitions for mural paintings were announced in Bulletin 17, issued by the Painting and Sculpture Section of the Treasury Department in September. These ranged in value from \$650 to \$1600, according to size. Evidence of the spread of activity was to be found in the fact that many of these regional competitions were in States and sections of the country where a few years ago there were no local artists capable of executing such commissions.

Doubtless this distribution of enterprise and development of capability will eventually bring forth good results, in fact it is already doing so, the merit of the murals produced in 1938 being very much greater than those in the years immediately preceding.

The World's Fairs, to be held in 1939 in New York and San Francisco, respectively, kept many of the best painters busy in 1938. In June, the Golden Gate Exposition announced that contracts for \$40,000 worth of mural paintings had been let. Earlier in the year 32 artists were commissioned by the New York Fair to execute murals, some of which, it was stated, would cover great areas of from 4000 to 8000 square feet—the largest program of exterior mural painting ever undertaken.

Due to the insistence of the Mural Artists' Guild that all wall paintings in buildings in New York must be executed by union painters, the Fair authorities agreed that competitions should be merely for designs, in color, to scale, to be executed by union painters under the supervision of the designer; in other words, that unless the winner was a member of a union he could not render, full-size on the wall, his own work. This agreement was reached after 80 mechanics, representing 10 different trades, had walked out on strike because Winold Reiss (non-unionist) was painting a decoration on the wall of the Longchamps Restaurant, New York. Mr. Reiss, in order to complete the work, was forced to join the union.

George Biddle, as president, and Rockwell Kent, as vice-president, of the Mural Artists' Guild were leaders in this new movement toward unionization. Later in the year Mr. Kent was elected president of the United American Artists, Local 60 of the United Office and Professional Workers of America, which in turn is affiliated with the C.I.O.

The artists won a victory in their fight to have

contemporary art represented at the New York World's Fair by a large exhibition to be shown in a building especially designed and set apart for the purpose. This building will accommodate 800 exhibits—paintings, sculpture, and prints by living American artists—to be selected by regional juries throughout the country. A. Conger Goodyear, president of the Museum of Modern Art, was named chairman of the organizing committee, and Holger Cahill, head of the WPA Art Project, director of the Exhibition.

The final chapter of the story of the rejected mural by the Mexican, Rivera, in the R.C.A. Building, Rockefeller Center, was written in the summer of 1938, when the space from which it had been removed was covered by a great canvas by José María Sert, a Spanish artist, painted in his Paris studio, representing the development of America during the past 300 years.

Painting in 1938 seemed to concern itself much more with social conditions and problems than ever before. The keynote of an exhibition of paintings by Jon Corbino held at a conservative dealer's gallery in New York was said to be "violence"; a group of paintings sent to Washington for display (late in the year) by a gallery in New York with radical leanings was described as epitomizing "anger and class hatred." A growing tendency toward vulgarity of expression was remarked, and stringent criticism was called forth from critics by works shown in the annual exhibition of contemporary art held by the Whitney Museum of American Art, from mid-November to mid-December.

The exhibition of American Art assembled by the Museum of Modern Art, by invitation of the French Government, and shown during the summer in the Jeu de Paume, Paris, met with small favor at the hands of the French critics, save in its film and architectural sections. The charges brought against the section of contemporary paintings were that it was not in any sense nationalistic and that the examples of the advanced school of today "betrayed the germ of academic death" rather than new life.

John Whorf, the well-known water colorist, was given an honorary degree by Harvard University in June, the first ever bestowed by this institution on a professional artist. At the same time Edward Bruce was likewise honored by Harvard, on account of service rendered as organizer and head, first of the Public Works Art Project and later of the Painting and Sculpture Section (now the Fine Arts Division) of the Treasury Department. Incidentally, Mr. Bruce is both painter and executive.

Georgia O'Keeffe, painter, who spent her childhood in Williamsburg, Virginia, was given the honorary degree of Doctor of Fine Arts by William and Mary College, Williamsburg, Va., in May.

In 1938 Dartmouth College followed the example of the University of Wisconsin by installing an artist-in-residence, not to teach but to promulgate an art atmosphere, to create contact between scholastic education and the arts which are cultural. Paul Sample, of California, a Dartmouth graduate, was appointed to this position.

Extravagance in the art of painting was carried from surrealism one step further into the unknown. André Smith, the distinguished etcher, who in 1938 was in charge of the Research Studio, privately supported, in Maitland, Florida, published, in book form under the title "Art and the Subconscious" a series in full color of automatic paintings made under extraordinary circumstances beyond his control. Similar experiments along these lines were made by other painters adventuring into

the realms of the occult, but, as in his instance, without apparent tangible reason or gain.

The regular exhibitions by established institutions such as the National Academy of Design, the Pennsylvania Academy of the Fine Arts, and the several Museums were held as usual, featured, in most instances, by the generous award of prizes in money, medals, and honors, but were comparatively poorly patronized. The same was true of exhibitions by other professional organizations of painters in water color, oil, etc.

In the Carnegie International Exhibition held in Pittsburgh in the autumn of 1938, the highest award, \$1000, went for the first time in the history of the Institution to a German, Karl Hofer of Berlin, for a figure painting, "The Wind." The third prize, \$500, and the third honorable mention both went to Americans, the former to Arnold Blanch for a painting, "The People," and the latter to Rockwell Kent for a landscape, "Storm Clouds, Greenland." All of the other awards were carried off by Frenchmen—Maurice de Vlaminck, Albert Marquet, Maurice Utrillo, Edmund Cera, and Roger Chapelain-Midy. For the fifth successive year the Popular Prize, voted by visitors to the exhibition, went to Frederick J. Waugh, for a marine painting, "Pounding Surf"—a realistic transcription of waves and rocks. This exhibition comprised 253 paintings by European and 165 by American artists.

Among the losses by death occasioned in the field of painting during 1938 were those of Edmund C. Tarbell, Thomas W. Dewing, Horatio Walker, Wm. Sargeant Kendall, William Glackens, W. L. Lathrop, Elizabeth Nourse, Yarnell Abbott, George Walter Dawson, Bancel LaFarge, Granville Smith, Paul L. Gill, George R. Barse, Eric Pape, and Kimon Nicolaides. Lathrop was drowned during the great September hurricane, while endeavoring to get from his sailboat to land. George R. Barse, National Academician, earlier in the year took his own life, because of discouragement and loneliness. A memorial exhibition of Mr. Tarbell's works was held in the Museum of Fine Arts, Boston, and one of the works of Glackens was presented by the Whitney Museum of American Art late in the season.

PALACIO VALDÉS, pá-lá'thē-ō vál-dās', ARMANDO. A Spanish novelist, died in Madrid, Feb. 2, 1938. Born in Entralgo in Asturias, Oct. 4, 1853, he was educated at Oviedo and in 1870 studied jurisprudence and political economy at Madrid. He became the editor of *La Revista Europea*, the leading scientific review of Madrid, in 1875, resigning in 1878 to devote all his time to writing.

His first works were of a critical nature, but in 1881 the novel, *El Señorito Octavio* appeared, which marked him as one who excelled in psychological analysis as well as in descriptions of nature. His second book, considered by many his finest work, was *Marta y María* (1883). This, together with *José* (1885), *La Hermana San Sulpicio* (1889), and *La Aldea Perdida* (1902), were his best-known works. Of his later works, *La Hija de Natalia* (1924) was outstanding. He was elected to the Royal Academy in 1920.

Other of his writings included *Riverita* (1886) and its sequel, *Maximina* (1887); *El Maestrante* (1899); *Tristan, ó el Pesimismo* (1906); *Papeles del Doctor Angélico* (1911); *Años de juventud del Doctor Angélico* (1918); *La Novela de un Novelista* (1922), the most autobiographical of all his works; *Santa Rozelia* (1926); *Los Carmenes de Granada* (1928); *Testamento Literario* (1929);

Sinfonia Pastoral (1930); *El Gobierno de las mujeres* (1931), and *Tiempos felices* (1933).

PALAU. See JAPANESE PACIFIC ISLANDS.

PALESTINE. A territory on the east coast of the Mediterranean, administered by Great Britain under a mandate of the League of Nations since Sept. 29, 1923. Capital, Jerusalem.

Area and Population. With an area of about 10,429 square miles, Palestine had a population estimated at 1,416,000 on Mar. 31, 1938. On June 30, 1937, there were 1,383,320 inhabitants, including 876,947 Moslems, 386,084 Jews, and 109,769 Christians. The birth rate per 1000 of population in 1937 was 41.6 (44.9 in 1936); death rate, 18.9 (16.1 in 1936). During 1937 immigrants into Palestine numbered 12,475 as against 31,671 in 1936 and 64,147 in 1935; practically all were Jews. Estimated populations of the principal towns in 1937 were: Tel Aviv, 140,000 (all Jews); Jerusalem, 125,000; Haifa, 99,000; Jaffa, 71,000; Gaza, 20,500; Hebron, 20,400; Nablus, 19,200; Lydda, 12,750; Ramleh, 11,950; Nazareth, 9900; Safed, 9900; Tiberias, 9700; Acre, 8800; Bethlehem, 7250.

Education and Religion. In 1936-37 there were 382 public schools for Arabs, with 42,713 pupils (mostly Moslems); 581 Jewish schools, with 7,273 pupils, including 19 training colleges, 19 secondary schools, 13 technical schools, and 7 agricultural schools; 180 Christian schools (25 Orthodox, 105 Catholic, 41 Protestant, 9 others), with 12,650 pupils; and 175 private Moslem schools, with 12,537 pupils. Jerusalem is a holy city for Christians, Jews, and Moslems alike. Stationed here are the Orthodox, Latin, and Armenian Christian patriarchs, an Anglican, a Jacobite, and a Coptic bishop, two joint Chief Rabbis, and the Moslem Grand Mufti, who is president of the Moslem Supreme Council. See *History*.

Production. Agriculture and stock raising are the chief industries, and oranges and grapefruit are the principal export crops. Exports of citrus fruit in the 1937-38 season totaled nearly 11,500,000 cases, mainly oranges—the largest on record. Production of other leading crops in 1937 was (in metric tons): Wheat, 127,400; barley, 75,400; potatoes, 9500; tobacco, 2400; olive oil, 2800 (1936). The wine yield in 1937 was 25,000 hectoliters (hectoliter equals 26.42 U.S. gal.). The grape harvest in 1936 was 49,359 tons; melons and watermelons, 1,335 tons; durra, 22,112 tons; kersenneh, 7378 tons; figs, 16,421 tons; tomatoes, 19,027 tons; ananas, 7609 tons. The number of poultry in 1937 was 2,473,612, or double the 1930 total. The 1936 wool clip was 400 metric tons.

The chief minerals produced are salt (1200 metric tons in 1937), potash in the form of pure K₂O (1500 metric tons in 1937), and bromine (478 metric tons in 1936). The potash and bromine is extracted from the mineral-laden waters of the Dead Sea. The chief manufacturing industries have been wine-making, soap-making, and olive oil pressing. But industrial development has been speeded in recent years by Jewish capital. The Jewish industrial census of August, 1937, showed 6300 industrial enterprises, with a personnel of 27,300, and £P12,700,000 of invested capital. The principal branches of Jewish industry were metals and machinery, foodstuffs, stone and cement, wood, and chemicals. Construction of a £4,500,000 oil refinery at Haifa was begun in October, 1938, by the Anglo-Iranian Oil Co. The estimated income of the Jewish population in Palestine in 1937 was £P18,000,000, derived as follows: Industry,

£P4,100,000; services, £P3,900,000; rental, £P2,700,000; trade, £P2,500,000; agriculture, £P2,000,000; building, £P1,500,000; transport, £P1,300,000.

Foreign Trade. Imports for consumption amounted to £P15,904,608 in 1937 (£P13,979,023 in 1936) and exports of Palestine products to £P5,819,675 (£P3,625,233 in 1936). Re-exports in 1937 were £P635,841 (£P642,293 in 1936); transit trade, £P827,470 (£P513,252). Imports in 1937 came mainly from: Germany, £P2,628,229; United Kingdom, £P2,518,779; Syria, £P1,374,444; Rumania, £P1,372,091; United States, £P1,099,067. Exports were distributed principally as follows: United Kingdom, £P625,264; the Netherlands, £P324,819; Belgium, £P177,344; Sweden, £P155,445; United States, £P35,216. Crude oil delivered at Haifa by pipe line from the Iraq fields and shipped abroad totaled 2,048,178 tons in 1937.

Finance. For the fiscal year ended Mar. 31, 1938, governmental revenues totaled £P4,897,000 (£P4,640,000 in 1936-37) and expenditures were £P7,298,000 (£P6,074,000 in 1936-37). The large deficit reduced the Treasury surplus, which stood at £P4,800,000 on Mar. 31, 1937, to £P2,400,000 on Mar. 31, 1938. One Palestine pound (£P) was equal to one pound sterling.

Transportation, etc. In 1937 there were 328 miles of railway line, about 850 miles of all-weather motor highways, 1045 miles of other roads, 10,675 automobiles, and air connections from Gaza, Lydda, and Haifa to the principal cities of the world. Gross railway revenues in 1937 were £P808,140; working expenses, £P730,058. Extension of the Haifa-Samakh asphalt highway to Baghdad in Iraq was begun in June, 1938. A new daily commercial air service between Tel Aviv and Haifa, with service on to Beyrouth, Syria, three times weekly, was started Sept. 22, 1938. Jaffa, Haifa, Gaza, and Acre are the chief ports. The new lighter-port of Tel Aviv, construction of which was begun in 1936, was opened to passenger traffic on Feb. 23, 1938.

Government. The Constitution of Sept. 1, 1922, vested executive authority in a High Commissioner and Commander-in-Chief and an executive council. It provided also for an elective legislative council including representatives of the various religious communities, but due to lack of co-operation among the religious groups this council was not established. In the meantime its functions were performed by an advisory council appointed by the High Commissioner. The Jewish, Moslem, and Christian communities enjoyed complete autonomy in their religious, cultural, and communal affairs. English, Arabic, and Hebrew are official languages. Lieut.-Gen. Sir Arthur Grenfell Waichope was succeeded as British High Commissioner on Mar. 1, 1938, by Sir Harold Alfred MacMichael.

HISTORY

The Arab Revolt. Guerrilla warfare by Arab bands against Jews and British officials and troops had broken out again late in 1937 in protest against the British proposals for partition of Palestine into separate Arab and Jewish states (see 1937 YEAR BOOK, pp. 568 f.). In 1938 this guerrilla struggle gradually developed into a large-scale Arab revolt, directed by the Grand Mufti of Jerusalem, Haj Amin el Huseini, from his refuge in Beyrouth, Syria. The Mufti's adherents established a provisional government ruling over many villages, towns, and outlying districts. They launched a campaign of assassination and terrorism against Arabs who were hostile or unsympathetic to the

rebellion and its leaders. Meanwhile a faction of intransigent Jews perpetrated a series of bombing outrages in retaliation against Arab attacks. The British were forced to rush more and more reinforcements to Palestine. Toward the year-end some 25,000 troops and an enlarged police force were making headway in stamping out Arab resistance.

Arab bands began operations on a larger scale immediately after the inauguration of Sir Harold MacMichael as the new British High Commissioner on March 3. The following day a battle between 1000 British troops and over 500 Arabs took place near Nablus. In May the growing number of murders of Arab villagers loyal to the British administration led British troops and police to occupy villages in the Haifa, Samaria, and Galilee districts. Since many of the raiders were Syrian Arabs and the rebel bands were obtaining arms and ammunition through Syria and Trans-Jordan, the British soon afterwards commenced the erection of a barbed-wire barricade to end illegal traffic across the Syrian and Trans-Jordan frontiers. The barricade—known as Tegart's Wall, after Sir Charles Tegart, who suggested it—was completed in a little over three months at a cost of £P100,000. It extended from the Mediterranean at Ras en Nakura on the Palestine-Syrian boundary eastward along the military road to Nebi Yusha and on to the Huleh marshes. From there it was carried southward to the north end of the Sea of Galilee. Another section linked the south end of the sea with the Trans-Jordan frontier near Yarmuk. Equipped with an electric-alarm system and reinforced by occasional blockhouses and sentry pill-boxes, the barricade was effective in reducing the arms traffic and preventing reinforcement of the Palestine guerrillas by Arabs from neighboring countries. But Arab bands within Palestine nevertheless increased their activities.

On June 29 the British authorities hanged Solomon ben Yosef, a Revisionist Jew convicted by a military court of firing at an Arab bus. His execution, despite Jewish protest demonstrations and appeals for clemency, was followed within a few days by the inauguration of terroristic attacks upon Arabs, attributed to ben Yosef's Revisionist comrades. Although this retaliation was condemned by all other Jewish groups, it continued throughout the year. On July 15 a bomb exploded in an Arab market in Jerusalem, killing 10 and wounding some 30 occupants. On July 25, 45 Arabs were killed in a similar outrage in a Haifa market. On August 26 an explosion in a Jaffa market killed 24 Arabs and wounded 70. This latter outrage, however, was attributed to Arab terrorists desirous of inflaming their fellow Arabs against the Jews. There were numerous less important cases of Jewish terrorism. These tragedies provoked Arab reprisals upon the Jews. Only the presence of British troops prevented more large-scale massacres, like that at Tiberias on the night of October 2, when Arab raiders slaughtered 20 Jews, half of them children.

Autumn found the situation going from bad to worse. Arab bands, supported by sympathizers in the villages and towns, had disrupted the mails and the communication and transportation systems. They had occupied Bethlehem and other towns and destroyed police stations, post offices, and other public buildings in communities. In the middle of October the Arabs even ventured to seize control of the Old City in Jerusalem. They were dislodged by British troops a few days later with the loss of 22 killed and 25 wounded as against 4 British

wounded. In the frequent clashes between British troops and Arab bands, the Arabs invariably suffered heavy casualties. But it was not until the end of the year that British military pressure appeared to be eliminating guerrilla operations. To achieve this the British were obliged to enroll 7500 Jews in the police forces, to introduce an identification card system (October 13), and to enforce modified martial law (October 18).

In the five months ending in November, Arab rebel casualties were reported at 1100. During November alone the rebels suffered 170 casualties; British forces, 11 killed and 42 wounded; Jews, 13 killed and 39 wounded; Arabs, other than rebels, 35 killed and 19 wounded. In the 30 months ending in November, 135 Arabs had been murdered by Arab terrorists. Practically all of those attacked were enemies of the Mufti and his followers. Among them were the mayors of Hebron and Lydda, 34 village officials and other notables, 27 policemen, and many others who resisted the establishment of Arab rule in regions from which British officials and police were forced to withdraw. Despite the violent terrorism employed by the Mufti's supporters to crush all Arab opposition to his leadership, the Arab National Defense party, under Fakhri Bey Nashashibi, continued to contest the Mufti's right to speak for all Palestine Arabs. There were indications, also, that many Arab villagers were growing weary of guerrilla exactions and oppressions.

The Woodhead Commission. While civil strife raged throughout Palestine, the British authorities made another attempt to evolve a plan for the settlement of Arab-Jewish differences that would permit restoration of peace. On April 27 a British technical commission headed by Sir John Woodhead arrived in Palestine to draw up a detailed plan for carrying into effect the partition proposals made by the Peel Commission in 1937. The Arabs boycotted the Woodhead Commission in protest against the partition proposals. Nevertheless, it toured the country, held hearings in Jerusalem and other cities from April to August, and then returned to England previous to issuing its report on November 9.

The commissioners, in their report, unanimously advised against adoption of the partition scheme proposed by the Peel Commission. They considered also two other partition schemes and a majority of the four commissioners decided that the most feasible of these would divide Palestine into three parts, as follows: (1) A northern part to be retained under mandate, (2) a southern part (the Negeb) to be retained under mandate, and (3) a central part to be divided into an Arab state, a Jewish state, and a Jerusalem enclave under British mandate. The Commission concluded, however, that none of the three plans would give a reasonable prospect of the eventual establishment of self-supporting Arab and Jewish states. It therefore proposed a modified form of partition on the basis of their preferred scheme. Both the Arab and Jewish states would be required, as a condition of the surrender of the British mandate, to enter a customs union with the remaining mandated areas in which Britain would determine the fiscal policy after consulting with both states. The British mandatory authorities would collect the customs and distribute the net surplus, after meeting certain common charges, among the Arab, Jewish, and mandated areas in accordance with a prearranged formula.

Partition Abandoned. Simultaneously with the

publication of the Woodhead Commission's report, the British Government announced that the commission's investigation had shown that "the political, administrative, and financial difficulties involved in the proposal to create independent Arab and Jewish states inside Palestine are so great that this solution of the problem is impracticable." It therefore stated that Britain would continue its responsibility for the government of the whole of Palestine.

In an effort to find a solution consistent with British obligations to both Arabs and Jews, the government announced that it would "immediately invite representatives of the Palestinian Arabs and of neighboring states on the one hand and of the Jewish Agency on the other, to confer with them as soon as possible in London regarding future policy, including the question of immigration into Palestine." The government's statement reserved the right to bar from the negotiations Palestine Arab leaders "responsible for the campaign of assassination and violence." This referred especially to the Mufti. It also declared that "if the London discussions should not produce agreement within a reasonable period of time, they (the government) will take their own decision in the light of their examination of the problem and of the discussions in London, and announce the policy which they propose to pursue." The discussions in London were expected to open early in 1939.

Reaction of Arabs and Jews. However, neither the Jews nor the Arabs viewed the government's proposals for further discussions with favor. The Jewish press in the Holy Land objected to the inclusion of representatives of neighboring Arab states in the conference and declared the Jewish demand for further immigration into Palestine would not be sacrificed under any circumstances. Arab partisans of the Mufti and his associates denounced the proposal to exclude them from the discussions. They also objected to any negotiations unless the Zionist Jews and the British Government first repudiated the Balfour Declaration.

Some of the opposition Arab leaders approved of the conference proposal, although upholding the Arab demands set forth by the Grand Mufti on October 18. These included immediate cessation of Jewish immigration into Palestine; complete independence and a national government for the Palestine Arabs; abandonment of the Balfour Declaration's pledge of a Jewish national home in Palestine; immediate termination of the British mandate; prohibition of the further sale of Palestine land to Jews; and conclusion of a treaty of alliance between the British Government and the Palestine Arabs similar to the Anglo-Egyptian, Anglo-Iraqi, and Franco-Syrian treaties, establishing a sovereign Arab state in which the Jews would be granted minority rights.

Foreign Intervention. The Mufti's position was supported by Arab groups in Egypt, Iraq, and Syria (q.v.), where demonstrations protesting against British and Jewish policy in Palestine were organized. In August Moslem leaders in Iraq adopted a resolution favoring a holy war against the Jews in Palestine and Britishers everywhere. In October a resolution against the Balfour Declaration, partition, and Jewish immigration into Palestine was adopted at Cairo by delegates from eight Moslem countries.

The Jews, on the other hand, brought pressure upon the United States Government through American Zionist leaders to exert its influence in preserving the Balfour Declaration and the right of

Jewish immigration into Palestine. On October 14, Secretary of State Hull agreed to watch the Palestine situation and take necessary measures to protect American rights, including those of some 9000 American Jews in Palestine, in accordance with the Anglo-American treaty of Dec. 3, 1924. Under this treaty the United States had no power to obstruct revision of the mandate, but it could refuse to recognize the new administration if it were not established with American consent. President Roosevelt, on October 22, indicated that he was "for the maintenance of Palestine as a Jewish national home without limitation," and that the influence of the Washington Government would be exerted in favor of continued Jewish immigration.

This intervention of high United States officials in the Palestine dispute provoked bitter protests from Arab Christians in Palestine and aroused indignation throughout the Moslem countries. A boycott of American goods was threatened.

PALMYRA, pāl-mi'ra (**CORNWALLIS**) ISLAND. A central Pacific island (5° 40' W.; some 850 miles S. by W. of Hawaii) belonging to the U.S.A. It was annexed to Hawaii in 1862. Area, 1½ square miles.

PANAMA. A republic of Central America, bisected by the Panama Canal Zone (q.v.). Capital, Panamá.

Area and Population. The area is 32,380 square miles and the population on Dec. 31, 1937, was estimated at 548,000 (467,459 at the 1930 census), excluding the Canal Zone. The urban population, in towns of 1000 or over, was 153,248 in 1930. The racial division of the population in 1930 was: Whites, 78,813; Negroes, 69,583; Indians, 42,897; Orientals, 4138; mixed, 249,583. Estimated populations of the chief cities are: Panamá, 82,827; Colón, 33,460; David, 8000.

Education and Religion. About 50 per cent of the adult inhabitants are estimated to be illiterate. The school enrollment in 1934-35 was: Primary, 53,147; secondary, 2823; National University, 978. In 1938 modifications were introduced to make the primary school curriculum more effective. A General Inspection Section was established for secondary schools and matriculation fees for secondary students were abolished. Roman Catholicism is the dominant religion but other faiths have a considerable following.

Production. The chief occupations are agriculture, cattle raising, lumbering, pearl fishing, commerce, and the tourist business. In 1937 Panama exported 5,838,000 bunches of bananas, 7,797,000 coconuts, 12,637,000 lb. of cacao beans, 8,506,000 lb. of fresh beef, 11,000 cattle hides, and 418,000 lb. of mother-of-pearl shells. Coffee, vegetables, chicle, ivory nuts, balata, hardwoods, and tortoise shell are other products. Some gold and salt is mined. Manufacturing is confined to the production of beverages, sugar, hard candy, shoes, cheap clothing, and furniture for local use. During 1936-37 (fiscal year) about 38,000 tourists and other passengers disembarked at Canal Zone ports and an additional 136,000 transient passengers, most of whom spent a few hours ashore, passed through these ports. In 1938 the number of tourists visiting the Isthmus and the amount spent per capita were the lowest of any year since 1932, with the result that

retail and wholesale business in Panama declined about 20 per cent.

Foreign Trade. Preliminary official statistics placed imports into Panama in 1938 (calendar year) at \$17,548,678 (\$21,828,175 in 1937) and exports from Panama at \$3,769,651 (\$4,069,727 in 1937). Imports from the United States were \$10,139,378 (57 per cent of the total) for 1938 and \$11,357,000 (52 per cent) in 1937; exports to the United States were \$3,339,871 (88.6 per cent) in 1938 and \$4,069,727 (90 per cent) in 1937. Silk and rayon piece goods, meats, perfumery and cosmetics, and automobiles were leading imports. The chief 1937 exports were: Bananas, \$2,578,000; cacao beans, \$759,000; re-exports, \$4,599,000.

Finance. Budget estimates for the biennium Jan. 1, 1939-Dec. 31, 1940, as passed by the National Assembly on first reading, balanced at 22,380,000 balboas (19,207,000 balboas for the 1937-38 biennium). Actual receipts for the period Jan. 1, 1937, to June 30, 1938, were 14,702,000 balboas; expenditures, 15,488,000 balboas. The public debt on June 30, 1938, stood at 22,346,000 balboas (external, 17,838,000; internal, 2,616,000; guaranteed, 1,892,000), as against 20,144,000 balboas on June 30, 1936. The balboa (nominal parity, \$1.693 U.S. currency) exchanged at \$1 in 1936 and 1937.

Transportation. Railways in 1937 comprised 230 miles of line, including the Canal Zone. Roads and highways extended 977 miles in 1937, including Canal Zone (number of automobiles, 11,749). The surfacing of the Panamanian section of the Pan American Highway was in progress during 1938. For the construction of strategic highways in the vicinity of the Canal, see *History*. There were 270 miles of airlines under the Panamanian flag in 1938. For shipping statistics, see PANAMA CANAL.

Government. The Constitution of Feb. 13, 1904, as amended in 1918 and 1928, vests executive power in a President elected by direct popular vote for four years and ineligible for re-election. Legislative power rests in a National Assembly of 32 members elected for four years, which meets biennially on September 1. President in 1938, Dr. Juan Demóstenes Arosemena, who assumed office Oct. 1, 1936. Dr. Arosemena was elected by a coalition of the National Revolutionary, National Liberal, and Conservative parties, which captured 18 out of the 32 seats in the National Assembly. In September, 1937, he was designated "Supreme Chief" of these parties but the representatives of each party continued to function as a separate group in the National Assembly.

History. In his message of Sept. 1, 1938, to the new session of the National Assembly, President Arosemena announced that he had drafted an entirely new Constitution for its consideration and that proposed amendments to the existing Constitution would also be submitted. The assembly had not completed its study of the proposed new organic law by the end of the year.
